Major Programs in Biology

For more information, please see biology's web page, http://www-biology.ucsd.edu/

The UCSD Division of Biology is structured around the different levels of biological organization—biochemical, cellular, physiological, and ecological. The research and teaching of the division emphasize the fundamentally important processes that occur at each of these levels. With a solid foundation in these processes future training and study in any area of biology is possible, from plant breeding to genetic counseling, from medical microbiology to ecological epidemiology, from veterinary science to cancer research. The UCSD campus is situated among some of the finest research institutions in the world. The Division of Biology is fortunate in having close ties with the Scripps Institution of Oceanography, the Salk Institute of Biological Studies, and the Scripps Clinic and Research Foundation, all of which open interesting avenues for motivated students.

The division offers six different major programs, each of which provides an excellent background for future graduate or professional study. They are (1) general biology, (2) animal physiology and neuroscience, (3) biochemical and cell biology, (4) molecular biology, (5) microbiology, and (6) ecology, behavior, and evolution. The requirements of each of the majors are designed to meet the needs of a different group of students. These requirements are quite concordant, reflecting the division's philosophy that familiarity with certain basic aspects of the subject is fundamental to all specialized understanding. Bachelor of science degrees granted in each of these majors will be so designated.

The Student Affairs Office (1128 Pacific Hall) administers the undergraduate biology program for all five colleges. For complete details regarding policies and procedures pertaining to the biology programs, please contact Biology Student Affairs.

Admission to the Division of Biology

Student demand exceeds program capacity in all biology majors. Therefore, admission to a biology major is based on academic excellence demonstrated either in high school and standardized testing or as a pre-major at UCSD.

Freshmen

Effective fall 1998, entering freshmen who have indicated the desire to major in biology will either be admitted directly to the biology major of their choice, or admitted to the biology pre-major, depending upon their UCSD admission credentials. Undeclared and other majors who wish to major in biology will be designated as pre-majors. Those designated as pre-majors must complete the following screening courses within six quarters (by the end of the sophomore year) and achieve a GPA of 2.75 or better in these courses in order to be formally admitted to a biology major:

- Math 10A and 10B (or 20A and 20B)
- Physics 1A and 1B (or 2A and 2B)
- Chemistry 6A and 6B
- BILD 1 and 2 (or 1 and 3)

At the end of their sophomore year, those who desire to enter the biology major must formally apply at the Biology Student Affairs Office. (NOTE: These are the minimal screening requirements, and do not satisfy all of the lower-division requirements of any biology major. Please consult the section regarding your particular major to ensure that you satisfy all lower-division and upper-division requirements.)

Continuing Students

Students admitted to UCSD prior to fall 1998 may continue to declare any of the six biology majors by submitting a completed Change of Major form at the Registrar's Office. (NOTE: These are the minimal screening requirements, and do not satisfy all of the lower-division requirements of any biology major. Please consult the section regarding your particular major to ensure that you satisfy all lower-division and upper-division requirements.)

Transfer Students Entering Fall 2000

Effective fall 2000, applicants seeking admissions as transfer students to the Division of Biology at UCSD will be subject to the division's admission policies. In order to be admitted to a biology major at UCSD, students must have completed the following courses, or course equivalency, with an overall GPA of 2.75.

- Math. 10A-B (or 20A-B)
- Physics 1A-B (or 2A-B)
- Chemistry 6A-B
- BILD 1 and 2 (or BILD 1 and 3)

Those who have not completed all of the above requirements will only be admitted as pre-majors, and will be allowed a maximum of three quarters to satisfy any unmet pre-major requirements. Transfer students are therefore strongly encouraged to complete these requirements at their community college.

Satisfactory Progress

All students admitted into a biology major must maintain satisfactory progress in order to remain in a biology program. If the GPA in biology courses for such a student falls below 2.0, he or she will be placed on probation during the quarter after the average fell below the line. If the GPA is not brought above the 2.0 level during the quarter on probation, the student will be dropped from the major.

Prerequisites

All students are expected to have completed all prerequisites prior to enrolling in any biology course. Please visit the student affairs office or consult our Web page for the most current information.

Exceptions

The division will accept petitions from pre-majors for admission to the major with less than the required GPA, and the success of such petitions will be evaluated based upon academic promise that is not reflected in the GPA. Exceptions might also be made to accommodate students who showed exceptional promise in laboratory experimentation, or students who had overcome extraordinary hardship while taking the lower-division courses.

Enrollment in Upper Division Biology Classes by Non-Biology Students

Because biology is an impacted major, enrollment in upper-division biology courses is limited to biology majors, and those majors for which upper-division biology courses are required for graduation. Every effort will be made, on a space available basis, to enroll students from other majors in those biology lecture and laboratory courses which may be required for postgraduate study.

Division of Biology Residency Requirement

To receive a bachelor of science degree in biology from UCSD, all students must complete at least nine upper-division biology courses (four units each) in the Division of Biology while officially enrolled at UCSD. (Students participating in the Education Abroad Program (EAP), and courses
at other UC campuses, may petition up to three of these courses to count toward their residency minima.) Biology courses completed through the UC Extension program (concurrent enrollment) will not be counted toward this residency requirement.

**Grade Requirements for the Majors**

The minimum GPA requirement (for both the major and overall UC) for graduation is 2.0. D grades in courses required for the major are acceptable, providing that the student’s major GPA and overall UC GPA is at least 2.0. Students who received D and/or F grades should contact one of the Division of Biology’s undergraduate advisers to determine the effect of such grades on their GPAs. The biology major GPA calculation is based on upper-division courses required for the major. (Upper-division courses from other UCs, other UCSD departments, and EAP which have been approved via petition to count toward the major are counted into the major GPA. Other transfer courses do not count toward the UC or major GPA.) All courses, required for any of the six majors, must be taken for a letter grade with the exception of BISP 195, 196, or 199.

**Students with Transfer Credit**

All courses (including prerequisites) taken at other institutions must be reviewed by the Division of Biology before they can be applied toward any major requirement. Students must obtain approval from the Biology Student Affairs office prior to taking courses outside of UCSD (for example, students wishing to take a Chem 6BL equivalent at another institution must consult with Biology Student Affairs before enrolling in the substitute course). In addition, any student wishing to satisfy a major requirement with upper-division transfer work (with the exception of organic chemistry) must first submit a General Petition. Contact Biology Student Affairs (1128 Pacific Hall) for specific information regarding transfer documentation and petition procedures.

**Programs Abroad**

The Division of Biology strongly encourages students to participate in the Education Abroad Program (EAP) or the UCSD Opportunities Abroad Program (OAP). It is very important that students who plan to participate in the UC Education Abroad Program (including the Costa Rica Tropical Ecology program) or the UCSD Opportunities Abroad Program obtain the name of a faculty adviser from the Biology Student Affairs Office in order to discuss the proposed program of study. For most EAP programs, it is strongly recommended that biology majors complete biochemistry (BIBC 100 or 102) and genetics (BICD 100) and their prerequisites before going abroad.

**Special Studies Courses**

Only one quarter of BISP 195 and one quarter of BISP 196 or 199 may be counted toward any biology major. For information on requirements and application procedures for special studies courses students should go to the Biology Student Affairs Office (1128 Pacific Hall).

**BISP 195**

Being a teaching assistant is an important task and can provide students with experience and faculty contact which can be valuable when applying for graduate school. Students who are interested in being a T.A. should have received a strong grade in the course which they want to teach, have an overall GPA of at least 3.0, and have taken at least ninety total units. Students should apply very early in the quarter prior to the quarter they wish to teach. Applications are available at the Biology Student Affairs Office.

**BISP 197**

The Division of Biology, in collaboration with local biotech industries, created Biotechnology Internship Opportunities (BIO). The mission of BIO is to provide biology majors with an opportunity to participate in research in an industrial setting. We believe that working as an intern in the private sector will enrich a student’s educational experience. Students will gain valuable insight into the relationship between theory and practice, and hence, a better understanding of the relevance of course work in their major. Most importantly, students will learn the importance of outstanding oral and written communication skills.

**BISP 199**

Independent Study BISP 199 is intended to provide interested and qualified biology students with an opportunity to work closely with faculty and professionals in their chosen field and can be a valuable contribution to the student’s preparation for graduate school or career goals. To enroll in BISP 199, students must have accrued at least ninety quarter-units with an overall UC GPA of at least 3.0. Students may select for their instructor any professor at UCSD, but the BISP 199 application must be submitted for approval to the Division of Biology. The deadline to apply for BISP 199 is the eighth week of the quarter prior to the quarter in which the research will begin.

**AIP 197**

Because the undergraduate research conducted through the Academic Internship Program is generally done at a site not affiliated with the UCSD Division of Biology, students who wish to request that an AIP 197 course be counted toward their major must submit a General Petition for their request before the end of the eighth week of the quarter prior to the quarter in which research will begin. This early deadline allows time for the biology faculty to review and contribute to the student’s research proposal and ascertain the project’s compatibility with the student’s academic goals. If an AIP 197 course is approved for the student’s major, no other special studies course (BISP 196 or 199) can be used toward the major.

**General Biology Major**

Please refer to the “Admission to the Majors” notice detailed earlier in the Division of Biology section of this catalog.

This program allows the most diversified exposure to biology of any of the majors offered by the Division of Biology. It is designed for students with broad interests who do not wish to be constrained by the specialized requirements of the other majors and who desire maximum freedom to pursue their particular educational goals.

**Lower-Division Requirements**

Lower-division requirements are designed to provide the foundations in mathematics, physics, and chemistry that are fundamental to the study of biology. In addition, an introduction to biology is required to provide the appropriate background for upper-division biology courses. The lower-division requirements are subsumed in large part under those of the various colleges.

- Mathematics 10A-B-C or 20A-B, and 20C or 21C
- Chemistry 6A-B-C, and one lab
Physics 1A-B-C or 2A-B-C and one lab
BILD 1 and 2 or BILD 1 and 3

Upper-Division Requirements

Listed below are the upper-division course requirements for the general biology major. Specific requirements have been held to a minimum for this major in order to allow students maximum freedom in fitting course schedules to their particular educational goals. Because of the central positions of biochemistry and genetics in all of modern biological thought, only Biochemistry (BIBC 100 or 102), its organic chemistry prerequisites (Chemistry 140A and B), and Genetics (BICD 100) are prescribed requirements for general biology majors.

1. Organic Chemistry (Chemistry 140A and 140B)
2. Effective fall 2000, entering freshmen are required to complete Metabolic Biochemistry (BIBC 102). Transfer students will be held to the new requirements beginning fall 2002. Students entering prior to fall 2000 may complete either Structural Biochemistry (BIBC 100) or Metabolic Biochemistry (BIBC 102). Both are recommended.
3. Genetics (BICD 100)
4. One upper-division biology lab to be chosen from the following: BIBC 103, 105, BICD 101, 111, 123, 131, 133, 145, BIEB 121, 165, 167, 179, BIMM 101, 103, 121, 127, BIPN 105, or 145. Independent Research (BISP 196, 199) is encouraged, but may not replace one of the formal laboratory courses listed above.
5. Nine additional upper-division biology courses (each course must be at least four units) taken through the UCSD Division of Biology are required. Only one quarter of BISP 195 and one quarter of either BISP 196 or 199 may be applied toward this requirement. (Subsequent quarters of 195, 196, or 199 may be applied toward college and university requirements.) Although students are free to design upper-division curricula which meet their individual educational goals, Molecular Biology (BIMM 100) and Cell Biology (BICD 110) are strongly recommended for those contemplating applying to graduate or professional schools.

Animal Physiology and Neuroscience Major

Please refer to the “Admission to the Majors” notice detailed earlier in the Division of Biology section of this catalog.

The animal physiology and neuroscience major provides a program for studying the bodily and neural functions of complex organisms. Within this major, a student may concentrate upon more specialized areas of study, such as human biology, neurobiology, or endocrinology. This major is most directly applicable to health-related professions such as medicine, nursing, dentistry, veterinary medicine, pharmacy, physical therapy, and medical technology. Animal physiology and neuroscience majors are also well prepared to enter other professions such as physiological research, physical education, agriculture, and wildlife management.

Lower-Division Requirements

Mathematics 10A-B-C, or 20A-B, and 20C or 21C
Chemistry 6A-B-C, and one lab
Physics 1A-B-C or 2A-B-C, and one lab
BILD 1 and 2 or BILD 1 and 3

Upper-Division Requirements

Listed below are the upper-division courses required for the animal physiology and neuroscience major. The first four requirements provide exposure to the current understanding of subcellular function that should be at the command of all modern biologists. Requirements 5 and 6 constitute the core of the animal physiology and neuroscience major. By choosing four optional four-unit upper-division biology courses (requirement 7), a program geared to the needs of the individual student can be formulated.

1. Organic Chemistry (Chemistry 140A, 140B, and 143A)
2. Effective fall 2000, entering freshmen will be required to complete Metabolic Biochemistry (BIBC 102). Students entering prior to fall 2000 may complete either Structural Biochemistry (BIBC 100) or Metabolic Biochemistry (BIBC 102). Both are recommended. Transfer students will be held to the new requirements beginning fall 2002.
3. Molecular Biology (BIMM 100)
4. Genetics (BICD 100)
5. Four from the following seven courses:
   a. Mammalian Physiology I (BIPN 100)
   b. Mammalian Physiology II (BIPN 102)
   c. Comparative Physiology (BIPN 106)
   d. Cellular Neurobiology (BIPN 140)
   e. Systems Neurobiology (BIPN 142)
   f. Developmental Neurobiology (BIPN 144)
   g. Computational Neurobiology (BIPN 146)
6. One of four Physiology Laboratories (BIPN 105, BICD 131, BICD 133, or BIPN 145). BISP 196 or 199 or an AIP 197 may substitute for a laboratory upon petition approval by the faculty adviser.
7. Four additional upper-division biology courses (each course must be at least four units) taken through the UCSD Division of Biology are required and may include the above (number 5–6). These may include no more than one quarter of BISP 195 and one quarter of either BISP 196 or 199 (AIP 197 may be used in place of BISP 196 or 199 upon approval by the faculty adviser). (Subsequent quarters of 195, 196, or 199 may be applied toward college and university requirements.)

Biochemistry and Cell Biology Major

Please refer to the “Admission to the Majors” notice detailed earlier in the Division of Biology section of this catalog.

This major is designed to provide students with the fundamental courses required for entry into a school of medicine or into graduate training in a wide variety of areas of biological and biomedical sciences: biochemistry, biophysics, genetics, molecular biology, cell biology, developmental biology, microbiology, virology, human biology (physiology, metabolism, genetic disorders), cancer biology, pharmacology, and others. The emphasis is on basic principles which help us understand those processes unique to living organisms at the molecular level.

The program includes two required upper-division biology laboratory courses to provide practical experience with modern techniques and
useful technology for those seeking positions as lab technicians in clinical and basic research laboratories. The opportunity to select five elective courses allows students either to seek a still broader background in a variety of biology courses or to begin specialization in a chosen field of study.

**Lower-Division Requirements**

Mathematics 10A-B-C, or 20A-B, and 20C or 21C
Chemistry 6A-B-C, and one lab
Physics 1A-B-C or 2A-B-C, and one lab
(Mathematics 20A-B-C, and Physics 2A-B-C are recommended)
BILD 1 and 2 or BILD 1 and 3

**Upper-Division Requirements**

1. Organic Chemistry (Chemistry 140A and 140B)
2. One chemistry laboratory: Organic Chemistry (Chemistry 143A) or Physical Chemistry (Chemistry 105A)
3. Structural Biochemistry (BIBC 100) or Physical Biochemistry (BIBC 110) or Physical Chemistry (Chemistry 126)
4. Metabolic Biochemistry (BIBC 102)
5. Biochemical Techniques (BIBC 103)
6. Molecular Biology (BIMM 100)
7. Cell Biology (BICD 110)
8. Genetics (BICD 100)
9. One upper-division biology lab to be chosen from the following: Signal Transduction (BIBC 105), Eukaryotic Genetics (BICD 101), Cell Biology (BICD 111), Plant Molecular Genetics and Biotechnology (BICD 123), Embryology (BICD 131), Developmental Biology Lab (BICD 133), Laboratory in Molecular Medicine (BICD 145), Recombinant DNA Techniques (BIMM 101), Advanced Techniques in Molecular Genetics (BIMM 103), Microbiology (BIMM 121), Environmental Microbiology (BIMM 127), Animal Physiology Lab (BIPN 105), Neurobiology Lab (BIPN 145), or Organic Chemistry (Chemistry 143C). Students completing a BISP 199 research project prior to fall 2000 may use this to satisfy the upper-division lab requirement. Students completing a BISP 199 fall 2000 or later may count the BISP 199 as an upper-division elective only.
10. Five additional upper-division biology courses (each course must be at least four units) taken through the UCSD Division of Biology are required. Only one quarter of BISP 195 and one of BISP 196 or 199 may be applied toward the fulfillment of this requirement. Students may use only one BISP 199 for meeting major requirements. (Subsequent quarters of BISP 195, 196, or 199 may be applied toward college and university requirements.)

The following courses offered by the Department of Chemistry and Biochemistry are recommended as electives for the biochemistry and cell biology major: Chemistry 115, 116, 122, 124, 126, 127. Please note that these courses will not count towards the Division of Biology residency requirement.

**Molecular Biology Major**

Please refer to the “Admission to the Majors” notice detailed earlier in the Division of Biology section of this catalog.

The program for molecular biology is designed to provide an intensive exposure to the theoretical concepts and experimental techniques of molecular biology. The concepts and techniques of molecular biology are the foundation for the studies of all aspects of biology in modern time. A focus on molecular biology, therefore, provides an excellent preparation for a wide range of advanced studies including basic research, medicine, bioengineering, and biotechnology. Considerable emphasis is placed on chemistry, biochemistry, and genetics for students enrolled in the program. As such, it is recommended for those students who have a particularly strong interest in this field of study.

**Microbiology Major**

Please refer to the “Admission to the Majors” notice detailed earlier in the Division of Biology section of this catalog.

The microbiology major is designed to prepare students for graduate studies and for professional careers in a variety of health-related programs. The specialization in microbiology can provide the basic background for work in medical technology, or for further training in public health or other health-related specialties. The program is also designed to provide a foundation for graduate studies in microbiology, virology, and a variety of allied fields as well as for medical and dental school.

**Lower-Division Requirements**

Mathematics 10A-B-C, or 20A-B, and 20C or 21C
Chemistry 6A-B-C, and one lab
Physics 1A-B-C or 2A-B-C, and one lab
(Mathematics 20A-B-C, and Physics 2A-B-C are recommended)
BILD 1 and 2 or BILD 1 and 3

**Upper-Division Requirements**

1. Organic Chemistry (Chemistry 140A-B)
Upper-Division Requirements

1. Organic Chemistry (Chemistry 140A-B)
2. Organic Chemistry Laboratory (Chemistry 143A)
3. Effective fall 2000, entering freshmen are required to complete Metabolic Biochemistry (BIBC 102). Transfer students will be held to the new requirements beginning fall 2002. Students entering prior to fall 2000 may complete either Structural Biochemistry (BIBC 100) or Metabolic Biochemistry (BIBC 102). Both are recommended.
4. Biochemical Techniques (BIMM 103)
5. Molecular Biology (BIMM 100)
6. Immunology (BICD 140)
7. Genetics (BICD 100)
8. Bacteriology (BIMM 120)
9. Laboratory in Microbiology (BIMM 121)
10. Virology (BIMM 114)
11. Medical Microbiology (BIMM 124)
12. Three additional upper-division biology courses (each course must be at least four units) taken through the UCSD Division of Biology are required. These may include no more than one quarter of BISP 195 and one quarter of BISP 196 or 199. (Subsequent quarters of 195, 196, or 199 may be applied toward college and university requirements.) Other courses of special interest to microbiology majors are listed below:
   Cell Biology (BICD 110)
   Regulation of Gene Activity in Eucaryotic Cells (BIMM 112)
   Microbial Genetics (BIMM 122)
   Recombinant DNA Techniques (BIMM 101)

Ecology, Behavior and Evolution Major

Please refer to the "Admission to the Majors" notice detailed earlier in the Division of Biology section of this catalog.

This major includes the fields of population biology, ecology, conservation biology, animal behavior, population genetics, biogeography, and evolution. These fields have in common a focus on evolutionary processes and whole organisms in relation to each other and to their environments. Research careers in ecology, behavior, and evolution can be found in universities, government agencies, and the biotechnology industry. More applied careers for ecologists are equally varied: recent graduates now work in forestry and wildlife management, as ecological consultants for U.S. and foreign governments and private industry, as teachers, or in new fields such as ecological medicine and epidemiology, environmental design and planning, and conservation biology. Because organismal biology spans such a wide variety of topics, this major has been designed to provide the basic fundamentals while allowing maximum flexibility within the general topic areas.

Lower-Division Requirements

Mathematics: Three quarters of calculus are required. Mathematics 20A-B-C or 21C are strongly recommended, but Mathematics 10A-B-C are acceptable.

Chemistry: Chemistry 6A-B-C. Laboratories in chemistry are not required.

Physics: Physics 1A-B-C or Physics 2A-B-C. Laboratories in physics are not required.

BILD 1 and 3

Upper-Division Requirements

1. Genetics (BICD 100). This course should be taken at the end of the second year.
2. Biometry (BIEB 100). This course is a prerequisite for several core courses in ecology, behavior, and conservation, and should be taken in the second year.
3. Effective fall 2000, entering freshmen are required to complete Metabolic Biochemistry (BIBC 102). Transfer students will be held to the new requirements beginning fall 2002. Students entering prior to fall 2000 may complete either Structural Biochemistry (BIBC 100) or Metabolic Biochemistry (BIBC 102). Both are recommended. Please note that organic chemistry (Chemistry 140A-B) is a prerequisite for biochemistry. These prerequisite courses may be applied as elective courses under requirement number five listed below.

4. Ecology, Behavior, and Evolution. Seven courses to be chosen from BIEB 120–180 are required. At least two of these courses must be laboratory or field courses (BIEB 121, 165, 167, and/or 179). BIEB 120, 126, 130, 140, 150, 164, 166, 178, and 180 are designed to be taken by third-year students; BIEB 121, 154, 156, 165, 167, 176, and 180 are designed to be taken by more advanced students. For students graduating on or before summer 2002, however, an EBE core lecture course may be substituted for one of the two laboratory courses. Although two laboratory or field courses are recommended, one such course and six EBE core lecture courses will satisfy the seven core course requirement. Laboratory courses may be taken either concurrently with the prerequisite lecture course if Biometry (BIEB 100) has been taken, or during the subsequent academic year. Note that some of the laboratory courses may not be offered every year. For that reason, it is recommended that students take as many required courses as possible when the courses are offered.

5. Four additional upper-division courses (each course must be at least four units) in biology, chemistry, mathematics, or related sciences are required. Students are required to meet the Division of Biology residency requirement. Courses to be completed outside of the UCSD Division of Biology must be petitioned (prior to commencement of the course) to satisfy this requirement. Transfer courses are considered to be outside of the division. Students participating in the Education Abroad Program should refer to the biology section of that topic or contact the undergraduate adviser.

Courses outside the Division of Biology that are particularly appropriate and that have been approved in the past include: Chemistry 122, 140A-B, and 149A, Mathematics 111A-B-C, 180A-B-C, and 181A-B-C; Biological Anthropology (most courses); and Earth Sciences (most courses); Economics 131; Scripps Institution of Oceanography (consent of instructor required). Only one quarter of BISP 196 or 199 and one quarter of BISP 195 may be used to fulfill this requirement. (Subsequent quarters of 195, 196, or 199 may be applied toward college and university requirements.) Certain intensive spring and summer session courses offered at various universities and field stations throughout the country may be used to help satisfy this requirement if prior approval is obtained from the faculty adviser of the major by petition. A good example is the field course in tropical biology offered in Costa Rica each spring and fall quarter. Prerequisites for the Costa Rica pro-
APPLICATION TO THE HONORS THESIS PROGRAM

1. Students interested in the program who are eligible as of the end of the spring quarter of their junior year (the fourth quarter prior to graduation) need to find a Division of Biology faculty member willing to act in the capacity of thesis adviser and inform the Biology Student Affairs Office of their intent.

2. After an adviser is selected, the student and the adviser should complete the Special Studies application form (available from the Biology Student Affairs Office, 1128 Pacific Hall). The form should contain the research proposal.

3. The application form should then be submitted to the Biology Student Affairs Office. The deadline for submitting this form is the end of the eighth week of the quarter prior to the quarter the research will begin.

4. The application will be submitted to the honors thesis coordinator after eligibility has been determined.

5. If the student is approved for admission to the program, he or she will then be authorized to register for BISP 196.

Entry into the second and third quarter of the program will require submission to the honors thesis adviser of a written report in which the student summarizes the data obtained in the first quarter. A brief oral interview with the student on this report can also be expected. If the progress made appears reasonable for an honors student, then the 196 petition will be signed. If not, conversion of the 196 credit to BISP 199 will be recommended. Completion of the program will require a final written report by the student at the end of the third quarter in addition to an oral presentation in the middle of the quarter to a suitable group of faculty and students, including the honors thesis adviser.

Minor in Biology

To receive a minor from the Division of Biology, a student must complete at least seven four-unit biology courses, including at least five four-unit upper-division biology courses (for a total of at least twenty-eight units of course work). Students may apply transferable biology courses from another institution toward the lower-division requirement, after obtaining approval from both the UCSD Division of Biology and the student’s college. Upper-division courses must be taken for letter grade. No courses taken outside of the Division of Biology may be applied toward the biology minor (i.e., Chemistry 140A, Psychology 106, etc.). Advanced placement biology scores of four or five may be counted in lieu of two lower-division biology courses for the division.

Secondary School Biology Teaching

UCSD’s biology division is committed to the education of future biology teachers and offers an excellent preparation for teaching biology in secondary schools. If you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program Program for information about the prerequisite and professional preparation requirements. It is recommended that you contact TEP and the Biology Student Affairs Office early in your academic career to help you plan a suitable biology curriculum. If you plan to get your credential at another institution, keep in mind that a broad education in biology is the best preparation to become a teacher.

We suggest that students take courses in plant and animal biology, microbiology, ecology, population biology, evolution, marine biology, genetics, and biochemistry. Courses in cellular and molecular biology are also advisable. After completion of BILD 1, 2, and 3, a suggested program of upper-division courses would be: BIBC 100 or 102, BICD 301, 320, 150, BIEB 120, 150, BIPN 106, SIO 275B (or BILD 82). This would give you as a prospective teacher the required breadth of education.

Integrated Bachelor’s/ Master’s Degree Program

An integrated program leading to a bachelor of science degree and a master of science degree in biology is offered to those undergraduate students who are enrolled in any of the major programs offered by the Division of Biology at UCSD. Qualified students are able to obtain the M.S. degree within one year following receipt of the B.S. degree. Students interested in applying to this program must meet with the BS/MS adviser in the Biology Student Affairs Office BEFORE the end of their junior year.
The program is open only to UCSD undergraduates. The Division of Biology does not have financial aid available for students enrolled in this program.

Eligibility and Enrollment

To be eligible, students must have completed the first two quarters of their junior year in residence at UCSD and must have an overall UC GPA of at least 3.0. Students’ major GPA should be at least 3.3. Students must demonstrate excellent performance in upper-division biology core courses during their undergraduate program to be eligible to enroll in biology graduate core courses.

It is the responsibility of the prospective B.S./M.S. student to select a faculty member (from the Division of Biology) who would be willing to serve as the student’s adviser and in whose laboratory the student would complete at least twenty-four units of research over a two-year period. The units of research which must be completed during the student’s senior undergraduate year, must be taken IN ADDITION to the requirements for the bachelor’s degree. These units will count toward the requirements for the master’s degree only. Students must complete six consecutive quarters of research to fulfill the research component of the program. Any deviation from this plan, such as a break in enrollment for one or more quarters, will be cause for the student to be dropped from the program.

Students who have been approved (by both the Division of Biology and the UCSD Office of Graduate Admissions) for the program must enroll in a Special Studies Course, BGGN 271, for each and every quarter of participation in the B.S./M.S. program. Students can obtain the appropriate course code and division stamp at the Biology Student Affairs Office.

Research work (BGGN 271) will be credited toward the B.S./M.S. program requirements only if it is completed during the time a student is officially enrolled at UCSD and has paid tuition for that quarter.

Requirements for the Master of Science Degree

1. Completion of six consecutive quarters of research during the senior undergraduate year and the graduate year.

2. Completion of at least thirty-six units of graduate course work (BGGN 200-level or higher, or approved via petition) graduate courses offered by related departments at a similar level) during the graduate year. The course of study must be approved by the faculty adviser.

3. Twelve of the thirty-six units must be in courses other than BGGN 271 (BGGN 297 and BGGN 299 may not be used to satisfy this requirement).

4. Serve as a graduate teaching assistant.

5. Maintenance of a grade-point average (both overall and in the major) of at least 3.0 for all course work, both cumulatively and for each quarter of enrollment in the B.S./M.S. program. If the student’s GPA falls below 3.0 (for either overall or in the major), he or she will be automatically dropped from the program.

6. Completion of a thesis, with an oral presentation to, and approval of, a three-member Thesis Committee. A student may have any regular faculty at UCSD or any adjunct faculty as their adviser and chair of their Thesis Committee. The Thesis Committee must contain at least two regular faculty from the Division of Biology and no more than one adjunct faculty can serve on the committee. If an adjunct faculty serves as chair of the Thesis Committee, then the biology members must serve as co-chair.

7. At least three complete, separate, and consecutive quarters of residency as a graduate student which will commence the quarter immediately following the quarter in which the B.S. degree is awarded. (Note: The summer session is not considered an official quarter during the graduate year.)

8. Students who have been approved for the B.S./M.S. program must provide the Office of Graduate Admissions with a copy of their official UCSD transcripts with the B.S. degree posted, PRIOR TO THE COMMENCEMENT OF THE GRADUATE YEAR IN THE PROGRAM.

Non-Degree Program

The Division of Biology will accept applicants into the non-degree program for a maximum of one year only. Qualified applicants must have at least a 3.0 GPA in their upper-division work to be accepted. Justification will not be made for those who fall below the GPA minimum.

Students who wish to apply to the UCSD biology Ph.D. program at a later date should not apply for this program. However, students who have applied to graduate or medical schools elsewhere, but have not yet been accepted, are welcome to apply.

Once accepted into this program, the student has graduate status for the academic year. Courses may be taken on the undergraduate or graduate level with consent of the instructor. Students will not be assigned faculty advisers and must make their own academic plans.

The Doctoral Program

Graduate studies for a Ph.D. degree in the Division of Biology in affiliation with the Salk Institute are oriented mainly toward the development of the capacity for independent research and for teaching in the biological sciences.

The requirements for entrance to graduate study in the Division of Biology are flexible, but a strong background in mathematics, chemistry, and physics is recommended.

Formal course work and opportunities for dissertation research include most basic areas of experimental biology, with emphasis in the general areas of biochemistry, biophysics, cell biology, developmental biology, genetics, immunology, molecular biology, neurobiology, plant molecular biology, ecology, behavior and evolution, virology, and cancer biology.

During the first year of graduate study, each student undertakes a research project in the laboratory of each of four to six different faculty members, and is expected to spend a major portion of his or her academic time on this project. The laboratories are selected by the student in consultation with the first year adviser to provide a broad view of the research interests of the division. The student is also expected to enroll in the first-year graduate biology sequence which includes advanced material in genetics, developmental biology, plant biology, neurobiology, molecular biology, cell biology, virology, and immunology.

The only other general course requirement for the Ph.D. is a minimum of twelve units of BGGN 500 (Apprentice Teaching in Biology). A program of further study, including seminars and courses appropriate to a student’s background and interests, is arranged through consultation between
the student and the faculty. Much reliance is placed on informal instruction through early and close association of the student with the faculty and research staff, and through regular seminars. After becoming familiar with the research activities of the faculty through the laboratory rotation program, the student begins work on a thesis research problem of his or her choice no later than the end of the first year. The student is free to choose for the thesis adviser a regular member of the UCSD faculty or an adjunct member of the Division of Biology faculty. The student is required to have completed a two-part examination in order to be admitted to candidacy for the Ph.D. degree. The purpose of the examinations is for the student to demonstrate competence in the field of major interest and in related fields of biology. The major remaining requirement for the Ph.D. degree is the satisfactory completion of a dissertation consisting of original research carried out under the guidance of a faculty member.

Close collaboration with members of the Department of Chemistry and Biochemistry is a vital and stimulating aspect of the biology program. Additional strength and breadth in biology are gained by collaborating with the Department of Marine Biology of the Scripps Institution of Oceanography, with the Scripps Research Institute, and with the Salk Institute for Biological Studies.

**Divisional Ph.D. Time Limit Policies**

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed seven years.

**Joint Doctoral Program with San Diego State University**

The Division of Biology at UCSD participates in a joint graduate program with the Department of Biology at SDSU, primarily in the areas of cell and molecular biology, and leading to the Ph.D. degree in biology. Graduate student participants in the joint doctoral program are required to spend one year enrolled at UCSD; thesis research is carried out under the supervision of the SDSU faculty.

Information regarding admission is found in the current edition of the San Diego State University Graduate Bulletin.

---

**COURSES**

**NOTE:** The division will endeavor to offer the courses as outlined below; however, unforeseen circumstances sometimes mandate a change of scheduled offerings, especially the quarter offered (F,W,S). Students are strongly advised to check the Schedule of Classes or with the division’s Student Affairs Office (1128 Pacific Hall, (858) 534-0557) before relying on the following schedule. This is of particular importance in planning schedules for graduation requirements. It is the student’s responsibility to contact the Student Affairs Office to determine the specific quarter that certain courses will be offered. The following schedule is tentative for the academic year 2000–2001 only. It should not be assumed that the same schedule will continue after this academic year.

Students who have satisfied the prerequisites for courses at another college or by AP credit need to be pre-authorized to register for the course. Please come to the Biology Student Affairs Office before your registration time to be authorized. If the class is full, please place your name on the waitlist and attend the first class meeting.

Students who do not attend the first thirty minutes of the first scheduled meeting (be it lab or lecture) will be considered not enrolled in the course. Prior written notification to the instructor regarding an anticipated absence will ensure a space. However, responsibility for officially dropping the lab from the registrar’s records belongs to the student.

**IF A STUDENT DROPS A LAB COURSE AFTER THE END OF THE SECOND SESSION, THE DEPARTMENT WILL REPORT A “W” FOR THE COURSE.**

---

**LOWER-DIVISION**

**BILD 1. The Cell** (4)
An introduction to cellular structure and function, to biological molecules, bioenergetics, to the genetics of both procaryotic and eucaryotic organisms, and to the elements of molecular biology. Three hours of lecture and one hour of recitation. Prerequisites: two quarters of general chemistry (second quarter of chemistry may be taken concurrently). (F,W,S)

**BILD 2. Multicellular Life** (4)
An introduction to the development and the physiological processes of plants and animals. Included are treatments of reproduction, nutrition, respiration, transport systems, regulation of the internal environment, the nervous system, and behavior. Three hours of lecture and one hour of recitation. Prerequisites: two quarters of general chemistry (Chem. 6A-B, second quarter of chemistry [Chem. 6B] may be taken concurrently). (F,W,S)

**BILD 3. Organismic and Evolutionary Biology** (4)
The first principles of evolutionary theory, classification, ecology, and behavior; a phylogenetic synopsis of the major groups of organisms from viruses to primates. Three hours of lecture and one hour of lab. Prerequisite: a full year of high school biology. Note: E.B.E. majors should complete this course during their first year at UCSD. (F,S)

**BILD 7. The Beginning of Life** (4)
An introduction to the basic principles of plant and animal development, emphasizing the similar strategies by which diverse organisms develop. Practical applications of developmental principles as well as ethical considerations arising from these technologies will be discussed. (S)

**BILD 10. Fundamental Concepts of Modern Biology** (4)
An introduction to the biochemistry and genetics of cells and organisms; illustrations are drawn from microbiology and human biology. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 10 after receiving credit for BILD 1. (F,W)

**BILD 12. Neurobiology and Behavior** (4)
An introduction to the organization and functions of the nervous system; topics include molecular, cellular, developmental, systems, and behavioral neurobiology. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major.

**BILD 14. Introduction to Plant Biology** (4)
Plant biology for non-majors with emphasis on human concerns. Plants as food for a growing population; plant growth, development and reproduction; the soil ecosystem; genetically engineered plants; organic farming; environmental concerns of agriculture. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 14 after receiving credit for BILD 120.

**BILD 16. History of Life** (4)
Life has a very long history on earth and this course will chronicle patterns of biological diversity from its origin over 3 billion years ago to the present day. Topics covered will include methods for reconstructing the history of life on this planet, the origin and evolution of major groups of plants and animals, dinosaur paleobiology, past environmental changes and their effects on species and communities, and extinctions. We will also explore how insights from the past can be used to understand how present and future environmental changes will impact biological diversity. This course is designed for non-biology majors. (W)

**BILD 20. Human Genetics in Modern Society** (4)
Fundamentals of human genetics and introduction to modern genetic technology such as gene cloning and DNA fingerprinting. Applications of these techniques, such as forensic genetics, genetic screening, and genetic engineering. Social impacts and ethical impli-
fillings of these applications. This course is designed for
non-biology students and does not satisfy a lower-di-
vision requirement for any biology major. Note: Students
may not receive credit for BILD 20 after receiving credit
for BICD 100. (S)

BILD 22. Human Nutrition (4)
A survey of our understanding of the basic chemistry
and biology of human nutrition; discussions of all
aspects of food: nutritional value, diet, nutritional dis-
eases, public health, and public policy. Three hours of
lecture and one hour of discussion. This course is
designed for non-biology students and does not satisfy
a lower-division requirement for any biology major.
Note: Students may not receive credit for BILD 22 after
receiving credit for BIBC 120. (S)

BILD 24. Biology of Human Reproduction (4)
The topics covered are: sexual development in embryo
and fetus, the nature and regulation of changes at
puberty, the functioning of the mature sexual system.
Three hours of lecture. This course is designed for non-
biology students and does not satisfy a lower-division
requirement for any biology major. Note: Students may
not receive credit for BILD 24 after receiving credit for
BICD 134. (W)

BILD 26. Human Physiology (4)
Introduction to the elements of human physiology and
the functioning of the various organ systems. The
course presents a broad, yet detailed, analysis of human
physiology, with particular emphasis towards under-
standing disease processes. Three hours of lecture and
one hour of discussion. This course is designed for non-
biology students and does not satisfy a lower-division
requirement for any biology major. (F)

BILD 30. Biomedicine/Microbes (4)
General principles of microbiology with emphasis on
the cell biology of microorganisms and of the cells with
which they interact in causing diseases of man and ani-
mals. A discussion of infection by bacteria fungi and
viruses, and host responses to infection. Three hours of
lecture and one hour of discussion. This course is designed for non-
biology students and does not satisfy a lower-division
requirement for any biology major. Note: Students may
not receive credit for BILD 30 after receiving credit for
BIMM 120. (W)

BILD 32. Biomedicine/Cancer (4)
An introduction to molecular, cellular, and immunologi-
cal aspects of cancer and a consideration of the socio-
logical and psychological impact of cancer on the
individual and general society. Three hours of lecture.
This course is designed for non-biology students and
does not satisfy a lower-division requirement for any
biology major. Note: Students may not receive credit for
BILD 32 after receiving credit for BIMM 134. (S)

BILD 36. AIDS Science and Society (4)
An introduction to all aspects of the AIDS epidemic.
Topics include the epidemiology, biology, and clinical
aspects of HIV infection; HIV testing; education and
approaches to therapy; and the social, political, and
legal impacts of AIDS on the individual and society. In
order to count for their major, biology majors must take
the upper-division course, BICD 136. (F)

BILD 90. Undergraduate Seminar (1)
This seminar is restricted to lower-division undergradu-
ate students (freshmen and sophomores). The course
introduces current biological topics. The topics vary
with the interests of the instructor and for each quarter.
Examples of topics which may be discussed are: wildlife conservation,
signalling within and between cells, mapping the
human genome, etc. This course does not satisfy any
requirement for the biology major, biology minor, or
college general/education. (F,W,S)

BILD 92. Professional Topics (1)
This seminar will introduce students to the various sub-
disciplines and their research methodology in the bio-
logical sciences. Emphasis will be on bioinformatics,
neurophysiology, and biotechnology. Current research
topics in the specialized areas in academia and industry
will be discussed. The role and professional identity of
biologists in research, consulting, government, man-
agement, and teaching will be reviewed. In addition, issues
surrounding professional ethics will be discussed.

BILD 95. Undergraduate Workshops (1)
The workshops will be restricted to lower-division
undergraduates. The course will introduce students to
the methods of scientific research and to a variety of
research topics in the biological/biomedical sciences.
Examples of topics are: Introduction to Scientific
Research, AIDS, Medical and Social Aspects, Is the Mind
the Same as the Brain, Wildlife Conservation. (F,W,S)

BILD 99. Horticulture and Animal Husbandry (4)
The practical and theoretical aspects of plant and ani-
mal propagation, maintenance, and behavior in a typi-
cal Southern California farm community. Animals to be
studied include bees, rabbits, sheep, goats, pigs, horses,
chickens, ducks, geese, and turkeys. Behavioral and
social aspects are emphasized. Plants to be studied
include a variety of fruit trees, bushes, and vegetables.
Emphasis is on propagation and culture conditions.
Each student chooses a principal project and area of
study. One hour of lecture and fourteen hours of farm
work, research and/or study per week. Oral reports and
final paper required.

UPPER-DIVISION

Biochemistry

BIBC 100. Structural Biochemistry (4)
The structure and function of biomolecules. Includes
protein conformation, dynamics, and function; enzym-
ic catalysis, enzyme kinetics, and allosteric regula-
tion; lipids and membranes; sugars and polysaccharides;
and nucleic acids. Three hours of lecture and one hour
of recitation. Prerequisites: two quarters of organic chem-
istry (second quarter may be taken concurrently). (Note:
Students may not receive credit for both BIBC 100 and
Chem. 114A.) (F,WS)

BIBC 102. Metabolic Biochemistry (4)
Energy-producing pathways–glycolysis, the TCA cycle,
oxidative phosphorylation, photosynthesis, and fatty
acid oxidation; and biosynthetic pathways–gluconeoo-
genesis, glycolgen synthesis, and fatty acid biosynthesis.
Nitrogen metabolism, urea cycle, amino acid metabo-
lish, nucleotide metabolism, and metabolism of
macromolecules. Three hours lecture and one hour
recitation. Prerequisites: two quarters of organic chem-
istry (second quarter may be taken concurrently). Note:
Students may not receive credit for both BIBC 102 and
Chem. 114B.) (F,WS)

BIBC 103. Biochemical Techniques (4)
Introductory laboratory course in current principles
and techniques to biochemical/molecular biological
research problems. Techniques include protein and
nucleic acid purification and identification methods
such as centrifugation, chromatography, and elec-
trophoresis. Techniques covered also include immuno-
ological, spectrophotometric, enzyme, and radioisotopes
techniques. Note: Students may not receive credit for
both BIBC 103 and Chem. 112A. (F,W,S)

BIBC 105. Signal Transduction Laboratory (6)
A laboratory course involving the application of molec-
ular, cellular, and biochemical techniques to explore sig-
nal transduction mechanisms in mammalian cells. The
events between ligand-biding to a cell surface receptor
and activation of gene transcription in the nucleus will
be studied. Prerequisites: BIBC 100, BIBC 103 and BIMM
100. (S)

BIBC 110. Physical Biochemistry (4)
The theory and applications of physical chemistry to
biological molecules, process and systems and tech-
niques used in biochemistry and physiology. Topics
include reversible and irreversible thermodynamics,
bioenergetics, energy coupling and transduction, solu-
tions of macromolecules, sedimentation, chromatogra-
phy, electrophoresis, passive and active membrane
transport, spectroscopy, and chemical kinetics. Three
hours of lecture and one hour of recitation. Pre-
requisites: calculus and organic chemistry. (S)

BIBC 115. Computer Programming in Biology (4)
Use of computer programming in the analysis and
presentation of biological data (computation of best
value and standard deviation, histogram, least squares
fitting procedure, simulation of genetic experiments,
etc.) Students learn the C++ computer language and
run their programs at the Computer Center. There are
some visits to laboratories and hospitals to see applica-
tions of computers in biology and medicine. Three
hours of lecture and about ten hours of homework per
week; limited enrollment. Prerequisite: upper-division
standing or consent of instructor. (Note: Students may
not receive credit for both BIBC 115 and Chem. 134.)

BIBC 116 Evolution of Genes and Proteins (4)
The history of an organism can be found in its genome.
Analyses of the primary sequences will be used to rec-
ognize families of genes that arose by duplication and
divergence. Topics include comparisons of amino acid
sequences and three dimensional structures and range
from the most conserved and most widely distributed pro-
tiens to modern mosaics. Where possible, specific motifs and
folds will be traced to their ancestral beginnings.
Prerequisites: BIBC 100, BIMM 100.

BIBC 120. Nutrition (4)
Emphasis is on the biochemical aspects of nutrition.
The known functions of vitamins, minerals, fats, carbo-
hydrates, and protein are discussed in terms of experi-
ments in nutrition and an evaluation of the relation of
the knowledge to nutrition in man. Three hours of lec-
ture. Prerequisite: BIBC 102 (may be taken concurrently).
(F)

BIBC 130 Marine Biochemistry (4)
Biochemical mechanisms of adaptation in organisms to
the marine environment. Special emphasis will be on
the effects of pressure, temperature, salinity, oxygen,
and light on the physiology and biochemistry.
Prerequisites: BIBC 102 or consent of instructor.

BIBC 153. Topics in Biophysics/Photobiology (4)
(Same as Chemistry 153 and Physics 153.)
Basic principles of photobiology and photochemistry.
Photochemical mechanisms in photosynthesis. Photo-
receptor pigment systems and photosynthetic control
mechanisms in living organisms. Prerequisite: upper-division standing in biology, chemistry or physics, or consent of instructor. (S)

**Genetics, Cellular and Developmental Biology of Plants and Animals**

**BICD 100. Genetics (4)**
An introduction to the principles of heredity in diploid organisms, fungi, bacteria, and viruses. Mendelian inheritance; population genetics; quantitative genetics; linkage; sex determination; meiotic behavior of chromosome aberrations, gene structure, regulation, and replication; genetic code. Three hours of lecture and one hour of recitation. Prerequisite: BILD 1 or the equivalent. (F,WS)

**BICD 101. Eucaryotic Genetics Laboratory (4)**
This course emphasizes the principles of Mendelian inheritance and requires the student to apply both cytological and genetic analysis to the solution of problems in transmission genetics. One hour of lecture and seven hours of laboratory. Prerequisite: BICD 100. Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (S)

**BICD 110. Cell Biology (4)**
The structure and function of cells and cell organelles, cell growth and division, motility, cell differentiation and specialization. Three hours of lecture and one hour of recitation. Prerequisites: BIBC 100 or BIBC 102, and BICD 100. (F,WS)

**BICD 111. Cell Biology Laboratory (4)**
A laboratory course in the application of cellular techniques to biological problems. The establishment, growth, transformation, immortalization, and senescence of mammalian cells will be studied at the molecular and the cellular level. Ten hours of laboratory. In addition to the formal lab hours listed above, there will be an average of two hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. Prerequisite: BICD 110 (may be taken concurrently); BIBC 103 is strongly recommended. (F) Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (S)

**BICD 120. Fundamentals of Plant Biology (4)**
An introduction to the biology of plants. Basic principles of plant anatomy, physiology, development, and diversity are covered as well as specialized topics, including plant genetic engineering, plant disease and stress, medicinal plants, plants and the environment, and sustainable agriculture. Prerequisites: BILD 1 and 2. (F)

**BICD 122. Plant Cellular and Molecular Biology (4)**
The cellular and molecular basis of plant development, including plant hormones, signal transduction mechanisms, light and plant growth, plant microorganism interaction, plant transformation, genetic engineering of plants. Prerequisite: BIBC 102 required. (W)

**BICD 123. Plant Molecular Genetics and Biotechnology Laboratory (6)**
Techniques in plant cell and tissue culture, plant transformation, genetic selection and screening of mutants, host pathogen interactions, gene regulation, organelle isolation, membrane transport. Two hours of lecture and eight hours of laboratory each week. In addition to the formal lab hours, there will be at least eight hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. Prerequisites: upper-division standing; BICD 120 strongly recommended. (S) Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (F)

**BICD 130. Embryos, Genes, and Development (4)**
Developmental biology of animals at the tissue, cellular, and molecular levels. Basic processes of embryogenesis in a variety of invertebrate and vertebrate organisms. Cellular and molecular mechanisms that underlie cell fate determination and cell differentiation. More advanced topics such as pattern formation and sex determination are discussed. Open to upper-division students only. Three hours of lecture and one hour of recitation. Prerequisites: BICD 100, upper-division standing, BIBC 100 or BIBC 102; BICD 110, BIMM 100 strongly recommended. (W)

**BICD 131. Embryology Laboratory (6)**
Descriptive and experimental embryology of marine invertebrates and of vertebrates. One and one-half hours of lecture and ten hours of laboratory each week. In addition to the formal lab hours, there will be at least six and a half hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. Prerequisites: BILD 1 and 2 or BIPN 100 or the equivalent. (F) Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (S)

**BICD 132. Molecular Basis of Development (4)**
Explores the molecular mechanisms that underlie cell fate determination and cell differentiation during animal development. Emphasizes the action of key regulatory networks in directing developmental events in a variety of vertebrate and invertebrate systems. This course is open to upper-division students only. Three hours of lecture and one hour of recitation. Prerequisites: BIMM 100, upper-division standing. (F)

**BICD 133. Developmental Biology Lab (6)**
Explore fundamentals of embryonic development using advanced techniques in light and fluorescent microscopy and by analyzing developmental mutants. Course includes selecting and knocking out genes of interest followed by phenotypic analyses. Invertebrate and vertebrate organisms covered. Prerequisites: BILD 1 and BILD 2 or BIPN 100, BIMM 100 and BIMM 110 are recommended. (W) Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (F)

**BICD 134. Human Reproduction and Development (4)**
This course is addressed to the development of the human sexual system, including gametogenesis, fertilization, and embryo implantation. Emphasis is placed on the physiology of reproductive functions. Three hours of lecture and one hour of discussion. Prerequisites: BIBC 102 and BICD 100. (F)

**BICD 136. AIDS Science and Society (4)**
An introduction to all aspects of the AIDS epidemic. Topics will include the epidemiology, biology, and clinical aspects of HIV infection, HIV testing, education and approaches to therapy, and the social, political, and legal impacts of AIDS on the individual and society. In order to count for their major, biology majors must take the upper-division course, BICD 136. Prerequisites: BILD 1, BILD 2 recommended. (F)

**BICD 140. Immunology (4)**
Formation and function of the mammalian immune system, molecular and cellular basis of the immune response, infectious diseases and autoimmunity. Prerequisites: BICD 100, BIMM 100, BIBC 100 recommended. (F)

**BICD 142. Topics in Immunology (4)**
This course covers selected topics in molecular and cellular immunology at a more advanced level, and is a sequel to Immunology (BICD 140). Prerequisites: BICD 140 and upper-division standing. (S)

**BICD 145 Laboratory in Molecular Medicine (4)**
This course focuses upon a molecular and immunological approach to study problems in modern medical research. The emphasis will be on novel approaches in medicine, including lymphocyte biology, cancer biology, and gene transfer. Prerequisites: BIBC 103, BIMM 100 (W) Attendance at the first lecture/lab is required. Nonattendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (S)

**BICD 150. Endocrinology (4)**
Topics are hormone biosynthesis, metabolism and mechanisms of action, neuroendocrinology, regulation of intermediary metabolism and body size, water and electrolyte, calcium and phosphate homeostasis. This course is restricted to upper-division students. Three hours of lecture and one hour of discussion. Prerequisite: BILD 1, BILD 2, BICD 100, BIPN 100 recommended. (F)

**BICD 162. Critical Reading and Writing in the Biological Sciences (2)**
Students will read primary literature in the field of cell transport and will be instructed how to approach a scientific paper, how to interpret results, and how to write a paper that summarizes scientific research. Prerequisites: Chem. 140A, 140B, 143A; either BIBC 100 or BIBC 102; BICD 100; either BICD 100 or BICD 110; plus one laboratory course (BIBC 103 or BIMM 101 or BIPN 105 or BIMM 121) or other example of research experience (BISP 199 or research experience in industry). Upper-division standing is required. (F)

**BICD 170. Topics in Human Genetics (4)**
An advanced course covering aspects of human genetics in detail and using papers from the scientific literature as the major source of information. A review of basic genetics as applied to the human species is followed by the consideration of recent genetic insights into a number of human conditions which illustrate the principles covered in the first part of the course. Prerequisites: BICD 100 (may not be taken concurrently), BIMM 100 is strongly recommended. (F)

**BICD 180. Genetics of Model Organisms (4)**
Survey of various organisms used in current biological biomedial research. Biology faculty experts discuss organisms used in their research, outline history as genetic models, tools used for laboratory study, and contributions to the wider understanding of biological systems. Prerequisite: BICD 100. (S)

**Ecology, Behavior, and Evolution**

**BIEB 100. Biometry (4)**
Application of statistics in biological problems. Topics: parametric statistics, t-test, correlation, regression,
ANOVA, non-parametric statistics resampling methods, experimental design. Mandatory homework to apply theory using statistical Macintosh-based programs. Instructor conducts mandatory two-hour discussion session in computer lab. Three hours of lecture and two hours of laboratory section. Prerequisite: BILD 3 recommended. (F/W)

BIEB 102. Introductory Ecology-Organisms and Habitat (4)
This course emphasizes principles shaping organisms, habitats, and ecosystems. Topics covered include population regulation, physiological ecology, competition, predation, and human exploitation. This will be an empirical look at general principles in ecology and conservation with emphasis on the unique organisms and habitats of California. Prerequisite: BILD 3 or equivalent.

BIEB 120. General Ecology (4)
A study of the factors affecting species' distributions and abundances, with a special emphasis on population dynamics. Three hours of lecture and one hour of section. Prerequisite: BIEB 100 (may be taken concurrently). (W)

BIEB 121. Ecology Laboratory (6)
A laboratory course to familiarize students with ecological problem solving and methods. Sections will use the Macintosh computer and also perform outdoor field work. Two hours of lecture and eight hours of laboratory each week. In addition to the formal lab hours, there will be at least nine hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. Prerequisites: BIEB 100 and 120. (BIEB 120 may be taken concurrently). (WS)

BIEB 126. Plant Ecology (4)
This course begins with an introduction to plant population biology including whole-plant growth and physiology. We then focus on three classes of ecological interactions: plant-plant competition, plant-herbivore coevolution, and plant reproductive ecology including animal pollination and seed dispersal. Prerequisite: BILD 3. (W)

BIEB 130. Introductory Marine Ecology (4)
An introduction to the marine environment—its physics and chemistry, the organisms which live there, and the ecological processes affecting the distributions and abundances of these organisms. Prerequisites: BILD 3, high school physics, and chemistry. (F)

BIEB 140. Biodiversity (4)
An introduction to the patterns of geographic distribution and natural history of plants and animals living in terrestrial and marine ecosystems. We will explore ecological and evolutionary processes responsible for generating and maintaining biological diversity; and the nature of extinction both in past and present ecosystem. Prerequisite: BILD 3. (S)

BIEB 150. Evolution (4)
Evolutionary processes are discussed in their genetic, historical, and ecological contexts. Microevolution, speciation, macroevolution, and the evolution of adaptations. Three hours of lecture and one hour of recitation. Prerequisite: BILD 3 or equivalent. (F)

BIEB 154. Molecular Evolution (4)
This course deals with the evolution of genes and the molecules they encode. The role of mutation, selection, and drift at the molecular level are discussed. Molecular phylogenies, jumping genes, viral evolution, and searches for molecular homologies are a few of the topics covered. Three hours of lecture and one hour of discussion. Prerequisites: BIBC 102, BICD 100, and BIMM 100 recommended.

BIEB 156. Population Genetics (4)
The first two-thirds of the course will cover the basic theory of population genetics, including selection, genetic drift, mutation, and migration. The last one-third of the course provides an introduction to quantitative genetics, including measurements of heritability and selection. The theory is illustrated throughout with biological examples. Prerequisite: BICD 100. BIEB 100 is recommended. (F)

BIEB 164. Behavioral Ecology (4)
A survey of the patterns of social behavior in animals and a discussion of the ecological principles underlying the evolution of animal societies. Three hours of lecture and one hour of discussion. Prerequisite: BILD 3 recommended. (W)

BIEB 165. Behavioral Ecology Laboratory (6)
This course will deal with quantitative methods for the study of animal social behaviors. Topics include spatial patterns, mating systems, and cooperation. The course includes both lab exercises and field trips. Two hours of lecture and eight hours of laboratory each week. In addition to the formal lab hours, there will be at least nine hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. Prerequisites: BIEB 100 and BIEB 164. (BIEB 164 may be taken concurrently). (S)

BIEB 166. Animal Communication (4)
An integrated approach to animal communication, including the physics and physiology of signals, optimal strategies for signalling and receiving, and the ecological and social contexts of signal evolution. Three hours of lecture and one hour of section. Prerequisite: BILD 3 recommended.

BIEB 167. Animal Communication Laboratory (6)
Laboratory exercises will introduce students to quantitative methods of visual, auditory, and olfactory signal analysis and to lab and field studies of animal signalling. Two hours of lecture and eight hours of laboratory each week. In addition to the formal lab hours, there will be at least nine hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. Prerequisites: BIEB 100 and BIEB 166. (BIEB 166 may be taken concurrently.)

BIEB 170. Field Ecology (4)
Designed to instruct and demonstrate to students the value and approaches of experimental field research using hypothetico-deductive experimental approach. May be taken only as part of the White Mountain Research Supercourse. Prerequisite: consent of instructor. For more information, consult http://www.wmrs.edu

BIEB 171. Physiological Ecology (4)
An examination of the functional means by which animals and plants cope with their environments, the physiological limits that determine the boundary conditions of various ecological niches. Unifying principles that describe the regulatory features of all animals and plants are emphasized. May be taken only as part of the White Mountain Research Supercourse. Prerequisite: consent of instructor. For more information, consult http://www.wmrs.edu

BIEB 172. Applied Conservation Biology (4)
Designed to introduce students to the complexities, and realities, of natural resource exploitation and preservation, emphasizing the trade-offs between economic benefits and ecosystem stability and sustainability. May be taken only as part of the White Mountain Research Supercourse. Prerequisite: consent of instructor. For more information, consult http://www.wmrs.edu

BIEB 176. Conservation and the Human Predicament (4)
(Cross-listed with ANTH/BIO 132; however, biology majors must take the course as Biology 176.) An interdisciplinary discussion of the human predicament, the biodiversity crisis, and the importance of biological and environmental conservation in sustaining future societies. We explore the consequences of habitat destruction and species extinctions on the biosphere and human welfare. Three hours of lecture and one hour of discussion. Prerequisite: upper-division standing and BILD 3 or consent of instructor. (S)

BIEB 178. Principles of Conservation Ecology (4)
Biodiversity will ultimately be preserved in “islands” of natural habitat. The principles of community ecology, island biogeography, and metapopulation dynamics will underlay the management decisions regarding the number, size, and locations of such reserves. Case studies are emphasized. Prerequisite: BIEB 120. (S)

BIEB 179. Conservation Biology Laboratory (6)
Students will utilize, modify, and create computer software to solve conservation biology management problems. Topics included are pedigree analysis, stochastic population dynamics, community structure, and island biogeography. Two hours of lecture and eight hours of laboratory each week. In addition to the formal lab hours, there will be at least seven hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. Prerequisite: BIEB 178 or BIEB 180 (may be taken concurrently).

BIEB 180. Principle of Conservation Genetics (4)
Species preservation depends on the maintenance of genetic diversity, which involves many aspects of population behavior. Inbreeding, heterozygosity loss, genetic divergence, and pedigree analysis are emphasized. Case studies involve zoo and reserve management. (S)

Molecular Biology, Microbiology

BIMM 100. Molecular Biology (4)
Molecular basis of biological processes, emphasizing gene action in context of entire genome. Chromosomes and DNA metabolism: chromatin, DNA replication, repair, mutation, recombination, transposition. Transcription, protein synthesis, regulation of gene activity. Procaryotes and eucaryotes. Prerequisites: BIBC 100 or BIBC 102, BICD 100. (Note: Students may not receive credit for both BIMM 100 and Chem. 114C.)

BIMM 101. Recombinant DNA Techniques (4)
Theory and practice of DNA cloning. This course aims at providing practical knowledge in the field of genetic engineering. Techniques covered include construction of plasmid and phage DNA libraries, screening libraries for desired DNA clones by hybridization methods, plasmid and phage DNA preparation, and DNA sequencing. Two hours of lecture, one hour of discussion, and eight hours of laboratory. Prerequisite: BIMM 100. Attendance at the first lecture/lab is required. Non-attendance will
result in the student’s being dropped from the course roster. It is the student’s responsibility to officially drop the course. **Note:** Students may not receive credit for both BIMM 101 and Chem. 112B. (F, W, S)

**BIMM 103. Modern Techniques in Molecular Biology (4)** This course focuses upon a combined biochemical and molecular genetic approach to study current biological problems. Techniques include amplification of rare nucleic acids with the polymerase chain reaction, purification and characterization of a eukaryotic protein expressed in bacteria, in vitro mutagenesis of DNA. One hour of lecture and eleven hours of laboratory. Prerequisites: BIBC 103, BIMM 100. Attendance at the first lecture/lab is required. Non-attendance will result in the student’s being dropped from the course roster. It is the student’s responsibility to officially drop the course. (W)

**BIMM 110. Molecular Basis of Disease (4)** An examination of the molecular basis of human diseases. Course emphasizes inherited human disorders, and some important diseases caused by viruses. Focus on the application of genetic, biochemical, and molecular biological principles to an understanding of the diseases. Three hours of lecture. Course restricted to upper-division biology majors. Prerequisites: BIMM 100 and BICD 100. (S)

**BIMM 112. Regulation of Gene Activity in Eucaryotic Cells (4)** This course explores problems in the regulation of gene activity in eucaryotic cells approached at the molecular level. The course includes the organization, structure, transcription, and regulation of eucaryotic genes; mechanism of hormonal regulation in controlling gene activity; induction of gene expression in eucaryotic cells; role of signal transduction in controlling gene expression; and regulation of gene activity during differentiation in developing systems. Examples are taken from eucaryotic microorganisms, invertebrates, as well as mammalian and other vertebrate systems. Three hours of lecture and one hour of discussion. Prerequisites: BIMM 100. (S)

**BIMM 114. Virology (4)** An introduction to eucaryotic virology, with emphasis on animal virus systems. Topics discussed include the molecular structure of viruses; the multiplication strategy of different viruses; major virus families; viral latency, persistence, and oncology. Three hours of lecture and one hour of discussion. Prerequisites: BIMM 100. (S)

**BIMM 120. Bacteriology (4)** A discussion of the structure, growth, molecular genetics, and physiology of prokaryotic microorganisms, with emphasis on the diverse activities of bacteria and on the interaction of various bacterial species with their environment. Three hours of lecture and one hour of recitation. Prerequisites: organic chemistry; BIBC 100 or BIBC 102 (may be taken concurrently). (F, W)

**BIMM 121. Laboratory in Microbiology (4)** This course emphasizes fundamental principles of microbiology. Studies with bacteria include comparative morphology and physiology; pure culture techniques; bacterial growth; spore germination; and bacteriophage infection, replication, and release. Additional studies on antibiotics and the use of bioassays are included. One hour of demonstration and seven hours of laboratory. Prerequisites: BIMM 120, may be taken concurrently, and consent of instructor. Attendance at the first lecture/lab is required. Nonattendance will result in the student’s being dropped from the course roster. It is the student’s responsibility to officially drop the course at the Registrar’s Office. (F, W, S)

**BIMM 122. Microbial Genetics (4)** Organization and function of prokaryotic genetic systems; lecturing, sexual factors, transduction, transformation, phage genetics, transposons, genetic engineering. Three hours of lecture. Prerequisites: BIMM 100, BICD 100, or consent of instructor. (W)

**BIMM 124. Medical Microbiology (4)** This course covers basic principles and detailed aspects of microbial infectious diseases. Biochemical properties underlying microbial spread, host antimicrobial and inflammatory response, immunity, and recovery are emphasized. Emphasis is placed upon viral and bacterial diseases, including molecular principles of pathogenesis, host immune responses, of drug resistance, and of viral and plasmid replication. Three hours of lecture and one hour of discussion. Prerequisites: BIMM 100 and 120, BICD 140 is recommended. (S)

**BIMM 126. Environmental Microbiology (4)** The role of microorganisms in environmental processes; fundamental aspects of Microbiology, interaction of microbes with plants, animals and other microbes, biogeochemical cycles, pollution, water quality, mineral recovery, biomass energy production, microbial control of pest and disease, genetic exchange. Prerequisites: BIBC 102 (may be taken concurrently), and BIMM 120 recommended or consent of instructor. (W)

**BIMM 127. Environmental Microbiology Laboratory (4)** This course emphasizes advanced techniques and theory in environmental microbiology. Students will perform experiments concerning: (a) enrichment of diverse microbes, (b) microbial enumeration and identification, (c) metabolic and physiochemical adaptations, and (d) biotechnology, along with an independent project. Prerequisites: consent of instructor. (S)

**BIMM 130. Microbial Physiology (4)** Prokaryotic microbial physiology will be discussed primarily from a biochemical standpoint with emphasis on mechanism. Topics will vary from year to year but will include the following themes: Central metabolism, bioenergetics, biosynthesis, regulation, differentiation, prokaryotic structure-function relationships. Prerequisites: BIBC 100 or BIBC 102 or equivalent. (S)

**BIMM 132. Molecular Biology of Human Retroviruses (3)** Replication cycle and gene regulation of HIV. Molecular approaches to therapy and vaccines. Three hours of lecture. Prerequisite: BIMM 100. (S)

**BIMM 134. Biology of Cancer (4)** This course covers basic processes of transformation and tumor formation in a two-part format. The first section is focused on molecular and cellular mechanisms of carcinogenesis. The second section discusses tumor pathology and metastasis. Open to upper-division students only. Prerequisites: BICD 110 and BIMM 100. (S)

**BIMM 140. Introduction to Bioinformatics (4)** Introduction to basic methods used in bioinformatics and computational biology. Survey of methods used in computational analysis of DNA such as sequence assembly, sequence comparison, gene modeling, and sequence databases. Survey methods used in the computational analysis of protein sequences such as alignments, motif and pattern recognition, family classification, and protein structure prediction. Survey of organismic database methods. Emphasis is on a broad survey of current approaches with an introduction to statistical and computational techniques for analyzing, comparing, and validating methods. Prerequisites: BIBC 100 or 102, BIMM 100, and BICD 100. (BIMM 100 may be taken concurrently) (S)

**BIMM 141. Bioinformatics Laboratory (4)** Laboratory course giving hands-on exposure to topics covered in BIMM 140. Survey of methods used in computational analysis of DNA such as sequence assembly, sequence comparison, gene modeling, and sequence databases. Survey of methods used in the computational analysis of protein sequences such as alignments, motif and pattern recognition, family classification, and protein structure prediction. Prerequisites: BIBC 100 or 102, BIMM 100, BICD 100, and BIMM 140. (S)

**BIMM 142. Advanced Bioinformatics (4)** Continuation of BIMM 140 emphasizing advanced topics in bioinformatics and computational biology. Emphasis is on computational approaches at the level needed to design and implement new approaches. Topics: computational and statistical approaches to computational biology including probabilistic models, machine learning approaches, and using federated resources to develop integrated approaches to bioinformatics problems. Prerequisites: BIBC 100 or 102, BIMM 100, BICD 100, and BIMM 140.

**BIMM 150. Post-Genomics Biology (2)** This course will focus on large-scale analysis of post-genomics biological systems. Students will be introduced to methods for analyzing changes in gene expression, identifying protein-protein interactions, screening for pathway inhibitors, characterizing multiprotein complexes, and probing protein localization and function. Prerequisites: BIMM 100, BICD 100.

**Animal Physiology and Neuroscience**

**BIPN 100. Mammalian Physiology I (4)** This course introduces the concepts of physiological regulation, controlled and integrated by the nervous and endocrine systems. It then examines the muscular, cardiovascular, and renal systems in detail and considers their control through the interaction of nervous activity and hormones. Three hours of lecture and one hour of discussion. Prerequisites: BILD 1, 2, and BIBC 100 or 102. (F, W, S)

**BIPN 102. Mammalian Physiology II (4)** This course completes a survey of organ systems begun in BIPN 100, by considering the respiratory and gastrointestinal systems. Consideration is then given to interactions of these systems in weight and temperature regulation, exercise physiology, stress, and pregnancy and reproduction. Three hours of lecture and one hour of section per week. Prerequisite: BILD 2. (F, W, S)

**BIPN 105. Animal Physiology Lab (6)** Experiments are performed on membrane physiology; nerve muscle function; cardiovascular physiology; respiratory, gastrointestinal and renal physiology. Subjects include experimental animals and humans. Prerequisite: BIPN 100. (Students who have received credit for Biol. 152 or 154 may not receive credit for BIPN 105.) Three hours of lecture and ten hours of laboratory each week. In addition to the formal lab hours, there will be at least eight hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. Attendance at the first lecture/lab is required. Non-attendance will result in the
student's being dropped from the course roster. It is the student’s responsibility to officially drop the course. (F,W,S)

BISP 106. Comparative Physiology (4)
This course examines the physiological adaptation of animals, invertebrates and vertebrates, to their particular environmental and behavioral niches. Structural, functional, and molecular adaptations of the basic organ systems are discussed. Prerequisites: BILD 2, Chem, 6A-B-C or Chem 7A-B-C. BILD 3 is recommended. (F)

BISP 140. Cellular Neurobiology (4)
This course covers the biophysics of the resting and active membranes of nerve cells. It also covers the mechanisms of sensory transduction and neuromodulation, as well as the molecular basis of nerve cell function. Prerequisites: BILD 1, 2; BIBC 100 or 102 recommended. (F)

BISP 142. Systems Neurobiology (4)
This course covers integrated networks of nerve cells, including simple circuits like those involved in spinal reflexes. We will study how information and motor output is integrated and processed in the brain. We will also discuss higher-level neural processing. Prerequisites: BILD 1, 2, and BIBC 100 or 102. (W)

BISP 145. Neurobiology Laboratory (4)
Basic principles of nerve and muscle physiology will be taught through weekly exercises and individual projects. One hour of lecture and nine hours of laboratory each week. Prerequisite: BISP 140 or BISP 142 or BISP 146 (may be taken concurrently). (F)

BISP 146. Computational Neurobiology (4)
An exploration of computational brain models, including biophysical models of single neurons, small neural circuits, and larger scale network models. Prerequisite: BILD 12 or BISP 140 or Psych. 106 or Cog. Sci. 107 recommended. (S)

Special Courses

BISP 190. Advanced Biology Seminars for Seniors (2)
Experts in diverse areas of biology from major universities in the U.S. and abroad will describe current research activities being conducted in their laboratories. Relevant readings will be assigned. P/NP grades only. Prerequisites: seniors only; concurrent enrollment in BISP 199 or consent of instructor. (F,W,S)

BISP 195. Introduction to Teaching in Biology (4)
Introduction to the teaching of the basic course in biology. A student under the direction of the instructor of the course is assigned one class section and will meet one time per week with the section. A student is required to attend the course lecture and meet with the instructor of the course at least one time per week. Limited to upper-division students who have a B average or higher. Three hours’ lecture. (P/NP grades only). Prerequisites: consent of instructor and approval of department chair. (Note: Applications for a BISP 195 are to be submitted to the Division of Biology by the end of the sixth week of the quarter preceding the quarter in which the BISP 195 will be completed.) (F,W,S) This course may be counted as one of the upper-division electives for a biology major.

BISP 196. Honors Thesis in Biology (4)
Senior thesis research program. Research is conducted under the supervision of a biology faculty member. This one-year program is taken in addition to the major requirements for graduation. Upon satisfactory completion of the program, students will receive "Distinction in Biology" on their transcripts. Prerequisites: senior standing, 3.7 GPA or above; prior selection for the program by a faculty member and approval by program coordinator. A department stamp will be used to monitor during registration. (F,W,S)

BISP 197. Biology Internship Program (4)
Under the joint supervision of a biology faculty adviser and a selected industry mentor, the student will conduct independent research on a problem in an industrial biotech laboratory. The student will gain insight into industry research and practical biotech experience. Prerequisites: BIBC 103 or BIMM 101, BIBC 102, BICD 100, BIMM 100, overall GPA 3.0, and consent of the biology faculty coordinator.

BISP 199. Independent Study for Undergraduates (4)
Independent reading or research on a problem by special arrangement with a faculty member. (P/NP grades only.) Prerequisites: overall UCSD GPA of at least 3.0, minimum of ninety units, consent of instructor, and approval by division chair. (Note: Applications for a BISP 199 must be submitted to, and approved by, the Division of Biology prior to the eighth week of the quarter preceding the quarter in which the BISP 199 will be completed.) (F,W,S) This course may be counted as one of the upper-division electives for a biology major, providing that no other special studies courses have already been counted toward the major.

GRADUATE

BGGN 204. Topics in Community and Population Ecology (3)
This course teaches a different topic each quarter on the theoretical or conceptual side of community and population ecology. Students will read materials in depth, attend weekly discussions, and explore theories and models with statistical, analytical, and algorithmic tools of the trade. Prerequisite: graduate standing or consent of instructor. (S/U grades only) (Quarter offered varies and course is not offered every year.)

BGGN 206. Topics in Biophysics and Physical Biochemistry (4)
Selection of topics of current interest. Examples: primary processes of photosynthesis; membrane biophysics; applications of physical methods to problems in biology and chemistry, e.g., magnetic resonance, X-ray diffraction, fluctuation spectroscopy, optical techniques (fluorescence, optical rotary dispersion, circular dichroism). Topics may vary from year to year. Prerequisite: consent of instructor. (S/U grades permitted.) This course is cross-listed with Physics 206 and Chemistry 206. (W)

BGGN 211. Special Topics in Microbiology (3)
Recent developments in prokaryotic and eukaryotic microbial research. Topics vary from year to year but may include the following subjects: the molecular basis of (a) sex determination, expression, and interconversion; (b) differentiation, morphogenesis, and programmed death; (c) transcriptional and metabolic regulation; and (d) chemical macromolecular and energy-mediated reception, transmission, and response processes. The main thesis of the course is that examples of complex regulatory phenomena in higher organisms can be found in single celled organisms. This course is open to enrollment by undergraduates. Prerequisites: BIBC 102 and BICD 100. (S/U grades permitted.)

BGGN 219. Classic Papers in Genetics (3)
The course explores, through classic papers, how genetic approaches in the distant and near past have opened up novel areas of biology. The goal of the course is to teach students the type of approach that allowed these researchers to break out of old paradigms and form new ones of their own based on genetic pathfinding. (W)

BGGN 220. Advanced Molecular Biology (6)
Provides a broad, advanced-level coverage of modern molecular biology for first-year graduate students. Topics include prokaryotic and eukaryotic gene structure and regulation, chromatin structure, DNA replication, translation, mechanisms of transcription, and an introduction to viruses. OPEN ONLY TO STUDENTS ENROLLED IN A GRADUATE DEGREE PROGRAM. (Letter grades only.) (F)

BGGN 221. Advanced Protein Biochemistry (3)
Topics include general aspects of protein structure and biochemical approaches to the isolation and study of proteins. This course also covers the relationship between the structure and function of selected proteins. Detailed discussion of modern biophysical methods to study protein-protein interactions will be included. BGGN 221 is a co-requisite. OPEN ONLY TO STU- DENTS ENROLLED IN A GRADUATE DEGREE PROGRAM. (Letter grades only.) Corequisite: BGGN 220. (F)

BGGN 222. Advanced Cell Biology (6)
A coverage of modern cell biology for first-year graduate students. There is an up-to-date discussion of topics such as: structure and function of membranes; ion pumps, ion channels, transmembrane signalling; receptor-mediated endocytosis; protein targeting; the role of RER and Golgi apparatus; the biosynthesis of intracellular organelles in animal and plant cells; the cytoskele-
The course is similar in content to BICD 140 but is restricted to students enrolled in a graduate degree program. (Letter grades only.) (W)

BGGN 229. Advanced Oncogenes (3)
This course provides detailed coverage of the cellular and molecular basis of cellular transformation and oncogenesis. There will be extensive discussion on the role of oncogenes and their cellular counterparts. The course also provides in-depth analysis of intracellular signal transduction mechanisms. Prerequisites: BGGN 220, 221, and 222. (Letter grades only.) (S)

BGGN 230. Signal Transduction (3)
The course will introduce students to a variety of signal transduction pathways and their function in the regulation of cellular processes. Special emphasis will be given to signaling cascades regulating immunological responses and alterations of signaling pathways during oncogenesis. (W)

BGGN 232. Human Retrovirology (3)
This course consists of both lectures and journal reviews on replication, genetic regulation and pathogenesis of HIV and TLV, and on recent developments of vaccine and therapy against AIDS. Open to upper-division students with consent of instructor. Prerequisite: BIMM 100 or equivalent. (S/U grades only) (S)

BGGN 233. Cellular Immunology (3)
This course covers the molecular and cellular events in the humoral and cellular response to antigen, transplantation biology, the structure and function of the major histocompatibility gene complex, the T-cell receptor, lymphokines, and the induction of immunological tolerance. It serves as the second course in a two-part sequence. May be taken by undergraduates who have taken Part 1 (BICD 140) and by graduate students (S/U grades only). (Quarter offered varies and course is not offered every year.)

BGGN 235. Biology and Biochemistry of Cancer Cells (2)
This course covers recent advances in cell biology, biochemistry, immunology, and virology as they relate to cancer cells and their interaction with the host. Cancer research specialists from outside will be brought in to discuss the most recent evidence and interpretations in key areas of cancer research. This course meets two hours per week for lecture and discussion. It will be an advanced graduate level but open to a limited number of seniors (with permission of instructor) on a P/NP basis. (S/U grades only) (Quarter offered varies, and course is not offered every year.)

BGGN 236. Essentials of Glycobiology (2)
Molecular glycobiology encompasses studies of the structure, biosynthesis, and biological roles of oligosaccharide units on glycoconjugates. This course provides an overview of this rapidly evolving field with an emphasis on the glycoconjugates of eukaryotic organisms in the animal kingdom. (S/U grades only.) (S) This course is cross-listed with Medicine 222.

BGGN 240. Cellular Neurobiology (2)
Students read classic and modern papers that form the basis of the undergraduate lectures (BIPN 240), which they are encouraged to attend. These papers are presented by the students at weekly discussion sessions. Prerequisite: consent of instructor. (S/U grades only.) (F)

BGGN 241. Neurobiology Seminar (3)
Presentation of current research by local and visiting neurobiologists. (S/U grades only.) (F,W,S)

BGGN 242. Systems Neurobiology (2)
Students read classic and modern papers that form the basis of the undergraduate lectures (BIPN 142), which they are encouraged to attend. These papers are presented by the students at weekly discussion sessions. Prerequisite: consent of instructor. (S/U grades only.) (S)

BGGN 244. Molecular/Developmental Neurobiology (2)
Students read classic and modern papers that form the basis of the undergraduate lectures (BIPN 144), which they are encouraged to attend. These papers are presented by the students at weekly discussion sessions. Prerequisite: consent of instructor. (S/U grades only.) (S)

BGGN 246. Systems Neurophysiology (3)
Ways in which neurons are assembled into circuits to achieve perception and patterned movement. (S/U grades only) (S)

BGGN 249-A-C. Basic Neuroscience (4-4-4)
These courses are designed for graduate students in the neurosciences and other departments that are part of the interdisciplinary program (i.e., Biology, Cog. Sci.). These courses have been designed to cover as much basic neuroscience as possible in three quarters of study. They will combine two three-hour meetings each week with a 1.5 hour lecture and a 1.5 hour discussion of papers. These are required courses for all first-year neurosciences graduate students. Prerequisite: graduate student or consent of instructor. (F,W,S)

BGGN 251. Molecular Biology (3)
The first section of this course consists of a review of fundamental concepts in molecular biology together with an in-depth analysis of molecular biological topics of medical importance. The second section covers the structure, genetics, and multiplication of animal viruses, with particular emphasis on the DNA and RNA tumor viruses. Other subjects discussed include viral persistence, latency, and approaches to viral chemotherapy. Three hours of lecture. Prerequisite: biochemistry. (Not open to undergraduates.) (S/U grades only) (F)

BGGN 252. Genetics (3)
Human genetics, with emphasis on basic principles. Topics covered include chromosome abnormalities, the mechanisms of dominant and recessive diseases, pedigree analysis, ascertainment of linkage, the interaction of genotype with diseases. Mechanisms of maintaining genetic diversity in human populations will be discussed along with recent approaches to genetic counseling and intervention. Prerequisite: consent of instructor. (Not open to undergraduates.) (S/U grades only) (F)

BGGN 253. Immunology (3)
Graduate students will explore topics in specialized areas of immunology and cellular immunology, antigenic and molecular structure of immunoglobulin molecules; antigenantibody interactions; cellular events in the humoral and cellular immune responses; translation immunology. Prerequisite: consent of instructor. The course is similar in content to BICD 140 but is accelerated in pace. (S/U grades permitted.) This course is cross-listed with Chemistry 217. (F)

BGGN 254. Cell and Membrane Physiology (3)
This course is a survey covering current subjects in mammalian physiology relevant to medicine. Subjects are: 1) membrane isolation, composition, and structure; 2) consequences of membrane fluidity (mode of action of anesthetics, intercellular communication, eicosanoid and endo-cytosis biogenesis); 3) sensory perception and response (chemo- and energy-reception, cellular neurophysiology, muscle physiology); 4) regulation of membrane function (hormone reception, intercellular adhesion, neoplastic transformation). Prerequisites: biochemistry and genetics. (S/U grades only)
BGHN 255. Clinical Correlates (2)
Clinical correlates stress the close tie between clinical medicine and basic science and the two-way interactions among practicing doctors and research scientists. Most sessions start with the presentation of a clinical case by an attending practitioner and an analysis by the clinician of the basic principles demonstrated by each case. There will follow an extended period of open discussion between basic scientists, clinicians, and students. Prerequisites: graduate students only, BGHN 251, 252, 253, 254 to be taken simultaneously. (S/U grades only.) This course is cross-listed with Chemistry 277. (F)

BGHN 271. Advanced Experimental Methods in Biology (4-12)
Advanced laboratory and/or field experience in contemporary biological methodology. Open only to students enrolled in the integrated Bachelor's/Master's Degree Program. Prerequisites: consent of instructor and approval of division chair. (F, W, S) (Undergraduate students: P/NP only. Graduate students: letter grades only.)

BGHN 297. Research Conference (1-3)
Group and individual discussion of research activities and of current literature. Prerequisite: graduate standing. (S/U grades only) (F, W, S)

BGHN 298. Laboratory Projects in Biology (3-12)
An introduction to contemporary laboratory techniques and research interests through independent, original projects under the direction of individual faculty members. Prerequisite: consent of instructor. (Letter grades only) (F, W, S)

BGHN 299. Thesis Research in Biology (1-12)
(F, W, S)

BGHN 500. Apprentice Teaching (4)
This course involves participation in upper-division undergraduate teaching at the level of assuming responsibility for recitation sections or laboratories under the supervision of the responsible faculty member. Some experience in lecturing to upper-division classes will occasionally be provided. (S/U grades only.) (F, W, S)

BGJC 201. Journal Club in Cell Biology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F, W, S)

BGJC 202. Journal Club in Developmental Biology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (Quarter offered is varies, and course is not offered every year.)

BGJC 203. Journal Club in HIV Molecular Biology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only) (F, W, S)

BGJC 204. Journal Club in Molecular and Cellular Immunology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F, W, S)

BGJC 205. Journal Club in Cellular Immunology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F, W, S)

BGJC 206. Journal Club in Microbial Physiology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F, W, S)

BGJC 207. Journal Club in Neurobiology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (S)

BGJC 208. Journal Club in Plant Molecular Biology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F, W, S)

BGJC 209. Journal Club in Molecular and Cellular Regulation in Biology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F, W, S)

BGJC 210. Journal Club in Cell Cycle Regulation (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F, W, S)

BGJC 211. Journal Club in Molecular Immunology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F, W, S)

BGJC 212. Journal Club in Genetics (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F, W, S)

BGJC 204. Research Discussion in Development of Dictyostelium (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 204. Molecular Biology of the Cell (1)
Research reports and discussions based on recent experimental results in cell biology, oncogenesis, genetics, molecular biology and development. Students are expected to present and discuss their own new data and the recent data of others. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 205. Research Discussion in Plant Membrane Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 206. Research Discussion in Metals in Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 207. Research Discussion in Neuronal Pattern Generation (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 208. Research Discussion in Mammalian Molecular Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 209. Research Discussion in AIDS (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 210. Research Discussion in Virology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 211. Research Discussion in Developmental Cellular Neurobiology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)
BGRD 212. Research Discussion in Behavior and Development of Simple Nervous Systems (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 213. Research Discussion in Golgi Structure and Function (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 214. Research Discussion in Development and Function of the Immune System (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 215. Research Discussion in Lymphocyte Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 216. Research Discussion in Molecular and Cell Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 217. Research Discussion in Plant Membranes and Organelles (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 218. Research Discussion in Plant Molecular Genetics (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 219. Research Discussion in Molecular Biophysics (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 220. Research Discussion in Advanced Evolutionary Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 221. Research Discussion in Behavioral Ecology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 222. Research Discussion in Evolutionary Molecular Ecology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 223. Research Discussion in Ecology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 224. Research Discussion in Plant Population Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 225. Research Discussion in Genetic Variation (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 226. Research Discussion in Conservation Genetics (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 227. Research Discussion in Intracellular Signalling (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 228. Research Discussion in Drosophila Developmental Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 229. Research Discussion in Drosophila Neurobiology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 230. Research Discussion in Cell Signalling Pathways (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 231. Research Discussion in Nuclear Transport and Function (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 232. Research Discussion in Chromatin and Transcription Regulation (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 233. Research Discussion in Cell Cycle Motility (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGRD 234. Research Discussion in Cell Signalling in Drosophila (3)
Presentation of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

BGSE 200. Seminar in Biology (1)
Invited speakers from the U.S. and abroad, who are leaders in various aspects of biological research, describe their current research. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F,W,S)

BGSE 201. Seminar in Molecular Biology (1)
Invited speakers from the U.S. and abroad, who are leaders in various aspects of biological research, describe their current research. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F,W,S)

BGSE 202. Seminar in Immunology (1)
Invited speakers from the U.S. and abroad, who are leaders in various aspects of biological research,
describe their current research. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F,W,S)

**BGSE 203. Seminar in Population Biology** (1)
Invited speakers from the U.S. and abroad, who are leaders in various aspects of biological research, describe their current research. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.)

**BGSE 204. Seminar in Developmental Genetics** (1)
Invited speakers from the U.S. and abroad, who are leaders in various aspects of biological research, describe their current research. Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199. (S/U grades only.) (F,W,S)

**BGSE 205. Graduate Research Seminar** (1)
Discussions of recent research in various aspects of biological research conducted by third- and fourth-year doctoral students in the Division of Biology. (S/U grades only.) (F,W,S)
