Environmental Systems

Office: 188 Galbraith Hall, Revelle College

Program Faculty

Mark H. Thiemens, Professor, Chemistry and Biochemistry, Program Director
Jane Teranes, Associate Director
Donna Blackman, Associate Researcher, SIO
Ronald S. Burton, Professor, Marine Biology, SIO
Richard T. Carson, Professor, Economics
Colm P. Caulfield, Assistant Professor
Christopher D. Charles, Professor, Oceanography, SIO
Clark Gibson, Associate Professor, Political Science
Sarah T. Gille, Assistant Professor, MAE
Mryl C. Hendershott, Professor, Oceanography, SIO
William S. Hodgkiss, Professor, Electrical Engineering, SIO
Joshua R. Kohn, Associate Professor, Biology
Paul Linden, Professor, MAE
T. Guy Masters, Professor, Geophysics, SIO
Naomi Oreskes, Associate Professor, History
Brian Palenik, Associate Professor, Marine Biology, SIO
Keith Pezzoli, Lecturer, Urban Studies and Planning
Frank L. Powell, Professor, Medicine/Director, White Mountain Research Station
Jeffrey B. Remmel, Professor, Mathematics
Richard C. J. Somerville, Professor, Meteorology, SIO
Lisa Tauxe, Professor, Geosciences, SIO
Jeffrey R. Vincent, Professor, Environmental Economics

There can be little doubt that in the twenty-first century the global human community is facing a substantial growth in the environmental consequences of providing food, energy, materials, and basic services to a population of more than six billion inhabitants. The Environmental Systems Program recognizes the growing demand for environmental specialists and is designed to prepare undergraduates to enter a broad spectrum of environmental careers and graduate programs in, for example, the natural sciences, the social sciences, public policy, law, and business.

This interdisciplinary program recognizes that local, national, regional, international, and global environmental problems do not fit neatly into traditional academic departments. A measurable part of society’s inability to effectively manage complex environmental problems stems from the lack of specialists who can apply analytical tools that cross disciplinary boundaries. Many environmental specialists possess little training in the natural sciences including both the fundamental ideas and methodologies of the earth and environmental sciences. The environmental systems major was created to address both of these shortcomings.

To encourage and foster an interdisciplinary focus in the major, the Environmental Systems Program is supported by a wide range of UCSD faculty representing the natural sciences, the social sciences, the humanities, engineering, and medicine. The program includes a required lower-division core, an upper-division “integrating course sequence,” two other upper-division courses and statistics, an advanced track, and a senior integrative project and seminar. There is a strong emphasis on a rigorous natural science foundation as well as an introduction to the policy sciences for all students enrolled in the major.

The Environmental Systems program places a significant value on interdisciplinary problem solving and all majors are expected to complete an integrative Senior Project in their final year. The Senior Project is designed by the student to focus on an interdisciplinary environmental problem or research topic. Appropriate topics for the Senior Project could conceivably include biodiversity conservation, coastal zone management, environmental health, climate change, environmental justice, and/or urban air quality. An important component of the Senior Project is an off-campus or laboratory internship where students might work on, for example, the development of a comprehensive management plan for a threatened ecosystem. The Senior Seminar provides a venue for the presentation and group evaluation of the ESYS Senior Projects. Distinction in the major may be awarded for outstanding projects.

The Environmental Systems Major

The requirements for completion of the environmental systems major include a lower-division core, two upper-division courses, a three course upper-division integrating sequence (ESYS 101, ESYS 102, ESYS 103), an upper-division statistics course, advanced courses in one of four tracks, and the senior project (ESYS 190A) and senior seminar (ESYS 190B). Any questions concerning the requirements should be directed to the associate director or the program adviser.

Students completing the advanced tracks in “Earth Sciences,” “Ecology, Behavior, and Evolution,” and “Environmental Chemistry” will be awarded a B.S. in environmental systems. The B.A. in environmental systems will be granted to students completing the “Environmental Policy” track within the major.

A grade-point average of 2.0 or higher in the upper-division major program is required for graduation. Students must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. In exceptional cases, students with a grade-point average in the major of 2.5 or greater may petition to have one grade of D accepted.

LOWER-DIVISION CORE REQUIREMENTS

(Should be completed early in student’s degree program.)

Biology 3 — BILD 3
Chemistry 6A, 6B, 6BL, 6C — Environmental Chemistry track students must also complete Chemistry 6CL
Physics 1A, 1B, 1C — Earth Sciences track students complete Physics 2A-B-C
Mathematics 10A, 10B, 10C — Earth Sciences track students complete Math. 20A-B, 20C, and Math. 20D is recommended
Economics 1A

UPPER-DIVISION CORE REQUIREMENTS

Economics 131. Economics of the Environment
Political Science 160AA. Introduction to Policy Analysis

“Integrating Course Sequence”

(Should be taken junior year.)

Environmental Systems 101. The Living Earth
Environmental Systems 102. The Solid and Fluid Earth
Environmental Systems 103. The Human Earth
Environmental Systems 190A. Senior Project (two quarters)
Environmental Systems 190B. Senior Seminar

Environmental Systems Major Tracks

There are four advanced tracks in which students must complete a minimum of seven upper-
division courses. Students will select courses following the requirements below in consultation with a faculty adviser.

**Earth Sciences**
- Ecology, Behavior, and Evolution
- Environmental Chemistry
- Environmental Policy

The program is working with the School of Engineering to create an “Environmental Engineering” track to be offered at a future date.

**Earth Sciences Track**

Required upper-division courses:
- ERTH 101. Introduction to Earth and Environmental Sciences
- ERTH 102. Introduction to Geochemistry
- MATH 183. Statistical Methods (This statistics course, required in sophomore year)

Upper-division electives: (must complete a minimum of seven courses)

**Solid Earth emphasis:**
- ERTH 103. Introduction to Geophysics
- ERTH 104. Geobiology
- ERTH 105. Sedimentology and Stratigraphy
- ERTH 120. Introduction to Mineralogy
- ERTH 130. Geodynamics of Terrestrial Planets
- ERTH 144. Isotope Geochemistry
- ERTH 160. Introduction to Tectonics
- ERTH 162A. Introduction to Field Geology
- ERTH 162L. Structural Analysis for Field Geology
- ERTH 180. Geophysics of Natural Resources
- ERTH 182. Field Geophysics
- SIO 210. Physical Oceanography
- SIO 260. Marine Chemistry
- SIO 240. Marine Geology

Other ERTH/SIO courses by petition

**Ocean/Atmosphere emphasis:**
- ERTH 142. Atmospheric Chemistry and Biochemical Cycles
- Chemistry 149A. Environmental Chemistry
- Chemistry 173. Atmospheric Chemistry
- SIO 240. Marine Geology
- SIO 269. Special Topics in Marine Chemistry
- SIO 280. Biological Oceanography
- BIEB 130. Introduction to Marine Ecology

Other courses may be substituted by petition.

**Ecology, Behavior, and Evolution Track**

Required upper-division courses:
- BICD 100. Genetics
- BIEB 100. Biometry (satisfies upper-division statistics requirement)

Upper-division electives [a total of seven courses required, one of which must be a lab course, selected from the courses below.]

Students may satisfy some part of the upper-division elective requirements through enrollment in the Environmental Biology Program at the White Mountain Research Station (WMRS).

The courses that make up this program are listed below as BIEB 170-171-172. For details contact the Environmental Systems Program office.

- BIBC 100. Structural Biochemistry
- BIBC 102. Metabolic Biochemistry
- BIBC 103. Biochemical Techniques
- BIBC 115. Computer Programming in Biology
- BIBC 120. Nutrition
- BIBC 130. Marine Biochemistry
- BICD 110. Cell Biology
- BICD 120. Fundamental of Plant Biology
- BICD 130. Embryos, Genes, and Development
- BICD 134. Human Reproduction and Development
- BIEB 102. Introductory Ecology—Organisms and Habitats
- BIEB 120. General Ecology
- BIEB 121. Ecology Laboratory
- BIEB 126. Plant Ecology
- BIEB 130. Introduction to Marine Ecology

**Environmental Chemistry Track**

Students must complete two of the following courses:
- Chemistry 149A. Environmental Chemistry
- Chemistry 149B. Environmental Chemistry
- Chemistry 173. Atmospheric Chemistry
Students must complete:
Math. 183. Statistical Methods (This statistics course required in sophomore year)
Chemistry 140A and B. Organic Chemistry
One upper-division lab from either:
Chemistry 106. Instrumental Analysis Laboratory
Chemistry 143A. Organic Chemistry Laboratory
Two other upper-division courses, for example:
Chemistry 122. Biochemical Evolution
Chemistry 124. Bioinorganic Chemistry
Chemistry 126/127. Physical Chemistry
Chemistry 131/132/133. Physical Chemistry
Chemistry 140C. Organic Chemistry
Other courses may be substituted by petition.

Environmental Policy Track

Students complete a minimum of seven courses selected from the following list. It is also possible to complete the requirements for the Environmental Policy track with a specialization that includes courses from one of the other tracks. For example, a course of study with a focus on conservation biology and policy for students who may be interested in the policy and scientific dimensions of habitat conservation planning for endangered species, would include advanced courses from the Ecology, Behavior, and Evolution track.

One upper-division Statistics course—Math 183.
Econometrics.
Economics 132. Energy Economics
Economics 125. Economics of Population Growth
Economics 116. Economic Development
Economics 130. Public Policy

Political Science 102L. The Politics of Regulation
Political Science 125. The Politics of Conservation in Developing Countries
Political Science 150A. Politics of Immigration
Political Science 160AB. Introduction to Policy Analysis
Earth Sciences 150. Environmental Perils
IR-PS 453L. Sustainable Development
IR-PS 458L. International Environmental Policy
HISC 105. History of Environmentalism
HUIS 154. Western Environmental History
ANBI 132L. Conservation and the Human Predicament
Com/Cul 148L. Communication and the Environment

Env. Studies 102. Selected Topics in Environmental Studies
Env. Studies 110. Environmental Law
Philosophy 148. Philosophy of the Environment
Philosophy 164. Technology and Human Values
USP 124. Land Use Planning
USP 144. Environmental and Preventive Health Issues
USP 170. Planning Theory and Practice
USP 171. Sustainable Development

Other courses may be substituted by petition.

*C These graduate courses are offered through the Graduate School of International Relations and Pacific Studies. Enrollment in these courses requires the permission of the instructor.

COURSES

Many of the courses that are used to fulfill the requirements of the environmental systems major are offered by other departments and programs. Most of these courses are offered on a regular basis. Students should consult the Schedule of Classes or contact the Environmental Systems Office in order to obtain current information. The courses below are offered directly through the Environmental Systems Program.

LOWER-DIVISION

ESYS 10. Introduction to Environmental Systems (4)
This course explores the interdisciplinary character of environmental issues through an examination of a particular topic [climate change, for example] from numerous disciplinary perspectives [e.g., biology, chemistry, physics, political science, and economics]. Prerequisite: none. (W)

ESYS 90. Perspectives on Environmental Issues (1)
Provides an introduction to environmental systems. Faculty members from departments in the natural sciences, geosciences, and social sciences will offer perspectives in these areas. (F)

UPPER-DIVISION

ESYS 101. The Living Earth (4)
This course will survey the basic biochemical and physiological processes governing the relationship between organisms and their environments. Fundamentals of molecular biology, enzyme reactions, photosynthesis, and central metabolic processes, mechanisms underlying homeostasis at cellular and organismal levels will be discussed with a view toward understanding the adaptations and sensitivity of biological systems to environmental perturbations. Prerequisites: Math. 10A, 10B, 10C, BILD 3, CHEM 6A-B-C, Physics 1A-B-C. (F)

ESYS 102. The Solid and Fluid Earth (4)
The physical Earth system can be divided into three components: the solid earth, the liquid earth, and the atmosphere. These components are all dynamic and interact in complex ways with profound impacts on our environment. We will examine the controls of natural phenomena such as earthquakes, volcanoes, landslides, soil formation (and destruction), and changes in sea-level and climate. Prerequisites: Math. 10A, 10B, 10C, BILD 3, CHEM 6A-B-C, Physics 1A-B-C. (W)

ESYS 103. The Human Earth (4)
This course explores the impacts of human, social, economic, and industrial activity on the environment. It highlights the central roles in ensuring sustainable development played by market forces, technological innovation, and governmental regulation on local, national, and global scales. Prerequisites: grade of C– or better in Math. 208 or Math. 10A-C, Physics 2B or Physics A-C, Chemistry 6B or by consent of instructor. In addition, ESYS majors, must take ESYS 101 and 102 or permission of instructor. (S)
ESYS 190A. Senior Project (8)
All majors are required to complete an integrative Senior Project in their senior year. The Senior Project is designed by the student to focus on an interdisciplinary environmental problem or research topic and is developed either individually or as part of a team over two quarters. Appropriate topics could include biodiversity conservation, environmental health, and/or global change. An important component of the Senior Project is an off-campus or laboratory internship. Prerequisites: ESYS 103 and upper-division standing, departmental approval, majors only. (F, W)

ESYS 190A(W). ESYS/UCDC Senior Project (4)
ESYS majors may opt to complete the internship portion of their Senior Project through the UCDC Program. Students are expected to apply to the fall or winter quarter of UCDC Program and obtain an internship in a governmental agency, NGO, and/or research laboratory. Prerequisites: ESYS 103 and upper-division standing, departmental approval, majors only. (F, W)

ESYS 190B. Senior Seminar (2)
The Senior Seminar provides a venue for the presentation and group evaluation of the ESYS Senior Projects. Prerequisite: ESYS 190A or 190A(W) (NOTE: After completing (1) quarter of ESYS 190A, ESYS 190B may be taken concurrently), senior standing. (S)

ESYS 199. Independent Study (2-4)
Individually guided readings or projects in the area of environmental systems.
