Once admitted to the B.S./master’s program, students must maintain a 3.0 cumulative GPA in all courses through the winter quarter of the senior year and in addition must at all times maintain a 3.0 cumulative GPA in their graduate course work. Students not satisfying these requirements may be re-evaluated for continuation in the program.

Admission for graduate study through the B.S./master’s program will be for the M.S. or M.Eng. degree only. Undergraduate students wishing to continue toward the Ph.D. degree must apply and be evaluated according to the usual procedures and criteria for admission to the Ph.D. program.

CURRICULUM

Students in the five-year B.S./master’s program must complete the same requirements as those in the regular M.S. program. Completion of the M.S. degree requirements within one year following receipt of the B.S. degree will generally require that students begin graduate course work in their senior year. All requirements for the B.S. degree should be
completed by the end of the senior (fourth) year, and the B.S. degree awarded prior to the start of the fifth year. Courses taken in the senior year may be counted toward the B.S. degree requirements or the M.S. degree requirements, but not both. Students must have received their B.S. degree before they will be eligible to enroll as graduate students in the department.

THE GRADUATE PROGRAMS

The department offers graduate programs leading to the M.Eng., M.S., and Ph.D. degrees in electrical engineering. Students can be admitted into ECE graduate studies through either the M.Eng. M.S. or Ph.D. programs.

The Ph.D. program is strongly research oriented and is for students whose final degree objective is the Ph.D. If a student with a B.S. is admitted to this program, he or she will be expected to complete the requirements for the M.S. degree (outlined below) before beginning doctoral research. The M.S. is a technically intensive, research-oriented degree intended as preparation for advanced technical work in the engineering profession, or subsequent pursuit of a Ph.D. By contrast, the M. Eng. is intended to be a terminal professional degree, for those not planning to pursue the Ph.D. The M. Eng. has only a course work requirement.

In addition, the department offers M.S. and Ph.D. programs in computer engineering jointly with CSE, and a Ph.D. program in applied ocean science jointly with MAE and Scripps Institution of Oceanography.

Admission to an ECE graduate program is in accordance with the general requirements of the UCSD graduate division, and requires at least a B.S. Degree in engineering, physical sciences, or mathematics with a minimum upper division GPA of 3.0. Applicants must provide three letters of recommendation and recent GRE General Test scores. TOEFL or IELTS scores are required from international applicants whose native language is not English. Applicants should be aware that the University does not permit duplication of degrees.

Support: The department makes every effort to provide financial support for Ph.D. students who are making satisfactory progress. Support may take the form of a fellowship, teaching assistantship, research assistantship, or some combination thereof. International students will not be admitted unless there is reasonable assurance that support can be provided for the duration of their Ph.D. Program Students in the M.Eng. and M.S. programs may also obtain support through teaching or research assistantships, but this is less certain.

Advising: Students should seek advice on requirements and procedures from the departmental graduate office and/or the departmental Web site http://www.ece.ucsd.edu. All students will be assigned a faculty academic advisor upon admission and are strongly encouraged to discuss their academic program with their advisor immediately upon arrival and subsequently at least once per academic year.

MASTER OF ENGINEERING

The Master of Engineering (M.Eng.) program is intended primarily for engineers who desire master’s-level work but do not intend to continue with Ph.D.-level research. It differs from the M.S. program in that it is a terminal professional degree, whereas the M.S. may serve as an entry to a Ph.D. program. Salient features of the M. Eng. program include the following: It can be completed in four quarters at full-time or eight quarters at half time; it does not require a thesis, a research project, or a comprehensive exam; and it has an option of three courses in business, management, and finance.

Course Requirements:
The total course requirements are forty-eight units (twelve quarter courses). At least thirty-six units must be at the graduate level. The choice of courses is subject to general focus and breadth requirements. Students will be assigned a faculty advisor who will help select courses.

1. The Focus Requirement: (five courses) The M.Eng. program should reflect, among other things, a continuity and focus in one subject area. The course selection must therefore include at least twenty units (five quarter courses) in closely related courses leading to the core of the art in that area. The requirement may be met by selecting five courses from within one of the focus areas listed below. In some cases it may be appropriate to select five closely related courses from two of the areas listed below. Such cases must be approved by a faculty advisor and the ECE Graduate Affairs Committee.

2. The Breadth Requirement: (two courses) A graduate student often cannot be certain of his or her future professional career activities and may benefit from exposure to interesting opportunities in other subject areas. The breadth requirement is intended to provide protection against technical obsolescence, open up new areas of interest, and provide for future self-education and interaction with people from related and sometime disparate disciplines. The minimum breadth requirement is eight units (two quarter courses) of ECE/CSE graduate courses selected from among the courses listed below, in an area distinctly different from that of the focus requirement.

3. Technical Electives: (two courses) Two technical electives may be any graduate courses in ECE, CSE, Physics, or Mathematics. Other technical courses may be selected with the approval of the faculty advisor and the ECE Graduate Affairs Committee. Technical electives may include a maximum of four units of ECE 298 (Independent Study), or ECE 299 (Research).

4. Professional Electives: (three courses) The three professional electives may be used in several ways: for the IP/ Core 401, 420, 421 series in business, management, and finance; for upper-division undergraduate technical courses specified as prerequisites for graduate-level focus, breadth, or technical elective courses taken to satisfy the M.Eng. Degree requirements; or for additional graduate technical electives. Use of other courses to satisfy the Professional Elective requirement must be approved by the faculty advisor.

Scholarship Requirement: The forty-eight units of required course work must be taken for a letter grade (A–F), except for ECE 298 or 299, for which only S/U grades are allowed. Courses for which a D or F is received may not be counted. Students must maintain a GPA of 3.0 overall.

MASTER OF ENGINEERING PROGRAM FOCUS COURSES

Please consult the ECE graduate office or the ECE Web site http://www.ece.ucsd.edu for the current list of focus areas and courses.

1. Applied Physics

ECE 222A-B-C. Electromagnetic Theory
ECE 230A-B-C. Solid State Electronics
ECE 236A-B-C-D. Semiconductors
ECE 238A-B. Materials Science
MS 201A-B-C. Materials Science
ECE 240A-B-C. Optics
ECE 241A-B-C. Optics

2. Communications and Signal Analysis

ECE 250. Random Processes
ECE 251AN-BN-CN-DN. Digital Signal Processing
ECE 252A-B. Speech Compression and Recognition
ECE 253A-B. Digital Image Analysis
ECE 254. Detection Theory
ECE 255AN. Information Theory
ECE 255BN-CN. Source Coding
ECE 256A-B. Time Series Analysis
ECE 257A-B. Wireless Communications
ECE 258A-B. Digital Communications
ECE 259AN-BN-CN. Channel Coding
ECE 275A-B. Statistical Parameter Estimation
ECE 285. Special Topic: Computer Vision; Pattern Recognition (offerings vary annually)

3. Electronic Circuits and Systems

ECE 222A-B-C. Applied Electromagnetic Theory
ECE 230A-B-C. Solid State Electronics
ECE 236A-B-C. Semiconductor Hetero-structure Materials
ECE 250. Random Processes
ECE 260A-B-C. VLSI Circuits
ECE 264A-B-C-D. Analog IC Design
ECE 265A-B. Wireless Circuit Design
CSE 240A, 240B. Computer Architecture
CSE 242A, 243A. Computer Aided Design
ECE 251AN-BN-CN-DN. Digital Signal Processing

TRANSFERRING TO THE PH.D. PROGRAM

Although the M. Eng. is intended as a terminal degree, the department recognizes that degree goals can change, including the possibility that a student admitted to the M. Eng. may wish to pursue a Ph.D. To this end, we outline below the procedure
that must be followed to effect such a change. At the outset, however, we stress that this option should not be used in an attempt to circumvent the normal Ph.D. admissions process. Students who fail to meet the standards for the Ph.D. program at the time of admission have little chance of being allowed into the Ph.D. program at a later date.

Students in the M.Eng. program wishing to be considered for admission to the Ph.D. program should consult their academic advisor as soon as possible. Transfer from M. Eng. to the Ph.D. program is possible provided that the student:

- Satisfy all requirements for initial admission to the Ph.D. program, including submission of GRE General Test Scores, and be approved for consideration for transfer to the Ph.D. program by the ECE Graduate Admissions Committee.
- Identify a faculty member who agrees, in writing, to serve as that student’s academic and Ph.D. research advisor.
- In consultation with the academic advisor, design and complete a program of course work that satisfies all course requirements and constraints for a Ph.D. discipline appropriate to their research. All students in the Ph.D. programs are required to satisfy all Ph.D. degree requirements as described below. Should the student not be admitted to the Ph.D. program, this program of course work will serve, with the approval of the academic advisor and the ECE Graduate Affairs Committee, to satisfy the course work requirements for the M.S. or M.Eng. degree (see below).
- Pass the comprehensive examination at the level required for continuation in the Ph.D. program. A student failing to pass the comprehensive exam at this required level will not be admitted to the Ph.D. program, and will instead continue in the M.S. or M.Eng. degree program (see below).
- Maintain a GPA of at least 3.4 in the appropriate core graduate courses.

A student who has fulfilled all of the above requirements should, after passing the departmental comprehensive exam, submit a petition to change their degree objective from M.Eng. to Ph.D.

**MASTER OF SCIENCE**

The ECE department offers M.S. programs in electrical and computer engineering. The M.S. program in computer engineering is jointly administered with the Department of Computer Science and Engineering. The M.S. programs are research oriented, are intended to provide the intensive technical preparation necessary for advanced technical work in the engineering profession or subsequent pursuit of a Ph.D. The M.S. degree may be earned either with a thesis (Plan 1) or with a research project followed by a comprehensive examination (Plan 2). However, continuation in the Ph.D. program requires a comprehensive examination so most students opt for Plan 2.

**Course Requirements:** The total course requirements for the master of science degrees in electrical engineering and in computer engineering are forty-eight units (twelve quarter courses) and forty-nine units, respectively, of which at least thirty-six units must be in graduate courses. Note that this is greater than the minimum requirements of the university. The department maintains a list of core courses for each disciplinary area from which the thirty-six graduate course units must be selected. The current list may be obtained from the department graduate office or the official Web site of the department. Students in interdisciplinary programs may select other core courses with the approval of their academic advisor. The course requirements must be completed within two years of full-time study. Students will be assigned a faculty advisor who will help select courses and approve their overall academic curriculum.

**Scholarship Requirement:** The forty-eight units of required course work must be taken for a letter grade (AF), except for graduate research (e.g. ECE 298, 299) for which only S/U grades are allowed. Courses for which a D or F is received may not be counted. Students must maintain a GPA of 3.0 overall.

**Thesis and Comprehensive Requirements:** The department offers both M.S. Plan 1 (thesis) and M.S. Plan 2 (written comprehensive exam). Students in the M.S. program may elect either Plan 1 or Plan 2 any time. Students in the M.S. Plan 1 (thesis) must take twelve units of ECE 299 (Research) and must submit a thesis as described in the general requirements of the university. Students in the M.S. Plan 2 (written comprehensive exam) may count four units of ECE 299 (Research) toward the thirty-six graduate units required and must pass the departmental written comprehensive examination not later than the end of the fall quarter of their second year of study. Students who pass the written examination at the MS level will receive a terminal masters degree, if they do not already have one.

Students in the computer engineering discipline may elect to take examinations in the Department of Computer Science and Engineering, in accordance with the CSE guidelines, in place of the written comprehensive examination in ECE.

**Transfer to the Ph.D. Program:** Students in the M.S. program wishing to be considered for admission to the Ph.D. program should consult their academic advisor as soon as possible. Transfer from the M.S. to the Ph.D. program is possible provided that the student:

- Satisfy all requirements for initial admission to the Ph.D. program, including submission of GRE general test scores, and be approved for consideration for transfer to the Ph.D. program by the ECE Graduate Admissions Committee.
- Identify a faculty member who agrees, in writing, to serve as that student’s academic and Ph.D. research advisor.
- In consultation with the academic advisor, design and complete a program of course work that satisfies all course requirements and constraints for a Ph.D. discipline appropriate to the student’s research. All students in the Ph.D. program are required to satisfy all Ph.D. degree requirements as described below. Should the student not be admitted to the Ph.D. program, this program of course work will serve, with the approval of the academic advisor and the ECE Graduate Affairs Committee, to satisfy the course work requirements for the M.S. degree.
- Pass the comprehensive examination at the level required for continuation in the Ph.D. program. A student failing to pass the comprehensive exam at this required level will not be admitted to the Ph.D. program, and will instead continue in the M.S. degree program.

**THE DOCTORAL PROGRAMS**

The ECE department offers graduate programs leading to the Ph.D. Degree in ten disciplines within electrical and computer engineering, as described in detail below. The Ph.D. is a research degree requiring completion of the Ph.D. Program course requirements, satisfactory performance on the comprehensive (Ph.D. Preliminary) examination and University Qualifying Examination, and submission and defense of a doctoral thesis (as described under the “Graduate Studies” section of this catalog). Students in the Ph.D. Program must pass the comprehensive exam (Ph.D. Preliminary) before the beginning of the winter quarter of the second year of graduate study. To ensure timely progress in their research, students are strongly encouraged to identify a faculty member willing to supervise their doctoral research by the end of their first year of study.

Students should begin defining and preparing for their thesis research as soon as they have passed the comprehensive exam (Ph.D. Preliminary). They should plan on taking the University Qualifying Examination about one year later. The University does not permit students to continue in graduate study for more than four years without passing this examination. At the Qualifying Examination the student will give an oral presentation on research accomplishments to date and the thesis proposal to a campus-wide committee. The committee will decide if the work and proposal has adequate content and reasonable chance for success. They may require that the student modify the proposal and may require a further review.

The final Ph.D. Requirements are the submission of a dissertation and the dissertation defense (as described under the “Graduate Studies” section of this catalog).

**Course Requirements:** The total course requirements for the Ph.D. Degree in electrical engineering are essentially the same as the M.S. degree and consists of forty-eight units (twelve quarter courses), of which at least thirty-six units must be in graduate courses. Note that this is greater than the minimum requirements of the university. The department maintains a list of core courses for each disciplinary area from which the thirty-six graduate course units must be selected. The current list may be obtained from the ECE department graduate office or the official Web site of the department. Students in the interdisciplinary programs may select other core courses with the approval of their academic advisor. The course requirements must be completed within two years of full-time study.

Students in the Ph.D. programs may count no more than eight units of ECE 299 towards their course requirements.
Students who already hold an M.S. degree in electrical engineering must nevertheless satisfy the requirements for the core courses. However, graduate courses taken elsewhere can be substituted for specific courses with the approval of the academic advisor.

Scholarship Requirement: The forty-eight units of required courses must be taken for a letter grade (AF), except for ECE 299 (Research) for which only S/U grades are allowed. Courses for which a D or F is received may not be counted. Students must maintain a GPA of 3.0 overall. In addition, a GPA of 3.4 in the core graduate courses is generally expected.

Comprehensive Exam (Ph.D. Preliminary): Ph.D. students must find a faculty member who will agree to supervise their thesis research. This should be done during the first year of study. Students may complete at least four units of ECE 299 (Research) and must pass the departmental comprehensive exam not later than the end of the fall quarter of their second year of study. The comprehensive examination consists of a written examination, possibly followed by an oral examination. Students that pass the written examination with sufficiently high score during the spring quarter of their first year will not be required to take the oral exam. Students not meeting this threshold but who still pass at the Ph.D. level will be required to take the oral exam and to have identified a thesis advisor. The oral examination must be taken not later than the end of the fall quarter of their second year of study. Students who pass the written part of the comprehensive examination at the M.S. level will receive a terminal masters degree, if they do not already have one.

Successful completion of the comprehensive examination (Ph.D. Preliminary) at any of these levels will also satisfy the M.S. Plan 2 comprehensive exam requirement.

*Students in the computer engineering discipline may elect to take examinations in the Department of Computer Science and Engineering, in accordance with the CSE guidelines, in place of the ECE comprehensive examination as described above.

University Qualifying Exam: Students who have passed the comprehensive exam (Ph.D. Preliminary) should plan to take the University Qualifying Examination approximately a year after passing the comprehensive exam (Ph.D. Preliminary). The University does not permit students to continue in graduate study for more than four years without passing this examination. The University Qualifying Examination is an oral exam in which the student presents his or her thesis proposal to a university-wide committee. After passing this exam the student is "advanced to candidacy."

Dissertation Defense: The final Ph.D. Requirements are the submission of a dissertation, and the dissertation defense (as described under the "Graduate Studies" section of this catalog). Students who are advanced to candidacy may register for any ECE course on an S/U basis.

Departmental Time Limits: Students who enter the Ph.D. Program with an M.S. degree from another institution are expected to complete their Ph.D. Requirements a year earlier than B.S. entrants. They must discuss their program with an academic advisor in their first quarter of residence. If their Ph.D. Program overlaps significantly with their earlier M.S. work, the time limits for the comprehensive and qualifying exams will also be reduced by one year. Specific time limits for the Ph.D. Program, assuming entry with a B.S. Degree, are as follows:

1. **The Comprehensive Exam (Ph.D. Preliminary)** must be completed before the start of the winter quarter of the second year of full-time study.
2. **The University Qualifying Exam** must be completed before the start of the fifth year of full-time study.
3. **Support Limit:** Students may not receive financial support through the university for more than seven years of full-time study (six years with an M.S. degree).
4. **Registered Time Limit:** Students may not register as graduate students for more than eight years of full-time study (seven years with an M.S. degree).

Half-Time Study: Time limits are extended by one quarter for every two quarters of approved half-time status. Students on half-time status may not take more than six units each quarter.

**PH.D. RESEARCH PROGRAMS**

1. **Applied Ocean Sciences:** This program in applied science related to the oceans is interdepartmental with the Graduate Department of the Scripps Institution of Oceanography (SIO) and the Department of Mechanical and Aerospace Engineering (MAE). It is administered by SIO. All aspects of man's purposeful and unusual intervention into the sea are included.

2. **Applied Physics—Applied Optics and Photonics:** These programs encompass a broad range of interdisciplinary activities involving optical science and engineering, optical and optoelectronic materials and device technology, communications, computer engineering, and photonic systems engineering. Specific topics of interest include ultrafast optical processes, nonlinear optics, quantum cryptography and communications, optical image science, multidimensional optoelectronic I/O devices, spatial light modulators and photodetectors, artificial dielectrics, multifunctional diffractive and micro-optics, volume and computer-generated holography, optoelectronic and micromechanical devices and packaging, wave modulators and detectors, semiconductor-based optoelectronics, injection lasers, and photodetectors. Current research projects are focused on applications such as optical interconnects in high-speed digital systems, optical multidimensional signal and image processing, ultrahigh-speed optical networks, 3D optical memories and memory interfaces, 3D imaging and displays, and biophotonic systems. Facilities available for research in these areas include electron-beam and optical lithography, material growth, microfabrication, assembly, and packaging facilities, cw and femtosecond pulse laser systems, detection systems, optical and electro-optic components and devices, and electronic and optical characterization and testing equipment.

3. **Communication Theory and Systems:** Communications theory and systems concerns the transmission, processing, and storage of information. Topics covered by the group include wireless and wireline communications, spread-spectrum communication, multi-user communication, network protocols, error-correcting codes for transmission and magnetic recording, data compression, time-series analysis, and image and voice processing.

4. **Computer Engineering** consists of balanced programs of studies in both hardware and software, the premise being that knowledge and skill in both areas are essential both for the modern-day computer engineer to make the proper unbiased tradeoffs in design, and for researchers to consider all paths towards the solution of research questions and problems. Toward these ends, the programs emphasize studies (course work) and competency (comprehensive examinations, and dissertations or projects) in the areas of VLSI and logic design, and reliable computer and communication systems. Specific research areas include: computer systems, signal processing systems, multiprocessor, parallel and distributed computing, computer communications and networks, computer architecture, computer-aided design, fault-tolerance and reliability, and neurocomputing. The faculty is composed of interested members of the Departments of Electrical and Computer Engineering (ECE), Computer Science and Engineering (CSE), and related areas. The specialization is administered by both departments; the requirements are similar in both departments, with students taking the comprehensive exam, if necessary, given by the student’s respective department.

5. **Electronic Circuits and Systems:** This program involves the study and design of analog, mixed-signal (combined analog and digital), and digital electronic circuits and systems. Emphasis is on the development, analysis, and implementation of integrated circuits that perform analog and digital signal processing for applications such as wireless and wireline communication systems, test and measurement systems, and interfaces between computers and sensors. Particular areas of study currently include radio frequency (RF) power amplifiers, RF low noise amplifiers, RF mixers, fractional-N phase-locked loops (PLLs) for modulated and continuous-wave frequency synthesis, pipelined analog-to-digital converters (ADCs), delta-sigma ADCs and digital-to-analog converters (DACs), PLLs for clock recovery, adaptive and fixed continuous-time, switched-capacitor, and digital filters, echo cancellation circuits, adaptive equalization circuits, wireless receiver and transmitter linearization circuits, mixed-signal baseband processing circuits for wireless transmitters and receivers, high-speed digital circuits, and high-speed clock distribution circuits.

6. **Applied Physics—Electronic Devices and Materials:** This program addresses the synthesis and characterization of advanced electronic materials, including semiconductors, metals, and dielectrics, and their application in novel electronic, optoelectronic, and photonic devices. Emphasis is placed on exploration of techniques for high-quality epitaxial growth of semiconductors, including both molecular-beam
epitaxy (MBE) and metalorganic chemical vapor deposition (MOCVD); fabrication and characterization of materials and devices at the nanoscale; development of novel materials processing and integration techniques; and high-performance electronic devices based on both Group IV (Si/SiGe) and III-V compound semiconductor materials. Areas of current interest include novel materials and high-speed devices for wireless communications; electronic and optoelectronic devices for high-speed optical networks; high-power microwave-frequency devices; nanoscale CMOS devices and circuits; heterogeneous materials integration; novel device structures for biological and chemical sensing; advanced tools for nanoscale characterization and metrology; and novel nanoscale electronic, optoelectronic, and photonics devices. Extensive facilities are available for research in this area, including several MBE and MOCVD systems; a complete microfabrication facility; electron-beam lithography and associated process tools for nanoscale fabrication; a Rutherford backscattering system; x-ray diffraclometers; electron microscopy facilities; extensive scanning-probe instrumentation; cryogenic systems; and comprehensive facilities for DC to RF electrical device characterization and optical characterization of materials and devices.

7. Intelligent Systems, Robotics, and Control: This information sciences-based field is concerned with the design of human-interactive intelligent systems that can sense the world (defined as some specified domain of interest); represent or model the world; detect and identify states and events in the world; reason about and make decisions about the world; and/or act on the world, perhaps all in real-time. A sense of the type of systems and applications encountered in this discipline can be obtained by viewing the projects shown at the Web site http://swiftlet.ucsd.edu.

The development of such sophisticated systems is necessarily an interdisciplinary activity. To sense and succinctly represent events in the world requires knowledge of signal processing, computer vision, information theory, coding theory, and data-based detection; to detect and reason about states of the world utilizes concepts from statistical detection theory, hypothesis testing, pattern recognition, time series analysis, and artificial intelligence; to make good decisions about highly complex systems requires knowledge of traditional mathematical optimization theory and contemporary near-optimal approaches such as evolutionary computation; and to act upon the world requires familiarity with concepts of control theory and robotics. Very often learning and adaptation are required as either critical aspects of the world are poorly known at the outset, and must be refined online, or the world is non-stationary and our system must constantly adapt to it as it evolves. In addition to the theoretical information and computer science aspects, many important hardware and software issues must be addressed in order to obtain an effective fusion of a complicated suite of sensors, computers, and problem dynamics into one integrated system.

Faculty affiliated with the ISRC subarea are involved in virtually all aspects of the field, including applications to intelligent communications systems; advanced human-computer interfacing; statistical signal- and image-processing; intelligent tracking and guidance systems; biomedical system identification and control; and control of teleoperated and autonomous multilugent robotic systems.

8. Magnetic Recording is an interdisciplinary field involving physics, material science, communications, and mechanical engineering. The physics of magnetic recording involves studying magnetic heads, recording media, and the processes of transferring information between the heads and the medium. General areas of investigation include: nonlinear behavior of magnetic heads, very high frequency loss mechanisms in head materials, characterization of recording media by micromagnetic and many body interaction analysis, response of the medium to the application of spatially varying vectorial head fields, fundamental analysis of medium nonuniformities leading to media noise, and experimental studies of the channel transfer function emphasizing non-linearities, interferences, and noise. Current projects include numerical simulations of high density digital recording in metallic thin films, micromagnetic analysis of magnetic reversal in individual magnetic particles, theory of recorded transition phase noise and magnetization induced nonlinear bit shift in thin metallic films, and analysis of the thermal-temporal stability of interacting fine particles. Research laboratories are housed in the Center for Magnetic Recording Research, a national center devoted to multidisciplinary teaching and research in the field.

9. Applied Physics—Radio and Space Science: The Radio Science Program focuses on the study of radio waves propagating through turbulent media. The primary objectives are probing of otherwise inaccessible media such as the solar wind and interstellar plasma. Techniques for removing the effects of the turbulent medium to restore the intrinsic signals are also studied.

The Space Science Program is concerned with the nature of the sun, its ionized and supersonric outer atmosphere (the solar wind), and the interaction of the solar wind with various bodies in the solar system. Theoretical studies include: the interaction of the solar wind with the earth, planets, and comets; cosmic dusty-plasmas; waves in the ionosphere; and the physics of shocks. A major theoretical effort involves the use of supercomputers for modeling and simulation studies of both fluid and kinetic processes in space plasmas. Students in radio science will take measurements at various radio observatories in the U.S. and elsewhere. This work involves a great deal of digital signal processing and statistical analysis. All students will need to become familiar with electromagnetic theory, plasma physics, and numerical analysis.

10. Signal and Image Processing: This program explores engineering issues related to the modeling of signals starting from the physics of the problem, developing and evaluating algorithms for extracting the necessary information from the signal, and the implementation of these algorithms on electronic and opto-electronic systems. Examples of research areas include filter design, fast transforms, adaptive filters, spectrum estimation and modeling, sensor array processing, image processing, image restoration, video processing, pattern recognition, and the implementation of signal processing algorithms using appropriate technologies. Signal and image processing techniques have found application in a number of areas such as sonar, radar, speech, geophysics, medical imaging, robotic vision, digital communications, and multimedia systems among others.

11. Nanoscale Devices and Systems: This program area will address the science and engineering of materials and device structures at length scales of ~100nm and below, at which phenomena such as quantum confinement and single-electron effects in electronics, near-field behavior in optics and electromagnetics, single-domain effects in magnets, and a host of other effects in mechanical, fluidic, and biological systems emerge and become dominant. Engineering activities such as scaling of transistors and other circuit elements in microelectronics, design of new, artificial materials with engineered optical properties and of photonic components and systems based on these materials, engineering of high-density magnetic storage media and systems, development of new technologies for renewable energy conversion and storage, advancement of sensor technology, and others now depend upon engineering both solid-state and “soft” materials and device structures at the nanoscale. Furthermore, the integration of such technologies into complex systems, as well as consideration of system drivers and constraints as guides for the development of new materials and devices, is emerging as a critical aspect of nanotechnology.

RESEARCH FACILITIES
Most of the research laboratories of the department are associated with individual faculty members or small informal groups of faculty. Larger instruments and facilities, such as those for electron microscopy and e-beam lithography are operated jointly. In addition the department operates several research centers and participates in various university wide organized research units. The department-operated research centers are the Center for Wireless Communications which is a university-industry partnership; the Institute for Neural Computation, and the Center for Information Theory and Application in conjunction with Calit2. Department research is also associated with the Center for Astronomy and Space Science, the Center for Magnetic Recording Research, the California Space Institute, the Institute for Nonlinear Science, and Calit2 (http://www.calit2.net). Departmental researchers also use various national and international laboratories, such as the National Nanofabrication Facility, the National Radio Astronomy Laboratory, and the Center for Networked Systems (CSE).
The department emphasizes computational capability and maintains numerous computer laboratories for instruction and research. One of the NSF national supercomputer centers is located on the campus. This is particularly useful for those whose work requires high data bandwidths.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

The department will endeavor to offer the courses as outlined below; however, unforeseen circumstances sometimes require a change of scheduled offerings. Students are strongly advised to check the Schedule of Classes or the department before relying on the schedule below. For the names of the instructors who will teach the course, please refer to the quarterly Schedule of Classes. The departmental Web site http://www.ece.ucsd.edu includes the present best estimate of the schedule of classes for the entire academic year.

LOWER-DIVISION
1A–B. C. Mesa Orientation Course (1–1–1)
Students will be given an introduction to the engineering profession and our undergraduate program. Exercises and practicums will develop the problem-solving skills needed to succeed in engineering. PREREQUISITE: none. (F, W, S)

15. Engineering Computation (4)
Students learn the C programming language with an emphasis on high-performance numerical computation. The commonality across programming languages of control structures, data structures, and I/O is also covered. Techniques for using Matlab to graph the results of C computations are developed. PREREQUISITES: a familiarity with basic mathematics such as trigonometry functions and graphical interpretation is expected but this course assumes no prior programming knowledge. (F, W)

25. Introduction to Digital Design (4)
This course emphasizes digital electronics. Principles introduced in lectures are used in laboratory assignments, which also serve to introduce experimental and design methods. Topics include Boolean algebra, combinatorial and sequential logic, gates and their implementation in digital circuits. (Course material and/or program fees may apply.) PREREQUISITE: none. (F, W, S)

30. Introduction to Computer Engineering (4)
The fundamentals of both the hardware and software in a computer system. Topics include: representation of information, computer organization and design, assembly and microprogramming, current technology in logic design. (Students who have taken CSE 30 may not take ECE 30 for credit.) PREREQUISITES: ECE 15 and 25 with grades of C– or better. (F, W, S)

35. Introduction to Analog Design (4)
Fundamental circuit theory concepts, Kirchhoff's voltage and current laws, Thevenin and Norton's theorems, loop and node analysis, time-varying signals, transient first order circuits, steady-state sinusoidal response. (Course material and/or program fees may apply.) PREREQUISITE: Math. 20A-B; Math. 20C and Physics 28 must be taken concurrently. (F, W, S)

45. Circuits and Systems (4)
Steady-state circuit analysis, first and second order systems, Fourier Series and Transforms, time domain analysis, convolution, transient response, Laplace Transform, and filter design. PREREQUISITES: Math. 20A-B-C, ECE 15, and ECE 35. (F, W, S)

53. Introduction of Electronic Digital Circuits (4)
First course in electronics for computer science students. We introduce the fundamentals of the devices and interconnects. Topics include: networks of lumped elements; switches and MOS transistors; digital abstraction; dynamics of first- and second-order systems; and analysis of interconnects such as power networks, clock distributions, and signal buses. (Students may take ECE 53 to repeat ECE 53A or 53B, but not both.) PREREQUISITES: Math. 20C and Math. 20D; computer science majors only. (F, W, S)

65. Components and Circuits Laboratory (4)
Introduction to linear and nonlinear components and circuits. Topics will include: two terminal devices, bipolar and field-effect transistors, and large and small signal analysis of diode and transistor circuits. (Course material and/or program fees may apply.) PREREQUISITES: ECE 15, 25, and 35. (F, W, S)

80. Photonics of Everyday Life (4)
This course is a general elective for students interested in the impact of photonics technology on our everyday lives. Topics include digital camera and photography, photography vs. holography, holograms for counterfeit, LCD display and optical storage (CD and DVD) in computers, some varieties of lasers, differences between laser light and ordinary light, optics for telecom, telescope, microscope, spectroscopy, and biophotonics. PREREQUISITE: simple concepts of calculus (see instructor), or Math. 10A or 20A. (W or S)

87. Freshman Seminar (1)
The freshman seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are held in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with priority given to entering freshmen. PREREQUISITE: none.

90. Undergraduate Seminar (1)
This seminar class will provide a broad review of current research topics in both electrical engineering and computer engineering. Typical subject areas are signal processing, VLSI design, electronic materials and devices, communications, microprocessors, and optical computing. PREREQUISITE: none. (F, W, S)

UPPER-DIVISION

100. Linear Electronic Systems (4)
Linear active circuit and system design. Topics include frequency response, use of Laplace transforms; design and stability of filters using operational amplifiers. Integrated lab and lecture involves analysis, design, simulation, and testing of circuits and systems. PREREQUISITES: ECE 15, ECE 25, ECE 35, and ECE 45. COREQUISITE: ECE 102 (F, W, S)

101. Linear Systems Fundamentals (4)

102. Introduction to Active Circuit Design (4)

103. Fundamentals of Devices and Materials (4)
Introduction to semiconductor materials and devices. Semiconductor crystal structure, energy bands, doping, carrier statistics, diffusion, drift and self-diffusion, Shockley-Read-Hall, and surface effects. Semiconductor junctions. Bipolar junction transistors. Current flow, amplification, switching, non-ideal behavior. Metal-oxide-semiconductor structures, MOSFETs, device scaling. PREREQUISITES: Phys. 2D or Phys. 4D and 4E with grades of C– or better. (F, W, S)

107. Electromagnetism (6)
Electrostatics and magnetostatics; electromodynamics; Maxwell's equations; plane waves; skin effect. Electromagnetics of transmission lines: reflection and transmission at discontinuities, Smith chart, pulse propagation, dispersion. Rectangular waveguides. Dielectric and magnetic properties of materials. PREREQUISITES: Phys. 2A-D or 4A-E and ECE 45 or 53B with grades of C– or better. (W, S)

108. Digital Circuits (4)
Digital integrated electronic circuits for processing technologies. Analytical methods for static and dynamic characteristics. MOS field-effect transistors and bipolar junction transistors, circuits for logic gates, flip-flop, data path, and programmable logic arrays, memory elements. (Course material and/or program fees may apply.) PREREQUISITES: Math. 20A-B, 21C-D, 20F-E; Phys. 2A-D or 4A-E; ECE 25, 35, 45, and 65; ECE 30 or CSE 30; ECE 102 with grades of C– or better. (W, S)

109. Engineering Probability and Statistics (4)
Axioms of probability, conditional probability, theorem of total probability, random variables, densities, expected values, characteristic functions, transformation of random variables, central limit theorem. Random number generation, engineering reliability, elements of estimation, random sampling, sampling distributions, tests for hypothesis. Students who completed Math. 180A-B, Math. 183, Math. 186, Econ. 120A, or Econ. 120AH will not receive credit for ECE 109. PREREQUISITES: Math. 20A-B or 21C-D, 20F or 21D, 20F, with grades of C– or better. (ECE 101 recommended). (W, S)

111. Advanced Digital Design Project (4)
Advanced topics in digital circuits and systems. Use of computer and design automation tools. Hazard elimination, synchronous/asynchronous FSM synthesis, synchronization, pipelining, pipeline, continuous and parallel computations, A/D, D/A, sensors, signal conditioning, video, and closed loop control. Students design and construct an interfacing project. (Course material and/or program fees may apply.) PREREQUISITES: ECE 30 or CSE 30 and ECE 60A-B-L or ECE 53A-B. (S)

120. Solar System Physics (4)
General introduction to planetary bodies, the overall structure of the solar system, and space plasma physics. Course emphasis will be on the solar atmosphere, how the solar wind is produced, and its interaction with both magnetized and unmagnetized planets (and comets). PREREQUISITES: Phys. 2A-C or 4A-D, Math. 20A-B, 20C or 21A, 20D, with grades of C– or better. (S)

123. Antenna Systems Engineering (4)
The electromagnetic and systems engineering of radio antennas for terrestrial wireless and satellite communications. Antenna impedance, beam pattern, gain, and polarization. Dipoles, monopoles, paraboloids, phased arrays. Power and noise budgets for communication links. Atmospheric propagation and multipath. PREREQUISITE: ECE 107 with a grade of C– or better. (W or S)

134. Electronic Materials Science of Integrated Circuits (4)
Electronic materials science with emphasis on topics pertinent to microelectronics and VLSI technology. Concept of the course is to use components in integrated circuits to discuss structure, thermodynamics, reaction kinetics, and electrical properties of materials. PREREQUISITES: Phys. 2C-D with grades of C– or better. (S)

135A. Semiconductor Physics (4)
Crystal structure and quantum theory of solids; electronic band structure; review of carrier statistics, drift and diffusion, p-n junctions; nonequilibrium carriers, impure, traps, recombination, etc; metal-semiconductor junctions and heterojunctions. PREREQUISITE: ECE 103 with a grade of C– or better. (F, W)

135B. Electronic Devices (4)
Structure and operation of bipolar junction transistors, junction field-effect transistors, metal-oxide-semiconductor
153. Probability and Random Processes for Engineers

154A. Communications Systems I (4)
Study of analog modulation systems including AM, SSB, DSB, VSB, FM, and PM. Performance analysis of both coherent and noncoherent receivers, including threshold effects on the receiver and play transducers. PREREQUISITE: ECE 107 with a grade of C– or better. (W)

154B. Communications Systems II (4)
Design and performance analysis of digital modulation techniques, including probability of error results for PSK, DPSK, and FSK. Introduction to effects of inter-symbol interference and fading. Detection and estimation theory, including optimal receiver design and maximum-likelihood parameter estimation. PREREQUISITE: ECE 154A with a grade of C– or better. (W)

154C. Communications Systems III (4)
Introduction to information theory and coding, including entropy, average mutual information, channel capacity, block codes and convolutional codes. PREREQUISITE: ECE 145B with a grade of C– or better. (S)

155A. Digital Recording Systems (4)
This course will be concerned with modulation and coding techniques for digital recording channels. PREREQUISITES: ECE 109 and 153 with a grade of C– or better and concurrent registration in ECE 154A required. Department stamp required. (F)

155B. Digital Recording Projects I (4)
Students registered in this course work one-on-one with a researcher on a project involving the design and evaluation of a digital recording system based upon material covered in ECE 155A. PREREQUISITE: ECE 155A with grade of C– or better. Concurrent registration in ECE 154B. Department stamp required. (WS)

155C. Digital Recording Projects II (4)
Students registered in this course work one-on-one with a researcher on a project involving the design and evaluation of a digital recording system based upon material covered in ECE 155A. The project can be a continuation of a project initiated in Digital Recording Projects I or it can be an entirely new project. PREREQUISITES: ECE 155B with grade of C– or better. Concurrent registration in ECE 154C. Department stamp required. (WS)

156. Sensor Networks (4)
Characteristics of chemical, biological, and other physical sensors; signal processing techniques supporting distributed detection of salient events; wireless communication and networking protocols supporting formation of robust sensor fabrics; current experience with low power, low cost sensor deployments. Undergraduate students must take a final exam; graduate students must write a term paper or complete a final project. Cross-listed with MAE 149 and SIO 238. PREREQUISITE: upper-division standing and consent of instructor, or graduate student in science and engineering. (S)

157A. Communications Systems Laboratory I (4)
Experiments in the modulation and demodulation of baseband and passband signals. Statistical characterization of signals and impairments. (Course material and/or program fees may apply.) PREREQUISITE: ECE 154A with a grade of C– or better. (W)

157B. Communications Systems Laboratory II (4)
Advanced Projects in communication systems. Students will plan and implement design projects in the laboratory, updating progress weekly and making plan/design adjustments based upon feedback. (Course material and/or program fees may apply.) PREREQUISITE: ECE 154A with a grade of C– or better. (W)

158A. Data Networks I (4)
Layered network architectures, data link control protocols and multiple-access systems, performance analysis. Flow control; prevention of deadlock and throughput degradation. Routing, centralized and decentralized schemes, static dynamic algorithms and minimum average delay algorithms. Comparisons. PREREQUISITE: ECE 109 with a grade of C– or better. ECE 159A recommended. (W)

158B. Data Networks II (4)
Layered network architectures, data link control protocols and multiple-access systems, performance analysis. Flow control; prevention of deadlock and throughput degradation. Routing, centralized and decentralized schemes, static dynamic algorithms. Shortest path and minimum average delay algorithms. Comparisons. PREREQUISITE: ECE 158A with a grade of C– or better. (S)

159A. Queuing Systems: Fundamentals (4)
Analysis of single and multisever queuing systems; queue size and waiting times. Modeling of telephone systems, interactive computer systems and the machine repair problems. PREREQUISITE: ECE 109 with a grade of C– or better. (F)

159B. Queuing Systems: Computer and Data Networks (4)
MG/1 queueing systems. Computer systems applications: priority scheduling, load balancing. Open and closed queuing networks; modeling and performance of interactive computer systems. Elements of computer communication networks: stability and delay analysis; optimal design issues. PREREQUISITE: ECE 159A with a grade of C– or better. (W)

161A. Introduction to Digital Signal Processing (4)
Review of discrete-time systems and signals, Discrete-Time Fourier Transform and its properties, the Fast Fourier Transform, design of Infinite Impulse Response (IIR) and Infinite Impulse Response (FIR) filters, implementation of digital filters. (Course material and/or program fees may apply.) PREREQUISITE: ECE 101 with grades of C– or better. (F-S)

161B. Digital Signal Processing I (4)
Sampling and quantization of baseband signals; A/D and D/A conversion, quantization noise, oversampling and noise shaping. Sampling of bandpass signals, undersampling and downconversion, and Hilbert transforms. Coefficient quantization, roundoff noise, limit cycles and overflow. Tuning-insensitive filters. Analog and digital filters. Systems will be designed and tested with Matlab, implemented with DSP processors and tested in the laboratory. PREREQUISITE: ECE 161A with a grade of C– or better. (W)

161C. Applications of Digital Signal Processing (4)
This course discusses several applications of DSP. Topics covered will include: speech analysis and coding; image and video compression and processing. A class project is required, algorithms simulated by MATLAB. PREREQUISITE: ECE 161A with a grade of C– or better. (S)

163. Electronic Circuits and Systems (4)
Analysis and design of analog circuits and systems. Techniques for designing operational amplifiers, filter and operational amplifier circuits. Stability, sensitivity, bandwidth, compensation. Design of active filters. Switched capacitor circuits. Phase-locked loops. Analog-to-digital and digital-to-analog conversion. (Course material and/or program fees may apply.) PREREQUISITES: ECE 101 and 102 with grades of C– or better. (S)

164. Analog Integrated Circuit Design (4)
Design of linear and non-linear analog integrated circuits including operational amplifiers, voltage regulators, drivers, power stages, oscillators, and multiphase. Use of feedback and evaluation of noise performance. Parasitic effects of integrated circuit technology. Laboratory simulation and testing of circuits. PREREQUISITE: ECE 102 with a grade of C– or better. ECE 163 recommended. (F)

165. Digital Integrated Circuit Design (4)
VLSI digital systems. Circuit characterization, performance estimation, and optimization. Circuits for alternative logic styles and clocking schemes. Subsystems include ALUs, memory, processor arrays, and PLAs. Techniques for gate arrays, standard cell, and custom design. Design and simulation using CAD tools. (Students who have taken CSE 143 may not take ECE 165 for credit.) PREREQUISITE: ECE 108 with a grade of C– or better. (S)

166. Microwave Systems and Circuits (4)
Circuits. Impedance matching. Detection and frequency conversion using microwave diodes. Design of transistor amplifiers including noise performance. Circuits designs will be simulated by computer and tested in the laboratory. (Course material and/or program fees may apply.) PREREQUISITES: ECE 102 and 107 with grades of C– or better. (F)

171A. Linear Control System Theory (4)
Stability of continuous- and discrete-time single-input/ single-output linear-invariant control systems emphasizing frequency domain methods. Transient and steady-state behavior. Stability analysis by root locus, Bode, Nyquist, and Nichols plots. Compensator design. PREREQUISITE: ECE 608 or ECE 53A-B or ECE 140 with a grade of C– or better. (F)

171B. Linear Control System Theory (4)
Time-domain, state-variable formulation of the control problem for both discrete-time and continuous-time linear systems. State-space realizations from transfer function system description. Input and output stability, controllability/observability, minimal realizations, and pole-placement by full-state feedback. PREREQUISITE: ECE 171A with a grade of C– or better. (F)
172A. Introduction to Intelligent Systems: Robotics and Machine Intelligence (4)
This course will introduce basic concepts in machine perception. Topics covered will include: edge detection, segmentation, texture analysis, image registration, and compression. \textbf{Prerequisite:} ECE 101 with a grade of C– or better, ECE 109 recommended. (F)

173. Theory and Applications of Neural Networks and Fuzzy Logic (4)
Theory of fuzzy logic, reasoning and control; mathematical aspects of neural architectures for pattern classification, functional approximation, and adaptive estimation and control; theory of computer-assisted learning (supervised, unsupervised and hybrid); theory and practice of recurrent networks. Responsibility, placement of equilibria; computer-aided design of fuzzy and neural systems, Bayes and minimax design. \textbf{Prerequisite:} Math. 20f with a grade of C– or better. (W)

174. Introduction to Linear and Nonlinear Optimization with Applications (4)
The linear least squares problem, including constrained and un constrained quadratic optimization and the relationship to the geometry of linear transformations. Introduction to nonlinear optimization. Applications to signal processing, system identification, robotics, and circuit design. \textbf{Prerequisite:} Math. 20f with a grade of C– or better. (S)

175. Elements of Machine Intelligence: Pattern Recognition and Machine Learning (4)

181. Physical Optics and Fourier Optics (4)
Ray optics, wave optics, beam optics, Fourier optics, and electromagnetic optics. Ray transfer matrix, matrices of cascaded optics, numerical apertures of step and graded index fibers. Fresnel and Fraunhofer diffractions, interference of light. Gauss-Bessel beams, the ABCD law for transmissions through arbitrary optical systems. Spatial frequency, impulse response and transfer function of optical systems, Fourier transform and imaging properties of lenses, holography. Wave propagation in various (inhomogeneous, dispersive, anisotropic or nonlinear) media. (Course material and/or program fees may apply.) \textbf{Prerequisites:} ECE 103 and 107 with grades of C– or better. (S)

182. Electromagnetic Optics, Guided-wave, and Fiber Optics (4)
Polarization of optical waves: crystal optics, birefringence. Guided-wave optics: modes, losses, dispersion, coupling, switching. Fiber optics: step and graded index, single and multimode operation, attenuation, dispersion, fiber optic communications. Resonator optics. (Course material and/or program fees may apply.) \textbf{Prerequisites:} ECE 103 and 107 with grades of C– or better. (F)

183. Optical Electronics (4)
Quantum electronics, interaction of light and matter in atomic systems, semiconductors. Laser amplifiers and laser systems. Photodetectors. Electro-optics and acoustooptics, photonic switching. Fiber optic communication systems. Labs: semiconductor lasers, semiconductor photodetectors. (Course material and/or program fees may apply.) \textbf{Prerequisites:} ECE 103 and 107 with grades of C– or better. (W)

184. Optical Information Processing and Holography (4)
(Cooney with ECE 241AL) Labs: optical holography, photorefractive effect, spatial filtering, computer generated holography. Students enrolled in ECE 184 will receive four units of credit; students enrolled in ECE 241AL will receive two units of credit. (Course material and/or program fees may apply.) \textbf{Prerequisite:} ECE 182 with a grade of C– or better. (W)

185. Lasers and Modulators (4)
(Cooney with ECE 241BL) Labs: CO2 laser, HeNe laser, electrooptic modulation, acoustooptic modulation, spatial light modulators. Students enrolled in ECE 185 will receive four units of credit; students enrolled in ECE 241BL will receive two units of credit. (Course material and/or program fees may apply.) \textbf{Prerequisite:} ECE 183 with a grade of C– or better. (S)

186L. Optical Information Systems (4)
Lab covering concepts in optical data systems including free-space communications, remote sensing and wavelength-multiplexed optical fiber transmission. (Course material and/or program fees may apply.) \textbf{Prerequisites:} ECE 181 and 182 or 183 with grades of C– or better, or consent of instructor.

187. Introduction to Biomedical Imaging and Sensing (4)
Image processing fundamentals: imaging theory, image processing, pattern recognition; digital radiography, computerized tomography, nuclear medicine imaging, nuclear magnetic resonance imaging, ultrasound imaging, microscopy imaging. \textbf{Prerequisites:} Math. 20A-B, 20C, 21C, 20D, 21D, Phys. 2A-D, ECE 101 (may be taken concurrently) with grades of C– or better. (F)

190. Engineering Design (4)
Students complete a project comprising at least 50 percent or more engineering design to satisfy the following features: student creativity, open-ended formulation of a problem statement/specifications, consideration of alternative solutions/realtistic constraints. Written final report required. \textbf{Prerequisites:} students enrolling in this course must have completed all breadth courses prior to one depth course. The department stamp is required to enroll in ECE 190. (Specifications and enrollment forms are available in the undergraduate office.)

191. Engineering Group Design Project (4)
Groups of students work to design, build, demonstrate, and document an engineering project. All students give weekly progress reports of their tasks and contribute a section to the final project report. \textbf{Prerequisites:} completion of all of the breadth courses and one depth course. (F, W, S)

192. Senior Seminar (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small setting to explore an intellectual topic in ECE (at the upper-division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. ECE 192 is no longer valid for ECE design credit, students should take ECE 190 instead. \textbf{Prerequisites:} department stamp and/ or consent of instructor.

193H. Honors Project (4-8)
An advanced reading or research project performed under the direction of an ECE faculty member. Must contain enough design to satisfy the ECE program's four-unit design requirement. Must be taken for a letter grade. May extend over two quarters with a grade assigned at completion for both quarters. \textbf{Prerequisite:} admission to the ECE departmental honors program.

195. Teaching (2 or 4)
Teaching and tutorial activities associated with courses and seminars. Not more than four units of ECE 195 may be used for satisfying graduation requirements. (P/NP grades only.) \textbf{Prerequisite:} consent of the department chair.

197. Field Study in Electrical and Computer Engineering (4, 8, 12, or 16)
Directed study and research at laboratories and observatories away from the campus. (P/NP grades only; 
\textbf{Prerequisites:} consent of instructor and approval of the department.

198. Directed Group Study (2 or 4)
Topics in electrical and computer engineering whose study involves reading and discussion by a small group of students under direction of a faculty member. (P/NP grades only.) \textbf{Prerequisite:} consent of instructor.

199. Independent Study for Undergraduates (2 or 4) Independent reading or research by special arrangement with a faculty member. (P/NP grades only.) \textbf{Prerequisite:} consent of instructor.

Graduate

200. Research Conference (2)
Group discussion of research activities and progress of group members. (Consent of instructor is strongly recommended.) (S/U grades only.) \textbf{Prerequisite:} graduate standing. (F, W, S)

212AN. Principles of Nanoscience and Nanotechnology (4)
Introduction to and rigorous treatment of electronic, photonic, magnetic, and mechanical properties of materials at the nanoscale. Concepts from mathematical physics, quantum mechanics, quantum optics, and electromagnetics will be introduced as appropriate. Students may not receive credit for both ECE 212A and ECE 212AN. \textbf{Prerequisite:} graduate standing. (F)

212BN. Nanoelectronics (4)
Quantum states and quantum transport of electrons; single-electron devices; nanoelectronic devices and system concepts; introduction to molecular and organic electronics. (S, W) Students may not receive credit for both ECE 212BN and ECE 212C. \textbf{Prerequisites:} ECE 212AN, graduate standing. (F)

212CN. Nanophotonics (4)
Photonic properties of artificially engineered inhomogeneous nanoscale composite materials incorporating dielectrics, semiconductors, and/or metals. Near-field localization of photons and applications. Device and component applications. Students may not receive credit for both ECE 212CN and 212B. \textbf{Prerequisites:} ECE 212BN, graduate standing. (W)

222A. Antennas and Their System Applications (4)
Antennas, waves, polarization. Friis transmission and Radar equations, dipole, loops, slots, ground planes, traveling wave antennas, array theory, phased arrays, impedance of frequency independent antennas, microstrip antennas, cell phone antennas, system level implications such as MIMO, multi-beam and phased array systems. (Recommended prerequisite: ECE 107 or an equivalent undergraduate course in electromagnetics.) \textbf{Prerequisite:} graduate standing. (F)

222B. Applied Electromagnetic Theory—Electromagnetics (4)
Graduate-level introductory course on electromagnetic theory with applications. Topics covered include Maxwell’s equations, plane waves in free space and in the presence of interfaces, polarization, fields in metallic and dielectric waveguides including surface waves, fields in metallic cavities, Green’s functions, electromagnetic field radiation and scattering. \textbf{Prerequisites:} ECE 222A, graduate standing. (W)

222C. Applied Electromagnetic Theory—Computational Methods for Electromagnetics (4)
Computational techniques for numerical analysis of electromagnetic fields, including the finite difference time domain (FDTD) method, finite difference frequency domain (FDFD) method, method of moments (MOM), and finite element method (FEM). Practice in writing numerical codes. Review of commercial electromagnetic simulators. \textbf{Prerequisites:} ECE 222B, graduate standing. (S/Even years)

222D. Advanced Antenna Design (4)
Review of 222A-B. Fourier transform, waveguide antennas, mutual coupling, active impedance, Floquet modes in arrays. Microstrip antennas, surface waves. Reflector and lens analysis: taper, spillover, aperture and physical optics methods. Impedance surfaces, Advanced concepts: Sub-wavelength superposition, etc. (chosen by instructor). (Recommended prerequisite(s): ECE 222A, ECE 222B, or equivalent.) \textbf{Prerequisites:} ECE 222C, graduate standing. (S/odd years)

230A. Solid State Electronics I (4)
This course is designed to provide a general background in solid state electronic materials and devices. Course content emphasizes the fundamentals of current issues of semiconductor physics related to the ECE solid state electronic sequences. (Recommended prerequisite: ECE 135A-B or equivalent.) \textbf{Prerequisite:} graduate standing. (F)
230B. Solid State Electronics II (4)
Physics of solid-state electronic devices, including p-n diodes, Schottky diodes, field-effect transistors, bipolar transistors, and FETs. Computer simulation of devices, scaling characteristics, high frequency performance, and circuit models. PREREQUISITES: ECE 230A; graduate standing. (W).

23OC. Solid State Electronics III (4)
This course is designed to provide a treatise of semiconductor devices based on solid state phenomena. Band structures and carrier scattering and recombination processes and their influence on transport properties will be emphasized. (Recommended prerequisite: ECE 230A or equivalent.) PREREQUISITE: ECE 230B; graduate standing. (S).

235. Nanometer-Scale VLSI Devices (4)
This course covers modern research topics in sub-100 nm scale, focusing on advanced VLSI devices. Starting with the fundamentals of CMOS scaling to nanometer dimensions, various advanced device and circuit concepts, including RF CMOS, low power CMOS, silicon-on-insulator, SiGe bipolar, strained silicon MOSFETs, etc. will be taught. The physics of near-ballistic transport in an ultimately scaled 10 nm MOSFET will be discussed in light of the recently developed scattering theory. PREREQUISITE: graduate standing. (F).

236A. III-V Compound Semiconductor Materials (4)
This course covers the growth, characterization, and heteroepitaxial properties of III-V compound semiconductor structures and group IV heterostructures for the subsequent courses on electronic and photonic device applications. Topics include epitaxial growth techniques, electrical properties of heterojunctions, transport and optical properties of quantum wires and wells. (Recommended prerequisites: ECE 230A-B-C-C) PREREQUISITE: graduate standing. (W).

236B. Optical Processes in Semiconductors (4)
Absorption and emission of radiation in semiconductors. Radiative transition and nonradiative recombination, Laser, modulators, and photodetector devices will be discussed. (Recommended prerequisites: ECE 230A and ECE 230C or equivalent.) PREREQUISITE: ECE 236A; graduate standing. (S).

236C. Heterojunction Field Effect Transistors (4)
Device physics and applications of isotype and anisotropy heterojunctions and quantum wells, including band-edge discontinuities, band bending and space charge layers at heterojunction interfaces, charge transport normal and parallel to such interfaces, two-dimensional electron gas structures, modulation doping, heterojunction and insulated gate field effect transistors. PREREQUISITE: ECE 236B; graduate standing. (S, alternating years).

236D. Heterojunction Bipolar Transistors (4)
Current flow and charge storage in bipolar transistors. Use of heterojunctions to improve bipolar structures. Topics include transistor electron velocity overshoot. Simulation of device characteristics. Circuit models of HBTS. Requirements for high-speed circuit applications. Elements of bipolar process technology, with emphasis on III-V materials. PREREQUISITE: ECE 236C, graduate standing. (F, alternating years).

238A. Thermodynamics of Solids (4)
The thermodynamics and statistical mechanics of solids. Basic concepts, equilibrium properties of alloy systems, thermodynamic information from phase diagrams, surfaces and interfaces, crystalline defects. Multiple listed with Materials Science 201A. PREREQUISITE: consent of instructor. (F).

238B. Solid State Diffusion and Reaction Kinetics (4)

240A. Lasers and Optics (4)
Fresnel and Fraunhofer diffraction theory; optical resonators, interferometer, Gaussian beam propagation and transformation. Laser oscillation and amplification, Q-switching and mode locking of lasers, some specific laser systems. (Recommended prerequisites: ECE 107 and ECE 182 or equivalent, introductory quantum mechanics or ECE 183.) PREREQUISITE: graduate standing. (F).

240B. Optical Information Processing (4)
Space-bandwidth product, superresolution, space-variant optical system, partial coherence, image processing with coherently imaged light, processing with real-time real-time light modulators for hybrid processing, nonlinear processing. Optical computing and other applications. (Recommended prerequisite: ECE 240A or equivalent.) PREREQUISITE: ECE 240A; graduate standing. (W).

240C. Optical Modulation and Detection (4)
Propagation of waves and rays in anisotropic media. Electro-optical switching and modulation, co-centered optical deflection and modulation. Detection theory. Heterodyne detection, incoherent and coherent detection. (Recommended prerequisites: ECE 181, ECE 183 or equivalent.) PREREQUISITE: ECE 240A; graduate standing. (S).

241A. Nonlinear Optics (4)
Second harmonic generation (color conversion), parametric amplification and oscillation, photorefractive effects and four-wave mixing, optical bistability; applications. (Recommended prerequisites: ECE 240A, C) PREREQUISITE: graduate standing. (F).

241B. Optical Devices for Computing. (4)
Application of electro-optic, magneto-optic, acousto-optic, and electro-absorption effects to the design of electro-optic devices with emphasis on spatial light modulation and optical storage techniques. (Recommended prerequisites: ECE 240A-C) PREREQUISITE: ECE 241A; graduate standing. (F).

241C. Holographic Optical Elements (4)
Fresnel, Fraunhofer, and Fourier holography. Analysis of thin and volume holograms, reflection and transmission holograms, color and polarization holograms. Optically recorded and computer-generated holograms. Applications to information storage, optical interconnects, 2-D and 3-D display, pattern recognition, and image processing. (Recommended prerequisites: ECE 182 or equivalent.) PREREQUISITE: ECE 241B; graduate standing. (W).

242B. Optical Fiber Communication (4)
Optical fibers, waveguides, laser communication system, Modulation and demodulation; detection processes and communication-receivers. (Recommended prerequisites: ECE 240A-B or equivalent.) PREREQUISITE: ECE 242A or 240B or 240C or equivalent; graduate standing. (W).

244A. Statistical Optics (4)
Introduction to statistical phenomena in optics including first order properties of light waves generated from various sources. Coherence of optical waves, high-order coherence. Partial coherence and its effects on imaging systems. Imaging in presence of randomly inhomogeneous media. Imaging and detection processes. (Recommended prerequisites: ECE 240A-B) PREREQUISITE: graduate standing. (F).

244B. Quantum Electronics of Femtosecond Optical Pulses (4)

247C. BioNanotechnology (4)
Topics include: nanosensors and nanodevices for both clinical diagnostics and biofaire (bioterror) agent detection; nanosstructures for drug delivery; nanoarrays and nanodevices; use of nanoanalytical devices and systems; methods for modification or functionalization of nanoparticles and nanosources with biological molecules; molecular rosettes for gas and bio-fuel cells; potential use of DNA and other biomolecules for computing and ultra-high-density data storage. Cross-listed with BENG 247B. PREREQUISITE: graduate standing. (W).

250. Random Processes (4)

251A. Digital Signal Processing I (4)
Discrete random signals; conventional (FFT based) spectral estimation. Coherence and transfer function estimation; model-based spectral estimation; linear prediction and all-pole filters. Levinson's algorithm and lattice filters, minimum variance spectrum estimation. Cross-listed with SIO 207B. SIO 207A is intended for graduate students who have not had an undergraduate course in DSP. (Recommended prerequisites: ECE 153 in addition to either ECE 161 or 161A and SIO 207A or equivalent background.) PREREQUISITE: graduate standing. (W).

251B. Digital Signal Processing II (4)
Adaptive filter theory, estimation errors for recursive least squares and gradient algorithms, convergence and tracking analysis of LMS, RLS, and Kalman filtering algorithms, comparative performance of Weiner and adaptive filters, transversal and lattice filter implementations, performance analysis for equalization, noise cancelling, and linear prediction applications. Cross-listed with SIO 207C. (Recommended prerequisite: ECE 251A or ECE 251AN.) PREREQUISITE: graduate standing. (Recommended prerequisite: ECE 251B or SIO 207B for SIO 207C.) (S).

251C. Filter Banks and Wavelets (4)
Fundamentals of multirate systems (Noble Identities, Polyphase representations), maximally decimated filter banks (QMF filters for 2-channels, M-channel perfect reconstruction systems), Paraunitary perfect reconstruction filter banks, the wavelet transform (Multiresolution, discrete wavelet transform, filter banks and wavelet). (Recommended prerequisite: ECE 161 or equivalent.) PREREQUISITE: ECE 251B; graduate standing. (W).

251D. Array Processing (4)
The coherent processing of data collected from sensors distributed in space for signal enhancement and noise rejection purposes or wavefield directionality estimation. Conventional and adaptive beamforming. Matched field processing. Sparse array design and processing techniques. Applications to acoustics, geophysics, and electromagnetics. Cross-listed with SIO 207D. (Recommended prerequisite: ECE 251A or ECE 251AN.) PREREQUISITE: graduate standing: ECE 251C (for ECE 251D); SIO 207C (for SIO 207D). (F).

252A. Speech Compression (4)
Speech signals, production and perception, compression theory, high rate compression using waveform coding (PCM, DPCM, ADPCM, ...), DSP tools for low rate coding, LPC vocoders, sinusoidal transform coding, multi-band coding, medium rate coding using code excited linear prediction (CELP). PREREQUISITE: ECE 161A or 161. (W)
252B. Speech Recognition (4)
- Signal analysis methods for recognition, dynamic time warping, isolated word recognition, hidden markov models, continuous and connected speech recognition. 
- Preliminary: ECE 109, ECE 262A. (S)

253A. Fundamentals of Digital Image Processing (4)
- Image quantization and sampling, image transforms, image enhancement, image compression. 
- Preliminary: ECE 109, 153, ECE 161 or ECE 161A. (W)

253B. Digital Image Analysis (4)
- Image morphology, edge detection, scene segmentation, texture analysis, registration and fusion, feature analysis, time-varying images. 
- Preliminary: ECE 253A or consent of instructor. (S)

254. Detection Theory (4)
- Hypothesis testing, detection of signals in white and colored Gaussian noise; estimation of signal parameters, maximum-likelihood detection; resolution of signals; detection and estimation of stochastic signals; applications to radar, sonar, and communications. (Recommended prerequisite: ECE 153.) 
- Preliminary: graduate standing. (F)

255AN. Information Theory (4)
- Introduction to basic concepts, source coding theorems, capacity, noisy-channel coding theorem. 
- Preliminary: ECE 154A-B-C or consent of instructor. (F)

255BN. Source Coding I (4)
- Theory and practice of lossy source coding, vector quantization, predictive and differential encoding, universal coding, source-channel coding, asymptotic theory, speech and image applications. 
- Preliminary: ECE 250 and 259A or 259AN, or consent of instructor. (W)

256A-B. Time Series Analysis and Applications (4-4)
- Stationary processes; spectral representation; linear transformation. Recursive and nonrecursive prediction and filtering; Wiener-Hopf and Kalman-Bucy filters. Series expansions and applications. Time series analysis; probability density, covariance and spectral estimation. 
- inferred from sample-data, sampling theorems; equally and non-equally spaced data, applications to detection and estimation. 
- Preliminary: ECE 153. (F,W)

257A. Multiuser Communication Systems (4)
- Preliminary: graduate standing. (W)

257B. Principles of Wireless Networks (4)
- This course will focus on the principles, architectures, and analytical methodologies for design of multi-user wireless networks. Topics to be covered include cellular approach to wireless design, digital modulation, MIMO technology, broadband networks, ad-hoc networks, and wireless packet access. (Recommended prerequisites: ECE 159A and 154B, or equivalent.) 
- Preliminary: ECE 257A; graduate standing. (S)

257C. Stochastic Wireless Networks Models (4)
- ECE 257A-B or consent of instructor. (S)

258A-B. Digital Communication (4-4)
- Digital communication theory including performance of various modulation techniques, effects of inter-symbol interference, adaptive equalization, spread spectrum communication. 
- Preliminary: ECE 154A-B-C and ECE 254 or consent of instructor. (W,S)

259A. Algebraic Coding (4)
- Fundamentals of block codes, introduction to groups, rings and finite fields, nonbinary codes, cyclic codes such as BCH and RS codes, decoding algorithms, applications. Students who have taken ECE 259AN may not receive credit for ECE 259A. 
- Preliminary: graduate standing. (W)

259B. Probabilistic Coding (4)
- Convolutional codes, maximum-likelihood (ML) decoding, maximum a-posteriori (MAP) decoding, parallel- and serial concatenation architectures, turbo codes, repeat-accumulate (RA) codes, the turbo principle, turbo decoding, graph-based codes, message-passing decoding, low-density parity check codes, threshold analysis, applications. Students who have taken ECE 259BN may not receive credit for ECE 259B. (Recommended prerequisites: ECE 154A-B-C.) Preliminary: ECE 259A or 259AN; graduate standing. (W)

259C. Advanced Topics in Coding (4)
- Advanced topics in coding theory. Course content varies by instructor. Sample course topics: Low-density parity-check coding, bandwidth-efficient data transmission; advanced algebraic and combinatorial coding theory; space-time coding for wireless communications; constrained coding for digital recording. Students who have taken ECE 259AN may not receive credit for ECE 259C. Preliminary: ECE 259B-A or 259AN-BN; graduate standing. (S)

260A. VLSI Digital System Algorithms and Architectures (4)
- Custom and semi-custom VLSI design from both the circuit and system designer's perspective. MOS transistor threshold voltage and channel length modulation and estimation. CMOS logic design will be emphasized. Computer-aided design (CAD) tools for transistor level simulation, layout and verification will be introduced. (Recommended prerequisites: undergraduate-level semiconductor electronics and digital logic design, ECE 165 or equivalent.) 
- Preliminary: graduate standing. (F)

260B. VLSI Integrated Circuits and Systems Design (4)
- VLSI implementation methodology across block, circuit, and layout levels of abstraction. Circuit building blocks, including embedded memory and clock distribution. Computer-aided design (synthesis, place-and-route, veri- fication) and generation of chips. Implementation projects spanning RTL to tape-out using leading-edge EDA tools. (Recommended prerequisite: ECE 165.) 
- Preliminary: ECE 260A; graduate standing. (W)

260C. VLSI Advanced Topics (4)
- Advanced topics in design practices and methodologies for modern system-on-chip design. Different design alternatives are introduced and analyzed. Advanced design tools are used to design a hardware-software system. 
- Class discussion, participation, and presentations of projects and special topics assignments are emphasized. 
- Preliminary: ECE 260B; graduate standing. (S)

264A. CMOS Analog Integrated Circuits and Systems I (4)
- Frequency response of the basic CMOS gain stage and current mirror configurations. Advanced feedback and stability analysis; compensation techniques. High-Performance CMOS operational amplifier topologies. Analysis of noise and distortion. (Recommended prerequisites: ECE 164 and ECE 153, or equivalent courses.) 
- Preliminary: graduate standing. (W)

264B. CMOS Analog Integrated Circuits and Systems II (4)
- Non-ideal effects and their mitigation in high-performance operational amplifiers. Switched capacitor circuit techniques: CMOS circuit topologies, analysis and mitigation of non-ideal effects, and filter synthesis. Overview of CMOS samplers, data converters, and PLLs. (Recommended prerequisite: ECE 251A or ECE 251AN.) 
- Preliminary: ECE 264A; graduate standing. (S)

264C. CMOS Analog Integrated Circuits and Systems III (4)
- Integrated CMOS analog/digital systems: Analog to digital and digital to analog converters, Nyquist versus oversampling, linearity, jitter, randomization, calibration, speed versus resolution, pipeline, folding, interpolation, averaging. 
- Preliminary: ECE 163 and 164. (W)

264D. CMOS Analog Integrated Circuits and Systems IV (4)
- PLL: Phase noise effect, VCO, phase detector, charge pump, integer-N and fractional-N frequency synthesizer, clock and data recovery, decision feedback. Filter: Continuous-time filter, I-Q complex filter, raised-cosine, Gaussian, delay, zero equalizers. 
- Preliminary: ECE 163 and 164. (S)

265A. Communication Circuit Design I (4)
- Current research topics in the field. Preliminary: ECE 166 or consent of instructor. (W)

265B. Communication Circuit Design II (4)
- Random frequency integrated circuits: Low-noise amplifiers, AGCs, mixers, filters, voltage-controlled oscillators. BJTs and CMOS technologies for radio frequency and microwave applications. Device modeling for radio frequency applications. Design and device tradeoffs of linearity, noise, power dissipation, and dynamic range. Current research topics in the field. 
- Preliminary: ECE 166 and ECE 265A or consent of instructor. (S)

265C. Power Amplifiers for Wireless Communications (4)
- Design of power amplifiers for mobile terminals and base-stations. Emphasis on high-efficiency, linear tradeoffs. After a discussion of classical designs (Class A, AB, B, C, D, E, F, and S), linearity and power tradeoffs are presented and composite architectures (envelope tracking, EER, and Doherty) are covered. Familiarity with basic microwave design, electronics and digital signal processing is assumed. 
- Preliminary: ECE 166.) 
- Preliminary: ECE 265A and B; consent of instructor. (F)

267. Wireless Embedded and Networked Systems (4)
- Study of wireless networked systems from a system design perspective, covering the protocol stack from physical to network layer with a focus on energy. Topics include digital communications, networking, and optimization. 
- A basic knowledge of these is recommended. 
- Preliminary: graduate standing. (F)

270A-C. Neurocomputing (4-4-4)
- Neurocomputing is the study of biological information processing from an artificial intelligence engineering perspective. This three-quarter sequence covers neural network structures for arbitrary object (perceptual, motor, thought process, abstraction, etc.) representation, learning of pairwise object attribute descriptor antecedent support relations, the general mechanism of thought, and situationally responsive generation of movements and thoughts. Experimental homework assignments strongly reinforce the fundamental concepts and provide experience with myriad associated technical issues. 
- Preliminary: graduate standing, an understanding of mathematics through basic linear algebra and probability, or consent of instructor. (F,W,S)

271A. Statistical Learning I (4)
- Bayesian decision theory; parameter estimation; maximum likelihood; the bias-variance trade-off; Bayesian estimation; the predictive distribution; conjugate and noninformative priors; dimensionality reduction; principal component analysis; Fisher's linear discriminant analysis; density estimation; parametric vs. nonparametric methods; expectation-maximization; applications. 
- Recommended prerequisite: ECE 109.) 
- Preliminary: graduate standing. (W)

271B. Statistical Learning II (4)
- Linear discriminants; the Perceptron; the margin and large margin classifiers; learning theory; empirical vs. structural risk minimization; the VC dimension; kernel functions; reproducing kernel Hilbert spaces; regularization theory; Lagrangian optimization; duality theory; the support vector machine; boosting; Gaussian processes; applications. 
- Recommended prerequisite: ECE 109.) 
- Preliminary: ECE 271A; graduate standing. (W)

272A. Stochastic Processes in Dynamic Systems (4)
- Stochastic processes, focusing on detailed discussion of discrete-time Markov chains. Demonstrate the relationship
to dynamic systems under uncertainty, introducing er-
godicity, diffusion, estimation, and detection. Extend to continuous-time Markov chains and optimization of stochastic systems. (Recommended prerequisite: ECE 250.) PREREQUISITE: graduate standing.

273. Convex Optimization and Applications (4)
This course covers some convex optimization theory and al-
gorithms. It will mainly focus on recognizing and formulat-
ing convex problems, duality, and applications in a variety of fields (system design, pattern recognition, combinatorial optimization, financial engineering, etc.). PREREQUISITE: basic linear algebra is strongly recommended. (F)

275A. Parameter Estimation I (4)
Linear least squares (batch, recursive, total, sparse, poseduo-
inverse, QR, SVD); Statistical figures of merit (bias, consis-
tency, Cramer-Rao lower bound, efficiency); Maximum like-
lihood estimation (MLE); Sufficient statistics; Algorithms for computing the MLE including the Expectation Maximization (EM) algorithm. The problem of missing information; the problem of out liers. (Recommended prerequisites: ECE 109 and ECE 153.) PREREQUISITE: graduate standing.

275B. Parameter Estimation II (4)
The Bayesian framework and the use of statistical priors; suf-
cie n ce statistics and reproducing kernel hilbert spaces; min-
um mean square estimation (MSE); linear minimum mean square estimation; maximum a posteriori (MAP) estimation; minimax estimation; Kalman filter and extended Kalman filter (EKF) Baum-Welsh algorithm; Viterbi algorithm. Applications to identifying the parameters and states of hidden Markov models (HMMs) including ARMA, state-space, and finite-state dynamical systems. Applications to parametric and non-parametric density estimation. (Recommended prerequisites: ECE 153 and ECE 275A.) PREREQUISITE: ECE 275A; graduate standing.

280. Special Topics in Electronic Devices and Materials/Applied Physics (4)
A course to be given at the discretion of the faculty at which topics of interest in electronic devices and materials or applied physics will be presented by visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. PREREQUISITE: graduate standing.

281. Special Topics in Nanoscience/ Nanotechnology (4)
A course to be given at the discretion of the faculty at which topics of interest in nanoscience and nanotechnology will be presented by visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. PREREQUISITE: graduate standing.

282. Special Topics in Photonics/Applied Optics (4)
A course to be given at the discretion of the faculty at which topics of interest in photonics, optoelectronic materials, devices, systems, and applications will be presented by visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. PREREQUISITE: graduate standing.

283. Special Topics in Electronic Circuits and Systems (4)
A course to be given at the discretion of the faculty at which topics of interest in electronic circuits and systems will be presented by visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. PREREQUISITE: graduate standing.

284. Special Topics in Computer Engineering (4)
A course to be given at the discretion of the faculty at which topics of interest in computer engineering will be presented by visiting or resident faculty members. Subject matter will not be repeated so it may be taken for credit more than once. PREREQUISITE: consent of instructor.

A course to be given at the discretion of the faculty at which topics of interest in signal and image processing or robotics and control systems will be presented by visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. PREREQUISITE: graduate standing.

286. State-of-the-Art Topics in Computational Statistics and Machine Learning (4)
Class discusses both fundamental and state-of-the-art research topics in computational statistics and machine learning. Topics vary based upon current research, and have included: non-parametric Bayesian models; sampling methods for inference in graphical models; Markov Chain Monte Carlo (MCMC) methods. PREREQUISITE: graduate standing.

287. Special Topics in Communication Theory and Systems (4)
A course to be given at the discretion of the faculty at which topics of interest in information science will be presented by visiting or resident faculty members. It will not be repeated so it may be taken for credit more than once. PREREQUISITE: graduate standing.

290. Graduate Seminar on Current ECE Research (2)
Weekly discussion of current research conducted in the Department of Electrical and Computer Engineering by the faculty members involved in the research projects.

291. Industry Sponsored Engineering Design Project (4)
Design, build, and demonstrate an engineering project by project teams. All students give weekly progress reports on tasks and write final report, with individual exams and presentations. Projects/sponsorships originate from the needs of local industry. May count toward M.Eng. degree. (Recommended prerequisites: ECE 230 or ECE 240 or ECE 251 or ECE 253 or ECE 258 or equivalent.) PREREQUISITE: graduate standing.

292. Graduate Seminar in Electronic Circuits and Systems (2)
Research topics in electronic circuits and systems. PREREQUISITE: graduate standing.

293. Graduate Seminar in Communication Theory and Systems (2)
Weekly discussion of current research literature.

294. Graduate Seminar in Electronic Devices and Materials/Applied Physics (2)
Research topics in electronic devices and materials or applied solid state physics and quantum electronics.

295. Graduate Seminar in Computational Statistics and Machine Learning (2)
Weekly discussion of both fundamental and state-of-the-art research topics in computational statistics and machine learning. Topics vary based upon current research, and have included: Non-parametric Bayesian models; sampling methods for inference in graphical models; Markov Chain Monte Carlo (MCMC) methods. (F,W,S)

295R. Graduate Seminar in Signal and Image Processing/Robotics and Control Systems (2)
Weekly discussion of research topics in signal and image processing of robotics and control systems. PREREQUISITE: graduate standing.

296. Graduate Seminar in Photonics/Applied Optics (2)
Research topics of current interest in photonics and applied optics, including imaging, photonic communications, sensing, energy and signal processing. PREREQUISITE: graduate standing.

298. Independent Study (1-16)
Open to properly qualified graduate students who wish to pursue a problem through advanced study under the direction of a member of the (S/U grades only): PREREQUISITE: consent of instructor.

299. Research (1-16)
(S/U grade only.)

501. Teaching (1-4)
Teaching and tutorial activities associated with courses and seminars. Number of units for credit depends on number of hours devoted to class or section assistance. (S/U grade only.) PREREQUISITE: consent of department chair.

To prepare our students for rapid technological change and to deal knowledgeably and ethically with the impact of technology in our society and on global issues.

**THE UNDERGRADUATE PROGRAM**

**DEGREE AND PROGRAM OPTIONS**

The Department of Mechanical and Aerospace Engineering (MAE) offers traditional ABET accredited engineering programs leading to the B.S. degree in mechanical engineering, and aerospace engineering. MAE also offers traditional nonaccredited engineering programs leading to the B.S. degree in engineering science and environmental engineering. The B.S. programs require a minimum of 196 units.

All MAE programs of study have strong components in laboratory experimentation, numerical computation, and engineering design. Design is emphasized throughout the curricula by open-ended homework problems, by laboratory and computer courses which include student-initiated projects, and finally by senior design project courses which often involve teams of students working to solve engineering design problems brought in from industry. The MAE programs are designed to prepare students receiving bachelor's degrees for professional careers or for graduate education in their area of specialization. In addition, the programs can also be taken by students who intend to use their undergraduate engineering education as preparation for postgraduate professional training in nontechnical fields such as business administration, law, or medicine.

**Mechanical engineering** is a traditional four-year curriculum in mechanics, vibrations, thermodynamics, fluid flow, heat transfer, materials, control theory, and mechanical design. Graduates find employment in the mechanical and aerospace industries as well as electro-mechanical or biomedical industries. Mechanical engineers are involved in material processing, manufacturing, assembling, and maintenance of life-line facilities such as power plants.

**Aerospace engineering** is a four-year curriculum that prepares students for a career in the aeronautical and astronautical industries, related technology industries, or for graduate school.

The curriculum was developed to emphasize engineering fundamentals, aerospace topics, and the integration of these fundamentals and topics into the design of an aerospace system. Courses in aerospace engineering fundamentals include materials, solid and fluid mechanics, thermodynamics, computer modeling, computer-aided-design, numerical analysis, and controls. Courses covering the aerospace engineering topics include aerodynamics, aerospace structures, flight mechanics, dynamics and control of aerospace vehicles, and propulsion. Students complete the program by taking a two-quarter capstone design course that integrates all of their aerospace education into the design, development, and testing of an aeronautical or astronautical vehicle or component. Throughout the program, students take laboratory courses that expose them to modern testing techniques and enhance their understanding of complex engineering topics. To provide students with a strong foundation in engineering fundamentals; in-depth knowledge of key topics in aerospace engineering including aerodynamics, propulsion, flight mechanics, orbital mechanics, aerospace structures and materials, and design and control of aerospace systems; and an awareness of the value of lifelong learning.

The **engineering science** program resembles the Mechanical Engineering Program, except the amount of mechanical design is reduced and control theory is not required. In addition to core courses in dynamics, vibrations, structures, fluid mechanics, thermodynamics, heat transfer, and laboratory experimentation, a large number of technical electives are scheduled. This aspect of the curriculum allows flexibility by permitting specialization and in-depth study in one area of the engineering sciences or through a sequence of courses on various emerging technologies. Students must consult their advisors to develop a sound course of study to fulfill the technical elective of this program. Although a sequence in non-sciences may be permitted, the faculty advisors may insist on a substantial number of MAE or other science courses as technical electives.

**Environmental engineering** is a four-year curriculum with fundamental engineering courses in mechanics, thermodynamics, physics, chemistry, and mathematics. In the third and fourth year, an environmental engineering sequence is offered, as well as further specialization in fluid mechanics, and a wide choice of technical electives, both from within MAE and other departments. The environmental engineering major focuses on conveying an understanding and awareness of the fundamental processes associated with human industrial activity that have environmental implications, and on equipping the next generation of engineers with the tools to develop technologies that enable sustainable economic growth.
OTHER UNDERGRADUATE PROGRAMS OF STUDY IN MAE

The engineering mechanics minor involves successful completion of seven MAE courses, including at least five upper-division courses open to students who meet the course prerequisites: one must be MAE 130A; one must be 101A (or CENG 101A) or 131A (or both may be taken); and the balance must be selected from MAE 3, 9, 20, 110A, 130B, 160, and CENG 102. This set of courses provides a good introduction to engineering analysis and would be useful to non-engineering majors desiring a background that could be used in professional communication with engineers.

DOUBLE MAJORS AND MINORS

It is the policy of the UC San Diego Academic Senate not to approve double majors within engineering departments.

PROGRAM ACCREDITATION

The B.S. Programs in mechanical engineering and aerospace engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET/EAC).

MAJOR REQUIREMENTS

Specific course requirements for each major program are outlined in tables in this section of the catalog. In addition to the required technical courses specifically indicated, a suggested scheduling of humanities and social science courses (HSS) are distributed in the curriculum for students to use to meet college general-education requirements. To graduate, students must maintain an overall GPA of at least 2.0, and the department requires at least a C- grade in each course required for the major.

Deviations from these programs of study must be approved by the Undergraduate Affairs Committee prior to taking alternative courses. In addition, technical elective (TE) course selections must have departmental approval prior to taking the courses. In the accredited programs, TE courses are restricted to meet ABET standards. Courses such as MAE 195, 197, and 198 are not allowed as a technical elective in meeting the upper-division major requirements. MAE 199 can be used as a technical elective only under restrictive conditions. Policy regarding these conditions may be obtained from the department's Student Affairs Office.

Students with different academic preparation may vary the scheduling of lower-division courses such as math, physics and chemistry, but should consult the department. Deviations in scheduling MAE upper-division courses is discouraged and requires prior approval. Most lower-division courses are offered more than once each year to permit students some flexibility in their program scheduling. However, many MAE upper-division courses are taught only once per year, and courses are scheduled to be consistent with the curricula as shown in the tables. When possible, MAE does offer large enrollment courses more than once each year. A tentative schedule of course offerings is available from the department each spring for the following academic year.

GENERAL-EDUCATION/COLLEGE REQUIREMENTS

For graduation each student must satisfy general-education course requirements determined by the student's college as well as the major requirements determined by the department. The six colleges at UCSD require widely different general-education courses, and the number of such courses differs from one college to another. Each student should choose his or her college carefully, considering the special nature of the college and the breadth of general education.

Each MAE program allows for humanities and social science (HSS) courses so that students can fulfill their course requirements. In the ABET accredited programs, students must develop a program that includes a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. It should be noted, however, that some colleges require more than the nine or ten HSS courses indicated in the curriculum tables. Accordingly, students in these colleges could take longer to graduate than the indicated four-year schedule. Students must consult with their college to determine which HSS courses to take.

PROFESSIONAL LICENSING

After graduation, all students are encouraged to take the Fundamentals of Engineering (FE) examination as the first step in becoming licensed as a professional engineer (PE). Students graduating from an accredited program can take the PE examination after FE certification and two years of work experience; students graduating from a nonaccredited program can take the PE examination after FE certification and four years of work experience.

For further information please contact your local Board of Registration for Professional Engineers and Land Surveyors.

MECHANICAL ENGINEERING

The Mechanical Engineering Program has a traditional ABET accredited four-year curriculum involving mechanics, vibrations, thermodynamics, fluid flow, heat transfer, materials, control theory, and mechanical design. Graduates of this program are expected to have the following skills, knowledge, and abilities:

1. An ability to apply knowledge of mathematics including multivariable calculus, differential equations, linear algebra, science, and engineering to mechanical engineering problems
2. An ability to design and conduct experiments, as well as to analyze and interpret data
3. An ability to design a system, component, or process to meet desired needs
4. An ability to function on multi-disciplinary teams
5. An ability to identify, formulate, and solve engineering problems
6. An understanding of professional and ethical responsibility
7. An ability to communicate effectively
8. The broad education necessary to understand the impact of engineering solutions in a global and societal context
9. A recognition of the need for, and an ability to engage in lifelong learning
10. A knowledge of contemporary issues
11. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice
12. A familiarity with chemistry and calculus-based physics
13. A familiarity with statistics
14. Ability to work professionally in mechanical system areas including the design and realization of such areas
15. Ability to work professionally in thermal systems areas including design and realization of such systems

- Chem. 6AH-6BH sequence may be taken in place of Chem. 6A-B.
- In fulfilling the humanities and social science requirements (HSS), students must take a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Ten HSS courses are listed here; individual college requirements may be higher.
- Technical electives (TE) must be an upper-division or graduate course in the engineering sciences, natural sciences or mathematics.
- See the MAE Student Affairs Office for a complete list of technical electives.
ENGINEERING SCIENCE

The engineering science program resembles the mechanical engineering program, except that the course load of mechanical design is reduced, and control theory is not required. In addition to core courses in dynamics, vibrations, structures, fluid mechanics, thermodynamics, heat transfer, and laboratory experimentation, a large number of technical electives are scheduled. This aspect of the curriculum allows flexibility, permitting specialization and in-depth study in one area of the engineering sciences or development of a sequence of courses emerging from the current research interests of the faculty of MAE and/or other departments, e.g., sequences in the earth sciences, transportation, or energy-related studies. Students intending to pursue postgraduate professional careers in non-technical fields such as business administration, law, or medicine may develop an appropriate sequence of courses. Although a sequence in the non-sciences may be permitted, the faculty advisor may insist on a substantial number of MAE or other science courses as technical electives. Students must consult their advisors to develop a balanced course of study to fulfill the technical elective requirements of this program. This curriculum also allows the highest number of humanities and social science courses (HSS) to meet college general-education requirements.

- Chem. 6AH-6BH sequence may be taken in place of Chem. 6A-B.
- Humanities and social science (HSS) courses should be selected to meet general-education requirements of the colleges. Individual college requirements may be higher or lower than what is listed here.
- Four technical elective (TE) courses must be upper-division or graduate courses in the engineering sciences, natural sciences or mathematics selected with prior approval of the department. A sequence of non-science courses may also be selected with prior approval (see program description).

See the Student Affairs Office for a complete list of technical electives.

AEROSPACE ENGINEERING

Aerospace engineering is an ABET-accredited four-year curriculum that begins with fundamental engineering courses in mechanics, thermodynamics, materials, solid mechanics, fluid mechanics, and heat transfer. Additional courses are required in aerospace structures, aerodynamics, flight mechanics, propulsion, controls, and aerospace design. Graduates of this program enter graduate school or enter the aerospace industry to develop aircraft and spacecraft, but also they find employment in other areas that use similar technologies, such as mechanical and energy-related fields. Examples include automobile, naval, and sporting equipment manufacturing.

Graduates of this program are expected to have the following skills, knowledge, and abilities:

1. an ability to apply knowledge of mathematics, science, and engineering
2. an ability to design and conduct experiments, as well as to analyze and interpret data
3. an ability to design a system, component, or process to meet desired needs
4. an ability to function on multidisciplinary teams
5. an ability to identify, formulate, and solve engineering problems
6. an understanding of professional and ethical responsibility.
7. an ability to communicate effectively with written, oral, and visual means
8. the broad education necessary to understand the impact of engineering solutions in a global and societal context
9. a recognition of the need for, and an ability to engage in lifelong learning
10. a knowledge of contemporary issues
11. an ability to use modern engineering techniques, skills, and computer tools necessary for engineering practice
12. knowledge of key topics in aeronautical engineering including aerodynamics, aerospace materials, structures, propulsion, flight mechanics, and stability and control
13. knowledge of topics in astronautical engineering including attitude determination and control, space structures, orbital mechanics, and rocket propulsion
14. an ability to integrate knowledge of the fundamental topics in the design of an aerospace system

- Technical elective (TE) course must be upper-division or graduate courses in engineering sciences, natural sciences, or mathematics selected with a prior approval of the department. See Student Affairs in MAE for a current list of approved TEs.

ENVIRONMENTAL ENGINEERING

The environmental engineering is a four-year curriculum with fundamental engineering courses in mechanics, thermodynamics, physics, chemistry, and math. In the third and fourth year, an environmental engineering sequence is offered, as well as further specialization in fluid mechanics, and a wide choice of technical elective (TE) courses, both from within MAE and in other departments. The environmental engineering curriculum is currently undergoing review for future ABET accreditation. Please see MAE Student Affairs for more information.

- See MAE Student Affairs Office for a complete list of TE's.

**POLICIES AND PROCEDURES FOR MAE UNDERGRADUATE STUDENTS**

**ADMISSION TO THE MAJOR**

The B.S. degrees in mechanical and aerospace engineering are impacted. Because of heavy student interest in these two majors, and the limited resources available to accommodate this demand, maintenance of a high-quality program makes it necessary to limit enrollments.

Environmental engineering and engineering science continue to be open majors.

**FRESHMAN STUDENTS**

Freshman students who have excelled in high school and have declared mechanical, aerospace, environment engineering, or engineering sciences on their UCSD application are eligible for direct admission into those majors. Enrollment is limited in the mechanical and aerospace majors due to its heavy demand and limited resources. Students will be notified by the UC San Diego Office of Admissions whether they have been admitted into their chosen major, based on admissions criteria and their ranking in the applicant pool.

**TRANSFER STUDENTS**

Applicants seeking admission as transfer students will be considered for admission into the mechanical, aerospace, environmental engineering, and engineering science majors. Enrollment is limited in the mechanical and aerospace majors due to its heavy demand and limited resources. Impacted status will be in effect in 2011. Transfer students who have excelled in their community college courses, especially courses in math., physics, and chemistry, will have the strongest advantage.

Students who have taken equivalent courses elsewhere may request to have transfer credit apply toward the department’s major requirements. To receive transfer credit, complete a MAE Student Petition form and submit it to MAE Student Affairs. For mathematics, chemistry and physics, transfer equivalencies are determined by the respective departments. An Undergraduate Student Petition must be submitted to each department from which you are requesting transfer credit.

It is **strongly recommended** that transfers complete the following preparation for all engineering majors.

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Differential Equations (Math. 20D)
- Calculus and Analytic Geometry (Math. 20C)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Physics 2A, B, and C)
- Chemistry 6A
- Highest level of introductory computer programming language course offerings at the community college

**CONTINUING STUDENTS CHANGING MAJORS**

Continuing students who wish to change into an impacted major (mechanical engineering and aerospace engineering) must submit an application to the department. Applications will be accepted twice a year. Please see the department Web site maeweb.ucsd.edu for details.

Continuing students who wish to be considered must submit an application to the MAE department on or before the target dates and must meet the following minimum requirements:
1. completed at least one year/three quarters in residence at UCSD;
2. complete all lower-division requirements for the requested major.

Applications will be ranked by their UCSD GPA on the date of the application. Students will be allowed into the major based on a ranking system, up to a maximum number.

Students who apply later than the final day of their sixth academic quarter at UCSD will not be considered.

**ACADEMIC ADVISING**

Upon admission to the major, students should consult the catalog or MAE Web site (http://maeweb.ucsd.edu) for their program of study or their undergraduate advisor if they have questions. The program plan may be revised in subsequent years, but revisions involving curricular requirements require approval by the undergraduate advisor or the Undergraduate Affairs Committee. Because some course and/or curricular changes may be made every year, it is imperative that students consult with the department’s undergraduate advisor on an annual basis.

Some MAE courses are offered only once a year and therefore should be taken in the recommended sequence. If courses are taken out of sequence, it may not always be possible to enroll in courses as desired or needed. If this occurs, students should seek immediate departmental advice. When a student deviates from the sequence of courses specified for each curriculum in this catalog, it may be impossible to complete an MAE major within the normal four-year period.

In addition to the advising available through the Student Affairs Office, programmatic or technical advice may be obtained from MAE faculty members. A specific MAE faculty mentor is assigned to each MAE student. It is recommended that all MAE students meet with their faculty mentor at least once a quarter.

**PROGRAM ALTERATIONS/EXCEPTIONS TO REQUIREMENTS**

Variations from or exceptions to any program or course requirements are possible only if a petition is approved by the MAE Undergraduate Affairs Committee before the courses in question are taken. Petition forms may be obtained from the MAE Student Affairs Office and must be processed through this office.

**INDEPENDENT STUDY**

MAE students may take MAE 199, Independent Study for Undergraduates, under the guidance of an MAE faculty member. This course is taken as an elective on a P/NP basis. Under very restrictive conditions, however, it may be used to satisfy upper-division technical elective course requirements for the major. Students interested in this alternative must identify an MAE faculty member with whom they wish to work and propose a two-quarter research or study topic. After obtaining the faculty member’s concurrence on the topic and scope of the study, the student must submit a Special Studies Course form (each quarter) and an MAE 199 as Technical Elective Contract form to the Undergraduate Affairs Committee. These forms must be completed, approved, and processed prior to the add/drop deadline. Detailed policy in this regard and the requisite forms may be obtained from the Student Affairs Office.

**TEACHING**

Students interested in participating in the instructional activities of the department may take MAE 195, Undergraduate Teaching. Normally, this course is taken as an elective on a P/NP basis. Under very restrictive conditions, it may be used to satisfy upper-division technical elective course requirements for the major. Policy in this regard and the appropriate forms may be obtained from the Student Affairs Office.

**THE GRADUATE PROGRAM**

The Department of Mechanical and Aerospace Engineering offers graduate instruction leading to
the M.S. and Ph.D. degrees in engineering sciences with a designated specialization in each of the following areas: aerospace engineering, applied mechanics, applied ocean sciences, engineering physics, and mechanical engineering.

In fall 2007, a new Ph.D. specialization was introduced: computational science. Computational science seeks to gain understanding principally through the analysis of mathematical models on high performance computers. It is a blend of applications, computations, and mathematics. It is a mode of scientific investigation that supplements the traditional lab and theoretical models of acquiring knowledge. This is done by formulating mathematical models whose solutions are approximated by computer simulations.

The computational science specialization leverages the strengths of the existing mathematics, science, and engineering departments. Ph.D. students must demonstrate advanced undergraduate-level proficiency in numerical analysis and in computer algorithms and data structures.

For more information, please contact the MAE Graduate Affairs Office.

Admission is in accordance with the general requirements of the graduate division, which requires a B.S. and/or M.S. degree in some branch of engineering, the physical sciences, or mathematics; an overall GPA of 3.0; and three letters of recommendation from individuals who can attest to the academic or professional competence and to the depth of their interest in pursuing graduate study. In addition, all applicants are required to submit GRE General Test scores. A minimum score of 550 on the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. Students who score below 600 on the TOEFL examination are strongly encouraged to enroll in an English as a second language program before beginning graduate work. (UC San Diego Extension offers an excellent English language program during the summer as well as the academic year.) Applicants are judged competitively. Based on the candidate's background, qualifications, and goals, admission to the program is in one of three categories: M.S. only, M.S., or Ph.D. Admission to the M.S. only category is reserved for students for whom the M.S. degree is likely to be the terminal graduate degree. The M.S. designation is reserved for students currently interested in obtaining an M.S. degree but who at a later time may wish to continue in the doctoral degree program. Admission to the Ph.D. program is reserved for qualified students whose final aim is a doctoral degree. Policies for possible changes in status are given under "Master's Degree Program" below.

Non-matriculated students are welcome to seek enrollment in MAE courses via UC Extension's concurrent registration program, but an extension student's enrollment in an MAE graduate course must be approved by the instructor.

MASTER'S DEGREE PROGRAM

The M.S. program is intended to extend and broaden an undergraduate background and/or equip practicing engineers with fundamental knowledge in their particular fields. The degree may be terminal, or obtained on the way to the Ph.D. The degree is offered under both the Thesis Plan I and the Comprehensive Examination Plan II (see "Graduate Studies: Master's Degree"). A strong effort is made to schedule M.S.-level course offerings so that students may obtain their M.S. degree in one year of full-time study or two years of part-time study.

M.S. Time Limit Policy: Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

Course requirements are flexible in the applied mechanics and engineering physics programs. Specific departmental requirements for the M.S. degree are as follows:

**MASTER'S PLAN I - THESIS DEFENSE**

This plan of study involves both course work and research, culminating in the preparation of a thesis. A total of forty-eight units of credit is required: thirty-six units (nine courses) must be in course work, and twelve units must be in research. The student's program is arranged, with prior approval of the faculty advisor, according to the following policies:

1. Course work must include sixteen units (four courses) of MAE 200-level courses.
2. Units obtained in MAE 205 or 299 may not be applied toward the course work requirement.
3. No more than a total of eight units of MAE 296 and 298 may be applied toward the course work requirement.
4. No more than twelve units of upper-division 100-level courses (engineering-based or technically serious) may be applied toward the course work requirement.
5. Twelve units of MAE 299 must be taken to fulfill the research requirement.

Students must maintain at least a B average in the courses taken to fulfill the degree requirements. A thesis based on the research is written and subsequently reviewed by the thesis advisor and two other faculty members appointed by the dean of Graduate Studies. The review is normally an oral defense of the thesis.

**COMPREHENSIVE EXAMINATION PLAN II**

This plan of study involves course work only and culminates in a comprehensive examination. A total of forty-eight units of credit (twelve courses) is required. The student's program is arranged, with prior approval of the faculty advisor, according to the following policies:

1. At least sixteen units (four courses) must be MAE 200-level courses.
2. Units obtained in MAE 205 or 299 may not be applied toward the degree requirements.
3. No more than a total of eight units of MAE 296 and 298 may be applied toward the degree requirements.
4. No more than twelve units of upper-division 100-level courses may be applied toward the degree requirements.

Students must maintain at least a B average in the courses taken to fulfill the degree requirements. The comprehensive examination is conducted by the advisor and at least two other faculty members. The examination committee normally conducts an oral examination in two areas of specialization covered by course work taken by the student. A student working toward the Ph.D. degree who has successfully passed two areas of the department's Ph.D. examination need not take the comprehensive examination for the M.S. degree.

**Change of Degree.** Upon completion of the requirements for the M.S. degree, students admitted as M.S. only or M.S. candidates are not automatically eligible for admission to the Ph.D. Program. M.S. only candidates who subsequently wish to pursue a doctorate must submit an application for a change in status to their examining committee. If the recommendation is positive and the request approved, the student must submit a general petition for graduate students to effect the change of status. In addition, the examining committee may recommend that the examination satisfy one of the three topics required in the departmental qualifying examination for the doctorate.

M.S. candidates who subsequently wish to pursue a doctorate must also submit an application for a change in status to their examining committee. In this case, a special examination is not required. The application, however, must be approved and signed by an MAE faculty member who expects to serve as the student's Ph.D. advisor. When the request is approved, the student must submit a general petition for graduate students to effect the change of status. If the student elects the comprehensive examination plan for the M.S. degree, this examination may be used not only to fulfill the requirement for the M.S. degree but also to satisfy one of the three topics required in the departmental qualifying examination for the doctorate. In fact, the M.S. examination may be part of the doctoral examination.

**M.S. PROGRAM**

To complete an M.S. degree with specialization in aerospace engineering, engineering physics, mechanical engineering, applied mechanics, or applied ocean sciences, students must complete a sequence of courses unique to their area. Students should consult with their faculty advisor, as well as the MAE Graduate Student Affairs Office, when choosing their courses.

**DOCTORAL DEGREE PROGRAM**

The MAE Ph.D. Program is intended to prepare students for a variety of careers in research and teaching. Therefore, depending on the student's background and ability, research is initiated as soon as possible. In general, there are no formal course requirements for the Ph.D. All students, in consultation with their advisors, develop course programs that will prepare them for the MAE Departmental Qualifying Examination and for their dissertation...
research. However, these programs of study and research must be planned to meet the time limits established to advance to candidacy and to complete the requirements for the degree. Doctoral students who have passed the Departmental Examination may take any course for an S/U grade with the exception of any course that the student’s Departmental or Ph.D. Qualifying Examination Committee stipulates must be taken in order to remove a deficiency. It is strongly recommended that all MAE graduate students take a minimum of two courses (other than research) per academic year after passing the Departmental Qualifying Examination. Specific details in this regard can be obtained from the MAE Student Affairs Office.

**Doctoral Examinations**

An MAE Ph.D. student is required to pass three examinations. The first is a *Departmental Qualifying Examination (DQE)* which is intended to determine the candidate’s ability to successfully pursue a research project level appropriate for the doctorate. This first exam must be taken within the first six quarters of registration as a graduate student. The DQE is an oral examination by a committee of four persons (two of which must be in the MAE department) and is based on material taught over 36 units in three areas of study: a major area (four courses), a minor area (two introductory courses), and a study in mathematics or basic science (three courses). Students must submit a plan of study, approved by their advisor, to the Graduate Affairs Committee for final approval by the end of their second quarter of graduate study.

The *Teaching Experience* is required of all MAE Ph.D. students prior to taking the Ph.D. Qualifying Exam. The teaching experience is defined as lecturing one hour per week in either a problem-solving section or regular lecture for one quarter in a course designated by the department. The requirement can be fulfilled by teaching assistant service or taken as a course for academic credit (MAE 501). Students must contact the Student Affairs Office to plan for completion of this requirement.

The *Ph.D. Qualifying Examination* is the second examination required of MAE Ph.D. Students. In preparation for the Ph.D. Qualifying Examination, students must have completed the Departmental Qualifying Examination and the Departmental Teaching Experience requirement, obtained a faculty research advisor, and have identified a topic for their dissertation research and have made initial progress. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student’s graduate program is appointed by the Graduate Council. The committee conducts the Ph.D. Qualifying Examination, during which students must demonstrate the ability to engage in dissertation research. This involves the presentation of a plan for the dissertation research project. The committee may ask questions directly or indirectly related to the project and general questions that it determines to be relevant. Upon successful completion of this examination, students are advanced to candidacy and are awarded the candidate in philosophy degree (see “Graduate Studies” section in this catalog).

The *Dissertation Defense* is the final Ph.D. Examination. Upon completion of the dissertation research project, the student writes a dissertation that must be successfully defended in an oral examination and public presentation conducted by the doctoral committee. A complete copy of the student’s dissertation must be submitted to each member of the doctoral committee approximately four weeks before the defense. It is understood that this copy of the dissertation given to committee members will not be the final copy, and that the committee members may suggest changes in the text at the time of the defense. This examination may not be conducted earlier than three quarters after the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and the university librarian represents the final step in completion of all requirements for the Ph.D.

There is no formal foreign language requirement for doctoral candidates. Students are expected to master whatever language is needed for the pursuit of their own research.

**Ph.D. Time Limit Policy**

Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years (engineering physics, seven years). The defense and submission of the doctoral dissertation must be within seven years (engineering physics, eight years).

**Evaluations**

In the spring of each year, the faculty evaluate each doctoral student’s overall performance in course work, research, and prospects for financial support for future years. A written assessment is given to the student after the evaluation. If a student’s work is found to be inadequate, the faculty may determine that the student cannot continue in the graduate program.

---

**LOWEr-DIVISION**

**MAE 02. Introduction to Aerospace Engineering (4)**

An introduction to topics in aeronautical and astronautical engineering including aerodynamics, propulsion, flight mechanics, structures, materials, orbital mechanics, design, mission planning, and environments. General topics include historical background, career opportunities, engineering ethics, and professionalism. Must be taken for a letter grade. **PREREQUISITE:** none.

**MAE 03. Introduction to Engineering Graphics and Design (4)**

Introduction to design process through a hands-on design project performed in teams. Topics include problem identification, concept generation, project management, risk reduction. Engineering graphics and communication skills are introduced in the areas of: Computer-Aided Design (CAD), hand sketching, and technical communication. **PREREQUISITE:** grade of C- or better in Physics 2A or 4A (or concurrent enrollment). Priority enrollment given to engineering majors.

**MAE 05. Quantitative Computer Skills (4)**

Introductory course for non-engineering majors. Use of computers in solving problems; applications from life sciences, physical sciences, and engineering. Students run existing computer programs and complete some programming in BASIC. **PREREQUISITE:** none.

**MAE 09. C/C++ Programming (4)**

C/C++ computer programming under the UNIX environment with applications to numerical problems fundamental to computational mechanics. Arithmetic operations, branches, arrays, data structures, and use of pointers are introduced. Programming ethics are discussed. Priority enrollment given to pre-engineering and engineering majors.

**MAE 20. Elements of Materials Science (4)**

The structure of materials: metals, ceramics, glasses, semiconductors, superconductors and polymers. Control of internal structure to produce desired properties. Mechanical, rheological, electrical, optical, superconducting and magnetic properties and classification. **PREREQUISITES:** Phys. 2A or 4A, Chem. 6A, Math. 21C or 20D (or concurrent registration).

**MAE 87. Freshman Seminar (1)**

The Freshman Seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges. Topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. **PREREQUISITE:** none.
MAE 92A. Design Competition—Design, Build, and Fly Aircraft (1)
(Cross-listed with SE 10A.) Students design, build, and fly unmanned aircraft for a national student competition. Students concentrate on vehicle system design including aerodynamics, structures, propulsion, and performance. Teams engineering, fabricate the aircraft, submit a design report, and prep aircraft for competition. **PREREQUISITES:** consent of instructor.

MAE 99R. Independent Study (1)
Independent study or research under direction of a member of the faculty. **PREREQUISITES:** student must be of first-year standing and a Regent’s Scholar; approved Special Studies form.

UPPER-DIVISION

MAE 101A. Introductory Fluid Mechanics (4)
Fluid statics; fluid kinematics; integral and differential forms of the conservation laws for mass, momentum and energy; Bernoulli equation; potential flows; dimensional analysis and similarity. **PREREQUISITES:** admission to an engineering major and grades of C– or better in Phys. 2A, Math. 20D, 20E, or consent of instructor.

MAE 101B. Advanced Fluid Mechanics (4)
Laminar and turbulent flow. Pipe flow including friction factor. Boundary layers, separation, drag, and lift. Compressible flow including shock waves. Professional ethics will be included. **PREREQUISITES:** grades of C– or better in MAE 101A, or CENG 101A or CENG 103A, and MAE 110A or CENG 102 or consent of instructor.

MAE 101C. Heat Transfer (4)
Extension of fluid mechanics in MAE 101B to viscous, heat-conducting flows. Application of the energy conservation equation to heat transfer in ducts and external boundary layers. Heat conduction and radiation transfer. Heat transfer coefficients in forced and free convection. Design applications. **PREREQUISITES:** grade of C– or better in MAE 101A or CENG 101A and MAE 101B, or consent of instructor.

MAE 102. Fluid Mechanics for Structural Engineers (4)
(Cross-listed with SE 112.) Fluid statics, hydrostatic forces; integral and differential forms of conservation equations for mass, momentum, and energy; Bernoulli equation; dimensional analysis; viscous pipe flow; external flow, boundary layers; open channel flow. **PREREQUISITES:** grade of C– or better in Phys. 2A, Math. 20D, and Math. 20E or consent of instructor.

MAE 104. Aerodynamics (4)
Basic relations describing flow field around wings and bodies at subsonic and supersonic speed. Thin-wing theory. Slender-body theory; crossflow theory of supercritical airfoils for analyzing forces and moments on airplane geometries. Application to the design of high-speed airplanes. **PREREQUISITES:** open to MC 25, MC 27, MC 28 and SE 27 only and grade of C– or better in MAE 101A-8 or consent of instructor.

MAE 105. Introduction to Mathematical Physics (4)
Fourier series, Sturm Liouville theory, elementary partial differential equations, transformation of theories for solving non-linear algebraic equations; function interpolation and differentiation and optimal procedures; data fitting and least-squares; numerical solution of ordinary differential equations. **PREREQUISITES:** engineering majors only and grades of C– or better in MAE 9 or MAE 10 and Math. 20F.

MAE 107. Computational Methods in Engineering (4)
Introduction to scientific computing and algorithms; iterative methods will be systems of linear equations; grade of C– or better in MAE 9 or MAE 10 and Math. 20F.

MAE 109A. Thermodynamics (4)
Fundamentals of engineering thermodynamics: energy, work, heat, properties of pure substances, first and second laws for closed systems and control volumes, gas mixtures. Application to engineering systems, power and refrigeration cycles, combustion. **PREREQUISITES:** grades of C– or better in Phys. 2C and Chem 6A. Enrollment restricted to engineering majors only.

MAE 110B. Thermodynamic Systems (4)
Thermodynamic analysis of power cycles with application to combustion driven engines: internal combustion, diesel, and gas turbines. Thermodynamics of mixtures and chemical and phase equilibrium. Computational methods for calculating chemical equilibrium. **PREREQUISITE:** grade of C– or better in MAE 110A.

MAE 113. Fundamentals of Propulsion (4)
Compressible flow, thermodynamics, and combustion relevant to aircraft and space vehicle propulsion. Analysis and design of components for gas turbines, including turbines, inlets, combustion chambers and nozzles. Fundamentals of rocket propulsion. **PREREQUISITES:** engineering majors MC 25, MC 27 and MC 28 and only grades of C– or better in MAE 110A or MAE 101A-B or CENG 101A and 101C (or CENG 103A-B).

MAE 117A. Elementary Plasma Physics (4)
(Cross-listed with Physics 151J.) Particle motions, plasmas as fluids, waves, diffusion, equilibrium and stability, nonlinear effects, controlled fusion. **PREREQUISITES:** Math. 21D or consent of instructor. Phys. 100B-C or ECE 107 are recommended.

MAE 117B. Industrial Plasma Applications (4)
Charged particle motion in DC and RF electromagnetic; atomic processes in plasmas; ionization, excitation, dissociation, rate constants, electron energy balance electric breakdown of the gases; debye length, plasmas quasi-neutrality, sheath, DC, capacitive, inductive, and wave-heated discharges; etching, deposition, and implantation. **PREREQUISITE:** Math. 20D or 21D, or consent of instructor.

MAE 117L. Elements of Experimental Plasma Physics (4)
Measurements of electron density and temperature with the langmuire probes, emission spectroscopy measurements of neutrals and ions in plasmas; electric breakdown of the gases; plasmas etching of materials. **PREREQUISITES:** none.

MAE 118A. Introduction to Energy Systems (4)
Overview of present-day primary energy sources and availability; stationary and mobile power plant technologies; air pollution and controls; introduction to climate change; overview of renewable energy resources and technologies. **PREREQUISITES:** MAE 101A or CENG 101A, or consent of instructor.

MAE 118B. Twenty-First Century Energy Technologies I (4)
A survey of projected energy demands and resources. Climate change physics and impacts on energy systems. Basic physics of photovoltaics, wind power, and other renewable and developing energy technologies. An exploration of the “Hydrogen Economy.” **PREREQUISITES:** MAE 101A or CENG 101A, or consent of instructor.

MAE 118C. Twenty-First Century Energy Technologies II (4)
Overview of basic fusion processes and fusion processes. Elementary fission reactor physics and engineering; environmental and waste disposal issues. Introduction to power producing fusion reactor physics. Survey of fusion technology issues, status and prospects for fusion energy. **PREREQUISITES:** MAE 101A or CENG 101A, or consent of instructor.

MAE 124. The Human Earth: An Introduction to Environmental Engineering and Policy (4)
(Cross-listed with EYS 103.) This course explores the impacts of human social, economic, and industrial activity on the environment. It highlights the central roles in ensuring sustainable development played by market forces, technological innovation and governmental regulation on local, national, and global scales. **PREREQUISITES:** grade of C– or better in Math. 20B or Math. 10A-C, or consent of instructor.

MAE 125. Fluid Solid Interactions in Environment Engineering (4)

MAE 125C. Case Studies in Environmental Engineering (4)
This course is project-oriented. Students will conduct research in small groups, give oral presentations and write reports. Topics reflect material in MAE 125A and MAE 125B. Possible topics: air pollution modeling, building ventilation, wetland preservation. **PREREQUISITES:** engineering majors and students receiving a grade of C– or better in MAE 125A-B.

MAE 126A. Environmental Engineering Laboratory I (4)
Design and analysis of experiments in environmental engineering. Experiments in wind tunnel, water tunnel, and equipment. Use of statistical analysis and report writing; error analysis; engineering ethics. **PREREQUISITES:** grade of C– or better in MAE 101A or CENG 101A, MAE 125A.

MAE 126B. Environmental Engineering Laboratory II (4)
Design and analysis of original studies in environmental engineering. Students work on environmental projects and use computational and laboratory facilities. Students propose and design studies, collect and analyze data, and prepare a major report. **PREREQUISITE:** grade of C– or better in MAE 126A.

MAE 127. Statistical Methods for Environmental Sciences and Engineering (4)
Methods for evaluating environmental data including probability distributions, confidence intervals, functional fitting, spectral analysis, and programming methods for data analysis. **PREREQUISITE:** grade of C– or better in Math. 20C.

MAE 130A. Mechanics I: Statics (4)
(Cross-listed with SE 10A.) Statics of particles and rigid bodies in two and three dimensions. Free body diagrams. Internal forces. Static analysis of trusses, frames, and machines. Shear force and bending moment diagrams in beams. Equilibrium problems with friction. **PREREQUISITES:** Math. 20C and Phys. 2A with grades of C– or better. Students cannot also receive credit for SE 10A.

MAE 130B. Mechanics II: Dynamics (4)

MAE 130C. Mechanics III: Vibrations (4)
(Cross-listed with SE 10C.) Free and forced vibrations of undamped and damped single degree of freedom systems. Harmonically excited vibrations. Vibrations under general loading conditions. Vibrating systems with multiple degrees of freedom. Modal analysis with application to realistic engineering problems. Vibrations of continuous systems. **PREREQUISITES:** grades of C– or better in Math. 20F and MAE 130B or SE 10B.

MAE 131A. Solid Mechanics I (4)
PREREQUISITES: grades of C– or better in Math. 20D, 20F, and MAE 130A or SE 101A.

MAE 131B. Fundamentals of Solid Mechanics II (4)
Continuum mechanics of solids and its application to the mechanical response of machine and structural elements. Stress and strain in indicial notation; field equations and constitutive relations. Linear elastic stress analysis in torsion, plane stress and plane strain; stress concentrations; fracture mechanics. Extremum principles and structural stability. Viscoelasticity, plasticity, and failure criteria. Theorem of plastic work. PREREQUISITES: grades of C– or better in MAE 131A or SE 110A and MAE 105.

MAE 131C. Solid Mechanics III (4)

MAE 132. Intermediate Dynamics (4)
Kinematics and kinetics of 3-D rigid body motion. Angular momentum and its rate of change. Euler’s and general equations of motion. Rotation about a fixed axis and a fixed point. Gyroscopic motion. Dynamic reactions. Lagrange’s equations of motion with applications. PREREQUISITES: grade of C– or better in MAE 130B or SE 101B.

MAE 133. Finite Element Methods in Mechanical and Aerospace Engineering (4)
Development of stiffness and mass matrices based upon variational principles and application to static, dynamic, and stability design problems in structural and solid mechanics. Architecture of computer codes for linear and nonlinear finite element analysis and basic computer implementation. The use of general purpose finite element structural analysis computer codes. PREREQUISITES: grade of C– or better in MAE 131A or SE 110A.

MAE 135. Computational Mechanics (4)
Mathematical models in terms of systems of algebraic and differential equations. Overview of numerical methods. Problem statement, boundary, and initial conditions. Overview of commercial packages for solving the equations of Mathematical and Engineering Physics. Numerical solutions of selected examples drawn from real-life applications of fluid flow, solid mechanics, and heat transfer with emphasis on design. PREREQUISITE: consent of instructor.

MAE 140. Linear Circuits (4)

MAE 142. Dynamics and Control of Aerospace Vehicles (4)
The dynamics of vehicles in space or air are derived for analysis of the stability properties of spacecraft and aircraft. The theory of flight, lift, drag, Dutch roll and phugoid modes of aircraft are discussed. Optimal state space control theory for the design of analog and digital controllers (autopilots). PREREQUISITES: admission to the engineering major and grades of C– or better in MAE 104 and MAE 143B or ECE 171A, or consent of instructor.

MAE 143A. Signals and Systems (4)

MAE 143B. Linear Control (4)

MAE 143C. Digital Control Systems (4)
Discrete time systems: sampling, aliasing, stability. 2-transform, discrete time signals, state space models; state equations; canonical forms, observability, controllability. Pole placement design, observer design, output feedback, linear quadratic regulator design. Implementation: digital approximation, computational and numerical issues. PREREQUISITE: grade of C– or better in MAE 143B.

MAE 149. Sensor Networks (4)
(Cross-listed with ECE 156 and SIG 238) Characteristics of chemical, biological, seismic and other physical sensors; signal processing techniques supporting distributed detection of salient events; wireless communication and networking protocols supporting formation of robust sensor fabrics; current experience with low power, low-cost sensor deployments. PREREQUISITES: upper-division standing and consent of instructor, or graduate student in science or engineering.

MAE 150. Computer-Aided Design (4)
Computer-Aided Analysis and Design. Design methodology, tolerance analysis, Monte Carlo analysis, kinematics and dynamics, better design of linkages, numerical calculation of moments of inertia, design of cams and cam dynamics; finite element analysis design using Pro-E, Mechanica Motion and Mechanica Structures. PREREQUISITES: grades of C– or better in MAE 130A or SE 101A or BENG 110, MAE 107 or SE 121, and MAE 3, senior standing in engineering major, or consent of instructor.

MAE 152. Computer Graphics for Engineers and Scientists (4)
Computer graphics algorithms using C programming and Ironcad. Applications in engineering and science. Line-drawing algorithms. Area fill algorithms, color, CAD user interface, spline curves and surfaces, 2-D and 3-D transformations, wireframe and solid models. Hidden-surface elimination. PREREQUISITES: grade of C– or better in MAE 3 and MAE 9 or 10. Not offered every year.

MAE 155A. Aerospace Engineering Design I (4)
Fundamental principles of aerospace vehicle design including the conceptual, preliminary, and detailed design phases. Aeronautical or astronautical design project that integrates all appropriate engineering disciplines as well as issues associated with optimization, teamwork, manufacturability, reporting, and professionalism. PREREQUISITES: grade of C– or better in MAE 2, 104, 113, 130C, 142, 150, SE 2 and SE 160B or consent of instructor. Students may enroll concurrently with MAE 113, 142, and 150.

MAE 155B. Aerospace Engineering Design II (4)
Fundamental principles of aerospace vehicle design including the conceptual, preliminary, and detailed design phases. Aeronautical and astronautical design project that integrates all appropriate engineering disciplines as well as issues associated with optimization, teamwork, manufacturability, reporting, and professionalism. PREREQUISITES: grade of C– or better in MAE 113, 142, 150, 155A or consent of instructor.

MAE 156A. Fundamental Principles of Mechanical Design I (4)
Fundamental principles of mechanical design and the design process. Application of engineering science to the design and analysis of mechanical components. Initiation of team design projects that culminate in MAE 156B with a working prototype designed for a real engineering application. Professional ethics discussed. Course material fee may apply. PREREQUISITES: grades of C– or better in MAE 3, 130C, MAE 131A, MAE 160, or MAE 131B, and MAE 170 or consent of instructor.

MAE 156B. Fundamental Principles of Mechanical Design II (4)
Fundamental principles of mechanical design and the design process. Culmination of a team design project initiated in MAE 156A which results in a working prototype designed for a real engineering application. PREREQUISITE: grade of C– or better in MAE 156A. MAE 101C, MAE 150 or consent of instructor.

MAE 160. Mechanical Behavior of Materials (4)
Elasticity and anisotropy, dislocations and plasticity of crystals, creep, and strengthening mechanisms. Mechanical behavior of ceramics, composites, and polymers. Fracture: mechanical and microstructural fatigue. Laboratory demonstrations of selected topics. PREREQUISITES: grade of C– or better in MAE 20, MAE 130A (or SE 101A) and MAE 131A, or consent of instructor.

MAE 161. Electronic, Magnetic, and Photonic Materials (4)
Introduction to the worlds of electronic, magnetic/photonics materials, the unique properties of advance engineering materials in relation to processing, fabrication, and microstructure. Semiconductors, metals, alloys, ceramics, polymers, and composite materials and their practical applications. PREREQUISITE: consent of instructor. Not offered every year.

MAE 165. Fatigue and Failure Analysis of Engineering Components (4)

MAE 166. Nanomaterials (4)
Basic principles of synthesis techniques, processing, microstructural control and unique physical properties of materials in nano-dimensions. Nanowires, quantum dots, metamaterials, electrical and optical properties of materials. Nanomechanics of thin-films, electrical transport, optical behavior, mechanical behavior, and technical applications of nanomaterials. PREREQUISITE: consent of instructor. Not offered every year.

MAE 167. Wave Dynamics in Materials (4)
Pressure and shear waves in infinite solids. Reflection and diffusion. Rayleigh and Love waves in semi-infinite space. Impulse load on a half space. Waves in rods and group velocity. PREREQUISITE: consent of instructor. Not offered every year.

MAE 168. MEME Materials, Fabrication, and Applications (4)
The principles of micro-electro-mechanical systems (MEMS) fabrication, materials involved, actuation principles utilized, and the fundamentals of MEMS operation in relation to stresses and deformation. Novel device applications, future trends, and nano-electro-mechanical (NEMS) systems. PREREQUISITE: consent of instructor. Not offered every year.

MAE 170. Experimental Techniques (4)
Principles of experiment design and control and the design and conduct of experiments. Technical report writing. Lectures relate to dimensional analysis, error analysis, signal-to-noise problems, filtering, data acquisition and data reduction, as well as background of experiments and statistical analysis. Experiments relate to the use of electronic devices and sensors. PREREQUISITE: grade of C– or better in Phys. 2CL and admission to any engineering major.

MAE 171A. Mechanical Engineering Laboratory I (4)
Design and analysis of experiments in fluid mechanics, solid mechanics, and control engineering. Experiments in wind tunnel, water channel, vibration table, and testing machine and control systems. Students propose and design experiments, obtain data, complete engineering analysis and write a
MAE 107. Topics in Engineering Science (4)
A course to be given at the discretion of the faculty in which topics of current interest in engineering will be presented.
PREQUISITE: consent of instructor.

MAE 209. Continuum Mechanics Applied to Medicine/Biology (4)
(Cross-listed with BENG 209.) Introduction to the basic definitions of continuum mechanics and their mathemati- cal formulation at the graduate level with applications to problems in medicine and biology. This course is intended for students with little or no background in mechanics. It is an introduction to the Biomechanics courses BENG 250 A-B in the Department of Bioengineering and to Solid and Fluid Mechanics courses MAE 210A and MAE 231A in the Stability of Materials course. This course should not be taken concurrently with MAE 210A or MAE 231A.
PREQUISITE: consent of instructor.

MAE 210A. Fluid Mechanics I (4)
(Cross-listed with CENG 210A.) Basic conservation laws. Flow kinematics. The Navier-Stokes equations and some of its exact solutions. Non-dimensional parameters and different flow regimes, vorticity dynamics. PREQUISITES: MAE 101A-B and MAE 110A, or consent of instructor.

MAE 210B. Fluid Mechanics II (4)
Potential flows, boundary layers, low-Reynolds number flows. PREQUISITES: MAE 210A, MAE 101A-B, and MAE 110A, or consent of instructor.

MAE 210C. Fluid Mechanics III (4)
Flow instabilities, linear stability theory; introduction to turbulent flows. PREQUISITES: MAE 210A-B, MAE 101A-B, and MAE 110A, or consent of instructor.

MAE 220A. Thermodynamics of Gases (4)
Thermodynamics of gases for use in gasdynamics. Applications of classical and quantum statistical mechanics to chemical, thermal, and radiative properties of gases. Equilibrium and nonequilibrium radiation, chemical equilibrium, and elements of chemical kinetics. Laser and reacting-flow applications. PREQUISITE: MAE 110A or consent of instructor.

MAE 220B. Physical Gas Dynamics (4)

MAE 220C. Nonequilibrium Gas Dynamics (4)

MAE 221A. Heat Transfer (4)
(Cross-listed with CENG 221A.) Conduction, convection, and radiation heat transfer. Development of energy conservation equations. Analytical and numerical solutions to transport problems. Specific topics and applications vary. PREQUISITE: MAE 101A-B-C or CENG 101A-B-C, or consent of instructor.

MAE 221B. Mass Transfer (4)
(Cross-listed with CENG 221B.) Fundamentals of diffusive and convective mass transfer and mass transfer with chemical reaction. Development of mass conservation equations. Analytical and numerical solutions to mass transfer problems. Specific topics and applications will vary. PREQUISITE: MAE 101A-B-C or CENG 101A-B-C, or consent of instructor.

MAE 223. Computational Fluid Dynamics (4)
Numerical methods in fluid dynamics and convective transport processes. Numerical solution of the Euler and

MAE 225A. Nanoscale and Microscale Heat Transfer for Energy Conversion Applications I (4) An advanced introduction to the principles underlying conduction, convection, and radiation phenomena at the atomic/molecular scale; overview of macroscopic thermal sciences, kinetic theory and fluids, statistical thermodynamics and quantum theory, thermal properties as a function of dimensionality; experimental methods. PREREQUISITES: MAE 212A, MAE 101A-B-C, or consent of instructor.

MAE 228. Selected Topics in Plasma Physics (4) Collisionless magnetic reconnection, interactions of relativistic laser field with plasma, plasma in astrophysics, computational plasma physics. PREREQUISITES: MAE 217A-B-C or consent of instructor.

MAE 229A. Mechanical Properties (4) (Cross-listed with MAT 211A) Review of basic concepts in mechanics of deformation: plasticity, viscoelasticity and creep; effects of temperature and strain-rate on inelastic flow; microstructure and mechanical properties; application of basic concepts to selected advanced materials. PREREQUISITE: consent of instructor.

MAE 231A. Foundations of Solid Mechanics (4) (Cross-listed with SE 276A.) Basic equations of solids in mechanics. Emphasis on the principle of virtual work, finite element stiffness matrices, various finite element formulations and their accuracy, and the numerical implementation required to solve problems in small strain, isotropic elasticity in solid mechanics. PREREQUISITE: MAE 228B or consent of instructor.

MAE 232B. Finite Element Methods in Solid Mechanics II (4) (Cross-listed with SE 276B) Finite element methods for linear problems in structural dynamics. Beam, plate, and doubly curved shell elements are derived. Strategies for eliminating shear locking problems are introduced. Formulation and numerical solution of the equations of motion for structural dynamics are introduced and the effect of different mass matrix formulations on the solution accuracy is explored. PREREQUISITES: graduate standing and MAE 232A or MAE 232A.

MAE 233A. Fracture Mechanics (4) Theoretical strength; stress concentration. Linear and nonlinear fracture mechanics; stress singularity, fracture toughness, crack tip plastic zone, dudgeon model, the R-curve; power-law materials, the J-integral; fatigue; special topics. PREREQUISITE: MAE 231A, MAE 231B, or consent of instructor.

MAE 233B. Micromechanics (4) General theory of transformation strains and corresponding elastic and plastic solutions for anisotropic materials; methods; dislocations; inclinations and inhomogeneities; micromechanics of plastic flow, microcracking, cavitation, and damage in crystalline and other solids. PREREQUISITES: MAE 231A-B-C or consent of instructor.

MAE 233C. Linear and Power-Law Mechanics of Solids (4) Linear and power-law mechanics; stress singularity, fracture toughness, crack tip plastic zone, dudgeon model, the R-curve; power-law materials, the J-integral; fatigue; special topics. PREREQUISITES: MAE 231A-B-C or consent of instructor.

MAE 242. Robot Motion Planning (4) Modeling, solving, and deploying planning problems for single robots or agents. Configuration space for motion planning, sampling-based motion planning, combinatorial motion planning, feedback motion planning, differential models, and non-holonomic constraints. Basic decision-theory and dynamic programming, sensor and information spaces.

MAE 251. Structure and Analysis of Solids (4) (Cross-listed with MAT 227 and Chem. 222.) Key concepts in the atomic structure and bonding of solids such as metals, ceramics, and semiconductors. Symmetry operations, point groups, lattice types, space groups, simple and complex inorganic compounds, structure/proerty comparisons, structure determination with x-ray diffraction, ionic, covalent, metallic bonding compared with physical properties. Atomic and molecular orhtals, bands vs. bonds, pre-electron theory. PREREQUISITE: consent of instructor.

MAE 255. Advanced Ceramics (4) (Cross-listed with MAT 236.) Topics include phase equilibria and crystallography, defects and thermodinamics (notation, graph), grain growth and grain transport behavior, Bronner diagrams, powder synthesis and compaction, sintering theory and grain growth, mechanical optical, magnetic, electrical properties, fuel cells. PREREQUISITE: consent of instructor.

MAE 254. Energy Materials and Applications (4) (Cross-listed with MATS 256.) This course will cover the fundamentals-engineering aspects of various energy materials based on metallic, ceramic, semiconductor, and chemical structures, and their applications related to solar cells, fuel cells, batteries, fusion energy, and hydrogen storage will be discussed. PREREQUISITE: consent of instructor or department stamp.

MAE 261. Cardiovascular Fluid Mechanics (4) Topics in the mechanics of blood flow including analytical solutions for flow in deformable vessels, one-dimensional equations; cardiovascular anatomy, lumped parameter models, vascular trees, scaling laws, and an introduction to the biomechanics and treatment of adult and congenital cardiovascular diseases. PREREQUISITES: MAE 210A, MAE 290A, or consent of instructor.

MAE 262. Fluid Mechanics of the Cell (4) Fluids phenomena relevant to the function, environment, and dynamics of biological cells. Topics include: low-Reynolds number flows, cell motility, internal cellular flows, development and morphogenesis, hydrodynamics of suspensions and polymers, rheology, diffusion, hydrodynamics of deformable bodies (vesicles, membranes, cytoskeletal filaments), cells under fluid flow, and other cell fluid interactions. PREREQUISITES: MAE 209, MAE 210A, or consent of instructor.

MAE 263. Experimental Methods in Cell Mechanics (4) Methods to measure mechanical aspects of cellular nature and behavior such as intracellular rheology, intracellular force distribution and propagation, cell adhesion strength, generation of propulsive forces during locomotion, interaction with the extracelluar matrix, and response to external mechanical stimuli. PREREQUISITES: MAE 209 or MAE 210A, MAE 131A or equivalent, or consent of instructor.

MAE 266. Biomaterials (4) (Cross-listed with MATS 252.) This course will cover biomaterials and biomimetic materials. Metal, ceramic, and polymer biomaterials will be discussed. Emphasis will be on the structure-property relationships, biocompatibility/ degradation issues and tissue/material interactions. Synthesis and mechanical testing of biomimetic materials will also be discussed. PREREQUISITE: consent of instructor.
MAE 267. Nanomaterials and Properties (4)
(Cross-listed with MAT 253.) This course discusses syn-
thetics, processing, microstructural control and unique phasetransformations of materials in nano-di-
sions. Topics include nanowires, quantum dots, thin films, electrical transport, electron emission properties, optical behavior, mechanical behavior, and technical applications of nanomaterials. PREREQUISITE: consent of instructor.

(Cross-listed with MAT 254.) Fabrication of Micro-Electro-Mechanical Systems (MEMS) by bulk and surface micro-
machining of single crystal, polycrystal and amorphous silicon and other materials. Performance issues including electrotactile, piezoelectric actuators, residual stresses, deformation. Novel device applications, future trends in smart materials and nano-electro-mechanical (NEMS) systems. PREREQUISITE: consent of instructor.

MAE 269. Presentations, Inventions and Patents (4)
(Cross-listed with MAT 255.) This course covers meth-
odology and skills for oral and written presentations. Topics include preparation of presentation materials, presentation exercise, publication manuscripts, research work proposals, understanding and securing of inven-
tions and intellectual properties, patent applications and licensing. PREREQUISITE: consent of instructor. Not offered in 2008–09.

MAE 271A. Thermodynamics of Solids (4)
(Cross-listed with MAT 201A and ECE 238A.) This thermody-
namics and statistical mechanics of solids. Basic concepts, equilibrium properties of alloy systems, thermodynamic information from phase diagrams, surfaces and interfaces, crystalline defects. PREREQUISITE: consent of instructor.

MAE 271B. Solid State Diffusion and Reaction Kinetics (4)
(Cross-listed with MAT 201B and ECE 238B.) Thermally activated processes, Boltzmann factor, homogenous and heterogeneous reactions, solid state diffusion, Fick’s laws, diffusion mechanisms, Kirkendall effect, Boltzmann-Matano analysis, high diffusivity paths. PREREQUISITE: consent of instructor.

MAE 271C. Phase Transformations (4)
(Cross-listed with MAT 201C and ECE 238C.) Classification of phase transformations; displacive and reconstructive transformations; classical and non-classical theories of nucleation; Becker-Döring, Volmer-Weber, lattice instabili-
ties, spinodal decomposition. Growth theories; interface migra-
tion, stress effects, terrace-ledge mechanisms, epitaxial growth, kinetics and mechanics. Precipitation. Order-
derorder transformations. Solidification. Amorphization. PREREQUISITE: consent of instructor.

MAE 272. Imperfections in Solids (4)
(Cross-listed with MAT 201A.) Point, line, and planar defects in crystalline solids, including vacancies, self in-
terstitials, solute atoms, dislocations, stacking faults, and grain boundaries; effects of imperfections on mechanical properties; interactions of dislocations with point defects; strain hardening by micro-obstacles, precipitation, and alloying elements.

MAE 273A. Dynamic Behavior of Materials (4)
(Cross-listed with MAT 213A.) Elastic waves in continuum; longitudinal and shear waves. Surface waves. Plastic waves; shock waves, Rankine-Hugoniot relations. Method of char-
acteristics, differential and difference form of con-
version equations; dynamic plasticity and dynamic fracture. Shock wave reflection and interaction. PREREQUISITE: consent of instructor.

MAE 277. Ceramic and Glass Materials (4)
(Cross-listed with MAT 236.) Powder synthesis, powder compaction and densification via different processing routes, Phase equilibria and topology in ceramic materials. Sintering, liquid and vapor phase processing and single crystal growth. Control of the microstructural develop-
ment and interfacial properties optimize properties for structural, thermal, electrical, or magnetic use. Topics in processing, properties, and applications of ceramic materials. Glass formation and structure, phase separation, viscous flow and relaxation. PREREQUISITE: consent of instructor.

MAE 280A. Linear Systems Theory (4)

MAE 280B. Linear Control Design (4)
Parametrization of all stabilizing output feedback con-
trollers, covariance controllers, H-infinity controllers, and L-2 to L-infinity controllers. Continuous and discrete-time treatment. Alternating projection algorithms for solving optimization problems. Model reduction. All feedback design problems reduced to one critical theorem in linear algebra. PREREQUISITE: MAE 280A.

MAE 281A. Nonlinear Systems (4)
Existence and uniqueness of solutions of ODEs, sensitivity equations. Stability, direct and crossway Lyapunov theo-
rems, LaSalle’s theorem, linearization, invariance theorems. Center manifold theorem. Stability of perturbed systems with vanishing and non-vanishing perturbations, input-to-

MAE 281B. Nonlinear Control (4)
Small gain theory, passivity. Describing functions. Nonlinear controllability, feedback linearization, input-

MAE 282. Adaptive Control (4)
nomial, LQR, indirect. Robustification, parameter drift, leakage, projection, dead zone, dynamic normalization. Adaptive nonlinear control, tuning functions, modular design. Extremum seeking. PREREQUISITE: MAE 280A or consent of instructor.

MAE 283A. Parametric Identification: Theory and Methods (4)
Constructive dynamical models from experimental data. Deterministic and stochastic discrete time signals. Discrete-time systems and parametric identification. Con-
relation and spectral analysis. Parametric identification; realization and prediction error methods, least squares estimation, approximate modeling. Experiment design, frequency domain identification. PREREQUISITE: MAE 143C recommended.

MAE 283B. Approximate Identification and Control (4)
Identification for control: approximate identification, esti-

MAE 284. Robust and Multi-Variable Control (4)
Multivariable feedback systems; transfer function matrices, Smith-McMillan form, poles, zeros, principal gains, op-

MAE 286. Hybrid Systems (4)

MAE 287. Control of Distributed Parameter Systems (4)

MAE 288A. Optimal Control (4)
Deterministic methods: Pontryagin’s Maximum Principle, dynamic programming, calculus of variations, Hamiltonian and Lagrangian methods: Gauss-Markov processes, Linear Quadratic con-
trol, Markov chains. Linear Quadratic Gaussian Control and the Separation Principle. PREREQUISITE: graduate standing or consent of instructor.

MAE 288B. Optimal Estimation (4)
Least Squares and Maximum Likelihood Estimation meth-
ods, Gauss-Markov models, State Estimation and Kalman Filtering, prediction and smoothing. The extended Kalman filter. PREREQUISITE: MAE 280A completed or concurrent.

MAE 289. Functional Analysis and Applications (4)
al and differentials. Applications. PREREQUISITE: Math. 204-A-B-C-D-E-F or consent of instructor.

MAE 290A. Efficient Numerical Methods for Simulation, Optimization, and Control (4)
Linear algebra, numerical methods, and functional analysis. Direct and iterative methods for systems of linear and nonlinear equations, the fundamental matrix decom-
potions (eigenvector/SVD/Jordan), transform methods (Fourier/Laplace/2), function approximation, differen-
tiation, integration (quadrature/ODEs), and minimization. PREREQUISITE: MAE 107 or consent of instructor.

MAE 290B. Numerical Methods for Differential Equations (4)
Numerical solution of differential equations in mathemati-
cal physics and engineering, ordinary and partial differen-
tial equations. Linear and nonlinear hyperbolic parabolic, and elliptic equations, with emphasis on prototypical cases, the convection-diffusion equation, Laplace’s and Poisson equation. Finite difference methods will be considered in depth, and additional topics. PREREQUISITE: MAE 290A or consent of instructor.

MAE 291. Design and Mechanics in Computer Technology (4)
Design and mechanics problems inherent in computer peripherals such as disk files, tape drives, and printers. Formulation and solution of problems involving mechanics, fluid mechanics, and materials; Reynolds equation, slider bearings; friction and wear; actuator design, imaging, imaging, imaging; silicon fluid jets. PREREQUISITE: consent of instructor. Not offered every year.

MAE 292. Computer-Aided Design and Analysis (4)
Introduction to 2-D and 3-D computer-aided design. Design problems may include: ball bearing kinematics, Weiellb statistics, non-repeatable spindle run-out, four bar linkages, beam deflection and vibration, design of magnetic head suspension, hydrodynamic theory of lub-
rication, air bearings, heat transfer, optical servo, design of ink jet print head. PREREQUISITE: consent of instructor. Not offered every year.

MAE 293. Advanced Computer Graphics for Engineers and Scientists (4)
Advanced topics used to enhance scientific and engineer-
ing visualization. C programming assignments and the use of advanced graphics software. Continuation of topics from MAE 152, including color, computational geometry, 3-D contouring, volume visualization, and hardware archi-

ENGINEERING, MECHANICAL AND AEROSPACE ENGINEERING (MAE) 305
tectures. **PREREQUISITE**: MAE 152 or consent of instructor. Not offered in 2009-10.

**MAE 294A. Introduction to Applied Mathematics (4)**

**MAE 294B. Introduction to Applied Mathematics II (4)**
(Cross-listed with SIO 203B.) Asymptotic methods: method of steepest descent (if not covered in I) WKB, method of multiple scales, boundary layer theory. Elements of complex analysis. **PREREQUISITE**: MAE 294A or SIO 203A or consent of instructor.

**MAE 294C. Introduction to Applied Mathematics III (4)**
(Cross-listed with SIO 203C.) Partial differential equations: characteristics, similarity solutions, Green’s functions, images, wave equation, diffusion equation, Laplace’s equation. Applications to continuum mechanics, potential fields, and transport phenomena such as diffusion, linear and nonlinear waves, Burger’s equation and shocks. Other topics according to the interests of the instructor. **PREREQUISITES**: MAE 294B or SIO 203B or consent of instructor.

**MAE 295. Field Study (1-12)**
Provides field study in industry with faculty supervision. Analysis and problem solving using real world applications. **PREREQUISITE**: consent of advisor and department; 3.0 GPA.

**MAE 296. Independent Study (1-4)**
Independent reading or research on a problem as arranged by a designated faculty member. Must be taken for a letter grade only. **PREREQUISITE**: consent of instructor.

**MAE 298. Directed Group Study (1-4)**
Directed group study on a topic or in a field not included in regular department curriculum, by special arrangement with a faculty member. **PREREQUISITE**: consent of instructor. (S/U grades permitted.)

**MAE 299. Graduate Research (1-12)**
Independent work by graduate students engaged in research and writing theses. MAE graduate students only. (S/U grades only.)

**MAE 501. Teaching Experience (2)**
Teaching experience in an appropriate MAE undergraduate course under direction of the faculty member in charge of the course. Lecturing one hour per week in either a problem-solving section or regular lecture. (S/U grade only.) **PREREQUISITE**: consent of instructor and the MAE department.

**DEPARTMENTAL FOCUS**
The Department of NanoEngineering will focus on nanoscience, nanoengineering, and nanotechnology that have the potential to make valuable contributions to new materials development, environmental remediation, energy efficiency, and biology and medicine, to name just a few. Nanoengineering refers broadly to engineering on the atomic and molecular scale, normally 1 to 100 nanometers, and the fabrication of devices within that size range. As it is a highly multidisciplinary field, graduate research programs will cover a broad range of topics, but focus particularly on biomedical nanotechnology, nanotechnologies for energy conversion and storage, computational nanotechnology, and molecular and nanomaterials. Undergraduate degree programs will focus on integrating the various science and engineering disciplines necessary for successful careers in the evolving nanotechnology industry.

The Department of NanoEngineering is the administrative home of the interdepartmental Chemical Engineering Program (CENG).

---

**UNDERGRADUATE PROGRAM**

**DEGREE AND PROGRAM OPTIONS**
Plans are currently underway to develop an undergraduate major leading to the B.S. degree in nanoengineering by 2011. The B.S. program in chemical engineering (CENG) is accredited by the Engineering Accreditation Commission of the Accreditation Board of Engineering and Technology (ABET/EAC).

---

**GRADUATE PROGRAM**

**DEGREE AND PROGRAM OPTIONS**
Plans are currently underway to develop graduate curricula leading to the M.S. and Ph.D. degrees in nanoengineering by 2010. Until NanoEngineering graduate programs are in place, students wishing to pursue nanoengineering as a graduate focus are encouraged to apply to related graduate programs in bioengineering, chemical engineering, and mechanical and aerospace engineering. Transfer to NanoEngineering will be considered upon approval of its degree programs.

The Chemical Engineering Program offers graduate instruction leading to the M.S. and Ph.D. degrees in chemical engineering. Effective fall 2009, Chemical Engineering will offer a concentration in nanotechnology within the graduate program, which also will bridge with the future graduate degree program in nanoengineering.

---

To instill in chemical engineering students a sense of humanistic values and professionalism such that they can conduct ethically and knowledgeably regarding technological impact in societal issues. The curriculum is designed to prepare chemical engineering graduates for further education and personal development through their entire professional career. We strive to accomplish these goals by providing a rigorous and demanding curriculum that incorporates lectures, discussions, laboratory and project development experiences in basic sciences, mathematics, engineering sciences, and design as well as the humanities and social sciences.

The Chemical Engineering Program has affiliated faculty from the Department of NanoEngineering, Department of Mechanical and Aerospace Engineering, Department of Chemistry and Biochemistry, and the Department of Bioengineering. The curricula at both the undergraduate and graduate levels are designed to support and foster chemical engineering as a profession that interfaces engineering and all aspects of basic sciences (physics, chemistry, and biology).

The primary educational objectives of the Chemical Engineering Program are:

- To provide chemical engineering students with a strong technical education and communication skills that will enable them to have successful careers in a wide range of industrial and professional environments.
- To prepare chemical engineering students for rapidly changing technological environments with the core knowledge central to multidisciplinary development and personal improvement throughout their professional careers.
- To instill in chemical engineering students a strong sense of humanistic values and professionalism such that they can conduct ethically and knowledgeably regarding technological impact in societal issues.

The curriculum is designed to prepare chemical engineering students for further education and personal development through their entire professional career. We strive to accomplish these goals by providing a rigorous and demanding curriculum that incorporates lectures, discussions, laboratory and project development experiences in basic sciences, mathematics, engineering sciences, and design as well as the humanities and social sciences.

THE UNDERGRADUATE PROGRAM

The B.S. program in chemical engineering is accredited by the Engineering Accreditation Commission of the Accreditation Board of Engineering and Technology (ABET/EAC). The curriculum is tailored to provide breadth and flexibility by taking advantage of the strength of basic sciences and other engineering disciplines at UCSD. The intention is to graduate chemical engineers who are multidisciplinary and can work in a broad spectrum of industries rather than solely traditional chemical and petrochemical industries.

Areas of specialization are available whereby a graduate can be in a position for a career in environmental technology, microelectronic device fabrication, materials and polymer processing, pharmaceutical and biotechnology, biomedical engineering, energy and thermal systems, control and system engineering, and so forth.

For students who aspire to pursue a graduate degree and a career in research and development, the units in an area of specialization can be allocated to more fundamental science and engineering courses. These students are also encouraged to perform independent projects in one of the faculty research laboratories or groups.

Whether the career goal is industry, or graduate or professional school, the curriculum has a strong emphasis on developing problem-solving skills and the ability to think and learn independently. The capstone courses are the senior design and process lab courses. Students learn to participate in project teams, refine their communication skills, and work on various design and experimental projects that over two quarters introduce them to elements of project planning, execution, analysis, and improvement.

Entering freshmen will follow the new set of course work guidelines detailed in this section. Continuing students will continue with their current set of course work guidelines outlined in previous general catalogs. The Student Affairs Office can provide the proper curriculum tables. All students are encouraged to visit the Student Affairs Office or visit the Department of NanoEngineering Web site for any clarification and updated information.

Deviations from these programs of study must be approved by the Undergraduate Affairs Committee prior to taking alternative courses. In addition, technical elective (TE) course selections must have departmental approval prior to taking the courses. The TE courses are restricted to meet ABET standards. Courses such as CENG 195, 197, and 198 are not allowed as a technical elective in meeting the upper-division major requirements. CENG 199 can be used as a technical elective only under restrictive conditions. Policy regarding these conditions may be obtained from the department's Student Affairs Office. To graduate, students must maintain an overall GPA of at least 2.0, and the department requires at least a C– grade in each course required for the major.

Students with different academic preparation may vary the scheduling of lower-division courses such as math, Physics, and chemistry, but should consult the department. Deviations in scheduling CENG upper-division courses are discouraged and require prior approval. Most lower-division courses are offered more often than once each year to permit students some flexibility in their program scheduling. However, all CENG upper-division courses are taught only once per year, and courses are scheduled to be consistent with the curriculum as shown in the tables.

GENERAL-EDUCATION/COLLEGE REQUIREMENTS

For graduation each student must satisfy general-education course requirements determined by the student's college as well as the major requirements determined by the department. The six colleges at UCSD require widely different general-education courses, and the number of such courses differs from one college to another. Each student should choose his or her college carefully, considering the special nature of the college and the breadth of general education.

The CENG program allows for humanities and social science (HSS) courses so that students can fulfill their college requirements. As an ABET accredited program, students must develop a program that includes a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Students must consult with their college to determine which HSS courses to take.

PROFESSIONAL LICENSING

After graduation, all students are encouraged to take the Fundamentals of Engineering (FE) examination as the first step in becoming licensed as a professional engineer (PE). Students graduating from our accredited program can take the PE examination after FE certification and two years of work experience; students graduating from a nonaccredited program can take the PE examination after FE certification and four years of work experience.

For further information please contact your local Board of Registration for Professional Engineers and Land Surveyors.

MAJOR REQUIREMENTS

To receive a B.S. in chemical engineering, students must complete 194 units for graduation, which includes forty-four units of general education (HSS) requirements of their colleges and the ABET requirements in the arts, humanities, and social sciences. The balance consists of basic sciences (fifty-three units), chemistry core (twenty units), chemical engineering core (thirty-two units), process laboratory and design (sixteen units), general engineering (twelve units), and an area of specialization (sixteen units). Beyond the fifty-three units of basic sciences, the science and engineering courses total to ninety-six units. A one-unit introductory seminar (CENG1) is required of all incoming freshmen. The specific breakdown is as follows:

Basic sciences (fifty-three units):

This lower-division requirement includes twenty-four units of mathematics (Math. 20A–F), fourteen units of physics (Phys. 2A–C, 2CL), and fifteen units of chemistry (Chem. 6A–C, 6BL).

Chemistry core (twenty units):

Chemical engineering core (thirty-two units):

This requirement covers chemical process modeling, solution thermodynamics, transport phenomena, chemical reaction engineering, process control, and unit operations (CENG 100, 101A–C, 102, 113, 120, 122).

Process laboratory and design (sixteen units):

This requirement is crucial to fulfill the ABET design content (CENG 124A-B, 176A-B).

General engineering (twelve units):

This requirement covers basics in computer programming, probability and statistics, and instrumentation. The computer programming requirement can be satisfied with a course in either Fortran (MAE 10), C (MAE 9), or Java (CSE 8B or 11). If you have no programming experience, you need CSE 8A before 8B, but no credit is given for 8A alone. Probability and statistics can be satisfied with ECE 109 or a course with equivalent content. Instrumentation is satisfied with MAE 170.

Electives in an area of specialization (sixteen units):

Electives are intended to broaden and enhance professional goals. They may be chosen to achieve either breadth or depth in one's education. All electives must be upper-division courses in engineering. Suggestions are listed below.

Biotechnology/Biochemical Engineering:

BENG 161A-B-C. (Requires petition with the Department of Bioengineering. Requires prerequisites including Chem. 114A-B.)

Electronic Materials:

ECE 103, 134, 135A, 136, 136L.

Engineering Mechanics:

MAE 130A-B, 131A, 160.

Engineering Science:

MAE 105, 107, 140.

Environmental Engineering:

MAE 120, 121, 122, 124, 125A-B.

Materials Science:

ECE 137; MS 201A-B-C, 205A, 227.

Process Control:

ECE 101, 171A-B or MAE 140, MAE 143A-B.

Thermal Engineering and Systems:

MAE 118A-B-C, 110B, 113.

Independent Research:

CENG 199 as equivalent to a senior thesis can be approved as equivalent to two elective courses (eight units). Consult department Student Affairs Office for details.

Principles of Team Engineering:

ENG 100/L A four-unit elective equivalent can be approved for completion of ENG 100 and ENG 100L. A second elective equivalent will only be approved with petition prior to additional ENG 100L engagement. There is no retroactive approval if you complete a second quarter of ENG 100L without prior petition.

1MAE 9 can be replaced by MAE 10, CSE 8B or 11.
2Humanities and social sciences (HSS).
3Five advanced chemistry electives must be selected from among Chem. 131, 132, 133, 140AB, 114A-B, and 120 A-B, and 143A. Two recommended options are Chem. 140A-B, 114A-B, and 143A for those interested in biochemical/organic, and Chem. 131, 132, 133, 120A, and 140A for those interested in inorganic/materials.
4The electives in an area of specialization (AS) must be upper-division or graduate courses in engineering, based on the preapproved sequences. Otherwise, the selections must receive prior approval of the department to meet ABET standards.
5If a student chooses process control as the area of specialization, CENG 120 can be replaced by a relevant course within the approved set of courses for specialization in process control.
6If students do not require these additional HSS courses to meet their college requirements, they may substitute an unrestricted elective in order to meet the minimum 194 unit graduation requirement. The twelfth HSS course is intended only for students who have additional college requirements to fulfill. To meet ABET requirements, students must have up to twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, and personnel administration.

POLICIES AND PROCEDURES FOR UNDERGRADUATE STUDENTS

Admission to the Major

Applicants who have demonstrated excellent academic performance prior to being admitted to UC San Diego will be admitted directly to the engineering major of their choice. These directly admitted students and all students are expected to complete lower- and upper-division courses, as suggested in the curriculum tables, in a timely fashion in the sequences outlined.

Academic Advising

Upon admission to the major, students should consult the catalog or NanoEngineering Web site (http://nanoengineering.ucsd.edu) for their program of study or their undergraduate advisor if they have questions. The program plan may be revised in subsequent years, but revisions involving curricular requirements require approval by the undergraduate advisor or the Undergraduate Affairs Committee. Because some course and/or curricular changes may be made every year, it is imperative that students consult with the department’s undergraduate advisor on an annual basis.

CENG courses are offered only once a year and therefore should be taken in the recommended sequence. If courses are taken out of sequence, it may not always be possible to enroll in courses as desired or needed. If this occurs, students should seek immediate departmental advice. When a student deviates from the sequence of courses specified for each curriculum in this catalog, it may be impossible to complete a CENG major within the normal four-year period.

In addition to the advising available through the Student Affairs Office, programmatic or technical advice may be obtained from chemical engineering faculty members. A specific faculty mentor is assigned to each student. All CENG students are required to meet with their faculty mentor at least once a quarter.

Program Alterations/Exceptions to Requirements

Variations from or exceptions to any program or course requirements are possible only if a petition is approved by the Undergraduate Affairs Committee before the courses in question are taken. Petition forms may be obtained from the Student Affairs Office and must be processed through this office.

Independent Study

CENG students may take CENG 199, Independent Study for Undergraduates, under the guidance of a CENG faculty member. This course is taken as an elective on a P/NP basis. Under very restrictive conditions, however, it may be used to satisfy upper-division technical elective course requirements for the major. Students interested in this alternative must identify a CENG faculty member with whom they wish to work and propose a two-quarter research or study topic. After obtaining
Transfer Students
The chemical engineering curriculum is designed to integrate four years of college educational experience. It is not easy for transfer students to complete the major requirements in only two additional years beyond their junior college work. However, if transfer students seek a college for which they already satisfy the general-education requirements, have taken the lower-division science and mathematics, and have completed some advanced chemistry requirement, then the rigorous first-year schedule below will permit them to graduate in two years. Other students should consult their advisor for a transition program compatible with their junior college preparation.

Requirements for admission as a CENG major or minor, or into CENG courses, are the same for transfer students as they are for continuing students. Accordingly, when planning their program, transfer students should be mindful of lower-division prerequisite course requirements, as well as for meeting colloge requirements.

Students who have taken equivalent courses elsewhere may request to have transfer credit apply toward the department’s major requirements. To receive transfer credit, complete a Student Petition form and submit it to Student Affairs. For mathematics, chemistry and physics, transfer equivalencies are determined by the respective departments. An Undergraduate Student Petition must be submitted to each department from which the student is requesting transfer credit.

Effective fall 2009, these courses are strongly recommended for all engineering transfer students for success in their major.

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Physics 2A-B-C)
- Chemistry 6A (except computer science and computer engineering majors)
- Highest level of introductory computer programming language course offerings at the community college*
- Community college equivalent courses can be found at: http://www assistir.org

* Refer to the UC San Diego General Catalog to select major prerequisite requirements for computer language courses.

Graduate Program
The M.S. Program is intended to extend and broaden an undergraduate education with fundamental knowledge in different fields. The degree may be terminal, or obtained on the way to the Ph.D. The degree is offered under both the Thesis Plan I and the Comprehensive Examination Plan II.

M.S. Time Limit Policy: Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there is no written time limit for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

Course requirements: All M.S. students must complete a total of forty-eight units, which include a core of five courses (twenty units) chosen among fluid dynamics (CENG 210A, MAE 210B), heat and mass transfer (CENG 221AB), kinetics (CENG 252), and mathematics. To maintain a certain balance in the core, no more than two mathematics courses should be chosen among the choices of applied mathematics (MAE 294AB or Math. 210AB) and numerical mathematics (MAE 290AB or Math. 270AB). No more than three courses (twelve units) of upper-division courses may be applied toward the total course work requirement. No more than a total of eight units of CENG 296 and 298 may be applied toward the course work requirement. Units in seminars (CENG 259) may not be applied toward the degree requirement.

Thesis Plan I: Completion of the research thesis (CENG 299) fulfills twelve units toward the total graduation requirement. The balance is made up of the five core courses (twenty units) and additional four elective courses (sixteen units) subject to the restrictions described above. The nanotechnology concentration signifies that four elective courses are chosen from the approved courses in this area.

Admission is in accordance with the general requirements of the graduate division, which requires at least a B.S. in some branch of engineering, sciences, or mathematics; an overall GPA of 3.0, and three letters of recommendation from individuals who can attest to the academic or professional competence and to the depth of their interest in pursuing graduate study.

In addition, all applicants are required to submit GRE General Test Scores. A minimum score of 550 on the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English. Students who score below 600 on the TOEFL are strongly encouraged to enroll in an English as a second language program before beginning graduate work. UC San Diego Extension offers an excellent English language program during the summers as well as the academic year.

MAJOR’S DEGREE PROGRAM
The M.S. Program is intended to extend and broaden an undergraduate education with fundamental knowledge in different fields. The degree may be terminal, or obtained on the way to the Ph.D. The degree is offered under both the Thesis Plan I and the Comprehensive Examination Plan II.

M.S. Time Limit Policy: Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there is no written time limit for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

Course requirements: All M.S. students must complete a total of forty-eight units, which include a core of five courses (twenty units) chosen among fluid dynamics (CENG 210A, MAE 210B), heat and mass transfer (CENG 221AB), kinetics (CENG 252), and mathematics. To maintain a certain balance in the core, no more than two mathematics courses should be chosen among the choices of applied mathematics (MAE 294AB or Math. 210AB) and numerical mathematics (MAE 290AB or Math. 270AB). No more than three courses (twelve units) of upper-division courses may be applied toward the total course work requirement. No more than a total of eight units of CENG 296 and 298 may be applied toward the course work requirement. Units in seminars (CENG 259) may not be applied toward the degree requirement.

Thesis Plan I: Completion of the research thesis (CENG 299) fulfills twelve units toward the total graduation requirement. The balance is made up of the five core courses (twenty units) and additional four elective courses (sixteen units) subject to the restrictions described above. The nanotechnology concentration signifies that four elective courses are chosen from the approved courses in this area.

Comprehensive Examination Plan II: This plan involves course work only and culminates in an oral comprehensive examination based on topics selected from the core courses. In addition to the five core courses (twenty units), one must choose an additional seven electives (twenty-eight units) subject to the restrictions of CENG 259, 296, and 298 described above. Sample electives are listed in the table below. A student should consult his or her academic advisor to choose an appropriate course schedule, including alternatives in bioengineering, electrical and computer engineering, materials science, basic sciences, and mathematics. The
nanotechnology concentration signifies that four elective courses are chosen from the approved courses in this area.

Change of Degree: Upon completion of the requirements for the M.S. degree, students admitted as M.S. only or M.S. candidates are not automatically eligible for admission to the Ph.D. Program.

M.S. only and M.S. candidates who subsequently wish to pursue a doctorate must submit an application for a change in status to their examining committee. The application, if approved by the committee, must be signed by a faculty member who expects to serve as the student's Ph.D. advisor. The student must also submit a general petition for graduate students to effect the change of status. If the student elects the comprehensive examination plan for the M.S. degree, the examining committee may recommend that the comprehensive examination may replace the preliminary qualifying examination expected of Ph.D. students.

DOCTORAL DEGREE PROGRAM

The Ph.D. Program is intended to prepare students for a variety of careers in research and teaching. The emphasis is on research. In general, there are no formal course requirements. All students, in consultation with their advisors, develop appropriate course programs that will prepare them for the Preliminary Qualifying Examination and for their dissertation research. These programs must be planned to meet the time limits established to advance to candidacy and to complete the requirements of the degree. All Ph.D. students are required to pass three examinations. The first is a Preliminary Qualifying Examination, which should be taken within three to four quarters of full-time graduate study. The second is the Ph.D. Qualifying Examination. The last is the Dissertation Defense.

Preliminary Qualifying Examination: The examination is intended to determine a candidate's basic understanding of engineering fundamentals and the candidate's ability to pursue successfully a research project at a level appropriate for the doctorate. The scope of the examination is based on topics selected from the core curriculum as listed under the M.S. degree program. A candidate is expected to demonstrate knowledge equivalent to these courses and formal enrollment record is not a prerequisite. The format is an oral examination administered by a committee of three faculty members in the Chemical Engineering Program. The candidate should present to the committee, prior to the examination, the five core courses that will constitute the basis of the examination.

Depth Requirement: A candidate must have the ability to perform in-depth analysis in the dissertation topic. A candidate should consult with the thesis advisor to develop a proper course program if it is deemed necessary. Depending on an individual's background and the nature of the research problem, a candidate should either complete a set of a minimum of four courses or demonstrate to the thesis advisor the equivalent knowledge and ability.

Ph.D. Qualifying Examination: Prior to taking this examination, the candidate must have completed the departmental qualifying examination, obtained a faculty research advisor, and must have made initial progress on a chosen dissertation project. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student’s graduate program is appointed by the Graduate Council under the policy listed in the "Graduate Studies" section of the UC San Diego General Catalog. The committee conducts the Ph.D. Qualifying Examination, during which the student must demonstrate the ability to engage in thesis research. The process involves the presentation of a plan for the thesis research project. The committee may ask questions directly or indirectly related to the project and general questions that it determines to be relevant. Upon successful completion of the examination, subject to the UCSD time limit policy, the student is advanced to candidacy and is awarded the candidate in philosophy degree (see "Graduate Studies" section in this catalog).

Teaching Experience: Prior to the dissertation defense, the candidate must serve at least once as a teaching assistant with the responsibility to hold a problem-solving section one hour a week.

Dissertation Defense: This is the final Ph.D. examination. Upon completion of the dissertation research project, the candidate writes a dissertation that must be successfully defended in an oral examination and public presentation conducted by the doctoral committee. A complete copy of the student’s dissertation must be submitted to each member of the doctoral committee four weeks before the defense. It is understood that this copy of the dissertation given to committee members will not be the final copy, and that the committee members may request changes in the text at the time of the defense. This examination may not be conducted earlier than three quarters after the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and the University Librarian represents the final step in completion of all requirements for the Ph.D. degree.

Ph.D. Time Limit Policy: Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years. The defense and submission of the doctoral dissertation must be within seven years.

Annual Evaluation: In the spring of each year, the faculty advisor evaluates each doctoral student's overall performance in course work, research, and prospects for financial support for future years. A written assessment is given to the student after the evaluation. If a student's work is found to be inadequate, the faculty may determine that the student

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

COURSES IN CHEMICAL ENGINEERING (CENG)

All students enrolled in CENG courses or admitted to the CENG program are expected to meet prerequisite and performance standards, i.e., students may not enroll in any CENG courses or courses in another department which are required for the major prior to having satisfied prerequisite courses with a C– or better. (The program does not consider D or F grades as adequate preparation for subsequent material.) Additional details are given under the program outline, course descriptions, and admission procedures for the Jacobs School of Engineering in this catalog.

LOWER-DIVISION

CENG 1. The Scope of Chemical Engineering (1)

Demonstrations and discussions of basic knowledge and the opportunities in chemical engineering for professional development. Introduction to campus library and computer resources. Use of personal software tools such as spreadsheet and student edition of MATLAB. PREREQUISITES: none. (IP/NP grading only.)

UPPER-DIVISION

CENG 100. Process Modeling and Computation in Chemical Engineering (4)

Introduction to elementary numerical methods with applications to chemical engineering problems using a variety of problem solving strategies. Error analysis. Concepts of mathematical modeling, material and energy balances, and probability and statistics with applications to design problems. PREREQUISITES: admission to the chemical engineering or bioengineering major only and grades of C– or better in MAE 9 or 10, and Chem. 6C or consent of instructor.

CENG 101A. Introductory Fluid Mechanics (4)

Kinematics and equation of motion; hydrostatics; Bernoulli's equation; viscous flows; turbulence, pipe flow; boundary layers and drag in external flows; applications to chemical, structural, and bioengineering. Students may not receive credit for both MAE 101A and CENG 101A. PREREQUISITES: admission to the major and grades of C– or better in Phys. 2A and Math. 21D or 20, and 20E or consent of instructor.

CENG 101B. Heat Transfer (4)

Conduction, convection, radiation heat transfer; design of heat exchangers. Students may not receive credit for both MAE 101C and CENG 101B-103C. PREREQUISITES: admission to the major and a grade of C– or better in CENG 101A.

CENG 101C. Mass Transfer (4)

Diffusive and convective mass transfer in solids, liquids, and gases; steady and unsteady state; mass transfer coefficients; applications to chemical engineering and bioengineering. PREREQUISITES: admission to the major and grade of C– or better in CENG 101A.

CENG 102. Chemical Engineering Thermodynamics (4)

CENG 113. Chemical Reaction Engineering (4)

Principles of chemical reactor analysis and design. Experimental determination of rate equations, design of batch and continuous reactors; optimization of selectivity in multiple reactions, consideration of thermal effects and
residence time distribution. Introduction to multi-phase reactors. **PREREQUISITE:** grade of C– or better in CENG 100 or consent of instructor.

**CENG 120. Chemical Process Dynamics and Control (4)**
Examination of dynamic linear and linearized models of chemical processes. Stability analysis. Design of PID controllers. Selection of control and manipulated variables. Root locus, Bode and Nyquist plots. Cascade, feed-forward and ratio controls. **PREREQUISITE:** admission to the major and grades of C– or better in Math 21D or Math 20D. (Students may not receive credit for both MAE 141A or MAE 143B and CENG 120.)

**CENG 122. Separation Processes (4)**
Principles of analysis and design of systems for separation of components from a mixture. Topics will include staged operations (distillation, liquid-liquid extraction), and continuous operations (gas absorption, membrane separation) under equilibrium and nonequilibrium conditions. **PREREQUISITES:** admission to the major and grades of C– or better in CENG 100, CENG 102, and CENG 101C.

**CENG 124A. Chemical Plant and Process Design I (4)**
Principles of chemical process design and economics. Process flow diagrams and cost estimation. Computer-aided design and analysis. Representation of the structure of complex, interconnected chemical processes with recycle streams. Ethics and professionalism. Health, safety, and the environmental issues. **PREREQUISITES:** admission to chemical engineering major and grades of C– or better in CENG 113 and CENG 122 or consent of instructor.

**CENG 124B Chemical Plant and Process Design II (4)**
Engineering and economic analysis of integrated chemical processes, equipment, and systems. Cost estimation, heat and mass transfer design and economics. Comprehensive integrated plant design. Optimal design. Profitability. **PREREQUISITES:** admission to chemical engineering major and grades of C– or better in CENG 124A.

**CENG 176A. Chemical Engineering Process Laboratory I (4)**
Laboratory projects in the areas of applied chemical research and unit operations. Emphasis on applications of engineering concepts and fundamentals to solution of practical and research problems. **PREREQUISITES:** admission to the major and grades of C– or better in CENG 113, CENG 122, and MAE 170 or consent of instructor and departmental approval.

**CENG 176B. Chemical Engineering Process Laboratory II (4)**
Training in research planning projects, execution of experimental work and articulation (both oral and written) of the research plan and results in the areas of applied chemical technology and engineering operations related to mass, momentum, and heat transfer. **PREREQUISITE:** admission to the major and grades of C– or better in CENG 176A.

**CENG 192. Senior Seminar in Chemical Engineering (1)**
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in chemical engineering (at the upper division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students with preference given to seniors. **PREREQUISITE:** department stamp or consent of the instructor.

**CENG 199. Independent Study for Undergraduates (4-4)**
Independent reading or research on a problem by special arrangement with a faculty member. **PREREQUISITE:** consent of instructor. (P/NP Only).

**CHEMICAL ENGINEERING GRADUATE COURSES**

**CENG 205. Graduate Seminar in Chemical Engineering (1)**
Each graduate student in CENG is expected to attend one seminar per quarter, of his or her choice, dealing with current topics in chemical engineering. Topics will vary. **PREREQUISITE:** none.

**CENG 207. Nanomedicine (4)**
Introduction to nanomedicine; diffusion and drug dispersion; diffusion in biological systems; drug permeation through biological barriers; drug transport by fluid motion; pharmacokinetics of drug distribution; drug delivery systems; nanomedicine in practice: cancers, cardiovascular diseases, immune diseases, and skin diseases.

**CENG 208. Nanofabrication (4)**
Basic engineering principles of nanofabrication. Topics include: photo-, electron beam and nanoimprint lithography, block copolymers and self-assembled monolayers, colloidal assembly, biological nanofabrication.

**CENG 210A. Fluid Mechanics I (4)**
(Cross-listed with MAE 210A.) Basic conservation laws, flow kinematics. The Navier-Stokes equations and some of its exact solutions, non-dimensional parameters and different flow regimes, vorticity dynamics. **PREREQUISITES:** MAE 101A-B and MAE 110A or consent of instructor.

**CENG 222A Heat Transfer I (4)**
(Cross-listed with MAE 222A.) Conduction, convection, and radiation heat transfer development of energy conservation equations. Analytical and numerical solutions to heat transport problems. Specific topics and applications will vary. **PREREQUISITES:** MAE 101A-B-C or CENG 101A-B-C or consent of instructor.

**CENG 222B Mass Transfer I (4)**
(Cross-listed with MAE 222B.) Fundamentals of diffusive and convective mass transfer and mass transfer with chemical reaction. Development of mass conservation equations. Analytical and numerical solutions to mass transport problems. Specific topics and applications will vary. **PREREQUISITES:** MAE 101A-B-C or CENG 101A-B-C or consent of instructor.

**CENG 251. Thermodynamics (4)**
Principles of thermodynamics of single and multi-component systems. Phase equilibria. Estimation, calculation, and correlation of properties of liquids and gases. **PREREQUISITE:** consent of instructor.

**CENG 252. Chemical Reaction Engineering (4)**
Analysis of chemical rate processes; complex kinetic systems. Chemical reactor properties in steady state and transient operations; optimal design policies. The interaction of chemical and physical transport processes in affecting reactor design and operating characteristics. Uniqueness/multiplicity and stability in reactor systems. Applications of the heterogeneous reactor systems. **PREREQUISITE:** consent of instructor.

**CENG 253. Heterogeneous Catalysis (4)**
Physics and chemistry of heterogeneous catalysis. Adsorption/desorption kinetics, chemical bonding, isotherms, kinetic models, selection of catalysts, poisoning, experimental techniques. **PREREQUISITE:** consent of instructor.

**CENG 254. Biochemical Engineering Fundamentals (4)**
Introduction to microbiology as relevant to the main topic, biological reactor analysis. Fermentation and enzyme technology. **PREREQUISITE:** consent of instructor.

**CENG 255. Electrochemical Engineering (4)**
Fundamentals of electrochemistry and electrochemical engineering. Structure of the double layer, cell potential and electrochemical thermodynamics, charge transfer kinetics, electrochemical transport phenomena, and introduction to colloidal chemistry. Applications such as corrosion prevention, electroplating, reactor design, batteries and fuel cells. **PREREQUISITE:** consent of instructor.
systems design are increasingly cross-disciplinary over many traditional engineering areas.

**THE UNDERGRADUATE PROGRAM**

**DEGREE AND PROGRAM OPTIONS**

The Department of Structural Engineering offers an unique engineering program leading to the B.S. degree in structural engineering which is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (EAC/ABET). The Department of Structural Engineering also offers a non-accredited B.S. degree in engineering sciences. The B.S. programs require a minimum of 148 units, plus college requirements in humanities and social sciences.

All Structural Engineering programs of study have strong components in laboratory experimentation, numerical computation, and engineering design. Design is emphasized throughout the curricula by open-ended homework problems, by laboratory and computer courses which include student-initiated projects, and finally, by senior design project courses which involve teams of students working to solve engineering design problems brought in from industry. The Structural Engineering programs are designed to prepare students receiving bachelor’s degrees for professional careers or for graduate education in their area of specialization. In addition, the programs can also be taken by students who intend to use their undergraduate engineering education as preparation for postgraduate professional training in non-technical fields such as business administration, law or medicine.

**Structural Engineering** is concerned with the design and analysis of civil, mechanical, aerospace, marine, and offshore structures. Examples include bridges, dams, buildings, aircraft, spacecraft, ships, oil platforms, automobiles, and other transportation vehicles. This field requires a thorough knowledge of the behavior of solids (concrete, soils, rock, metals, plastics, and composite materials), fluid mechanics as it relates to structural loads, dynamics as it relates to structural response, mathematics for the generation of theoretical structural models and numerical analysis, and computer science for simulation purposes associated with computer-aided design, response analyses, and data acquisition.

Basic understanding of materials behavior and structural performance is enhanced by laboratory courses involving static and dynamic stress failure tests of structural models, and response of structural systems. Within this area, students can specialize in (a) civil structures, (b) aerospace structures, (c) renewal of structures, or (d) earthquake engineering.

The **engineering sciences** program follows the overall Structural Engineering program except that the number of required design courses is reduced. In addition to core courses in dynamics, vibrations, structures, fluid mechanics, thermodynamics, heat transfer, and laboratory experimentation, a large number of technical electives are scheduled. This aspect of the curriculum allows flexibility by permitting specialization and in-depth study in one area of the engineering sciences or through a sequence of courses on various emerging technologies.

Students must consult their advisors to develop a sound course of study to fulfill the technical elective requirements of this program.

**MAJOR REQUIREMENTS**

Specific course requirements for the major are outlined in a table herein. In addition to the required technical courses specifically indicated, a suggested scheduling of humanities and social science courses (HSS) are distributed in the curricula for students to use to meet college general-education requirements. To graduate, students must maintain an overall GPA of at least 2.0, and the department requires at least a C- grade in each course required for the major.

Deviations from the program must be approved by the Undergraduate Affairs Committee prior to taking alternative courses. In cases where a student needs to take a course outside UCSD, prior departmental approval is essential. In addition, technical elective (TE) course selections must have departmental approval prior to taking the courses. In the accredited program, TE courses are restricted to meet ABET standards. Courses such as SE 195, SE 197 and SE 198 are not allowed as technical electives in meeting the upper-division major requirements. SE 199 can be used as a technical elective only under restrictive conditions. Policies regarding these conditions may be obtained from the department’s Student Affairs Office. Graduate level courses may be petitioned for technical elective credit.

Students with different academic preparations may vary the scheduling of lower-division courses such as math, physics and chemistry, but should consult the department prior to doing so. Deviations in scheduling lower-division Structural Engineering courses are discouraged due to scheduling constraints. A tentative schedule of course offerings is available from the department each spring quarter for the following academic year.

**GENERAL-EDUCATION/COLLEGE REQUIREMENT**

For graduation, each student must satisfy general-education course requirements determined by the student’s college, as well as the major requirements determined by the department. The six colleges at UCSD require widely different general-education courses, and the number of such courses differs from one college to another. Each student should choose his or her college carefully, considering the special nature of the college and the breadth of general education.

The Structural Engineering program allows for twelve humanities and social science (HSS) courses so that students can fulfill their college requirements. In the ABET accredited programs, students must develop a program that includes a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. It should be noted, however, that some colleges may require more than twelve HSS courses indicated in the curriculum tables. Accordingly, students in these colleges may take longer to graduate than the indicated four-year schedule. Students must consult with their college to determine which HSS courses to take.
PROFESSIONAL LICENSING
All students are encouraged to take the Engineering-in-Training (EIT) examination as the first step in becoming licensed as a professional engineer (PE). Students graduating from an accredited program can take the PE examination after EIT certification and two years of work experience; students graduating from a nonaccredited program can take the PE examination after EIT certification and four years of work experience.

For further information please contact your local Board of Registration for Professional Engineers and Land Surveyors or visit http://www.dca.ca.gov/pels.

STRUCTURAL ENGINEERING (ABET ACCREDITED PROGRAM)

Mission Statement
To provide a comprehensive education and training to engineers using a holistic approach to structural systems engineering by emphasizing and building on the commonality of engineering structures at the levels of materials, mechanics, analysis, and design.

Goals
1. To provide our students with a strong technical education that will prepare students receiving bachelor's degrees for professional careers in industry, or for continued graduate education in their area of specialization.
2. To provide our students with cross-disciplinary technical education to adequately prepare them for a rapidly changing technological world based on the commonality of knowledge across structural engineering disciplines thereby ensuring that they are able to continuously meet professional objectives throughout their careers.
3. To provide our students with a firm foundation for professional advancement not just through technical expertise, but also through communication skills, team and group activities, and ethical/professional responsibility as designers and engineers.

Objectives
• To provide a sound basis in the general sciences and mathematics that underlie the cross-disciplinary field of structural engineering.
• To provide a thorough training in the design principles and structural action as related to components and systems over a broad range of application areas.
• To provide a thorough training in the methods of analysis, including problem formulation and the use of current mathematical and computational tools.
• To provide an understanding of structural action at the component and systems level through design, analysis, and experimentation.
• To provide through structure and flexibility in the curriculum the opportunity for students to have both specialization (through focus sequences) and breadth (through technical electives) in the area of structural engineering.
• To instill in students the ability of critical and innovative thinking, and ability to formulate solutions based on sound principles of structural mechanics and materials.
• To teach students techniques of experimentation and data analysis, including the use of statistics and reliability methods required for structural applications.
• To teach the fundamentals of the design process initiating in conceptual design and culminating in final design including the use of appropriate codes of practice.
• To prepare students in the skills needs for successful professional practice as related to team participation, and effective verbal and written communication.
• To instill in our students an understanding and acceptance of their professional and ethical responsibilities.

1In fulfilling the humanities and social science requirements (HSS), students must take a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Twelve HSS courses are listed here; individual college requirements may be higher.
2Students admitted to the university prior to fall 2010 who have completed MAE 9 are not required to take SE 9.
3Technical elective (TE) course must be an upper-division or graduate course in the engineering sciences, natural sciences or mathematics, selected with prior approval of the department to meet ABET standards.
4Students must take one full-focus sequence (FS) in: (a) Civil Structures, (b) Aerospace Structures, (c) Renewal of Structures, or (d) Earthquake Engineering. Students should note that not all focus sequence classes will be offered every year. Students admitted to the university prior to fall 2010 will be allowed to use the courses outlined in past focus sequences from the catalog year in which they entered the university.

ADMISSION TO THE MAJOR
Students who declare a Structural Engineering major will be directly admitted to the major. All students are expected to complete lower- and upper-division courses, as suggested in the curriculum tables, in a timely fashion in the sequences outlined.

TRANSFER STUDENTS
Requirements for a Structural Engineering major, or into Structural Engineering courses, are the same for transfer students as they are for continuing students. Accordingly, when planning their program, transfer students...
INDEPENDENT STUDY

Structural Engineering students may take SE 199, Independent Study for Undergraduates, under the guidance of a Structural Engineering faculty member. Normally, this course is taken as an elective on a P/NP basis. Under very restrictive conditions, however, it may be used to satisfy upper-division technical elective course requirements for the major. Students interested in this alternative must identify a faculty member with whom they wish to work and propose a two-quarter research or study topic. After obtaining the faculty member’s concurrence on the topic and scope of the study, the student must submit a Special Studies Course form (each quarter) and the “SE 199 as Technical Elective Contract” form to the Structural Engineering Undergraduate Affairs Committee. These forms must be completed, approved, and processed prior to the beginning of the quarter in which the course is to be taken. This should not be done during the add/drop period. Detailed policy in this regard and the requisite forms may be obtained from the Student Affairs Office.

BACHELOR’S/MASTER’S PROGRAM

The department offers a bachelor’s/master’s degree program to enable students to complete both the B.S. and M.S. degrees in an accelerated timeframe. Undergraduate students in the Department of Structural Engineering who have at least 148 quarter units with a cumulative GPA of 3.5 or higher are eligible to apply. Admission to the bachelor’s/master’s degree program is not automatic. Student applications are reviewed and the final decision is made by the Department of Structural Engineering. Acceptance into this program is an honor which carries with it practical benefits—the graduate application process is simplified (no GREs required) and advanced students are given access to graduate level courses. Upon acceptance as an undergraduate into the program, a faculty member will be assigned who will serve as the student’s advisor. Interested students should contact the Structural Engineering Student Affairs Office. Students must fulfill all requirements for the B.S. degree prior to being formally admitted to graduate status.

THE GRADUATE PROGRAM

The Department of Structural Engineering offers instruction leading to the degrees of master of science (M.S.) and doctor of philosophy (Ph.D.) in structural engineering (SE). In addition, an M.S. degree in structural health monitoring, prognosis, and validated simulations has been activated. The graduate program is aimed at training a select number of highly skilled professionals in structural engineering with the academic and engineering credentials to assume leadership roles in industry and academia.

The M.S. degree program is intended to provide students with additional fundamental knowledge as well as specialized advanced knowledge in selected structural engineering aspects over and above the undergraduate degree course work. Two plans, the M.S. Thesis Plan and the M.S. Comprehensive Examination Plan, are offered. The M.S. Thesis Plan is designed for those students with an interest in research prior to entering the structural engineering profession or prior to entering a doctoral degree program. The M.S. Thesis Plan involves course work leading to the completion and defense of a master’s thesis. The M.S. Comprehensive Examination Plan involves course work and requires the completion of a report and a public oral presentation related to the courses the student has taken. The topic is selected by the student’s advisor, and must draw on at least two focus sequences the student has taken. The student will be required to prepare a final written report on the topic that must be approved by the student’s advisor and must be presented orally to a committee of three faculty members (one being the student’s advisor) during the final quarter of study. The written report must be submitted to the advisor two weeks before the oral presentation and to the other committee members one week before the oral presentation.

M.S. students must complete forty-eight units of credit for graduation. For the M.S. Comprehensive Examination Plan all forty-eight units of credit must consist of regular courses (twelve courses). For the M.S. Thesis Plan, thirty-six units (nine courses) from regular courses are required, in addition to twelve units of graduate research for the master’s thesis. For
both M.S. plans, students are required to complete a minimum of two sequences from the following focus areas:
1. Structural Analysis
2. Structural Design
3. Earthquake Engineering
4. Geotechnical Engineering
5. Advanced Composites
6. Solid Mechanics
7. Advanced Structural Behavior

A sequence is composed of three regular courses from the same focus area. The courses comprising the focus sequences are listed in the table in this section. To meet the specific needs of some students, other focus areas may be developed by a student in consultation with his or her advisor, but these must be pre-approved by the SE Graduate Affairs Committee. To allow for greater flexibility in the program, the remaining credits required from courses may be earned by completing additional focus sequences, parts of focus sequences, or other appropriate courses. Students may elect to take other appropriate technical electives (with the approval of their advisor and the SE Graduate Affairs Committee). In general, no undergraduate courses are allowed for the M.S. degree. In special cases where an undergraduate course may be used, the arrangement must be preapproved by both the academic advisor and the Graduate Affairs Committee.

Units obtained in SE 290 and 298 may not be applied toward course work requirements. No more than four units of SE 296 may be applied toward course work requirements and only with prior approval of the SE Graduate Affairs Committee.

The department also offers a seminar course each quarter dealing with current research topics in Structural Engineering (SE 290). Students must take SE 290 every quarter in the first year, and are strongly recommended to take it for at least one quarter in every subsequent year.

FOCUS SEQUENCES

**Structural Analysis**
- SE 201. Advanced Structural Analysis
- SE 202. Structural Stability
- SE 203. Structural Dynamics
- SE 204. Structural Reliability and Risk Analysis
- SE 205. Nonlinear Mechanical Vibrations
- SE 206. Random Vibrations

**Structural Design**
- SE 211. Advanced RC/PC Design
- SE 212. Advanced Structural Steel Design
- SE 213. Bridge Design
- SE 223. Advanced Seismic Design of Structures
- SE 254. FRP Rehabilitation of Civil Structures

**Earthquake Engineering**
- SE 203. Structural Dynamics
- SE 206. Random Vibrations
- SE 221. Earthquake Engineering
- SE 222. Geotechnical Earthquake Engineering
- SE 223. Advanced Seismic Design of Structures

**Geotechnical Engineering**
- SE 223. Advanced Geotechnical Design of Structures
- SE 242. Advanced Foundation Engineering
- SE 246. Soil Structure Interaction

**Advanced Composites**
- SE 253A. Mechanics of Laminated Composite Structures I
- SE 253B. Mechanics of Laminated Composite Structures II
- SE 253C. Mechanics of Laminated Anisotropy Plates and Shells
- SE 252. Experimental Mechanics & NDE
- SE 251A. Processing Science of Composites
- SE 251B. Mechanical Behaviors of Polymers and Composites
- SE 254. FRP Rehabilitation of Civil Structures

**Solid Mechanics**
- SE 234. Plates & Shells
- SE 235. Wave Propagation in Elastic Media
- SE 252. Experimental Mechanics and NDE
- SE 271. Solid Mechanics for Structural and Aerospace Engineering
- SE 272. Theory of Elasticity
- SE 273. Theory of Plasticity and Viscoelasticity

**Advanced Structural Behavior**
- SE 205. Nonlinear Mechanical Vibrations
- SE 224. Structural Reliability and Risk Analysis
- SE 206. Random Vibrations
- SE 252. Experimental Mechanics and NDE
- SE 265. Structural Health Monitoring Principles

Students taking the Solid Mechanics focus sequence are required to take SE 271, SE 272, and one of these courses: SE 273, SE 252 or SE 235.

Students taking the Advanced Composites focus sequence have the opportunity of taking either one or both of the following sequences:

**Suggested Sequence A.**
- SE 253A. Mechanics of Laminated Composite Structures I
- SE 253B. Mechanics of Laminated Composite Structures II
- SE 253C. or other class approved by advisor

**Suggested Sequence B.**
- SE 253B. Mechanics of Laminated Composite Structures II
- SE 251A. Processing Science of Composites
- SE 251B. or other class approved by advisor

*Students who have previously taken an equivalent course must choose suggested Sequence B.*

The thesis defense is the final examination for students enrolled in the M.S. thesis plan and must be conducted after completion of all course work. Upon completion of the research project, the student writes a thesis that must be successfully defended in an oral examination and public presentation conducted by a committee composed of three faculty. A complete copy of the student’s thesis must be submitted to each member of the M.S. thesis committee (comprised of a minimum of three faculty) at least two weeks before the defense.

---

**M.S. DEGREE IN STRUCTURAL ENGINEERING WITH SPECIALIZATION IN HEALTH MONITORING, PROGNOSIS, AND VALIDATED SIMULATIONS (SHMP&VS)**

The M.S. degree in SHMP&VS provides specialized multidisciplinary knowledge in the three technology areas of (1) sensing technology, (2) data interrogation, and (3) predictive modeling. Many courses currently offered within the Jacobs School of Engineering may be grouped into numerous focus sequences within each technology area, as shown in the following list:

**A. SENSING TECHNOLOGY AREA**

**Sensing Methodologies**
- SE 252. Experimental Mechanics and NDE
- MAE 261. Sensors and Measurements
- MAE 268. MEMS Materials, Fabrication, and Applications

**Data Acquisition Systems**
- ECE 257B. Principles of Wireless Networks
- ECE 258A-B. Digital Communications
- ECE 259CN. Advanced Coding and Modulation for Digital Communications
- MAE 261. Sensors and Measurements
- CSE 237A. Introduction to Embedded Computing
- CSE 237B. Software for Embedded Computing
- CSE 237C. Validation/Testing of Embedded Systems
- CSE 237D. Design Automation and Prototyping for Embedded Systems

**Controls**
- MAE 280A. Linear Systems Theory
- MAE 280B. Linear Control Design
- MAE 282. Adaptive Control
- MAE 284. Robust and Multi-Variable Control
- MAE 285. Optimal Control and Estimation

**B. DATA INTERROGATION TECHNOLOGY AREA**

**Signal Processing**
- ECE 161A/SIO 207A. Introduction to Digital Signal Processing
- ECE 251AN/SIO 207B. Digital Signal Processing I
- ECE 251BN/SIO 207C. Digital Signal Processing II
- ECE 251CN. Filter Banks and Wavelets
- ECE 251DN or SIO 207D. Array Processing
- ECE 253A. Fundamentals of Digital Image Processing
- ECE 253B. Digital Image Analysis
- ECE 254. Detection Theory
- ECE 255AN. Information Theory

**System Identification**
- MAE 283A. Parameter Identification: Theory and Methods
MAE 283B. Approximate Identification and Control
ECE 256A-B. Time Series Analysis and Applications
ECE 275A. Parameter Estimation I
ECE 275B. Parameter Estimation II

Pattern Recognition
CSE 250A. Artificial Intelligence: Search and Reasoning
CSE 250B. Artificial Intelligence: Learning
CSE 253. Neural Networks for Pattern Recognition
CSE 254. Statistical Learning
CSE 255. Data Mining and Artificial Intelligence Applications
ECE 270A-B-C. Neurocomputing

Statistical/Probabilistic Methods
MTH 281A-B-C. Mathematical Statistics
CSE 254. Statistical Learning
SE 206. Random Vibrations
SE 224. Structural Reliability and Risk Analysis

C. PREDICTIVE MODELING TECHNOLOGY AREA

Structural Analysis
SE 201. Advanced Structural Analysis
SE 202. Structural Stability
SE 203. Structural Dynamics
SE 204. Structural Reliability and Risk Analysis

Finite Element
MAE 232A. Finite Element Methods in Solid Mechanics I
MAE 232B. Finite Element Methods in Solid Mechanics II
MAE 232C. Advances in Materials Computations
SE 274. Nonlinear Finite Elemental Methods

Solid Mechanics
SE 271. Solid Mechanics for Structural and Aerospace Engineering
SE 272. Theory of Elasticity
SE 273. Theory of Plasticity and Viscoelasticity
SE 252. Experimental Mechanics and NDE
SE 235. Wave Propagation in Elastic Media

Material Behavior/Modeling
MAE 233B. Micromechanics
MAE 233C. Advanced Mechanics of Composite Materials
MAE 232C. Advances in Materials Computations
MAE 250. Fatigue, Fracture, and Failure Analysis in Engineering Materials
MAE 273A. Dynamic Behavior of Materials
SE 245. Constitutive Modeling and Numerical Implementation

Advanced Structural Behavior
SE 205. Nonlinear Mechanical Vibrations
SE 206. Random Vibrations
SE 224. Structural Reliability and Risk Analysis
SE 252. Experimental Mechanics and NDE
SE 265. Structural Health Monitoring Principles

Earthquake Engineering
SE 203. Structural Dynamics
SE 206. Random Vibrations
SE 221. Earthquake Engineering
SE 222. Geotechnical Earthquake Engineering
SE 223. Advanced Seismic Design of Structures

Advanced Composites
SE 142. Design of Composite Structures
SE 251. Processing Science of Composites
SE 253. Mechanics of Laminated Composite Structures
MAE 233C. Advanced Mechanics of Composite Materials
SE 254. FRP Rehabilitation of Civil Structures

Two degree plans in SHMP&VS will be offered: M.S. Thesis Plan and M.S. Comprehensive Examination Plan. Students in both plans must complete forty-eight units of credit for graduation. For both plans, students must complete thirty-six units of course work consisting of one focus sequence from each of the three technology areas A, B, and C listed above. Any three of the courses listed under a specific topic area constitute a focus sequence. Courses must be chosen in consultation with the student’s advisor. The remaining twelve units must be completed as graduate research SE 299.

For the M.S. SHMP&VS Comprehensive Examination Plan, the twelve-unit graduate research SE 299 must be conducted as a mentored research project. This project is intended to provide a mentored practicum whereby students integrate knowledge learned from their technology areas into comprehensively solving a problem from structural health monitoring/prognosis or model validation and uncertainty quantification, at their discretion. This project will emphasize professional practice, with both oral and written communication of technical data, and will include a strong design component. The project will be presented to a committee of two faculty members in Structural Engineering and one from another department within the Jacobs School of Engineering or an adjunct faculty member in an appropriate area of focus.

For the M.S. SHMP&VS Thesis Plan, the twelve-unit graduate research SE 299 culminates with the preparation of a research thesis. The thesis must be successfully defended in an oral examination and public presentation conducted by a committee composed of three faculty members. The committee will consist of two faculty members in Structural Engineering and one from another department within the Jacobs School of Engineering or an adjunct faculty member in an appropriate area of focus. A complete copy of the student’s thesis must be submitted to each member of the M.S. thesis committee at least two weeks prior to the defense. Because of the inherent multidisciplinary nature of the M.S. SHMP&VS degree, research within SE 299 can be conducted at outside locations (industry or government facilities). In this case a scientist on location, with an adjunct faculty appointment at UCSD, will be part of the student’s committee.

All students in the M.S. SHMP&VS program are required to take a seminar course (SE 290) each quarter they are registered.

DOCTORAL DEGREE PROGRAM

The Ph.D. program is intended to prepare students for a variety of careers in research, teaching and advanced professional practice in the broad sense of structural engineering, encompassing civil and aerospace structures, earthquake and geotechnical engineering, composites, and engineering mechanics. Depending on the student’s background and ability, research is initiated as soon as possible. All students, in consultation with their advisors, develop course programs that will prepare them for the Departmental Comprehensive Examination and for their dissertation research. However, these programs of study and research must be planned to meet the time limits established to advance to candidacy and to complete the requirements for the degree. Doctoral students who have passed the Departmental Comprehensive Examination may take any course for an S/U grade, with the exception of any course that the student’s Departmental Comprehensive or Ph.D. Candidacy Examination Committee stipulates must be taken in order to remove a deficiency. It is strongly recommended that all Structural Engineering graduate students take a minimum of two courses (other than research) per academic year after passing the Departmental Comprehensive Examination.

The department also offers a seminar course each quarter dealing with current research topics in Earthquake Engineering (SE 290). Students must take SE 290 every quarter in the first year of graduate study, and it is strongly recommended to take it for at least one quarter in every subsequent year. All doctoral students will be required to take SE 200, Applied Mathematics in Structural Engineering, prior to taking the departmental comprehensive exam.

Doctoral Examinations: A Structural Engineering Ph.D. student is required to pass three examinations. The first is a Departmental Comprehensive Examination which should be taken within three to six quarters of full-time graduate study and requires a 3.5 GPA. This examination is intended to determine the student’s ability to successfully pursue a research project at a level appropriate for the doctoral degree. It is administered by at least four faculty, three of whom must be in Structural Engineering. The student is responsible for material pertaining to four focus areas. One focus area can be satisfied by course work, provided that all courses in that area have been taken at UCSD, the grade in each course is B or better, and the overall GPA in that area is at least 3.5. In order to insure appropriate breadth, the focus areas should consist of the following: (a) two focus areas within Structural Engineering which are closely related to the student’s research interests, (b) one focus area within Structural Engineering that is not directly related to the student’s area of research, and (c) one minor focus area outside the Department of Structural Engineering. An update list of sample focus areas for Ph.D. students is available in the Structural Engineering Graduate Handbook. Minor areas too closely related to the major areas will not be approved by the SE Graduate Affairs Committee. The Solid Mechanics Focus Sequence, which is jointly taught by the Department of Structural Engineering and the Department of Mechanical and Aerospace...
Engineering, cannot be used to satisfy the outside Structural Engineering requirement. Students intending to specialize in the emerging areas of structural health monitoring, damage prognosis, and validated simulations are advised to take courses in the focus areas of Advanced Structural Behavior and elective courses MAE 283, MAE 261, ECE 251AN, ECE 251BN, ECE 254, and CSE 291 which can be used to satisfy the outside Structural Engineering requirement.

Since the examination areas must be approved by the Structural Engineering Graduate Affairs Committee, students are advised to seek such approval well before their expected examination date, preferably while planning their graduate studies. Although students are not required to take particular courses in preparation for the Departmental Comprehensive Examination, the scope of the examination in each area is associated with a set of three graduate courses, generally in focus areas offered or approved by the department. A list of focus areas is available in the Structural Engineering Graduate Handbook. A candidate can develop a sense of the level of knowledge expected to be demonstrated during the examination by studying the appropriate syllabi and/or discussing the course content with faculty experienced in teaching the courses involved. The Departmental Comprehensive Examination may be a written or an oral examination, at the discretion of the committee.

Teaching experience is required of all Structural Engineering Ph.D. students prior to taking the Ph.D. Candidacy Examination. Teaching experience is defined as lecturing one hour per week in either a problem-solving section or laboratory session, for one quarter in an undergraduate course designated by the department. The requirement can be fulfilled by serving as a teaching assistant or by taking SE 501 for academic credit. Students must contact the Student Affairs Office to plan for completion of this requirement.

The Ph.D. Candidacy Examination is the second examination required of Structural Engineering doctoral students. In preparation for the Ph.D. Candidacy Examination, students must have completed the Departmental Comprehensive Examination and the Departmental Teaching Experience requirement, obtained a faculty research advisor, have identified a topic for their dissertation research, and have made initial progress in that research. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student's graduate program is appointed by the Graduate Council. In accordance with Academic Senate Regulations 715(D): “A doctoral committee of five or more members shall be appointed by the dean of Graduate Studies under the authority of the Graduate Council. The committee members shall be chosen from at least two departments, and at least two members shall represent academic specialties that differ from the student's chosen specialty. In all cases, each committee must include one tenured UCSD faculty member from outside the student's major department.” The committee conducts the Ph.D. Candidacy Examination, during which students must demonstrate the ability to engage in dissertation research. This involves the presentation of a plan for the dissertation research project. A short written document describing the research plan must be submitted to each member of the committee at least two weeks before the Ph.D. Candidacy Examination. The committee may ask questions directly or indirectly related to the research project and general questions that it determines to be relevant. Upon successful completion of this examination, students are advanced to candidacy and are awarded the candidate of philosophy degree. The Ph.D. Candidacy Examination is an oral examination.

The Dissertation Defense is the final Ph.D. examination. Upon completion of the dissertation research project, the student writes a dissertation that must then be successfully defended in an oral examination and public presentation conducted by the doctoral committee. A complete copy of the student's dissertation must be submitted to each member of the doctoral committee at least four weeks before the defense. While the copy of the dissertation handed to the committee is expected to be complete and in final form, it should be noted that students are expected to make changes in the text per direction of the committee as a result of the defense. This examination cannot be conducted earlier than three quarters after the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and the university librarian represents the final step in completion of all requirements for the Ph.D.

Ph.D. Time Limit Policy. Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years. The defense and submission of the doctoral dissertation must be within seven years.

Evaluations. In the spring of each year, the department faculty members evaluate each doctoral student's overall performance in course work, research, and prospects for financial support for future years. A written assessment is given to the student after the evaluation. If a student's work is found to be inadequate, the faculty may determine that the student cannot continue in the graduate program.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

All students enrolled in Structural Engineering courses or admitted into a Structural Engineering program are expected to meet prerequisite and performance standards, i.e., students may not enroll in any SE courses or courses in another department which are required for the major prior to having satisfied prerequisite courses with a C– or better. (The department does not consider D or F grades as adequate preparation for subsequent material.) Additional details are given under the various program outlines, course descriptions, and admission procedures for the School of Engineering in this catalog. Furthermore, the majority of SE courses have enrollment restrictions which give priority to, or are open only to, structural engineering students. Where these restrictions apply, the registrar will not enroll other students except by department stamp on class enrollment cards. The department expects that students will adhere to these policies on their own volition and enroll in courses accordingly. Students are advised that they may be dropped at any time from course rosters if prerequisites and/or performance standards have not been met.

While some courses may be offered more than once each year, most SE courses are taught only once per year, and courses are scheduled to be consistent with the curricula as shown in the tables. When possible, SE does offer selected large-enrollment courses more than once each year. A tentative schedule of course offerings is available from the department each spring for the following academic year.

LOWER-DIVISION

SE 1. Introduction to Structures and Design (4)

Introduction to structural components, systems from aerospace, civil, mechanical, marine and offshore areas. Structural action, the design process. History of structural engineering. Role and responsibility of structural engineers in society. Engineering economics, costs-benefits analysis. Implications on safety. Professional ethics. Priority enrollment given to structural engineering majors.

SE 2. Structural Materials (4)

Structure of engineering materials (metals, ceramics, concrete, composites) tailoring to produce desired properties and response in structural components and systems. Mechanical tests, elasticity, plastic deformation, fracture, toughness, creep and fatigue. Selection based on performance requirements/applications. Laboratory demonstrations and tests. PREREQUISITES: Chem. 6A, Phys. 2A. Priority enrollment given to structural engineering majors and mechanical and aerospace engineering majors.

Introduction to the Matlab environment. Variables and types, statements, functions, blocks, loops, and branches. Algorithm development. Functions, function handles, input and output arguments. Data encapsulation and object-oriented programming. Toolboxes and libraries. Models from physics (mechanics and thermodynamics) are used in exercises and projects. PREREQUISITES: grade of C– or better in Math. 20D and Math. 20F (20F may be concurrent).

SE 10A. Design Competition—Design, Build, and Fly Aircraft (1)

Student teams design, build, and fly unmanned aircraft for a national student competition. Students concentrate on vehicle system design including aerodynamics, structures, propulsion, and performance. Teams engineer and fabricate the aircraft, submit a design report, and prep aircraft for competition. PREREQUISITE: consent of instructor.

SE 87. Freshman Seminar (1)

The freshman seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. PREREQUISITE: open to freshmen only.

UPPER-DIVISION

SE 101A. Mechanics I: Statics (4)

Principles of statics using vectors. Two- and three-dimensional equilibrium of statically determinate structures under discrete and distributed loading including hydrostatics; internal forces and concept of stress; free body diagrams; moment, product of inertia; analysis of trusses and beams. PREREQUISITES: grade of C– or better in Math. 20C and Phys. 2A.

SE 101B. Mechanics II: Dynamics (4)

SE 101C. Structural Mechanics III: Structural Dynamics (4)
Free and forced vibrations of damped 1-DOF systems; vibrations in isolation, impact and packaging problems. Analysis of discrete MDOF systems using matrix representation; normal mode of frequencies and modal matrix formulation. Lagrange’s equations. Modal superposition for analysis of complex vibrating systems. **PREREQUISITES:** grade of C– or better in SE 102 (or MAE 130B).

SE 102. Numerical, Computational, and Graphical Tools for Structural Engineering (4)

SE 103. Conceptual Structural Design (4)
Introduction to design principles and structural action. Development of design theories, approaches and methodology. Concepts of load and resistance factors, factors of safety, limit and ultimate states, design allowables. Simple design examples from aerospace, civil, marine, offshore and mechanical structural systems. **PREREQUISITES:** grade of C– or better in SE 2, SE 9, and SE 101A (or MAE 130A).

SE 110A. Solid Mechanics I (4)

SE 110B. Solid Mechanics II (4)

SE 111A-B. Steel Bridge Design Competition (2-2)
Student teams design, test, and build a steel bridge for regional and national ASCE design competition. Students focus on learning ASCE guidelines, rules, and constraints for adherence to national competition policy. **PREREQUISITES:** grade of C– or better in SE 103 and SE 110A (or MAE 131A). SE 111A for SE 111B.

SE 112A-B. Concrete Canoe Design Competition (2-2)
Student teams design, test, and build a concrete canoe for regional and national ASCE design competition. Students focus on learning and applying specific fundamental ASCE competition guidelines, rules, and constraints into design. **PREREQUISITES:** grade of C– or better in SE 110A (or MAE 131A). SE 112A for SE 112B.

SE 115. Fluid Mechanics for Structural Engineering (4)
Fluid statics, hydrostatics; integral and differential forms of conservation equations for mass, momentum, and energy; Bernoulli equation; dimensional analysis; viscous pipe flow; external flow; boundary layers; open channel flow. **PREREQUISITES:** grade of C– or better in Phys. 2A, Math. 20D, and Math. 20E.

Engineering graphics, solid modeling, CAD applications including 2-D and 3-D transformations, 3-D viewing, wire frame and solid modeling, Hidden surface elimination. **PREREQUISITES:** grade of C– or better in SE 102 and SE 103, SE majors.

SE 121. Numerical Methods in Engineering (4)
Advanced numerical methods for applications for engineering problems. Solution of systems of linear and nonlinear equations. Deflections in beams. Statics, statics are fitting, function approximation, computation of integrals, numerical differentiation, and solution of systems of ordinary differential equations. **PREREQUISITES:** grade of C– or better in SE 102, SE major.

SE 125. Statistics, Probability and Reliability (4)
Probability theory. Statistics, data analysis and inferential statistics, distributions, confidence intervals. Introduction to structural reliability and real-life probability applications to components and systems. **PREREQUISITES:** SE majors.

SE 130A-B. Structural Analysis (4)
Classical methods of analysis for statically indeterminate structures. Development of computer codes for the analysis of civil, mechanical, and aerospace structures from the matrix formulation of the classical structural theory, through the direct stiffness formulation, to production-type structural analysis programs. **PREREQUISITES:** grades of C– or better in SE 110A (or MAE 131A). SE 130A for SE 130B. Priority enrollment given to structural engineering majors.

SE 131. Finite Element Analysis (4)
Development of stiffness and mass matrices based upon variational principles. Application to static and dynamic problems in structural and solid mechanics. The use of general purpose finite element structural analysis codes. **PREREQUISITES:** grade of C– or better in SE 121, SE 130B, and SE major.

SE 140. Structures and Materials Laboratory (4)
Introduction to instrumentation and testing techniques. Discussion of standard tension and compression tests. Similitude relationships for structural models. Term project in model structure including complete engineering report on theory, design and results of the term project. **PREREQUISITES:** grade of C– or better in SE 103, SE 130B, MAE 170, and senior standing in the major.

SE 142. Design of Composite Structures (4)
Design and analysis of lightweight structures composed of laminated composite materials. Stiffness, strength, failure mechanisms, micromechanics, and hygrothermal behavior. Fabrication and experimental testing. Design projects that involve computer implementation. **PREREQUISITES:** SE 110A (or MAE 131A) and SE 110B.

SE 150. Design of Steel Structures (4)

SE 151A-B. Design of Structural Concrete (4-4)
Concrete and reinforcement properties. Service and ultimate limit state analysis and design. Design and detailing of structural concrete components. **PREREQUISITES:** grade of C– or better in SE 103 and SE 110A (or MAE 131A). SE 111A for SE 111B.

SE 154. Design of Timber Structures (4)

SE 158. Structural Reliability and Random Phenomena (4)
Introduction to model structure including complete engineering report on theory, design and results of the term project. **PREREQUISITES:** grades of C– or better in SE 110A or MAE 131A. SE 130A. Priority enrollment given to structural engineering majors; graduate standing required for SE 246.

SE 160B. Aerospace Structural Mechanics II (4)
Work-energy principles, matrix models, bending of plates and shells, structural stability of beams and plates, tension field concept for lightweight structures, vibrational damping and flutter, fasteners and structural joints, structural test methods. **PREREQUISITES:** grade of C– or better in SE 160A. Priority enrollment given to engineering majors.

SE 163. Nondestructive Evaluation (4)
Damage detection, materials characterization. Introduction to nondestructive evaluation. Impedance-based methods, ultrasonic, acoustic, thermographic, liquid penetrant, proof testing, stress coatings, vibrational techniques. **PREREQUISITES:** grade of C– or better in SE 110A and SE 110B or consent of instructor; SE major.

SE 170. Civil Structures Rehabilitation (4)
Identification of structural distress, lessons from past history of structural and structural systems. Rehabilitation, seismic retrofit. Strengthening of beams, slabs and walls, design detailing, safety factors, fabrication/installation methods. **PREREQUISITES:** grade of C– or better in SE 103, SE 130A-B, SE 151A.

SE 171. Aerospace Structures Repair (4)
Identification of structural distress, corrosion/stress corrosion cracking, fatigue cracking, damage tolerance, integrity and durability of built-up members, patching, health monitoring. **PREREQUISITES:** grade of C– or better in SE 130B or SE 160B.

SE 180. Earthquake Engineering (4)

SE 181. Geotechnical Engineering (4)
General introduction to geotechnical and engineering properties of soils. Soil classification and identification methods. Compaction and construction control. Total and effective stress. Permeability, seepage, and consolidation phenomena. Shear strength of sand and clay. **PREREQUISITES:** grade of C– or better in SE 110A or MAE 131A; SE major.

SE 182. Foundation Engineering (4)
Application of soil mechanics to the analysis, design, and construction of foundations for structures. Soil exploration, sampling, and in-situ testing techniques. Stress distribution and settlement of structures. Bearing capacities of shallow foundations. Axial and lateral capacity of deep foundations, earth pressures on retaining walls. **PREREQUISITES:** grade of C– or better in SE 181; SE major.

SE 183/246. Geotechnical Engineering (4)
Influence of geology on design of engineering works. Mineral and rock identification and their engineering behavior. Geologic mapping. Rock mechanics, rock fracture mechanics, and tunnels and underground engineering. Local field trips. **PREREQUISITES:** senior standing; priority enrollment is given to structural engineering majors; graduate standing required for SE 246.

SE 192. Senior Seminar (1)
The Senior Seminar is designed to allow senior under graduates to meet with faculty members to explore an intellectual topic in structural requirements. Topics will vary from quarter to quarter. Enrollment is limited to twenty students with preference given to seniors. **PREREQUISITES:** SE major. Department stamp and/or consent of instructor.

SE 195. Teaching (2-4)
Teaching and tutorial assistance in a SE course under supervision of instructor. Not more than four units may be used to satisfy graduation requirements. (P/NP grades only.) **PREREQUISITES:** B average in major, upper-division standing and consent of department chair. Department stamp required.

SE 197. Engineering Internship (1-4)
An enrichment program, available to a limited number of undergraduate students, which provides work experience with industry, government offices, etc., under the supervision of a faculty member and industrial supervisor. Coordination of the Engineering Internship is
conducted through UCSD’s Academic Internship Program. **PREREQUISITES:** completion of ninety units with a 2.5 GPA and consent of department chair. Department stamp required.

**SE 198. Directed Study Group (4)** Directed group study on a topic or in a field not included in the regular department curriculum, by special arrangement with a faculty member. (P/NP grades only.) **PREREQUISITE:** consent of instructor or department stamp.

**SE 199. Independent Study (4)** Independent reading or research on a problem by special arrangement with a faculty member. (P/NP grades only.) **PREREQUISITE:** consent of instructor or department stamp.

**GRADUATE**

**SE 200. Applied Mathematics in Structural Engineering (4)**
This course is designed to give beginning graduate students the basic preparation in mathematical methods required for graduate Structural Engineering courses. Topics include systems of linear algebraic equations; ordinary differential equations; diffusion and wave propagation problems; and calculus variation. **PREREQUISITE:** graduate standing.

**SE 201. Advanced Structural Analysis (4)** Applications of advanced analytical concepts to structural engineering problems. Effects of approximations in the discretization and the type of finite elements under consideration. An introduction is given to the nonlinear behavior of structures focusing on basic concepts and computational techniques. **PREREQUISITE:** SE 130A-B or equivalent, or consent of instructor.

**SE 202. Structural Stability (4)** Static, dynamic, and energy-based techniques and predicting elastic stability. Linear and nonlinear analysis of classical and shear deformable beams and plates. Ritz, Galerkin, and finite element approaches for frames and reinforced shells. Nonconservative aerodynamic (divergence flutter) and follower forces. **PREREQUISITE:** SE 110B or consent of instructor.

**SE 205. Nonlinear Mechanical Vibrations (4)** Advanced analytical techniques to understand nonlinearity in mechanical vibration. Phase plane analysis instability, and bifurcations. Application in nonlinear structural resonance. Introduction to chaotic dynamics, advanced time series analysis and using chaotic dynamics in applications such as structural damage assessment. **PREREQUISITE:** SE 206 or consent of instructor.

**SE 207. Topics in Structural Engineering (4)** A course to be given at the discretion of the faculty in which topics of current interest in structural engineering will be presented.

**SE 211. Advanced Reinforced and Prestressed Concrete Design (4)** Advanced topics in concrete design, including frame and shear wall structures, design of connections, reinforced and prestressed concrete system evaluation for seismic resistance including confinement and ductility requirements. Upper and lower bound theories for slab design. **PREREQUISITE:** SE 151A, or equivalent background in basic RC/PC design, or consent of instructor.

**SE 212. Advanced Structural Steel Design (4)** Load and Resistance Factor Design (LRFD) philosophy. Behavior and design of steel elements for global and local buckling, Background of seismic codes. Ductility requirements and capability design concept. Seismic design of steel moment frames and braced frames. **PREREQUISITE:** SE 201 and SE 150, or equivalent course, or consent of instructor.

**SE 213. Bridge Design (4)** Design and analysis of bridge structures, construction methods, load conditions. Special problems in analysis — box girders, curved and skewed bridges, environmental and seismic loads. Bearings and expansion joints. Time-temperature dependent superstructure deformations. Conceptual/preliminary bridge design project. **PREREQUISITE:** SE 201 and fundamental courses in RC and PC design, or consent of instructor.

**SE 214. Masonry Structures (4)** Analysis and design of unreinforced and reinforced masonry structure using advanced analytical techniques and design philosophies. Material properties, stability, and buckling of unreinforced masonry. Flexural strength, shear strength, stiffness, and ductility of reinforced masonry elements. Design for seismic loads. **PREREQUISITE:** SE 151A, B, or equivalent basic reinforced concrete course, or consent of instructor; graduate standing.

**SE 215. Cable Structures (4)** The course deals with cable structures from a structural mechanics point of view. The theoretical and practical aspects of the application of cables to moorings, groyne structures, suspension bridges, cable-stayed bridges, and suspended membranes are discussed. **PREREQUISITE:** graduate standing or consent of instructor.

**SE 220. Seismic Isolation and Energy Dissipation (4)** Concepts, advantages and limitations of seismic isolation techniques; fundamentals of dynamic response under seismic excitation; spectra analysis; damping; energy approach; application to buildings and structures. **PREREQUISITE:** background in structural dynamics, or consent of instructor.

**SE 221. Earthquake Engineering (4)** Introduction to plate tectonics and seismology. Rupture mechanism, measures of magnitude and intensity, earthquake occurrence and relation to geologic, tectonic processes. Probabilistic seismic hazard analysis. Strong earthquake ground motion; site effects on ground motion; structural response; soil-structure interaction; design criteria; code requirements.

**SE 222. Geotechnical Earthquake Engineering (4)** Influence of soil conditions on ground motion characteristics; dynamic behavior of soils, computation of ground response using wave propagation analysis and finite element analysis; evaluation and mitigation of soil liquefacation; soil-structure interaction; lateral pressures on earth retaining structures; analysis of slope stability.

**SE 224. Structural Reliability and Risk Analysis (4)** Probability theory and random processes; fundamentals of structural reliability theory. Modern methods of structural reliability analysis including computational aspects; structural component and system reliability. Reliability-based design codes; structural modeling for performance and safety. Risk analysis of structural systems. **PREREQUISITE:** basic knowledge of probability theory (e.g., SE 125).

**SE 232. Computational Techniques in Finite Elements (4)** Practical application of the finite element method to problems in solid mechanics including basic preprocessing and postprocessing. Topics include element types, mesh refinement, boundary conditions, dynamics, eigenvalue problems, and linear and nonlinear solution methods.

**SE 234. Plates and Shells (4)** General mathematical formulation of the theory of thin elastic shells; linear membrane and bending theories; finite strain and rotation theories; shell of revolution; shallow shells; selected static and dynamic problems; survey of recent advances. **PREREQUISITE:** graduate student standing.

**SE 235. Wave Propagation in Elastic Media (4)** Wave propagation in elastic media with emphasis on waves in unbounded media and on uniform and layered half-spaces. Fundamental aspects of elastodynamics. Application to strong-motion seismology, earthquake engineering, dynamics of foundations, computational wave propagation, and non-destructive evaluations. **PREREQUISITE:** graduate standing or consent of instructor.

**SE 236. Wave Propagation in Continuious Structural Elements (4)** Wave propagation of elastic waves in thin structural elements such as strings, rods, beams, membranes, plates and shells. An approximate strength-of-materials approach is used to consider propagation of elastic waves in these elements and obtain the dynamic response to transient loads. **PREREQUISITE:** graduate standing or consent of instructor.

**SE 242. Advanced Foundation Engineering (4)** Advanced treatment of topics in foundation engineering, including earth pressure theories, design of earth retaining structures, bearing capacity, ground improvement for foundation support, analysis and design of shallow and deep foundations, including drilled piers and driven piles.

**SE 243. Soil-Structure Interaction (4)** Advanced treatment of soil interaction with structures, including shallow and deep foundations, bridge abutments, retaining walls, and buried structures subjected to static and dynamic loading. Elastic approximation. Linear and nonlinear Winkler models p-y and t-z curves.

**SE 245. Constitutive Modeling and Numerical Implementation (4)** Development and numerical implementation of procedures to model the nonlinear behavior of engineering materials, including soil and concrete. Inelastic hyperbolic and elasto-plastic modeling of hysteretic response to cyclic loading. Behavior of soil-structure systems under transient loading such as seismic earthquake excitation.

**SE 246. Engineering Geology (4)** Influence of geology on design of engineering works. Mineral and rock identification and their engineering behavior. Geologic mapping. Rock mechanics, rock slope stability, and tunnel engineering. Local field trips. (Graduate students are required to submit a term project based on two extended weekend field trips and self-guided research.)

**SE 251A. Processing Science of Composites (4)** Introduction to processing, fabrication methods; process models; materials-process-microstructure interaction; materials selection; form and quality control. Wet layup/spay-up, autoclave cure, SMC, injection molding, RTM; resin infusion; winding and fiber placement; pultrusion. Process induced defects, environmental considerations. **PREREQUISITE:** graduate standing.
SE 251B. Mechanical Behaviors of Polymers and Composites (4)
Material science oriented course on polymers and composites. Molecular and statistical treatments of elastic and plastic deformations, fracture, and fatigue of polymers and composites. Graduate student standing required.

SE 252. Experimental Mechanics and NDE (4)
Theory of electrical resistance strain gages, full-field coherent optical methods including photoelasticity, moiré and speckle interferometry, ultrasonics, thermography and fiberoptic sensing. Applications to materials characterization, defect detection and health monitoring of structures with emphasis on fiber-reinforced composites.

Prerequisites: SE 101A, SE 110A, and MIE 131B, or consent of instructor.

SE 253A. Mechanics of Laminated Composite Structures I (4)
Graduate-level introductory course on mechanics of composites and anisotropic materials. Overview of composite materials and processes, 3-D properties and stress-strain relationships, micromechanics, classical laminated plate theory, basic failure criteria, thermal/moisture/CTE. Students may not receive credit for both SE 253A and SE 250. Prerequisite: graduate standing.

SE 253B. Mechanics of Laminated Composite Structures II (4)
Advanced topics, with prerequisite being SE 253A, or equivalent. Macro- and micro-material modeling, classical and shear deformable laminate beam and plate theories developed via energy principles, Ritz, Gailerkin, and Finite element based solutions, advanced failure theories, fracture, holes/notches and hole-size effect, interlaminar stresses, free-edge problems, impact, damage tolerance, fatigue, elastic tailoring, thermally stable/stable CTE structures, etc. Prerequisites: SE 253A or equivalent, graduate standing.

SE 253C. Mechanics of Laminated Anisotropic Plates and Shells (4)
Static, dynamic, and elastic stability of laminated anisotropic plates and cylindrical shells. Theories covered include thin-plate (classical laminated theory), first- and third-order shear-deformable (Reissner-Mindlin, and Reddy) thick plates, and refined layer-wise theories. Solution methods covered include exact, approximate (Ritz, Galerkin) and the finite element method. Additional topics include sandwich construction, elastic couplings, theoremal response, shear factor determination, fiber and interlaminar stress recovery, strength and fatigue considerations. Prerequisites: graduate student standing required; must have taken SE 253B or equivalent, or consent of instructor.

SE 254. FRPs in Civil Structures (4)

SE 255. Textile Composite Structures (4)
Introduction to textile structure and behavior, mechanics of yarns and fabrics as relevant to structural composites and geotechnical applications. Mechanics of textiles and fabric-based composites. Applications in fiber reinforced composites, coated textile structures, geotextiles.

SE 261. Aerospace Engineering Design (4)
Advanced topics in the design of weight-critical aerospace structures. Topics include: static, dynamic and environmental load definitions; metallics and polymeric composite material selection; semi-monocoque analysis techniques, and bolted/bonded connections. Design procedures for sizing the structural components of aircraft and spacecraft will be reviewed.

SE 262. Aerospace Structures Repair (4)

SE 265. Structural Health Monitoring (4)
A modern paradigm of structural health monitoring as it applies to structural and mechanical systems is presented. Concepts in data acquisition, feature extraction, data normalization, and statistical modeling will be introduced in an integrated context. MATLAB-based exercises. Term project. Prerequisites: graduate student, undergraduate vibrations or structural dynamics course.

SE 271. Solid Mechanics for Structural and Aerospace Engineering (4)
Application of principles of solid mechanics to structural components and systems, description of stresses, strains, and deformation. Use of conservation equations and principle of minimum potential energy. Development of constitutive equations for metallic cermements and polymeric materials. Prerequisite: SE 110A or consent of instructor.

SE 272. Theory of Elasticity (4)
Development, formulation, and application of field equations of elasticity and variational principles for structural applications in civil and aerospace area. Use of plane stress and plane strain formulation, solution of typical boundary value problems. Prerequisite: SE 271 or consent of instructor.

SE 273. Theory of Plasticity and Viscoelasticity (4)
Mechanical models of viscoelastic, plastic, and viscoplastic behavior in simple shear or uniaxial stress. Constitutive relations for three-dimensional states of stress and strain. Application to selected technological problems for civil and aerospace structural applications. Prerequisite: SE 272 or consent of instructor.

SE 275. Hydrodynamics in Marine Engineering (4)
Fluid dynamics equations; potential flow-theory; basic potential-flow solutions; added mass; 6-DOF hydrodynamic forces/moments on a body; water wave theory; irregular wave field; wave-body interactions; high/low-frequency responses; vortex-induced vibrations; galloping; numerical methods. Prerequisite: graduate standing.

SE 276A. Finite Element Methods in Solid Mechanics I (4)
Finite element methods for linear problems in solid mechanics. Emphasis on the principle of virtual work, finite element stiffness matrices, various finite element formulations and their accuracy and the numerical implementation required to solve problems in small strain, isotropic elasticity in solid mechanics.

SE 276B. Finite Element Methods in Solid Mechanics II (4)
Finite element methods for linear problems in structural dynamics. Beam, plate, and doubly curved shell elements are derived. Strategies for eliminating shear locking problems are introduced. Formulation and numerical solution of the equations of motion for structural dynamics are introduced and the effect of different mass matrix formulations on the solution accuracy is explored.

SE 276C. Finite Element Methods in Solid Mechanics III (4)
Finite element methods for problems with both material and geometrical (large deformations) nonlinearities. The total LaGrangian and the updated LaGrangian formulations are introduced. Basic solution methods for the nonlinear equations are developed and applied to problems in plasticity and interactive structure and stability. Prerequisites: graduate standing and SE 276A or MAE 232A and MAE 231A or SE 271.

SE 277. Error Control in Finite Element Analysis (4)
This course will provide an overview of the latest technology for evaluating and improving the accuracy and validity of linear and nonlinear finite element models, solution verification, finite element model validation, sensitivity analysis, uncertainty analysis, and test-analysis correlation. Prerequisite: SE 232B or MAE 232B.

SE 278A. Computational Fluid Dynamics (4)
Development and application of advanced computational techniques for fluid flow. Stabilized and variational multiscale methods for finite element and related discretizations are stressed. Applications involve advection-diffusion equations and systems, and incompressible and compressible Navier-Stokes equations. Turbulence modeling will also be covered. Prerequisites: MAE 232A or SE 276A or consent of instructor.

SE 278B. Computational Fluid-Structure Interaction (4)
Conservation laws on general moving domains. Arbitrary Lagrange-Eulerian (ALE) and space-time approaches to fluid-structure interaction are covered. Suitable discretizations, mesh motion, and discrete solution strategies are discussed. Prerequisite: SE 278A.

SE 290. Seminar in Earthquake Engineering (2)
Weekly seminar and discussion by faculty, visitors, postdoctoral research fellows and graduate students concerning research topics in earthquake engineering and related subjects. May be repeated for credit. (S/U grades only.)

SE 296. Independent Study (4)
Prerequisite: consent of instructor.

SE 298. Directed Group Study (1-4)
Directed group study on a topic or in a field not included in regular department curriculum, by special arrangement with a faculty member. Prerequisite: consent of instructor.

SE 299. Graduate Research (1-12)
(S/U grades permitted.)

SE 501. Teaching Experience (2)
Teaching experience in an appropriate SE undergraduate course under direction of the faculty member in charge of the course. Lecturing one hour per week in either a problem-solving section or regular lecture. Prerequisite: consent of instructor and the department. (S/U grades permitted.)

English as a Second Language
OFFICE: 232 Literature Building, Warren College
http://basicwriting.ucsd.edu

The English as a Second Language Program (ESL) offers coursework specific to the language needs of students for whom English is a second (or subsequent) language. This course is SDCC 4. SDCC 4 is a required course for all undergraduates who have not satisfied the UC Entry Level Writing requirement and who have been designated as needing the course based on their UC Analytical Writing Placement Examination. A combination of instructor recommendation, Entry Level Writing Exit Exam result, and a possible portfolio review places students in SDCC 4 for another quarter, in SDCC 1, or in a college writing sequence. Like SDCC 1, SDCC 4 is taught through a cooperative agreement with the San Diego Community College District. Under Academic Senate regulations, SDCC 4 cannot be counted toward graduation requirements; however,
the course units do count as workload credit toward the Minimum Progress requirement and toward eligibility for financial assistance.

For further information about the UC Entry Level Writing Requirement or the UC Analytical Writing Placement Exam, please visit the Basic Writing office, or call (858) 534-6177.

Entry Level Writing

OFFICE: 232 Literature Building http://basicwriting.ucsd.edu/

For information about satisfying the University of California Entry Level Writing requirement, especially prior to enrollment, please refer to “UC Entry Level Writing Requirement” in the catalog section “Academic Regulations.”

Students who have not satisfied the UC Entry Level Writing requirement before enrolling at UC San Diego must satisfy the requirement by achieving a grade of C or better in SDCC 1 (English Composition—Entry Level Writing) and by passing the Entry Level Writing Exit Examination given at the end of SDCC 1. That examination is administered by the Basic Writing Program office. Students must enroll in SDCC 1 or SDCC 4 during the first quarter of residence at UCSD. SDCC 1 and SDCC 4 are Mesa College courses taught at UCSD as part of a cooperative program with the San Diego Community College District.

Under Academic Senate regulations, SDCC 1 and SDCC 4 cannot be counted toward graduation requirements; however, the course units do count as workload credit toward the minimum progress requirement and toward eligibility for financial assistance.

For further information about the UC Entry Level Writing requirement or the UC Analytical Writing Placement Examination, please visit the Basic Writing office, 232 Literature Building, or call (858) 534-6177.

Environmental Studies

OFFICE: 2113 Humanities and Social Sciences Building, Muir College, (858) 534-3589 http://provost.ucsd.edu/muir/instructional/environmental-studies

Shirley Strum, Ph.D., Professor, Anthropology
Donald Welling, Ph.D., Professor Emeritus, Literature
David Woodruff, Ph.D., Professor, Biology—Ecology, Behavior and Evolution

MINOR IN ENVIRONMENTAL STUDIES

The Environmental Studies minor offers students from every major a basic grounding in the scientific, technical, social, and cultural issues presented by the interaction of human beings with their environment and the need to build a more environmentally sustainable future.

The two required courses, ENVR30 and ENVR130, have no prerequisites. Some of the other courses related to the minor, particularly those in Group A, have significant prerequisites; students planning an Environmental Studies minor should check catalog course descriptions carefully. Some credit toward the minor may be gained through independent study, field research, study abroad, the Academic Internship Program, and others (prior approval strongly recommended). Petitions for petitionable courses, transfer courses, and individual additions to the courses listed below must be approved by the chair of the Environmental Studies Steering Committee. For updates, individual advising, and quarterly lists, please come to the Environmental Studies Office: Muir Interdisciplinary Studies, 2113 HSS, Mail Code 0106, phone (858) 534-3589.

APPLICABLE AND PETITIONABLE COURSES

Environmentally-based courses offered by UCSD departments fall into two categories: applicable and petitionable. Applicable courses are those which have been approved as always applying to the ENVR minor. Petitionable courses are either new and therefore not yet approved as applicable or are “topics” courses which focus on environmental matters only in particular quarters. Petitionable courses may be approved by petition to the minor during the quarters in which they appear in the ENVR quarterly lists.

QUARTERLY LISTS

Each quarter, when the upcoming quarter’s Schedule of Classes is published, the Environmental Studies quarterly list is available in 2113 HSS and at the Web site. It is an important, comprehensive source of information about ENVR course offerings as well as those from departments throughout the campus. It identifies applicable as well as petitionable courses for a given quarter. For reference, the office and the Web site maintain archives of quarterly lists.

The minor is structured as follows:

Required:
- Environmental Studies 30, usually offered in the fall quarter.
- Environmental Studies 130, usually offered in the winter quarter (need not be taken consecutively).

Required:
- Five additional courses, at least four in the upper-division, from the following two groups. At least one course must be taken from Group A and one from Group B.

Group A—Natural Sciences

Biology LD 3. Organismic and Evolutionary Biology
BIEB 121. General Ecology Laboratory
BIEB 131. Marine Invertebrate Ecology Laboratory
BIEB 132. Introduction to Marine Biology
BIEB 134. Introduction to Biological Oceanography
BIEB 140. Biodiversity
BIEB 165. Behavioral Ecology Laboratory
BIEB 166. Animal Behavior and Communication
BIEB 176. Conservation and the Human Predicament (cross-listed with ANBI 132)
Chemistry 15. Chemistry of the Universe
Chemistry 149A. Environmental Chemistry
Chemistry 149B. Environmental Chemistry
Chemistry 173. Atmospheric Chemistry
Environmental Studies 102. Selected Topics in Environmental Studies (when taught from a natural sciences perspective)
Environmental Systems 101. The Living Earth
Environmental Systems 103. The Human Earth
Environmental Systems 120. Science and Environmental Writing
MAE 118A. Energy: Non-Nuclear Energy Technologies
Physics 12. Energy and the Environment
Science, Technology, Public Affairs 35. Society and the Sea
SIO 10. The Earth
SIO 12. History of Earth and Evolution
SIO 15. Natural Disasters
SIO 16. Geology of National Parks
SIO 20. The Atmosphere
SIO 30. The Oceans
SIO 35. Water
SIO 110. Introduction to GIS and GPS for Scientists

Group B—Social Sciences/Humanities

ANAR 108. Archaeology of the UCSD Campus
ANAR 182. Origins of Agriculture and Sedentism
ANBI 132. Conservation and the Human Predicament (cross-listed with BIEB 176)
ANSC 160. Nature, Culture and Environmentalism
Communication
CUL 148. Communication and the Environment
Economics 145. Economics of Ocean Resources
Environmental Studies 102. Selected Topics in Environmental Studies (when taught from a humanities/social sciences perspective)
Environmental Studies 110. Environmental Law
Ethnic Studies 103. Environmental Racism
History US 154. Western Environmental History
IRPS GN 458. International Environmental Policy
and Politics
IRPS GN 459. Conflict Resolution of Environmental
Issues
Philosophy 148. Philosophy and the Environment
Philosophy 164. Technology and Human Values
Political Science 162. Environmental Policy
Soc/C 149. Sociology of the Environment
Urban Studies & Planning 2. Urban World System
Urban Studies & Planning 124. Land Use Planning
Urban Studies & Planning 144. Environmental and
Preventive Health Issues
Urban Studies & Planning 171. Sustainable
Development

COURSES
For course descriptions not found in the UC San
Diego General Catalog, 2009–10, please contact the
department for more information.

30. Environmental Issues: Natural Sciences (4)
Examines global and regional environmental issues. The
approach is to consider the scientific basis for policy options.
Simple principles of chemistry and biology are introduced.
The scope of problems include: air and water pollution,
climate modification, solid-waste disposal, hazardous-
Waste treatment, and environmental impact assessment.
PREREQUISITE: none.

87. Environmental Studies Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new
students with the opportunity to explore an intellectual
topic with a faculty member in a small seminar setting.
Freshman seminars are offered in all campus departments
and undergraduate colleges, and topics vary from quarter
to quarter. Enrollment is limited to fifteen to twenty stu-
dents, with preference given to entering freshmen.

102. Selected Topics in Environmental Studies (4)
An interdisciplinary course focusing on one of a variety of
topics related to environmental studies such as environ-
mental policy and politics, foreign study in environmental
problems, environmental history, nature writers, ethics
and the environment. May be repeated for credit as topics
vary. PREREQUISITE: upper-division standing or consent
of instructor.

110. Environmental Law (4)
Explores environmental policy in the United States and
the world in which it is reflected in law. The social and pol-
itical issues addressed include environmental justice and
environmental racism, as well as the role of government
in implementing environmental law. PREREQUISITE:
upper-division standing or consent of instructor.

120. Coastal Ecology (4)
Explores the diverse ecosystems of coastal San Diego
County (salt marsh, rocky intertidal, sandy beach, etc.)
in the classroom and in the field with attention to basic
principles of field ecology, natural history, and techniques
for collecting ecological data. Course and/or materials
fee may apply. PREREQUISITE: upper-division standing
or consent of instructor.

130. Environmental Issues: Social Sciences (4)
Explores contemporary environmental issues from the
perspective of the social sciences. It includes the cultural
framing of environmental issues and appropriate social
action, the analysis of economic incentives and constraints,
and a comparison of policy approaches. PREREQUISITE:
upper-division standing or consent of instructor.

192. Senior Seminar in Environmental Studies (1)
The Senior Seminar Program is designed to allow se-
nior undergraduates to meet with faculty members in
a small group setting to explore an intellectual topic in
Environmental Studies (at the upper-division level).

Environmental Systems

OFFICE: 188 Galbraith Hall, Revelle College

PROGRAM FACULTY
Mark H. Thiemens, Professor, Chemistry and
Biochemistry, Program Director
Jane Teranes, Lecturer, Associate Director
Donna Blackman, Research Geophysicist, SIO
Ronald S. Burton, Professor, Marine Biology, SIO
Richard T. Carson, Professor, Economics
Christopher D. Charles, Professor, Oceanography, SIO

Sciences, SIO
Hubert Staudigel, Research Geophysicist, SIO
Lynne Tailey, Professor, Physical Oceanography, SIO
Lisa Tauxe, Professor, Geosciences, SIO
David Woodruff, Professor, Biology
Junjie Zhang, Assistant Professor, International
Relations and Pacific Studies

There can be little doubt that in the twenty-first
century the global human community is fac-
ing a substantial growth in the environmental
consequences in providing food, energy, materials,
and basic services to a population of almost 6.5
billion inhabitants. The Environmental Systems
Program (ESYS) recognizes the growing demand
for environmental specialists and is designed to
prepare undergraduates to enter a broad spectrum
of environmental careers and graduate programs in,
for example, the natural sciences, the social sciences,
policy, law, and business.

This interdisciplinary program recognizes that
local, national, regional, international, and global
environmental problems do not fit neatly into
traditional academic departments. A measurable
portion of society’s inability to effectively manage
central environmental problems stems from the
lack of specialists who can apply analytical tools that
cross disciplinary boundaries. Many environmental
specialists possess little training in the natural
sciences including both the fundamental ideas and
methodologies of the earth and environmental sci-
ces. The environmental systems major was created
to address both of these shortcomings.

To encourage and foster an interdisciplinary focus
in the major, the Environmental Systems Program
is supported by a wide range of UC San Diego
courses representing the natural sciences, the social
sciences, the humanities, engineering, and medicine.
The program includes a required lower-division core,
an upper-division “integrating course sequence,”
two other upper-division courses and statistics,
an advanced track, and a senior integrative project and
seminar. There is a strong emphasis on a rigorous
natural science foundation as well as an introduction
to the policy sciences for all students enrolled in
the major. The Environmental Systems Program places
a significant value on interdisciplinary problem solving
and all majors are expected to complete an integra-
tive Senior Project in their final year. The Senior
Project is designed by the student to focus on an
interdisciplinary environmental problem or research
topic. Appropriate topics for the Senior Project
could conceivably include biodiversity conservation,
coastal zone management, environmental health,
climate change, environmental justice, and/or urban
air quality. An important component of the Senior
Project is an off-campus or laboratory internship
where students might work on, for example, the
development of a comprehensive management
policy for threatened ecosytem. The Senior Seminar
provides a venue for the presentation and group
evaluation of the ESYS Senior Projects.

THE ENVIRONMENTAL SYSTEMS MAJOR

The requirements for completion of the environ-
mental systems major include a lower-division
core, two upper-division courses, a three course
upper-division integrating sequence (ESYS 101, ESYS 102, ESYS 103), an upper-division statistics course, advanced courses in one of four tracks, and the Senior Project (ESYS 190A) and Senior Seminar (ESYS 190B). It is suggested that the integrating sequence ESYS 101, 102, and 103 should be completed by sophomore year, if possible. Any questions concerning the requirements should be directed to the associate director or the program advisor. Students completing the advanced tracks in Earth Sciences, Ecology, Behavior, and Evolution, and Environmental Chemistry will be awarded a B.S. in environmental systems. The B.A. in environmental systems will be granted to students completing the Environmental Policy track within the major.

A grade-point average of 2.0 or higher in the upper-division major program is required for graduation. Students must receive a grade of C— or better in any course to be counted toward fulfillment of the major requirements. In exceptional cases, students with a grade-point average in the major of 2.5 or greater may petition to have one grade of D accepted.

All courses (lower- and upper-division) required for the major must be taken for a letter grade.

Lower-Division Core Requirements
(Should be completed early in student's degree program.)

**Biology 3**—BILD 3
Chemistry 6A-B, 6BL, 6C
Physics 1A, 1AL, 1B, 1BL, 1C, 1CL (Physics 2A-B-C recommended for Earth Sciences track.)
Mathematics 10A-B-C (Math. 20A-B-C recommended for Earth Sciences track.)
Economics 1
SIO 50—for Earth Sciences track only

Upper-Division Core Requirements

Economics 131. Economics of the Environment
Political Science 160AA. Introduction to Policy Analysis

Integrating Course Sequence

It is suggested that the Integrating Course Sequence be completed by the sophomore year, if possible. Environmental Systems 101. Environmental Biology
Environmental Systems 102. The Solid and Fluid Earth
Environmental Systems 103. Environmental Challenges: Science and Solutions
Environmental Systems 190A. Senior Project (two quarters)
Environmental Systems 190B. Senior Seminar

Environmental Systems Major Tracks

There are four advanced tracks in which students must complete a minimum of seven upper-division courses. Students will select courses following the requirements below in consultation with a faculty advisor.

Earth Sciences
Ecology, Behavior, and Evolution
Environmental Chemistry
Environmental Policy

It is possible to complete the requirements for any of the Environmental Systems tracks with five upper-division electives and a specialization that consists of two additional upper-division electives from any other track. For example, a student interested in the policy and scientific dimensions of habitat conservation planning for endangered species might plan a course of study to include five advanced courses from the Ecology, Behavior, and Evolution track and two advanced courses from the Environmental Policy track.

Earth Sciences Track

Required lower-division course:
SIO 50. Introduction to Earth and Environmental Sciences

Required upper-division courses:
SIO 102. Introduction to Geochemistry
MATH 183. Statistical Methods

Upper-division electives: Students complete a minimum of seven courses selected from the following list.

- SIO 100. Introduction to Field Methods
- SIO 104/255. Paleobiology and History of Life
- SIO 105. Sedimentology and Stratigraphy
- SIO 110. Introduction to GIS and GPS for Scientists
- SIO 112. Urban Landscapes
- SIO 120. Introduction to Mineralogy
- SIO 144/252A. Introduction to Isotope Geochemistry
- SIO 160. Introduction to Tectonics
- SIO 162. Structural Geology
- SIO 185. Applied Complexity
- SIO 199. Independent Study
- ESYS 120. Science and Environmental Writing
- ESYS 199. Independent Study
- BIEB 132. Introduction to Marine Biology
- BIEB 134. Introduction to Biological Oceanography
- BIEB 210. Physical Oceanography
- BIEB 240. Marine Geology
- BIEB 260. Marine Chemistry
- BIEB 263. Aquaeus Chemistry
- BIEB 280. Biological Oceanography
- Chemistry 149A. Environmental Chemistry
- Chemistry 173/273. Atmospheric Chemistry

Other courses may be substituted by petition.

Ecology, Behavior, and Evolution Track

Required upper-division courses:

- BIEB 100. Genetics
- BIEB 100. Biometry (satisfies upper-division statistics requirement)

Upper-division electives [a total of seven courses required, one of which must be a lab course, selected from the courses below.]

- BIBC 100. Structural Biochemistry
- BIBC 102. Metabolic Biochemistry
- BIBC 103. Biochemical Techniques
- BIBC 120. Nutrition
- BIBC 130/SIO 281. Marine Biochemistry
- BICD 110. Cell Biology
- BICD 120. Fundamental of Plant Biology
- BICD 130. Embryos, Genes, and Development
- BICD 134. Human Reproduction and Development
- BIEB 102. Introductory Ecology—Organisms and Habitats
- BIEB 121. Ecology Laboratory
- BIEB 126. Plant Ecology
- BIEB 131. Marine Invertebrate Ecology Lab
- BIEB 132. Introduction to Marine Biology
- BIEB 134. Introduction to Biological Oceanography
- BIEB 140. Biodiversity
- BIEB 144. Quantitative Ecology
- BIEB 150. Evolution
- BIEB 156. Population Genetics
- BIEB 164. Behavioral Ecology
- BIEB 165. Behavioral Ecology Laboratory
- BIEB 166. Animal Communication
- BIEB 167. Animal Communication Lab
- BIEB 176/ANBI 132. Conservation and the Human Predicament
- BIMM 100. Molecular Biology
- BIMM 110. Molecular Basis of Disease
- BIMM 114. Virology
- BIMM 120. Bacteriology
- BIMM 121. Laboratory in Microbiology
- BIMM 124. Medical Microbiology
- BIMM 126. Marine Microbiology
- BIMM 127/SIO 288. Marine Microbiology Laboratory
- BIPN 100. Mammalian Physiology I
- BIPN 102. Mammalian Physiology II
- BIPN 105. Animal Physiology Lab (6)
- BIPN 106. Comparative Physiology (4)
- ESYS 120. Science and Environmental Writing
- ESYS 150. Environmental Perils
- ESYS 199. Independent Study

Other courses may be substituted by petition.
ENVIRONMENTAL POLICY TRACK

Required upper-division course

One upper-division Statistics course—Math 183. Statistical Methods or Economics 120A. Econometrics

Upper-division electives  
Students complete a minimum of seven courses selected from the following:

Economics 116. Economic Development  
Economics 125. Economics of Population Growth  
Economics 130. Public Policy  
Economics 132. Energy Economics  
Environmental Systems 120. Science and Environmental Writing  
Environmental Systems 150. Environmental Perils  
Environmental Systems 199. Independent Study  
Political Science 102L. The Politics of Regulation  
Political Science 125. The Politics of Conservation in Developing Countries  
Political Science 125A. Communities and the Environment  
Political Science 150A. Politics of Immigration  
Political Science 160AB. Introduction to Policy Analysis  
IR-GN 457/257*. Cost Benefit Analyses  
IR-GN 459/259*. Conflict Resolution of Environmental Issues  
IR-GN 487/289*. Applied Environmental Issues  
IR-GN 488/206*. Corporate Strategy and the Environment  
IR-GN 490/290*. Special Topics in Pacific International Affairs (Petition only.)  
IR-GN 453/253*. Sustainable Development  
IR-GN 458/258*. International Environmental Policy  
HISC 105. History of Environmentalism  
HUS 154. Western Environmental History  
ANBI 132. Conservation and the Human Predicament  
Com/Cul 148. Communication and the Environment  
Env. Studies 102. Selected Topics in Environmental Studies  
Env. Studies 110. Environmental Law  
Env. Studies 130. Environmental Issues  
Philosophy 148. Philosophy and the Environment  
Philosophy 164. Technology and Human Values  
SIO 110. Introduction to GIS and GPS for Scientists  
SIO 112. Urban Landscapes  
USP 124. Land Use Planning  
USP 144. Environmental and Preventive Health Issues  
USP 170. Sustainability Planning  
USP 171. Sustainable Development

Other courses may be substituted by petition.

ENVIRONMENTAL CHEMISTRY TRACK

Students must complete two of the following courses:

Chemistry 149A. Environmental Chemistry  
Chemistry 149B. Environmental Chemistry  
Chemistry 173/273. Atmospheric Chemistry  
ESYS 141/Chem 174. Chemical Principles of Marine Systems

Students must complete:

Math. 183. Statistical Methods OR  
Math. 186. Probability Statistics for Bioinformatics  
Chemistry 100A. Analytical Chemistry Laboratory  
Chemistry 100B. Instrumental Analysis Laboratory  
Chemistry 143A. Organic Chemistry Laboratory

Two upper-division restricted electives from:

Chemistry 124. Bioinorganic Chemistry  
Chemistry 126. Physical Chemistry or Chem. 133 (Note: Chem. 126 and Chem. 133 both require Physics 2D and Math. 202 as prerequisites.)  
Chemistry 127. Physical Chemistry or Chem. 131, 132  
Chemistry 140C. Organic Chemistry III  
ESYS 199. Independent Study

Other courses may be substituted by petition.

ENVIRONMENTAL SYSTEMS MINOR

A minor in Environmental Systems will expose students to the interdisciplinary approach necessary to address environmental problems. The program places a strong emphasis on a rigorous natural science foundation. Thus, most of the courses related to the minor have significant prerequisites; students planning an Environmental Systems minor should check catalog course description carefully.

The minor consists of twenty-eight units, at least twenty of which must be upper-division. Any upper-division course used to satisfy major requirements may not be applied toward a minor. Up to two courses for the minor may be taken on a Pass/Not Pass basis, (upper or lower division). Students must earn at least a letter grade of C– in the remaining five or more courses used for the minor. Students considering the Environmental Systems minor are strongly advised to meet with the associate director or the program advisor.

The minor is structured as followed:

Lower-Division Courses:

Any two of the following lower-division courses, if they are NOT lower-division requirements for the student's major, may be applied to satisfy eight of the total units necessary for the minor:

- Biology 3  
- Math. 10A-B-C  
- Chemistry 6A-B-6BL-C  
- Physics 1A-AL, 1B-6L, 1C-CL  
- Economics 1  
- SIO: any lower-division course

Environmental Systems 10  
Environmental Studies 30

Required core courses:

Environmental Systems 101, offered every fall quarter  
Environmental Systems 102, offered every winter quarter  
Environmental Systems 103, offered every spring quarter

NOTE: ESYS 102 and ESYS 103 all have significant prerequisites; students planning an Environmental Systems minor should check course descriptions and prerequisites carefully.

Upper-Division Electives:

At least two additional upper-division courses from the advanced tracks in the Environmental Systems major. The lists of upper-division electives are
reviewed and updated each quarter. They are available in the Environmental Systems Office and on the program Web site (http://esys.ucsd.edu). Students are advised to consult with the Environmental Systems program advisors or associate director.

SPECIAL STUDIES COURSES

Special Studies in the environmental systems is offered as ESYS 199. This course is subject to consent of the instructor and approval by the Environmental Systems faculty advisor. This course is open to students who have accrued at least ninety quarter-units and have a GPA of at least 3.0. No more than two quarters of environmental systems special studies may be counted toward the environmental systems major.

Study abroad through the Education Abroad Program or Opportunities Abroad Program can enhance a student’s major, particularly as an opportunity for diverse field experiences. However, careful planning is important to meet all major requirements. Please contact the Environmental Systems Office as early as possible if you are planning to study abroad.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

Many of the courses that are used to fulfill the requirements of the environmental systems major are offered by other departments and programs. Most of these courses are offered on a regular basis. Students should consult the Schedule of Classes or contact the Environmental Systems office in order to obtain current information. The courses below are offered directly through the Environmental Systems Program.

LOWER-DIVISION

ESYS 10. Introduction to Environmental Systems (4)
This course explores the interdisciplinary character of environmental issues through an examination of a particular topic (climate change, for example) from numerous disciplinary perspectives (e.g., biology, chemistry, physics, political science, and economics) and serves as a general introduction to the Environmental Systems major. PREREQUISITE: none. (W)

ESYS 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate college, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students with preference given to entering freshmen.

ESYS 90. Perspectives on Environmental Issues (1)
Provides an introduction to environmental systems. Faculty members from departments in the natural sciences, geosciences, and social sciences will offer perspectives in these areas. (F)

UPPER-DIVISION

ESYS 101. Environmental Biology (4)
This course surveys biochemical and physiological processes governing the relationship between organisms and their environments, such as those involved in element cycling and cellular homeostasis. The course introduces biological perspectives on human activities ranging from antibiotic use to genetic engineering. PREREQUISITE: BILD 1 or 2 or equivalent, or consent of instructor. (F)

ESYS 102. The Solid and Fluid Earth (4)
Earth’s dynamic physical systems interact in complex ways with profound impact on our environment. Processes such as volcanism and weathering enable geochronologic exchange between solid and fluid (ocean and atmosphere) systems. Sea-level and climate changes involve with tectonic processes. PREREQUISITES: Math. 10A, Chem. 6A, Physics 1A or consent of instructor. (W)

ESYS 103/MAE 124. Environmental Challenges: Science and Solutions (4)
This course explores the impacts of human, social, economic, and industrial activity on the environment. It highlights the central roles in ensuring sustainable development played by market forces, technological innovation, and government regulations on local, national, and global scales. PREREQUISITE: grade of C– or better in Math. 208 or Math. 10A-C; or by consent of instructor. (S)

ESYS 120. Science and Environmental Writing (4)
Course designed to improve the written communication of science majors through frequent writing assignments that develop the practical skills needed to communicate science to lay audiences. Topics include news writing, news releases, grant writing, broadcast script writing, and editorial writing. PREREQUISITES: upper-division standing in science or mathematics major and completion of college composition requirement (or consent of instructor). (W)

ESYS 150. Environmental Perils (4)
An advanced field-oriented course for engineering and science students stressing the geologic basis for environmental perils such as earthquakes, erosion, flooding, and waste disposal. Two one-hour lectures, and a two-hour lab/field trip each week. PREREQUISITES: Math. 10 A-B-C sequence and Physics 1A,AL; 1B,BL; 1C,1CL sequence or equivalent. (S)

ESYS 190A. Senior Project (8)
All majors are required to complete an integrative Senior Project in their senior year. The Senior Project is designed by the student to focus on an interdisciplinary environmental problem or research topic and is developed either individually or as part of a team over two quarters. Appropriate topics could include biodiversity conservation, environmental health, and/or global change. An important component of the Senior Project is an off-campus or laboratory internship. PREREQUISITES: ESYS 103 and upper-division standing, departmental approval only. (EW)

ESYS 190B. Environmental Systems Senior Seminar (4)
The seminar provides a venue for the development, presentation, and evaluation of the Environmental Systems Integrative Project. The seminar will include work on research methods as well as paper presentation skills. PREREQUISITES: Completion of ESYS 190A or ESYS 190A(W), sequence, senior standing and majors only. (S)

ESYS 199. Independent Study (2-4)
Individually guided readings or projects in the area of environmental systems.

Ethnic Studies

Faustina Solis, Professor Emerita, Urban Studies/Family and Preventive Medicine
Roberto Tejada, Associate Professor, Visual Arts
Olga Vásquez, Associate Professor, Communication
Daniel Widener, Assistant Professor, History
Lisa Yoneyama, Associate Professor, Literature
Elana Zilberg, Assistant Professor, Communication

Ethnic studies is the study of the social, cultural, and historical forces that have shaped the development of America’s diverse ethnic peoples over the last 500 years and which continue to shape our future. Focusing on immigration, slavery, and confinement, those three social processes that combined to create in the United States a nation of nations, ethnic studies intensively examines the histories, languages, and cultures of America’s racial and ethnic minority groups in and of themselves, in their relationships to one another, and particularly, in structural contexts of power.

The curriculum of the Department of Ethnic Studies is designed (1) to study intensively the particular histories of different ethnic and racial groups in the United States, especially intragroup stratification; (2) to draw larger theoretical lessons from comparisons among these groups; (3) to articulate general principles that shape racial and ethnic relations both currently and historically; and (4) to explore how ethnic identity is constructed and reconstructed over time both internally and externally.

A degree in ethnic studies offers training of special interest to those considering admission to graduate or professional schools and careers in education, law, medicine, public health, social work, journalism, business, city planning, politics, psychology, international relations, or creative writing. A major in ethnic studies is designed to impart fundamental skills in critical thinking, comparative analysis, social theory and research analysis, and written expression. These skills will give students the opportunity to satisfy the increasingly rigorous expectations of graduate admissions committees and prospective employers for a broad liberal arts perspective.

**THE MAJOR**

To receive a B.A. degree with a major in ethnic studies, students must meet the following requirements:

1. A three-quarter course lower-division sequence (Ethnic Studies 1A-B-C). Ideally this sequence should be taken during the sophomore year as an intensive introduction to the history and theoretical dimensions of ethnic diversity in the United States. Ethnic Studies 1A-B-C, Introduction to Ethnic Studies, will consist of the following three courses: Population Histories of the United States, Immigration and the Transformation of American Life, Race and Ethnic Relations in the United States.

2. A minimum of twelve four-unit upper-division courses in the Department of Ethnic Studies must be completed from the following five categories:

   *Only two will be counted in fulfillment of this requirement.

   *Only two will be counted in fulfillment of this requirement.

   d. At least three upper-division ethnic studies courses that focus on language, ethnicity, and institutional discourses: ETHN 120. Race and Performance: The Politics of Popular Culture ETHN 140. Language and American Ethnicity ETHN 141. Language, Culture, and Inequality ETHN 142. Medicine, Race, and the Global Politics of Inequality ETHN 144. Bilingual Communities in the U.S.A. ETHN 145. Spanish Language in the United States ETHN 164. African Americans and the Mass Media ETHN 185. Discourse, Power, and Inequality ETHN 186. The Ethnic Press in the United States Students may petition to count one course on language, ethnicity, and institutional discourses offered by other departments. In addition, one course in foreign language at the upper-division level may be counted in partial fulfillment of this requirement, with the consent of the department. Students must seek faculty advice on which courses would best satisfy the requirement and yield the most rigorous training.

ETHN 136. Topics in Chicano/a-Latino/a Cultures
ETHN 138. Chicano/a-Latino/a Poetry
ETHN 139. Chicano Literature in English
ETHN 146A. Theatrical Ensemble
ETHN 148. Latino/a and Chicano/a Literature
ETHN 168. Comparative Ethnic Literature
ETHN 172. Afro-American Prose
ETHN 173. Afro-American Poetry
ETHN 174. Themes in Afro-American Literature
ETHN 175. Literature of the Harlem Renaissance
ETHN 176. Black Music/Black Texts: Communication and Cultural Expression
ETHN 178. Blues: An Oral Tradition
ETHN 179A. Jazz Roots and Early Development (1900–1943)
ETHN 179B. Jazz Since 1946: Freedom and Form

- One four-unit field methods course (Ethnic Studies 190, Research Methods: Studying Ethnic and Racial Communities).
- Since the goal of the Department of Ethnic Studies is to intensively study both the particular histories of various ethnic and racial groups in the United States and to draw larger theoretical lessons from comparisons among and between groups, students may not fulfill requirements 2B and 2D by focusing all of the seven required courses on only one ethnic or racial group.

4. Ethnic studies majors, including students who are double majors, may petition up to four upper-division courses to fulfill major requirements as long as each of the following three conditions is met for each course: (1) the course is taken from another UC San Diego department, taken from a UCSD approved study abroad program, or taken at another UC campus; (2) the course work is appropriate to the ethnic studies major; and (3) the student completes at least one course offered by the UCSD ethnic studies department in each of the five upper-division categories.

5. To satisfy the requirements for the major, lower- and upper-division courses must be completed with a C–, or better grade.

6. Except for independent study course electives (ETHN 197, 198, or 199) which are always taken with a Pass/Not Pass grade option, students majoring in ethnic studies may take up to two courses, either lower- or upper-division, with a Pass/Not Pass option.

**THE HONORS PROGRAM**

Consistent with other research opportunities offered to undergraduates on the UCSD campus, the department offers the Honors Program to ethnic studies majors in their senior or junior year the opportunity to conduct original research using interdisciplinary methodologies in the comparative study of race and ethnicity. To enroll in the Honors Program, an undergraduate must have a minimum grade-point average of 3.5 in ethnic studies classes counted toward the major. Students with a GPA lower than 3.5 in the major may be admitted by exception if they show promise of success in research.

The Honors Program will be an extension of current departmental offerings using existing faculty resources. Ethnic studies and affiliated faculty will choose to advise students who successfully complete ETHN 191A and continue in the Honors Program based on related research interests. The student will enroll in ETHN 191B and ETHN 191C and work with the appropriate faculty advisor. Students will present their research projects at the annual Ethnic Studies Honors Symposium in June. Students who complete the sequence ETHN 191A, ETHN 191B, and ETHN 191C will receive one credit toward the B (Social Studies/Humanities) requirements for the ethnic studies major. Students who complete their research project with a grade of B or better and maintain a minimum 3.25 GPA in the ethnic studies major will receive Distinction in the major upon graduation from UCSD. Ethnic Studies 191A, 191B, and 191C must be taken for letter grade only.

191A. Undergraduate Research in Ethnic Studies (4)
This course is designed to help students conduct their own research rather than merely read the research of others. The course will introduce students to research paradigms in ethnic studies, familiarize them with finding aids and other library resources, and involve them in the design of research plans.

191B. Honors Research in Ethnic Studies (4)
This course is a continuation of Ethnic Studies 191A. Undergraduate Research in Ethnic Studies. Students who have completed ETHN 191A and selected a faculty research advisor may enroll in this course. During the quarter the research for the honors project will be completed under the faculty advisor's supervision. Faculty advisors will meet weekly with their honors students to oversee the progress made in carrying out the plan of research. Formerly ETHN 192. **PREREQUISITES:** upper-division standing, consent of instructor, and completion of 191A.

191C. Honors Research in Ethnic Studies (4)
This course is a continuation of Ethnic Studies 191B. Honors Research in Ethnic Studies. Students who have completed ETHN 191B and are continuing to work with a faculty research advisor may enroll in this course. During the quarter the written drafts and final honors paper will be completed under the faculty advisor's supervision. The student will meet weekly with the faculty advisor in order to prepare drafts and the final version of the honors paper. Formerly ETHN 193. **PREREQUISITES:** ETHN 191A and ETHN 191B.

**EDUCATION ABROAD PROGRAM**

Students are able to participate in the UC Education Abroad Program (EAP) or UCSD's Opportunities Abroad Program (OAP) while still making progress toward completing their major. Students considering this option should discuss their plans with the undergraduate advisor prior to going abroad, and courses taken abroad must be approved by the department. Interested students should contact the Programs Abroad Office in the International Center.

**THE MINOR**

Students may minor in ethnic studies. Consistent with the provision for a minor curriculum for students entering after January 1, 1998, students wishing to minor in ethnic studies must satisfy the following requirements:

1. Students must take two four-unit courses in the history and theoretical dimensions of ethnic diversity in the United States from the lower-division sequence (Ethnic Studies 1A-B-C) or students must take two four-unit upper-division courses in analytic and comparative study of ethnicity. Theories and Methods of Ethnic Studies (ETHN 100); and Research Methods, Studying Ethnic and Racial Communities (ETHN 190).

2. Students must take five four-unit upper-division ethnic studies elective courses; at least two, but no more than three of the five elective courses must be selected from either the ethnic studies history and social studies courses (listed above in section 2B) or the ethnic studies literature and cultural expressions courses (listed above in section 2D). While language and ethnicity courses offered by the department (listed above in section 2C) may also be used to satisfy this requirement, foreign language and area studies courses from other departments may not. No more than two independent study courses (ETHN 197, 198, or 199) may be used to satisfy this requirement.

3. To satisfy the requirements for the minor, lower- and upper-division courses must be completed with a P, C–, or better grade.

4. Except for independent study course electives (ETHN 197, 198, or 199) that are always taken with a Pass/Not Pass grade option, students minoring in ethnic studies may take one course, either lower- or upper-division, with a Pass/Not Pass grade option.

Students interested in the African-American experience should consider the following courses:

ETHN 149. African American History in the Twentieth Century
ETHN 159. Topics in African American History
ETHN 161. Black Politics and Protest since 1941
ETHN 164. African Americans and the Mass Media
ETHN 165. Sex and Gender in African American Communities
ETHN 167. African American History in War and Peace. 1917 to the Present
ETHN 170A. Origins of the Atlantic World, c. 1450–1650
ETHN 170B. Slavery and the Atlantic World
ETHN 172. Afro-American Prose
ETHN 173. Afro-American Poetry
ETHN 174. Themes in Afro-American Literature
ETHN 175. Literature of the Harlem Renaissance
ETHN 176. Black Music/Black Texts. Communication and Cultural Expression
ETHN 178. Blues: An Oral Tradition
ETHN 179A. Jazz Roots and Early Development (1900–1943)
ETHN 179B. Jazz Since 1946: Freedom and Form
ETHN 181. Topics in the Comparative History of Modern Slavery
ETHN 182. Segregation, Freedom Movements, and the Crisis of the Twentieth Century (not offered in 2009–10)
ETHN 184. Black Intellectuals in the Twentieth Century
ETHN 187. Black Nationalism
ETHN 188. African Americans, Religion, and the City
Students interested in the Chicano experience should consider the following courses:

ETHN 116. The United States-Mexico Border in Comparative Perspective
ETHN 130. Social and Economic History of the Southwest I
ETHN 131. Social and Economic History of the Southwest II
ETHN 132. Chicano Dramatic Literature
ETHN 133. Hispanic-American Dramatic Literature
ETHN 135A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960
ETHN 135B. Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present
ETHN 136. Topics in Chicano/a-Latino/a Cultures
ETHN 138. Chicano/a-Latino/a Poetry
ETHN 139. Chicano Literature in English
ETHN 145. Spanish Language in the United States
ETHN 148. Latino/a and Chicano/a Literature
ETHN 180. Topics in Mexican American History

Students interested in the Asian-American experience should consider the following courses:

ETHN 20. Introduction to Asian American History
ETHN 120. Race and Performance: The Politics of Popular Culture
ETHN 121. Contemporary Asian-American History
ETHN 122. Asian-American Culture and Identity
ETHN 123. Asian-American Politics
ETHN 124. Asian-American Literature
ETHN 125. Asian-American History
ETHN 126. Comparative Filipino- and Vietnamese-American Identities and Communities

Students interested in the Native American experience should consider the following courses:

ETHN 110. Cultural World Views of Native Americans
ETHN 111. Native American Literature
ETHN 112A. History of Native Americans in the United States I
ETHN 112B. History of Native Americans in the United States II

THE GRADUATE PROGRAM

The UC San Diego Department of Ethnic Studies emphasizes comparative, analytic, and relational study of ethnicity and race in the United States. Our fields of emphasis include intercultural communication and conflict, population histories of the Americas, ethnicity and identity, immigration and assimilation, ethnic politics and social movements, race and racism, urban ethnicity, gender and ethnicity, sexuality, intellectual and cultural histories of ethnic groups, cultural pluralism, national integration, language and ethnic life, and mass media representations of ethnic identity.

ADMISSION

New students are admitted in the fall quarter of each academic year. Prospective applicants should submit the official application for admission and awards (same form), one set of official transcripts from each institution attended after high school, official scores from the Graduate Record Examination, application fee, at least three letters of recommendation, and one or more samples of the applicant's own writing, such as term papers. Additionally, foreign applicants must submit official scores from the Test of English as a Foreign Language (TOEFL). Applicants are encouraged to visit the department to talk with faculty and graduate students. The application deadline is January 15.

PROGRAM OF STUDY

Students are required to enroll as full-time graduate students, to carry a minimum enrollment of twelve units of graduate-level courses each quarter, and to maintain a grade-point average of 3.2 or better. To obtain an M.A. degree students must take fifty-four units of course work and write a master's thesis.

CORE CURRICULUM SEQUENCE REQUIREMENTS

1. Ethnic Studies 200A-B-C, Core Seminar
All graduate students will be required to take the introductory three-quarter core seminar (four units each, twelve units total) during their first year in the program. This course covers the genealogy of critical racial and ethnic studies (its antecedents and development as a distinct and interdisciplinary method of inquiry), interdisciplinarity and knowledge production in ethnic studies, and research in ethnic studies (Pro Seminar).

2. Ethnic Studies 230, Department Colloquium
During the first two years of graduate study, all students will be required to enroll in six one-quarter colloquia required by the department. In Ethnic Studies 230, department faculty and visiting lecturers will make presentations about research in progress in our field. This colloquium is a one-unit course and must be taken for a total of six quarters.

All graduate students will be required to take the three-quarter core research methods course (four units each, twelve units total) during their first year in the program. ETHN 240A, Historical Methods and Archives; ETHN 240B, Cultural Studies and Cultural Production; and ETHN 240C Qualitative Methods/Ethnography.

4. Ethnic Studies 290A-B, Master's Thesis Preparation
Students are required to write a master's thesis as part of the requirements for the master of arts in ethnic studies. Students should enroll in thesis preparation courses in the fall and spring quarters of the second year of graduate studies.

FOREIGN LANGUAGE REQUIREMENT

Competence in one or more foreign languages is encouraged but not required at the M.A. level. All doctoral candidates must satisfy the department's graduate committee that they have adequate linguistic competence in one foreign language relevant to their area of research by translating three pages of scholarly text written in the designated foreign language. The graduate committee may waive the language requirement and test the candidate on other specialized skills in instances where knowledge of a foreign language is not relevant to the candidate's areas of research.

INSTRUCTION IN QUANTIFICATION

The department encourages graduate students to employ quantitative methods where appropriate. Instruction in quantitative methods can fulfill elective requirements; recommended courses include Sociology 205 and 206, Survey and Demographic Methods; Political Science 270, Quantitative Methods in Political Science. In cases where a reading knowledge of evidence assembled through quantitative methods would be useful, students who obtain the permission of the director of Graduate Studies may fulfill elective requirements by taking no more than two selected undergraduate courses including Sociology 103, Computer Applications to Data Management in Sociology; Sociology 107, Demographic Methods; Sociology 108, Quantitative Analysis of Survey Data; Sociology 109, Quantitative Analysis of Sociological Data; and Political Science 170, Quantitative Political Science, among others.

THE MASTER'S DEGREE

Students entering the ethnic studies doctoral program must first complete a master's degree before continuing toward the doctorate. University regulations prohibit entering students who already have a master's degree in ethnic studies from receiving a second master's degree. Nonetheless, students who are admitted to the ethnic studies doctoral program with a master's degree must complete all the requirements for the ethnic studies master of arts degree. The M.A. will also be a terminal degree for those students denied admission to candidacy. To obtain the M.A. degree, students must complete the department's course requirements satisfactorily. At the end of the second year in the graduate program, students must submit a written thesis to their Master’s Thesis Committee (MTC). The committee will assess the quality of the work and determine whether it demonstrates the likelihood of success in conducting doctoral research. The final decision regarding the M.A. degree is based on grades, the master's thesis, and yearly faculty evaluations. The Graduate Program Committee awards three possible grades: Pass, M.A. Only, and Not Pass. All passing students (with the exception of those who already have a master's degree in ethnic studies from another institution) receive the master of arts degree and proceed in their course of studies for the doctorate. Students who receive M.A. Only evaluations gain the master's degree but may not continue in the department's Ph.D. program. Students who receive a Not Pass evaluation must withdraw from the program without a graduate degree. The master's degree is earned as one of the requirements for the Ph.D. and is based on the quality of the student's work during the first two years in the graduate program. At the end of the second year, students are evaluated by the Graduate Program Committee for the master's degree. At that time, the committee (GPC) ascertains the student's suitability for doctoral work and recommends either advancement to Ph.D. work or termination.

REQUIREMENTS FOR THE QUALIFYING EXAMINATIONS

When students complete all the core curriculum requirements and have taken five four-unit elective courses in appropriate areas or disciplines, they are
eligible to take the qualifying examination for the Ph.D. degree. Students will be encouraged to take the exam by the end of their third year in the program, but this examination must be completed by the end of the student's fourth year in the program. The qualifying exam is both written and oral; it consists of two parts. Part one tests the student’s basic competence and knowledge of ethnic studies scholarship as spelled out in the Department of Ethnic Studies required graduate reading list. The reading list will be distributed to every student entering the graduate program. Over the next three years, students are required to read all of these books and articles, and to have their mastery of these readings tested during the qualifying examination. Part two of the examination requires the submission of a dissertation prospectus. The dissertation prospectus is a written document that (1) specifies the dissertation research topic; (2) places the dissertation research in the context of the relevant literature in the field; (3) identifies the significance of the project as original discovery scholarship; (4) explains and justifies the research methods to be employed; (5) establishes the feasibility of the research and identifies the primary sources or data bases to be used; (6) indicates the anticipated steps leading to completion of the project; and (7) provides a timetable for the research and writing phases of the project.

The Doctoral Committee consists of five persons proposed by the student and accepted by the department chair and the office of Graduate Studies according to graduate council regulations. A sixth member of the committee may be added with the approval of the department chair. Students are expected to select the chair of their examination committee by the winter quarter of the third year of study. The chair of the Ph.D. Examination Committee serves as the student’s advisor for the remainder of the student’s graduate program. Three of the Examination Committee members must be Department of Ethnic Studies faculty; the other two must be from other departments.

Fourteen days before the scheduled qualifying examination, the student must submit the written dissertation prospectus to the examination committee. On this same day, the student will receive from the chair of the examination committee a three-question written exam testing knowledge of the required graduate reading list. Seven days before the scheduled qualifying examination, the student must submit written answers to the questions that have been posed, distributing copies of these essays to all examination committee members. A two-hour oral examination will occur on the appointed date. At the two-hour oral exam, the student will answer questions posed by the committee about the student’s dissertation prospectus, mastery of the required graduate reading list, answers to the written part of the exam, and comprehensive knowledge of ethnic studies scholarship. Based on written papers and oral performance, three possible grades will be selected by the examination committee: Not Pass, Pass, and High Pass. Students who receive a Not Pass must retake the qualifying examination within one year and obtain a Pass grade to remain in the doctoral program.

THE DOCTORAL DISSERTATION

Once students pass the qualifying exam, they may begin dissertation research. Students are expected to consult with their committee members on a regular basis during the research process. All doctoral students will be evaluated annually by the doctoral committee and given a written report signed by the thesis advisor according to campus policy.

When the dissertation has been substantially completed and once committee members have had the opportunity to review drafts of the written work, the committee meets (with or without the student present at the discretion of the committee chair) to consider the progress made and to identify concerns, changes to be made, or further research to be done. Once the committee members are substantially satisfied with the written work, the student, in consultation with the committee, schedules the oral defense of the dissertation. By university regulation, the defense is open to the public.

The final version of the dissertation must be approved by each member of the doctoral committee. Having successfully defended the dissertation in oral examination, the student is eligible to receive the Ph.D. degree. The final version of the dissertation is then filed with the university librarian via the office of Graduate Studies. Acceptance of the dissertation by the university librarian is the final step in completing all requirements for the Ph.D.

DEPARTMENTAL PH.D. TIME LIMITS POLICY

Pre-candidacy status, that is, the registered time before a student passes the qualifying examination and thereby advances to Ph.D. candidacy, may not exceed four years. Normative time for a Ph.D. in ethnic studies is six years. Normative time is defined as that period of time in which students under normal circumstances are expected to complete their doctoral program. To provide an incentive for students to complete the Ph.D. within normative time, students will only be eligible for departmental financial support for six years (eighteen quarters). By university policies, the doctoral dissertation must be submitted and defended within eight years. To meet this normative time limit, and to meet departmental requirements, students must complete the Qualifying Examination by the end of the fourth year. In the spring quarter each year, the Graduate Program Committee will assess the progress of each pre-candidacy student on the basis of evaluations submitted by three faculty members chosen by the student. The committee will establish that the student is in good standing, recommend additional course work, or recommend dismissal. The committee may wish to meet with some students in person to discuss the student’s evaluation and progress toward the degree.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

LOWER-DIVISION

1A. Introduction to Ethnic Studies: Population Histories of the United States (4)
This course examines the comparative historical demography of what is today the United States, focusing on the arrival, growth, distribution, and redistribution of immigrants from Asia, Europe, Africa, and Latin America.

1B. Introduction to Ethnic Studies: Immigration and the Transformation of American Life (4)
A history of immigration to the United States from colonial times to the present, with emphasis on the roles of ethnic and racial groups in economics, power relations between dominant and subordinate groups, and contemporary ethnic and racial consciousness.

1C. Introduction to Ethnic Studies: Race and Ethnic Relations in the United States (4)
This course examines the theoretical literature on race and ethnicity, focusing on issues of domination and subordination, and the historical emergence of racism and ethnic conflict. Attention is given to class and gender differences within racial and ethnic groups.

20. Introduction to Asian-American History (4)
This course introduces students to key issues in Asian-American lives, with emphasis on the global historical context of migration; changing ethnic and racial consciousness; economic, social, and political status; cultural production; and family and gender relations.

87. Freshman Seminar (1 to 4)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

97. Field Studies in Racial and Ethnic Communities (1 to 4)
Supervised community fieldwork on topics of importance to racial and ethnic communities in the San Diego County region. Regular individual meetings with faculty sponsor and final project and/or written report are required.

PREREQUISITES: lower-division standing, completion of at least thirty units of undergraduate study at UCSD, minimum 3.0 GPA at UCSD, consent of instructor, and completed and approved Special Studies Form.

98. Directed Group Studies (1 to 4)
 Directed group study on a topic; or in a field not included in the regular department curriculum by special arrangement with a faculty member. PREREQUISITES: lower-division standing, completion of at least thirty units of undergraduate study at UCSD, minimum 3.0 GPA at UCSD, consent of instructor, and completed and approved Special Studies Form.

99. Independent Study (1 to 4)
Directed study on a topic or in a field not included in the regular department curriculum by special arrangement with a faculty member. PREREQUISITES: lower-division standing, completion of at least thirty units of undergraduate study at UCSD, minimum 3.0 GPA at UCSD, consent of instructor, and completed and approved Special Studies Form.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor.

100. Theories and Methods in Ethnic Studies (4)
An introduction to research in ethnic studies with special emphasis on theories, concepts, and methods. Students will explore how racial and ethnic categories are shaped by gender, class, and regional experiences and will study ethnicity and race in comparative perspective.

101. Ethnic Images in Film (4)
An upper-division lecture course studying representations of ethnicity in the American cinema. Topics include ethnic images as narrative devices, the social implications of eth-
nic images, and the role of film in shaping and reflecting societal power relations.

103. Environmental Racism (4)
This course will examine the concept of environmental racism, the empirical evidence of its widespread existence, and the efforts by government, residents, workers, and activists to combat it. We will examine those forces that create environmental injustices in order to understand its causes as well as its consequences. Students are expected to learn and apply several concepts and social scientific theories to the course material.

104. Race, Space, and Segregation (4)
Through in-depth studies of housing segregation, urban renewal and displacement, neighborhood race effects, and the location of hazards and amenities, this course examines how space becomes racialized and how race becomes spatialized in the contemporary United States.

105. Ethnic Diversity and the City (4)
This course will examine the city as a crucible of ethnic identity, exploring both the racial and ethnic dimensions of urban life in the U.S. from the Civil War to the present. (Cross-listed with USP 104.)

107. Fieldwork in Racial and Ethnic Communities (4)
This is a research course examining social, economic, and political issues in ethnic and racial communities through a variety of research methods that may include interviews and archival, library, and historical research. (Cross-listed with USP 130.)

108. Race, Culture, and Social Change (4)
Aggrieved groups often generate distinctive forms of cultural expression by turning negative ascription into positive affirmation and by transforming segregation into congregate. This course examines the role of cultural expressions in struggles for social change by these communities inside and outside the U.S. (Cross-listed with MUS 151.)

109. Race and Social Movements (4)
This course explores collective mobilizations for resources, recognition, and power by members of aggrieved racialized groups, past and present. Emphasis will be placed on the conditions that generate collective movements, the strategies and ideologies that these movements have developed, and on the prospect for collective mobilization for change within aggrieved communities in the present and future.

110. Cultural World Views of Native Americans (4)
Using interdisciplinary methods, this course examines the cultural world views of various Native American societies in the United States through an exploration of written literary texts and other expressive cultural forms such as dance, art, song, religious and medicinal rituals.

111. Native American Literature (4)
This course analyzes Native American written and oral traditions. Students will read chronicles and commentaries on published texts, historic speeches, trickster narratives, oratorical and prophetic tribal epics, and will delve into the methodological problems posed by tribal literature in translation.

112A. History of Native Americans in the United States (4)
This course examines the history of Native Americans in the United States, with emphasis on the lifeways, mores, warfare, cultural adaptation, and relations with the European colonial powers and the emerging United States until 1870. (Cross-listed with HISS 108A.)

112B. History of Native Americans in the United States (II) (4)
This course examines the history of Native Americans in the United States, with emphasis on the lifeways, mores, warfare, cultural adaptation, and relations with the United States from 1870 to the present. (Cross-listed with HISS 108B.)

116. The United States-Mexico Border in Comparative Perspective (4)
This course critically explores the U.S.-Mexico frontier and the social-cultural issues on both sides of the international demarcation. Social-historical and political-economic patterns illuminate border life, ethnic identity, social di-

117. Organic Social Movements (4)
Examination of local responses to global change and social disruption through the examination of organic movements in indigenous and post-industrial analysis of the Kuna Indians of San Blas, Panama; Maya-Zapatistas of Chiapas, Mexico; and Micronesians of the western Pacific.

118. Contemporary Immigration Issues (4)
This course examines the diversity of today’s immigrants—their social origins and contexts of exit and their adaptation experiences and contexts of incorporation.

119. Race in the Americas (4)
This course explores the genesis, evolution, and contradictions of racially defined national issues in the Americas, from European conquest to the present: the social history of Native Americans, blacks, and Asians, their interactions with European settlers, and racial, sexual, and class divisions. PREREQUISITE: upper-division standing.

120. Race and Performance: The Politics of Popular Culture (4)
This course explores how racial categories and ideologies have been constructed through performance and displays of the body in the United States and other states. Racialized performances, whether self-displays or coerced displays, such as, and incorporate, cinema, music, dance, film, ethnography, and tourist performances are considered. PREREQUISITE: upper-division standing or consent of instructor.

121. Contemporary Asian-American History (4)
The course will study changes in Asian-American communities as a result of renewed immigration since 1965; the influx of refugees and the growing numbers of Asian-American immigrants, and the impact of Asian-American movements on Asian-Americans’ current economic, social, and political status.

122. Asian-American Culture and Identity (4)
A survey of Asian-American cultural expressions in literature, art, and music to understand the social experiences that have helped forge Asian-American identity. Topics: culture conflict, media presentations, migration pressures, the model minority myth, and interethnic and class relations.

123. Asian-American Politics (4)
This course will examine the development of Asian-American politics by studying the historical and contemporary factors, such as political and economic exclusion, that have contributed to the importance and complexity of ethnicity as a mobilizing force in politics. PREREQUISITE: upper-division standing or instructor approval.

124. Asian-American Literature (4)
Selected topics in the literature by and for women of Asian descent who live and work in the United States. May be repeated for credit when topics vary. (Cross-listed with LITN 181.)

125. Asian-American History (4)
Explore how Asian Americans were involved in the political, economic and cultural formation of United States society. Topics include migration; labor systems; gender, sexuality and social organization; racial ideologies and anti-Asian movements; and nationalism and debates over citizenship. (Cross-listed with MUS 124.)

126. Comparative Filipino and Vietnamese-American Identities and Communities (4)
This course compares the historical and contemporary social, political, and economic experiences of Filipinos and Vietnamese-Americans, paying particular attention to the impact of U.S. wars in the Philippines and in Vietnam on their respective lives. PREREQUISITE: upper-division standing.

127. Sexuality and Nation (4)
This course explores the nexus of sex, race, ethnicity, gender, and nation and considers their influence on identity, sexuality, migration, movement, and borders and other social, cultural, and political issues that these constructs affect. (Cross-listed with GGS 112.)

128. Hip Hop: The Politics of Culture (4)
Examination of hip hop’s technology, lyrics, and dance and its influences in graffiti, film, music video, fiction, advertising, gender, corporate investment, government, and censorship with a critical focus on race, gender, and popular culture and the politics of creative expression. (Cross-listed with MUS 152.)

129. Asian and Latina Immigrant Workers in the U.S. Economy (4)
This course will explore the social, political, and economic implications of global economic restructuring, immigration policies, and welfare reform on Asian and Latina immigrant women in the United States. We will critically examine these larger social forces from the perspectives of Latina and Asian immigrant women workers, incorporating theories of race, class, and gender to provide a careful reading of the experiences of immigrant women on the global assembly line. (Cross-listed with USP 135.)

130. Social and Economic History of the Southwest I (4)
This course examines the history of the Spanish and Mexican Borderlands (what became the U.S. Southwest) from roughly 1400 to the end of the U.S.-Mexican War in 1848, focusing specifically on the area’s social, cultural, and political development. (Cross-listed with HISS 158.)

131. Social and Economic History of the Southwest II (4)
This course examines the history of the American Southwest from 1846–48 to the present, focusing on immigration, racial and ethnic conflict, and the growth of Chicanos national identity. (Cross-listed with HISS 159.)

132. Chicano Dramatic Literature (4)
Focusing on the contemporary evolution of Chicano dramatic literature, the course will analyze playwrights and theatre groups that express the Chicanos experience in the United States, examining relevant actors, plays, and documentary for their contributions to the developing Chicano theatre movement. (Cross-listed with THHS 110.)

133. Hispanic-American Dramatic Literature (4)
This course examines the plays ofleading Cuban-American, Puerto Rican, and Chicano playwrights in an effort to understand the experiences of these Hispanic-American groups in the United States. (Cross-listed with THHS 111.)

134. Immigration and Ethnicity in Modern American Society (4)
Comparative study of immigration and ethnic-group formation in the United States from 1880 to the present. Topics include immigrant adaptation, competing theories about the experiences of different ethnic groups, and the persistence of ethnic attachments in modern American society. Requirements vary for undergraduate, M.A., and Ph.D. students. Graduate students may be required to submit a more substantial piece of work. (Cross-listed with HISS 180 and conjoined with HISS 280.) PREREQUISITES: upper-division standing and department stamp.

135A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960 (4)
Cross-disciplinary study of nineteenth- and early twentieth-century Latino/a-Chicano/a, folklore, music, testimonio, or other cultural practices. Specific periods covered will fall between the immediate aftermath of the Treaty of Guadalupe Hidalgo to the Cuban revolution. Repeatable for credit when topics vary. (Cross-listed with HTSP 150A.) PREREQUISITE: LTSP 50B or consent of instructor.

135B. Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present (4)
Cross-disciplinary study of late twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, film, or other cultural practices. Specific periods covered will fall between the Kennedy years to the era of neoliberalism and the creation of “Hispanic” or Latino/a identities. Repeatable for credit when topics vary. (Cross-listed with HTSP 150B.) PREREQUISITE: LTSP 50B or consent of instructor.

136. Topics in Chicano/a-Latino/a Cultures (4)
Cross-disciplinary study of late twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, film, or other cultural practices. Representative areas of study are social movements, revolution, globalization, gender and sexuality, cultures of the U.S.-Mexican border, and Chicano/a-Mexican/a literary relations. Repeatable
for a credit when topics vary. (Cross-listed with LTSP 151.)

PREREQUISITE: LTSP 50B or consent of instructor.

138. Chicano/a and Latino/a Poetry (4)
A study of themes and issues in the poetic production of Latino communities in the United States. Every effort will be made to select text in Spanish but some will be bilingual. Repeatable for credits when topics vary. (Cross-listed with LTSP 153.)

PREREQUISITE: LTSP 50B or consent of instructor.

140. Language and American Ethnicity (4)
This course examines the intersection of language and ethnicity in the United States, focusing on the social and political impact of bilingualism, ethnically-based English dialects, and standard and nonstandard English.

141. Language, Culture, and Inequality (4)
A critical reading of concepts of language and how they have been deployed in constructing images of culture, race, gender, sexuality, and class. Topics include cultural and linguistic relativism, structuralism, symbolic and cognitive approaches, ethnomethodology, sociolinguistics, ethnography of speaking, performance, and ethnopoetics.

142. Medicine, Race, and the Global Politics of Inequality (4)
Globalization fosters both the transmission of AIDS, cholera, tuberculosis, and other infectious diseases and gross inequalities in the resources available to prevent and cure them. This course will focus on how race, ethnicity, gender, sexuality, class, and nation both shape and are shaped by the social construction of health and disease worldwide.

144. Bilingual Communities in the U.S.A. (4)
This course compares the many ways of “doing being bilingual” that exist among communities of speakers of varied national origins, generations, networks, localities, races, classes, and genders. Of particular interest are the varied types of bilingual individual and linguistic repertoires that exist in communities of Native American, Chicanos/Latinos, and Asian origin, and the implications of shifting and hybrid linguistic identities for the drawing of community boundaries and the shaping of national language policy. Specific topics include factors that promote language loss or maintenance in families, the linguistic and cultural repercussions of code switching and word borrowing, bilingual education, linguistic profiling, and language ideologies.

145. Spanish Language in the United States (4)
A sociolinguistic study of the popular dialects in the United States and their relation to other Latin American dialects. The course will cover phonological and syntactic differences between the dialects as well as the influence of English on the Southwest dialects. (Cross-listed with LTSP 162.)

146A. Theatrical Ensemble (4)
An intensive theatre practicum designed to generate theatre created by an ensemble, with particular emphasis upon the analysis of text. Students will explore and analyze scripts and authors. Ensemble segments include black theatre, Chicano theatre, feminist theatre, commedia dell’arte theatre. (Cross-listed with TDAC 120.)

148. Latino/a and Chicano/a Literature (4)
This course will study the representation of a variety of social issues (immigration, racism, class differences, violence, inter/intra-ethnic relations, etc.) in works written in Spanish by Latino/a and Chicano/a writers. May be repeated for credit with different topics, texts, and historical periods vary. (Cross-listed with LTSP 154.)

PREREQUISITE: LTSP 50B or consent of instructor.

149. African American History in the Twentieth Century (4)
This course examines the transformation of African America across the expanse of the long twentieth century: imperialism, migration, urbanization, desegregation, and deindustrialization. Special emphasis will be placed on issues of culture, international relations, and urban politics.

151. Ethnic Politics in America (4)
This course will survey the political effects of immigration, ethnic mobilization, and community building in America, and the changing role of ethnicity in politics and intergroup relations.

152. Law and Civil Rights (4)
In this course students explore the relationship between race, class, and law as it applies to civil rights both in a historical and contemporary context. Topics will include the law, history of the Fourteenth Amendment, affirmative action, social desegregation, and educational affirmative action.

159. Topics in African American History (4)
A colloquium dealing with special topics in the history of people of African descent in the United States. Themes will vary from quarter to quarter. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students will be required to submit a more substantial piece of work. (Cross-listed with HIUS 183 and construed with HIUS 283.)

161. Black Politics and Protest Since 1941 (4)
Discussion of black social, political, and intellectual experiences since the publication of Richard Wright’s Native Son. Close examination of blacks’ involvement in and relationships to World War II, cold war, civil rights movement, black power movement, Reagan revolution, and underclass debate.

164. African Americans and the Mass Media (4)
Examination of the media representations of African Americans from slavery to the present focusing on emergence and transmission of enduring stereotypes; their relationship to changing social, political, and economic frameworks; and African Americans’ responses to and interpretations of these mediated images. (Cross-listed with MUS 153.)

165. Sex and Gender in African American Communities (4)
This course will investigate the changing constructions of sex, gender, and sexuality in African American communities defined by historical period, region, and class. Topics will include the sexual division of labor, myths of black sexuality, the rise of black feminism, black masculinity, and queer politics.

167. African-American History in War and Peace: 1917 to the Present (4)
The social, political, economic, and ideological pressures generated during the international conflicts of the twentieth century have had an enormous impact on American life. This course examines how the pressures of “total war” and “cold war” shaped the African-American experience in both war and peace time. (Cross-listed with HIUS 138)

168. Comparative Ethnic Literature (4)
A lecture-discussion course that juxtaposes the experience of two or more U.S. ethnic groups and examines their relationships. The students will analyze a variety of texts representing the history of ethnicity in this country. Topics will vary. (Cross-listed with LTN 178.)

170A. Origins of the Atlantic World, c. 1450–1650 (4)
An examination of interactions among the peoples of western Europe, Africa, and the Americas that transformed the Atlantic System. Topics will include maritime technology and the European Age of Discovery, colonization in the Americas, the beginnings of the transatlantic slave trade, and early development of plantation slavery in the New World. (Cross-listed with HIUS 133A.)

170B. Slavery and the Atlantic World (4)
The development of the Atlantic slave trade and the spread of racial slavery in the Americas before 1800. Explores the diversity of slave labor in the Americas and the different slave cultures African Americans produced under the constraints of slavery. (Cross-listed with HIUS 135B.)

172. Afro-American Prose (4)
Students will analyze and discuss the novel, the personal narrative, and other prose genres, with particular emphasis on the developing characters of Afro-American narrative and the cultural and social circumstances that influence their development. (Cross-listed with LTN 183.)

174. Themes in Afro-American Literature (4)
This course focuses on the influence of slavery upon African American writers. Our concern is not upon what slavery was but upon what it is within the works and what these texts reveal about themselves, their authors, and their audiences. (Cross-listed with LTN 185.)

175. Literature of the Harlem Renaissance (4)
The Harlem Renaissance (1917–39) focuses on the emergence of the “New Negro” and the impact of this concept on black culture, art, and music. Writers studied include Claude McKay, Zora N. Hurston, and Langston Hughes. Special emphasis on new themes and forms. (Cross-listed with LTEN 186.)

176. Black Music/Black Texts: Communication and Cultural Expression (4)
Explores role of music in traditional form of communication among Africans, Afro-Americans, and West Indians. Special attention given to poetry of black music, including blues and other forms of vocal music expressive of countercultural political attitudes. (Cross-listed with LTEN 187 and MUS 154.)

This course will examine the development of the blues from its roots in work-songs and the minstrel show to its flowering in the Mississippi Delta to the development of urban blues and the close relationship of the blues with jazz, rhythm and blues, and rock and roll. (Cross-listed with MUS 126.)

179A. Jazz Roots and Early Development (4)
This course will trace the early development of jazz and the diverse traditions which helped create this uniquely American art form. We will witness the emergence of Louis Armstrong in New Orleans and examine the composer’s role in jazz with Jelly Roll Morton and Duke Ellington. (Cross-listed with MUS 127A.)

179B. Jazz Since 1946: Freedom and Form (4)
This course will examine the evolution of jazz from 1943 to the present. The course will survey the contrasting and competing styles in jazz from bebop to cool to the avant garde and fusion. (Cross-listed with MUS 127B.)

COLLOQUIA

180. Topics in Mexican-American History (4)
This colloquium studies the racial representation of Mexican-Americans in the United States from the nineteenth century to the present, examining critically the theories and methods of the humanities and social sciences. (Cross-listed with HIUS 167.)

181. Topics in the Comparative History of Modern Slavery (4)
Slavery was both a thread of continuity in the history of the Americas and distinctive institution in the specific social settings. The purpose of this course is to examine and discuss readings that explore topics in the Caribbean and the U.S. Because topics will vary, the seminar may be taken more than once for credit, with permission of the instructor. Requirements vary for undergraduates, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. (Cross-listed with HIUS 164 and MUS 264.)

183. Gender, Race, Ethnicity, and Class (4)
Gender is often neglected in studies of ethnic/racial politics. This seminar explores the relationship of race, ethnicity, class, and gender by examining the participation of working class women in community politics and how they challenge mainstream political theory.

184. Black Intellectuals in the Twentieth Century (4)
Analysis of black cultural producers and producers of cultural production since 1895. Course will explore how race and race-consciousness have influenced the dialogue between ideas and social experience; and how other factors—i.e., age, gender, and class—affected scholars’ insights.

185. Discourse, Power, and Inequality (4)
While discourse analysis has transformed numerous disciplines, it has not transformed the way we think about inequality in general. This course engages both perspectives critically in analyzing law, medicine, and popular culture.

186. The Ethnic Press in the United States (4)
Readings and research on news media institutions established in ethnic communities since the nineteenth century. The course will trace the emergence, development, and
longevity of ethnic presses, their role in cultivating and maintaining ethnic identity, and their attempts to respond to and resist images in mainstream media.

187. Black Nationalism (4)
This course will investigate the ideologies and practices of black nationalist movements in the United States and/or across the black diaspora, focusing on their political philosophy, political culture, and gender and class structure.

188. African Americans, Religion, and the City (4)
This course details the history of African American migration to urban areas after World War I and World War II and explores the role of religion in their lives as well as the impact that their religious experiences had upon the cities in which they lived. (Cross-listed with USP 132.)

189. Special Topics in Ethnic Studies (4)
A reading and discussion course that explores special topics in ethnic studies. Themes will vary from quarter to quarter; therefore, course may be repeated three times as long as topics vary.

SEMINARS AND INDEPENDENT STUDIES

190. Research Methods: Studying Racial and Ethnic Communities (4)
The course offers students the basic research methods with which to study ethnic and racial communities. The various topics to be explored include human and physical geography, transportation, employment, economic structure, cultural values, housing, health, education, and intergroup relations. (Cross-listed with USP 129.)

191A. Undergraduate Research in Ethnic Studies (4)
This course is designed to help students conduct their own research rather than merely read the research of others. The course will introduce students to research paradigms in ethnic studies, familiarize them with finding aids and other library resources, and involve them in the design of research plans. PREREQUISITE: Instructor approval.

191B. Honors Research in Ethnic Studies (4)
This course is a continuation of Ethnic Studies 191. The course will involve students in the conduct of independent research under the supervision of a faculty advisor. Students who have completed ETHN 191 and a faculty research advisor may enroll in this course. During the quarter the research for the honors project will be completed under the faculty advisor’s supervision. Faculty advisors will meet weekly with their honors students to oversee the progress made in carrying out the plan of research. PREREQUISITE: completion of 191.

191C. Honors Research in Ethnic Studies (4)
This course is a continuation of Ethnic Studies 192. Students who have completed ETHN 192 and are continuing to work with a faculty research advisor may enroll in this course. The quality of the drafts and final honors paper will be evaluated under the faculty advisor’s supervision. The student will meet weekly with the faculty advisor in order to prepare drafts and the final version of the honors paper. PREREQUISITE: instructor approval.

197. Fieldwork in Racial and Ethnic Communities (4)
This course comprises supervised community fieldwork on topics of importance to racial and ethnic communities in the greater San Diego area. Regular individual meetings with faculty sponsor and written reports are required. (May be repeated for credit.)

198. Directed Group Studies (4)
Directed group study on a topic or in a field not included in the regular department curriculum by special arrangement with a faculty member. (May be repeated for credit.)

199. Supervised Independent Study and Research (4)
Individual research on a topic that leads to the writing of a major paper. (May be repeated for credit.)

GRADUATE

Introduction to critical racial and ethnic studies and how this perspective departs from traditional constructions of race and culture; examination of relevant studies to identify

themes, concepts, and formulations that indicate the critical departures that characterize the field. PREREQUISITE: graduate standing or consent of instructor.

200B. Formulations: Interdisciplinarity and Knowledge Production in Ethnic Studies (4)
This course uses model studies to explore how comparative and relational problems are posed as research projects, how research questions are constructed, and how they employ theory to frame the project and establish what is at stake in the research. PREREQUISITE: graduate standing or consent of instructor.

200C. Projects (ProSeminar): Research in Ethnic Studies (4)
Students examine research designs presented by faculty and advanced graduate students to study how to conceive of and pose research questions, integrate theoretical and methodological frameworks, and use knowledge to assess their own research project. PREREQUISITE: graduate standing or consent of instructor.

230. Departmental Colloquium (1)
This course is a forum for the presentation of recent research by guests, faculty, and students. This course may be taken for credit six times.

240. Historical Methods and Archives (4)
This course seeks to develop research skills in historical methods; to understand techniques and tools historians use to create historical narratives using archival and historiographic sources; and to compare and relate the value of these to ethnic studies research.

241. Cultural Studies and Cultural Production (4)
This course will train students in approaches to interdisciplinary research concerned with the impact of modern knowledge, with a focus on conducting multimedia field research, applying discourse analysis, and recognizing forms of data across disciplinary divides.

241A. Community Ethnography I: Method and Theory (4)
This course reviews the major tenets of ethnography using case studies of ethnographic work and critical theory pertaining to epistemological concerns in the social sciences. Critical here are the major ethical parameters of conducting ethnography in ethnic communities, the role of researchers, and the practical implications of such research.

241B. Community Ethnography II: Practicum (4)
This course focuses on the practical application of ethnographic concepts and methods in actual field research in a local San Diego community. The purpose here is to provide experience in conducting ethnography through participant observation, interviews, and contributing to communities. This will include a brief overview of ethnographic methods, but will focus on hands-on research, analysis, and ethnographic writing.

242. Qualitative Methods/Ethnography (4)
This course focuses on conceptual and methodological frameworks of ethnography and qualitative inquiry, including research design, grounded theory, the field note journal, participant observation, and interviewing; major themes include the role of indigenous/insider researchers, ethics of involvement, and community collaboration.

253. Mass Media and Ethnic Identity (4)
This course examines the ways that ethnic identity influences the practices of mass media, and the ways in which mass media shape and reflect ethnic identity.

254. Race and Racism (4)
This course examines inequality based on race with a focus on the institutions, symbols, and social practices which structure and maintain racism. Particular attention is given to laws and social policy that reinforce racial inequality.

256. Gender, Sexuality, and Race (4)
This course studies the body cross-culturally as the site for the construction of gender, sex, ethnic, and racial identities. PREREQUISITE: graduate standing or consent of instructor.

257A-B. Social Theory (4-4)
An intensive survey of social and cultural theory, focusing on how constructions of science, language, politics, and social inequality shaped early modernity, romantic nationalism, Marxism, cultural relativism, psychoanalysis, and fin de siècle social thought. The second quarter surveys poststructuralist, postmodern, feminist, subaltern studies, globalization, and other critiques. ETHN 257A is not a prerequisite for ETHN 257B.

259. Comparative Conquests, Colonization, and Resistance in the Americas (4)
This course will offer a comparative survey of the impact of European interactions with native nations and populations in the New World, from Peru to Canada. Readings will emphasize modes of initial interaction, patterns of European colonization, and Native adaptation and resistance, and broader changes in Native culture and cosmology as a result of conquest and colonization.

260. Transnationalism and Borderlands: The Local and Global (4)
This course critically reviews the analytical frameworks of transnationalism and borderzones, and how they illuminate traditional and current social science practice on immigration, identity, and community studies, and to understand how diverse peoples engage and participate in global processes.

261. Race and Law (4)
This seminar advances a critique of laws’ innocence—of its clauses for universality. The reading of legal and scientific texts will indicate how, by incorporating existing constructions of the meanings of race, the law produces racialized modern subjects.

262. Race, Inequality, and Health (4)
New critical and multidisciplinary perspectives provide tools for examining entrenched and newly emerging diseases and inequalities. This course examines medicine and public health in relationship to race, gender, sexuality, class, and nation and explores how these connections affect the distribution of health and health services locally, nationally, and internationally.

263. Language and Socialization across Cultures (4)
This course will focus on the ways in which children in different ethnic and racial groups are socialized to language and through language. We will explore racial and class and gender ideologies that underpin the ways parents and other adults expect children to learn to speak; examine effective and appropriate methods for studying cultural patterns and understanding ideologies; and consider implications of bioculturalism, stigmatized dialects, immigration, religious training, and home-school conflicts in ways of speaking and using language(s). PREREQUISITE: graduate standing or consent of instructor.

264. War, Race, and Violence (4)
This course critically examines theories and research on war, race, and violence, including everyday forms of state violence, war and the making of empire, the politics of war memory, and war refugees. PREREQUISITE: graduate standing or consent of instructor.

265. Critical Immigration and Refugee Studies (4)
This course surveys the field of international refugee studies and introduces students to recent theories and cutting-edge research in the field. Key topics: gender and migration; diaspora and transnationalism; immigration, race, and citizenship; and globalization and immigrant labor. PREREQUISITE: graduate standing or consent of instructor.

289. Topics in Ethnic Studies Research (4)
This course is a research seminar on themes of contemporary and historic importance in ethnic studies. Themes will be determined by instructor. Course may be repeated three times for credit.

290A-B. Master’s Thesis Preparation (4-4)
All graduate students are required to write a master’s thesis as part of the requirements for the Master of Arts in ethnic studies. Students should enroll in the thesis preparation courses in the fall and spring quarters of the second year of graduate studies.

298. Directed Reading (1-12)
This is an independent research or individual guided tutorial in an area not covered by current course offerings. This course must be repeated for an indefinite number of times due to the independent nature of the content of the course.

THE EUROPEAN STUDIES MINOR

The European Studies minor is for students with strong European interests or who plan to study in Europe on an Education Abroad Program (EAP) or Opportunities Abroad Program (OAP) but also those who seek to complement their major with the study of Europe as a political, cultural, and economic entity. To receive a minor in European Studies, a student must complete seven four-unit courses (twenty-eight units).

(A) Language requirement

All minors must demonstrate basic proficiency in a single European language other than English by completing four quarters of language instruction (or equivalent). Students may also complete this requirement by demonstrating advanced language ability on a proficiency exam. Students completing the language requirement through waiver (700 or better on SAT II language, score of 4 or better on AP language), or proficiency exam will fulfill the language component of the minor by completing one of these requirements but no course credit will be applied toward the (seven) courses required for the minor.

Up to TWO four-unit courses in foreign language can be included in the seven courses required for the minor. These may be lower-division courses.

(B) Additional course requirements

1. The remaining five to seven courses (depending on the number of language courses applied to the minor) must include at least three courses on Europe as a whole including one course in each of the two broad tracks.
   a. Economics and Politics
   b. Culture and Society
   (See course listings for each track.)

2. At least one of the track courses should be in the Department of History.

3. No more than three courses in any one department.

4. All courses applied to the minor must receive a letter grade of C– or better.

5. Upper-division courses may include up to two 198 and 199 courses and up to three courses from UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP) with the approval of the minor advisor.

6. Minors in European Studies are encouraged to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP). Students should consult with the faculty director before going abroad to determine which courses will be approved for minor credit.

**TDPW 104. Screenwriting (4)**

The Freshman Seminar Program debuted in 2003–04 to offer students early intellectual contact with faculty members, spark their interest in a broad range of topics, and enrich the undergraduate experience at UC San Diego. These seminars create a unique classroom environment by providing new students with opportunities to engage in intellectual discussions with faculty and peers in a small supportive class setting, and by fostering the development of critical thinking and analytical skills. Incoming students are highly encouraged to enroll in freshman seminars during their first year at UCSD. Students can select from an interesting and exciting array of seminars each quarter, designated by courses numbered 87 (e.g., PHYS 87).

Faculty from all departments offer approximately 150 seminars each academic year. Seminars offer one unit of credit and are graded Pass/Not Pass. Enrollment is limited to twenty students per seminar, with preference given to entering freshmen, and up to four seminars may be taken for credit. Please visit the Freshman Seminar Program Web site at http://ugseminars.ucsd.edu for a description of seminars currently offered. This site also contains useful information, such as enrollment procedures for freshmen with advanced standing, and additional program details. Questions about a specific freshman seminar should be directed to the department offering the seminar.

PROGRAM DESCRIPTION
German Studies is an interdisciplinary program that offers both a major and a minor for students with broad academic interests in the German-speaking world.

In consultation with a faculty advisor in the program, students design individual plans of study from the many core courses offered in the Departments of History, Literature, Music, Philosophy, Political Science, Sociology, and Theatre and Dance. Further courses, including some offered by other departments, may be incorporated into the student’s program if they bear directly on German studies. Students considering a major or minor should consult a member of the German Studies faculty as early as possible.

Students need to attain competence in German (two years of university-level language courses or the equivalent) before they can take certain required upper-division courses. It is recommended that students attain this level of competence early in the program.

STUDY ABROAD
All German Studies students are strongly encouraged to make overseas study an integral part of their program. The UC Education Abroad Program (EAP) conducts formal programs of study in Berlin, Göttingen, and Bayreuth ranging from one-quarter, intensive beginning language programs to a full year of study at a German university. Students may petition to use up to five courses completed while studying abroad in their major, and three in their minor.

SENIOR HONORS THESIS
At the beginning of his or her senior year, a student major in German Studies may elect to write a Senior Honor’s Thesis. To be eligible, the student must have a GPA of 3.5 in the German Studies major at the beginning of the senior year.

To begin work, the student forms a committee of three appropriate faculty members, including a committee chair, who is chosen from among the German Studies Core Faculty. The chair supervises the student in a two-quarter program of independent study to research and write an Honor’s Thesis of approximately thirty to fifty pages (GMST 196A/B; the two courses count among the required twelve for the major). The student defends the thesis in a one-hour oral exam with the full committee, which is charged with recommending the degree of honors that will appear on the student’s transcript and diploma.

THE MAJOR
The major in German Studies requires twelve upper-division courses chosen from the core course list, and includes

- German Studies I and II (LTGM 100 and 101)
- three courses in German Literature
two courses in History
-five additional core courses, taken in at least two different departments. At least two of these courses must be taken outside the literature department.

Students plan their major in consultation with their German Studies faculty advisor, and submit it to the program director for approval.

THE MINOR
The minor in German Studies consists of seven courses, at least five of which must be upper-division, including

- German Studies I or II (LTGM 100 or 101)
- At least six additional core courses, taken in at least two departments.

Students plan their minor in consultation with their German Studies faculty advisor, and submit it to the program director for approval.

CORE COURSES
Courses marked with an asterisk (*) frequently cover topics bearing on German Studies. Students should check the departments’ quarterly course descriptions and yearly course spreads for their applicability to the program, and discuss them in advance with their German Studies advisor.

Michael Willoughby, Ph.D., Lecturer, Economics

PROGRAM DESCRIPTION
The Master of Advanced Studies (MAS) in the Leadership of Healthcare Organizations provides depth and focus on management for health care professionals with an emphasis on clinical process improvement. The goal of the program is to prepare health care professionals to participate more effectively in the business decisions that affect the quality of patient care by teaching participants to deal with error prevention, process quality, and systems of care. Students gain the advanced knowledge and skills that are essential to manage escalating challenges in the competitive business environment of health care. The MAS program crosses many fields and clinical and administrative professions in the health industry, including medicine, nursing, mental health, dentistry, insurance, pharmacy, and other related areas. The program is appropriate for nurses, managers, physicians, allied health professionals, health care executives, and medical students as they assume more active roles in health care leadership and on management teams.

The MAS in the Leadership of Healthcare Organizations is a part-time, self-supporting degree program with a flexible course schedule designed for working professionals. It is the first graduate degree of its kind within the University of California system. The UC San Diego graduate division confers the MAS degree and the Department of Family and Preventive Medicine in the UCSD School of Medicine is responsible for the academic management of the curriculum. UCSD Extension administers the program and provides student advising and career counseling services.

ADMISSION
New students are admitted in the fall, winter, and spring quarter of each academic year. Prospective candidates should submit and complete the official UCSD online graduate application for admission, the application fee, one set of official transcripts from each institution attended after high school, three letters of professional recommendation, and a current résumé or c.v. The GRE/GMAT is not required; however, it is strongly recommended that candidates have a minimum of five years of professional experience in health care. International applicants must submit official scores from the Test of English as a Foreign Language (TOEFL). The application deadlines are July 15 (fall), October 15 (winter), and January 15 (spring).

PROGRAM OF STUDY
The part-time degree program is designed to be completed in one, two, or three years, depending upon a participant’s time to devote to the program. Classes are typically scheduled in the late afternoons, evenings, or weekends to meet the demands of working professionals. Students are required to complete forty-two units of required courses.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

CURRICULUM
LHCO 201A-B. Topics in Healthcare Management and Innovation (2-2)
Weekly discussions with healthcare entrepreneurs and managers will expose students to real-life experiences. How are solutions to healthcare delivery identified and implemented? How are solutions brought to the marketplace?

LHCO 202. Organizational Dynamics and Change Management (4)
This course examines principles and applications of management and organization theory as applied to healthcare organizations. It covers methods for assessing key features of organizational environments and internal structures and identifying, developing, and implementing strategies for improved performance.

LHCO 203. Using and Managing Information and Information Technologies (4)
Designed to familiarize health administrators and professionals with the principles of information systems design and management for health care. Provides an understanding of current trends in information technologies for health care and management issues unique to it. Includes hands-on computer lab.

LHCO 204. Managing People and Teams (2)
This course studies key management concepts and roles of management and how they apply in successful, dynamic organizations. It also examines competencies of effective managers in developing customer focus, planning, selecting, and developing individuals and teams, communicating, managing resources, using technology and being adaptable.

LHCO 205. Modern Health Care Organizations (4)
Describes and analyzes the dynamics responsible for the change in health care delivery and effects on development of modern health care organizations. Describes actions taken by employers, insurers, consumers, and government, analyzing the effects on physicians and provider organizations. Note: It is recommended that students take this course in their first winter quarter in the program.

LHCO 206. Topics in Financial Management and Decision Making (2)
This course presents real-life applications in health care provider organizations of financial management and decision-making. Topics include budgeting, uses of financial reports, development of long-range financial forecasts, benchmarking, business plan development, and actuarial analysis in projecting health care delivery costs.

LHCO 207. Health Law and Medical Liability (4)
This course provides an introduction to the relationship of law to health care, including liability, government regulation, financial and ethical issues, contracting and negotiation and dispute resolution.

LHCO 209. Patient Outcomes and Quality of Care (4)
This course provides a critical overview of the tools used to measure outcomes and quality of care, development and use of practical guidelines, advantages and disadvantages of various methods, and the use of such analysis in administrative decision-making.

LHCO 211. Healthcare Leadership and Political Advocacy (2)
Within the context of healthcare advocacy, the course examines the organizational and individual issues that impact success in promoting and advocating for a healthcare agenda. The course aims to provide clarity to that process and assist students with understanding how to navigate the political landscape. Students learn about the legislative process, lobbying, the impact of political campaigns, the involvement of the media, and how healthcare economics impact politics.

LHCO 212. Statistics and Applied Decision Making (2)
Students will learn statistical methods and their most common applications in healthcare management. Topics covered include data presentation, sampling, the development and use of confidence intervals, hypothesis testing, analysis of variance and simple regression. We will also explore elementary probability theory and decision making under uncertainty. Students who have taken LHCO 208 may not receive credit for LHCO 212. PREREQUISITE: admission to MAS in LHCO or consent of department.

LHCO 213. Financial Accounting and Analysis (2)
Students will learn the use of financial information within a healthcare organization. Topics covered will include capital structure, working capital, and cash management, the time value of money, and capital budgeting. Students who have taken LHCO 208 may not receive credit for LHCO 213. PREREQUISITES: admission to the MAS in the Leadership of Healthcare Organizations Program or consent of department.

LHCO 214. Practical Business Communication Skills for Healthcare Professionals (2)
This course focuses on developing effective business communication skills for professionals in managerial/senior roles in healthcare. Writing scenarios include: preparing briefings and reports; constructing proposals and reports; solicitation; coordinating projects via email; and drafting and editing group documents. On-the-job examples from the student’s workplace are used throughout the course. PREREQUISITE: admission to the MAS in
Health Care–Social Issues

OFFICE: Interdisciplinary Programs, EBU 38 Computer Science and Engineering Building Room 1108, Warren College http://warren.ucsd.edu/health

Health Care–Social Issues is an interdisciplinary minor designed to enhance students' competence in analyzing complex social and ethical implications and ramifications of health-care issues, policies, and delivery systems. Students gain an understanding of how the economy, culture, technology, and sociological and psychological processes influence modern health care. Although it is administered by Warren College, it is available to all UC San Diego undergraduate students with a general interest in health care as well as to students considering health-care careers. This minor offers students the opportunity to examine health-care related issues from the perspectives of a wide range of disciplines, including anthropology, biology, cognitive science, contemporary issues, economics, ethnic studies, philosophy, psychology, science and technology, sociology, and urban studies. By bringing together course work from these academic departments, this interdisciplinary curriculum offers a breadth of intellectual experience that enhances students' experience, career clarification, and an opportunity to apply theories learned in course work.

Further information on the program is available at the Warren College Interdisciplinary Programs Office.

HEALTH CARE–SOCIAL ISSUES

MINOR REQUIREMENTS

The minor consists of three required courses and four elective courses. At least five courses must be taken at the upper-division level. Upper-division courses must not overlap with courses in the student's major. No more than three courses may be taken in any one discipline. For full descriptions of the following courses, please see departmental listings.

Required Courses

Sociology/L 40—Sociology of Health Care Issues
Philosophy 163—Biomedical Ethics

One course in Urban Studies and Planning chosen from the following:

143—The U.S. Health Care System
144—Environmental and Preventive Health Issues
145—Aging: Social and Health Policy Issues
147—Case Studies in Health Care Programs/Poor and Underserved Population

(Additional Urban Studies and Planning courses may be taken to fulfill elective requirements in the minor.)

Elective Course Options

Anthropology

ANTH 2—Human Origins
ANBI 101—Special Topics in Biological Anthropology (topic approval required)
ANBI 141—The Evolution of Human Diet
ANSC 100—Special Topics in Socio-Cultural Anthropology (topic approval required)
ANSC 164—The Anthropology of Medicine

Biology

BILD 36—AIDS, Science, and Society
BICD 136—AIDS, Science, and Society

Cognitive Science

174—Drugs: Brain, Mind, and Culture

Contemporary Issues

22—Human Sexuality
40—The AIDS Epidemic
136—The Anthropology of Medicine

Economics

140—Economics of Health Producers

Ethnic Studies

142—Medicine, Race, and the Global Politics of Inequality

History

HISC 115—History of Modern Medicine
HISC 116—History of Bioethics
HISC 174—History of Localization of Brain Function

Philosophy

147—Philosophy of Biology
148—Philosophy and the Environment
151—Philosophy of Neuroscience
162—Contemporary Moral Issues
164—Technology and Human Values

Psychology

2—General Psychology: Biological Foundations
60—Introduction to Statistics
104—Introduction to Social Psychology
124—Introduction to Clinical Psychology
132—Hormones and Behavior
134—Eating Disorders
153—Clinical Psychology
154—Behavior Modification
155—Social Psychology and Medicine
163—Abnormal Psychology
168—Psychological Disorders of Childhood
169—Brain Damage and Mental Function
172—Psychology of Human Sexuality
179—Drugs, Addiction, and Mental Disorders
181—Drugs and Behavior
188—Impulse Control Disorders

Science, Technology, and Public Affairs

181—Elements of International Medicine

Sociology

Soc/L 60—The Practice of Social Research
Soc/B 120—Special Topics in Culture, Language, and Social Interaction (topic approval required)
Soc/B 143—Suicide
Soc/C 134A—The Making of Modern Medicine
Soc/C 134B—Medicine in the Twentieth Century
Soc/C 135—Medical Sociology
Soc/C 136A—Sociology of Mental Illness: Historical Approach
Soc/C 136B—Sociology of Mental Illness in Contemporary Society
Soc/C 137—Knowledge and Practice in Biomedicine
Soc/C 138—Genetics and Society
Soc/C 159—Special Topics in Social Organizations and Institutions (topic approval required)

Urban Studies and Planning

143—The U.S. Health Care System
144—Environmental and Preventive Health Issues
145—Aging: Social and Health Policy Issues
147—Case Studies in Health Care Programs/Poor and Underserved Population

Students may petition to substitute courses in the minor that have substantial content related to health care and society. Petitions should be submitted to the Warren College Interdisciplinary Programs Office.

RECOMMENDED INTERNSHIP EXPERIENCE

A health-care related internship (AIP 197) is recommended and should be arranged at least one quarter in advance through the Academic Internship Program, Literature Building, Second Floor. Clinical and research placements are available. For each four units of credit, ten hours per week for one quarter plus a ten-page research paper are required.

**ASSOCIATED FACULTY**

Susan A. Channick, J.D., Professor of Law, California Western School of Law
Edward Dauer, J.D., Visiting Professor of Law, California Western School of Law, Dean Emeritus, Sturm College of Law at the University of Denver
Leonard J. Deftos, M.D., J.D. LL.M., Professor of Medicine, UCSD School of Medicine; Physician, VA San Diego Healthcare System; Adjunct Professor of Law, California Western School of Law
Richard Kronick, Ph.D., Professor and Chief, Division of Health Care Sciences, Department of Family and Preventive Medicine, UCSD School of Medicine
Bryan Liang, M.D., Ph.D., J.D., E. Donald Shapiro Distinguished Professor of Law, Executive Director of the Institute of Health Law Studies, California Western School of Law; Associate Professor of Anesthesiology, UCSD School of Medicine
Loki Natarajan, Associate Adjunct Professor, Biostatistics, UCSD School of Medicine
Rema Raman, Ph.D., Assistant Adjunct Professor, Biostatistics, UCSD School of Medicine
Michael Willoughby, Ph.D., C.F.A., Lecturer, Department of Economics, UCSD
Deborah L. Wingard, Ph.D., Professor, Department of Family and Preventive Medicine, Division of Epidemiology, UCSD School of Medicine

**PROGRAM DESCRIPTION**

The Master of Advanced Studies (M.A.S.) in Health Law is a joint-degree offering from UC San Diego and California Western School of Law. The program was developed in response to the increasing need to equip professionals from the health care and legal disciplines with a more complete understanding of the best scientific, ethical, regulatory, and management practices. As medical decisions grow more complicated and far-reaching, the intersection of legal and medical/health care practices will be one of the most critical focal points of society for decades to come. Managed care, advances in medical treatment and biotechnology, issues of access, and bioethics all absorb the attention of our regulatory, legislative, and judicial systems. Health care and legal professionals will need to have the specialized skills and training to be effective and influential in this complex environment.

LHay by select faculty from the School of Medicine at the University of California, San Diego and California Western School of Law, the rigorous and timely graduate-level curriculum is designed to orient professionals to the common activities, philosophy of practice, and challenges of the companion discipline in health care or law. The program focuses on acculturating practitioners in both fields to become leaders in providing integrated, sensitive solutions to everyday practice and policy issues.

**ADMISSION**

New students are admitted in the fall quarter of each academic year. Prospective candidates should submit an official UCSD on-line graduate application for admission, the application fee, one set of official transcripts from each institution attended after high school, three letters of professional letters of recommendation, and a current résumé or c.v. The GRE/GMAT is not required; however, it is strongly recommended that candidates possess, or currently be pursuing, a graduate degree in a scientific or health care related field and also have some level of experience in scientific or clinical research. In some instances candidates without an advanced degree may be admitted to the joint-degree program if they have demonstrated substantial professional experience in the field at increasing levels of responsibility. The application deadline is April 2.

**PROGRAM OF STUDY**

The part-time master's degree program is designed to be completed in eighteen months to two-or three-years, depending upon a participant’s time to devote to the program. Responsibility for course offerings is shared between UCSD School of Medicine and California Western School of Law and students will be expected to enroll in courses at both institutions. Classes are typically held in the late afternoons or evenings, to allow flexibility for participants’ home and work life. The forty-five-unit degree comprises fifteen units of required courses, twelve units of core courses, twelve units of general electives, and six units of a capstone project.

**COURSES**

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

**REQUIRED COURSES (FROM UCSD)**

HLAW 201. Introduction to Medical/Health Care Practice (3)

This overview for the non-medical professional examines the environment in which the medical practitioner must manage the patient relationship and deal with legal concerns. Topics include patient safety and privacy, medical technology and research, pharmaceuticals, and economics. Cases are used. **PREREQUISITE:** M.A.S. health law student or consent of instructor.

HLAW 207A. Principles in Health Law and Policy A (6)

This course presents a comprehensive view of modern issues at the intersection of healthcare and law, with an emphasis on improving understanding and synergy between the professions. The course stresses foundational understanding of how health law and policy is formulated and the application of health law and policy in current practice. A portion of the class is devoted to group work where students select and study issues in depth to build a framework for resolving enduring challenges in the field. A variety of timely topics on the health law system and procedures/processes, such as Medicare and Medicaid coverage, are introduced to reinforce understanding. Students who have taken HLAW 202–C, HLAW 203A–C, or HLAW 204A–C may not receive credit for HLAW 207A. **PREREQUISITE:** M.A.S. health law student or consent of department.

HLAW 207B. Principles in Health Law and Policy B (6)

This course presents a comprehensive view of modern issues at the intersection of healthcare and law, with an emphasis on improving understanding and synergy between the professions. The course stresses foundational understanding of how health law and policy is formulated and the application of health law and policy in current practice. A portion of the class is devoted to group work where students select and study issues in depth to build a framework for resolving enduring challenges in the field. A variety of timely topics on the health law system and procedures/processes, such as Medicare and Medicaid coverage, are introduced to reinforce understanding. Students who have taken HLAW 202–C, HLAW 203A–C, or HLAW 204A–C may not receive credit for HLAW 207B. **PREREQUISITE:** HLAW207A, M.A.S. health law student, or consent of department.

HLAW 296. Capstone Project (6)

The Capstone Project (CP) is the cornerstone of the M.A.S. Program. Students will be involved in a high-level applied research project that integrates what they have learned in an area related to or more of the topics covered in the formal curriculum. Students’ work will be evaluated by a committee of faculty and may also include industry advisors when appropriate. **PREREQUISITE:** M.A.S. health law student or consent of instructor.

**PRESCRIBED ELECTIVES (FROM UCSD)**

HLAW 205A. Bioethics Seminar—Clinical Focus A (2)

This seminar examines bioethical concerns and considerations from a clinical perspective. Using medical literature and case law, topics such as bioethics principles, informed consent, technology and reproduction, surrogacy, fetal rights, and the right to die are presented and discussed. **PREREQUISITE:** M.A.S. health law student or consent of instructor.

HLAW 205B. Bioethics Seminar—Clinical Focus B (2)

The seminar broadens the focus on the patient/patient relationship and medical ethical issues in healthcare policy at the national and global levels. Topics include allocation of scarce medical resources; compulsory public health measures; clinical research in the developing world; and cross-cultural medical practice. **PREREQUISITE:** M.A.S. health law student or consent of instructor.

LHCO 205. Modern Health Care Organizations (4)

Describes and analyzes the dynamics responsible for the change in health care delivery and the effects on development of modern health care organizations. Describes actions taken by employers, insurers, consumers, and government, and analyzes the effects on physicians and provider organizations. **PREREQUISITE:** M.A.S. health law student or consent of instructor.

LHCO 206. Topics in Financial Management/Decision-Making in Health Care (2)

Prepares for real-life applications in health care provider organizations of financial management and decision-making. Topics include budgeting, uses of financial reports, development of long-range forecasts, benchmarking, business plan development, and actuarial analysis in projecting health care delivery costs. **PREREQUISITE:** M.A.S. health law student or consent of instructor.

HEALTH LAW 339
LHCO 213. Financial Accounting and Analysis (2)
Students will learn the use of financial information within a healthcare organization. Topics covered will include capital structure, working capital and cash management, the time value of money, and capital budgeting. Students who have taken LHCO 208 may not receive credit for LHCO 213. **Prerequisite:** admission to the M.A.S. in the leadership of healthcare organizations program or consent of department.

HLAW 208. Influencing Public Policy (2)
Students will learn the basic policy framework in the U.S. (i.e., the “legal process”) and points at which this framework can be influenced to formulate public policy in healthcare. **Prerequisite:** M.A.S. health law student or consent of department.

**GENERAL ELECTIVES**
Varies. Refer to list of elective courses from UCSD and California Western School of Law.

**The Undergraduate Program**

"Whereas other subjects may make us smarter for next time," said the great historian of the Renaissance, Jakob Burckhardt, "the study of history makes us wiser forever." This major is, moreover, an excellent preparation for a number of rewarding careers in university and college teaching and research, law, government, diplomacy, international business, education, and even medicine. At the crossroads of the humanities, the arts, and the social sciences, history is the study of human experience as it has unfolded over the ages. As an academic discipline it presents a unique gateway both to the richness of our cultural heritage and to the immense variety of world civilizations.

Students wishing to declare a major in history should first consult with an academic advisor. After determining the likely field of emphasis, the student should select an appropriate faculty advisor from among the department's faculty members, and consult with the faculty advisor at least once each quarter. Any difficulties in the advising procedure or in registration formalities should be reported to the Director of Undergraduate Studies.

The fields of emphasis are as follows: Africa (HIAF), East Asia (HIAE), Europe (HIEU), Near East (HINE), Latin America (HILA); History of Science (HISC), United States (HISU); as well as the following three thematic fields: Gender and Sexuality; Race, Ethnicity, and Migration; and War, Revolution, and Social Change. A list of courses approved for the thematic fields is available in the department office or on its Web site, http://history.ucsd.edu.

The department also administers the following special research and instructional units: Chinese Studies; Judaic Studies; and the Committee on Area and Ethnic Studies and Research (CAESAR), which includes Classical Studies, European Studies, German Studies, Italian Studies, Japanese Studies, Middle East Studies, Russian and Soviet Studies.

The department is fortunate in having the research and professional activities of its faculty supported by the Laura and John Galbraith Faculty Development Fund.

Basic requirements for the major are as follows:
1. Three lower-division courses in history.
2. Twelve four-unit upper-division courses, distributed as follows:
   a. Seven courses in the field of emphasis. (In certain cases, with approval of the academic advisor, two of these courses may be in a neighboring discipline.)
   b. Five courses in other fields within the department.
   c. Three of the twelve courses must focus on the period before 1800. These courses are indicated by the symbol (+).
   d. At least one of the twelve courses must be a colloquium in which students write a substantial term paper. Colloquia are courses with numbers between 160 and 190, or others approved by the undergraduate advisor. Note: The colloquium need not be in the major field of emphasis.

Lower-division courses may be selected from the following:
HILD 2 A-B-C. United States History
HILD 7 A-B-C. Race and Ethnicity in the U.S.A.
HILD 10-11-12. East Asia

Students may also satisfy the lower-division requirement for the major by completing the Revelle College Humanities Sequence or the Eleanor Roosevelt College Sequence "Making of the Modern World." Students entering with AP credit in history may waive part of the lower-division requirement. Transfer students may consult with the Director of Undergraduate Studies and petition to substitute courses from another school for required lower-division courses.

Students majoring in history will normally take at least eight of their twelve upper-division history courses at UCSD. Exceptions may be made for
The department offers a special program for outstanding students. The Honors Program is especially recommended for those students interested in pursuing graduate study in history or allied fields. It is also a particularly effective preparation for professional careers. Candidates for History Honors are chosen during the spring quarter from among juniors in history who have taken at least four upper-division courses in the department. Juniors with a 3.5 GPA in history (3.0 overall) are eligible to apply. Admission to the program is based on the student’s academic work. Interested candidates should complete the application form (available in the Department of History office) by the second Friday of May.

In addition to regular course work in the department, the Honors Program consists of a colloquium in historiography offered in the fall quarter of the senior year and a program of independent study leading to the completion of an honors essay on a topic of the student’s choice. During the fall quarter of the senior year, candidates select a topic and begin preliminary work on the Honors essay in consultation with a major field advisor (HITO 194). During the winter quarter the student pursues a course of independent study devoted to the completion of the Honors essay (HITO 195). The award of History Honors is based on satisfactory completion of the colloquium in history and the Honors essay. Students are expected to maintain an average of 3.5 or better in all work taken within the department. Honors candidates must include at least three colloquia in their regular course work.

Candidates for history honors should organize their upper-division course work as follows:
1. Six quarter-courses in one of the major fields offered by the department.
2. Three quarter-courses in a field other than the primary one.
3. Three of these nine quarter-courses must be colloquia.
4. HITO 196. Colloquium in History.

ADMISSIONS

Admission is based on the applicant’s undergraduate preparation; previous graduate work, if any; three letters of recommendation; one or two papers (preferably written for history courses); and scores from the Graduate Record Examination (GRE). The GRE subject exam in history is not required. The Test of English as a Foreign Language (TOEFL) is required for foreign applicants. A minimum score of 550 for the paper-based test, a score of 213 for the computer-based test, or a score of 80 on the Internet-based test is required on the TOEFL. The minimum grade-point average for admission is 3.0 with a higher average in history and related subjects. Refer to the online application for filing deadline.

For online application visit: http://www.orgs.ucsd.edu/General Requirements

The master’s program can be completed in one year of full-time study or two years of half-time study, and includes nine four-unit courses (thirty-six units) in a major field. Required courses vary for each major field (see below), but all courses must be taken for a letter grade. With very few exceptions, students are expected to begin their programs in the fall quarter. In addition to the course requirements, completion of the M.A. degree requires that students pass a one-hour oral examination at the end of their final quarter of enrollment.

Language requirement: While proficiency in a foreign language is only required in European history (see below), prospective applicants are strongly urged to begin study of a foreign language appropriate to the proposed area of concentration as early as possible in their academic career.

Area of Concentration: Judaic Studies

Judaic studies is an interdisciplinary program that allows students interested in many areas to build a coordinated graduate program leading to an M.A. Courses that count toward the degree may be in a wide array of university programs and departments, including history, literature, anthropology, political sciences, sociology, and philosophy.

A. Admission Requirements
1. B.A. or equivalent
2. Two years of course work in the language or languages appropriate to the field of Judaic studies.
3. Applicants should apply through the Department of History.

B. Degree Requirements
1. The M.A. degree will be granted for thirty-six credits, ordinarily completed in one or two years.
2. Students may enroll in no more than two undergraduate courses. All courses should be approved by the faculty mentor of the student. A thesis is required, worth eight units of credit, enrolled as Judaic Studies 296.

Area of Concentration: Europe

Candidates for the M.A. degree in European history pursue a program concentrating on the history of early modern and modern Europe. Some training in a discipline other than history is also recommended. The requirement of nine courses (thirty-six units) is normally distributed as follows:
1. A two-quarter research seminar, either HIGR 230 or 231.
2. Cross-field historiography course: HIGR 200
3. European historiography courses: HIGR 220, 221, and/or 222. Each year one to two of these historiography courses are offered, and the student must take these.
Area of Concentration: History of Science

The master's program in history of science provides a broad background in preparation for a variety of careers related to science and technology, business, journalism, education, government, or for more advanced degree work. The nine courses (thirty-six units) required are normally distributed as follows:

1. Two courses in science in early modern Europe.
2. Two courses in science since 1750.
3. A two-quarter research seminar.
4. The remaining courses are chosen in consultation with the faculty in history of science. For students whose previous training has been mainly scientific, these will include courses in historical fields other than the history of science.
5. For students who already have historical training, they may include one or more courses related to the sciences.

Area of Concentration: Latin America

This program offers the student a general preparation in the history of Latin America. Students will have the opportunity to specialize in national or colonial periods and can emphasize work in one country. Advanced work in another discipline related to Latin America may also be included in the program. Thirty-six units normally should be distributed as follows:

1. HILA 267, 268, 269.
2. Three graduate courses in Latin American history.
3. Three other courses related to Latin America in history or in other disciplines.

Area of Concentration: United States

This area of concentration offers the M.A. candidate a broad grounding in the literature of American history from the colonial period to the present. In addition to a shared core of courses, students specialize in a topical field of their own choosing. Training in a related discipline outside of history is encouraged. The requirement of nine courses (thirty-six units) is ordinarily distributed as follows:

1. HIGR 265A-B-C. The Literature of American History. These colloquia are required of all entering graduate students in American history.
2. A two-quarter research seminar.
3. Two courses in a single topical field chosen from African-American history, Asian American history, Atlantic history, history of the borderlands and Southwest, Chicano history, economic history, legal and constitutional history, political history, social and cultural history, history of the South, history of the West, or history of women, gender, and sexuality.
4. Two additional courses chosen in consultation with the student's advisor. These courses may be in a related field outside the department.
5. At least six of the nine courses must be colloquia or graduate-level courses. Students may take conjoined courses, directed readings, research seminars, or the 265 series to meet this requirement.

PH.D. PROGRAM

Admission

The Department of History offers the doctor of philosophy degree in the fields of ancient history, East Asian history, European history, history of science, Latin American history, Middle Eastern history, and United States history. Applicants must indicate to which of these programs they seek admission.

Admission is based on the applicant's undergraduate preparation; previous graduate work, if any; three letters of recommendation; one or two writing samples (preferably written for history courses); and scores from the Graduate Record Examination (GRE). The GRE subject exam in history is not required. The Test of English as a Foreign Language (TOEFL) is required for foreign applicants. A minimum score of 550 for the paper-based test or a score of 213 for the computer-based test is required on the TOEFL. The minimum grade-point average for admission is 3.0 with a higher average in history and related subjects. With very few exceptions, students are expected to begin their programs in the fall quarter.

In most areas of concentration, knowledge of at least two foreign languages will be required during a student's academic career. In general, applicants are expected to have a reading knowledge of the languages most appropriate to their major field at the time of admission. Thus, students in ancient history, East Asian history, European history, history of science, Latin American history, and Middle Eastern history should have a working knowledge of AT LEAST one foreign language at the time of admission. Refer to the online application for filing deadline.

For online application visit: http://www.ogs.ucsd.edu/

Fields of Study

Each student will pursue a major field within one of the Ph.D. programs, and two minor fields. The first minor field can be a supplementary field within their program (e.g., medieval Chinese history for a modern Chinese historian), while the second minor field is usually chosen from outside the geographical area or outside the discipline. During the first two years, the student should identify a special area of interest in the major field to pursue a dissertation project.

I. Ancient History

Students in ancient history will be expected to demonstrate a broad mastery of the entire field, with special concentration as follows:

A. Major Fields
1. The history of Israel in the biblical period.
2. The history of the Jewish people in antiquity.

B. First Minor
1. One of the fields listed above not chosen as the major field.
2. Greek and Roman history.
3. The Middle East before Islam (western Asia and northeastern Africa from the sixth century B.C.E. to the seventh century C.E.).

C. Second Minor
1. A field of history outside of ancient history.
2. A related discipline, offered through another department.

D. Language Requirements
1. All students will be expected to demonstrate a reading knowledge of two modern foreign languages, usually French and German. This requirement may be satisfied by any of the means recognized by the department.
2. All students will be expected to demonstrate a reading knowledge of at least one and usually two of the three following ancient languages: Greek, Hebrew, and Latin. The languages will be chosen as appropriate to the student's particular interests and the requirement will be satisfied by departmental examination.
3. The second and sometimes third language not elected under (2) may be required if necessary for the student's research. Additional languages, such as Akkadian, Aramaic, Egyptian, Ugargit, Phoenician, and middle and modern Hebrew, may be required as necessary for the student's research. The required level of competence will be set as appropriate to the student's needs and the requirement will be satisfied by departmental examination.

E. Core Courses
HIGR 255 Historical Scholarship in Ancient History
HIGR 260 Research Seminar in Ancient History (two quarters)

II. East Asian History

Students in East Asian history will be expected to demonstrate a broad competence in the entire field, with special concentration as follows:

A. Major Fields
1. Modern China
2. Modern Japan
3. Pre-modern China

B. Minor Fields
Students majoring in modern Chinese history will be expected to pass three minor fields for a broad perspective on East Asian history:
1. Pre-modern Chinese history.
3. A history field outside of East Asia, or a discipline outside of history.

For students majoring in Japanese history:
1. A field in history.
2. A related field offered through another department.

Note: One of the minor fields must not focus exclusively on East Asia.

Students majoring in pre-modern Chinese history will pass three minor fields.
1. Modern Chinese history.
2. Pre-modern history of another area.
3. One of modern Japanese history; a relevant field outside of East Asia; or a discipline outside of history.

C. Language Requirements
For students majoring in Chinese history: students must demonstrate a reading knowledge of Chinese and a reading knowledge of a second foreign language related to the student’s research interests.

For students majoring in Japanese history: students must demonstrate a reading and speaking knowledge of Japanese. Depending on specialization, reading knowledge of a second foreign language might be necessary.

Students majoring in pre-modern Chinese history must demonstrate proficiency in Chinese, classical Chinese, and another relevant Asian or European language.

D. Core Courses
For Chinese history students:
HIGR 210: Historical Scholarship on Modern Chinese History (two quarters)
HIGR 211: Historical Scholarship on Modern Japanese History (two quarters)
HIGR 212: Historical Scholarship on Modern East Asian History
HIGR 213: Sources on Modern Chinese History
HIGR 215A-B: Research Seminar in Modern Chinese History
HIGR 217A-B-C: Historical Scholarship on Pre-Modern Chinese History

For Japanese history students:
HIGR 211: Historical Scholarship on Modern Japanese History (two quarters)
HIGR 212: Historical Scholarship on Modern East Asian History
HIGR 214: Readings in Japanese on Modern Japan
HIGR 216A-B: Research Seminar in Modern Japanese History

III. European History
The graduate program in European history aims to achieve a dual objective: to develop a broad mastery of the major themes and scholarship in the field, as well as to encourage a special focus of research within a single nation or region in either the modern or early modern era.

A. Major Fields
Within the major field, national specialization is offered in modern Germany, Spain, Russia and Greece, and in early modern Italy and France.

Regional specialization is offered in central/eastern Europe and in the Mediterranean.
1. Modern Europe
2. Early modern Europe

B. First Minor Field
The first minor field should be selected from within the parameters of European history, but in a chronological period outside that of the major field.
1. Ancient Mediterranean
2. Medieval Europe
3. Early modern Europe
4. Modern Europe
5. A second national history

C. Second Minor Field
The second minor field is designed either to develop a non-European teaching expertise or to pursue broader theoretical reading related to the research interests of the student.
1. A geographical area outside Europe
2. History of science
3. A transnational thematic or theoretical concentration, such as gender history, citizenship, nationalism, etc.
4. A thematic or theoretical concentration rooted in another discipline, such as anthropology, sociology, art history, ethnic studies, or literature.

D. Language Requirement
All European Ph.D. students must show reading proficiency in two European languages other than English.

E. Core Required Classes
HIGR 200: History and Social Theory
HIGR 220: Historical Scholarship on European History, 1500–1715
HIGR 221: Historical Scholarship on European History, 1715–1850
HIGR 222: Historical Scholarship on European History Since 1850
HIGR 230A-B: Research Seminar in Early Modern Europe
HIGR 231A-B: Research Seminar in Modern Europe

IV. History of Science
Note: Students should indicate whether they are also applicants for admission to the interdepartmental program in Science Studies (history, philosophy, and sociology of science).

A. Major Fields
1. Science in early modern Europe
2. Science in the eighteenth and nineteenth centuries
3. Science in the twentieth century
4. Another field of comparable breadth, defined in consultation with the major field advisor

B. First and Second Minor Fields (any two of the following may be selected, in consultation with the major field advisor)
2. Any of the other fields offered by the department, provided that it offers general historical understanding of the same period as the major field.
3. A field of history of science not chosen as the major field.
4. A second field of history, provided that it concentrates on a period or region other than that chosen for the first minor field.
5. A related discipline, offered through another department. Note: this field may be in the physical or life sciences.

C. Language Requirement
Competency in one or two languages in addition to English before advancement to candidacy is required. The requirement will vary depending on chosen major field.

D. Core Required Courses
HIGR 236A-B: Seminar in History of Science
HIGR 238: Introduction to Science Studies
HIGR 239: Seminar in Science Studies
HIGR 240: Colloquium in Science Studies
HIGR 241: Advanced Approaches to Science Studies

V. Latin American History
Doctoral candidates in Latin American history are expected to gain a broad chronological and geographical mastery of the field as a whole. The oral examination in the major field, while concentrating on the student’s special area of interest, will be a comprehensive examination covering the whole field of Latin American history.

A. Major Fields
1. The national period of Latin America, with a specialty in the Andean Republics, Brazil, the Caribbean, Mexico, or the Southern Cone countries.
2. Colonial Latin America, with an emphasis on one major region.

B. First Minor
The student should select either the national period or the colonial period as a chronological supplement to the major.

C. Second Minor
1. The history of another geographic area outside Latin America and the Caribbean.
2. An area of discipline, offered through another department, related to the student's dissertation or preparation for university teaching.

D. Language Requirement
Competency in two languages in addition to English before advancement to candidacy is required. Normally the first of these will be Spanish. The second may be Portuguese or another European or non-European language, including an indigenous language of the Americas.

E. Core Required Classes
HIGR 200: History and Social Theory
HILA 267/268/269: Seminar in the Literature of Latin American History
HIGR 247A-B: Readings and Seminar on Colonial Latin America
HIGR 248A-B-C: Readings and Seminar on Latin America, National Period
VI. Middle Eastern History

The objective of the doctoral program in Middle Eastern history is to achieve broad expertise in the modern history of the Middle East and to develop a special focus in the history of the late Ottoman Empire or its successor states.

A. Major Fields
1. Late Ottoman history (approximately 1780 to 1920).
2. Colonial and national period of the post-Ottoman Middle East with a specialty in the Arab East, Turkey, Egypt, etc.

B. Minor Fields
Any two of the following:
1. The field of Middle Eastern history not chosen as a major field (see above).
2. The modern history of a geographic area outside of the Middle East (ordinarily in European history).
3. A related geographical or topical field (e.g., medieval Middle East, Iran, gender studies) offered through another department.

C. Language Requirement
Students must possess a sound foundation in reading Arabic or Turkish (Ottoman Turkish or modern Turkish) as a requirement for admission to the program. Reading competence in two languages in addition to English is required before advancement to candidacy: the regional language Arabic or Turkish (above), and a modern European language (other than English) related to the major field of specialization.

D. Core Required Classes
HIGR 275A-B: Research Seminar in Middle Eastern History

Additional courses pending approval.

VII. United States History

A. Major Fields
1. United States History.

B. First Minor
1. One of the following topical fields: African-American history, Asian-American history, Atlantic history, history of the borders and Southwest, Chicano history, economic history, legal and constitutional history, political history, social and cultural history, history of the South, history of the West, or history of women, gender, and sexuality, or one designed in consultation with the advisor.

C. Second Minor
1. A geographic area outside the United States in either the premodern or modern period.
2. A related discipline offered through another department.

D. Language Requirement
Competency in one language in addition to English before advancement to candidacy is required.

E. Third-Year Seminar
U.S. History students are encouraged in their third year of study to complete HIGR 271: New Research Directions in U.S. History.

F. Core Courses
HIGR 200: History and Social Theory
HIGR 265A-B-C: The Literature of American History
HIGR 267A-B: Research Seminar in United States History
HIGR 271: New Research Directions in U.S. History

VIII. Dual Degree Program

Students who wish to earn both the Ph.D. in history from UCSD and the Juris Doctor from California Western School of Law must apply to and be independently accepted into both programs under each of the campus’ standards and procedures.

Students pursuing the dual degree program will normally alternate years at each institution, in a manner agreed on by the student’s advisors and appropriate committees. Thus, for example, a student may spend his or her first year at Cal Western, his or her second year at UCSD, and so on through the program. At least one year at each institution must be completed by the end of three years.

Each institution will accept a small number of course credits from the other institution to satisfy its degree requirements. Cal Western remains on a semester system, while UCSD continues on a quarter system. With the exception of the historiography and research seminars and subject to approval by a faculty advisor and the graduate committee, the Department of History will accept for credit up to two classes from Cal Western.

IX. Other Fields

Students may be admitted to graduate study leading to the Ph.D. in fields other than those listed above upon the recommendation of an appropriate faculty member. In such cases, a special program of study appropriate to the field will be devised by the major field advisor, subject to the approval of the department’s graduate committee.

Note: The department also offers graduate work in African history. When appropriate, students may select a minor field in this area.

Ph.D. Course Work

A normal full-time program consists of twelve units (or three four-unit courses) per quarter.

Ph.D. students are expected to complete at least one of the following minimum formal courses of study prior to their qualifying examination: (1) two two-quarter research seminars, three one-quarter historiography courses in their major field, and five other courses (which may be a combination of colloquia, directed courses, or directed readings, but which must include one cross-field graduate colloquium like HIGR 200); or (2) three two-quarter research seminars (not necessarily in the same field), three one-quarter historiography courses in their major field, and three other courses (which may be a combination of colloquia, directed courses, or directed readings, but which must include one cross-field graduate colloquium like HIGR 200). Students are encouraged to take their first research seminar in their major field during the initial year of graduate study. After the first year, most students’ full-time program includes two regular academic courses each quarter (eight units) and employment as a 50 percent teaching assistant (four units).

Cross-Field Thematic Graduate Colloquia

In addition to the graduate courses offered by the field groups, the department will offer at least one and up to three cross-field colloquia each year, which are designed to cross geographical and chronologically bounded areas. Two of these courses are taught at least every other year under this rubric:

An introductory graduate course for students in all fields. Themes include cross-field historiography and theory, interdisciplinary approaches to history and historical method. (May be taken twice for credit, if the reading list is significantly different.)

HIGR 205: Feminist Historical Studies

An introduction to feminist historical studies. This course will provide students with training in women’s history, in the feminist theories that undergird that scholarship, and in gender analysis. (May be taken twice for credit, if the reading list is significantly different.)

HIGR 207: Nationalism, Colonialism, and Race

A transdisciplinary and comparative course on the interplay of nationalism, colonialism, and race (as well as class and gender/sexuality) in the nineteenth and twentieth centuries.

*All Ph.D. students are required to complete at least one cross-field graduate course (typically in the HIGR 200-HIGR 205 series) before advancement to candidacy. Students are strongly encouraged to meet this requirement in their first year, as their field and program of study permits.

Part-time Study

Students who enroll in fewer than twelve graduate or upper-division units per quarter are considered part-time students. Part-time study may be pursued in several master’s programs and a few Ph.D. programs at UCSD. Approval for individual students to enroll on a part-time basis may be given for reasons of occupation, family responsibilities, or health. Individuals who are interested in part-time study and meet the above qualifications should see the department’s graduate coordinator.

Part-time students must satisfy the same admission requirements as full-time students and are eligible, at the discretion of the department, for 25 percent teaching or research assistantships. Students who are approved by the dean of Graduate Studies for enrollment in a program of half-time study or less (maximum of six units) may be eligible for a reduction in fees. All other students pay the same fees as full-time students.

Ph.D. and M.A. Language Requirements

Ph.D. candidates in Chinese, European, Middle Eastern, and Latin American history must demonstrate competency in two foreign languages.
Ph.D. candidates in history of science, Japanese, and United States history, as well as M.A. candidates in European and Latin American history, must demonstrate competency in one foreign language.
Ph.D. candidates in ancient history must demonstrate competency in two modern foreign languages as well as the relevant ancient languages.
Ph.D. candidates in Middle Eastern history must possess a sound foundation in reading Arabic or Turkish (Ottoman Turkish or modern Turkish) as a requirement for admission to the program. Reading competence in two languages in addition to English is required before advancement to candidacy: the regional language Arabic or Turkish above, and a modern European language (other than English) related to the major field of specialization.

Additional languages appropriate to the special field of study as well as language requirements for a candidate in a field other than those already mentioned may be required by the graduate committee in consultation with the student’s major field advisor. Students may satisfy the foreign language requirement in one of the following ways:

A. By completing, with a grade of B– or better in each term, a two-year-long language sequence from the student’s undergraduate institution. Such a sequence must have been completed within two years of the time the request is made to the graduate committee for certification of competency.

B. By completing, while as a graduate student, with a satisfactory (S) grade in each term, a two-year, lower-division sequence in the language approved by the graduate committee.

C. By completing, while as a graduate student, with a satisfactory (S) grade in each term, a one-year, upper-division sequence in the language approved by the graduate committee.

D. By passing a translation examination administered by the department. (This is the only option available for Chinese and Japanese.)

Students are urged to complete at least one foreign language examination by the end of the first year of study and must do so by the beginning of their third year. Failure to meet this requirement is grounds for denial of financial support. No student may take the oral qualifying examination before completing all language requirements.

Ph.D. Examinations

A. Minor Fields

Ph.D. candidates are strongly encouraged to take at least one minor field examination by the end of the first year and to complete the second minor exam by the end of the second year. All minor fields must be completed before the major field exam can be taken. Generally, the department recognizes two types of minor fields. The first is a teaching field. That is, passing a minor field in an area certifies, on a student's record and resume, that the student has mastered the literature and the major issues in another geographical or chronological field such that the student is qualified to teach in that area. (An example would be a minor field in modern Japanese history for an East Asian history student specializing in modern China; or early modern European history for a modern Europeanist.) A second type of minor field is designed to familiarize a student with a range of theoretical, comparative, and/or transnational issues, which will be useful in the formulation of a dissertation topic and future research in the student’s major field.

In some cases, this minor field is pursued outside the department (in consultation with the student’s advisor): an example might be a minor in the Department of Ethnic Studies for a student working on race and ethnicity in the U.S. In other cases, the student may identify a faculty member or series of faculty members within the department who focus on a particular theme, such as gender, citizenship, or imperialism.

The minor field is defined by a reading list agreed upon by the student and the minor field advisor(s). As a guideline, the reading list should encompass about three quarters’ worth of course work (which may be taken with up to three faculty members), and include about fifty titles, with forty to seventy titles representing a reasonable range, depending on the combination of books and articles. The list is intended to establish what will be expected of the student and to prevent confusion over the material to be covered. The list should be finalized at the beginning of the quarter during which the student plans to complete the minor field.

Completion or evaluation of a minor field takes several forms, depending on the policies of different field groups or individual professors.

1. A one-hour oral examination.
2. A three-hour or twenty-four-hour take-home written exam.
3. An “un-timed” synthetic essay, twenty-five to thirty pages, that organizes the scholarship of the field.
4. Three shorter papers (eight to ten pages) each encompassing a single quarter’s worth of reading. This option is especially appropriate in cases where the student is working with more than one faculty member on a minor field.
5. Developing a course syllabus in the field.

B. The Major Field: Oral Qualifying Examination and Candidacy

Students are normally expected to take their qualifying examination no later than the spring of their third year of study (except as otherwise specified by the individual fields), and required to do so within four years. Students must fulfill all course work, minor field, and language requirements before taking the qualifying examination. The qualifying examination is an oral test in the student’s major field of study, conducted by at least five examiners. A minimum of three examiners must be members of the Department of History, and usually they will be in the student’s major field. The fourth can be either a faculty member from inside the department but outside the major field, or someone from another department. The fifth must be a tenured faculty member in another department. The student’s minor field advisor(s), whether inside the department or in another department, often serve in this “outside” capacity on the orals committee, although this is not required. Students should consult with their advisor about the composition of the examining committee well before their examination. In addition, the membership of the committee must be approved before the exam by the department chair and the dean of Graduate Studies. The student must meet with the graduate coordinator at least three weeks prior to the orals date to arrange for the submission of this paperwork.

The purpose of the major field oral examination is twofold: 1) to evaluate the student’s knowledge of the major research field and 2) to discuss the student’s dissertation project (with the exception of the U.S. field, which holds a separate meeting for this purpose, no later than two months after the exam).

The exam lasts between two and three hours, and is structured to give each of the five committee members an opportunity to ask questions of the student, based on the major field reading list. When the prospectus is also under discussion, usually the last half-hour is reserved for this purpose. When the exam is over, the student leaves the room and the committee decides whether the student has passed the exam and advanced to candidacy.

A. The major field book list should be drawn up by the student in consultation with the faculty advisor, and should be finalized at least thirty days before the date of the exam. Each major field list will reflect the unique interests of the student, while also incorporating core themes of the field. Some field groups have formal core lists that may comprise a part of each student’s total list, while others do not. In all cases, students are expected to organize their major field lists according to the specific themes/nations/issues that have informed their graduate study, since no major field list can be all-inclusive. The number of titles on a major field list should be around 100, with 80–120 titles representing a reasonable range. The date of the examination is determined by consultation between the candidate and the examining committee.

B. The discussion of the dissertation project will be framed by a five- to ten-page prospectus written by the student and submitted to the committee with the book list, at least three weeks before the exam. The purpose of the discussion is to determine the feasibility of the scope of the project and to offer suggestions about source materials and research strategies.

Should a student fail the examination, the examining committee will clarify the weaknesses in the exam, so that the student can prepare to take it a second time. If a second oral examination is warranted, the department requires that it should be taken no later than one quarter after the first examination. If the student fails the oral examination a second time, his or her graduate studies in the department will be terminated.

An M.A. degree may also be awarded to continuing Ph.D. students upon successfully passing the oral qualifying examination. The M.A. is not automatically awarded; students must apply in advance to receive the degree, but no additional work is required. Note: Students who wish to receive an M.A. degree as part of the Ph.D. program must apply for master’s degree candidacy by the end of the second week of the quarter in which they expect to receive the degree. Please see the graduate coordinator regarding this application.

The various requirements noted above apply to students who have done no previous graduate work in history. If a candidate has completed some graduate work before entering UCSD, appropriate adjustments in course work may be approved.
by general petition to the graduate committee. Nevertheless, all candidates are required to meet language requirements, pass field examinations, and complete and defend a dissertation.

Dissertation
After completing all relevant examinations and language requirements, the student is expected to write a dissertation under the supervision of his or her faculty advisor and the doctoral committee. The Department of History has established the following guidelines for dissertation work. The dissertation should:
- represent an original and significant contribution to knowledge
- be based upon primary research
- clearly demonstrate the capacity of the student to pursue independent historical research
- be written in clear and coherent prose

The scope of the dissertation and its length will depend upon the nature of the problem and the documentation. The department encourages students to complete their research and writing by the end of their sixth year of study. The scope and length of the dissertation should therefore be such that a complete project can be executed in no more than three years, but it should also be capable of further development for publication as a series of articles in scholarly journals, or as a book.

Guidelines for Ph.D. Completion

First Year
- All courses must be taken for a letter grade.
- Research seminar and field group historiography courses.
- Cross-field graduate colloquium (recommended).
- One language requirement.
- Select an advisor in major field.
- Define major and two minor fields with advisor.
- Complete one minor field.

Second Year
- Second research seminar and remaining field group required courses.
- Complete language requirement.
- Complete second minor field.

Third Year
- If not done so already, complete all minor field exams, language requirements, and course work (twelve four-unit courses required).
- Write a dissertation prospectus in preparation for the major field exam.
- Pass qualifying exam in major field.

Fourth Year
- Primary/field/archival research for the dissertation.

Fifth-Seven Years
- Writing and completing dissertation.

Note: While students may take an eighth year to complete the Ph.D., they may not receive financial support from the university or the department, including TAships or readerships after the seventh year.

Departmental Ph.D. Time Limit Policies
Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

Financial Support
Upon recommendation of the department, several types of financial aid are available to graduate students: teaching assistantships, research assistantships, fellowships, and travel grants, and full or partial remission of fees and tuition. Graduate students are eligible for one or a combination of the six forms of financial support.

Entering students who are offered a multi-year financial package are either offered fellowships or researchships, along with fee and tuition remission during their first year, followed by guaranteed employment as a teaching assistant in subsequent years. In some cases, guaranteed dissertation writing funds are part of such a package. Regardless of the initial financial package, the department seeks to ensure that all continuing Ph.D. students are financially supported, usually through TAships. In recent years all students needing support have received either fellowships, teaching assistantships, or research assistantships. To the extent that resources are insufficient to meet the need, the department, on the advice of the graduate committee, will rank students using a combined criterion of academic performance and financial need.

Fellowships, travel grants, and research assistantships are granted by the Office of Graduate Studies (OGS) upon the recommendation of the department. Teaching assistants are appointed by the department upon the recommendation of the graduate committee and by the college writing programs. Readers are appointed by the department upon the recommendation of the professor whose course requires such assistance. At the discretion of the department, half-time graduate students are eligible for 25 percent TAships. Graduate students must maintain a minimum grade-point average of 3.0 to be considered for any type of financial aid.

Financial support is not renewed automatically but is approved by the department on a yearly basis.

Departmental policy has been to seek seven years of support for students in the program. The Office of Graduate Studies grants partial remission of fees for nine quarters after advancement to candidacy ("normative time") if the student is advanced to candidacy by the end of the third year. If the student delays advancement, the amount of normative time is reduced accordingly. Upon expiration of normative time the student must complete the dissertation or resume full payment of fees.

Opportunities for Teaching
Undergraduate teaching, for which graduate teaching assistants earn regular academic credit, is an integral part of the graduate program at UCSD. The department considers experience in teaching an important part of a graduate student’s professional training. To prepare for an academic career, the Ph.D. candidate is encouraged to assist in courses offered by the department, ordinarily as a course Reader (grader) or Teaching Assistant. A maximum of four units per quarter may be taken in undergraduate teaching.

Readerships are available in a variety of upper-division history courses, while the department offers positions for teaching assistantships in lower-division East Asian and U.S. history courses. Graduate students in other fields usually serve as TAs in the interdisciplinary college programs, such as ERC’s “Making of the Modern World,” Revelle’s “Humanities,” Marshall’s “Dimensions of Culture,” Sixth’s “CAT,” and the Muir College Writing Program. Students must maintain a minimum grade-point average of 3.0 in order to receive academic employment on campus.

Job Placement
In recent years, 85 percent of the department’s Ph.D. graduates received positions as tenure-track assistant professors at colleges and universities around the country. The remaining 15 percent are currently administrators, visiting scholars, lecturers, or postdoctoral fellows at various educational institutions. Experience indicates that many from this latter group will eventually get professional appointments.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

LOWER-DIVISION

HILD 2A–B–C. United States
A year-long lower-division course that will provide students with a background in United States history from colonial times to the present, concentrating on social, economic, and political developments. (Satisfies Muir College humanities requirement and American History and Institutions requirement.)

HILD 7A–B–C. Race and Ethnicity in the United States
Lectures and discussions surveying the topics of race, slavery, demographic patterns, ethnic variety, rural and urban life in the U.S.A., with special focus on European, Asian, and Mexican immigration.

HILD 7A. Race and Ethnicity in the United States (4)
A lecture-discussion course on the comparative ethnic history of the United States. Of central concern will be slavery, race, oppression, mass migrations, ethnicity, city life in industrial America, and power and protest in modern America.

HILD 7B. Race and Ethnicity in the United States (4)
A lecture-discussion course on the comparative ethnic history of the United States. Of central concern will be the Asian-American and white ethnic groups, race, oppression, mass migrations, ethnicity, city life in industrial America, and power and protest in modern America.

HILD 7C. Race and Ethnicity in the United States (4)
A lecture-discussion course on the comparative ethnic history of the United States. Of central concern will be the Mexican-American, race, oppression, mass migrations, ethnicity, city life in industrial America, and power and protest in modern America.

HILD 10-11-12. East Asia
A lower-division survey that compares and contrasts the development of China and Japan from ancient times to the present. Themes include the nature of traditional East Asian society and culture, East Asian responses to political and economic challenges posed by an industrialized West, and war, revolution and modernization in the twentieth century.

HILD 10. East Asia: The Great Tradition (4)
The evolution of East Asian civilization from the first writing through classical Heian, Japanese and late imperial Song China. Primary and secondary readings on basic ideas,
institutions and practices of the Confucian, Daoist, and Buddhist paths and of the state and family.

HILD 11. East Asia and the West, 1279–1911 (4) From the Mongol conquests to China’s last dynasty and Japan’s annexation of Korea, this course examines political, institutional, and cultural ruptures and continuities as the East Asian countries responded to the challenges of Western imperialism with defense, reform, conservative reaction and creative imitation.

HILD 12. Twentieth-Century East Asia (4) Examines the emergence of a regionally dominant Japan before and after World War II; the process of revolution and state-building in China during the Nationalist and Communist eras; and Korea’s encounter with colonialism, nationalism, war, revolution and industrialization.

HILD 14. Film and History in Latin America (4) Students watch films on Latin America and compare them to historical research on similar episodes or issues. Films will vary each year but will focus on the social and psychological consequences of colonialism, forced labor, religious beliefs, and “Modernization.”

UPPER-DIVISION
Please note: The following upper-division courses are offered on a regular basis, although not every class is available every year. Check with the department to see what is available each quarter.

AFRICA
Lecture Courses
HIAF 111. Modern Africa Since 1880 (4) A survey of African history dealing with the European scramble for territory, primary resistance movements, the rise of nationalism and the response of metropolitan powers, the transfer of power, self-rule and military coups, and the quest for identity and unity. PREREQUISITE: upper-division standing.

HIAF 112. West Africa Since 1880 (4) West Africa from the nineteenth century onwards and examines the broad outlines of historical developments in the sub-region through the twentieth century, including such themes as religious, political, and social changes. PREREQUISITE: upper-division standing.

HIAF 113. Small Wars and the Global Order: Africa and the late imperial world (4) Examines the trades, interaction, and global repercussions of national conflicts (‘small wars’) in the postcolonial world. Focus on Africa and Asia from the Cold War to the present with particular attention to the intersection of foreign interests, insurgency, and geopolitics. PREREQUISITE: upper-division standing or instructor consent.

HIAF 120. History of South Africa (4) The origins and the interaction between the peoples of South Africa. Special attention will be devoted to industrial development, urbanization, African and Africaner nationalism, and the origin and development of apartheid and its consequences. PREREQUISITE: upper-division standing.

HIAF 122. Traditional African Religions (4) A study of the meaning, structure, and sources of African traditional religion. The course examines the attitudes of mind and belief and practices which have evolved in many societies in Africa.

HIAF 123. West Africa from Earliest Times to 1800 (4) Plant and animal domestication, iron-working and the distribution of ethnic/language groups, urbanization, regional and long-distance commerce, and the rise of medieval kingdoms. PREREQUISITE: upper-division standing.

HIAF 124. Islam in Contemporary African Societies (4) The spread of Islam in Africa. The rise of Islamic orthodoxy during the eighteenth and nineteenth centuries, and the social movements in the contemporary period geared towards the establishment of Islamic theocracies. PREREQUISITE: upper-division standing.

Colloquia
The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HIAF 161/261. Special Topics in African History (4) This colloquium is intended for students with sufficient background in African history. Topics, which vary from year to year, will include traditional political, economic, and religious systems, and theory and practice of indirect rule, decolonization, African socialism, and pan-Africanism. Department stamp required.

HIAF 162/262. The African Diaspora in the Atlantic World (4) Expose students to the competing paradigms adopted by scholars in the search for an appropriate analytical framework for understanding the African diaspora in the Atlantic world, as well as examine the African impact on Atlantic communities. Graduate students are required to submit an additional paper. PREREQUISITE: upper-division or graduate standing. Department stamp required.

HIAF 199. Independent Study in African History (4) Directed readings for undergraduates. PREREQUISITE: consent of instructor and academic advisor required.

EAST ASIA
Lecture Courses
HIEA 111. Japan: Twelfth to Mid-Nineteenth Centuries (4) Covers important political issues—such as the medieval decentralization of state power, unification in the sixteenth and seventeenth centuries, the Tokugawa system of rule, and conflicts between rulers and ruled—while examining long-term changes in economy, society, and culture. +

HIEA 112. Japan: From the Mid-Nineteenth Century through the U.S. Occupation (4) This course focuses on the Meiji Restoration, nationalism, industrialization, imperialism, Taisho Democracy, and the Occupation. Special attention will be given to the costs as well as benefits of “modernization” and the relations between dominant and subordinated cultures and groups within Japan.

HIEA 113. The Fifteen-Year War in Asia and the Pacific (4) Lecture-discussion course approaching the 1931-1945 war through various “local,” rather than simply national, experiences. Perspectives examined include those of marginalized groups within Japan, Japanese Americans, Pacific Islanders, and other elites and nonelites in Asian and Pacific settings.

HIEA 114. Postwar Japan (4) Examines social, cultural, political, and economic transformations and continuities in Japan since World War II. Emphasis will differ by instructor. PREREQUISITE: upper-division standing.

HIEA 115. Social and Cultural History of Twentieth-Century Japan (4) Japanese culture and society changed dramatically during the twentieth century. This course will focus on the transformation of cultural codes into what we know as “Japanese”, the politics of culture, and the interaction between individuals and society.

HIEA 116. Japan-U.S. Relations (4) Survey of relations between Japan and the United States in the nineteenth and twentieth centuries. Although the focus will be on these nation-states, the course will be framed within the global transformation of societies. Topics include cultural frameworks, political and economic changes, colonialism and imperialism, and migration.

HIEA 117. Ghosts in Japan (4) By examining the roles of ghosts in Japanese belief systems in a post-scientific age, this course addresses topics including folk beliefs and ghost stories, religiosity, early science, tools of amelioration and authoritative knowledge, and the relationship between myth and history. PREREQUISITE: upper-division standing or consent of instructor.

HIEA 119/SCOB 162R. Religion and Popular Culture in East Asia (4) Historical, social, and cultural relationships between religion and popular culture. Secularization of culture through images, worldviews, and concepts of right and wrong which may either derive from, or pose challenges to, the major East Asian religions. PREREQUISITE: upper-division standing.

HIEA 120. Classical Chinese Philosophy and Culture (4) The relation of social, political, and economic developments to the philosophical and religious traditions of China c. 1200 B.C. to 400 A.D., including Confucianism, Daoism, Legalism, correlative cosmology, and ideas about fate, spirits, and health. Previous course work on China helpful but not required. PREREQUISITE: upper-division standing or consent of instructor.

HIEA 121. Medieval Chinese Culture and Society (4) This course covers the period from the sixth century to thirteenth century, the time of the glorious Tang and Song dynasties. We focus on the “medieval revolution” that changed the political, economic, and social life of the empire. As much as possible we study these changes from the eyes of the people who lived through them—aristocrats, peasants, soldiers, merchants, women. PREREQUISITE: HIEA 120 recommended but not required.

HIEA 122. Late Imperial Chinese Culture and Society (4) Using primary and secondary sources, we survey the interactions of ideas and institutions in the commercial economy of China from the tenth through the eighteenth centuries, and consider their impact on the lives of individuals. Previous course work on China helpful but not required. PREREQUISITE: upper-division standing or consent of instructor.

HIEA 125. Women and Gender in East Asia (4) The impact of modern transformations on female roles and gender relations in China, Japan, and Korea, focusing on the imperial/early modern periods through the twentieth-century. PREREQUISITE: upper-division standing or instructor consent.

HIEA 126. The Silk Road in Chinese and Japanese History (4) This course studies the peoples, cultures, religions, economic, and technological, and the trade routes known collectively as the Silk Road from c. 200 BCE to 1000 CE. We will use an interdisciplinary approach. Primary sources will include written texts and visual materials. We will examine these trade routes as an early example of globalization. PREREQUISITE: upper-division standing or consent of instructor.

HIEA 128. History of Material Culture in China (4) Introduction to material culture in China from a historical perspective. Consider Chinese primary sources (including both historical texts and objects) from the point of view of the new interdisciplinary field of material culture studies. PREREQUISITE: upper-division standing.

HIEA 129. Faces of the Chinese Past (4) Through the biographies and autobiographies of prominent and ordinary men and women from antiquity to today, this course explores the relation of the individual to social structures, class and gender in personal experience, and the production of primary and secondary sources. PREREQUISITE: upper-division standing or consent of instructor.

HIEA 130. End of the Chinese Empire, 1800–1911 (4) From the Opium War to the 1911 Revolution. Key topics include ethnic identity under Manchu rule, the impact of
Western imperialism, the Taiping and other rebellions, overseas Chinese, social change and currents of reform, and the rise of Chinese nationalism. **Prerequisite:** upper-division standing or consent of instructor.

**HIEA 131. China in War and Revolution, 1911–1949 (4)***

An exploration of the formative period of the twentieth-century Chinese Revolution: the New Culture Movement, modern urban culture, the nature of Nationalist (Guomindang) rule, war with Japan, revolutionary nationalism, and the Chinese Communist rise to power. **Prerequisite:** upper-division standing or instructor consent.

**HIEA 132. History of the People's Republic of China (4)***

This course analyzes the history of the PRC from 1949 to the present. Special emphasis is placed on the problem of postrevolutionary institutionalization, the role of ideology, the tension between city and countryside, Maoism, the Great Leap Forward, the Cultural Revolution.

**HIEA 133. Twentieth-Century China: Cultural History (4)***

This course looks at how the historical problems of twentieth-century China are treated in the popular and elite cultures of the Nationalist and Communist eras. Special emphasis is placed on film and fiction. **Prerequisite:** upper-division standing or consent of instructor.

**HIEA 134. History of Thought and Religion in China: Confucianism (4)***

Course will take up one of the main traditions of Chinese thought or religion, Confucianism, and trace it from its origins to the present. The course will explain the system of thought and trace it as it changes through history and within human lives and institutions. **Prerequisite:** upper-division standing or instructor consent.

**HIEA 135. History of Thought and Religion in China: Buddhism (4)***

Course will take up one of the main traditions of Chinese thought or religion, Buddhism, and trace it from its origins to the present. The course will explain the system of thought and trace it as it changes through history and within human lives and institutions. **Prerequisite:** upper-division standing or instructor consent.

**HIEA 136. History of Thought and Religion in China: Daoism (4)***

Course will take up one of the main traditions of Chinese thought or religion, Daoism, and trace it from its origins to the present. The course will explain the system of thought and trace it as it changes through history and within human lives and institutions. **Prerequisite:** upper-division standing or instructor consent.

**HIEA 137. Women and the Family in Chinese History (4)***

This course explores the institutions of family and marriage, and women's roles and experiences within the family and beyond, from classical times to the early twentieth-century. **Prerequisite:** upper-division standing or consent of instructor.

**HIEA 138. Women and the Chinese Revolution (4)***

Examines women's roles and experiences in the twentieth-century Chinese revolution, the ways in which women participated in the process of historical change, the question of the revolution "liberated" women from "Confucian tradition." **Prerequisite:** upper-division standing or consent of instructor.

**Colloquia**

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

**HIEA 160/260. Seminar in Modern Japanese History (4)***

This colloquium examines controversial domestic and international issues in Japanese history from 1850 to recent times. Topics will vary from year to year. **Prerequisite:** department stamp, consent of instructor.

**HIEA 162/262. History of Women in China (4)***

This course concerns women in Chinese history in Imperial times. This course will focus on women's changing roles in the family, society, and culture. Topics will vary from year to year. Requirements will vary for undergraduate, M.A., and Ph.D. students. **Prerequisite:** upper-division standing.

**HIEA 163/263. Cinema and Society in Twentieth-Century China (4)***

This colloquium will explore the relationship between cinema and society in twentieth-century China. The emphasis will be on the social, political, and cultural impact of filmmaking. The specific period under examination (1930s, 1940s, post-1949) may vary each quarter. Graduate students will be expected to submit an additional paper. **Prerequisite:** upper-division or graduate standing and department stamp.

**HIEA 164/264. Seminar in Late Imperial Chinese History (4)***

Pairs primary sources with scholarship built on them to illuminate later imperial state, society, and individual lives, and to show how historians generate and answer questions. Topics vary; may be repeated for credit. Graduate students will be expected to submit an additional paper or project. **Prerequisite:** upper-division or graduate standing and department stamp.

**HIEA 165/265. Topics in Medieval Chinese History (4)***

Topics will vary in the history of medieval China. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students who choose to work on this topic will submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. **Prerequisite:** upper-division or graduate standing and department stamp.

**HIEA 166/266. Creating Ming Histories (4)***

This course explores the question of religious and political dissent in stateless societies. +

**HIEA 170/270. Ancient History and the Bible (4)***

This course explores ancient Near Eastern world from the Persian Wars to the death of Alexander the Great. **Prerequisite:** upper-division standing or consent of instructor.

**HIEA 171A/271A. Early Christianity (4)***

This course explores early Christianity through the lens of hagiography and biography. Such texts provide insight into the social, political, and cultural history of the time. An exploration of the formative period of the twentieth-century China are treated in the popular and elite cultures of the Nationalist and Communist eras. Special emphasis is placed on film and fiction. **Prerequisite:** upper-division standing or consent of instructor.

**HIEA 171B/271B. Modern History and the Bible (4)***

This course explores modern history through the lens of hagiography and biography. Such texts provide insight into the social, political, and cultural history of the time. An exploration of the formative period of the twentieth-century China are treated in the popular and elite cultures of the Nationalist and Communist eras. Special emphasis is placed on film and fiction. **Prerequisite:** upper-division standing or consent of instructor.

**HIEA 199. Independent Study in East Asian History (4)***

Directed reading for undergraduates under the supervision of various faculty members. **Prerequisite:** consent of instructor required.
touchstone, this class examines the history of apocalyptic expectations in the Middle Ages through a close scrutiny of both texts and art. **PREREQUISITE:** upper-division standing or consent of instructor. +

**HIEU 116. The Greek Diaspora (4)**
This course surveys the history of the Greek Diaspora in Canada, South America, Australia, and Africa from 1700 to the present. Special attention is paid to the Greek migration to North America during the twentieth century. **PREREQUISITE:** upper-division standing or consent of instructor.

**HIEU 117A. Greece and the Balkans in the Age of Nationalism (4)**
This course examines the history of Greece and the Balkans (1683–1914). Topics covered: social and economic development in the eighteenth century, nationalism, independence wars, state nation formation, interstate relations, the Eastern Question, rural society, urbanization, emigration, and the Balkan Wars. **PREREQUISITE:** upper-division standing or consent of instructor.

**HIEU 117B. Greece and the Balkans during the Twentieth Century (4)**
This course examines the history of Greece and the Balkans (1914–2001). Topics covered: World War I, population exchanges, authoritarianism, modernization, World War II, resistance, civil wars, Cold War, Greek-Turkish relations, Cyprus, collapse of Communism, 1990s conflicts, and EU expansion. **PREREQUISITE:** upper-division standing or consent of instructor.

**HIEU 118. Americanization in Europe (4)**
Examines problems surrounding the transfer of American culture, values, and styles to Europe in the twentieth and twenty-first centuries. Topics may include: consumer society, popular culture, commercial and business practices, “McDonaldization,” political and military influence, democratization, and resistance to Americanization. Students may not receive credit for both HIEU 117 and HIEU 118. **PREREQUISITE:** upper-division standing or consent of instructor.

**HIEU 119. Modern Italy: From Unification to the Present (4)**
History of Italy from the 1860s to the present with special focus on the changing relationship between state and society. Topics include the "Southern problem," the Catholic Church, the fascist dictatorship, the Cold War, terrorism, contemporary politics and culture. **PREREQUISITE:** upper-division standing or consent of instructor.

**HIEU 120. The Renaissance in Italy (4)**
The social, political, and cultural transformation of late-medieval Italy from the heyday of mercantile expansion before the plague to the dissolution of the Italian state system with the French invasions of 1494. Special focus upon family, associational life and factionalism in the city, the development of the techniques of capitalist accumulation, and the spread of humanism. **PREREQUISITE:** upper-division standing. +

**HIEU 122. Politics Italian Renaissance Style (4)**
Modern political and historical thought find their roots in the realistic examination of fifteenth- and sixteenth-century Italian political experience. Contemporary Renaissance humanists and thinkers—Machiavelli, Guicciardini, Castiglione, Botero, and Campanella—tested classical, Christian, and legal models against practical necessities. +

**HIEU 125. Reformation Europe (4)**
The intellectual and social history of the Reformation and Counter-Reformation with the French invasions to the Edict of Nantes. Emphasis is upon reform from below and above, the transformation of grass-roots spirituality into institutional control. **PREREQUISITE:** upper-division standing or consent of instructor. +

**HIEU 126. Age of Expansion: Europe and the World, 1400–1600 (4)**
Course will begin with a survey of the major empires of the fifteenth century, concentrating on the links between them. It will then examine the entrance of Europeans on the global scene in the sixteenth century. This part of the course will examine European/ non-European encounters, focusing on perceptions, economic interaction, and institutional adaptation and will emphasize the Hispanic American, Ottoman, and Indian Ocean cases. +

**HIEU 127. Sport in the Modern World (4)**
This course looks at the phenomenon of sport in all of its social, cultural, political, and economic aspects. The starting point will be the emergence of modern sport in nineteenth-century Britain; but the focus will be global. Since the approach will be topical rather than chronologi- cal, students should already have a good knowledge of world history in the nineteenth and twentieth centuries. **PREREQUISITE:** upper-division standing. +

**HIEU 128. Europe Since 1945 (4)**
An analysis of European history since the end of the Second World War. Focus is on political, social, economic, and cul- tural developments within European societies as well as on Europe’s relationship with the wider world (the Cold War, decolonization). +

**HIEU 129. Paris, Past and Present (4)**
This course surveys the historical and cultural significance of Paris from about 1500 to the present. The focus is on interactions between political, architectural, and urban evolutions, and the changing populations of Paris in times of war, revolutions, and peace. +

**HIEU 130. Europe in the Eighteenth Century (4)**
A lecture-discussion course focusing on Europe from 1688–1789. Emphasis is on the social, cultural, and intellectual history of France, Germany, and England. Topics consid- ered will include family life, urban and rural production and unrest, the poor, absolutism, and the Enlightenment from Voltaire to Rousseau. **PREREQUISITE:** upper-division standing. +

**HIEU 131. The French Revolution: 1789–1814 (4)**
This course examines the Revolution in France and its impact in Europe and the Caribbean. Special emphasis will be given to the origins of the Revolution, the develop- ment of political and popular radicalism and symbolism from 1789 to 1794, the role of political participants (e.g., women, sans-culottes, Robespierre), and the legacy of revolutionary wars and the Napoléonic system on Europe. **PREREQUISITE:** upper-division standing. +

**HIEU 132. Germany from Luther to Bismarck (4)**
How Germany, from being a maze of tiny states rife with re- ligious conflict, became a nation. Did the nations-building process lead to Nazism? **PREREQUISITE:** upper-division standing or consent of instructor. +

**HIEU 133. Gender in Antiquity and the Early Medieval Mediterranean (4)**
This course discusses sex and gender at the end of the classical period and its development into the Middle Ages; in both Eastern and Western Mediterranean. Course will examine the ways in which our medieval predecessors—e.g., women, assigned gender traits and relationships to members of society. It will approach the topic in part through an ex- amination of the language used about gender and in part through the modern gender theories. **PREREQUISITE:** upper-division standing. +

**HIEU 134. The Formation of the Russian Empire, 800–1855 (4)**
State-building and imperial expansion among the peoples of the East Slavic lands of Europe and Asia from the origins of the Russian state in ninth-century Kiev, through Peter the Great’s emperorship, and into the nineteenth century. **PREREQUISITE:** upper-division standing or consent of instructor. +

This course investigates the social history of crime, criminal justice, and policing in Europe between approximately 1700 and 1900. The topic enables historians to investigate a variety of issues, including state formation, gender rela- tions, and class relations. **PREREQUISITE:** upper-division standing or consent of instructor. +

**HIEU 136A. European Society and Social Thought, 1688–1870 (4)**
A lecture and discussion course on European political and cultural development and social theory from 1688-1870. Important writings will be considered both as responses to and as provocations for political and cultural change. +

**HIEU 136B. European Society and Social Thought, 1870–1989 (4)**
A lecture and discussion course on European political and cultural development and social theory from 1870-1989. Important writings will be considered both as responses to and as provocations for political and cultural change. +

**HIEU 137. History of Colonialism: From New Imperialism to Decolonization (4)**
This course surveys the age of colonialism in the nineteenth and twentieth century. The course will focus on the debates on colonialism in the metropole as well as on conflicts inside the colonies. Considerable emphasis will be placed on colonialism in Africa. **PREREQUISITE:** upper-division standing or consent of instructor. +

**HIEU 138. Imperial Spain, 1476–1808 (4)**
The rise and decline of Spain’s European empire from Ferdinand II and Isabella to 1700 and her return to European affairs in the eighteenth century. **PREREQUISITE:** upper-division standing or graduate stand- ing. +

**HIEU 139. The Origins of Constitutions (4)**
The course will cover the development of constitutional ideas and institutions from the twelfth century to the U.S. Constitution. Students will read legal text and commentar- ies that established the foundations of the ideas of the rule of law, limited government, inalienable rights, and the independent judiciary. Students will study the formation of institutions as parallels for the U.S., and consider their function in modern law. The course will start and finish with an analysis of the U.S. Constitution. **PREREQUISITE:** upper-division standing or consent of instructor. +

**HIEU 141. European Diplomatic History, 1870–1945 (4)**

**HIEU 142. European Intellectual History, 1780–1870 (4)**
European thought from the late Enlightenment and the French Revolution to Marx and Baudelaire, emphasizing the origins of romanticism, idealism, and positivism in England, Germany, and France. **PREREQUISITE:** upper-division stand- ing or consent of instructor. +

**HIEU 143. European Intellectual History, 1870–1945 (4)**
A lecture-discussion course on the crisis of bourgeois culture, the redefinition of Marxist ideology, and the transition of modern social thought. Readings will include Nietzsche, Sorel, Weber, Freud, and Musil (This course satisfies the minor in the Humanities Program.) **PREREQUISITE:** upper-division standing. +

**HIEU 145. The Holocaust as Public History (4)**
We will study historical accounts, memoirs, diaries, and oral histories to master the Holocaust epoch. We will contrast scholarly narratives to personal experience as different ways to learn about the past. Students will design projects for public education. **PREREQUISITE:** upper-division standing or consent of instructor. +

**HIEU 146. Fascism, Communism, and the Crisis of Liberal Democracy: Europe 1919–1945 (4)**
A consideration of the political, social, and cultural crisis that faced Western liberal democracies in the interwar period, with emphasis on the mass movements that op- posed bourgeois liberalism from both the left and the right. +

**HIEU 147. Women and Gender in Early Modern Europe (4)**
This course examines the history of European women and gender issues from about 1500 to 1700. Three major themes are covered: intellectual and cultural trends; the nature of the human body and work roles; and, spiritual beliefs, experiences, and practices. **PREREQUISITE:** upper-division standing or consent of instructor. +

**HIEU 147A. Women in the Middle Ages (4)**
This course examines the image and the reality of women in the period from 200-1500. We will focus upon the am- bivalent status of women in this period as “internal others” to medieval—simultaneously necessary to the functioning
of society, yet viewed as marginal to its interests or even as outsiders. **Prerequisite:** upper-division standing or instructor consent. +

HIEU 148. Women and Gender from the Enlightenment to the Victorian Eras (4)

This course examines European women and gender issues from about 1700 to 1870. Major themes covered are: intellectual and cultural trends (e.g., education and politics); attitudes toward female and male bodies and work roles; and, spiritual beliefs and practices. **Prerequisite:** upper-division standing or consent of instructor. +

HIEU 149. History of Women in Europe: 1870 to the Present (4)

This course explores the history of women across classes from 1870 to the present, with an emphasis on the variety of women’s experiences and the efforts towards and obstacles to empowerment. Topics include: women and the state, science and gender, feminist movements and the evolution of women’s work. **Prerequisite:** upper-division standing.

HIEU 150. Modern British History (4)

Emphasis on changes in social structure and corresponding shifts in political power. The expansion and the end of empire. Two World Wars and the erosion of economic leadership. **Prerequisite:** upper-division standing or consent of instructor.

HIEU 151. Spain since 1808 (4)

Social, political, cultural history of Spain since Napoleon. Features second Spanish Republic, the Civil War, Franco era, and transition to democracy. **Prerequisite:** upper-division standing.

HIEU 152. The Worst of Times: Everyday Life in Authoritarian and Dictatorial Societies (4)

Examines how ordinary citizens coped with the problems of life under Europe’s authoritarian regimes. Topics may include Nazism, fascism, and quasi-fascist societies (e.g., Franco’s Spain, Salazar’s Portugal), and communist practice from Leninism to Stalinism to the mild Titosim of Yugoslavia. **Prerequisite:** upper-division standing or consent of instructor.

HIEU 154. Modern German History: From Bismarck to Hitler (4)

An analysis of the volatile course of German history from unification to the collapse of the Nazi dictatorship. Focus is on domestic developments inside Germany as well as on their impact on European and global politics in the twentieth century.

HIEU 155. Modern Austria (4)

The political, social, and intellectual history of Austria from Maria Theresa to the First Republic with special emphasis on the development of liberal culture in the late nineteenth century. **Prerequisite:** upper-division standing or consent of instructor.

This course explores war, revolution, development, and terror in the Soviet Union from 1905–1991. **Prerequisite:** upper-division standing or consent of instructor.

HIEU 157. Religion and the Law in Modern European History (4)

Comparative examination of the relationship between religious commitments and legal norms in Europe from the Reformation to the present. Topics may include government sponsorship; religious expression; conflicts with secular law; religious rights as human rights; and religious and cultural politics. **Prerequisite:** upper-division standing or consent of instructor.

HIEU 158. Why Hitler? How Auschwitz? (4)

Why did Germany in 1919 produce an Adolf Hitler; how did the Nazis take power in 1933; and why did the Third Reich last until 1945? Why did the war against the Jews become indissoluble from the war against communism? **Prerequisite:** upper-division standing or consent of instructor.

HIEU 159. Three Centuries of Zionism, 1648–1948 (4)

For centuries the land of Israel was present in Jewish minds and hearts. Why and how did the return to Zion become a reality? Which were the vicissitudes of Jewish life in Palestine? **Prerequisite:** upper-division standing or consent of instructor.

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HIEU 160/260. Topics in the History of Greece (4)

A seminar focusing on selected topics in Greek history from the Bronze Age to the Roman Conquest. **Prerequisite:** upper-division standing or consent of instructor. +

HIEU 163/263. Special Topics in Medieval History (4)

Intensive study of special problems or periods in the history of medieval Europe. Topics vary from year to year, and students may therefore repeat the course for credit. **Prerequisites:** background in European history and upper-division standing. +

HIEU 164/264. Special Topics in Early Modern Europe (4)

This course looks at the European and non-European in the early modern era. Topics will vary year to year. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. **Prerequisites:** upper-division standing or consent of instructor. +

HIEU 166/266. Europeans Abroad 1400–1700 (4)

Between 1400 and 1700 Europeans spread around the world. This course looks at the personal, face-to-face ways in which Europeans survived and prospered in early modern Asia, Africa, and Latin America—religious conversion, intermarriage, collaboration, coercion. Graduate students are expected to submit an additional piece of work. **Prerequisite:** upper-division standing. Department stamp required. +

HIEU 171/271. Special Topics in Twentieth-Century Europe (4)

This course alternates with HIEU 170. Topics will vary from year to year. **Prerequisite:** background in European history.

HIEU 172/272. Comparative European Fascism (4)

This course will be a comparative and thematic examination of the fascist movement and regimes in Europe from the 1920s to the 1940s. In particular, it will focus on the emergence of the two major fascist movements in Europe and Germany. Graduate students will be required to submit a more substantial piece of work in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. **Prerequisites:** upper-division or graduate standing and department stamp.

HIEU 174/274. The Holocaust: A Psychological Approach (4)

An examination of how traditional moral concerns and human compassion came to be abandoned and how the mass murder of the Jews was organized and carried out. The focus of this course will be on the perpetrators. Requirements will vary for undergraduate M.A. and Ph.D. students. Graduate students are required to submit a more substantial piece of work. **Prerequisites:** upper-division or consent of instructor. Department stamp required.

HIEU 176/276. Politics in the Jewish Past (4)

This seminar addresses Jewish civic autonomy in the late medieval era, the terms of emancipation in the European states, the politics of Jewish socialists, the costs of assimilation, and the consequences of a successful Zionist state in 1948. Graduate students will be required to submit a more substantial piece of work with in-depth analysis and an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. **Prerequisites:** upper-division or graduate standing and department stamp.

HIEU 177/277. Special Topics in Modern German Thought (4)

Topics will vary from year to year. (Satisfies the Humanities Program minor.) **Prerequisite:** background in European history.

HIEU 178/278. Soviet History (4)

Topics will vary from year to year. Graduate students are required to submit a more substantial paper. **Prerequisite:** upper-division standing or consent of instructor.

HIEU 181/281. Immigration, Ethnicity, and Identity in Contemporary European Society. (4)

Comparative study of immigration and migration in Europe since 1945. Topics include immigrant adaptation, assimilation, and identity; labor systems, opposition to and regulation of migration; competing concepts of nationality and citizenship, conflicts over Muslim immigration; and implications for European integration. Students may not receive credit for both HIEU 181/281 and ERC 101. Graduate students will be expected to submit an additional paper. **Prerequisites:** upper-division or graduate standing and department stamp.

HIEU 182/282. The Muslim Experience in Contemporary European Society (4)

Comparative study of Islam in Europe since 1945. Topics include: indigenous populations; immigration; Islamic law/church-state questions; EU integration/integration; gender issues; terrorism; Islamophobia; "Europeanizing" Islam; the historical tradition of European-Muslim encounter and its present political/cultural issues. Graduate students will be required to do an additional paper. **Prerequisites:** upper-division or graduate standing and department stamp.

HIEU 183/283. Social History and Anthropology of the Mediterranean (4)

This seminar examines the social history and anthropology of the Mediterranean. Topics covered are: the Mediterranean debate, rural economy, peasant society, gender relations, honor and shame, rural violence, class formation, and emigration. The seminar introduces the methodology of historical anthropology. Graduate students will be expected to complete an additional paper or project. **Prerequisite:** upper-division or graduate standing and department stamp.

HIEU 184/284. Yugoslavia: Before, Diving, and After (4)

Examines the multi-ethnic Yugoslav states that existed from 1918 until the 1990s. Topics include inter-ethnic relations, foreign affairs, Tito’s revisionist communism, the consumerist Yugoslav Dream, culture and society, the violent break-up of the 1990s, and the post-Yugoslav order. Graduate students will be required to submit an additional paper. **Prerequisites:** upper-division or graduate standing and department stamp.

HIEU 198. Directed Group Study (1, 2, 3, 4)

Directed group study on European history under the supervision of a member of the faculty on a topic not generally included in the regular curriculum. Students must make arrangements with individual faculty members. **Prerequisites:** upper-division standing, completion of at least ninety units of UCSD undergraduate study, a minimum UCSD G.P.A. of 2.95, a completed and approved Special Studies form, and department stamp.

HIEU 199. Independent Study in European History (4)

Directed readings for undergraduates under the supervision of various faculty members. **Prerequisite:** consent of instructor.

LATIN AMERICA

Lecture Courses

HILA 100. Latin America—Colonial Transformations (4)

Lecture-discussion survey of Latin America from the pre-Columbian era to 1825. It addresses such issues as the nature of indigenous cultures, the implanting of colonial institutions, native resistance and adaptations, late colonial growth and the onset of independence. +
Lecture-discussion survey of Latin America in the nineteenth century. It addresses such issues as the collapse of colonial practices in the society and economy as well as the creation of national governments, political instability, disparities among regions within particular countries, and of economies oriented toward the export of goods to Europe and the United States.

HILA 102. Latin America in the Twentieth Century (4)  
This course surveys the history of the region by focusing on two interrelated phenomena: the absence of democracy in most nations and the region's economic dependence on more advanced countries, especially the United States. Among the topics discussed will be the Mexican Revolution, the military in politics, labor movements, the wars in Central America, liberation theology, and the current debt crisis. PREREQUISITE: upper-division standing or consent of instructor.

HILA 103. Revolution in Modern Latin America (4)  
A political, economic, and social examination of the causes and consequences of the Mexican, Cuban, and Nicaraguan revolutions. Also examine guerrilla movements that failed to gain power in their respective countries, namely the Shining Path in Peru, FARC in Colombia, and the Zapatistas in Mexico. PREREQUISITE: upper-division standing.

HILA 104. Modern U.S.-Latin American Relations (4)  
A survey of political, economic, and cultural aspects of U.S. relations during the twentieth century. Emphasis will be placed on U.S. territorial and economic expansion, U.S. national security and ideological morality, and Latin American efforts to influence U.S. policy in order to strengthen, in most cases, elite domination of society. PREREQUISITE: upper-division standing.

HILA 112. Economic and Social History of the Andean Region (4)  
Study of the economic and social problems of the Andean region from the colonial period until the crisis of 1912, with special attention to theoretical models to explain the processes of change. PREREQUISITE: upper-division standing.

HILA 113. Lord and Peasant in Latin America (4)  
Examination of the historical roots of population problems, social conflict, and revolution in Latin America, with emphasis on man-land relationships. Special emphasis on modern reform efforts and on Mexico, Cuba, Brazil, and Argentina. Lecture, discussion, reading, and films. PREREQUISITE: upper-division standing or consent of instructor.

HILA 114. Dictatorships in Latin America (4)  
How did dictatorships come about? Who were the authoritarian leaders? How did they organize their regimes and what were the consequences? Recent publications on dictators in Latin America allow for comparisons across countries and throughout time to answer those questions. PREREQUISITE: upper-division standing.

HILA 115. The Latin American City, a History (4)  
A survey of the development of urban form in Latin America and of the role that cities played in the region as administrative and economic centers. After a brief survey of pre-Columbian centers, the lectures will trace the development of cities as outlets of the Iberian empires and as “city-states” that formed the nuclei of new nations after 1810. The course concentrates primarily on the cities of South America, but some references will be made to Mexico City. It ends with a discussion of modern social ills and Third World urban problems in Mexico City, Buenos Aires, Rio de Janeiro, and Sao Paulo as its principal examples. PREREQUISITE: upper-division standing.

From coffee boom through rebellion, militarization, revolution, state terrorism, and migration, the U.S. has loomed large in the history of El Salvador. This course explores this relationship from 1920 to the present through the prisms of revolution and human rights. PREREQUISITE: upper-division standing.

HILA 120. History of Argentina (4)  
A survey from the colonial period to the present, with an emphasis on the nineteenth and twentieth centuries. Among the topics covered: the expansion of the frontier, the creation of a cosmopolitan, predominately European culture, and the failure of industrialization to provide an economic basis for democracy. PREREQUISITE: upper-division standing.

HILA 121. History of Brazil (4)  
From colonial times to the present, with an emphasis on the nineteenth and twentieth centuries. Among the topics covered: the evolution of a slave-based economy, the key differences among regions, the military in politics, and the creation of the most populous and industrialized country in Latin America. PREREQUISITE: upper-division standing.

HILA 121A. History of Brazil, 1808 to 1904 (4)  
This course will discuss transformations in Brazilian society from 1808 to 1904, covering the Independence, the Empire, end of slavery, beginning of a Republican system, modernization, social protests, popular culture, nation building, and changes in the politics of social dominance. PREREQUISITE: upper-division standing or consent of instructor.

HILA 122. Cuba: From Colony to Socialist Republic (4)  
A lecture-discussion course on the historical roots of revolutionary Cuba, with special emphasis on the impact of the United States on the island's development and society. PREREQUISITE: upper-division standing.

HILA 124A. History of Women and Gender in Latin America (4)  
A broad historical overview of Hispanic-American women's history focusing on issues of gender, sexuality, and the family as they relate to women, as well as the historiographical issues in Latin American and Chicana women's history. PREREQUISITE: upper-division standing or consent of instructor.

HILA 126. From Columbus to Castro: Caribbean Culture and Society (4)  
Exploration of the relationships between socioeconomic and cultural development in Caribbean history; slavery and empire; nationalism and migration; vodun and Rastafarianism, and the literary arts. PREREQUISITE: upper-division standing.

HILA 127. History, Culture, and Power (4)  
What is the historical evidence on the relationship between culture and power: from the indigenous 'national' revolution (eighteenth century) to 'indigenismo'; from indigenous upheavals in Ecuador, Bolivia, Mexico and Peru, to the intellectual 'archaic utopia' (twentieth century). PREREQUISITE: upper-division standing or instructor consent.

HILA 131. A History of Mexico (4)  
A century of Mexican history, 1821-1924: the quest for political unity and economic solvency, the forging of a national identity, the Gilded Age and aftermath, the ambivalent Revolution of Zapata and his enemies. PREREQUISITE: upper-division standing or consent of instructor.

HILA 132. A History of Contemporary Mexico (4)  
The paradox of a conservative state as heir to a legendary social upheaval, with special emphasis on the mural art renaisance, the school crusade, the economic dilemma, and the failure to eradicate poverty and inequality. Lectures and discussion. PREREQUISITE: upper-division standing or consent of instructor.

Colloquia  
The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HILA 163/263. The History of Chile 1880–Present (4)  
The course surveys Chile's basic developments beginning with the era of nitrate exports. Students will have the opportunity to address a specific issue of their own choosing and develop the topic for class presentation and a final paper. Graduate students are expected to submit a more substantial piece of work. PREREQUISITE: upper-division standing or consent of instructor.

HILA 164/264. Women's Work and Family Life in Latin America (4)  
Insiders or outside of the household, women have always worked. Where do we find Latin American women, how has the labor market changed, how was and is women's work perceived, what were the consequences of changing work patterns on family life? Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. PREREQUISITE: upper-division standing or consent of instructor and department stamp.

HILA 165/265. Scholarship on Latin American History in the Colonial Period (4)  
Introduction to the historiography on Latin America for the colonial period from Spanish and Portuguese conquests to the Wars of Independence. Requirements will vary for undergraduate, M.S., and Ph.D. students. Graduate students are required to submit an additional research paper. PREREQUISITE: upper-division standing or consent of instructor; reading knowledge of Spanish; department stamp.

HILA 166/266. Scholarship on Latin American History in the Nineteenth Century (4)  
Introduction to the historiography on Latin America for the nineteenth century: world economy, nation-state building, agrarian processes, incipient industrialization, political and cultural thought, and social structure. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit an additional research paper. PREREQUISITE: upper-division standing or consent of instructor; reading knowledge of Spanish; department stamp.

HILA 169/269. Scholarship on Latin American History in the Twentieth Century (4)  
Introduction to the historiography on Latin American for the twentieth century: agrarian revolution, urbanization, industrialization by import substitution, the political left, social development, and international relations. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit an additional research paper. PREREQUISITE: upper-division standing or consent of instructor; reading knowledge of Spanish; department stamp.

HILA 199. Independent Study in Latin American History (4)  
Directed readings for undergraduates under the supervision of various faculty members. PREREQUISITE: consent of instructor and department stamp.

NORTH EAST

Lecture Courses

HINE 101A. History of Ancient Mesopotamia (4)  
Course will trace the political and cultural history of Mesopotamia (modern Iraq), beginning with rise of cities in the fourth millennium B.C., continuing through the Sumerian, Akkadian, Assyrian, and Babylonian periods, and ending with the fall of Babylon (539 B.C.E.). PREREQUISITE: upper-division or instructor consent.

HINE 102. The History of China 1880–Present (4)  
The course surveys China's basic developments beginning with the era of nitrate exports. Students will have the opportunity to address a specific issue of their own choosing and develop the topic for class presentation and a final paper. Graduate students are expected to submit a more substantial piece of work. PREREQUISITE: upper-division standing or consent of instructor.
HINE 103. The Jewish Diaspora in Antiquity (4)
The Jews outside their homeland and in pre-Islamic times, concentrating on the Greco-Roman West and the Parthian-Sasanian East. Topics include assimilation and survival; anti-Semitism and missionizing; patterns of organization and autonomy; cultural and religious developments. **Prerequisite:** upper-division standing. +

HINE 108. The Middle East before Islam (4)
The peoples, politics, and cultures of Southwest Asia and Egypt from the sixth century B.C.E. to the seventh century C.E. The Achemenid Empire, the Ptolemaic and Seleucid kingdoms, the Roman Orient, the Parthian and Sasanian states. **Prerequisite:** upper-division standing. +

HINE 109B. Learning to Read Biblical Hebrew II (4)
Continued study of the language of the Bible with emphasis on advanced grammar and vocabulary. **Prerequisite:** HINE 109A. Offered during the summer.

HINE 111. Anthropology and the Hebrew Bible (4)
This course approaches the Hebrew Bible (Old Testament) from the perspective of cultural anthropology. Institutions studied will include the family, rites of passage, food taboos, warfare, animism, demons, sorcery, and animal sacrifice. **Prerequisite:** upper-division or instructor consent. Not offered in 2008–09. +

HINE 112A. Great Stories from the Hebrew Bible (4)
A close reading of select prose narratives from the Hebrew Bible/Old Testament. **Prerequisite:** upper-division standing or consent of instructor. +

HINE 112AXL. Great Stories from the Hebrew Bible/ Foreign Language (1)
Students with advanced Hebrew can study the texts in HINE 112A in the original language. **Prerequisite:** upper-division standing or consent of instructor.

HINE 112B. Great Poems from the Hebrew Bible (4)
A close reading of select poetic passages from the Hebrew Bible/Old Testament. **Prerequisite:** upper-division standing or consent of instructor. +

HINE 112BXL. Great Poems from the Hebrew Bible/ Foreign Language (1)
Students with advanced Hebrew can study the texts in HINE 112B in the original language. **Prerequisite:** upper-division standing or consent of instructor.

HINE 113. Ancient Near East Mythology (4)
Course will analyze and compare major myths from Egypt, Israel, Ugarit, and Mesopotamia, employing a variety of modern approaches. **Prerequisite:** upper-division standing or consent of instructor. +

HINE 114. History of the Islamic Middle East (4)
A survey of the Middle East from the rise of Islam to the region's economic, political, and cultural integration into the West (mid-nineteenth century). Emphasis on socioeconomic and political change in the early Arab empires and the Ottoman state. +

HINE 115. Islamic Civilization (4)
An introductory survey of Islamic civilizations. History and society, law, science and philosophy, arts and letters, and architecture. A broad picture of the dynamics and achievements of Islamic societies over time. **Prerequisite:** upper-division standing or consent of instructor. +

HINE 116. The Middle East in the Age of European Empires (1798–1914) (4)
Examines the contacts of the late Ottoman Empire and Qajar Persia with Europe from the Napoleonic invasion of Egypt to World War I, the diverse facets of the relationship with the West, and the reshaping of the institutions of the Islamic states and societies.

HINE 118. The Middle East in the Twentieth Century (4)
An introduction to the history of the Middle East since 1914. Themes such as nationalism, imperialism, the oil revolution, and religious revivalism will be treated within a broad chronological and comparative framework drawing on the experience of selected countries.

HINE 119. Contemporary Middle East Conflicts (4)
An examination of post-WWII Middle East conflicts, including the Israeli-Arab conflicts, the Lebanese Civil War, and the Gulf War of the 1980s. The roles of the superpowers and Middle Eastern states during the period.

HINE 122. Politicization of Religion in the Middle East (4)
Islamic formulations of dissent from the nineteenth century to our day; social, cultural, and political movements inflected by religion; domestic, interregional, and international dimensions with emphasis on the Arab East, Iran, and Turkey. **Prerequisite:** upper-division standing. +

HINE 123. The Emergence of Middle East Nationalisms (4)
A survey of nationalism in the modern Middle East with reference to current theories of identity formation in Europe and South Asia. The course will examine shifting identities in the Ottoman Empire, its Turkish and Arab successor states, and Iran. **Prerequisite:** upper-division standing or consent of instructor.

HINE 126. Iranian Revolution in Historical Perspective (4)
Iran’s social and political history in the twentieth century with emphasis on the Constitutional movement of the late Qajar period, formation and development of the Pahlavi state, anatomy of the 1978-79 Revolution, and a survey of the Islamic Republic. **Prerequisite:** upper-division or instructor consent.

HINE 127. History of Modern Turkey (4)
Eastern problems on the example of Turkey with special attention to collective identities, state-society dynamics, foreign and regional policies, and varieties of modernity. **Prerequisite:** upper-division standing or consent of instructor.

HINE 151B/251B. Introduction to Aramaic Dialects (4)
Study of Ancient Inscriptional Persian Imperial and Syriac Aramaic. +

HINE 152A/252A. The Evolution of the Northwest Semitic Dialects (4)
Principles of historical linguistics, application to the languages of the ancient Levant. **Prerequisites:** knowledge of at least one Semitic language; a course in general linguistics is also desirable. +

HINE 152B/252B. Introduction to Uguritic (4)
Decipherment of Ugurtic tablets, history, and culture of ancient Ugarit, study of Ugaritic mythic texts. +

HINE 152C/252C. Advanced Uguritic (4)
Continued study of Uguritic literature, comparison with Canaanite inscriptions. +

HINE 153A/253A. Introduction to Akkadian Language and Mesopotamian Culture (4)
Students study cuneiform script and elements of Babylonian-Assyrian grammar, as well as the history of Ancient Mesopotamia. +

HINE 153B/253B. Continued Akkadian Language (4)
Student begin to read and analyze ancient Mesopotamian texts from a variety of genres. +

HINE 153C/253C. Advanced Akkadian Language (4)
Continued study of Mesopotamian literature and history. +

Colloquia
The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HINE 161/HINE 261. Seminar in the Hebrew Bible (4)
Systematic reading and rendering of the books of the Hebrew Bible in order. Each time the class is taught, we will look at a different book. Adequate knowledge of Biblical Hebrew is required. Graduate students will have to write an extra paper or exam. **Prerequisites:** Judaic Studies 103, graduate standing, or consent of instructor. +

HINE 162/262. Anthropology and the Hebrew Bible (4)
This course approaches the Hebrew Bible (Old Testament) from the perspective of cultural anthropology. Institutions studied will include the family, rites of passage, food taboos, warfare, animism, demons, sorcery, and animal sacrifice. Formerly HINE 111; students may not receive credit for HINE 111 and HINE 162/262. Graduate students will be required to complete an extra paper. **Prerequisite:** upper-division or graduate standing and department stamp. +

HINE 163/263. Topics in the Ancient World (4)
Topics on the ancient world will vary from year to year. Requirements will vary for undergraduate and graduate students. Graduate students will submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. **Prerequisite:** upper-division or graduate standing and departmental stamp. +

HINE 166/266. Nationalism in the Middle East (4)
Growth of nationalism in relation to imperialism, religion, and revolution in the nineteenth- and twentieth-century Middle East. Emergence of cultural and political ethnic consciousness in the Ottoman Empire. Comparative study of Arab, Iranian, and Turkish nationalism as well as Zionism. **Prerequisite:** department stamp or consent of instructor.

HINE 170/270. Special Topics in Jewish History (4)
This course studies a period or theme in Jewish history. Topics will vary from year to year. **Prerequisite:** department stamp required.

HINE 181/281. Problems in the Study of Hebrew Manuscripts (4)
Detailed study of a portion of biblical text. Focus on text-critical and source-critical problems. **Prerequisite:** upper-division or graduate standing. +

HINE 186/286. Special Topics in Middle Eastern History (4)
Focused study of historical roots of contemporary problems in the Middle East: Islamic modernism and Islamist movements; contacts with the West; ethnic and religious minorities; role of the military; economic resources and development. Department stamp and permission of instructor.

HINE 199. Independent Study in Near Eastern History (4)
Directed readings for undergraduates under the supervision of various faculty members. **Prerequisite:** consent of instructor.

HISTORY OF SCIENCE

Lecture Courses
HISC 101A. Science in the Greek and Roman World (4)
A survey of the principal features of ancient science: the origins of Greek naturalism, the criticism of magic, notions of quantification. Topics may include astronomy, astrology, geography, geometry, optics, mechanics and physical theory, classification of living beings, and human cognition. Emphasis on primary sources, such as the presocratic natural philosophers: Plato, Aristotle, Euclid, Archimedes, Ptolemy, Pliny Galen, and Proclus. **Prerequisite:** upper-division standing. +

HISC 101B. Medieval Science in the Latin West, ca. 500–1500 (4)
Styles of the medieval scientific imagination. Reception and assimilation of the learning of the ancient world, especially Aristotle, Plato, Euclid, Galen, and Ptolemy. Struggles to reconcile Greek, Arabic, and Christian ideals of knowledge. Rise of universities. Natural philosophy, logic, geometry, optics, astronomy, astrology, mechanics, geography, and classification of living beings. **Prerequisite:** upper-division standing. +

HISC 101C. Early Modern Science (4)
Early forms of modern science, mid-15th to 17th centuries. The revolution in printing. Sites of knowledge-making: university and court cultures, museums, academies.
Astrology, astronomy, literature of the heavens, prophecy and apocalyptic expectation. Natural history, medicine, alchemy, magic and the physico-mathematical sciences.

**HISC 102. Technology in World History (4)**

Technology as an agent of change. How have humans harnessed the power of nature? What factors have contributed to successes and failures? How has technology changed human life? How should we evaluate the quality of these changes? **PREREQUISITE:** upper-division standing.

**HISC 103. Gender and Science in Historical Perspective (4)**

History of women’s struggles and strategies for access and equality in professional science. Questions related to gender bias in science—as a social institution and as an epistemological enterprise—will be addressed in light of the historical and biographical readings. **PREREQUISITE:** upper-division standing.

**HISC 104. History of Popular Science (4)**

Historical aspects of the popularization of science. The changing relation between expert science and popular understanding. The reciprocal impact of scientific discoveries and theories, and popular conceptions of the natural world. **PREREQUISITE:** upper-division standing or consent of instructor.

**HISC 105. History of Environmentalism (4)**

History of human effects on the natural environment, with emphasis on understanding the roles of the physical and biological sciences in providing insights into environmental processes. **PREREQUISITE:** upper-division standing or consent of instructor.

**HISC 106. The Scientific Revolution (4)**

A cultural history of the formation of early modern science in the sixteenth and seventeenth centuries: the social forms of scientific life; the construction and meaning of the new cosmologies from Copernicus to Newton; the science of politics and the politics of science; the origins of experimental practice; how Sir Isaac Newton restored law and order to the West. **PREREQUISITE:** upper-division standing. +

**HISC 107. The Emergence of Modern Science**

The development of the modern conception of the sciences, and of the modern social and institutional structure of scientific activity, chiefly in Europe, during the eighteenth and nineteenth centuries. **PREREQUISITE:** upper-division standing.

**HISC 108. Life Sciences in the Twentieth Century (4)**

The history of twentieth-century life sciences, with an emphasis on the way in which model organisms such as fruit flies, guinea pigs, bacteriophage, and zebra fish shaped the quest to unlock the secrets of heredity, evolution, and development. **PREREQUISITE:** upper-division standing or consent of instructor.

**HISC 109. Science in Western Civilization (4)**

An introduction to scientific thought as it relates to Western culture. Among the topics considered: Aristotelian, medieval, and Renaissance science; the scientific revolution; the Newtonian universe; science and the Enlightenment; evolution; science and the modern state; technoscience and biotechnology. **PREREQUISITE:** upper-division standing or consent of instructor.

**HISC 111. The Atomic Bomb and the Atomic Age (4)**

Development of nuclear science and weapons—1930s to present—including the discovery of radioactivity and fission, the Manhattan project, the bombings of Hiroshima and Nagasaki and end of WWII, the H-bomb, and legacies of nuclear proliferation, environmental damage, and radioactive waste. **PREREQUISITES:** upper-division standing or consent of instructor.

**HISC 114. The Darwinian Legacy (4)**

The Origin of Species by means of Natural Selection, and its scientific, religious, and political legacies. Topics include social Darwinism, eugenics, Nazi racial hygiene, population control, neo-Malthusianism in the modern environmental movement. **PREREQUISITE:** upper-division standing.

**HISC 115. History of Modern Medicine (4)**

Exploring the origin of clinical method, the hospital, internal surgery, and the medical laboratory, as well as the historical roots of debates over health-care reform, genetic determinism, and the medicalization of society. **PREREQUISITE:** upper-division standing or consent of instructor.

**HISC 116. History of Bioethics (4)**

The story behind the postwar rise of bioethics—medical technology, mass media, the development of novel technologies for saving and prolonging life, the emergence of new diseases, the unprecedented scope for manipulation opened up by biology. **PREREQUISITE:** upper-division standing or consent of instructor.

**HISC 117. History of the Neurosciences (4)**

A survey of the history of the neurosciences from the seventeenth century to the present, exploring the political, philosophical, cultural, aesthetic and ethical aspects of research into the workings of the human brain. **PREREQUISITE:** upper-division standing or consent of instructor.

**HISC 118. History of Sexology (4)**

Analyzes the history of sexology as a series of episodes in the science of human difference, from the European reception of the first translation of the Kama Sutra in 1883 to the search for the “gay gene” in the 1990s. **PREREQUISITE:** upper-division standing or consent of instructor.

**HISC 120A. Technology in America I (4)**

The role of technology in American history through the Civil War. Indigenous and colonial development, transportation infrastructures, and industrialization are explored to understand the connections among technology, society, and culture. **PREREQUISITE:** upper-division standing.

**HISC 120B. Technology in America II (4)**

The role of technology in the history of the United States since the Civil War. Mass production and consumption, information technologies, and the changing role of inventors and engineers are explored to understand the connections among technology, society, and culture. **PREREQUISITE:** upper-division standing.

**HISC 121. Listening In: Sound, Music, and Noise, in America (4)**

Explores the cultural meaning of sound by examining the history of the phonograph, radio, movies, Muzak, noise-abatement, and architectural acoustics. What do these technologies fulfill? How did they reinforce and challenge the society in which they were developed? **PREREQUISITE:** upper-division standing.

**HISC 130. Technology in the Twentieth Century (4)**

Major technological developments in the twentieth century, including the rise and decline of technologies, unexpected hazards and unanticipated consequences, and why some technologies fail. **PREREQUISITE:** upper-division standing.

**HISC 131. Science, Technology, and Law (4)**

Science and law are two of the most powerful establishments of modern Western culture. Science organizes our knowledge of the world; law directs our action in it. We will explore the historical roots of the interplay between them. **PREREQUISITE:** upper-division standing.

**Colloquia**

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

**HISC 160/260. Historical Approaches to the Study of Science (4)**

Major recent publications in the history of science will be discussed and analyzed; the topics will range in period from the sixteenth century to the twentieth, and will deal with all major branches of natural science. Special topics. Topics will vary from year to year. **PREREQUISITE:** consent of instructor.

**HISC 161A/261A. Seminar in Newton and Newtonianism (4)**

This course focuses on the single most important figure of the scientific revolution, Isaac Newton, and on his science and philosophy which set the frame of reference for physics and general science until the twentieth century. Graduate students are required to submit an additional piece of work. **PREREQUISITE:** upper-division or graduate standing and department stamp.

**HISC 163/263. History, Science, and Politics of Climate Change (4)**

The complex historical development of human understanding of global climate change, including key scientific work, and the cultural dimensions of proof and persuasion. Special emphasis on the differential political acceptance of the scientific evidence in the U.S. and the world. Graduate students are required to submit an additional paper. **PREREQUISITE:** upper-division or graduate standing. Department stamp required.

**HISC 164/264. Topics in the History of the Physical Sciences (4)**

Intensive study of specific problems in the physical (including chemical and mathematical) sciences, ranging in period from the Renaissance to the twentieth century. Topics vary from year to year, and students may therefore repeat the course for credit.

**HISC 165. Topics in Twentieth-Century Science and Culture (4)**

This seminar explores topics at the interface of science, technology, and culture, from the late nineteenth century to the present. Topics change yearly; may be repeated for credit with instructor's permission. **PREREQUISITE:** upper-division standing or consent of instructor.

**HISC 166/266. The Galileo Affair (4)**

Galileo’s condemnation by the Catholic Church in 1633 is a well-known but misunderstood episode. Was Galileo punished for holding dangerous scientific views? Personal arrogance? Disobedience? Religious transgressions? Readings in original sources, recent historical interpretations. Graduate students will be expected to submit a more substantial piece of work.

**HISC 167/267. Gender and Science (4)**

Why have women been traditionally excluded from science? How has this affected scientific knowledge? How have scientists constructed gendered representations not only of women, but also of science and nature? We will address these questions from perspectives including history, philosophy, and psychoanalytic theory. **PREREQUISITE:** upper-division standing or consent of instructor.

**HISC 168/268. The Extraterrestrial Life Question (4)**

The changing fortunes of the belief in the existence of life beyond the Earth (pluralism) from 1750–present as it evolved from a marginal speculation to a central scientific question with wide-ranging consequences for traditional religious belief-systems. Graduate students will be expected to submit a more substantial piece of work. **PREREQUISITE:** upper-division or graduate standing or consent of instructor.

**HISC 170/270. Topics in the History of Science and Technology (4)**

This seminar explores topics at the interface of science, technology, and society, ranging from the seventeenth century to the twentieth. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit an additional paper. **PREREQUISITE:** upper-division standing or consent of instructor.

The history of the built environment in the United States, from skyscrapers to suburbs, canals and railroads to factories and department stores. The technological history of structures and infrastructures, and the social and cultural values that have been “built into” our material environment. Graduate students are required to submit an additional material. Graduate students are required to submit an additional paper. **PREREQUISITE:** upper-division standing or consent of instructor.

**HISC 173/273. Seminar on Darwin and Darwinisms (4)**

Examines evolutionary theory before Darwin, the development of the theory of natural selection, the ongoing challenge from Lamarckism, nineteenth-century social Darwinism, the emergence of the neo-Darwinist synthesis, and the recent controversies over evolutionary psychology and creationism. Graduate students are expected to
submit an additional paper. **PREREQUISITE:** upper-division or graduate standing and department stamp.

**HISC 175/275. The Historical Sciences in the Nineteenth Century (4)**

A critical analysis of the host of "historical sciences" that developed over the course of the long nineteenth century, from archaeology and palaeontology to psychoanalysis and craniotomy, including the science of history itself. Graduate students will be required to submit an additional paper. **PREREQUISITE:** upper-division or graduate standing and department stamp.

**HISC 199. Independent Study in the History of Science (4)**

Directed readings for undergraduates under the supervision of various faculty members. **PREREQUISITE:** consent of instructor.

**TOPICS**

**Courses**

**HITO 87. Special Freshman Seminar (1)**

A seminar intended for exposing undergraduate students, especially freshmen, to exciting research programs conducted by department faculty. Enrollment is limited. Topic will vary quarter by quarter.

**HITO 99. Independent Study on History Topics (1, 2, 3, 4)**

Independent study for undergraduates with lower-division standing under the supervision of a member of the faculty on a topic to be determined in the regular curriculum. Students must make arrangements with individual faculty members. **PREREQUISITE:** lower-division standing, completion of thirty units of UCSD undergraduate study, a minimum UCSD G.P.A. of 3.0, and a completed and approved Special Studies form.

**HITO 102. Religious Traditions: East Asian Religious Traditions (4)**

Introduction to the major religious traditions of Asia: Hinduism, Buddhism, Taoism, Shinto, and Confucianism. The course will focus on one religion each year. Since special topics will vary from year to year, the course may be repeated for credit three times. **PREREQUISITE:** upper-division standing. +

**HITO 104. The Jews and Judaism in the Ancient and Medieval Worlds (4)**

The political and cultural history of the Jews through the early modern period. Life under ancient empires, Christianity and Islam. The post-biblical development of the Jewish religion and its eventual crystallization into the classical, rabbinic model. +

**HITO 105. The Jews and Judaism in the Modern World (4)**

Topics include the political emancipation of the Jews of Europe; the emergence of Reform, Conservative, and Modern Orthodox Judaism; hasidism; modern anti-semitism; Jewish socialism; Zionism; the Holocaust; modern anti-Semitism; Jewish minorities has sustained a global conversation about the unprecedented experience and an abiding threat. Graduate students are required to submit a more substantial piece of work. **PREREQUISITE:** upper-division or graduate standing and department stamp.

**HITO 174. The Foundations of Constitutional Law (4)**

Medieval and early modern origins of constitutional ideas and institutions. The question of the course is: Where did the ideas and institutions embodied in the constitutions of the U.S. (1787) and France (1791) come from? Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. **PREREQUISITE:** department stamp or consent of instructor.

**HITO 180/280. Housing in the Developing World (4)**

The majority of the world’s citizens now live in cities; this course examines the evolution of housing architecture and finance in the twentieth-century context of rapid urbanization, dissolving empire, industrialization, and globalization. Graduate students will submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. **PREREQUISITE:** upper-division or graduate standing and consent of instructor.

**HITO 192. Senior Seminar in History (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in history (at the upper-division level); Topics will vary from quarter to quarter. Senior Seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **PREREQUISITE:** department stamp and/or consent of instructor.

Course attached to six-unit internship taken by student participating in the UCDC program. Involves weekly seminar meetings with faculty and teaching assistant and a substantial historical research paper or graduate regular curriculum stamp required; participating in UCDC program.

**HITO 194. History Honors (4)**

A program of independent study providing candidates for history honors an opportunity to develop, in consultation with an advisor, a preliminary proposal for the honors essay. An IP grade will be awarded at the end of this quarter. A final grade will be given for both quarters at the end of HITO 195. **PREREQUISITE:** consent of instructor. Department stamp required.

**HITO 195. The Honors Essay (4)**

Independent study under the supervision of a faculty member leading to the preparation of an honors essay. A letter grade for both HITO 194 and 195 will be given at the completion of this quarter: **PREREQUISITE:** consent of instructor. Department stamp required.

**HITO 196. Honors Seminar (1)**

The nature and uses of history are explored through the study of the historian’s craft based on critical analysis of historical literature relating to selected topics of concern to all historians. Required of all candidates for history honors and open to other interested students with the instructor’s consent. Department stamp required.

**HITO 198. Directed Group Study (1-4)**

Directed group study on a topic not generally included in the regular curriculum. Students must make arrangements with individual faculty members. (P/NP grades only). **PREREQUISITE:** upper-division standing, completion of at least ninety units of UCSD undergraduate study, a minimum G.P.A. of 2.5, and a completed and approved Special Studies form.

**HITO 199. Independent Study for Undergraduates (4)**

Independent study on a topic not generally included in the regular curriculum. Students must make arrangements with individual faculty members. (P/NP grades only). **PREREQUISITE:** upper-division standing and consent of instructor.
UNITED STATES
See History of Science for more U.S. courses (HISC 105, HISC 108, HISC 111).

Lecture Courses
HUIS 100. Colonial Period to 1763 (4)
Political and social history of the thirteen colonies: European background, settlement and expansion, beginnings of culture, and the imperial context. PREREQUISITE: upper-division standing.

HUIS 101. The American Revolution (4)
Causes and consequences of the revolution: intellectual and social change, the problems of the new nation, the Constitution, and the origins of political parties. PREREQUISITE: upper-division standing.

HUIS 103. The World We Have Lost: Social History of Early America (4)
Selected themes in early American social history— including race, gender, faith, economy, and age—from an anthropological perspective. What distinguished it from our own world? PREREQUISITE: upper-division standing.

HUIS 104. The Revolutionary Atlantic (4)
The upheavals that transformed the early modern Atlantic emphasizing the United States, Caribbean, and Great Britain. Topics: struggles to define democracy, the reorganization of the Atlantic state system, the Enlightenment, and international responses to the American and French Revolutions. PREREQUISITE: upper-division standing.

HUIS 106B. American Foreign Relations, since 1900 (4)
Examines foreign relations of the United States from acquisition of a formal overseas empire in the aftermath of the Spanish-American War to the end of the Cold War. Topics cover a range of public and private interactions with the world. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 107. The Early Republic (4)
This course will examine the transformation of American society and politics between the American Revolution and the Jacksonian period. Topics to be considered include the emergence of domesticity, the development of political parties, the expansion of capitalist relations, the debate over slavery, the early labor movement, and the origins and motivations of middle-class reform.

HUIS 108A/ETHN 112A. History of Native Americans in the United States I (4)
This course examines the history of the Native Americans in the United States with emphasis on the lifeways, mores, warfare, cultural adaptation, and relations with the European colonial powers and the emerging United States until 1870. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 108B/ETHN 112B. History of Native Americans in the United States II (4)
This course examines the history of the Native Americans in the United States with emphasis on the lifeways, mores, warfare, cultural adaptation, and relations with the United States from 1870 to the present. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 109. Intellectual History: From Contact to Civil War (4)
An exploration of cultural, political, religious, and social thought in early America. Emphasis will be placed on the trans-Atlantic context and on the relationships between intellectual authority and authority. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 114. California History (4)
This course examines California history from 1800 onward, with an emphasis on social, economic, and political change. The course will explore the effect of national and international events as well as the ways in which California—the ideal and the real—fits into the American experience.

HUIS 115. History of Sexuality in the United States (4)
Constructions of sex and sexuality in the United States from the time of pre-contact Native America to the present, focusing on sexual behaviors, sexual ideologies, and the uses of sexuality for social control.

HUIS 116. War and American Society (4)
The connection between social relations and America's wars. Ways that American society has influenced decisions to prepare for or go to war, the impact of war on class relations and ideologies of race and gender. PREREQUISITE: upper-division standing.

HUIS 117. History of Los Angeles (4)
This course examines the history of Los Angeles from the early nineteenth century to the present. Particular issues to be addressed include urbanization, ethnicity, politics, technological change, and cultural diversification.

HUIS 120. Peace Movements in America (4)
Topics will include the Quaker origins of the American peace movement and examples of opposition to wars in the twentieth century from World Wars I and II, Vietnam, anti-nuclear movements, and intervention in Central America to Iraq. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 122. History and Hollywood: America and the Movies Since the Great Depression (4)
A lecture-discussion course utilizing written texts and films to explore major themes in American politics and culture from the Great Depression through the 1990s. Topics will include the wars of America, McCarthyism, the counterculture of the 1960s, and the transformation of race and gender relations. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 124/ETHN 125. Asian American History
Explore how Asian Americans were involved in the political, economic, and cultural formation of United States society. Topics include migration; labor systems; gender, sexuality and social organization; racial ideologies and anti-Asian movements; and nationalism and debates over citizenship.

HUIS 128. African-American Legal History (4)
This course sketches the shifting experience persons of African descent have had with the law in the United States. Films, cases, articles, and book excerpts are used to convey the complex nature of this four hundred year journey. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 130. Cultural History from 1607 to the Civil War (4)
This course will explore connections between American culture and the transformations of class relations, gender ideology, and political thought. Topics will include the transformations of religious perspectives and practices, republican art and architecture, artisan and working class culture, the changing place of art and artists in American society, antebellum reform movements, anticyavery and proslavery thought. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 131. Cultural History from the Civil War to the Present (4)
This course will focus on the transformation of work and leisure, and the development of consumer culture. Students will consider connections between culture, class relations, gender ideology, and politics. Topics will include labor radicalism, Taylorism, the development of organized sports, the rise of department stores, the transformation of middle-class sexuality, the growth of commercial entertainment, and the culture of the cold war.

HUIS 132. Civil War-Reconstruction in Pop Culture (4)
This course considers how cultural processes have shaped histories of the Civil War and Reconstruction. Students will analyze the relationship between popular culture and major themes of the era through the use of literature, texts, film, television, and print. Students may not receive credit for both HUIS 132 and HUIS 1325. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 133. The Golden Age of Piracy (4)
This interdisciplinary lecture course focuses on the history and literature of global piracy in the English-speaking world from Sir Francis Drake to Blackbeard and how this Golden Age was remembered in the popular fiction of the nineteenth and twentieth centuries. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 134. From Be Bop to Hip Hop: African American Cultural History Since 1945 (4)
Explore the politics of black culture in the postwar period. Topics include: the dynamic interplay of social factors (migration, civil rights, black power, deindustrialization, globalization) and the production of African American culture, including music, film, and literature. PREREQUISITE: upper-division standing or consent of instructor.

An examination of interactions among the peoples of western Europe, Africa, and the Americas that transformed the Atlantic basin into an interconnected “Atlantic World.” Topics will include maritime technology and the European Age of Discovery; colonization in the Americas; the beginnings of the transatlantic slave trade and the early development of plantation slavery in the New World. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 135B/ETHN 170B. Slavery and the Atlantic World (4)
The development of the Atlantic slave trade and the spread of racial slavery in the Americas before 1800. Explores the diversity of slave labor in the Americas and the different slave cultures African Americans produced under the constraints of slavery. PREREQUISITE: upper-division standing or consent of instructor.

The social, political, economic, and ideological pressures generated during the international conflicts of the twentieth century have had an enormous impact on American life. The course examines how the pressures of “total war” and “cold war” shaped the African American experience in both war and peacetime. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 139/ETHN 149. African-American History in the Twentieth Century (4)
This course explores the transformation of African America across the expanse of the long twentieth century: imperialism, migration, urbanization, desegregation, and deindustrialization. Special emphasis will be placed on issues of culture, international relations, and urban politics. PREREQUISITE: upper-division standing.

HUIS 140/Econ 158A. Economic History of the United States I (4)
The United States as a raw materials producer, as an agrarian society, and as an industrial nation. Emphasis on the logic of the growth process, the social and political tensions accompanying expansion, and nineteenth- and early twentieth-century transformations of American capitalism.

HUIS 141/Econ 158B. Economic History of the United States II (4)
The United States as modern industrial nation. Emphasis on the logic of the growth process, the social and political tensions accompanying expansion, and twentieth-century transformations of American capitalism.

HUIS 142. Great Trials of the Anglo-American World (4)
Examines important constitutional, criminal, and civil trials in English and American courts from the early modern period to the present. The topics will vary from year to year. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 142A. United States in the Twentieth Century, 1900–1945 (4)
Examines the political, economic, and social history of the American people from the turn of the twentieth century to the end of World War II. Topics: progressive movement, impact of the Great Depression, and the consequences of two world wars. PREREQUISITE: upper-division standing or consent of instructor.

HUIS 142B. United States in the Twentieth Century, 1945 to the Present (4)
Examines the political, economic and social history of the American people from the end of World War II to present. Topics: origins of the Cold War, struggle for racial justice and the rise of American conservatism since the 1980s. PREREQUISITE: upper-division standing or consent of instructor.
HIUS 146. Race, Riots, and Violence in the U.S. (4) Examining the history of urban riots in the U.S. since the late nineteenth century. Exploring how different groups of Americans have constructed competing notions of race, gender, labor, and national belonging by participating in street violence. **PREREQUISITE:** upper-division standing or consent of instructor.

HIUS 147/USP 165. History of the American Suburb (4) This lecture explores the development of suburbs in America from the early nineteenth century to the contemporary era. Topics include suburban formation, class, ethnic and racial dimensions, government influences, social life, and cultural responses to suburbia. The class will explore competing theories of suburbia as it surveys the major literature.

HIUS 148/USP 103. The American City in the Twentieth Century (4) This course focuses on the phenomenon of modern American urbanization. Case studies of individual cities will help illustrate the social, political, and environmental consequences of rapid urban expansion, as well as the ways in which urban problems have been dealt with historically.

HIUS 149. The United States in the 1960s (4) An overview of the social and political developments that polarized American society in the tumultuous decade of the 1960s. Themes include the social impact of the post-war "baby boom" and foreign political and military operations of the Cold War; the evolution of the civil rights and women's movements; and the transformation of American popular culture.

HIUS 150. American Legal History to 1865 (4) The history of American law and legal institutions. This quarter focuses on crime and punishment in the colonial era, the emergence of theories of popular sovereignty, the forging of the Constitution and American federalism, the relationship between law and economic change, and the crisis of slavery and Union. **PREREQUISITE:** upper-division standing. +

HIUS 151. American Legal History since 1865 (4) The history of American law and legal institutions. This course examines race relations and law, the rise of big business, the origins of the modern welfare state during the Great Depression, the crisis of civil liberties produced by two world wars and McCarthyism, and the Constitutional revolution wrought by the Warren Court. HIUS 150 is not a prerequisite for HIUS 151. **PREREQUISITE:** upper-division standing.

HIUS 152A. A Constitutional History of the United States to 1865 (4) The historical development of constitutional thought and practice in the United States from the era of the American Revolution to the Civil War, with special attention to the role of the Supreme Court under Chief Justices Marshall and Taney. **PREREQUISITE:** upper-division standing or consent of instructor.

HIUS 152B. A Constitutional History of the United States Since 1865 (4) The historical development of constitutional thought and practice in the United States since 1865, with special attention to the role of the Supreme Court from Chief Justices Chase to Renquist. **PREREQUISITE:** upper-division standing or consent of instructor. +

HIUS 153. American Political Trials (4) Survey of politicized criminal trials and impeachments from Colonial America to the 1990s. Examines politically-motivated prosecutions and trials that became subjects of political controversy, were exploited by defendants for political purposes, or had their outcomes determined by political considerations. +

HIUS 154. Western Environmental History (4) This course examines human interaction with the western environment and explores the distinction between the objective environmental understanding of science and the subjective views of history and historians. The course will also analyze the most compelling environmental issues in the contemporary West.

HIUS 155. From Zoot Suits to Hip Hop: Race and Popular Culture since World War II (4) Tracing popular cultural production and consumption in the U.S. since World War II. It history of popular culture as an arena where social relations are negotiated and where race, class, and gender identities are constructed, transformed, and contested. **PREREQUISITE:** upper-division standing or consent of instructor.

HIUS 155A. Religion and Law in American History: Foundations to the Civil War (4) Selected problems in the history of the relationship between religious beliefs and practice and legal institutions in the Anglo-American world. Topics include the English background, religion in the age of the American Revolution and the antebellum period. **PREREQUISITE:** upper-division standing or consent of instructor.

HIUS 155B. Religion and Law in American History: Civil War to the Present (4) Selected problems in the history of the relationship between religious beliefs and practice and legal institutions in America from the Civil War to the present. Topics include the religion and government aid; sacred duties and the law; and religion and cultural politics. **PREREQUISITE:** upper-division standing or consent of instructor.

HIUS 156. American Women, American Womanhood (4) This course explores the making of the ideology of womanhood in America in the early nineteenth century and contrasts the ideal with the historically diverse experience of women of different races and classes, from settlement to 1870. Topics include witchcraft, evangelicalism, cult of domesticity, sexuality, rise of industrial capitalism, and the transformation of women's work, Civil War, and the first feminist movement. **PREREQUISITE:** upper-division standing. +

HIUS 157. American Women, American Womanhood 1870 to Present This course explores the making of the ideology of womanhood in modern America and the diversity of American women's experience from 1870 to the present. Topics include the suffrage movement, the struggle for reproductive rights and the ERA; immigrant and working-class women, women's work, and labor organization; education, the modern feminist movement and the contemporary politics of reproduction, including abortion and surrogate motherhood. **PREREQUISITE:** upper-division standing.

HIUS 158/ETHN 130. Social and Economic History of the Southwest I (4) This course examines the history of the Spanish and Mexican borderlands (what became the U.S. South-west) from roughly 1540 to the end of the U.S.-Mexico War in 1848, focusing specifically on the area's social, cultural, and political development. +

HIUS 159/ETHN 131. Social and Economic History of the Southwest II (4) (Cross-listed as Ethnic Studies 131.) This course examines the history of the American Southwest from the U.S.-Mexican War in 1846-48 to the present, focusing on immigration, racial and ethnic conflict, and the growth of Chicano national identity.

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students. +

HIUS 160/260. Colloquium on the American Empire (4) Course explores the concept of an American Empire by examination of the literature on the topic. Particular attention will be on the work since 9/11/01. Students are expected to produce original work concerning the definition and/or existence of an American Empire. Graduate students are expected to submit an additional piece of work. **PREREQUISITE:** upper-division standing or consent of instructor. Department stamp required.

HIUS 162/262. The American West (4) This seminar will trace major themes in the history of the American West. Topics will include ethnicity, the environment, the role of the Supreme Court, economics, and shifting concepts surrounding the significance of the West. Graduate students will be required to submit additional work in order to receive graduate credit for the course. **PREREQUISITE:** department stamp required.

HIUS 164/264/ETHN 181. Topics in Comparative History of Modern Slavery (4) Slavery was both a thread of continuity in the history of the Americas and a distinctive institution in specific social settings. The purpose of this course is to examine and discuss readings that explore topics of the Caribbean and the United States. Because this course may be taken more than once for credit, with consent of the instructor. Requirements vary for undergraduates, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. **PREREQUISITE:** upper-division standing or consent of instructor. +

HIUS 166/266. Topics in Southern History (4) Specific topics will vary from year to year, including slavery, Civil War and Reconstruction, the Afro-American experience, race relations. +

HIUS 167/267/ETHN 180. Topics in Mexican-American History (4) This colloquium studies the racial representation of Mexican-Americans in the United States from the nineteenth century to the present, examining critically the theories and methods of the humanities and social sciences. **PREREQUISITE:** upper-division standing.

HIUS 168/268. Race, Resistance, and Cultural Politics (4) The course investigates race, resistance, and culture in the U.S. since the late nineteenth century. It interrogates how working-class whites, African Americans, Latinos, Asian Americans, and others have simultaneously challenged, shaped, and assimilated into U.S. society. Graduate students are required to submit an additional paper. **PREREQUISITE:** upper-division standing or consent of instructor. Department stamp required.

HIUS 169/269. Topics in American Legal and Constitutional History (4) A reading and discussion course on topics that vary from year to year, including American federalism, the history of civil liberties, and the Supreme Court. **PREREQUISITE:** consent of instructor.

HIUS 173/273. Topics in American Women's History (4) The specific content of the course will vary from year to year but will always analyze in depth a limited number of issues in American women's history. Special topics. Requirements will vary for undergraduate, M.A., Ph.D. students. Graduate students will be required to submit a more substantial piece of work. **PREREQUISITE:** consent of instructor or department stamp.

HIUS 176/276. Race and Sexual Politics (4) This seminar will explore the histories of sexual relations, politics, and cultures that both cross and define racial boundaries in the nineteenth and twentieth centuries. Reading will focus on the United States as well as take up studies sited in Canada and Latin America. Graduate students are expected to submit a more substantial piece of work. **PREREQUISITE:** upper-division standing or consent of instructor.

HIUS 178/278 The Atlantic World, 1400–1800 (4) This course explains the origins of the Atlantic as a zone of interaction for Europeans, indigenous Americans, and Africans, and evaluates the consequences of the interaction over several centuries by exploring contests over political power and economic/ideographic change. Graduate students will submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. **PREREQUISITE:** upper-division or graduate standing and departmental stamp. +
HU180/ETHN 134. Immigration and Ethnicity in Modern American Society (4)
Comparative study of immigration and ethnic-group formation in the United States from 1880 to the present. Topics include immigrant adaptation, competing theories about the experiences of different ethnic groups, and the persistence of ethnic attachments in modern American society. PREREQUISITE: upper-division standing.

HU181/281. Topics in Twentieth Century United States History (4)
A colloquium dealing with special topics in U.S. history from 1900 to the present. Themes will vary from year to year. PREREQUISITE: department stamp or consent of instructor.

HU183/283/ETHN 159. Topics in African American History (4)
A colloquium dealing with special topics in the history of people of African descent in the United States. Themes will vary from quarter to quarter. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students will be required to submit a more substantial piece of work. PREREQUISITE: upper-division standing or consent of instructor.

HU187/287. Topics in American Social History (4)
Colloquium on selected topics in American social history. Topics will vary from year to year, and the course may therefore be repeated for credit.

HU188/288. Topics in Culture and Politics (4)
Colloquium on select topics in culture and politics in the United States. Topics will vary from quarter to quarter. Graduate students will be required to submit an additional piece of work, based on original research, will be due in the second quarter. Seminar topics will vary. Reading knowledge of Chinese is expected. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. PREREQUISITE: 215A is a prerequisite for 215B.

HU190. Independent Study in United States History (4)
Directed readings for undergraduates under the supervision of various faculty members. PREREQUISITE: consent of instructor and department stamp required.

GRADUATE
Graduate standing is a prerequisite for all graduate-level courses. For more graduate courses (200-400), look at history undergraduate colloquia (courses numbered 160-190).

HIGR 200. History and Theory (4)
An introductory graduate course for students in all fields. Themes include cross-field historiography and theory, interdisciplinary approaches to history and historical method. (May be taken twice for credit, if the reading list is significantly different.)

HIGR 205. Feminist Historical Studies (4)
An introduction to feminist historical studies, this course is designed for interested graduate students from all history field groups. Graduate students from other disciplines are also encouraged to participate. The course will provide students a rigorous training in women's history, in the feminist theories that undergird that scholarship, and in the emergent field of gender analysis. The particular content of the course will change from year to year, but each course will include theoretical texts, historical case studies, and primary sources. Readings will be drawn from different times and places. This course is strongly recommended for those preparing minor fields in women's history. The course can be repeated twice for credit.

HIGR 210. Historical Scholarship on Modern Chinese History (4)
This course will introduce students to the monographic literature and the main historiographic controversies of modern Chinese history.

HIGR 211. Historical Scholarship on Modern Japanese History (4)
This course will introduce students to the monographic literature and the main historiographic controversies of modern Japanese history.

HIGR 212. Historical Scholarship on Modern East Asian History (4)
This course will introduce students to the monographic literature and the main historiographic controversies of modern East Asian history.

HIGR 213. Sources on Modern Chinese History (4)
An introduction to Chinese documentary sources and collections on Qing and Republican Republic. This course will introduce students to the language of Qing documents, and to the contents and uses of imperial documents and archives, documentary collections, periodicals, gazetteers, etc.

HIGR 215A-B. Research Seminar in Modern Chinese History (4-4)
A two-quarter research seminar in Chinese history. A paper, based on original research, will be due in the first quarter. Seminar topics will vary. Reading knowledge of Chinese is expected. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. PREREQUISITE: 215A is a prerequisite for 215B.

HIGR 216A-B. Research Seminar in Modern Japanese History (4-4)
A two-quarter research seminar in Japanese history. A paper, based on original research, will be due in the second quarter. Seminar topics will vary. Reading knowledge of Japanese is expected. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. PREREQUISITE: 216A is a prerequisite for 216B.

HIGR 217A. Historical Scholarship on Pre-Modern Chinese History: Foundations—China before Buddhism (4)
Ancient society differed dramatically from the imperial, bureaucratic, commercial, Buddhist China of later times. Yet the texts and artifacts of antiquity echoed powerfully through the centuries. We will study foundational texts, practices, and objects in their own contexts and also consider their later uses.

HIGR 217B. Historical Scholarship on Pre-Modern Chinese History: Han Dynasty through the Song Dynasty (4)
Course introduces history and society during the Chinese Middle Ages (c. 200 BCE–1200 CE), including the Han, Six, Tang, and Song dynasties. Examination of the birth and development of China’s great religions, Buddhism and Daoism, and the international culture of the Silk Road, and political and cultural systems that still resonate in China today.

HIGR 217C. Historical Scholarship on Pre-Modern Chinese History: Late Imperial Chinese History, 1200–1800 (4)
Course introduces major topics in scholarship on the Yuan, Ming, and Qing periods. It is intended to prepare graduate students to teach the history of late imperial China.

HIGR 218A. Graduate Seminar in Pre-Modern Chinese History (4)
Course subject varies among periods before 1900. 218A includes secondary scholarship studied for content, method, and structure; research methods and resources; and development of the research topic. In 218B students write an original research paper using primary sources. PREREQUISITES: graduate standing or consent of instructor. Reading knowledge of Chinese.

HIGR 218B. Graduate Seminar in Pre-Modern Chinese History (4)
Course subject varies among periods before 1900. 218A includes secondary scholarship studied for content, method, and structure; research methods and resources; and development of the research topic. In 218B students write an original research paper using primary sources. PREREQUISITES: graduate standing or consent of instructor. Reading knowledge of Chinese.

HIGR 230A-B. Research Seminar in Early Modern European History (4-4)
Selected topics in the period from the sixteenth century through the early nineteenth, with an emphasis on the theory and practice of socio-economic history. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. PREREQUISITE: 230A is a prerequisite for 230B.

HIGR 231A-B. Research Seminar in Modern European History (4-4)
Critical evaluation of selected topics in the period of modern Europe from the mid-nineteenth century to the present. Required for all beginning European history graduate students.

HIGR 235. Science, Empire, and Exploration (4)
Examines links between scientific work, particularly expeditions and exploration, and political programs of empire in the seventeenth to twentieth centuries. Topics: collecting expeditions as expressions of empire; role of colonial administrative networks in facilitating field-based investigations; relation between European and non-European knowledge systems.

HIGR 236A-B. Research Seminar in History of Science (4-4)
A two-quarter research seminar comprising intensive study of a specific topic in the history of science. The first quarter will be devoted to readings and discussions; the second chiefly to the writing of individual research papers. Topics vary from year to year, and students may therefore repeat the course for credit. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter.

HIGR 237. Topics in the History of Ocean Sciences (4)
(Cross-listed with SIO 217) Intensive study of specific problems in the history of the ocean sciences, and of related earth and atmospheric sciences, in the modern period. Topics vary from year to year, and students may therefore repeat the course for credit.

HIGR 238. Introduction to Science Studies (4)
(Cross-listed as Communication 225A, Philosophy 209A, and Sociology 255A) Study and discussion of classic work in history of science, sociology of science and philosophy of science, and of work that attempts to develop a unified science studies approach. Required for all students in the Science Studies Program. PREREQUISITE: enrollment in Science Studies Program.

HIGR 239. Seminar in Science Studies (4)
(Cross-listed as Communication 225B, Philosophy 209B, and Sociology 255B) Study and discussion of selected topics in the history of science, with emphasis on historical issues of methodology and interpretation. Required for all beginning History graduate students.

HIGR 250. History and Theory (4)
An introduction to feminist theoretical methodology, and to feminist scholarship on imperialism, colonialism, and modernism. Students will be asked to develop a personal project of research on a topic of their choosing, with the guidance of the instructor. The project will be a written paper that will be due at the end of the second quarter. PREREQUISITE: 200A-B.

HIGR 255A-B. Research Seminar in European History (4-4)
This seminar examines the history of fishing, whaling, shipping, and freebooting during the age of sail and investigates through primary and secondary sources the experience of living in communities that followed the sea. Students will be required to submit a proposal for a research project. PREREQUISITE: upper-division standing or consent of instructor.

HIGR 257. Historical Scholarship on Pre-Modern Chinese History: Han Dynasty through the Song Dynasty (4)
Course introduces history and society during the Chinese Middle Ages (c. 200 BCE–1200 CE), including the Han, Six, Tang, and Song dynasties. Examination of the birth and development of China’s great religions, Buddhism and Daoism, and the international culture of the Silk Road, and political and cultural systems that still resonate in China today.

HIGR 258A. Graduate Seminar in Pre-Modern Chinese History (4)
Course subject varies among periods before 1900. 258A includes secondary scholarship studied for content, method, and structure; research methods and resources; and development of the research topic. In 258B students write an original research paper using primary sources. PREREQUISITE: graduate standing or consent of instructor. Reading knowledge of Chinese.

HIGR 258B. Graduate Seminar in Pre-Modern Chinese History (4)
Course subject varies among periods before 1900. 258A includes secondary scholarship studied for content, method, and structure; research methods and resources; and development of the research topic. In 258B students write an original research paper using primary sources. PREREQUISITE: graduate standing or consent of instructor. Reading knowledge of Chinese.

HIGR 290. Seminar in Science Studies (4)
(Cross-listed as Communication 225B, Philosophy 209B, and Sociology 255B) Study and discussion of selected topics in the history of science, with emphasis on historical issues of methodology and interpretation. Required for all students in the Science Studies Program. May be repeated as course content changes annually. PREREQUISITE: enrollment in Science Studies Program.
HIGR 240. Colloquium in Science Studies (4)
(Cross-listed as Communication 225C, Philosophy 209C, and Sociology 255C.) A forum for the presentation and discussion of research in progress in science studies, by graduate students, faculty, and visitors. Required for all students in the Science Studies Program. May be repeated as course content changes annually. **PREREQUISITE:** enrollment in the Science Studies Program.

HIGR 241. Advanced Approaches to Science Studies (4)
(Cross-listed as COGR 225D, PHIL 209D, SOCG 255D.) Focus on recent literature in the history, philosophy, and sociology of science, technology, and medicine. Required of all students in the Science Studies Program. **PREREQUISITES:** HIGR 238 is a prerequisite for HIGR 241; enrollment in Science Studies Program or instructor's permission.

HIGR 242. Topics in the History of Earth and Life Sciences (4)
Intensive study of specific problems in the history of the life sciences and earth sciences, ranging in period from the Renaissance to the twenty-first century. May be repeated for credit as topics vary annually. **PREREQUISITES:** graduate standing and department stamp required.

HIGR 243. Historical Scholarship in Technology (4)
An introduction to the historiography of technology. This reading seminar provides an overview of scholarly approaches to the history of technology by critically examining classic and contemporary works in the field. **PREREQUISITE:** graduate-standing or consent of instructor.

HIGR 244. Introduction to Sound Studies (4)
Study and discussion of classic and recent scholarship on sound production and cultures of listening. Emphasizes historical literature but also includes works in literary studies, art history, music, and other fields. **PREREQUISITE:** graduate standing or consent of instructor.

HIGR 245A-B-C. Historical Scholarship on Latin American History (4-4-4)
Introduction to the literature of Latin American history. A three-quarter sequence of readings and discussions taught each quarter by members of the staff. Required for all beginning students for a graduate degree specializing in Latin American history; open and strongly recommended to other students using Latin American history as a secondary field for a graduate degree. HIGR 245A covers the colonial period, from conquest to independence to today; HIGR 245B covers South America from independence to today; HIGR 245C covers Mexico, Cuba, and Central America from independence to today. The three quarters need not be taken in sequence. Reading knowledge of Spanish is required.

HIGR 247A-B. Research Seminar in Colonial Latin America (4-4)
A two-quarter course involving readings and research on sixteenth- through eighteenth-century Latin America. Students are expected to compose a paper based on original research that is due in the second quarter. Reading knowledge of Spanish required. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter.

HIGR 248A-B. Research Seminar in Latin America, National Period (4-4)
A two-quarter course involving readings and research; the first quarter is devoted to the nineteenth and the second quarter to the twentieth century. Students are expected to compose a paper based on original research that is due in the second quarter. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. Reading knowledge of Spanish and/or Portuguese is helpful but not required.

HIGR 252. History, Social Evolution, and Intellectuals in the Andes: Maríategui, Haya de la Torre, and Arguedas (4)
The course will study three major twentieth-century interpreters of Andean history and society. Maríategui is Latin America's most original socialist intellectual; Haya de la Torre is the founder of Peru's most important party; and Arguedas was the most profound interpreter of the role of Indian peasants in the Andean nations.

HIGR 255. The Literature of Ancient History (4)
An introduction to the bibliography, methodology, and ancillary disciplines for the study of ancient history together with readings and discussion on selected topics within the field. May be repeated for credit; topic will vary year to year.

HIGR 257A. Historical Scholarship on Modern Middle East, Eighteenth to Twentieth Century (4)
Readings in the historiographical literature on the late Ottoman Empire (eighteenth to twentieth century). **PREREQUISITE:** graduate standing or consent of instructor.

HIGR 257B. Historical Scholarship on Modern Middle East, Colonial Period (4)
Readings in the historiographical literature on Middle Eastern states in the colonial period. **PREREQUISITE:** graduate standing or consent of instructor.

HIGR 257C. Historical Scholarship on Modern Middle East, Post-Colonial Eras (4)
Readings in the historiographical literature on the Middle East in the national/post-colonial eras. **PREREQUISITE:** graduate standing or consent of instructor.

HIGR 260A-B-C. Historical Scholarship on Judaic Studies (4-4-4)
Weekly graduate seminar. Faculty and students present results of research. Student research may be towards course work on thesis.

HIGR 265A-B-C. Historical Scholarship on American History (4-4-4)
A three-quarter sequence of readings and discussions on the bibliographical and monographic literature of American history from the colonial period to the present. Taught by different members of the staff each quarter, the course is required of all beginning graduate students in American history.

HIGR 267A-B. Research Seminar in United States History (4-4)
Readings and discussion in selected areas of American history for advanced graduate students. An IP (in progress) grade will be awarded the first quarter. The second quarter will be devoted to the presentation, discussion, and evaluation of work in progress. A final grade will be awarded at the end of the second quarter. **PREREQUISITE:** 267A is a prerequisite for 267B.

HIGR 271. New Research Directions in U.S. History (4)
Students will develop skills in presenting and assessing new research and offering feedback to work in progress by senior students and faculty. Course is required to be taken twice by third-year students and highly recommended for audit by all students in U.S. History. (S/U grades only.)

HIGR 275A. Research Seminar in Middle Eastern History (4)
HIGR 275A is the first quarter of a two-quarter research seminar in Middle Eastern history. Seminar topics will vary. Reading knowledge of Arabic or Turkish is expected. A paper, based on original research, will be due at the end of the second quarter. Final grade will not be given until the end of the second quarter. **PREREQUISITE:** graduate standing or consent of instructor.

HIGR 275B. Research Seminar in Middle Eastern History (4)
HIGR 275B is the second quarter of a two-quarter research seminar in Middle Eastern history. Seminar topics will vary. Reading knowledge of Arabic or Turkish is expected. A paper, based on original research, will be due at the end of the quarter. Final grade will be awarded for HIGR 275A and 8 at the end of the second quarter. **PREREQUISITE:** 275A and graduate-standing or consent of instructor.

HIGR 295. Thesis Seminar (4)
For students advanced to candidacy to the doctorate. Discussion, criticism, and revision of drafts of chapters of theses and of work to be submitted for publication.

HIGR 298. Directed Reading (1-12)
Guided and supervised reading in the literature of the several fields of history. This course can be repeated for an indefinite number of times due to the independent nature of the content of the course. (S/U grades permitted.)
**THE HUMAN DEVELOPMENT MAJOR**

The scientific study of human development focuses on issues of growth, development, and behavioral change across the lifespan. The Human Development Program is interdisciplinary, incorporating courses from the Departments of Anthropology, Biology, Cognitive Science, Communication, Ethnic Studies, History, Linguistics, Literature, Psychology, Sociology, Education Studies Program, and Urban Studies and Planning Program. The curriculum is designed to emphasize the idea of development as an essential perspective from which to understand human behavior. The courses cover a broad spectrum of issues in human development: from brain and perceptual development, to reasoning and problem solving, to social interaction and the evolution of cultural systems. The Human Development Program unifies and coordinates the excellent research and teaching resources currently available on campus in this area and profiles the factors that influence the ways in which humans develop and change.

Human development is a very large field, but there is a set of basic questions which serve to define and integrate it: What underlies the development of human knowledge? To what extent is the capacity to know, indeed the concepts themselves, encoded in the genes? How is the role of learning and environmental influences accounted for? How do we learn? What are the ways in which children become competent participants in their social groups? What is the origin and nature of social interaction and organization?

The study of human development has become increasingly central to a wide range of important issues affecting infants, young children, and adolescents, as well as the changing structure of the American family and public policy on children and education. An understanding of the processes that underlie human development is crucial to our evaluation of these issues and to our ability to offer avenues for remediation of the attendant problems. The three major areas of study within the Human Development Program are: Biological Development, Ontogenetic Development, and Socio-Cultural Development. These areas consider issues that pertain to development of specific neural and cognitive processes and development within a larger social and cultural context.

**EDUCATION ABROAD**

Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP) while still making progress towards the major. Students interested in studying abroad should see a Human Development Program advisor to discuss curriculum plans and appropriate courses. It is strongly recommended that students obtain HDP pre-approval for EAP courses that are intended to count toward the major. Information on EAP/OAP is detailed in the Education Abroad Program section of the UC San Diego General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit the Web site at [http://programsabroad.ucsd.edu/](http://programsabroad.ucsd.edu/). Financial aid is applicable and special study abroad scholarships are available.

**PREREQUISITES FOR HUMAN DEVELOPMENT MAJORS**

A bachelor of arts degree in human development will be given to students who satisfactorily complete the general-education and graduation requirements of Marshall, Muir, Revelle, Roosevelt, Sixth, or Warren College in addition to the Human Development Program requirements. In accordance with UCSD academic regulations, upper-division courses used to satisfy major requirements cannot be applied towards minors (please note there is some overlap permitted for double majors). See college advisor and major advisor for questions and restrictions.

**APPLYING FOR THE HDP MAJOR**

Students who wish to declare the Human Development Program major must meet major requirements and apply for entrance into the major. All lower-division requirements must be fulfilled before applying for the major. All lower-division courses must be completed with a grade of C or better. The cumulative GPA for the eight lower-division courses must equal or exceed 2.75. Students must meet with an HDP advisor and obtain approval to declare the human development major, no later than the second quarter of the student’s junior year.

**GRADE REQUIREMENTS FOR THE MAJOR**

A minimum grade-point average of 2.0 is required in the major. Students must receive a grade of C– or better in any course counted toward fulfillment of the major requirements. All courses taken to satisfy the program’s lower- and upper-division requirements must be taken for a letter grade. HDP 1, HDP 150, HDP 181, and HDP 191 must be taken in residence. No substitutions will be approved.

**LOWER-DIVISION REQUIREMENTS**

1. **Introduction to Human Development:** HDP 1 (3 units)
2. **One statistics course selected from the approved list:** PSYC 60, COGS 14, BIEB 100, ECON 120A, POLI 30, or MATH 11 (3 units)
3. **One formal skills course selected from the approved list:** PHIL 10, PHIL 12, LIGN 17, or one course from the MATH 10 sequence or MATH 20 sequence (3 units)
4 & 5. **Two biological sciences courses selected from the approved list:** ANTH 2, BILD 1, BILD 2, BILD 3, BILD 7, BILD 10, BILD 12, BILD 18, BILD 20, BILD 26, COGS 11, COGS 17, PSYC 2
6 & 7. **Two social sciences courses selected from the approved list:** ANTH 1, ANTH 3, COGS 20, COGS 1, One course from the HILD 7A, B, or C sequence (only one allowed), LIGN 4, LIGN 7 LIGN 8, LIGN 101, MMW 1, MMW 2, PSYC 1, PSYC 3, PSYC 6, Soc/L 1A, Soc/L 20
8. **One computer literacy course selected from the approved list:** MAE 5, COGS 3, COGS 8, COGS 18, CSE 3, CSE 5A, CSE 11

**UPPER-DIVISION REQUIREMENTS FOR THE HDP MAJOR**

A. Three Methods courses
B. Three Core Series courses
C. Six Development courses
D. HDP 150

(Full information follows)

**A. Methods Courses**

1. **HDP 181** (Students are encouraged to take this course their junior year.)
2. **HDP 191** (Students are encouraged to take this course their junior year.)
3. **One course selected from the following approved list**
   - ANSC 172. Life History Seminar and Practicum
   - BICD 131. Embryology Laboratory
   - BICD 133. Developmental Biology Laboratory
   - HDP 115/COMT 115. Media and Design of Social Learning Contexts
   - HDP 135/COMT 116. Practicum in Child Development
   - HDP 193. Advanced Research in Human Development**
   - PSYC 111A or B. Research Methods I or II
   - Soc/A 104. Field Research: Methods of Participant Observation
   - Soc/A 110A or B. Qualitative Research in Educational Settings

*Completion of an advanced methods course for the HDP Honors Thesis can be petitioned to replace the third methods course (not HDP 181 or HDP 191).

**HDP 193** must be taken for two quarters to fulfill the third methods course requirement.
**B. Core Series Courses**

(three courses selected from the approved list required, one from each DOMAIN)

**Domain 1: The biological basis of human development**
- ANBI 140. The Evolution of the Human Brain
- COGS 115. Neurological Development and Cognitive Change
- HDP 110. Brain and Behavioral Development

**Domain 2: The social/cognitive basis of human development**
- COGS 156. Language Development
- HDP 120. Language Development
- HDP 121/COGS 110. Developing Mind
- HDP 122. Social Development
- LIGN 171. Child Language Acquisition
- LIGN 179. Second Language Acquisition
- PSYC 187. Development of Social Cognition

**Domain 3: The socio-cultural basis of human development**
- HDP 133. Socio-cultural Foundations of Human Development
- HITO 126. History of Childhood
- Soc/B 131. Sociology of Youth
- Soc/C 129. The Family

**C. Development Courses**

(six courses required; at least one from each area of focus)

**Biological Development**
- ANBI 140. The Evolution of the Human Brain
- ANBI 159. Biological and Cultural Perspectives on Intelligence
- ANTH 102. Humans are Cultural Animals
- BICS 100. Genetics
- BICS 130. Embryology
- BICS 132. Molecular Basis of Development
- BICS 134. Human Reproduction and Development
- BIPS 144. Developmental Neurobiology
- COGS 115. Neurological Development and Cognitive Change
- COGS 184. Modeling the Evolution of Cognition
- PSYC 168. Psychological Disorders of Childhood

**Ontogenetic Development**
- COGS 113. Cognitive Development
- COGS 154. Communication Disorders in Children and Adults
- COGS 156. Language Development
- COH 100. Introduction to Communication and the Individual
- COH 114. Bilingual Communication
- COH 119. Learning to Read
- COH 121. Literacy, Social Organization, and the Individual
- EDS 119/LIGN 119. First and Second Language Learning: From Childhood through Adolescence
- LIGN 171. Child Language Acquisition
- LIGN 179. Second Language Acquisition
- LTWL 114. Children’s Literature
- LTWL 116. Adolescent Literature

**PSYC 101. Introduction to Developmental Psychology**
- PSYC 136. Cognitive Development
- PSYC 156. Cognitive Development in Infancy
- PSYC 168. Psychological Disorders of Childhood
- PSYC 172. Psychology of Human Sexuality
- PSYC 180. Adolescence
- PSYC 187. Development of Social Cognition
- PSYC 190. Parenting

**Socio-Cultural Development**
- ANBI 159. Biological and Cultural Perspectives on Intelligences
- COH 123. Children and Media
- EDS 115. Cognitive Development and Education
- EDS 117. Language, Culture, and Education
- HILA 117. Indians, Blacks, and Whites: Family Relations in Latin America
- LTWL 114. Children’s Literature
- LTWL 116. Adolescent Literature
- PSYC 167. Social and Emotional Development
- PSYC 180. Adolescence

**Advanced Course in Statistics or Methods**
- Soc/B 117. Language, Culture, and Education
- Soc/B 118A / LIGN 174. Gender and Language in Society
- Soc/C 129. The Family
- Soc/B 131. Sociology of Youth
- Soc/C 159. Special Topics in Organizations and Institutions (Only when topic is approved for HDP major)

**D. HDP 150. Advanced Human Development**

(HDP students should enroll in this course in their senior year.)

**ADVANCED HUMAN DEVELOPMENT REQUIREMENT HDP 150**

Seminar for graduating HDP seniors. Readings and discussion of special topics in human development. Provides advanced-level study on subfields of human development. Topics vary quarterly. **PREREQUISITES:** HDP1, HDP 181, HDP 191, senior standing, and department approval one quarter prior to enrollment.

**FIELD RESEARCH REQUIREMENT HDP 191**

This course provides students with the opportunity to participate jointly in a research project in conjunction with a mentor/collaborator from a local service site. This applied research experience allows students to design and conduct research projects in a variety of settings ranging from laboratory research settings to service-oriented placements. In addition to literature research and a final paper at the end of the quarter, students will participate at an off-campus site for a minimum of four hours per week. Research sites are prearranged one academic year in advance (see the student affairs office or the HDP Web site for enrollment information). Students’ interests and future career plans are considered for site placement. Various research orientations and methodologies are reviewed in class. **PREREQUISITES:**

**HDP 1 and department approval one academic year prior to enrollment.**

**HONORS IN HUMAN DEVELOPMENT HDP 194A-B-C**

The Human Development Program offers an honors option for those students who have demonstrated excellence in the human development major. The honors program allows eligible undergraduates to explore advanced issues in the field through an honors thesis on a topic of their choice and under faculty supervision. In order to be admitted to the honors program, students must have 1) junior standing and 2) maintained a minimum cumulative grade-point average of 3.2, and a 3.5 GPA for courses taken in the human development major. Interested students need to apply for departmental honors in spring quarter of their junior year. Students in the honors program are expected to complete the following additional requirements:

1. An advanced course in statistics or methods design (see the HDP student affairs office for more information).
2. HDP 194A-B-C, a year-long independent research project, which results in an Honors Thesis.
3. Weekly attendance of the Center for Human Development Seminar and participation.

**PETITIONING COURSES**

There are three circumstances under which petitions to receive credit for courses not explicitly approved for the major will be considered (all approved courses are detailed in the UC San Diego General Catalog, HDP section): Requests from transfer students, requests from students planning to study abroad, and exceptional courses identified by a student. In all cases, students are required to submit a petition in writing that clearly describes the course for which they wish to receive HDP major credit, and to attach to the petition as much information as possible about the content of the course (e.g., syllabus, course description, etc.). With the exception of courses petitioned by transfer students, ALL REQUESTS FOR APPROVAL OF COURSES NOT EXPLICITLY LISTED IN THE UC San Diego General Catalog SHOULD BE SUBMITTED BEFORE THE COURSE IS TAKEN BY THE STUDENT.

For students transferring from a community college or another university must petition for HDP credit for courses taken at their previous institution. For students transferring from the California Community College System, articulation agreements for many courses have been developed that facilitate the petition process. Transfer students should make an appointment with an HDP advisor to review courses for which they will most likely receive credit and fill out a written petition for each course. **Education Abroad.** Students planning to study abroad may receive credit toward the major for courses taken in another country. IT IS STRONGLY RECOMMENDED THAT STUDENTS RECEIVE PRELIMINARY APPROVAL (BEFORE LEAVING THE COUNTRY) FOR COURSES THEY ARE CONSIDERING TAKING DURING THEIR TIME ABROAD. While the preliminary approval does not guarantee that the actual course will be approved, the great majority...
of courses for which preliminary approval has been obtained are approved when the actual petition is submitted upon the student's return. Other courses. Occasionally students identify a UCSD course that has the potential to fulfill an HDP requirement. Students may petition in writing to request credit for such courses. However, it is important to note that very few such petitions are successful, and students are strongly cautioned to petition and receive approval for such a course before enrolling in the course. Note: Courses are not officially approved for credit until the written petition has been approved by the HDP Executive Committee and signed by the HDP director.

THE MINOR PROGRAM
(Courses must be discussed with and approved by a Human Development academic advisor.) A total of seven courses are required to complete a minor in human development. These include Introduction to Human Development (HDP 1), and six development courses drawn from each major area of study from the developmental course list. All courses for the HDP minor must be taken for a letter grade.

Finish-in-Four Plan
Students interested in a particular career field should see the student affairs office for more specific Finish-in-Four plans for their particular college.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

LOWER-DIVISION
HDP 1. Introduction to Human Development (4)
This course introduces students to the central issues in the basic areas in human development. The course will explain relationships between biological, cognitive, social, and cultural aspects of development. Offered once per year. (F)

HDP 87. Freshman Seminar (1)
This seminar is designed to provide new students with the opportunity to explore an intellectual topic in a small seminar setting. Topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

HDP 98. Directed Group Study (1-2)
Directed group study, on a topic or in a field not included in the department curriculum, by arrangement with a faculty member. Topics will vary from quarter to quarter. Pass/Not Pass grades only. Enrollment requires prior consent of the instructor; students must have at least thirty units completed and a minimum 3.0 GPA. Student may enroll for no more than a total of two units in one quarter. Cannot be used towards HDP major credit. Prerequisites: 3.0 GPA and at least thirty units completed.

HDP 99. Independent Study in Human Development (2-4)
Independent study and research under the direction of a human development program, or affiliated, faculty member. Pass/Not Pass only. Cannot be used towards HDP major credit. Prerequisites: lower-division standing, completion of thirty units of UCSD undergraduate study, a minimum UCSD GPA of 3.0, and a completed and approved Special Studies form. UCSD Application for Enrollment Special Studies Courses 97, 98, 99.

UPPER-DIVISION
HDP 110. Brain and Behavioral Development (4)
The purpose of this course is to familiarize students with basic mechanisms of brain and behavioral development from embryology through aging. Multiple levels of analysis will be discussed, including the effects of hormones on behavior, developmental events at the level of cells, structures, and neural systems, and the neural basis of cognition, social, perceptual, and language development. Prerequisite: HDP 1 or PSYC 101.

HDP 115. Media and Design of Social Learning Contexts (6)
(Same as COMT 115) A combined lecture/lab course cross-listed in communication and human development. Students attend lecture, write field notes, and spend three hours per week in specially designed after-school setting working with children and designing new educational media and producing special projects. Prerequisite: HDP 1 or COHI 100. (F,W,S)

HDP 120. Language Development (4)
Examination of children's acquisition of language from babbling to the formation of sentences. Topics covered include: pre-linguistic gestures, relationships between babbling and sound systems, speech perception, linking words with objects, language development over generalization, bilingualism, nature vs. nurture, individual differences, cultural differences. Prerequisite: HDP 1.

HDP 121. The Developing Mind (4)
(Same as COGS 110) This course examines changes in thinking and perceiving the physical and social world from birth through childhood. Evidence of significant changes in encoding information, forming mental representations, and solving problems is culled from psychological research, cross-cultural studies, and cognitive science. Prerequisite: HDP 1 or COGS 1.

HDP 122. Social Development (4)
This course covers topics in social development research. Content will address general principles such as the mutual influences of caregivers and children upon each other and the interplay of person and context. Discussion areas will include attachment, parenting styles, gender differences, aggression, social cognition, social components of achievement motivation, and development of conscience. Prerequisite: HDP 1.

HDP 133. Socio-cultural Foundations of Human Development (4)
This course will provide students with an understanding of the social and cultural foundations of human development. The topics will be examined through both national and international comparisons from infancy through adolescence. Prerequisite: HDP 1 or PSYC 1.

HDP 135. Practicum in Child Development (6)
(Same as COMT 116) A combined lecture and laboratory course for students in psychology, communication, and human development. Student backgrounds should include a background in general psychology or communication. Students will be expected to spend four hours a week in a supervised practical after-school setting at one of the community field sites involving children. Additional time will be devoted to readings and class prep, as well as six hours a week transcribing field notes and writing a paper on some aspect of the fieldwork experience as it relates to class lectures and readings. Prerequisites: HDP 1 or COHI 100 or PSYC 101. (F,W,S)

HDP 150. Advanced Human Development (4)
Seminar for graduating HDP seniors. Readings and discussion of special topics in human development. Prerequisite: lower-division standing, completion of thirty units of UCSD undergraduate study, a minimum UCSD GPA of 3.0, and a completed and approved Special Studies form. UCSD Application for Enrollment Special Studies Courses 97, 98, 99.

HDP 181. Experimental Projects in Human Development Research (6)
This laboratory course in human development is designed around a variety of intensive experimental projects. With lectures providing background information on research and child development, each assignment will include data collection and/or analysis, and a written laboratory report. Prerequisites: HDP 1, Statistics, and must be a declared HDP major. (F,W,S)

HDP 191. Field Research in Human Development (6)
This course combines lectures on research methodology (three hours/week) with an applied field research experience (four hours/week) conducted at a pre-approved study site. Required: Completion of a field notebook, review paper, oral presentation, and final paper. Prerequisites: HDP 1. Students must submit the pre-enrollment questionnaire one academic year prior to enrollment. See HDP Web site for details. (F,W,S)

HDP 193. Advanced Research in Human Development (4)
Specialized research project under the direction of a human development affiliated faculty member. May be taken for one or two quarters of credit. Prerequisites: declared HDP major, overall GPA of 2.8, ninety units completed, three HDP core courses completed, and consent of instructor.

HDP 194A-B. B.C. Honors Thesis (4-4-4)
Students will take part in a weekly research seminar. In addition, they will plan and carry out a three-quarter research project under the guidance of a faculty member. The project will form the basis for their senior honors thesis. Prerequisites: overall GPA of 3.2, and a 3.5 GPA for courses taken in the human development major; an advanced course in statistics or experimental design, and consent of instructor.

HDP 195. Instructional Apprentice in Human Development (4)
Introduction to teaching within the discipline of human development. Students will attend lecture, be responsible for assisting the instructor with course preparation, and will lead a discussion section of one of the lower-division courses in the human development program. Limited to upper-division students majoring in human development with consent of instructor. Pass/Not Pass only. Prerequisites: Declared HDP major, overall GPA of 3.0, 90 units completed, and consent of instructor.

HDP 199. Independent Study in Human Development (4)
Independent study and research under the direction of a faculty member. Pass/Not Pass only. Prerequisites: consent of the instructor, completion of at least ninety undergraduate units with a minimum of 2.5 GPA, and a completed and approved Special Studies Form.
of Revelle College. Instruction in university-level writing is part of all five courses, but students in Humanities 1 and 2 (six units each) receive intensive writing instruction. Students must have satisfied the UC Entry Level Writing requirement before registering for any part of the humanities sequence. Humanities 1 and 2 must be taken before Humanities 3-4-5.

For detailed description of the Revelle College humanities requirement, see “Revelle College, General-Education Requirements, Humanities.”

THE HUMANITIES MINOR

The humanities minor consists of at least seven courses from the listings of the Departments of History, Philosophy, Literature, Visual Arts, Music, and Theatre. All seven courses may be selected from the upper-division offerings, but at least five upper-division courses must be included. Students for whom Humanities 1-5 fulfill general-education requirements may use two of these courses towards fulfillment of requirements for the humanities minor.

For students who entered UC San Diego before January 1, 1998, the required number of courses for the minor is six courses, at least three of which must be upper-division.

Courses selected for the minor must be selected from the offerings of more than one department. They must concern themselves with more than one historical, national, or ethnic culture; and they must offer broad treatment of centrally important topics in the humanities. Thus, a course on the history of the United States since the Civil War would be appropriate for the humanities minor, while a course in the history of California would not.

Here are some examples of study lists appropriate for the present humanities minor:

Example 1:

History: HILD 24B: United States
History: HILD 11: East Asia and the West 1279–1911
Literature: LTEA 110B: Modern Chinese Fiction in Translation
Philosophy 160: Ethical Theory
Philosophy 153: Philosophy of History

Example 2:

History: HILA 102: Latin America in the Twentieth Century
History: HIAF 110: History of Africa to 1880
Literature: LTAM 110: Latin American Literature in Translation
Literature: LTEN 184: African American Poetry
Music 114: Music of the Twentieth Century
Visual Arts 126J: African and Afro-American Art

Example 3:

Literature: LTEN 145: The English Novel in the Twentieth Century
Literature: LTEN 146: Women and English/American Literature
Literature: LTEA 100: The Bible and Western Literature
Philosophy 175: Aesthetics
Philosophy 177: Philosophy and Literature
Theatre: TDGE 11: Great Performances on Film

Students should review their plans for the minor with the humanities advisor as well as with the advisors in their college. Before undertaking the minor, students must submit a study list for approval to the humanities office.

THE HUMANITIES MAJORS

Normally, students interested in majoring in humanities must choose a specific major in the humanities departments, i.e., history, literature, or philosophy. But students from Revelle and Muir Colleges may request to graduate with an approved individual special project major in the humanities.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

LOWER-DIVISION

1. The Foundations of Western Civilization: Israel and Greece (6)
   Texts from the Hebrew Bible and from Greek epic, history, drama, and philosophy in their cultural context. Revelle students must take course for letter grade. PREREQUISITE: satisfaction of the UC Entry Level Writing requirement. (W)

2. Rome, Christianity, and the Middle Ages (6)
   The Roman Empire, the Christian transformation of the classical world in late antiquity, and the rise of a European culture during the Middle Ages. Representative texts from Latin authors, early Christian literature, the Germanic tradition, and the high Middle Ages. Revelle students must take course for letter grade. PREREQUISITE: satisfaction of the UC Entry Level Writing requirement. (S)

3. Renaissance, Reformation, and Early Modern Europe (4)
   The revival of classical culture and values and the reaction against medieval ideas concerning the place of human beings in the world. The Protestant Reformation and its intellectual and political consequences. The philosophical background to the scientific revolution. Revelle students must take course for letter grade. PREREQUISITE: satisfaction of the UC Entry Level Writing requirement. (F)

4. Enlightenment, Romanticism, Revolution (1660–1848) (4)
   The enlightenment’s revisions of traditional thought; the rise of classical liberalism; the era of the first modern political revolutions; romantic ideas of nature and human life. Revelle students must take course for letter grade. PREREQUISITE: satisfaction of the UC Entry Level Writing requirement. (W)

5. Modern Culture (1848–present) (4)
   Challenges to liberalism posed by such movements as socialism, imperialism, and nationalism; the growth of new forms of self-expression and new conceptions of individual psychology. Revelle students must take course for letter grade. PREREQUISITE: satisfaction of the UC Entry Level Writing requirement. (S)

195. Methods of Teaching Humanities (4)
   An introduction to teaching humanities. Students are required to attend weekly discussions on methods of teaching humanities, and will teach discussion sections of one of the humanities courses. Attendance at lecture of the course in which the student is participating is required. (P/NP grades only) PREREQUISITE: consent of instructor. (W, S)

199. Special Studies (2–4)
   Individually guided readings or projects in area of humanities not normally covered in standard curriculum. PREREQUISITE: upper-division standing or consent of instructor.

200. Seminar in the Humanities (4)
   Selected topics in the history, literature, and thought of Mediterranean antiquity and its successor-cultures. Emphasis on identifying both common themes and cultural distinctiveness. Discussion of pedagogical approaches to this material. Required of all graduate instructional assistants in the humanities sequence. PREREQUISITE: graduate standing. (F)

International Migration Studies Minor

OFFICE: 329 Eleanor Roosevelt College

Yen Espiritu, Ph.D., Ethnic Studies
David Fitzgerald, Ph.D., Sociology
David Gutierrez, Ph.D., History
Zoltan Hajnal, Ph.D., Political Science
Gordon Hanson, Ph.D., IR/PS and Economics
John Haviland, Ph.D., Anthropology
April Linton, Ph.D., Sociology
Jorge Mariscal, Ph.D., Literature
Everard Meade, Ph.D., History
David Pedersen, Ph.D., Anthropology
John Skrentny, Ph.D., Sociology
Elana Zillberg, Ph.D., Communication

THE MINOR

The minor in International Migration Studies is jointly administered by the Center for Comparative Immigration Studies (CCIS) and Eleanor Roosevelt College (ERC). It is designed to provide students with an in-depth understanding of the causes, politics, and social consequences of international migration from a broad comparative perspective. This program of study helps to prepare students for a career in research and teaching, immigrant service-providing organizations, government agencies, or law. The unique research and writing opportunities offered by this minor also make it an excellent preparation for graduate school.

This interdisciplinary minor covers a wide range of topics, including the economic, cultural, demographic, and political impacts of immigration; laws and government policies for controlling immigration and refugee flows; ethnic, gender, citizenship, and transnational dimensions of immigration; the integration of immigrant minorities in receiving societies; and immigrant history and literature. Students learn about other countries of immigration (especially in Western Europe and East Asia) in

362 INTERNATIONAL MIGRATION STUDIES MINOR
order to place the U.S. experience in comparative perspective.

** REQUIREMENTS **

The minor consists of a total of seven courses (twenty-eight units). The requirements can be fulfilled by courses at the lower- and upper-division levels or a combination of course work and either field research in immigrant communities or internships with local immigrant service organizations. For more information about minor requirements, visit http://roosevelt.ucsd.edu/intl_migration_minor/.

1. All students in the minor are required to take one lower-division U.S. ethnic diversity course from the following list:
   - ANLD 23. Debating Multiculturalism: Race, Ethnicity, and Class in American Societies (4)
   - DOC 2. Dimensions of Culture: Justice (6)
   - ETHN 1A. Introduction to Ethnic Studies: Population Histories of the United States (4)
   - ETHN 1B. Introduction to Ethnic Studies: Immigration and Assimilation in American Life (4)
   - HILD 7A. Race and Ethnicity in the United States (4)
   - HILD 7B. Race and Ethnicity in the United States (4)
   - HILD 7C. Race and Ethnicity in the United States (4)
   - POLI 40. Introduction to Law and Society (4)
   - USP 3. The City and Social Theory (4)

2. Students must also take one of the following upper-division overview courses on comparative immigration:
   - POLI 150A. The Politics of Immigration: The U.S. in Comparative Perspective (4)
   - SOC B 125. Sociology of Immigration (4)

3. Students complete the minor (twenty more required units) by pursuing one of two separate tracks:

** Track A: Additional Course Work **

Students choosing this track will take five additional courses from the following list, four of which must be upper-division. Students in the course work track may not take more than a total of four courses from any one department for this minor.

** COURSES **

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

- ANLD 23. Debating Multiculturalism: Race, Ethnicity, and Class in American Societies (4)
- COHI 114. Bilingual Communication (4)
- COHI 175. Advanced Topics: Communication and the Borderlands (4)
- COCU 164. Representing Race, Nation, and Violence in Multicultural California (4)
- COCU 168. Latino Space, Place, and Culture (4)
- COCU 175. Advanced Topics in Communication, Culture: A Discussion of Migrant’s Survival Strategies in the Southwest (4)
- COCU 175 E00. Advanced Topics in Built Environment: Space, Place, and Culture: The Politics and Poetics of the Latino Barrio (4)
- CO 175. Special Topics: Transnationalism and Globalization (4) (proposed course)
- ECON 114. Economics of Immigration (4)
- ETHN 1A. Introduction to Ethnic Studies: Population Histories of the United States (4) (if not taken as a required course above)
- ETHN 1B. Introduction to Ethnic Studies: Immigration and Assimilation in American Life (4) (if not taken as a required course above)
- ETHN 116. The United States-Mexico Border in Comparative Perspective (4)
- ETHN 118. Contemporary Immigration Issues (4)
- ETHN 121. Contemporary Asian-American History (4)
- ETHN 122. Asian-American Culture and Identity (4)
- ETHN 123. Asian-American Politics (4)
- ETHN 144. Bilingual Communities in the U.S.A. (4)
- ETHN 151. Ethnic Politics in America (4)
- ETHN 189. Special Topics: Chicana/Latina Identities (4)
- ETHN 189. Special Topics: Comparative Vietnamese and Filipino American Identities and Communities (4)
- ETHN 189. Special Topics: Work and Family in Immigrant Communities (4)
- HIEU 181. Immigration, Ethnicity, and Identity in Contemporary European Society (4)
- HIEU 182. The Muslim Experience in Contemporary European Society (4)
- HILA 162. Topics in Latin American History: The United States and El Salvador (4)
- HILD 7A. Race and Ethnicity in the United States (4) (if not taken as a required course above)
- HILD 7B. Race and Ethnicity in the United States (4) (if not taken as a required course above)
- HILD 7C. Race and Ethnicity in the United States (4) (if not taken as a required course above)
- HIES 124. Asian-American History (4)
- HIES 140. Economic History of the United States I (4)
- HIES 141. Economic History of the United States II (4)
- HIES 167. Topics in Mexican-American History (4)
- HIES 180. Immigration and Ethnicity in Modern American Society (4)
- LTAM 100. Latino/a Cultures in the United States (4)
- LTAM 102. Contemporary Chicano/a-Latino/a Cultural Production: 1960 to Present (4)
- LTAM 105. Gender and Sexuality in Latino/a Cultural Production (4)
- LTAM 106. Modern Chicana and Mexican Women Writings (4)
- LTAM 107. Comparative Latino/a and U.S. Ethnic Cultures (4)
- LTAM 109. Cultural Production of the Latino/a Diasporas (4)
- LTSP 150A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960 (4)
- LTSP 150B. Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present (4)
- LTSP 151. Topics in Chicano/a-Latino/a Cultures (4)
- LTSP 177. Literary and Historical Migrations (4)
- LTEN 178. Comparative Ethnic Literature (4)
- LTEN 181. Asian-American Literature (4)
- POLI 100H. Race and Ethnicity in American Politics (4)
- POLI 150A. Politics of Immigration (4) (if not taken as a required course above)
- SOC B 114. Culture and Ethnicity (4)
- SOC B 125. Sociology of Immigration (4) (if not taken as a required course above)
- SOC B 127. Immigration, Race, and Ethnicity (4)
- SOC B 133. Immigration in Comparative Perspective (4)
- SOC C 139. Social Inequality: Class, Race, and Gender (4)
- SOC C 140F. Law and Workplace (4)
- SOC C 163. Migration and the Law (4)
- SOC D 151. Comparative Race and Ethnic Relations (4)
- SOC D 169. Citizenship, Community, and Culture (4)
- SOC D 175. Nationality and Citizenship (4)
- SOC D 183. Minorities and Nations (4)
- THHS 111. Hispanic-American Dramatic Literature (4)
- USP 135. Asian and Latina Immigrant Workers in the Global Economy (4)

** Track B: Field Research or Internship **

Students choosing this track will receive intensive training in field research methods appropriate for studying international migration and then conduct field research in immigrant communities or do an academic internship in a local immigrant/refugee service-providing organization.

(A) **Field Research Methods, Practicum, and Data Analysis **

Students who choose this option will take the following three-course sequence:

- Sociology 181A. Field Research Methods for Migration Studies (Fall Quarter)
- Sociology 181B. Field Research Practicum (Winter Quarter)
- Sociology 181C. Data Analysis/Write-up (Spring Quarter)

These courses provide students with field research methods training and allow them to go to Mexico for three weeks to conduct research in a rural community that sends migrant workers to the United States. They will also analyze and write up the data that is collected. Participants must be proficient in Spanish.

(B) **Independent Field Research **

Students who choose this option are required to take one upper-division research-methods course from the following:

- ETHN 190. Studying Racial and Ethnic Communities
- SOC 104. Field Research–Participant Observation
- SOC 108A. Survey Research Design

Students will complete the remaining sixteen units of the research track for this minor through a
combination of courses from the list under Track A and by completing one or two "199: Independent Studies" courses (four units each), in order to pursue a field research project with a faculty member. They will be required to conduct field research in a local immigrant community and write a substantial research paper based on this research.

(C) Internship

Students who choose this option are required to take one upper-division research-methods course from the following:

ETHN 190. Studying Racial and Ethnic Communities
SOC 104. Field Research–Participant Observation
SOC 108A. Survey Research Design

Students will then do an academic internship in a nongovernmental organization or government agency that serves immigrants or refugees in the San Diego/Tijuana area. Internships for up to eight units will be arranged by the UCSD Academic Internship Program (AIP). The remaining units needed to complete the minor will consist of courses from the list under Track A.

ASSOCIATE PROFESSORS
Alberto Diaz-Cayeros, Ph.D.  
Josh Graff Zivin, Ph.D.  
Ulrike Schaede, Ph.D.  
Barbara F. Walter, Ph.D.  
Christopher M. Woodruff, Ph.D.

ASSISTANT PROFESSORS
Edmund Malesky, Ph.D.  
Craig McIntosh, Ph.D.  
Krisiert Samphantharak, Ph.D.  
Jessica Wallack, Ph.D.  
Jong-Sung You, Ph.D.

THE MASTER OF PACIFIC INTERNATIONAL AFFAIRS (M.P.I.A.)

REQUIREMENTS FOR ADMISSION

Students interested in pursuing the M.P.I.A. degree program at UCSD’s Graduate School of International Relations and Pacific Studies (IR/PS) must have earned a B.A., or its equivalent, from an institution of comparable standing to the University of California. A minimum grade-point average of 3.0 or better in undergraduate course work or prior graduate study is required for admission. Undergraduate preparation that includes one or more of the following areas is strongly encouraged: the social sciences (specifically economics and political science), quantitative methods (such as calculus and statistics), foreign language, and related area studies courses. The admissions committee looks for students with previous professional employment, a history of meaningful international experience, and demonstrated leadership ability.

Applicants are required to submit the following:

- an online UCSD application for graduate study (http://graduateapp.ucsd.edu); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement; a Graduate Record Examination (GRE) or Graduate Management Admission Test (GMAT) score report. Test of English as a Foreign Language (TOEFL) scores are also required of international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. A minimum score of 550 on the paper/pencil version and a minimum score of 213 on the computer-based version of the TOEFL is required. For further details regarding the application process, procedures, and deadlines please visit the IR/PS Web site, http://irps.ucsd.edu, and click on “Programs.”

Orientation tours are available for all prospective applicants who would like further information about the M.P.I.A. program. Tours assist prospective applicants in becoming better acquainted with IR/PS’s M.P.I.A. program and in understanding how the program might relate to their long-term career goals. To sign up for a tour, please contact the IR/PS Office of Admissions at (858) 534-5914 or e-mail irps-apply@ucsd.edu.

The M.P.I.A. is a two-year, full-time program.

THE M.P.I.A. CURRICULUM

The M.P.I.A. curriculum (ninety-eight units) is made up of a set of core disciplinary and skill-oriented courses (thirty-eight units), a regional specialization (eight units), the foreign language requirement (up to twenty-four units), a professional career track (twenty-four units), and unstructured electives.

Core Curriculum

The core curriculum is designed to integrate diverse subject areas such as international management, international relations, applied economics, and comparative public policy. It comprises the following courses:

- Globalization, the World System and the Pacific (IRCO 412)
- Managerial Economics (IRCO 401)
- Policy Making Processes (IRCO 400)
- Quantitative Methods (IRCO 453 and IRCO 454)
- International Politics and Security (IRCO 410)
- International Economics (IRCO 403)
- Finance (IRCO 421)
- Accounting (IRCO 420)
- Capstone course—choices include Managerial Decision Making (IRCO 460), Business and Government in the Global Economy (IRCO 461), Public Policy Workshop (IRCO 462), Strategy and Negotiation (IRCO 463)
- The Corporation in the Global Economy (IRCO 464)

The Regional Specialization

The regional specialization is made up of two designated courses on the economy and political system of a student’s chosen country or region. All students must complete a regional specialization, and may choose from among the following five options: Latin America, Japan, Korea, China, and Southeast Asia.

The Foreign Language Requirement

IR/PS considers foreign language competency to be an indispensable skill for international relations professionals. The foreign language requirement is designed to ensure that students achieve a level of competency to assist in their global interactions. The foreign language requirement may be satisfied in any one of three ways: (a) native speaker ability;
Students must fulfill the foreign language requirement in a language that corresponds to their elected region of specialization. Students may select either Brazilian Portuguese or Spanish when studying Latin America. Students specializing in China, Japan, or Korea, must study Mandarin Chinese, Japanese, or Korean, respectively. Students electing to specialize in Southeast Asia may study Bahasa Indonesia, Chinese, Thai, French, or other approved language. Please contact the IR/PS Student Affairs for further information.

Beyond the basic language requirement, IR/PS also offers the option of certification of more advanced language proficiency for students who choose to pursue further language study. Students pursuing advanced language skills are strongly encouraged to undertake significant language study prior to coming to IR/PS.

Students on the Country and Regional Studies track are subject to a different foreign language requirement. These students must pass both the speaking and the reading proficiency examination in their selected language. The writing proficiency examination is optional. The minimum required level of proficiency is equivalent to a Foreign Service Institute (FSI) Scale 2+ for Spanish, 2 for Portuguese, and 2- for most other languages.

The proficiency examination is administered by appointment throughout the academic year. Students not following the Country and Regional Studies track may take the exam once free of charge in a language that IR/PS currently provides instructional support. Those students on the Country and Regional Studies track may take the exam twice free of charge, regardless of language selection. Please consult with the IR/PS Student Affairs for additional information.

A variety of language courses are offered by UCSD. IR/PS offers four-unit language courses for international relations professionals in Japanese, Mandarin Chinese, and Spanish at the intermediate or advanced levels. In addition, subject to demand, courses in Bahasa Indonesia or other Pacific Rim languages may be offered. Students electing to study a foreign language where IR/PS instructional support is not offered must secure their own language instruction and funding. Course credit for self-supported language learning may be given upon evaluation and approval of the IR/PS faculty. Please contact the IR/PS Student Affairs for additional information.

Students are placed in foreign language courses based on prior preparation and on the results of a placement test administered during orientation.

**Career Tracks**

Beyond the core curriculum, the regional specialization, and the foreign language requirement, students are offered an array of career tracks from which to choose. The career tracks provide an opportunity to focus on a specialized professional career path and to work closely with other students and faculty who share similar interests. A career track consists of six courses (twenty-four units). Each track combines some designated requirements and a range of relevant electives from which to choose. All students must complete a career track. A student whose interests do not fall within the existing range of tracks may complete the Self-Design track, and create a tailor-made package of courses in consultation with their faculty advisor. Currently, IR/PS offers the following career tracks:

- International Management
- International Politics
- International Environmental Policy
- Public Policy
- International Economics
- International Development and Non-Profit Management

**Country and Regional Studies**

**Electives**

Students may use remaining units to take electives across the range of IR/PS courses in management, political science, economics, regional studies, and language, as well as with (with approval) courses offered elsewhere on campus. The number of elective units available to a student will vary, depending on factors such as prior language study. Prospective students are advised to consult the IR/PS Office of Admissions for a full list of elective courses currently offered.

**EDUCATION ABROAD PROGRAM**

Students are encouraged to participate in the Education Abroad Program (EAP) in their second year of study. Though this may necessitate a third year of study to meet M.P.I.A. requirements, the opportunity provides unparalleled experience in the selected regional study area and language. By petition, certain credits earned through EAP may be applied to the M.P.I.A. degree requirements.

**CAREER SERVICES**

The IR/PS Career Services office provides students on-going guidance, expertise, and resources to successfully manage their careers. This personalized process begins before school starts with Career Management Orientation, and continues during the two-year program and throughout the students' careers as alumni.

The Career Services team offers IRPSCAREERS, an online system available twenty-four hours a day, seven days a week, which has a calendar of events, student profiles, online resumes, and a specialized database of employers with job/internship opportunities. Career consultants are available for daily scheduled appointments or quick consultations for resume writing, cover letters, effective job search strategies, interviewing skills (including videotaped mock interviews), labor market trends, job offer evaluation, and negotiation of total compensation packages. Alumni return to campus often for panels, information sessions, and employer interviews.

**INTERNSHIPS**

Students are strongly encouraged to participate in a variety of internship programs aligned with their career goals in business and industry, federal and state government, and nonprofit and multilateral organizations. The Career Services office works closely with students and alumni to make connections with global employers in the nonprofit, public, and private sectors based on the students' interests.

To enhance students' professional skills, IR/PS strongly recommends each student participate in an internship during the summer between the first and second year. Students with unpaid summer internships may receive financial support from IR/PS donors. Internships offer opportunities to explore career options, apply theoretical knowledge to real work situations, and gain experience important to potential future employers.

**MASTER OF ADVANCED STUDIES IN INTERNATIONAL AFFAIRS (M.A.S.-I.A.)**

**REQUIREMENTS FOR ADMISSION**

Students interested in pursuing the M.A.S.-I.A. degree program at UCSD's Graduate School of International Relations and Pacific Studies must have earned a B.A., or its equivalent, from an institution of comparable standing to the University of California and have a minimum of five years of relevant work experience and/or graduate-level studies and relevant international experience including demonstrated proficiency in a regional language.

A minimum grade-point average of 3.0 or better in undergraduate course work or prior graduate study is required for admission. Undergraduate preparation that includes one or more of the following areas is strongly encouraged: the social sciences (specifically economics and political science), quantitative methods (such as calculus and statistics), foreign language, and related area studies courses.

Candidates are required to submit the following: an online UCSD application for graduate study (http://graduateapp.ucsd.edu); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement. Test of English as a Foreign Language (TOEFL) scores are also required of international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. A minimum score of 550 on the paper/pencil version, a minimum score of 80 for the Internet-based test, and a minimum score of 213 on the computer-based version of the TOEFL is required. For further details regarding the application process, procedures, and deadlines please visit the IR/PS Web site, http://irps.ucsd.edu, and click on “Programs.”

Orientation tours are available for all prospective applicants who would like further information about the M.A.S.-I.A. program. Tours assist prospective applicants in becoming better acquainted with IR/PS's M.A.S.-I.A. program and in understanding how the program might relate to their long-term professional goals.

**INTERNATIONAL RELATIONS AND PACIFIC STUDIES, GRADUATE SCHOOL OF (IR/PS)**

365
The Regional Specialization

Tracks: Currently, IR/PS offers the following career M.A.S.-I.A. students and faculty who share similar interests. A professional career path and to work closely with other provide an opportunity to focus on a specialized pro-
career tracks from which to choose. The career tracks

Beyond the core curriculum and the regional
requirement may be completed prior to matricula-
tion of a student’s chosen country or region. All students
must complete a regional specialization, and may
choose from among the following five options: Latin
America, Japan, Korea, China, and Southeast Asia.

Foreign Language Proficiency

IR/PS considers foreign language competency to be
an indispensable skill for international relations professionals. The M.A.S.-I.A. language proficiency requirement may be satisfied in any one of three ways: (a) native speaker ability; (b) completing six quarters (four semesters) of college-level language instruction from UCSD or a comparable institution, with a grade of B or better in the final course; or (c) passing a special IR/PS-administered language exam, which is the equivalent of the final exam administered in the sixth-quarter course in the selected language. The foreign language proficiency requirement may be completed prior to matricula-
tion at IR/PS. Please contact IR/PS Student Affairs for additional information.

Career Tracks

Beyond the core curriculum and the regional
specialization, M.A.S.-I.A. students are offered three career tracks from which to choose. The career tracks provide an opportunity to focus on a specialized pro-essional career path and to work closely with other students and faculty who share similar interests. A career track consists of three courses (twelve units). Currently, IR/PS offers the following career M.A.S.-I.A. tracks:

International Security
International Political Economy
International Public Policy

Electives

Students may use remaining units to take electives across the range of IR/PS courses in management,
political science, economics, regional studies, and language, as well as (with approval) courses offered elsewhere on campus. Prospective students are advised to consult the IR/PS Office of Admissions for a full list of elective courses currently offered.

THE PH.D. IN ECONOMICS AND INTERNATIONAL AFFAIRS

Requirements for Admission

Applicants who seek admission to the highly com-
petitive joint Ph.D. program must have earned a B.A.,
or its equivalent, from an institution of comparable standing to the University of California. Preference
will be given to students with prior academic records of distinction and to those who have a background in one of the fields of emphasis and/or geographical areas covered by the program.

Applicants are required to submit the follow-
ing: an online UCSD application for graduate study (http://graduatetapp.ucsd.edu); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement; a writing sample; a Graduate Record Examination (GRE) score report. Test of English as a Foreign Language (TOEFL) scores are also required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. A minimum score of 550 on the paper/pencil version and a minimum score of 213 on the computer-based version of the TOEFL is required.

The minimum criteria required for admission to the extremely selective joint Ph.D. program can be found on the following Web site: http://irps.ucsd.edu/academics/phd-program.htm. Admission is offered to a very small number of applicants.

THE PH.D. CURRICULUM

Program of Study

The Ph.D. In economics and international affairs prepares students for research careers in economics, with an emphasis on international affairs and the Pacific region. The program combines the analytical skills of economics with political economy, institutional analysis, and region/empirical knowledge.

Program Advisory Committee

Each student is assigned a Program Advisory Committee of four economics and IR/PS faculty, at least one must be from economics, one from IR/PS and one outside member from another UCSD department. With this committee, the student works out a plan of study that the committee must ap-
prove. The student must make satisfactory progress in a coherent program of course work and reading courses, which meet the approval of the Program Advisory Committee.

Course Requirements

The Ph.D. curriculum in economics and international affairs is designed to provide students with basic training in the techniques of modern economics, as well as empirical and institutional knowledge of the Pacific region. The first year will consist of the three series of microeconomics, macroeconomics, and econometrics, taught in the Department of Economics. The second year will consist of continu-
ation of the three series plus seven electives. Two of these electives will be an IR/PS sequence in political economy. In subsequent years, courses will consist of the regional sequence, an empirical project, and two third-year papers.

Regional Requirement

Students must take at least three courses, one of which may be a reading course on policy processes and issues in the Pacific region. These courses may consider the Pacific region as a whole, as a sub-
region, or examine individual countries. The courses may be in both IR/PS and, with prior permission, related departments. Some students may choose to take more than the minimum three courses to deepen their knowledge of a particular country or area. Comprehensive examination on regional areas is not required.

Language Requirement

Students are expected to achieve a level appropriate to the student’s dissertation topic of reading profi-
ciency in at least one foreign language. Proficiency may be verified by examination or by certification by thesis supervisor.

Comprehensive Examinations

Students must pass written comprehensive exams in microeconomics, macroeconomics, and economet-
rics, which will be administered and graded by the economics department.

Dissertation

Candidates must present a dissertation prospectus no later than March of their third year in the doctoral program. They will be examined on their prospectus by their dissertation committee and must complete a dissertation, which makes a substantial and original contribution to knowledge commensurate with the standards of the University of California in order to receive the Ph.D. degree.

Oral Defense

Students will defend their dissertation at a final oral examination, which will be open to the public.

Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of five years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.
THE DOCTORATE OF PHILOSOPHY IN
POLITICAL SCIENCE AND
INTERNATIONAL AFFAIRS
(PH.D.)

REQUIREMENTS FOR ADMISSION

Applicants who seek admission to the highly competitive joint Ph.D. program must have earned a B.A., or its equivalent, from an institution of comparable standing to the University of California. Preference will be given to students with prior academic records of distinction and to those who have a background in one of the fields of emphasis and/or geographical areas covered by the program.

Applicants are required to submit the following: an online UCSD application for graduate study (http://graduateapp.ucsd.edu); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement; a writing sample; a Graduate Record Examination (GRE) score report. A minimum score of 550 on the paper/pencil version and 213 on the computer-based version of the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English.

The minimum criteria required for admission to the extremely selective joint Ph.D. program can be found on the following Web site: http://irps.ucsd.edu/programs/phd-program/apply.htm. Admission is offered to zero to two applicants per year.

THE PH.D. CURRICULUM

Program of Study

The Ph.D. in political science and international affairs prepares students for research careers in political science, with an emphasis in either international policy analysis or comparative policy analysis. The program combines the analytical skills of political science with political economy, institutional analysis, policy analysis (especially economic policy) and regional training, with special attention to East Asia and/or Latin America.

Course Requirements

The Ph.D. curriculum in political science and international affairs is designed to provide students with basic training in the techniques of modern political science, as well as applications to specific policy areas and countries or regions.

Seventeen courses are required prior to advancement to candidacy. There is a common core sequence, consisting of comparative public policy, two courses in comparative politics, two courses in international relations and research design. Each student must declare a primary field of either international policy analysis (I.P.A.) or comparative policy analysis (C.P.A.), consisting of three specialized courses. There is also a regional focus of five courses. Three additional courses must be taken from a set of electives.

Regional Requirement

The regional focus consists of international relations of Asia-Pacific or international relations of the Americas (depending on which region is the student’s primary region), three additional courses in the student’s primary region, and one course in another region offered by either IR/PS or the Department of Political Science are required. By petition, students may count a region other than one of the IR/PS offerings (currently China, East Asia, Japan, Latin America, or South-east Asia) as their primary region.

Language Requirement

All students in the program are required to meet a high standard of proficiency in a foreign language before being advanced to candidacy. The language must be linked to the student’s region.

Seminar Papers

Each student must submit two seminar papers, one in each field. The penultimate draft of each seminar paper must be completed prior to taking the appropriate field exam, and the final draft must be completed by the end of the quarter in which the exam is taken. Both papers must demonstrate knowledge of the student’s regional focus, as well as knowledge of relevant theory in the field. At least one of the papers must also demonstrate knowledge of a substantive policy area, related to the student’s primary focus field.

Comprehensive Examinations

Each student must pass two comprehensive examinations, one in international relations and one in comparative politics. Each exam will be graded by a joint committee consisting of three permanent faculty members, with at least one from political science and at least one from IR/PS.

The primary field exam contains a focus field, which may be either a substantive field of policy analysis (e.g. trade, environment, international finance) or the student’s chosen primary region. Regardless of focus field, that part of the exam will test the student’s knowledge of theoretical literature and ability to apply it to a policy issue of relevance to the region.

Dissertation

Candidates must present a dissertation prospectus to be examined by their dissertation committee, and must complete a dissertation which makes a substantial and original contribution to knowledge commensurate with the standards of the University of California in order to receive the Ph.D. Degree. The dissertation committee shall consist of four faculty members chosen from the Department of Political Science and IR/PS, with at least one from each unit. A fifth member must be from outside these two departments.

Oral Defense

Students will defend their dissertation at a final oral examination, which will be open to the public.

Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of the fourth year. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

BACHELOR OF ARTS IN INTERNATIONAL STUDIES AND MASTER OF INTERNATIONAL AFFAIRS B.A./M.I.A.

REQUIREMENTS FOR ADMISSION

Students interested in pursuing the B.A./M.I.A. degree program at UCSD’s School of International Relations and Pacific Studies (IR/PS) must be currently enrolled in UCSD’s International Studies (IS) undergraduate major. Students who meet the admissions requirements listed below may apply for admission to the combined degree track of the International Studies major in the fourth quarter prior to receipt of the B.A. degree.

1. Completion of fall and winter quarters of junior year with a minimum overall GPA of 3.00 and a minimum 3.4 GPA in International Studies upper-division course work.

2. Satisfactory completion of the foreign language requirement for the undergraduate International Studies major. The foreign language must be one of the Pacific Rim languages required by IR/PS.

4. Two letters of recommendation from individuals who can attest to the applicant’s academic promise and depth of interest in professional training in international affairs.

5. Students will also be required to complete a noncredit, professional internship in the field of international affairs during the summer prior to matriculation in the M.I.A. degree program.

Applicants will be admitted to the combined degree program on the basis of demonstrated academic excellence in upper-division course work in the International Studies major, Pacific Rim language proficiency, strong support from UCSD faculty in letters of recommendation, international experience, leadership, and community involvement.

THE B.A./M.I.A. CURRICULUM

International Studies (IS) students are required to declare a primary track (economics or political science) and a secondary track (five upper-division courses). In addition, IS majors must successfully complete two upper-division gateway courses (INTL 101 and 102) and a senior research seminar (INTL 190). In addition to these required courses, IS majors admitted to the combined degree program must also complete two quantitative methodology courses (IRCO 453 and 454). IS majors admitted to the combined degree program will complete all of these requirements for the International Studies degree in either Economics
or Political Science in years one through four of their study at UCSD.

**B.A. in International Studies–Economics**

**Economics Primary Track (eight courses)**

The following courses are required:
- IRCO 401: Managerial Economics
- IRCO 403: International Economics
- IRCO 420: Accounting
- IRCO 421: Finance

In addition, students are required to take four additional Economics courses chosen from the IS-Economics course list or from IR/PS Economics courses, for a total of eight courses.

**Political Science Secondary Track (five courses)**

The following courses are required:
- IRCO 400: Policymaking Processes
- IRCO 410: International Politics and Security
- IRCO 412: Globalization, the World System, and the Pacific

Two additional courses from the approved IS-Political Science course list or from IR/PS electives in regional politics, comparative public policy, or international politics. Of the thirteen track courses, three must focus on one country or region.

**B.A. in International Studies–Political Science**

**Political Science Primary Track (eight courses)**

The following courses are required:
- IRCO 412: Globalization, the World System, and the Pacific
- IRCO 400: Policymaking Processes
- IRCO 410: International Politics and Security

Five additional courses selected from the approved IS-Political Science course list or from IR/PS electives in regional politics, comparative public policy, or international politics.

**Economics Secondary Track (five courses)**

The following courses are required:
- IRCO 401: Managerial Economics
- IRCO 403: International Economics
- IRCO 420: Accounting
- IRCO 421: Finance

In addition, students are required to take one additional Economics course chosen from the IS-Economics course list or from IR/PS Economics courses, for a total of five courses. Of the thirteen track courses, three must focus on one country or region.

**Additional Requirements**

In the fifth year of the combined degree program, students will complete the requirements for the one-year M.I.A. degree. The M.I.A. requires a minimum of forty-eight units of 400-level course work complete at IR/PS, including a regional specialization (two four-unit courses), a professional career track (six four-unit courses), a capstone requirement (one four-unit course), elective course work (three four-unit courses), and an internship requirement (noncredit).

The combined degree program includes the following additional requirements:

1. Language requirement: All International Studies majors must complete a language requirement equivalent to four quarters of undergraduate training in a Pacific Rim language (as defined by IR/PS) prior to admission to the combined degree program. In order to receive the M.I.A. degree at the end of the fifth year, students must complete at least two additional quarters in the same Pacific Rim language, for a total of six quarters. As an alternative to the six-quarter language requirement, students may demonstrate proficiency at the level currently required by IR/PS.

2. All students in the combined degree program will declare a special primary and secondary track in their International Studies major. These combined degree tracks will be Economics (primary track)/Political Science (secondary track) or Political Science (primary track)/Economics (secondary track). Students will complete the existing lower-division requirements for the Economics primary or secondary track (Mathematics 10A-8-C or Mathematics 20A-8-C, Economics 1-2-3).

**PROGRAMS AND RESEARCH CENTERS**

**GLOBAL LEADERSHIP INSTITUTE PROGRAM**

The Global Leadership Institute (GLI) is a graduate-level, executive education program. Since 1989, GLI has served as an executive training program for mid-career professionals seeking to expand their knowledge and experience in various aspects of international affairs including politics, public policy, management, and economics. Participants also have the opportunity to learn English or other languages of countries located in the Pacific region. Professional tours are offered throughout the quarter, thereby allowing GLI Fellows the opportunity to see industry-related operations firsthand in a cross-section of public and private sector organizations. The duration of each participant’s program may range from one quarter (eleven weeks) up to two years. For international applicants, in addition to participating under the Exchange Visitor (J) Visa program as a short-term Fellow enrolled in courses, GLI also hosts research scholars exclusively interested in gaining access to UCSD’s extensive resources. Both working professionals and graduate students in study abroad programs may opt for either Exchange Visitor (J) Visa category. GLI also offers customized courses in a variety of disciplines for organizations sending a group of professionals in a specialized field; these courses can be integrated with regularly scheduled course work during the academic quarter. Custom group programs ranging in duration from one to thirty days are also available. A certificate of study is presented upon successful completion of a GLI program.

For more information, please contact the Global Leadership Institute via e-mail at irps-gli@ucsd.edu or call (858) 822-3875 or (858) 534-4019.

**THE KOREA-PACIFIC PROGRAM**

The Korea-Pacific Program was formed in September 1989 in recognition of the growing importance of Korea in the world, of Korean-U.S. relationships, and of the Korean model of social and economic development.

Directed by IR/PS Professor Stephan Haggard, the program promotes the understanding of Korea in an international context and encourages the study of Korea by offering courses on the country’s economics and politics. Research is supported on contemporary Korean political economy. Outreach to the community is offered through seminars, lectures, courses, and cultural events.

In comparison with other Korean studies programs in the United States, the IR/PS Korea-Pacific Program is distinctive in several respects: it concentrates on contemporary Korea, focuses on policy questions, stresses the foundations of Korean economic growth, explores Korea’s international relations, and seeks to understand Korea in a broad regional context.

**THE ASEAN-PACIFIC PROJECT**

The ASEAN-Pacific Project is one of several major regional and theme-based nodes of activity within the Graduate School of International Relations and Pacific Studies. Its mandate is to support students and to serve as a catalyst for the development of Southeast Asia-related teaching and research activities within the school.

The ASEAN-Pacific Project extends the success of the school’s original Vietnam-Pacific Project, with scope being broadened to embrace the other countries of Southeast Asia.

The project is built upon private donations to the school, with this resource being supplemented by resources obtained from external grant agencies and the university. The project supports the activities of students at IR/PS with an interest in Southeast Asia through fellowships (for summer travel and internships) and visiting guests speakers.

The project also serves as a catalyst and facilitator for research projects within the school relating to Southeast Asia. It seeks to promote disciplinary-driven work on political and economic topics pertaining to Southeast Asia, as distinct from more traditional area studies scholarship. Examples of this include recent work on national political institutions and policy-making, the dynamics of regional cooperation, food and agricultural policies, and the relocation of the global magnetic disk-drive industry to Southeast Asia. Other recent research-related initiatives include a major international workshop for Ph.D. students in political science working on Southeast Asia, and a workshop for the U.S. Agency for International Development on political conflict in Indonesia.

**COURSES**

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

IRPS 87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting.
Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15–20 students, with preference given to entering freshmen.

IRGN 199. Independent Research/Study (2-4) Independent research/consulting under the guidance of a faculty member of IR/PS. PREREQUISITE: consent of under-graduate advising office and instructor.

M.P.I.A. CORE CURRICULUM

IRCO 400. Policy-Making Processes (4) This course is designed to teach students how to “read” a country’s political and economic system. The course will examine how the evolution of different institutional frameworks in the countries of the Pacific region influences the way in which political choices are made. PREREQUISITE: IR/PS statistical familiarity.

IRCO 401. Managerial Economics (4) Survey of basic tools in economics. Examination of how commodity demand is determined, what affects supply of the commodity, how price is determined, when optimal market allocation of resources and failure occur, and basic topics concerning the aggregate economy.

IRCO 403. International Economics (4) The theory and mechanics of international economics. Included will be such topics as real trade theory, international movements of capital, the effects of trade and capital flows on domestic economies, and policies toward trade and foreign investment.

IRCO 410. International Politics and Security (4) Development of analytic tools for understanding international relations with applications to contemporary problems such as the environment, nuclear proliferation, human rights, humanitarian interventions, and the roots of conflict and cooperation among countries.

IRCO 412. Globalization, the World System, and the Pacific (4) This course examines globalization and other economic and political factors that shape the international relations of the Pacific Rim. Specific topics include financial market integration, state cooperation and intervention, and case studies of individual countries.

IRCO 420. Accounting (4) An introduction to financial accounting designed to prepare students to understand their own organizations’ international operations and interpret information from outside organizations. The emphasis will be on understanding the potential uses and limitations of accounting information for various management purposes, and the procedural aspects of accounting will be introduced only to the extent necessary to explicate the basic concepts.

IRCO 421. Finance (4) This course surveys the financial problems facing managers and analyzes financial institutions, financial instruments, and capital markets. Tools acquired will prepare students to analyze international financial topics such as exchange rate behavior, the management of international risk, and international financing. PREREQUISITES: IRCO 420, 453, and 454.

IRCO 453. Quantitative Methods I (2) This course is designed to provide proficiency in quantita-tive methods that are used for optimization and decision making. The use of spreadsheets is applied to data analysis and problem solving. Statistical theory and regression analysis are introduced.

IRCO 454. Quantitative Methods II (4) This course covers elements from statistics that are central to business decision-making under uncertainty. In particu-lar, regression analysis and estimation will be applied to problems of forecasting and optimization.

IRCO 460. Managerial Decision Making (4) This course develops practical decision-making skills useful in a management setting. It stresses identifying relevant information and presenting it effectively. Skills include strategic analysis, negotiation, and application of quantita-tive methods. PREREQUISITES: IRCO 400, 401, 410, 412, 420, 421, 453 and 454, or consent of instructor.

IRCO 461. Business and Government in the Global Economy (4) Business and government interaction in the world econ-omy are examined from both public policy and private sector management perspectives. Topics include competitiveness, the challenging boundaries of private and public, and the influence of private interests on public sector regulation. Prerequisites: IRCO 400, 401, 410, 412, 420, 421, 453, and 454, or consent of instructor.

IRCO 462. Public Policy Workshop (4) Presents tools for analysis of public policies. Students collaborate on term-long projects analyzing public policy for- mation, implementation, and outcomes. PREREQUISITES: IRCO 400, 401, 410, 420, 421, 453, and 454, or consent of instructor.

IRCO 463. Strategy and Negotiation (4) This class introduces the fundamentals of competitive strategy, based on case studies requiring corporate analysis; and the principles of negotiation, based on exercises and class learning. Both sections of this class are highly applied, and require intensive off-class preparation and teamwork that help students acquire skills in analytical thinking, strategic action planning, and hands-on negotia-tions. PREREQUISITES: IRCO 400, 401, 403, 410, 412, 420, 421, 453, and 454.

IRCO 464. The Corporation in the Global Economy: The Interaction of Business and Government (4) What can countries, firms, and individuals do to position themselves effectively in the world economy? This course uses case studies to explore the global division of labor in the production value chain, government policy and the micro-organization of the firm. PREREQUISITES: IRCO 400, 401, 410, 412, 420, 421, 453, and 454.

GENERAL COURSES

Not all general courses are offered each year.

IRGN 400. International Relations of Asia-Pacific (4) International relations and developing international political economies of nations bordering the Pacific. Topics include: the “Pacific Basin” concept; the U.S. and “hegemonic-stability” theory; legacies of the Korean War and Sino-Soviet dispute; immigration patterns and their consequences; and Japan’s foreign policy.

IRGN 401. Ethnic Conflict (4) Explanations for why ethnic conflicts break out, why they are difficult to resolve, and what effects outside intervention has on them. Introduces students to the major theories of ethnic and inter-group conflict. Policy debates regarding how the international community can best respond to these conflicts. PREREQUISITE: admission to program or consent of instructor.

IRGN 402. International Political Economy: Money and Finance (4) Examination of effects of national policies and international collaboration on public and private international financial institutions, in particular the management of international debt crises, economic policy coordination, and the role of international lender of last resort. PREREQUISITE: IRGN 411 or consent of instructor. Conjointed with Political Science 1440D and 262.

IRGN 404. Chinese Politics (4) This course will analyze post-1949 Chinese politics, includ-ing political institutions, the policy making process, and citizen political behavior. Special attention will be given to the prospects for political reform in China.

IRGN 405. U.S.–China Relations (4) Can the United States and China manage to develop a constructive relationship or are they headed toward a hostile relationship? This course addresses this question by examining the domestic and international influences on the foreign policies of both countries and key issues in the bilateral relationship. Students also do policy projects.

IRGN 406. Financial Institutions (4) This course analyzes the roles of money and financial institutions in the economy. The first part of the course focuses on microeconomics and the financial system. The topics include money, financial markets, financial intermediaries, banking regulations, and bank runs. The second part of the course focuses on the microeconomics aspects of financial institutions. The topics include financial development, financial liberalization, and their effects on the economy, especially economic growth and develop-ment. PREREQUISITE: IRCO 403 and IRCO 421 or consent of instructor.

IRGN 407. Policy Implementation Process (4) Course builds on Policy-Making Processes class by focusing on non-elected officials’ role in setting and implementing policy. Ideally, elected officials make policies that unbi-ased, technically proficient bureaucrats carry out. Course provides insight into why the real world departs from this. PREREQUISITE: IRCO 400.

IRGN 408. Internal Conflict after the Cold War (4) Will examine the causes of civil wars and the problems with resolution and state reconstruction. Theoretical approaches discussed will then be applied to three recent case studies: Cambodia, Rwanda, and Bosnia. Policy implications for the international community will be discussed. PREREQUISITE: IRCO 410.

IRGN 409. Economic Policy in Latin America (4) This course seeks to enhance the students’ understand-ing of the main policy alternatives open to the largest Latin American countries. Development and stabilization policies are analyzed, emphasizing the current debate between conventional and heterodox policy packages and their impact on decisionmaking. PREREQUISITES: IRCO 401, IRCO 403.

IRGN 410. Corporate Governance (4) Why do corporate governance systems—the way firms are run, the relationships among managers, stockholders, and workers—differ widely around the world? This course examines the various explanations for these striking differ-ences and the consequences. PREREQUISITE: graduate level or consent of instructor.

IRGN 411. Business and Management in Japan (4) This course introduces the main aspects of Japanese busi-ness and industrial organization (keiretsu), Japanese man-agement practices, and the representation and influence of business interests in the Japanese political economy.

IRGN 412. International Competitiveness and the Globalized Value Chain (4) This course explores the strategies countries pursue in the highly competitive world economy. It examines the global value chain and public policy toward education, labor, corporate social responsibility, free markets and global trade, finance and shareholding, and the political process.

IRGN 413. Corporate Strategy and the Environment (4) This seminar examines the ability of firms to increase shareholder value through improved environmental performance. Topics include product differentiation, strategic use of regulations, the “Porter hypothesis,” and environmental management systems. Readings include case studies and research articles. PREREQUISITES: IRCO 401, 421, 453, and 454.

IRGN 416. Post-War Politics in Japan (4) Overview of post-war politics in Japan, including American Occupation reforms, political institutions, major politi-cal factors, mass and elite, and political behavior. Special attention will be paid to the issue of Japan’s changing democracy.

IRGN 417. Microfinance (4) This course will begin by examining financial markets in poor countries. Investigates how microfinance con-tracts overcome problems which had previously barred the extension of business credit in many environments. PREREQUISITE: admission to program or consent of instructor.

IRGN 419. Risk Management (4) This course provides an introduction to derivative assets such as options, futures, and swap contracts. The main
emphasizes on their valuation, use in hedging, and role as components of liabilities that mitigate risk and agency problems in business firms. **Prerequisite:** IRCO 421.

**IRGN 420. Strategic Marketing Planning (4)**
This course develops the microeconomic foundations of market and firm theory and critically examines the marketing details of transactions: demand and product differentiation, incomplete and incorrect information, search costs and promotion costs. It is argued that within this theoretical framework (i.e., models) most observed marketing behavior can be reconciled. The primary objective of this course is to learn to deduce firm and consumer motives from observed behavior. **Prerequisites:** IRCO 401 and 403, or consent of instructor.

**IRGN 422. Investments (4)**
An analysis of the risk/return characteristics of different assets as perceived by different investors and their implications for security price behavior, emphasizing real world capital market behavior. International aspects include the role of exchange rate risk and international diversification. **Prerequisites:** IRCO 421, 453, and 454.

**IRGN 424. Corporate Finance (4)**
The topics covered are dividend policy and capital structure, options, debt financing, and short and long-term financial planning. Course format will be mostly lectures, with occasional cases. Some international aspects of corporate finance will also be discussed. **Prerequisites:** IRCO 401, 403, 420, 421, 453, and 454.

**IRGN 429. The Globalization of Production (4)**
This course examines how trade policy, information technology, and other factors shape the production strategies of multinational enterprises. Topics include foreign direct investment and the mode of entry into foreign markets, global outsourcing and the globalization of work, and the impact of trade and investment policy on the world location of production. **Prerequisites:** IRCO 401 and 403, or consent of instructor.

**IRGN 431. Fiscal and Monetary Policy (4)**
Effects of fiscal and monetary policies on aggregate variables such as output, nominal and real interest rates, price level, and employment. Additional topics include the inflation/unemployment trade-off, budget deficit, and economic growth.

**IRGN 432. Immigration and Immigration Policy (4)**
This course examines the role of immigration in the globalization of Pacific Rim economies. Topics include the economic forces behind immigration; the impact of immigration on wages, employment, and industry structure in sending and receiving countries; and the nature, scope, and political economy of immigration policy. **Prerequisite:** IRCO 401 or consent of instructor.

**IRGN 434. Strategic Analysis (4)**
This course analyzes competitive interactions, surveying the modern economic analysis of relationships between and within firms. The foundations of the course are game theory and the economics of information. Topics include bargaining and contracting, principal agent models, and bidding models. **Prerequisite:** graduate standing or consent of instructor.

**IRGN 435. Topics in International Trade (4)**
This course develops new analytical models of international trade theory and policy. Topics include setting trade policy where firms have global market power; the interaction between international trade, innovation, and economic growth; regional economic policy, dynamic industry clusters, and information technology; and new trade theory and the world distribution of income. **Prerequisites:** IRCO 401 and 403, or consent of instructor.

**IRGN 436. Information and Management (4)**
This is a seminar course on the use of information by organizations in strategic and tactical decision-making. Actual content varies, and currently includes doing business on the Internet and supply chain management.

**IRGN 437. Policy Design (4)**
Course teaches how to make strong, reasoned cases for new policy initiatives. Covers cost-benefit analysis, cost-effectiveness evaluation, multigal analysis, and how these are used in policymaking. Covers tools to predict policy impact, like drawing on "best practice" and related experiences.

**IRGN 438. Management: Analysis and Control (4)**
This course provides a comprehensive introduction to the fundamental decisions and trade-offs associated with the control of a firm's operations function. It analyzes production processes, quality control, inventory and materials planning, kanban and just-in-time principles. **Prerequisites:** IRCO 453 and 454, or consent of instructor.

**IRGN 439. Policy Evaluation (4)**
Research-design class focusing on strategies for evaluating policies’ effectiveness with data in small quantities. Skills taught: understanding limits of what data say, and using information optimally. The emphasis is on qualitative analysis. The concepts taught are similar to those presented in QM3. **Prerequisites:** IRCO 453 and 454.

**IRGN 440. Managerial Accounting and Control (4)**
Focus on planning, managing, controlling and evaluating costs for competitive advantage in global markets. Key topics will include cost structure, cost-based managerial decision making, strategic cost management, JIT/TQC cost management, and accounting control systems. **Prerequisite:** IRCO 420 or consent of instructor.

**IRGN 443. Economics of Telecommunications (4)**
This course will examine the economic of the telecommunications and public policy rationale of regulations applied to this industry. Both theoretical models and case studies will be used to provide better understanding of the telecommunication marketplace and the nature of competition in the industry. **Prerequisite:** IRCO 401 or consent of instructor.

**IRGN 444. Product Development (4)**
This course examines how high-tech companies develop successful products. Emphasizes interplay between business and technology issues, including marketing, finance, manufacturing, prototyping, testing, and design. Students develop novel products, from concept to working prototype, including a business plan for launching the product. Discussion of concurrent engineering, rapid prototyping, industrial design, and other design methodologies.

**IRGN 446. Applied Data Analysis and Statistical Decision Making (4)**
The goal of the course is to teach how to evaluate quantitative information in business and economics contexts, and to make sound managerial decisions in complex situations. Much of the problems and the course work will involve statistical software and spreadsheet analysis of data. The course is designed for students who have successfully completed a course in multivariate statistical methods beyond basics. **Prerequisites:** IRCO 453 and 454, or consent of instructor.

**IRGN 447. Organizations (4)**
A seminar course based on the modern economics of organization. Covers an eclectic set of readings on a diverse range of organizations, looking at how incentives for collective action are structured. **Prerequisites:** IRCO 401 and 403 or consent of instructor.

**IRGN 448. Civil Society and Development (4)**
To explore the roles that civil society/NGOs/the third sector can play in advancing political, social, and economic progress in developing countries. To consider the strengths and weaknesses of civil society's potential impact, like drawing on "best practice" and related experiences. **Prerequisite:** consent of instructor.

**IRGN 449. Making U.S. Foreign Policy (4)**
Analysis of the interests, structure and procedures of the main executive branch agencies involved in the formulation of foreign policy, and of the roles of Congress, the media, public opinion, and non-governmental actors. Case studies and "daily briefings" to prepare students to perform professionally in the foreign policy arena. **Prerequisite:** IRCO 410 or consent of instructor.
integration, and trade friction and conflict will be addressed in part through study of specific cases.

IRGN 461. Doing Business in China (4)
This course describes the Chinese commercial, organizational, and cultural environment. Case studies of foreign businesses in China are examined, and the opportunities and pitfalls of operation in China are considered. Negotiation with Chinese counterparts is covered through a negotiation exercise. The focus is on mainland China, but some attention is given to business in Hong Kong and Taiwan as well. Students are required to prepare business plans for proposed Chinese ventures.

IRGN 462. Economies in Southeast Asia (4)
This course focuses on the long-run and current economic issues of Southeast Asia. The topics are economic growth, human capital, inequality and poverty, social institutions, the business sector, the financial sector, government, the external sector, and regional and interregional economic relations. For each topic, we will discuss the issues from selected countries in the region in more detail. Prerequisite: IRGN 401 and IRGN 403 or consent of instructor.

IRGN 463. Politics of Southeast Asia (4)
This course provides an introduction to five Southeast Asian countries: Indonesia, Thailand, Malaysia, the Philippines, and Vietnam. The focus will be on national level of political and economic issues in these countries. In addition, a number of more specific issues will also be examined such as: Chinese business groups and networks; clientelism and corruption; regional trade and investment linkages; democratization; and the implications of political change for future economic development. Prerequisite: Graduate standing or consent of instructor.

IRGN 464. Strategies and Skills for Effective Consulting (4)
This course will provide an introduction to the field of consulting. It will focus both on effective consulting strategies and on skills and tools that are helpful in the process. Technical, cultural, economic, and political issues will be considered, as the various aspects of consultant work are examined.

IRGN 465. Management of Non-profit Organizations (4)
Analyzes the particular environment in which non-profit organizations define and achieve their objectives. Management tools are applied to existing non-profits and to student projects.

IRGN 466. Public Finance (4)
Describes principles of taxation and expenditure analysis; public budgeting; and assessment of budget priorities.

IRGN 467. Policymaking and Political Economy in Japan (4)
Examines the policymaking process in Japan, the interaction and role of state and non-state actors in shaping Japan's economy. Analysis and comparison, through case studies of industrial policies (toward high-tech and defense industries), and non-industrial policies and their consequences.

IRGN 470. International Business Strategy (4)
This course analyzes corporate strategies and management issues in their international dimensions. Based on numerous case studies, the class examines the strategic opportunities and problems that emerge when companies transfer corporate skills and competence to other countries.

IRGN 471. Japanese Economy (4)
A broad survey of the Japanese economy, together with in-depth examination of some distinctively Japanese phenomena such as savings behavior, financial structure, industrial organization, and labor markets. Prerequisite: IRGN 401 and 403, or consent of instructor.

IRGN 472. Japanese Corporate Culture (4)
This course examines Japanese culture values and social relations in the context of business organizations. The central focus will be on the integration of individuals into their organizations and on the human relations characteristic of their work environment.

IRGN 475. International Negotiation (4)
This course attempts to reach a broad audience of students who seek in-depth understanding of how states and other international actors attempt to achieve specific objectives through give-and-take of the negotiation process. Cases include Northern Ireland and Middle East peace processes, negotiations leading to Dayton accords, and negotiations over Anti-Ballistic Missile Treaty.

IRGN 478. Japanese Foreign Policy (4)
Examines the domestic and strategic sources of Japan's foreign policy in the post-war era. Unlike China in IRGN 460, this course emphasizes Japan's foreign economic policy in regional and global multilateral organizations, and the major security issues it confronts with its Asian neighbors.

IRGN 479. Politics and Institutions in Latin America (4)
Overview of Latin American politics and the "rules of the game," both formal and informal. Key topics include military rule, presidentialism, and clientelism in the region as a whole, with special emphasis on Argentina, Brazil, Chile, and Mexico. Prerequisite: IRGN 400 or consent of instructor.

IRGN 481. Managing Country Risk in the Modern Multinational Corporation (4)
Examines ways to analyze, assess, and reduce country risk.

IRGN 483. Business and Policy in Southeast Asia (4)
Surveys various dimensions of business in Southeast Asia, with particular attention to the policy context. Special focus on technological capabilities of business organizations in Southeast Asia.

IRGN 484. Korean Politics (4)
This course will examine characteristics and distinctive aspects of contemporary Korean society and politics. Emphasis will be placed on continuity and change in social values, political culture and leadership, economic growth and its impact, and democratization and its future prospects. Prerequisite: consent of instructor.

IRGN 485. The Korean Economy (4)
Analytical review of South Korea's economic performance. Examination of major policy changes (e.g., shifts toward export promotion, heavy and chemical industries promotion); Korea's industrial structure including the role of large enterprises (chaebol); role of government; links between Korea and other countries.

IRGN 486. Economic and Social Development of China (4)
This course examines China's development experience from a generally economic standpoint. Contents include: patterns of traditional Chinese society and economy; geography and resource constraints, impact of the West and Japan; development since 1949 and contemporary problems and options.

IRGN 487. Applied Environmental Economics (4)
This course teaches students how to analyze environmental and natural resource policy issues in developing countries using economic concepts and methods. Weekly spreadsheet exercises based on real-world data provide hands-on practice. Prerequisites: IRGN 401, 403, 465, 454, or consent of instructor.

IRGN 490. Special Topics in Pacific International Affairs (4)
A seminar course at an advanced level on a special topic in Pacific international affairs. May be repeated for credit.

IRGN 492. Special Topics in Pacific Studies (2)
A seminar course at an advanced level on a special topic in Pacific Studies.

IRGN 497. Internship (2)
Independent research that draws on an internship with an organization relevant to career track and/or regional specialization. Nature of the required product to be determined by professor supervising the course. May be repeated for credit.

IRGN 498. Directed Group Study (2)
Directed reading in a selected area. The content of each course is to be determined by the professor directing the course with the approval of the student's faculty advisor. May be repeated for credit.

IRGN 499. Independent Research (2-12)
Independent research under the guidance of a faculty member of IR/PS. May be repeated for credit.

LANGUAGE COURSES
IRLA 400A-B-C. Chinese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a low-intermediate level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisite: IR/PS majors only, or by consent of instructor.

IRLA 401A-B-C. Chinese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an intermediate level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisite: IR/PS majors only, or by consent of instructor.

IRLA 402A-B-C. Chinese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an advanced intermediate level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisite: IR/PS majors only, or by consent of instructor.

IRLA 403A-C. Chinese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a low-intermediate level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisite: IR/PS majors only, or by consent of instructor.

IRLA 410A-B-C. Japanese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a low-intermediate level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisite: IR/PS majors only, or by consent of instructor.

IRLA 411A-B-C. Japanese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an intermediate level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisite: IR/PS majors only, or by consent of instructor.

IRLA 412A-B-C. Japanese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an advanced-intermediate level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisite: IR/PS majors only, or by consent of instructor.

IRLA 413A-B-C. Japanese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an advanced level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisite: IR/PS majors only, or by consent of instructor.

IRLA 417. Introduction to Kanji (2)
Introduction to the characteristics and usage of Chinese characters (Kanji) used in Japanese language: history, structure, cognitive aspects, their relationship with hiragana and katakana, policy issues, learning strategies, and technology. Prerequisite: basic knowledge of Japanese grammar and consent of instructor, IR/PS majors.

IR/PS majors only, or by consent of instructor.
IRLA 430A-B-C. Portuguese Language for Spanish Speakers (4-4-4)
This course is designed to enable Spanish-speaking students to acquire proficiency in the Portuguese language through a combination of classes, language laboratories, exercises, and other language experiences. **PRERequisite:** IR/PS majors only or by consent of instructor.

IRLA 431A-B-C. Second Year Portuguese Language for Spanish Speakers (4-4-4)
A continuation of first-year Portuguese for Spanish speakers. This course is designed to enable Spanish speaking students to be introduced to an intermediate level of Portuguese language through a combination of classes, language laboratories, exercises, and other language experiences. **PRERequisite:** IR/PS majors only or by consent of instructor.

IRLA 440A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a low-intermediate level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. **PRERequisite:** IR/PS majors only or by consent of instructor.

IRLA 441A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an intermediate level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. **PRERequisite:** IR/PS majors only or by consent of instructor.

IRLA 442A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an advanced-intermediate level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. **PRERequisite:** IR/PS majors only, or by consent of instructor.

IRLA 443A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an advanced level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. **PRERequisite:** IR/PS majors only, or by consent of instructor.

IRLA 444A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a superior level of proficiency to maintain and improve their Spanish language skills through individual training with an instructor. **PRERequisite:** IR/PS majors only, or by consent of instructor.

IRLA 445A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a superior level of proficiency to maintain and improve their Spanish language skills through individual training with an instructor.

IRCO 401, 421, 453, 454, 460A-B-C. Bahasa Indonesia for Professional Proficiency (4-4-4)
This course is designed to enable students with basic knowledge and skills of Bahasa Indonesia to further develop communicative skills through a combination of classes, language laboratories, exercises, and other language experiences. **PRERequisite:** IR/PS majors only or consent of instructor.

IRLA 500. Apprentice Teaching of Language (1-4)
This course, designed for graduate students serving as language laboratories, exercises, and other language experiences. **PRERequisite:** IR/PS majors only or by consent of instructor.

**P.H.D. LEVEL COURSES**

IRGN 200. Theory of International Relations: International System (4)
This course examines the concepts of international structure and system in the field of international relations. It covers the literature on realism, neorealism, world systems theory, and other system-level explanations of patterns of international conflict and cooperation, continuity, and change.

IRGN 201. Ethnic Conflict (4)
Examination of why ethnic conflicts break out, why they are difficult to resolve, and what effect outside intervention has on them. Introduces students to the major theories of ethnic and internal conflict. Policy debates regarding how the international community can best respond to these conflicts. **PRERequisite:** admission to program or consent of instructor.

Examination of effects of national policies and international collaboration on public and private international financial institutions, in particular the management of international debt crises, economic policy coordination, and the role of international lender of last resort.

IRGN 204. International Relations of the Pacific (4)
International relations and developing international political economy. Topics include: the “Pacific Basin” concept; the U.S. and “hegemonic-stability” theory; legacies of the Korean War and Sino-Soviet dispute; immigration patterns and their consequences; and Japan’s foreign policy.

IRGN 205. U.S.-China Relations (4)
Can the United States and China manage to develop a constructive relationship or are they headed toward a hostile relationship? This course addresses this question by examining the domestic and international influences on the foreign policies of both countries and key issues in the bilateral relationship. Students also do policy projects.

IRGN 206. Corporate Strategy and the Environment (4)
This seminar examines the ability of firms to increase shareholder value through improved environmental performance. Topics include product differentiation, strategic use of regulations, the “Porter hypothesis,” and environmental management systems. Readings include case studies and research articles. **PRERequisites:** IRCO 401, 421, 453, 454, or consent of instructor.

IRGN 207. Policy Implementation Process (4)
This course builds on the core Policy-Making Processes class by focusing on nonelected officials’ role in setting and implementing policy. Ideally, elected officials make policy, not bureaucrats. The course examines how governmental institutions, in particular the management of international debt crises, economic policy coordination, and the role of international lender of last resort.

IRGN 209. Strategic Marketing Planning (4)
This course develops the microeconomics foundations of market exchange by explicitly examining the marketing details of transactions: demand and product differentiation, incomplete and incorrect information, search costs and promotion costs. It is argued that within this theoretical framework (i.e., model) most observed marketing behavior can be reconciled. The primary objective of this course is to learn to deduce firm and consumer motives from observed behavior. **PRERequisites:** IRGN 221 and 243, or consent of instructor.

IRGN 210. International Politics and Security (4)
Development of analytic tools for understanding international relations with applications to contemporary problems such as the environment, nuclear proliferation, human rights, humanitarian interventions, and the roots of conflict and cooperation among countries.

IRGN 211. Financial Institutions (4)
This course analyzes the roles of money and financial institutions in the economy. The first part of the course focuses on microeconomics and the financial system. The topics include money, financial markets, financial intermediaries, and banks. The second part of the course focuses on the microeconomics of financial institutions. The topics include financial development and financial liberalization, and their effects on the economy, especially economic growth and development. **PRERequisite:** graduate level or consent of instructor.

IRGN 212. International Competitiveness and the Globalized Value Chain (4)
This course explores the strategies countries pursue in the highly competitive world economy. It examines the global value chain and public policy toward education, labor, corporate social responsibility, free markets and global trade, finance and shareholding, and the political process.

IRGN 213. Risk Management (4)
This course provides an introduction to derivative assets such as options, futures, and swap contracts. The main emphasis is on their valuation, use in the hedging, and role as components of liabilities that mitigate risk and agency problems in business firms. **PRERequisite:** IRCO 421.

IRGN 214. Corporate Governance (4)
Why do corporate governance systems—the way firms are run, the relationship among managers, stockholders, and workers—differ widely around the world? This course examines the various explanations for these striking differences and the consequences. **PRERequisite:** graduate level or consent of instructor.

IRGN 216. Post War Politics in Japan (4)
Overview of postwar politics in Japan, including American Occupation reforms, political institutions, major political factors, mass and elite, and political behavior. Special attention will be paid to the issue of Japan’s changing democracy.

IRGN 217. Microfinance (4)
This course will begin by examining financial markets in poor countries. Investigates how microfinance contracts overcome problems that had previously barred the extension of business credit in many environments. **PRERequisite:** admission to program or consent of instructor.

IRGN 218. Globalization, the World System, and the Pacific (4)
This course examines globalization and other economic and political factors that shape the international relations of the Pacific Rim. Specific topics include financial market liberalization, state cooperation and intervention, and case studies of individual countries.

IRGN 221. Managerial Economics (4)
Survey of basic tools in economics. Examination of how commodity demand is determined, what affects supply of the commodity, how price is determined, when optimal market allocation of resources and failure occur, and basic topics concerning the aggregate economy.

IRGN 222. Investments (4)
Analysis of the risk/return characteristics of different assets as perceived by different investors and their implications for security price behavior, emphasizing real world capital market behavior. International aspects include the role of exchange rate risk and international diversification. **PRERequisites:** IRCO 421, 453, and 454.

IRGN 223. The Globalization of Production (4)
This course examines how trade policy, information technology, and other factors shape the production strategies of multinational enterprises. Topics include foreign direct investment and the mode of entry into foreign markets, global outsourcing and the globalization of work, and the impact of trade and investment policy on the world location of production. **PRERequisites:** IRGN 221 and IRGN 243, or consent of instructor.

IRGN 224. Corporate Finance (4)
The topics covered are dividend policy and capital structure, options, debt financing, and short and long-term in...
financial planning. Course format will be mostly lectures with occasional cases. Some international aspects of corporate finance will also be discussed. **PRE REQUISITES:** IRGN 221, IRGN 223, IRCO 420, 421, 453 and 454, or consent of instructor.

IRGN 225. Managing Service Operations (4)
This course covers (1) strategic issues such as service vision, market positioning, growth, and globalization; (2) process design, facility design, and capacity planning; (3) system control and performance measurement; and (4) human resources management, customer knowledge, and other service media. **PRE REQUISITES:** IRCO 460 and either IRGN 438 or consent of instructor.

IRGN 226. Management of Technology (4)
How companies choose and develop new technology. Case studies, lectures by executives. National technology policy, including the roles of intellectual property. This course emphasizes technology strategy at corporate/national level; the Product Development course emphasizes tactics for development teams.

IRGN 227. Organizations (4)
A seminar course based on the modern economics of organization. Covers an eclectic set of readings on a diverse range of organizations, looking at how incentives for collective action are structured. **PRE REQUISITES:** IRGN 221 and 243 or consent of instructor.

IRGN 229. Business and Management in Japan (4)
This course introduces the main aspects of Japanese business and industrial organization (keiretsu), Japanese management practices, and the representation and influence of business interests in the Japanese political economy.

IRGN 231. Fiscal and Monetary Policy (4)
Effects of fiscal and monetary policies on aggregate variables such as output, nominal and real interest rates, price level, and employment. Additional topics include the inflation/unemployment trade-off, budget deficit, and economic growth.

IRGN 232. Immigration and Immigration Policy (4)
This course examines the role of immigration in the globalization of Pacific Rim economics. Topics include the economic forces behind immigration; the impact of immigration on wages, employment, and industry structure in sending and receiving countries; and the nature, scope, and political economy of immigration policy. **PRE REQUISITES:** IRCO 401 or consent of instructor.

IRGN 235. Topics in International Trade (4)
This course develops new analytical models of international trade and examines their relevance for trade policy. Topics include setting trade policy where firms have global market power; the interaction between international trade, innovation, and economic growth; regional economic policy, dynamic industry clusters, and information technology; and new trade theory and the world distribution of income.

IRGN 237. Policy Design (4)
Course teaches how to make strong, reasoned cases for new policy initiatives. Covers cost-benefit analysis, cost-effectiveness evaluation, multi-goal analysis, and how these are used in policymaking. Covers tools to predict policy impact, like drawing on “best practice” and related experiences.

IRGN 238. Production and Operations Management: Analysis and Control (4)
This course provides a comprehensive introduction to the fundamental decisions and trade-offs associated with the control of a firm’s operations function. It analyzes production processes, quality control, inventory and materials planning, kanban, and just-in-time principles. **PRE REQUISITES:** IRCO 453 and 454, or consent of instructor.

IRGN 239. Policy Evaluation (4)
Research-design class focusing on strategies for evaluating policies' effectiveness with data in small quantities. Skills taught: understanding limits of what data say, and using information optimally. The emphasis is on qualitative analysis. The concepts taught are similar to those presented in QM3. **PRE REQUISITES:** IRCO 453 and 454.

IRGN 240. Applied Data Analysis and Statistical Decision Making (4)
The goal of the course is to teach how to evaluate quantitative information in business and economics contexts, and to make sound managerial decisions in complex situations. Much of the problems and the course work will involve statistical software and spreadsheet analysis of data. The course covers various applied multivariate statistical methods beyond basics. **PRE REQUISITES:** IRCO 453 and 454, or consent of instructor.

IRGN 242. Economics of Telecommunications (4)
This course will focus on the underlying economics of the telecommunications and public policy rationale of regulations applied to this industry. Both theoretical models and case studies will be used to provide a better understanding of the telecommunications marketplace and the nature of competition between service providers in the industry. **PRE REQUISITE:** IRGN 221 or consent of instructor.

IRGN 243. International Economics (4)
The theory and mechanics of international economics. Included will be such topics as real trade theory, international movements of capital, the effects of trade and capital flows on domestic economies, and policies toward trade and foreign investment.

IRGN 244. Product Development (4)
This course examines how high-tech companies develop successful products. Emphasizes interplay between business and technology issues, including market research, marketing, manufacturing, prototyping, testing, and design. Student teams develop novel products, from concept to working prototype, including a business plan for launching the product. Discussion of concurrent engineering, rapid prototyping, industrial design, and other design methodologies.

IRGN 248. Civil Society and Development (4)
To explore the role that civil society/NGOs/third sector can play in advancing political, social, and economic progress in developing countries. To consider the strengths and weaknesses, capacities, and limitations of NGOs in developing countries. To provide students with experience in evaluating NGOs and in making professional recommendations to enhance their ability to make a difference. To prepare students to take leadership roles—whether in government, the private sector, or NGOs—in promoting civil-society participation in development.

IRGN 249. Making U.S. Foreign Policy (4)
Analysis of the interests, structure, and procedures of the main executive branch agencies involved in the formulation of foreign policy, and of the roles of Congress, the media, public opinion, and non-governmental actors. Case studies and “daily briefings” to prepare students to perform professionally in the foreign-policy world. **PRE REQUISITE:** IRGN 210 or consent of instructor. Suggested: IRGN 211.

IRGN 250. The Politics of U.S.-Japan Economic Relations (4)
This course will analyze how the domestic politics of each country, their international negotiations, and their interaction concerning economic issues have affected the U.S.-Japan relationship. Both the politics of cooperation and integration, and trade friction and conflict will be addressed in part through study of specific cases.

IRGN 251. Economic Development (4)
This course examines comparative patterns of industrialization and agricultural modernization with a focus on certain common features of the modernization process and widely varying endowments, policies, and experiences of different countries. **PRE REQUISITES:** IRGN 221 and 243, or consent of instructor.

IRGN 252. Quantitative Methods for Advanced Analysts (4)
This course caters to the needs of those who routinely face a variety of advanced data analysis challenges such as international marketing and sales managers, consulting analysts, or international business development and intelligence specialists. Knowledge of introductory optimization and statistics including linear regression, is assumed. The course is entirely practical in that it is organized around in-depth case studies, requiring students to work extensively with data. Methods covered include cluster, factor, and discriminate analysis, and modeling and simulation.

IRGN 256. Program Design and Evaluation (4)
Introduction to elements of program design and evaluation. Examines principles and guidelines used in creating a program, evaluating its success, and making improvements. International case studies are explored. Students have the opportunity to develop their own program and evaluate projects.

IRGN 257. Cost Benefit Analysis (4)
Examination of public policy analysis, such as cost-benefit analysis and project evaluation, for use in policy formation. Sustainable development will receive particular attention. Case studies emphasizing the environment, agriculture and food, and economic development will be included.

IRGN 258. International Environmental Policy and Politics (4)
This course analyzes multilateral environmental agreements and negotiating positions of key countries on climate change, biodiversity conservation, sustainable development, and other subjects. It explores the challenges countries face to balance economic development objectives with global environmental concerns.

IRGN 259. Conflict Resolution of Environmental Issues (4)
Use of bilateral negotiations (U.S.-Canada), regional organization (EEC and acid rain in Europe), and United Nations’ specialized agencies (UNEP and WMO on ozone depletion and climate change) to mediate environmental disputes. Consideration of nontraditional approaches resolving international environmental problems.

IRGN 260. Economic and Social Development of China (4)
This course examines China’s development experience from a generally economic standpoint. Contents include: patterns of traditional Chinese society and economy; geography and resource constraints, impact of the West and Japan; development since 1949, and contemporary problems and options.

IRGN 261. Chinese Politics (4)
This course will analyze post-1949 Chinese politics, including political institutions, the policy-making process, and citizen political behavior. Special attention will be given to the prospects for political reform in China.

IRGN 263. Political Economy of Southeast Asia (4)
This course provides an introduction to five Southeast Asian countries: Indonesia, Thailand, Malaysia, the Philippines, and Vietnam. The focus will be on national level political and economic issues in these countries. In addition, we will also be examining a number of region-wide issues: Chinese business groups and networks; clientelism and corruption; and regional trade and investment linkages; denationalization, and the implications of political change for future economic development. **PRE REQUISITE:** IRGN 264.

IRGN 264. Economies in Southeast Asia (4)
This course focuses on the long-run and current economic issues of Southeast Asia. The topics are economic growth, human capital, inequality and poverty, social institutions, the business sector, the financial sector, government, the external sector, and regional and interregional economic relations. For each topic, we will discuss the issues from selected countries in the region in more detail.

IRGN 265. Management of Non-profit Organizations (4)
Analyzes the particular environment in which non-profit organizations define and achieve their objectives. Management tools are applied to existing non-profits and to student projects.

IRGN 266. Public Finance (4)
Describes principles of taxation and expenditure analysis; public budgeting; and assessment of budget priorities.

IRGN 270. International Business Strategy (4)
This course analyzes corporate strategies and management issues in their international dimensions. Based on numerous case studies, the class examines the strategic opportunities and problems that emerge when companies transfer corporate skills and competence to other countries.
IRGN 271. Japanese Economy (4)  
A broad survey of the Japanese Economy, together with in-depth examination of some distinctively Japanese phenomena such as saving behavior, financial structure, industrial organization, and labor markets. **PREREQUISITES:** IRGN 221 and 243, or consent of instructor.

IRGN 273. Current Issues in U.S.-Latin American Relations (4)  
Issues to be actively debated include the collective defense of democracy, coping with revolutionary change, counter-narcotics, anti-corruption, international finance, trade, and U.S.-Mexican and U.S.-Brazilians relations. In each case, students analyze the strengths and weaknesses of current U.S. policy and advocate alternative options. **PREREQUISITE:** IRCO 210 or consent of instructor.

IRGN 274. Economic Policy in Latin America (4)  
This course seeks to enhance the students' understanding of the main policy alternatives open to the largest Latin American countries. Development and stabilization policies are analyzed, emphasizing the current debate between conventional and heterodox policy packages and their impact on decision making. **PREREQUISITES:** IRGN 221 and 243.

IRGN 276. International Negotiation (4)  
This course attempts to reach a broad audience of students who seek in-depth understanding of how states and other international actors attempt to achieve specific objectives throughout the negotiation process. Cases include Northern Ireland and Middle East peace processes, negotiations leading to Dayton accords, and negotiations over Anti-Ballistic Missile Treaty.

IRGN 278. Japanese Foreign Policy (4)  
Examines the domestic and strategic sources of Japan's foreign policy in the postwar era. Unlike IRGN 460, this course emphasizes Japan's foreign economic policy in regional and global multilateral organizations, and the major security issues it confronts with its Asian neighbors.

IRGN 281. Managing Country Risk in the Modern Multinational Corporation (4)  
Examines ways to analyze, assess, and reduce country risk.

IRGN 284. Korean Politics (4)  
This course will examine characteristics and distinctive aspects of contemporary Korean society and politics. Emphasis will be placed on continuity and change in social values, political culture and leadership, economic growth and its impact, and democratization and its future prospects. **PREREQUISITE:** consent of instructor.

IRGN 285. The Korean Economy (4)  
Analytical review of South Korea's economic performance. Examination of major policy changes (e.g., shifts toward export promotion, heavy and chemical industrial promotion), Korea's industrial structure including the role of large enterprise (chaebol); role of government; links between Korea and other countries.

IRGN 287. Politics and Institutions in Latin America (4)  
Overview of Latin American politics and the “rules of the game,” both formal and informal. Key topics include military rule, presidentialism, and clientelism in the region as a whole, with special emphasis on Argentina, Brazil, Chile, and Mexico.

IRGN 289. Applied Environmental Economics (4)  
This course teaches students how to analyze environmental and natural resource policy issues in developing countries using economic concepts and methods. Weekly spreadsheet exercises based on real-world data provide hands-on practice. **PREREQUISITES:** IRCO 453, 454, IRGN 221, or consent of instructor.

IRGN 290. Special Topics in Pacific International Affairs (4)  
A seminar course at an advanced level on a special topic in Pacific international affairs. May be repeated for credit.

IRGN 292. Special Topics in Pacific Studies (2)  
A seminar course at an advanced level on a special topic in Pacific Studies.

IRGN 298. Directed Group Study (2)  
Directed reading in selected area. The content of each course is to be decided by the professor directing the course with the approval of the student's faculty advisor. May be repeated for credit. **PREREQUISITES:** graduate standing and consent of faculty advisor.

IRGN 299. Independent Research (2-12)  
Independent research under the guidance of a faculty member in IR/PS. May be repeated for credit. **PREREQUISITES:** graduate standing and consent of faculty advisor.

Lisa Yoneyama, Ph.D., Associate Professor, Literature  
Leon Zamosc, Ph.D., Associate Professor, Sociology

**THE INTERNATIONAL STUDIES PROGRAM**

Technology and the forces of cultural and economic integration appear to reduce the distances between societies, which now impinge on one another on many dimensions. At the same time, ethnic, religious, and economic conflicts erupt within and between societies, often in violent form. Both the proximity of other societies and the remaining divides within and between them demand a better understanding of their cultures and institutions. Societies cannot be understood in isolation or at a single point in time, however; they are shaped by global and regional environments—political, military, economic, cultural—and their pats. Individuals and societies in turn shape those environments as they reinterpret their histories.

Using different disciplinary lenses, the international studies major explores the interaction between international and national, global and local, contemporary and historical. The program builds on the strengths of existing international specializations at UC San Diego. International relations and comparative politics are established and distinguished fields of political science. The comparative study of societies and cultures lies at the core of sociology and anthropology. Literature and linguistics offer a rich array of courses dealing with languages and traditions outside the English-speaking societies. Area studies programs provide comprehensive understanding of particular countries and regions. The international studies major provides students with both a firm grounding in a discipline and the flexibility to permit exploration from alternative perspectives. The primary and secondary tracks chosen by each student contain the disciplinary foundations of the major. International studies majors also complete two core courses that serve as gateways to disciplinary approaches and to central international and comparative issues that cut across disciplines. Among these subjects are cultural boundaries and identities, economic and social development, international and regional integration and their effects, the evolution of political and social institutions, and forms of communication and language. A required capstone seminar permits the completion of a research paper in close association with a member of the faculty. International studies majors benefit throughout from the activities and programs of the Institute for International, Comparative, and Area Studies (IICAS), the home for international studies at UCSD.
Education Abroad

Majors in international studies are encouraged to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP). Subject to approval by the faculty director of the major, up to six courses taken through EAP/OAP will be accepted for credit toward the major. Students are strongly encouraged to complete INTL 101 and INTL 102 before departure. Students interested in studying abroad should see an international studies program advisor to discuss appropriate courses and programs for their plan of study.

Information on EAP/OAP is given in the Education Abroad Program section of the UC San Diego General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at http://programsabroad.ucsd.edu. Financial aid can be used for EAP/OAP study, and special study abroad scholarships are also available.

For information on study abroad in the ISP, visit http://isp.ucsd.edu, and http://programsabroad.ucsd.edu/acadint/PDFs/intlstudabroad.pdf.

Careers

International studies attracts students who are interested in a variety of careers, including government and international organizations, international business, non-governmental organizations, journalism, the arts, and the media. Because of its strong disciplinary core, the major also prepares students who wish to pursue graduate degree programs in international affairs or in one of the participating disciplines.

Honors

The Honors Program in International Studies recognizes academic excellence in the major. The Honors Program allows qualified students to complete an honors thesis on a topic of their choice in close collaboration with a member of the UCSD faculty. Students who wish to participate in the Honors Program in International Studies should indicate their interest in the spring quarter of their junior year. Honors program applications are available on the ISP Web site. Applications are due by Monday of the ninth week, the quarter before you enroll in 190H.

Refer to http://isp.ucsd.edu/content/is_major/honors.php for additional requirements and information pertaining to the ISP Honors Program.

Requirements for the Honors Program

Candidates for honors in any of the International Studies degrees must meet the following requirements:

- A GPA of 3.5 in courses in the International Studies Major (INTL 101, 102, primary track, and secondary track courses)
- Completion of INTL 190H: Senior Honors Seminar in International Studies.
- Completion of a senior honors thesis (INTL 190H). On the recommendation of the student’s instructor in INTL 190H and with the approval of the director of the International Studies program, qualified students will enroll in INTL 190H:

Directed Thesis Research (4 units) and complete a senior honors thesis under the direction of a member of the International Studies faculty. The thesis must reflect a research project that is substantially broader in scope and that includes more original research than the research paper required of all International Studies students in INTL 190.

Criteria for “Distinction,” “High Distinction,” and “Highest Distinction”

- Students must maintain a 3.5 GPA in the major to graduate with distinction.
- Each student whose honor thesis also earns a grade of A– shall be entitled to the designation “with distinction.”
- Each student whose honors thesis earns a grade of A shall be entitled to the designation “with high distinction.”
- Each student whose honors thesis earns a grade of A+ shall be entitled to the designation “with highest distinction.”

Please refer to the International Studies Program Web site for additional requirements.

THE INTERNATIONAL STUDIES MAJOR

A student who satisfactorily completes the general-education requirements of Muir, Revelle, Marshall, Warren, Roosevelt, or Sixth College in addition to the international studies requirements described below will be awarded one of the following bachelor of arts degrees based upon selection of the primary track:

International Studies–Anthropology
International Studies–Economics
International Studies–History
International Studies–Linguistics
International Studies–Literature
International Studies–Political Science
International Studies–Sociology

All upper-division courses applied to the requirements of the major must be taken for a letter grade. A 2.0 grade-point average is required in the major, and students must earn at least C– in each course counted for the major. Transfer students should see the international studies advisor to determine whether courses taken elsewhere satisfy international studies program requirements.

LOWER-DIVISION REQUIREMENTS

Foreign language (four quarters of college-level language or equivalent proficiency).

Students majoring in international studies are required to demonstrate basic proficiency in a modern foreign language by completing four quarters of foreign language instruction (or equivalent) with a passing grade. Students may also complete this requirement by demonstrating advanced language ability on a proficiency exam.

College-level language study is a prerequisite for study abroad in most non-English speaking countries and enhances understanding of those societies. Students who plan to study abroad in non-English speaking countries may need to take additional language classes, and they will need to take all language courses for letter grades.

Students should make substantial progress toward fulfilling college general-education requirements and the foreign language requirement of the international studies major before beginning the core sequence of the international studies major.

UPPER-DIVISION REQUIREMENTS

The upper-division requirements for a major in international studies are:

1. Two core courses (INTL 101 and INTL 102)
2. A capstone seminar (INTL 190)
3. Eight 4-unit, upper-division, non-language courses in a primary track
4. Four 4-unit, upper-division, non-language courses in a secondary track (different from primary track)

Core Courses

Two core courses (INTL 101 and INTL 102) provide an intellectual gateway to central issues and disciplinary approaches in international studies. Students may begin the sequence with either course. Sophomore status is a prerequisite for both courses.

INTL 101. Culture and Society in International Perspective (4)
INTL 102. Economics, Politics, and International Change (4)

Capstone Seminar

All majors will complete the capstone seminar during their senior year. Students are required to complete a research paper for this course.

INTL 190. Seminar in International Studies (4)

Regional Requirement

Of the thirteen track courses (eight primary and five secondary), three courses must concentrate on one country or region outside the United States to complete the International Studies Program regional requirement.

Departments Offering Both Primary and Secondary Tracks

Anthropology:

Primary Track: Students are required to take at least one course from the following:

ANTH 101. Foundations of Social Complexity
ANTH 102. Human Evolution
ANTH 103. Sociocultural Anthropology

The remaining upper-division courses should be selected from the Anthropology: Sociocultural (ANSC) and Archaeology (ANAR) listings. Up to two approved courses from Anthropology: Biological Anthropology (ANBI) can also be counted toward the major with the approval of the international studies program advisor.

Secondary Track: Students are encouraged to take ANTH 101 and 103; all other courses should be from the ANTH, ANSC, or ANAR series; one course from the ANBI series will be accepted for credit by petition.
**Economics:**

*Primary and Secondary Tracks: Both primary and secondary track IS majors must satisfy the following six lower-division department requirements with a C- or better.*
- Calculus. Mathematics 10A-B-C or Mathematics 20A-B-20C and Economics 1, 2, 3

Both primary and secondary track majors must take at least two of the following courses:
- Economics 101. International Trade
- Economics 103. International Monetary Relations
- Economics 114. Economics of Immigration
- Economics 116. Economic Development
- Economics 117. Economic Growth
- Economics 125. Demographic Analysis and Forecasting
- Economics 131. Economics of the Environment
- Economics 132. Energy Economics
- Economics 133. International Environmental Agreements
- Economics 145. Economics of Ocean Resources
- Economics 161. Global Integration of Latin America
- Economics 162. Economics of Mexico
- Economics 163. Japanese Economy
- Economics 165. Middle East Economics

At least one of the above must be Economics 101, 103, or 116.

**History:**

*Primary Track: At least six of eight courses must be taken in any of the following categories:*
- History of Africa (HIAF)
- History of Europe (HIEU)
- History of East Asia (HIEA)
- History of the Near East (HINE), with the exception of HINE 151, 152, 153
- History of Latin America (HILA)
- History of Science (HSC)
- History of Religion (HIRE) and/or History Topics (HITO), except HITO 194-199

Up to two courses may be taken in History of the United States (HIUS).

*Secondary Track: All courses must be taken in non-U.S. history.*

**Linguistics:**

*Primary Track: Eight upper-division courses in linguistics, which must include LIGN 101 (Introduction to the Study of Language) and at least three courses from the following list:*
- LIGN 105. Law and Language
- LIGN 108. Languages of Africa
- LIGN 141. Language Structures
- LIGN 142. Language of Typology
- LIGN 143. Structure of Spanish
- LIGN 145. Pidgins and Creoles
- LIGN 174. Gender and Language in Society
- LIGN 175. Sociolinguistics
- LIGN 176. Language of Politics and Advertising
- LIGN 177. Multilingualism

At most, one of the eight courses can be LIGN 199 (Independent Study in Linguistics) by petition.

*Secondary Track: Five upper-division courses in linguistics, which must include LIGN 101 (Introduction to the Study of Language) and at least two courses from the list above. At most, one of the five courses can be LIGN 199 (Independent Study in Linguistics) by petition.*

**Literature:**

*Primary Track: Eight upper-division courses may be selected from the following:*

**Literatures in English (LTEN):**
- LTEN 188. Contemporary Caribbean Literature
- LTEN 189. Twentieth-Century Postcolonial Literatures

**Literatures of the World (LTWL):**
- LTWL 141. Islam and Modernity
- LTWL 149. The Last Turn of the Century in the West
- LTWL 150. Modernity and Literature

**Literature/Cultural Studies (LTCS):**
- LTCS 133. Globalization and Culture
- LTCS 140. Subaltern Studies in Context
- LTCS 141. Race and Empire
- LTCS 145. National Cultures in Colonial and Postcolonial Contexts

And all courses listed under African Literatures (LTAF)
- Literatures in Chinese (LTCH)
- East Asian Literatures (LTEA)
- European and Eurasian Literature (LTEU) with exception of LTEU 100, 102, 105
- Literatures in French (LTFR) with exception of LTFR 160
- Literatures in German (LTGM)
- Literatures in Italian (LITT) with exception of LITT 161
- Korean Literature (LTKO)
- Literatures in Portuguese (LTPR)
- Russian Literature (LTRU) with exception of LTRU 104 A, B, C
- Literatures in Spanish (LTPS) with exception of LTPS 150, 151, 152, 153, 160, 162, 166

With approval of the undergraduate advisor, students may take up to two theory or methods courses selected from Literature/Theory (LTTH) courses LTTH 110, LTTH 115, or LTTH 150, and from among the Literature/Cultural Studies (LTCS) courses LTCS 100, LTCS 102, or LTCS 120.

**Political Science:**

*Primary Track: Eight courses selected from the following: all courses numbered POLI 120 through POLI 159:*
- Comparative Politics: POLI 120A through POLI 139A
- International Relations: POLI 140A through POLI 159

Up to three courses may be from the following subfields:
- American Politics: POLI 100A through POLI 108
- Political Theory: POLI 110A through 119A
- Policy Analysis: POLI 160AA through 168
- Research Methods: POLI 170A and POLI 181

*Secondary Track: Five upper-division courses selected from courses numbered POLI 120 through POLI 159 (see above); one of the five courses may be selected from the following subfields:*
- American Politics: POLI 100A through POLI 108
- Political Theory: POLI 110A through 119A
- Policy Analysis: POLI 160AA through 168
- Research Methods: POLI 170A and POLI 181

**Sociology:**

*Primary Track: Eight upper-division courses selected from the following list:*

**Cluster B: Culture, Language, and Social Interaction (Soc/B)**
- Soc/B 111A. Human Rights–Principles and Problems
- Soc/B 111B. Human Rights–Practices and Cases
- Soc/B 133. Immigration in Comparative Perspective
- Soc/B 162R. Religion and Popular Culture in East Asia

**Cluster C: Social Organization and Institutions (Soc/C)**
- Soc/C 134A. The Making of Modern Medicine
- Soc/C 134B. Medicine in the Twentieth Century
- Soc/C 136A. Sociology of Mental Illness: An Historical Approach
- Soc/C 136B. Sociology of Mental Illness in Contemporary Society
- Soc/C 139. Social Inequality: Class, Race, and Gender
- Soc/C 148. Political Sociology
- Soc/C 156. Sociology of Religion
- Soc/C 157. Religion in Contemporary Society
- Soc/C 163. Migration and the Law
- Soc/C 180. Social Movements and Social Protest

**Cluster D: Comparative and Historical Sociology (Soc/D)**
- Soc/D 158. Islam in the Modern World
- Soc/D 169. Citizenship, Community, and Culture
- Soc/D 175. Nationality and Citizenship
- Soc/D 177. International Terrorism
- Soc/D 178. The Holocaust
- Soc/D 179. Social Change
- Soc/D 181. Modern Western Society
Soc/D 182. Ethnicity and Indigenous Peoples in Latin America
Soc/D 183. Minorities and Nations
Soc/D 185. Globalization and Social Development
Soc/D 188A. Community and Social Change in Africa
Soc/D 188B. Chinese Society
Soc/D 188D. Latin America: Society and Politics
Soc/D 188F. Modern Jewish Societies and Israeli Society
Soc/D 188J. Change in Modern South Africa
Soc/D 189. Special Topics in Comparative-Historical Sociology

**NOTE:** Soc/D 189 must be preapproved by program advisor.

Secondary Track: Five upper-division courses selected from the above lists.

**DEPARTMENTS AND PROGRAMS OFFERING ONLY SECONDARY TRACKS**

**Communication:**

Course Prerequisites: Must take COGN 20 for a letter grade to enroll in upper-division courses.

Secondary Track: Five courses selected from the following lists:

**Communication as a Social Force (COSF):**

COSF 100. Introduction to Communication as a Social Force
COSF 123. Communication, Dissent, and Social Movements
COSF 124. Black Women, Feminism, and the Media
COSF 140A. Comparative Media Systems: Asia
COSF 140B. Comparative Media Systems: Europe
COSF 140C. Comparative Media Systems: Latin America and the Caribbean
COSF 159. Work and Industry in the New Information Economy
COSF 160. Political Economy/Global Consumer Culture
COSF 161. Global Economy and National Identity
COSF 167. Emerging Global High-Tech Regions: Labor and National Development
COSF 181. Political Economy of International Communications
COSF 183. The Politics of World Music
COSF 184. The Mass Media and Politics in Africa
COSF 185. Gender, Labor, and Culture in the Global Economy

**Communication and Culture (COCU):**

COCU 110. Cinema in Latin America
COCU 126. African Cinema
COCU 130. Tourism: Global Industry and Cultural Form
COCU 131. Cinema of the Cuban Revolution
COCU 162. Popular Culture
COCU 179. Colonialism and Culture
COCU 180. Cultures and Markets

**Communication and Human Information Processing (COHI):**

COHI 114. Bilingual Communication
COHI 115. Education and Global Citizenship

COHI 121. Literacy, Social Organization, and the Individual
COHI 135. Language and Globalization

**Area Studies Secondary Tracks**

Five upper-division courses in a single area studies program selected from the following list of programs:

African Studies
Chinese Studies
German Studies
Italian Studies
Japanese Studies
Latin American Studies
Middle East Studies
Russian and Soviet Studies
World Studies

Course lists can be found in the UC San Diego General Catalog. All courses must be four-unit, upper-division, non-language courses, taken for a letter grade C– or better. Please contact ISP academic advisor with questions.

Students seeking a broader regional focus (e.g., European or East Asian Studies) may elect to combine courses from area studies programs dealing with that region. Courses must be preapproved prior to enrolling.

---

**INTEGRATED BACHELOR OF ARTS/MASTER IN INTERNATIONAL AFFAIRS**

The International Studies Program and the School of International Relations and Pacific Studies have collaborated to create a combined five-year Bachelor of Arts/Master of International Affairs program (B.A./M.I.A.). The combined program is designed specifically for selected UCSD undergraduate majors in international studies who seek advanced training for leadership positions in the Pacific Rim community. In addition to serving the needs of UCSD undergraduate students, the program provides a societal benefit by providing students with advanced training that is suitable for a wide array of careers in government, industry, nonprofit institutions, and other organizations involved in the international affairs of the Pacific Rim.

The B.A./M.I.A. program retains and builds on the interdisciplinary core of the existing international studies degree and adds to it the professional training of a new one-year Master of International Affairs professional degree (year five of the combined program). This streamlined program will permit undergraduates to incorporate graduate-level courses into their final year of the international studies major. The combined degree program will provide an interdisciplinary program of study in the International Studies Program during the first four years. It is expected that up to ten undergraduate students will be accepted into this program each year.

The structure of the program is as follows:

**Years 1–3**

Undergraduate lower- and upper-division course work; general-education, language courses,

**Year 4**

Students are still undergraduates, but the majority of course work is completed at IR/PS at the graduate level; at end of year 4, students graduate with a B.A. in International Studies–Economics or International Studies–Political Science.

**Summer**

Required summer internship between years 4 and 5.

**Year 5**

Students enter IR/PS and complete remaining graduate course work; upon successful completion, they graduate with a Master of International Affairs (M.I.A.) at end of year 5.

**PLEASE NOTE:** This program is ONLY open to students whose two tracks are economics and political science, in either order.

Students apply to the program at the end of winter quarter in year 3. Acceptance is tentative until successful completion of year 4 and the required summer internship; student is then officially accepted into the M.I.A. program and begins to pay professional fees.

The B.A./M.I.A. Program is much more rigidly structured than the regular IS major. Students will need to meet frequently with the International Studies Program academic advisor from their first year onward to ensure proper course selection each quarter.

The approved course list for the B.A./M.I.A. Program is slightly different than the list for the regular IS major. Please be sure to consult the appropriate list to find approved courses.

Students must study a Pacific Rim foreign language for this program because the language must match the IR/PS region of specialization during the fifth year. Consult the ISP Web site for a complete list of approved B.A./M.I.A. languages and their corresponding IR/PS regions.

Students must complete a minimum of four quarters of a Pacific Rim foreign language in order to meet the B.A. requirement. **Two additional quarters** are required for the M.I.A. It is recommended (but not required) that students complete all six quarters at the undergraduate level.

Students choosing to satisfy their language requirement by taking six quarters of course work must earn a grade of C– or better in the fifth quarter and a grade of B or better in the sixth quarter.

For additional information about the B.A./M.I.A. program, please visit our Web site at http://isp.ucsd.edu. For application information and admissions criteria, please visit http://graduateapp.ucsd.edu.

**THE INTERNATIONAL STUDIES MINOR**

The international studies minor is designed to offer students an introduction to the interdisciplinary investigation of other societies and the forces of global integration and conflict. To receive a minor in international studies, a student must complete seven four-unit courses (twenty-eight units).
(A) LANGUAGE REQUIREMENT

All minors must demonstrate basic proficiency in a modern foreign language by completing four quarters of foreign language instruction (or equivalent). Students may also complete this requirement by demonstrating advanced language ability on a proficiency exam. Students completing the language requirement through waiver (700 or better on SAT II language exam or if you attended high school outside the U.S.) or proficiency will fulfill the language component of the minor by completing one of these requirements but no course credit will be applied toward the seven courses required for the minor. Up to two courses in foreign language can be included in the seven courses required for the minor. These may be lower-division courses but must be taken for a C– or better to apply. The remaining five courses must be upper-division courses in the humanities and social sciences. (See below.)

(B) ADDITIONAL COURSE REQUIREMENTS

1. All minors must take INTL 101 and INTL 102. INTL 101 and 102 may be taken in any order and are offered during different quarters throughout the academic year. You can enroll in INTL 101 and INTL 102 on WebReg if you have sophomore standing and are declared in the IS major or minor program. If you do not meet these requirements and wish to add INTL 101 or 102, contact the International Studies Advising Office. INTL 101 and 102 are gateway courses and should be taken in the sophomore or junior year.

2. The remaining three to five courses (depending on the number of language courses applied to the minor) must be distributed in two broad areas (tracks). Specifically, students must take at least one course in each of two tracks:

   Track 1. Economics, Politics, and International Change
   Track 2. Culture and Society in International Perspective

   (See course listings for each track.)

3. The minor must include courses from at least two departments.

4. All courses applied to the minor (including applicable language courses) must receive a letter grade of C– or better.

5. Minors in international studies are encouraged to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP). Subject to approval by the IS faculty director, up to three courses taken through EAP/OAP or at another university will be accepted for credit toward the minor.

TRACKS IN THE INTERNATIONAL STUDIES MINOR

*Track 1: Economics, Politics, and International Change

**COMMUNICATION**

COSF 123. Communication, Dissent, and Social Movements
COSF 159. Work and Industry in the New Information Economy

LECTURER
Adriana de Marchi Gherini, Ph.D., Literature

Italian studies is an interdisciplinary program in the language, literature, history, theater, music, and art of Italy. Italian studies coordinates the resources of the Departments of History, Literature, Music, Theatre and Dance, and Visual Arts, and offers students the opportunity to design a major, leading to a B.A., around the course offerings of these five departments. Students in Italian studies are encouraged to participate in the University of California Education Abroad Program (EAP), which is affiliated with the Universities of Padua, Trento, and Bologna: this provides the possibility of a junior year abroad, including both language courses and courses dealing with various aspects of Italian studies. EAP credits may be transferred back to UC San Diego to coordinate with on-campus offerings.

THE MAJOR PROGRAM

A major in Italian studies consists of a choice of twelve upper-division courses in literature, history, music, theatre, and visual arts approved for the program and listed below. Courses in other areas of Italian studies taken abroad or on our campus may also apply. At least three areas must be represented in the student's program of study. The particular courses making up each student's major will be selected in consultation with the program advisor. The study of Dante (LITIT 115) is considered central for all Italian studies majors.

THE MINOR PROGRAM

A minor in Italian studies consists of seven upper-division courses from among those listed below (at least three areas must be represented). Credit from the EAP program may be applied toward the minor.

UPPER-DIVISION/ITALIAN STUDIES COURSES

For description of courses listed below, see appropriate departmental listing.

LITERATURE
LITIT 1A-B-C. The Language of Italian Culture
LITIT 100. Introduction to Italian Literature
LITIT 110. Selected Topics in Italian Literature (may be repeated for credit as topics vary)
LITIT 115. Medieval Studies
LITIT 122. Studies in Modern Italian Culture
LITIT 137. Studies in Modern Italian Prose
LITIT 143. Major Italian Authors
LITIT 161. Advanced Stylistics and Conversation
LITIT 192. Seminar
LITIT 196. Honors Thesis
LITIT 198. Directed Group Study
LITIT 199. Special Studies

N.B.: Students must complete the following prerequisites for all upper-division work in Italian literature:
1. Linguistics/Italian 1A-B-C, or LITIT 1A-B-C
2. Literature/Italian 2A-B, 50

VISUAL ARTS
LITIT 122CN. High Renaissance Art
LITIT 122D. Michelangelo
LITIT 128B. Topics in Early Modern Art History (when on Italian topic)
LITIT 129B. Seminar in Early Modern Art History (when on Italian topic)

HISTORY (HIEU)
113. Rule, Conflict, and Dissent
122. Politics, Italian Renaissance Style
199. Independent Study for Undergraduates

The following courses may be applied to the major or minor, when 50 percent or more of the course focus is on Italian topics:
Music 113
THHS 101

Additional courses counting toward a major in Italian studies are offered on a year-to-year basis. As these often cannot be listed in the catalog in advance, interested students should consult the program faculty for an up-to-date list.

Japanese Studies

OFFICE: 3024 Humanities and Social Sciences Building, Muir College
http://japan.ucsd.edu

FACULTY
Yumiko Blanford, Lecturer, History (Japanese Language)
Takashi Fujitani, Associate Professor, History
Hisae Fujikura, Lecturer, History (Japanese Language)
Takeo Hoshi, Professor, International Relations and Pacific Studies
Germain A. Hoston, Professor, Political Science
Hifumi Ito, Lecturer, History (Japanese Language)
Noriko Kameda, Lecturer, History (Japanese Language)
Ellis Krauss, Professor, International Relations and Pacific Studies
Sige-Yuki Kuroda, Professor Emeritus, Linguistics
Mayumi Mochizuki McKee, Lecturer, History (Japanese Language)
Masao Miyoshi, Professor Emeritus, Literature
Megumi Naot, Assistant Professor, Political Science
Masato Nishimura, Lecturer, History (Japanese Language)
Kyoko Sato, Lecturer, History (Japanese Language)
Ulrike Schaede, Associate Professor, International Relations and Pacific Studies
Stefan Tanaka, Professor, History
Yasu-Hiko Tohsaku, Associate Professor, International Relations and Pacific Studies
Christena Turner, Associate Professor, Sociology
Lisa Yoneyama, Associate Professor, Cultural Studies and U.S.–Japan Studies
Joji Yuasa, Professor Emeritus, Music

The Program in Japanese Studies coordinates a variety of campus offerings dealing with the language, history, culture, and political economy of Japan. The program is especially strong in the area of modern and contemporary Japan. In addition to courses available in the Departments of Anthropology, Economics, History, Linguistics, Literature, Music, Political Science and Sociology, qualified undergraduates also may enroll in Japan-related courses in the Graduate School of International Relations and Pacific Studies with consent of instructors.

THE MAJOR

A. LOWER-DIVISION REQUIREMENT (9 COURSES)

1. Japanese language: two years lower-division or the transferred equivalent:
   Japanese Studies 10A-B-C
   Japanese Studies 20A-B-C

2. The remaining three courses must be chosen from among the following:
   e. East Asian History: HILD 10-11-12
   f. Eleanor Roosevelt College students may petition to use MMW Courses 2 and 5.
   g. Thurgood Marshall College students may petition to use DOC course 1.

3. The language requirement may be waived by demonstrating the equivalent proficiency through exam.

B. UPPER-DIVISION REQUIREMENT (12 COURSES)

1. Japanese language: six upper-division language courses or the transferred equivalent from:
   Japanese Studies 100A-B-C
   Japanese Studies 130A-B-C
   Japanese Studies 140A-B-C
   Japanese Studies 150A-B-C
   Students may petition to include three upper-division language courses taken abroad under EAP or OAP.

2. Japanese Studies 190 (JAPN 190): Selected Topics in Contemporary Japanese Studies. This is a seminar-style course focusing on selected topics in contemporary interdisciplinary studies of Japan. PREREQUISITE: upper-division standing;
   student must complete a minimum of one upper-division Japanese Studies approved course, or consent of instructor.

3. The remaining five courses must be taken from two or more different disciplines.
   a. Students may petition to include two non-language upper-division courses taken abroad under EAP or OAP.
   b. Students may include one 199.
   c. Students may include one course on China or Korea.

4. All upper-division courses must be taken for a letter grade, with the exception of JAP 199.

5. The language requirement can be waived by demonstrating the equivalent proficiency through exam. The required number of courses must be fulfilled by taking other non-language upper-division courses.

C. HONORS PROGRAM

1. Junior standing or higher.
2. A GPA of 3.5 or better in the major.
3. Overall GPA of 3.2 or better.
4. Completion of at least four upper-division non-language courses approved by the Program in Japanese Studies.
5. Recommendation of a faculty sponsor familiar with the student’s work.

   Students who qualify for honors take a two-quarter sequence Japanese Studies 196A-B (fall and winter quarters preferred) of directed study during which they define a research project, carry out the research, and complete an honors thesis.

   The completed honors thesis will be evaluated by a committee consisting of the student’s thesis advisor and one other faculty member appointed by the Program in Japanese Studies director.

THE MINOR

A minor in Japanese studies consists of at least fifteen units of Japanese language (lower- or upper-division) and at least sixteen units of upper-division non-language course work taken from two or more departments. Students may use one non-language course taken abroad. All courses to be used for the minor must be approved by the Program in Japanese Studies and must be taken for a letter grade. Students who are already beyond first- and second-year language levels will be placed in one of our upper-division Japanese language courses, Written Japanese (100A-B-C), Third-Year Japanese (130A-B-C), Fourth-Year Japanese (140A-B-C), or Advanced Japanese (150A-B-C), and will be required to take four upper-division language courses and three upper-division non-language courses. The language requirement can be waived by demonstrating the equivalent proficiency through exam. The required number of courses must be fulfilled by taking other non-language, upper-division courses.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

All graduate-level courses require permission of the instructor for undergraduate students. Course titles may vary from year to year.

HISTORY

HIEA 111. Japan: Twelfth through Mid-Nineteenth Century
HIEA 112. Japan: from Mid-Nineteenth Century through U.S. Occupation
HIEA 113. The Fifteen-Year War in Asia and the Pacific
HIEA 114. Postwar Japan
HIEA 115. Social and Cultural History of Twentieth-Century Japan
HIEA 116. Japan–U.S. Relations
HIEA 160. Colloquium on Modern Japanese History
HIEA 161. Representing Japan

JAPANESE STUDIES

JAPN 190. Selected Topics in Contemporary Japanese Studies

LANGUAGE

(Students who have prior preparation of Japanese language are placed in language courses based on the results of a placement exam or an oral interview with an instructor. Students who have lived in Japan, or use Japanese at home are required to take a placement exam administered prior to the beginning of the fall quarter. Contact the Japanese Studies office for more information.)

10A-B-C. First-Year Japanese
(No prior study of Japanese language is required for 10A.) PREREQUISITES FOR B AND C: previous course or consent of instructor.

20A-B-C. Second-Year Japanese
PREREQUISITE: previous course or consent of instructor.

100A-B-C. Japanese for Bilingual Speakers I
(These courses are for those students who have a high level of speaking proficiency in Japanese but no or little reading and writing abilities.) PREREQUISITE FOR A: consent of instructor. PREREQUISITES FOR B AND C: previous course or consent of instructor.

130A-B-C. Third-Year Japanese
PREREQUISITE: previous course or consent of instructor.

140A-B-C. Fourth-Year Japanese
PREREQUISITE: previous course or consent of instructor.

150A-B-C. Advanced Japanese
PREREQUISITE: previous course or consent of instructor.

ECONOMICS

ECON 163. Japanese Economy
LITERATURE
LTEA 130. Earlier Japanese Literature in Translation
(Quarter offerings will vary among A. General Literature; B. Poetry; C. Prose Fiction; D. Drama; and E. Essays, travel- 
ogues, diaries, etc.)

LTEA 132. Later Japanese Literature in Translation
(Quarter offerings will vary among A. General Literature; B. Poetry; C. Prose Fiction; D. Drama and Film; and E. Essays, criticism, etc.)

LTEA 134. A Single Japanese Author (in translation)

LTEA 136. Special Topics in Japanese Literature

LTCL 150. Topics in Cultural Studies

Lit/Th 240. Forms and Genres (when on Japan)

POLITICAL SCIENCE
POLI 132B. Modernity and Identity in East Asia

POLI 133A. Japanese Politics: A Developmental Perspective

POLI 133B. Chinese and Japanese Political Thought (I)

POLI 133C. Chinese and Japanese Political Thought (II)

POLI 133D. Japanese Foreign Policy

SOCIOLOGY
SOC/ED 158J. Religion and Ethics in China and Japan

SOC/ED 162R. Religion and Popular Culture in East Asia (same as HIEA 119)

GRADUATE SCHOOL OF INTERNATIONAL RELATIONS AND PACIFIC STUDIES
IRGN 400. International Relations of Asia—Pacific

IRGN 416. Postwar Politics in Japan

IRGN 471/271. Japanese Economy

MUSIC
(Music programs in other departments may count toward a minor.)

MUS 111. World Music

MUS 211. Seminar in World Music

LITCL 150. Topics in Cultural Studies

MUSIC

NONDEGREE PROGRAM

The UCSD Summer Session Program offers courses in the Judaic Studies Program in a variety of formats, including full-credit courses, half-credit courses, and study abroad experiences. Students may select from a range of courses offered on campus or at locations around the world. For more information, interested students should contact the Programs Abroad Office at http://anthrop.ucsd.edu/icenter/pao.

In addition, Revelle and Muir Colleges have noncontiguous minors in Judaic studies and in Hebrew language and literature; Warren College has Judaic studies and Hebrew literature concentrations; and various general requirements in all colleges can be met by courses in the Judaic area. For details students should inquire at their provost's office or at the Judaic Studies Program office.

Requirements for the major in Judaic studies are:

1. Judaic Studies 100 or equivalent; HITO 104, HITO 105

2. Twelve upper-division courses in Judaic studies, to be selected in consultation with a faculty advisor

3. Upper-division competence in Hebrew, normally to be fulfilled by completion of first- and second-year Hebrew language courses, or the equivalent

MINORS

A. Requirements for the minor in Judaic studies

1. Judaic Studies 100, HITO 104, HITO 105

2. Four upper-division courses in Judaic studies, to be selected in consultation with a faculty advisor

B. Requirements for the minor in Hebrew language and literature

Seven quarter courses in Hebrew language and literature, ordinarily Judaic Studies 1, 2, 3, 101, 102, and 103 plus one elective course

NOTE: Other course combinations for the major and minor may be approved by the student's faculty advisor.

NOTE: A majority of the courses for the major or minor must be taken at UCSD.

THE PH.D. IN ANCIENT HISTORY

The Department of History offers a Ph.D. program in ancient history. Relevant major fields are the history of Israel in the biblical period and the history of the Jewish people in antiquity. One of the two minor fields may be outside the history department. Students must acquire competence in the relevant ancient and modern languages.

THE PH.D. IN ANTHROPOLOGY (ARCHAEOLOGY)

The Department of Anthropology offers graduate training in social, cultural, and psychological anthropology, as well as in anthropological archaeology and biological anthropology. In conjunction with the Judaic Studies Program, students may concentrate in Near Eastern archaeology with a focus on Israel and Jordan. Students pursuing anthropological archaeology are expected to take required courses in anthropology and engage in field research.

ARCHAEOLOGY

Since 1993, the Judaic Studies Program has sponsored major archaeological excavations in Israel's northern Negev desert. Shortly after the peace treaty was formalized between Israel and Jordan, the program began a long-term archaeological field
program in the Jabal Hamrat Fidan Region (JHF) of southern Jordan. The project aims at studying the influence of early ore procurement and metallurgy on social change from the Neolithic period through the Iron Age. UCSD graduate students play an active role in the fieldwork and laboratory studies of material from these excavations. Qualified students are encouraged to use these data as part of their doctoral studies. In 2006, the UCSD Judaic Studies Program will join in several excavations along the Wadi al-Guwayb and Wadi al-Jariyyeh in southern Jordan. This is part of the UCSD Fall Session Middle East Field School.

The Judaic Studies Program supports a state-of-the-art archaeological laboratory in the Social Sciences Building. A wide range of digital-based technologies is used for archaeological data and image processing that are linked through the Internet. Labs for processing pottery, stone tools, and other materials are available for student use.

THE M.A. IN JUDAIC STUDIES

The M.A. in Judaic Studies, offered under the auspices of the Department of History, is an interdisciplinary program permitting the student to select courses primarily in history and literature, but also in anthropology, political science, sociology, and philosophy.

FELLOWSHIPS

Four fellowships are available for Ph.D. students. These include
- The Dita and Erwin Gumpel Judaic Studies Endowed Fellowship
- The University Fellowship
- The Wexler Family Judaic Studies Fellowship Fund in honor of David Noel Freedman

Judaic Studies Fellowships

Teaching assistantships are available in the Revelle College Humanities/Writing Program and in other writing programs and departments. Dissertation fellowships may be awarded to doctoral students at the dissertation stage of their studies. Funds are also available for support of travel to archaeological excavations. Students are also eligible for research-travel funds to other campus libraries of the University of California, as well as for grants that permit research in archives and libraries elsewhere. Students who deliver papers at scholarly conferences may also receive financial support for their participation.

Publications

The program produces a series of volumes: Biblical and Judaic Studies from the University of California, San Diego (published by Eisenbrauns Winona Lake, USA). The Anchor Bible (Commentary, Reference Library, and Dictionary) is edited by David Noel Freedman at UCSD. The series Approaches to Anthropological Archaeology is edited by Thomas E. Levy for Equinox Publishing Ltd. (London) at UCSD.

Lectures and Conferences

The program regularly hosts international conferences and an annual series of lectures and seminars by distinguished scholars in Hebrew Bible, Archaeology, and Judaica. "The Yigal Shiloh Memorial Lecture in Archaeology" is given by an archaeologist each year in memory of Professor Yigal Shiloh.

Application Procedures

The deadline for applications is January 9. For further information contact
University of California, San Diego
GRADUATE PROGRAM, JUDAIC STUDIES 0104
9500 Gilman Drive # 0104
La Jolla, California 92093-0104
E-mail: dwagoner@ucsd.edu

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

Following are course offerings in this area.

For descriptions of the courses listed below, refer to the appropriate department's section of the catalog.

Judaic Studies 1. Beginning Hebrew (4)
Acquisition of basic vocabulary, fundamentals of Hebrew grammar, conversation, and reading.

Judaic Studies 2. Intermediate Hebrew (4)
Continued study of vocabulary and grammar, emphasis on fluency in conversation, and reading.

Judaic Studies 3. Intermediate Hebrew, Continued (4)
Vocabulary, grammar, conversation, introduction to literary and nonliterary texts.

Judaic Studies 100. Introduction to Hebrew Bible (4)
An introduction to the Hebrew Bible focusing on the first five books, the Torah.

Judaic Studies 101. Introduction to Hebrew Texts (4)
Reading and analysis of texts from Biblical through modern authors, study of advanced vocabulary and grammar. Course taught in Hebrew and in English.

Judaic Studies 102. Intermediate Hebrew Texts (4)
Further reading and analysis of Hebrew literature from a range of periods. Advanced grammar and vocabulary. Course taught in Hebrew and in English.

Judaic Studies 103. Advanced Hebrew Texts (4)
Synthesis of fluency, reading, and grammatical skills. Reading of texts from a range of periods.

Judaic Studies 110. Introduction to Judaism (4)
An introductory survey of Jewish history, literature, and culture from antiquity to contemporary times. Topics include sacred texts, the variety of groups and views of Judaism, the historical and geographical movements of the Jewish people, and the intersection of religion, ethnicity, and culture.

Judaic Studies 111. Topics in Judaic Studies (4)
Study of a particular period, theme, or literature in Jewish civilization.

Judaic Studies 120. Topics in Zionism: Israelis and Palestinians: Two Cultures in Conflict (4)
This course examines Israeli culture, Palestinian culture, and the conflict between them. We will discuss what is distinct about each culture, how they are different, how they are similar, their histories, and what influences the relationship/conflict between them. PREREQUISITE: upper-division standing or consent of instructor.

Judaic Studies 196A. Judaic Studies Honors Course (4)
First quarter of honors thesis research for students accepted into honors program. Research is conducted under the supervision of a faculty member selected with the approval of the director of the Judaic Studies Program. PREREQUISITES: admission to Judaic Studies Honors Program; Judaic Studies 196B. Judaic Studies Honors Course (4)
Second quarter of honors thesis research for students accepted into honors program. Research is conducted under the supervision of a faculty member selected with the approval of the director of the Judaic Studies Program. PREREQUISITES: admission to Judaic Studies Honors Program; Judaic Studies 196C. Judaic Studies Honors Course (4)
Third quarter of honors thesis research for students accepted into honors program. Research is conducted under the supervision of a faculty member selected with the approval of the director of the Judaic Studies Program. PREREQUISITES: admission to Judaic Studies Honors Program; Judaic Studies 196D. Judaic Studies Honors Course (4)
Fourth quarter of honors thesis research for students accepted into honors program. Research is conducted under the supervision of a faculty member selected with the approval of the director of the Judaic Studies Program. PREREQUISITES: admission to Judaic Studies Honors Program; Judaic Studies 198. Directed Group Study in Judaic Studies (1-4)
Directed group study on a topic not generally included in the regular curriculum. Student must make arrangements with individual faculty members. (P/NP only)

Judaic Studies 199. Independent Study in Judaic Studies (1-4)
Independent study on a topic not generally included in the regular curriculum. Student must make arrangements with individual faculty members. (P/NP only)

ANLD 3. World Prehistory (4)

ANGN 100. Special Topics in Socio-Cultural Anthropology: Law, Religion, and Politics in Israel (4)

ANGN 142. Pastoralism in Archaeological Ethnographic Perspective (4)

ANGN 181. Foundations of Archaeology (4)

ANGN 183. Chiefdoms, States, and the Emergence of Civilizations (4)

ANPR 194. Archaeological Field School (4)

ANRG 116. Archaeology of the Holy Land: Prehistory (4)

ANRG 150. The Rise and Fall of Ancient Israel (4)

ANRG 162. Peoples of the Middle East (4)

ANRG 286. Archaeology, Anthropology and the Bible—Foundations, Data, and Debate

HIGR 260A-B-C. Seminar in the Judaic Studies (4-4-4)

HIGR 264. Topics in Pre-Islamic Jewish History (4)

HIGR 295. Thesis Seminar (4)

HIGR 298. Directed Reading (1-12)

HIGR 299. Ph.D. Thesis Direction (1-12)

HIGR 500. Apprentice Teaching (1-40)

HINE 100. The Ancient Near East and Israel (4)

HINE 102. The Jews in Their Homeland in Antiquity (4)

HINE 103. The Jewish Diaspora in Antiquity (4)

HINE 104. The Bible and the Ancient Near East: The Primary History (4)

HINE 105. The Bible and the Near East: The Prophets (4)

HINE 106. The Bible and the Near East: The Writings (4)

HINE 108. The Middle East before Islam (4)

HINE 109. Learning to Read Biblical Hebrew (4)

HINE 114. History of the Islamic Middle East (4)

HINE 116. The Middle East in the Age of European Empires (1798 to 1914) (4)

HINE 118. The Middle East in the Twentieth Century (4)

HINE 151A/251A. Introduction to Aramaic Language (4)
HINE 151B/251B. Introduction to Aramaic Dialects (4)  
PREREQUISITE: previous course.

HINE 151C/251C. Introduction to Aramaic Dialects (4)  
PREREQUISITE: previous course.

HINE 152A/252A. The Evolution of the Northwest Semitic Dialects (4)  
PREREQUISITE: knowledge of at least one Semitic language; a course in general linguistics also desirable.

HINE 152B/252B. Introduction to Ugaritic (4)  
PREREQUISITE: previous course.

HINE 152C/252C. Advanced Ugaritic (4)  
PREREQUISITE: previous course.

HINE 153A/253A. Introduction to Akkadian Language and Mesopotamian Culture (4)  
PREREQUISITE: previous course.

HINE 153B/253B. Continued Akkadian Language (4)  
PREREQUISITE: previous course.

HINE 153C/253C. Advanced Akkadian Language (4)  
PREREQUISITE: previous course.

HINE 161/261. Seminar in the Hebrew Bible (4)

HINE 166/266. Nationalism in the Middle East (4)

HINE 170/270. Special Topics in Jewish History (4)

HINE 181/281. Problems in Hebrew Manuscripts (4)

HINE 186/286. Topics in Middle Eastern History (4)

HINE 199. Independent Study in Near Eastern History (4)

HITO 104. The Jews and Judaism in the Ancient and Medieval Worlds (4)

HITO 105. The Jews and Judaism in the Modern World (4)

HITO 106. How Jewish Women Lived in Modern Times (4)

Humanities 1. The Foundations of Western Civilization: Israel and Greece (6)

LTCO 212. Studies in the Hebrew Bible (4)

LTEU 105. Medieval Studies: Crusade, Conquest, Conversion in Medieval Literature (4)

LTNE 101. Bible: The Narrative Books (4)

LTNE 102. Bible: The Prophetic Books (4)

LTNE 103. Bible: The Poetic Books (4)

LTWL 115. Contemporary Literature/Italy and Holocaust: Jewish Experience in Literature (4)

LTWL 134. A Cultural History of American Jewry (4)

LTWL 138. Critical Religion Studies (4)

LTWL 148. Yiddish Literature in Translation (4)

LTWL 198. Directed Group Study (4)

LTWL 199. Special Studies (4)

Courses cross-listed as LTNE and LTWL may be taken as Hebrew literature by students proficient in the language or as general literature by students without knowledge of Hebrew.

Music II. Folk Music: Klezmer Music (4)

Philosophy 185. Philosophy of Religion (4-4)

Political Science 121. Government and Politics of the Middle East (4)

Political Science 121B. Politics in Israel (4)

Political Science 138D. The Arab-Israeli Conflict (4)

Sociology/C 156. Sociology of Religion (4)

Sociology/C 157. Religion in Contemporary Society (4)

Sociology/D 178. The Holocaust (4)

Sociology/D 188F. Modern Jewish Societies and Israeli Society (4)

THE JOINT DOCTORAL PROGRAM

San Diego State University (SDSU) and the University of California, San Diego (UCSD), offer jointly a doctoral program in Language and Communicative Disorders. The program's focus is the interdisciplinary study of language and communicative disorders. A major emphasis of the program is to apply techniques developed in cognitive science and neuroscience to the study of language and language disorders. The program involves study and research in normal language (including sign languages of the deaf and language impairments), and in the neural bases of language use and language loss. Participating faculty have research interests in a wide range of issues in processes of language development, language and aging, multilingualism, language disorders, assessment, and intervention. Graduates of the program will be qualified to serve as faculty in university programs in a variety of disciplines, and to provide leadership in research and health services. The doctoral program faculty at UCSD are an interdisciplinary group from the Departments of Cognitive Science, Communication, Linguistics, Neurosciences, and Psychology. The doctoral program faculty at SDSU are members of the School of Speech, Language and Hearing Sciences and the Departments of Linguistics and Psychology. The program is coordinated by the doctoral program coordinators at each campus, in conjunction with an Executive Committee comprising three faculty from each campus appointed by the Graduate Deans from each campus.

The program is innovative in that many of the requirements are designed to function as a model of professional preparation specifically incorporating activities in which a successful teacher and researcher must engage after obtaining the Ph.D. Students will be required to participate in interdisciplinary research throughout the program, learn about the nature and ethics of research, prepare grant proposals, write manuscripts, and will gain experience in oral presentations and teaching. Graduates from the program will be well prepared for the rigors of an academic/research career. The doctoral program in Language and Communicative Disorders, being interdisciplinary, draws from a variety of undergraduate disciplines including communicative disorders, psychology, cognitive science, linguistics, engineering, and other related sciences. Students should have adequate preparation in mathematics, statistics, and biological sciences. Background in neurosciences and/or language sciences, or language disorder is helpful, but not required for admission.

By the end of the first year, all students will select a major field of emphasis by choosing one of three concentrations. The Adult Language concentration is intended to provide intensive education in communicative disorders in adults. Students in this concentration will also develop expertise in the study of language processing in normal adults. The Child Language concentration is intended to provide specialized education in childhood (birth to adolescence) communicative disorders. Students in this concentration will also achieve competence in developmental psycholinguistics emphasizing language acquisition in normally developing children. The Multilingualism concentration is intended to provide education in cross-linguistic, ethnographic, and other comparative studies of communicative disorders in children and/or adults, including those associated with bilingualism and second-language acquisition (including acquisition of sign language in deaf individuals). All students will be required to take some courses in each of the three concentrations. In addition, each student will elect a methods minor, applying one of the new technologies of cognitive neuroscience to research on language and communicative disorders. These may include computer-controlled studies of language processing in real-time functional brain imaging (including event-related brain potentials and/or functional magnetic resonance imaging), or neural-network simulations of communicative disorders.

The program is designed as a five-year curriculum, based on a twelve-month academic year. Students will be admitted to the doctoral program only in the fall semester/quarter. Information
regarding admission is found in the current edition of the Bulletin of the Graduate Division of San Diego State University. To receive an application for admission, contact: SDSU/UCSD Joint Doctoral Program in Language and Communicative Disorders, San Diego State University, 5500 Campanile Drive, San Diego, California 92182-1518, (619) 594-6775, or http://slhs.sdsu.edu/phdmain.php.

Required courses include the Tools requirement (two courses in statistics/research design, a course in neuroanatomy and physiology, a course in language structure and theory and a professional survival skills course), the Foundations requirement (three courses on normal language and three courses on disorders of language) and the Electives requirement (at least five courses, with a minimum of three courses related to the chosen concentration, chosen from a broad list of approved options from Cognitive Science, Communication, Computer Science, Linguistics, Neurosciences, and Psychology). Consult with advisor for approved list of elective courses. The five required electives must be approved by the student’s advisor and the Doctoral Program Coordinators. In addition to their course requirements, students are required to complete three laboratory rotations in different research methodologies (each lasting a minimum of one quarter), two research projects (first year and second year), a qualifying examination for advancement to candidacy, and a dissertation proposal in the form of grant proposal to one of the public agencies that funds research in communicative disorders.

PH.D. TIME LIMIT POLICIES
Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

COURSES
(See individual departments for details; for courses available at SDSU, see SDSU Graduate Catalogue.)

TOOLS REQUIREMENT:
Quantitative Methods in Psychology 201A-B-C
Ethics and Survival Skills in Academia
Cognitive Science 241
Systems Neuroscience
Cognitive Science 201 or
Basic Neurology SOMC 205
Foundations: Theories and Methods in the Study of
Cognitive Phenomena
Cognitive Science 203 or
Introduction to Grammatical Theory (Linguistics 221A) and
Introductory Phonology (Linguistics 211A)

FOUNDATIONS REQUIREMENT:
Special Topics in Psycholinguistics
Psychology 244
Aphasia
Cognitive Science 251 or Psychology 245
Language Acquisition
Psychology 215 or Cognitive Science 256

ELECTIVES:

COGNITIVE SCIENCE
200: Cognitive Science Seminar
202: Foundations: Computational Modeling of
Cognition
211A-B-C: Research Methods in Cognitive Science
213: Issues in Cognitive Development
260: Seminar on Special Topics
272: Topics in Theoretical Neurobiology
273: Biological Basis of Attention

COMMUNICATION
200A: Communication as Social Force
200B: Communication and Culture
200C: Communication and the Individual
201B: Ethnographic Methods for Communication
Research
201C: Discourse Analysis
222: Childhood and Culture

LINGUISTICS
211A: Introductory Phonology1
221A: Introduction to Grammatical Theory1
225: Topics in Syntax
249: Topics in Sign Languages of the Deaf
270: Psycholinguistics
272: Topics in Neurolinguistics
278: Research in Second Language Acquisition

PSYCHOLOGY
218A-B: Cognitive Psychology
222: Biological Psychology
227: Gender and Development
236: Substance Abuse
244: Special Topics in Psycholinguistics
252: Seminar on Cognitive Neuroscience
254: Functional Brain Imaging

COMPUTER SCIENCE AND ENGINEERING
250A: Artificial Intelligence
253: Neural Networks
256: Statistical Natural Language Processing
258A: Connectionist Natural Language Processing

NEUROSCIENCES
243: Physiological Basis of Human Information
263: Developmental Neurobiology
264: Behavioral Neuroscience

PHILOSOPHY
234: Philosophy of Language
1Students who use this course to fulfill the Tools requirement may not use this as an elective.

THE LATIN AMERICAN STUDIES PROGRAM

UC San Diego’s program in Latin American studies has attained national and international distinction for its excellence in teaching, research, and public service. Each year its faculty offers approximately 100 Latin America-related courses in fourteen academic departments, and the Latin American Studies Program offers three interdisciplinary degrees:
- Bachelor of arts in Latin American Studies
- Minor in Latin American Studies
- Master of arts in Latin American Studies

Latin American studies at UCSD offers distinct advantages:
- At the undergraduate level, students may take elective courses on Latin American topics or pursue a minor or a B.A. degree in Latin American Studies. At the graduate level, students can obtain a M.A. degree in Latin American studies. In addition, various doctoral programs in academic departments across the social sciences and humanities offer a regional focus on Latin America.
- Latin American studies integrates teaching, research, and policy analysis, encouraging students to develop interdisciplinary perspectives and to work actively with faculty on research projects and conferences.
- Students participate in the activities of an outstanding array of research and teaching organizations, including the Center for Iberian and Latin American Studies, the Center for U.S.-Mexican Studies, the Graduate School of International Relations and Pacific Studies, the Center for Comparative Immigration Studies, and the Institute of the Americas. The Center for Iberian and Latin American Studies (CLAS) sponsors multidisciplinary colloquia, conferences, projects, and publications. CLAS also awards fellowships and grants each year to promising graduate students.
- Students are encouraged to interact with visiting Latin American scholars and to participate in Latin America-related internships, seminars, clubs, foreign exchange programs, and other extracurricular activities.
- Students at UCSD have access to one of the largest and fastest-growing library collections on Latin America in the United States.

Degree programs in Latin American studies are supervised by an interdisciplinary faculty group under the direction of the director and program director of the Center for Iberian and Latin American Studies.

THE CURRICULAR PROGRAM

UNDERGRADUATE MAJOR IN LATIN AMERICAN STUDIES

The bachelor of arts in Latin American studies blends coverage of methodological and theoretical approaches to the study of Latin America with a broad foundation in the humanities and social sciences. Students receiving this degree will be prepared for private and government employment or for graduate training; the major also provides a valuable supplement for those who subsequently pursue professional degrees in business, law, engineering, medicine, or other fields.

To satisfactorily complete the B.A. degree, students must take a broad range of courses from at least three of UCSD’s humanities and social science departments. The collection of courses should be structured so as to provide both depth in a special area of study and breadth across the broader field. Students must also demonstrate proficiency in Spanish.

All students entering the major must enroll in LATI 50 “Introduction to Latin America,” an interdisciplinary course that prepares majors to build a coherent curriculum on Latin America. During the senior year, all B.A. candidates are required to successfully complete LATI 190, a writing seminar. This course will culminate in the preparation of an interpretive paper based on the secondary analysis of existing scholarly research (approximately twenty to forty pages in length). As part of the overall requirements, students are strongly encouraged to enroll in four credits of Individual Study (LATI 199) with a member of the Latin Americanist faculty, who will serve as the student’s principal advisor.

All upper-division courses applied to the requirements of the major must be taken for a letter grade (with the sole exception of LATI 199). A 2.0 grade-point average is required in the major, and students must earn at least a C– in each course counted for the major.

Students majoring in Latin American studies are also urged to minor in a core discipline such as anthropology, economics, history, literature, political science, or sociology. In summary, the requirements for the bachelor of arts in Latin American studies are:

Lower-Division Requirements

1. The equivalent of at least two years of college-level language instruction in Spanish, comparable to satisfactory completion of Literature/Spanish 2C; students who satisfy this requirement are strongly encouraged to study Portuguese.

2. LATI 50: Introduction to Latin America

Upper-Division Requirements

1. Eleven upper-division courses selected from the approved interdisciplinary course list for Latin American studies as follows:
   a. Course work must be in at least three departments.
   b. At least three courses must be from one department.
   c. No more than five courses from one department will count for credit.
   d. At least two courses must concentrate exclusively on periods earlier than the twentieth century.

2. Enrollment in the four-credit Senior Seminar (LATI 190), usually to be taken in the winter quarter of the senior year; satisfactory completion of a substantial paper is required of all graduating majors.

3. Maintain a 2.0 grade-point average, earning at least a C– in each course counting for the major. With the sole exception of LATI 199, all courses must be taken for a letter grade.
HONORS IN LATIN AMERICAN STUDIES

The Latin American Studies Program offers an Honors Program for students who demonstrate excellence in the major. In order to receive Honors in Latin American Studies a student must

1. Satisfy all lower-division requirements of the major program;

2. Complete nine upper-division courses selected from the Approved Interdisciplinary Course List for Latin American Studies as follows:
   a. Course work must be in at least three departments.
   b. At least three courses must be from one department.
   c. No more than five courses from one department will count for credit.
   d. At least two courses must concentrate exclusively on periods earlier than the twentieth century.

3. Complete a three-course sequence in the senior year consisting of Individual Study, the Senior Seminar, and the Honors Seminar (LATI 199, 190, and 191, respectively);

4. Produce an original thesis based on primary research under the direction of a mentor selected from the Latin Americanist faculty, and defend this thesis during the spring quarter before an interdisciplinary faculty committee; and

5. Maintain a minimum GPA of 3.5 in the major.

UNDERGRADUATE MINOR IN LATIN AMERICAN STUDIES

The Latin American studies minor allows students to explore interdisciplinary approaches to a significant world region while pursuing a major in an academic discipline. To complete the program, students take at least seven courses (twenty-eight units) in Latin American studies, five (twenty units) of which must be upper-division. These courses need to be approved Latin American studies classes from the humanities and social sciences. All classes need to be taken for a letter grade and satisfactorily completed.

- Five courses (twenty units) need to be upper-division.
- One course needs to be LATI 50, which is offered once per year.
- One course needs to fulfill the language requirement which should be the culmination of at least two years of college-level language instruction in Spanish or Portuguese. This course can be fulfilled in the following ways:
  - LTSP 2C for non-native speakers
  - LTSP 2D for native speakers
  - LTSP 50 or above
  - A UCSD-approved Spanish/Portuguese education-abroad course

EDUCATION ABROAD

Students in Latin American studies are encouraged to participate in the Education Abroad Program (EAP) in Brazil, Chile, Costa Rica, or Mexico, or in other study abroad programs offered by the Opportunities Abroad Program (OAP). Subject to approval by petition after courses have been completed (based on syllabi and course work), courses taken through EAP/OAP will be accepted for credit toward the major or minor. The equivalent of six UCSD upper-division courses can be petitioned for credit toward the major, and a maximum of two UCSD upper-division courses can be petitioned for credit toward the minor.

Students interested in studying abroad should see the Latin American studies student affairs coordinator to discuss appropriate courses and programs for their plan of study before they leave. They should also visit the following Web site: http://paco.ucsd.edu/academic/CILASabroad.htm. Information on EAP/OAP is given in the “Education Abroad Program” section of the UC San Diego General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at http://programsabroad.ucsd.edu. Financial aid can be used for EAP/OAP study, and special study-abroad scholarships are also available.

MASTER OF ARTS IN LATIN AMERICAN STUDIES

The master of arts in Latin American studies is designed for students who seek to integrate a broad range of disciplinary approaches to a world region of growing international significance. Upon graduation, most students pursue additional advanced degrees in academic or professional fields; others proceed to careers in the private sector, in international organizations, or in government.

To qualify for admission, students must have a B.A. with a grade-point average of at least 3.5 on a 4.0 scale for the final two years of undergraduate study plus satisfactory scores on the Graduate Record Examination.

To receive the master of arts in Latin American studies, a student must

1. Demonstrate foreign language competence in Spanish or Portuguese.

   - a. Complete the Latin American Studies Basic Seminar Sequence: twelve units must be taken in the required Core Seminar in Latin American Studies (LATI 200, four units), four units in approved theory seminar, and four units in approved methodology seminar.
   - b. Courses must be completed in at least three fields, with no more than sixteen units in any one department. Students are encouraged to include four units of independent research (LATI 299) for work on the master’s thesis.
   - c. At least sixteen units must be taken in graduate-level courses, and up to sixteen units may be taken in upper-division, undergraduate-level courses.

2. Successfully complete either a comprehensive exam or master’s thesis.

   - a. M.A. students have the option to upgrade upper-division, undergraduate-level courses to graduate-level courses (contact the Latin American studies student affairs coordinator for information on requirements and procedures). To convert an undergraduate-level course (100 level) into a 298 graduate-level course, a student must attend all of the course meetings and incorporate a component of additional, graduate-level research work, upon arrangement with the faculty member teaching the course (a special form describing the supplementary work must be filled by the student and approved by the instructor and CILAS’ academic coordinator). In all such cases, the supplementary work should (a) increase the amount of reading to match the regular reading expectations of a graduate seminar, (b) include additional meeting time with the professor for a graduate-level discussion of the material, and (c) require the student to write a research paper (which would generally be on the order of fifteen to twenty pages).

DISCIPLINARY AND THEMATIC CONCENTRATIONS

M.A. students in Latin American studies who are interested in specific disciplines or research topics may apply for a disciplinary or thematic concentration. Currently students may choose from concentrations in cultural studies, gender studies, international migration, history, and sociology. In addition to the general requirements for all candidates applying for admission to the Master of Arts in Latin American studies, applicants to a concentration must submit a statement explaining their intellectual and career interests in that specific area of study. Applications from new students will be considered for the fall quarter. Current students in the Latin American studies master’s program may apply in the spring quarter of their first year.

M.A. students who were previously enrolled as undergraduates at UCSD will not be allowed to repeat courses for credit toward the concentration. In all cases there are alternatives, and those students will be expected to take other classes to fulfill the requirements.

GENERAL CONCENTRATION REQUIREMENTS

To receive the master of arts in Latin American studies with a concentration, a student must

1. Demonstrate foreign language competence in Spanish or Portuguese.

   - a. Complete the Latin American Studies Basic Seminar Sequence: twelve units must be taken in the required Core Seminar in Latin American Studies (LATI 200, four units), four units in approved theory seminar, and four units in approved methodology seminar.
   - b. Courses must be completed in at least three fields, with no more than sixteen units in any one department. Students are encouraged to include four units of independent research (LATI 299) for work on the master’s thesis.
   - c. At least sixteen units must be taken in graduate-level courses, and up to sixteen units may be taken in upper-division, undergraduate-level courses.

2. Successfully complete either a comprehensive exam or master’s thesis.

   - a. Complete twelve units of general electives within the specification of the concentration (as specified below). All of the concentration units must be taken at the graduate level (200 level), and a maximum of two graduate-level electives (100 level) may be upgraded to graduate-level 298 courses.
   - b. Complete twelve units of general electives within the specification of the concentration (as specified below). At least 50 percent of the general elective units must be taken at the graduate level (200 level).
   - c. Successfully complete a master’s thesis on a topic relevant to the area of concentration.
CONCENTRATION IN CULTURAL STUDIES

To receive the master of arts degree in Latin American studies (cultural studies), a student must complete the following units as concentration course work and general electives:

1. Two seminars (eight units) from the approved list of core seminars. These may be used to satisfy the theory and methodology requirements of the LAS M.A. program (ETHN 259, ETHN 260, HIGR 200, HIGR 205, HIGR 207, HIGR 247A-B, HIGR 248A-B, HIGR 252, LTCS 201, LTCS 210, LTCS 225, LTCS 250, LTCS 255, LTPS 272, LTPS 275, VIS 259).

2. Two courses (eight units) from the approved list of elective courses within the thematic specialization (ANAR 100, ANAR 153, ANSC 131, ANRG 131, ANAR 154, ANSC 132, ANSC 135, ANTH 269, COCU 110, COCU 130, COCU 131, COCU 165, COCU 168, COCU 179, COHI 114, COHI 115, COSF 140C, COSF/ COCU/COHI 175, COSF 183, COSF 185, HIGR 245, LTAM 100, LTAM 101, LTAM 102, LTAM 105, LTAM 106, LTAM 107, LTAM 108, LTAM 109, LTAM 110, LTAM 111, LTAM 120, LTAM 130, LTAM 132, LTEN 180, LTEN 188, LTSP 130A/B, LTSP 133, LTSP 134, LTSP 135A, LTSP 135B, LTSP 136, LTSP 137, LTSP 138, LTSP 140, LTSP 141, LTSP 142, LTSP 150A, LTSP 150B, LTSP 151, LTSP 153, LTSP 154, LTSP 170, LTSP 172, LTSP 173, LTSP 174, LTSP 175, LTSP 176, LTSP 177, LTSP 190, LTSP 252, LTSP 258, MUS 107, MUS 111, MUS 126, MUS 150, MUS 151, TDHT 108, TDHT 110, TDHT 111, TDHT 112, VIS 126AN, VIS 126BN, VIS 126G, VIS 126H, VIS 128DN, VIS 1512).

3. The selection of these seminars and courses must be formally approved by the student’s personal advisor (by signing the student’s graduate student general petition form). With approval from his/her advisor, however, students in the cultural studies concentration may take other seminars and courses that do not appear in the approved list, provided that the content of the work that they do is directly related to Latin American issues, topics, or themes.

4. General Electives: The remaining twelve units must be taken as follows: two courses from the Approved List of Courses on Latin America, and one course of Directed Reading or Independent Research (298 or 299, four units).

CONCENTRATION IN GENDER STUDIES

To receive the master of arts degree in Latin American studies (gender studies), a student must complete the following units as concentration course work and general electives:

1. One general theoretical course in gender studies (four units in any of the following: ANGR 244, CGS 100, CGS 101, CGS 104, CGS 112, COCU 132, COCU 139, ETHN 256, LTCS 250, SOCB 118, SOCC 132, SOCC 267).

2. One course in feminist theory (four units in any of the following: CGS 103, COCU 138, HIGR 205, POLI 116A, POLI 217J).

3. One course focused on gender studies in Latin America (four units in any of the following: ETHN 129, ETHN 148, HILA 261, LTAM 105, LTAM 106, LTSP 175, POLI 134R, USP 135).

4. One course of directed reading (298, four units), taken with a faculty member affiliated with the CGS Program, focused on a topic relevant to Latin American gender studies.

5. General Electives: The remaining twelve units must be taken as follows: one course from the approved list of courses on Latin America (four units), four units of directed reading (298), and four units of independent research (299).

CONCENTRATION IN HISTORY

To receive the master of arts degree in Latin American studies (history), a student must complete the following units as concentration course work and general electives:

1. A required research seminar sequence in Latin American history (eight units in any of the following: HIGR 245A-B-C, HIGR 247A-B, or HIGR 248A-B).

3. General Electives: The remaining twelve units must be taken in departments other than the Department of History as follows: one course from the approved list of courses on Latin America (four units), four units of directed reading (298), and four units of independent research (299).

CONCENTRATION IN INTERNATIONAL MIGRATION

To receive the master of arts degree in Latin American studies (international migration), a student must complete the following units as concentration course work and general electives:

1. One course focused on economic and social factors in international migration (four units in any of the following: ECON 114, ETHN 118, ETHN 131, ETHN 134, HIUS 159, IRGN 490, POLI 248, SOCC 282).

2. One course focused on Immigration Policy (four units in any of the following: POLI 150, POLI 236, IRGN 490).

3. One course focused on Latin American international migration (four units in any of the following: COHI 175, ETHN 189, HIUS 180, HIUS 186, IRGN 490, LTAM 109, LTSP 177).

4. One course of directed reading (four units in a 298 course, focused on a topic relevant to Latin American migratory movements).

5. General Electives: The remaining twelve units must be taken as follows: one course from the approved list of courses on Latin America (four units), four units of directed reading (298), and four units of Independent Research (299).

CONCENTRATION IN SOCIOLOGY

To receive the master of arts degree in Latin American studies (sociology), a student must complete the following units as concentration course work and general electives:

1. One seminar in classical sociological theory (four units in SOC 201A or SOC 201B).

2. One seminar in sociological research methods (four units in any of the following: SOC 203, SOC 204, SOC 205, SOC 206, SOC 207, SOC 227).

3. One core sociological field seminar (four units in any of the following: SOC 212, SOC 216, SOC 222, SOC 226, SOC 234, SOC 244, SOC 264, SOC 267).

4. One sociology course or seminar focused on Latin America (four units in any of the following: SOC 182, SOCID 188D, SOCG 258).

5. General Electives: The remaining twelve units must be taken in departments other than the Department of Sociology as follows: one course from the approved list of courses on Latin America (four units), four units of directed reading (298), and four units of independent research (299).

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

LATI 1A. Zapotec Conversation and Analysis I (4) Presentation and practice of the grammatical structures of Valley Zapotec, an indigenous language from Mexico. Course focuses on listening, speaking, and writing. Students gain basic knowledge of grammatical principles in order to understand the structure and rules of the language.

LATI 1B. Zapotec Conversation and Analysis II (4) Presentation and practice of the grammatical structures of Valley Zapotec, an indigenous language from Mexico. Course teaches comprehensive vocabulary through listening, speaking, reading, and writing activities. Course also focuses on oral proficiency/grammar, including verb conjugation and other grammatical structures. PREREQUISITE: LATI 1A.

LATI 1C. Zapotec Conversation and Analysis III (4) Presentation and practice of the grammatical structures of Valley Zapotec, an indigenous language from Mexico. Course gives students an advanced understanding of written and spoken Valley Zapotec through reading, conversation, group presentations, and composition. PREREQUISITE: LATI 1B.

LATI 50. Introduction to Latin America (4) Interdisciplinary overview of society and culture in Latin America—including Mexico, the Caribbean, and South America: legacies of conquest, patterns of economic development, changing roles of women, expressions of popular culture, cycles of political change, and U.S.–Latin American relations.

LATI 50X. Foreign Language Discussion—Introduction to Latin America (1) Students will exercise advanced foreign language skills to discuss materials and the correspondingly numbered Latin American Studies foreign area course. This section is taught by the course instructor, has no final exam, and does not affect the grade in the core course, LATI 50.

LATI 87. Freshman Seminar (1) The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter
to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen.

LATI 120/220. Special Topics in Latin American Studies (1-4)
A course designed to cover various aspects and various disciplines of Latin American Studies.

LATI 190. Senior Seminar (4)
Research seminar on selected topics in the study of Latin America; all students will be required to prepare and present independent research papers. (Honors students will present drafts of senior research theses, of no less than fifty pages in length; non-honors students will present final versions of analytical papers of approximately twenty-five to forty pages in length.) PREREQUISITES: satisfactory completion of LATI 50 and a working knowledge of Spanish.

LATI 191. Honors Seminar (4)
Independent reading and research under direction of a member of the faculty group in Latin American Studies; goal is to provide honors students with an opportunity to complete senior research thesis (to be defended before three-person interdisciplinary faculty committee). PREREQUISITES: successful completion of LATI 50, working knowledge of Spanish; minimum GPA of 3.5 in the major.

LATI 199. Individual Study (4)
Guided and supervised reading of the literature on Latin America in the interdisciplinary areas of anthropology, communications, economics, history, literature, political science, and sociology. For students majoring in Latin American Studies, reading will focus around potential topics for senior papers; for honors students in Latin American Studies, reading will culminate in formulation of a prospectus for the research thesis. PREREQUISITES: LATI 50 and working knowledge of Spanish.

LATI 200. Core Seminar on Interdisciplinary Research and Methodology in Latin American Studies (4)
A team-taught course wherein members of the faculty group in Latin American Studies present diverse disciplinary and thematic approaches to the region. Topics vary from year to year. Grades are based on discussions and on a series of analytical papers. PREREQUISITE: enrollment in the master's degree program in Latin American Studies or permission of instructor.

LATI 210A-B. Latin American Library Resources and Research Methodology (2-2)
A detailed survey of major research methods and resources for the study of Latin America. Both conventional library materials and those available electronically will be explored. Skills will transfer to any major research library. Various methodologies will also be explored in relation to the students' individual projects. A critical review, annotated bibliography, and a statement of research methodology, related to their proposed topics, will be required. Not offered in 2009–10.

LATI 298. Directed Reading (1-12)
Guided and supervised reading of the literature of the areas included in the interdisciplinary fields of anthropology, communications, economics, history, literature, political science, and sociology. PREREQUISITE: graduate standing in Latin American Studies.

LATI 299. Independent Research (1-12)
Independent work by graduate students engaged in thesis research and writing under the direct supervision of a faculty advisor.

LATI 500. Teaching Apprenticeship (1-4)
The course is designed for teaching assistants to learn effective teaching methods through supervision and mentorship by the faculty. Student will learn handling of discussions; preparation and grading of examinations and other written exercises; and student relations.

COURSES THAT SATISFY UNDERGRADUATE/GRADUATE DEGREE REQUIREMENTS IN LATIN AMERICAN STUDIES

Approved Interdisciplinary Courses: The following is a list of courses available in UCSD departments that are approved to satisfy the requirements of the major, minor, and master’s in Latin American studies. Please note that these courses may not be offered every quarter or year and new courses may be added. Check the current schedule of classes or the Latin American studies Web site (http://orpheus.ucsd.edu/las) for updated information.

The Departments of Linguistics and Literature and the Graduate School of International Relations and Pacific Studies offer language courses in Spanish and Portuguese. Language courses do not count toward the course requirements for Latin American studies degrees.

Law and Society

OFFICE: Interdisciplinary Programs, EBU 3B, Computer Science and Engineering Building, Room 1108, Warren College
http://warren.ucsd.edu/law

Law and Society is an interdisciplinary minor that emphasizes the complexity and interrelationship of legal, social, and ethical issues in their historical context. Although it is administered by Warren College, it is available to all UC San Diego undergraduate students considering law-related careers or those with a general interest in law as a social institution. The purpose of the program is to enhance students' critical analysis of social and ethical issues related to law and of the legal implications and ramifications of policy and decision-making in their major fields of study. Students examine the role of the legal system and specific legal issues from the perspectives of the social sciences and humanities. Social forces, historical questions, and issues of values will be considered in the context of the legal system. The focus of the minor is on the process of law—how the law both reflects and defines basic social values—and its relation to the political, economic, and social conflicts within society.

The interdisciplinary content of the Law and Society minor offers students the opportunity to examine law-related issues from the perspectives of a broad range of disciplines, including anthropology, communication, critical gender studies, economics, environmental studies, ethnic studies, history, linguistics, philosophy, political science, psychology, sociology, and urban studies and planning.

Students should consult an academic advisor at their college to determine how the Law and Society minor can best meet their college graduation requirements. Minor declarations must be made online using the TritonLink major and minor application.

Students are urged to supplement the Law and Society minor with a law-related internship. The Academic Internship Program offers local placements with lawyers, judges, elected officials, government offices, and public interest groups. In addition, placements are available in Washington, D.C. with senators, representatives, legislative committees, and political action committees.

A number of extracurricular events and programs are also available to students interested in law. Information on these programs and activities is available in the Warren College Interdisciplinary Programs Office, EBU 3B, Computer Science and Engineering Building, Room 1108, Warren College, or call (858) 534-1704. Web site: http://warren.ucsd.edu/law.

### LAW AND SOCIETY MINOR REQUIREMENTS

The minor consists of four required courses and three elective courses. At least five courses must be taken at the upper-division level. To assure an interdisciplinary learning experience, students must include at least one course from each of the following academic departments: History, Philosophy, Political Science, and Sociology. Law and Society 101, Contemporary Legal Issues, will count as a Philosophy, Political Science, or Sociology course according to the departmental affiliation of the instructor. Law and Society 101 may be repeated for credit once, for a maximum total of eight units.

#### REQUIRED COURSES

1. One of the following two courses:
   - Political Science 40. Introduction to Law and Society
   - Sociology 50. Introduction to Law and Society

2. Law and Society 101. Contemporary Legal Issues

3. One of the following four courses:
   - History US 150. American Legal History to 1865
   - History US 151. American Legal History since 1865
   - Political Science 104A. The Supreme Court and the Constitution
   - Political Science 104B. Civil Liberties—Fundamental Rights

4. One of the following two courses:
   - Philosophy 168. Philosophy of Law
   - Sociology/C140. Sociology of Law

#### ELECTIVES CHOSEN FROM THE FOLLOWING:

- Anthropology: Socio-Cultural
  - 100. Topics in Socio-Cultural Anthropology (topic approval required)

- Communication as a Social Force
  - 139A-B. Law, Communication, and Freedom of Expression

- Critical Gender Studies
  - 106. Gender, Equality, and the Law
  - 107. Gender and Reproductive Rights

- Dimensions of Culture
  - 2. Justice (open to Thurgood Marshall College students only)

- Economics
  - 118. Law and Economics: Torts, Property, Crime
  - 119. Law and Economics: Contracts and Corporations

- Environmental Studies
  - 110. Environmental Law

- Ethnic Studies
  - 152. Law and Civil Rights

- History of Science
  - 131. Science, Technology, and Law

- History of the United States
  - 128. African-American Legal History
  - 150. American Legal History to 1865
  - 151. American Legal History since 1865
  - 152A. A Constitutional History of the U.S. to 1865
  - 152B. A Constitutional History of the U.S. since 1865
  - 153. American Political Trials
  - 155A. Religion and Law in American History: Foundations to the Civil War
  - 155B. Religion and Law in American History: Civil War to the Present
  - 169. American Legal and Constitutional History

- History Topics
  - 134. International Law: War Crimes and Genocide

- Law and Society
  - 101. Contemporary Legal Issues (may be repeated for credit once; separate topic required)
  - 1025. Crimes, Civil Wrongs, and Constitution
  - 198. Directed Group Study

- Linguistics
  - 105. Law and Language
  - 176. Language of Politics and Advertising

- Philosophy
  - 10. Introduction to Logic
  - 12. Logic and Decision Making
  - 162. Contemporary Moral Issues
  - 163. Biomedical Ethics
  - 167. Contemporary Political Philosophy
  - 168. Philosophy of Law

- Political Science
  - 13. Power and Justice
  - 40. Introduction to Law and Society
  - 104A. The Supreme Court and the Constitution
  - 104B. Civil Liberties—Fundamental Rights
  - 104C. Civil Liberties—The Rights of Criminals and Minorities
  - 104D. Judicial Politics
  - 104F. Seminar in Constitutional Law
  - 104L. Law and Politics—Courts and Political Controversy
  - 104M. Law and Sex
  - 117. Violence and Social Order
  - 140A. International Law and Organizations
  - 145A. International Politics and Drugs
  - 150A. Politics of Immigration

- Psychology
  - 162. Psychology and the Law
Sociology

Soc/L 50. Introduction to Law and Society
Soc/B 1205. Special Topics in Culture, Language, and Social Interaction (topic approval required)
Soc/B 142. Social Deviance
Soc/B 145. Violence and Society
Soc/B 146. Law Enforcement in America
Soc/B 160L. Law and Culture
Soc/B 173. Elite Crime
Soc/C 140. Sociology of Law
Soc/C 140F. Law and the Workplace
Soc/C 141. Crime and Society
Soc/C 144. Forms of Social Control
Soc/C 152. Social Inequality and Public Policy
Soc/C 159. Special Topics in Social Organizations and Institutions (topic approval required)
Soc/C 163. Migration and the Law

Urban Studies and Planning

124. Land Use Planning

Students may petition to substitute courses in the minor that have substantial legal content. Petitions should be submitted to the Warren College Interdisciplinary Programs Office.

RECOMMENDED INTERNSHIP EXPERIENCE

A law-related internship (AIP 197) is recommended and should be arranged at least one quarter in advance through the Academic Internship Program, Literature Building, Second Floor. For each four units of credit, ten hours a week for one quarter and a ten-page research paper are required.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

Most course work for the Law and Society minor is listed under the academic department providing instruction. Law and Society 101, described below, is an interdisciplinary course. It may be counted toward minor requirements as either History, Philosophy, Political Science, or Sociology. Further information on Law and Society 101 is available in the Interdisciplinary Programs Office.

UPPER-DIVISION

101. Contemporary Legal Issues (4)

This course will deal in depth each year with a different legal issue of contemporary significance, viewed from the perspectives of political science, history, sociology, and philosophy. Required for students completing the Law and Society minor. May be repeated for credit once, for a maximum total of eight units. **PREREQUISITE:** upper-division standing or consent of instructor.

1025. Crimes, Civil Wrongs, and Constitution (4)

Through lectures and discussions on several controversial topics, students are introduced to the subjects taught in the first year of law school. They learn briefing, case analysis, and the Socratic method of instruction, engage in role-playing exercises, and take law-school examinations. **PREREQUISITE:** upper-division standing or consent of instructor.

198. Directed Group Study (4)

Law-related group studies, readings, projects, and discussions. **PREREQUISITE:** upper-division standing or consent of instructor.

In what ways do languages differ, and in what ways are all human languages alike? These are the basic questions that the science of linguistics seeks to answer.

In formulating hypotheses about language it has been found that languages have intricate structure at a number of different levels. Phonetics studies the sounds of speech and how they are produced and perceived. Phonology studies the principles by which the sounds of a language are organized into a system and combined into syllables and larger units. Morphology studies the principles by which smaller units of meaning are combined into words. Syntax is the study of the principles by which words are combined into larger units such as phrases and sentences. Semantics studies meaning—the meanings of words and the ways the meanings of words are related to the meanings of larger units such as the phrase, the sentence, and the discourse. Linguists attempt to discover to what extent the principles at each level vary across languages, and to what extent they are universal.

Because language provides a window into the human mind, linguistics plays a central role in the study of human cognition and figures prominently in the field of cognitive science. We know, for example, that all normal children succeed in learning language relatively quickly at a time when their other cognitive abilities are still developing. The universal properties of human language that linguists discover can be used to provide models of this process, to explain why it occurs so rapidly, and to make specific predictions about the way it unfolds. The results of linguistic research can also be tested directly in experimental studies of how language is represented and processed in the mind (psycholinguistics) and brain (neurolinguistics). Language can also be studied in terms of its function as a cognitive system shared by an entire society; sociolinguistics investigate the ways in which the language we use is affected by our social environment.

The Department of Linguistics offers a series of lower-division courses designed to introduce non-majors to the scientific study of language in the broader perspective of a liberal arts education. These are LIGN 3 (Language as a Social and Cultural Phenomenon), LIGN 4 (Language as a Cognitive System), LIGN 7 (Sign Language and Its Culture), LIGN 8 (Languages and Cultures in America), and LIGN 17 (Making and Breaking Codes). These courses may be used to satisfy the Marshall College disciplinary breadth requirement. Lower-division linguistics courses may be used to satisfy the social sciences requirement at Muir College and Revelle College, and they partially fulfill the requirements for a program of concentration in Warren College. In addition, certain linguistics courses satisfy the American Culture requirement at Muir College and Warren College. LIGN 17 (Making and Breaking Codes) satisfies the Thurgood Marshall Computational Skills requirement in addition to the formal skills requirement in Warren College and in the Human Development Program. This course also satisfies the Structured Reasoning requirement in Sixth College. Students should consult their college advising offices to determine which linguistics courses satisfy these other requirements.

Linguistics courses are relevant to a wide range of fields of study at UC San Diego, including anthropology, cognitive science, communication, computer science, human development, law and society, psychology, and sociology, as well as areas such as African studies, Chinese studies, ethnic studies, Judaic studies, Latin American studies, and others. In some cases certain linguistics courses count toward a major or minor in one of these departments or programs. Students should consult with a faculty advisor in linguistics and the other department or program when deciding on their course of study.

Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP) while still making progress toward the major. Students considering this option should discuss their plans with the department undergraduate advisor before going abroad. Detailed information on EAP/OAP is found in this catalog under the heading “Education Abroad Program.”

The Department of Linguistics oversees the Linguistics Language Program, which offers basic language instruction in Arabic, ASL, French, German, Italian, Portuguese, and Spanish. Courses from the Language Program satisfy general-education requirements, as well as the Department of Linguistics language requirement. Graduate students who require a reading knowledge of French or German may enroll in LIFR 11 or LIGM 11, respectively.
The department also offers language instruction for individuals who grew up in an English-speaking environment while speaking a different language at home (Arabic, Armenian, Cantonese, Hindi, Korean, Persian, Tagalog, and Vietnamese; other languages may be added to this list if student demand is sufficient). Instruction in these languages is designed to raise students’ linguistic and cultural competence to professional levels. Finally, directed self-instruction is available for a wide variety of languages through LIDS 19.

Note: Please check with the department office for updates concerning programs and course offerings.

THE MAJOR PROGRAM

GENERAL REQUIREMENTS

Every linguistics major (except the language studies major) must satisfy the undergraduate language requirement and must successfully complete a minimum of twelve upper-division courses, including six required courses and at least five upper-division linguistics electives. (One elective pertaining to the study of language may be taken outside the department, subject to faculty approval.) In addition to the general major, the department offers a set of enriched major programs in various specializations.

Except for LIGN 199, no course taken on a Pass/Not Pass basis may be counted toward a linguistics major. No more than one quarter of LIGN 199 may be counted toward a linguistics major. At least six of the required upper-division linguistics courses counted toward the major must be taken in residence at UCSD. A letter grade of C– or better is required for every course counted toward a linguistics major, including courses taken to satisfy the department’s undergraduate language requirement.

REQUIRED LINGUISTICS COURSES

Linguistics 101 is required as an introduction to the field and serves as the prerequisite to certain other courses. Students who choose a linguistics major should enroll in it as early as possible.

Every major program in linguistics (except the language studies major) must include the following required courses covering basic areas of the field:

LIGN 101: Introduction to the Study of Language
LIGN 100: Phonetics
LIGN 111: Phonology I
LIGN 120: Morphology
LIGN 121: Syntax I
LIGN 130: Semantics

Students are advised to take these required courses as early as possible, since the background they provide may be needed for other upper-division linguistics courses. Check individual course listings for prerequisite information.

LINGUISTICS ELECTIVES

LIGN 105: Law and Language
LIGN 108: Languages of Africa
LIGN 119: First and Second Language Learning: From Childhood Through Adolescence
LIGN 140: The Structure of American Sign Language
LIGN 141: Language Structures
LIGN 142: Language Typology
LIGN 143: The Structure of Spanish
LIGN 144: Discourse Analysis: American Sign Language and Performing Arts
LIGN 145:Pidgins and Creoles
LIGN 146: Sociolinguistics in Deaf Communities
LIGN 150: Historical Linguistics
LIGN 160: Pragmatics
LIGN 165: Computational Linguistics
LIGN 170: Psycholinguistics
LIGN 171: Child Language Acquisition
LIGN 172: Language and the Brain
LIGN 173: Heritage Languages
LIGN 174: Gender and Language in Society
LIGN 176: Sociolinguistics
LIGN 177: Language of Politics and Advertising
LIGN 177: Multilingualism
LIGN 179: Language Acquisition Research Restricted Courses
LIGN 187: Freshman Seminar (does not count as a linguistics elective)
LIGN 190: Senior Seminar in Linguistics (does not count as a linguistics elective)
LIGN 195: Apprentice Teaching (does not count as a linguistics elective)
LIGN 197: Linguistics Internship
LIGN 199: Independent Study in Linguistics
LIGN 199H: Honors Independent Study in Linguistics

Note to Reveille and Warren students:

Reveille: For Reveille College only, the classification of the linguistics major as humanities, natural science, or social science must be determined on the basis of each student’s specific program. The classification of the major program will in turn determine what areas will be acceptable for the noncontiguous minor.

Warren: For Warren College only, any courses taken in departments other than linguistics may not overlap with the student’s outside area(s) of concentration.

UNDERGRADUATE LANGUAGE REQUIREMENT

Linguistics majors must demonstrate proficiency in one foreign language.

Proficiency in a foreign language may be demonstrated in three ways:

1. By passing the reading proficiency examination and the oral interview administered by the Department of Linguistics in French, German, Italian, or Spanish; or

2. By successfully completing a course given at UCSD representing the fourth quarter (or beyond) of instruction in any single foreign language with a grade of C– or better; or

3. By scoring four or greater on the Advanced Placement (AP) exam.

Students are encouraged to satisfy this requirement as early as possible in order to be able to use the language for reference in linguistics courses. Students with native language competence in a language other than English may petition to have English count as satisfying the proficiency requirement.

GENERAL MAJOR (12 COURSES)

The general major in linguistics requires satisfaction of the undergraduate language requirement and successful completion of twelve upper-division courses:

6 required linguistics courses
LIGN 101
LIGN 110
LIGN 111
LIGN 120
LIGN 121
LIGN 130

5 linguistics electives

1 additional linguistics elective or upper-division course in another department pertaining to the study of language. Courses currently approved to satisfy this requirement include the electives for the study of language. Courses currently approved to satisfy this requirement include courses in anthropology, English, foreign language, history, philosophy, and other departments.

SPECIALIZED MAJORs

Every student with a specialized major must consult the faculty advisor in the Department of Linguistics to have approved an individual curricular plan to satisfy the major requirements for the option chosen. Each specialized major requires satisfaction of the undergraduate language requirement and successful completion of upper-division requirements as specified below. The specialization will be reflected in the wording of a degree, e.g., “B.A. in Linguistics with Specialization in Language and Society.”

Cognition and Language (12 courses)

6 required linguistics courses
LIGN 101
LIGN 110
LIGN 111
LIGN 120
LIGN 121
LIGN 130

4 linguistics electives chosen from
LIGN 145
LIGN 155
LIGN 165
LIGN 170
LIGN 171
LIGN 172
LIGN 176
LIGN 179

2 additional courses from linguistics or other departments subject to advisor approval.

Courses currently approved to satisfy this requirement include the following. Note: some of these courses may have prerequisites:

Linguistics
Any upper-division courses (except those used to fulfill requirements A and B).

Anthropology
ANBI 140: The Evolution of the Human Brain
courses may have prerequisites:

LIGN 174: Gender and Language in Society
LIGN 175: Sociolinguistics
LIGN 177: Multilingualism

3 linguistics electives. Courses particularly relevant to this specialization are:

LIGN 105: Law and Language
LIGN 174: Gender and Language in Society
LIGN 175: Sociolinguistics
LIGN 176: Language of Politics and Advertising
LIGN 177: Multilingualism

LANGUAGE STUDIES MAJOR

Students majoring in language studies must consult with the language studies faculty advisor to approve an individual curricular plan.

The language studies major is designed for students who wish to pursue the study of a particular language from a variety of perspectives. To this end, students will take courses in linguistics and literature, as well as electives in linguistics, literature, culture, and area studies. This major provides preparation for a variety of careers that make use of second language skills. Depending on the elective emphasis, these include international business/law, teaching, translation, interpreting, linguistics, and foreign service. Each language studies major will specialize in one language of concentration. In principle, this could be any language other than English. However, some languages may require that some course work be completed outside UCSD. Hence, it is recommended that language studies majors consider a year abroad. Students whose language of concentration is American Sign Language will need to consult the faculty advisor for individualized requirements; these students may also consider an exchange year at Gallaudet University.

REQUIREMENTS

Lower-division preparation:

- Two years of language instruction in the language of concentration, or equivalent proficiency
- Lower-division prerequisites for upper-division courses in the literature of the language of concentration

Upper-division requirements:

**NOTE:** At least two of the upper-division courses must be conducted in the language of concentration. Students are encouraged to increase their academic exposure to their language of concentration by taking one-unit seminars in the language and by participating in the EAP program.

A. 6 upper-division linguistics courses, as follows

- LIGN 101: Introduction to Linguistics
- 3 courses chosen from:

LIGN 110: Phonetics
LIGN 111: Phonology I
LIGN 120: Morphology
LIGN 121: Syntax I
LIGN 130: Semantics
LIGN 145:Pidgins and Creoles
LIGN 150: Historical Linguistics

“Structure of” language of concentration course (e.g., LIGN 143 Structure of Spanish). If no such course is available, the student must consult with the undergraduate advisor regarding a possible substitution.

One additional upper-division LIGN course.

B. 2 upper-division courses in the literature of the language of concentration

C. 4 additional upper-division courses that deal with general linguistics, the language of concentration (e.g., literature), or the corresponding culture/area studies (e.g., anthropology, economics, history, political science, sociology), subject to approval of the faculty advisor.

Approved courses for this requirement include the following. **NOTE:** some of these courses may have prerequisites:

**Linguistics:** Any upper-division courses (except those used to fulfill requirement A).

**Literature:** Any upper-division courses related to the language of concentration (except those used to fulfill requirement B).

**Area Studies:** Approved courses are listed by language of concentration; other languages of concentration are possible in principle, but probably require course work outside of UCSD.

**ASL**

COHI 124: Voice: Deaf People in America

**Chinese**

ANRG 170/ ANSC 137: Traditional Chinese Society
ANRG 173/ ANSC 136: Chinese Popular Religion
HIEA 120: Classical Chinese Philosophy and Culture

SOC 188D: Latin America: Society and Politics

HONORS PROGRAM
The department offers an honors program for outstanding students. Those students who have a 3.75 GPA in linguistics (3.25 overall) at the end of their junior year are eligible to participate. Students interested in participating in the honors program should consult with their department advisor. Admission to the program requires nomination by the advisor and approval of the department faculty. The honors program requires that two graduate linguistics courses be taken as part of the twelve required courses for the major, and further requires one quarter of LIGN 199H. During one of the two graduate courses, the student, in consultation with the instructor and a faculty advisor, will begin a substantial research project which will be continued during the quarter of 199H and will culminate in an honors paper. Responsibility for proposing possible projects and completing necessary paperwork rests with the student. Upon successful completion of the requirements the designation “with distinction,” “with high distinction,” or “with highest distinction” will appear on the student's diploma.

INDEPENDENT STUDY AND DIRECTED GROUP STUDY IN LINGUISTICS FOR MAJORS
Upon presentation of a written study proposal or project, and with the consent of the instructor and the advisor, linguistics majors with at least a 3.5 GPA in the major courses may request permission to undertake independent study in linguistics (LIGN 199). No more than one such course (to be taken Pass/Not Pass) may count toward the major.

THE MINOR PROGRAM
The Linguistics minor consists of LIGN 101, plus six additional courses in linguistics, at least four of which must be upper-division.
For all courses toward the linguistics minor, the student must receive letter grades of C– or better. Courses counted toward the minor may not be taken on a Pass/Not Pass basis, except LIGN 199. Only one quarter of LIGN 199 may be counted toward the minor.

The Language Studies minor consists of seven courses, at least five of which must be upper-division:

Literature: One upper-division literature course is required in the language of concentration. This will require proficiency as well as lower-division prerequisites. Therefore, the lower-division courses of the minor may consist of prerequisites for the upper-division literature requirement. American Sign Language students may substitute a non-literature upper-division elective with approval of the faculty advisor.

Linguistics: LIGN 101 is required. In addition students must take a “Structure of” language concentration course (e.g., LIGN 143 Structure of Spanish). If no such course is available, the student must consult with the undergraduate advisor regarding a possible substitution.

Other: Two additional courses that deal with general linguistics, the language of concentration (e.g., literature), or the corresponding culture, subject to approval of the faculty advisor are required.

THE PH.D. PROGRAM
The UCSD Ph.D. program in linguistics offers rigorous training in multiple areas of theoretical linguistics, including syntax, semantics, phonetics, phonology, and morphology. The department is particularly strong in the study of interface areas, including syntax, semantics, phonetics, phonology, and morphology. Research conducted in a variety of theoretical frameworks is integrated into the graduate curriculum. Students receive a firm foundation in both formal and cognitive functionalist approaches to syntax and semantics. In phonology, basic training includes segmental and autosegmental phonology, constraint-based phonology, syllable theory, metrical theory, and theories of the phonology-morphology interface. The first two years of graduate study are devoted primarily to gaining a strong background in these core theoretical areas.
This theoretical strength of the department is matched by strength in both language study and experimental science. The range of languages represented in faculty research encompasses American Sign Language (ASL), Caucasian, Chinese, Finno-Ugric, Germanic, Greek, Persian, Romance, Semitic, Slavic, and Uto-Aztecan. The departmental concern with the empirical facts of language is reflected in a field methods requirement for graduate students as well as in the graduate student language requirement (conversational ability in one language other than English and reading ability in one language other than English). The department has a tradition of working with native speakers of a wide variety of languages. The department’s language laboratory maintains a library of written and recorded materials permitting independent study of dozens of languages; it also includes computers for self-instruction in French, German, Italian, and Spanish. The Linguistics Language Program (LLP) provides basic foreign language instruction for the entire campus, and many linguistics graduate students are employed as TAs in the program. Aside from providing a source of funding, the LLP provides graduate students with valuable teaching experience.

The department houses laboratories devoted to experimental studies of language with emphasis on phonetics, event-related brain potentials (ERPs), computational linguistics, and signed languages. The focus of experimental research in the department is the mutual dependence between mechanisms of language processing and theories of phonology and syntax. Linguistics graduate students may supplement their theoretical studies with experimental research; in addition to departmental laboratories, graduate students have access to experimental laboratories concerned with language issues in other departments.

The department has a strong commitment to, and is an active and integral part of, the cognitive science and neuroscience communities at UCSD. Most linguistics faculty have joint appointments in the Department of Linguistics and the Cognitive Science Interdisciplinary Ph.D. Program, and participate in the Department of Cognitive Science graduate core course in language (Cognitive Science 210D) as well as in the all-campus Interdisciplinary Program seminar (Cognitive Science 200) on a regular basis. Graduate students in the Cognitive Science Department frequently participate in Linguistics graduate courses, and Linguistics graduate students regularly attend courses in the Cognitive Science Department on neuroscience, child language acquisition, aphasia, neural networks, and semantics and cognition. Linguistics graduate students are eligible to pursue a joint degree in Cognitive Science and Linguistics within the Interdisciplinary Program. Areas of secondary specialization that are especially well represented in the cognitive science community at UCSD and related institutes include child development, connectionist modelling, distributed cognition, language disorders, neuroscience, philosophy, and psycholinguistics.

The department has access to rich informational resources; in addition to the extensive linguistics holdings in the main library, the department maintains a collection of research reports, dissertations, and unpublished papers. Access to the libraries of other universities exists through interlibrary loan.

PREPARATION
Since linguistics is a highly technical and analytic field, linguistics students will find their undergraduate training in mathematics and the natural sciences especially valuable. Undergraduate work in certain of the social sciences and humanities, particularly psychology, anthropology, philosophy and literature, is also good preparation for linguistics. The ideal candidate for admission will have both experience with foreign languages and some knowledge of the fundamentals of contemporary linguistic theory. Students who, upon admission, are deficient either in their formal linguistics preparation or languages will be advised by the department on how to make up the deficiency. New graduate students will be admitted only in the fall of any academic year.

LANGUAGE REQUIREMENTS
A candidate for the Ph.D. degree must demonstrate:
(1) Conversational ability in one language other than English. (2) A reading knowledge of any one language other than his or her native language, subject to faculty approval.

REQUIRED COURSES
Candidates for the Ph.D. must pass certain linguistics graduate courses prior to taking the qualifying examination. All graduate students must take a common core of ten courses. These are:
• Three courses in Syntax and Semantics: 221A, 221B, 230
• Three courses in Phonology and Phonetics: 210, 211A, 211B
• One course in Field Methods: 240
• Two courses in Research Methods, selected from 241, 245, and 251 (note: although 241 is repeatable, only one instance may count toward this requirement)
• One course in Research Paper Writing: 293

All required courses (except 293) must be taken for a letter grade.

EVALUATIONS
A graduate student is formally evaluated by the entire faculty at particular stages during the first three years of graduate study. The first evaluation (at the end of the third quarter of graduate study) pertains chiefly to performance in courses. The second (or comprehensive) evaluation (at the end of the sixth quarter) determines the student’s fitness to continue in the Ph.D. Program. It takes into account performance in course work and ability to engage in original research in one area of linguistics as demonstrated in a research paper. The third evaluation (at the end of the ninth quarter) focuses primarily on a second research paper (which must be in a different area of linguistics from the first).

QUALIFYING EXAMINATION
Candidates for the Ph.D. degree must pass an oral qualifying examination which tests the student’s knowledge in the area of specialization. Prior to taking this examination, the student must pass the comprehensive evaluation, satisfy all language requirements, successfully complete all required courses, and demonstrate—through research papers—the ability to carry out independent, dissertation-level research. Students must take the qualifying examination by the end of the fourth year of graduate work.

COLLOQUIUM PRESENTATION
Sometime prior to the thesis defense, a student must present a paper orally at a professional gathering. The colloquium requirement is intended to enable a student to develop the skills necessary for organizing research results for oral presentation. The requirement is generally met by presenting a department colloquium or by presenting a paper at a professional meeting. In either case, a faculty member must certify the acceptability of the presentation.

DISSERTATION
The candidate for the Ph.D. will write a substantial dissertation incorporating the results of original and independent research carried out under the supervision of the doctoral committee. The candidate will be recommended for the doctor of philosophy degree after having made a successful oral defense of the dissertation before the doctoral committee in a public meeting and after having the final version of the dissertation accepted by Geisel Library.

APPRENTICE TEACHING
As part of their preparation for a future academic career, graduate students in linguistics at UCSD are given special opportunities to participate in teaching programs under the supervision of a professor. Depending on qualifications, students may conduct conversation or analysis classes in lower-division language courses (LLP and HLP), or may assist a professor in the teaching of an undergraduate linguistics course.

OTHER DEGREES
Candidates for the Ph.D., who have not previously earned a master’s degree, may be granted the M.A. in linguistics after: 1) satisfactorily completing twelve required courses; all but LIGN 293 must be taken for a letter grade; 2) passing the comprehensive evaluation at the end of the sixth quarter; and 3) demonstrating a reading knowledge of any language except English, subject to faculty approval.

Candidates for the Ph.D. may also be granted the C.Phil. upon completion of all degree requirements other than the dissertation.

DEPARTMENTAL PH.D. TIME LIMIT POLICIES
The time a student takes to complete the Ph.D. depends on a number of factors, including previous preparation and the amount of time spent in teaching or other job commitments. Several policies set an upper limit to the length of the program. All degree requirements other than the dissertation must be completed by the end of the fourth year of graduate work. Total instructional support (TAships, etc.) cannot exceed six years; total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.
Linguistics

Lower Division

3. Language as a Social and Cultural Phenomenon (4)
The role of language in thought, myth, ritual, advertising, politics, and the law. Language variation, change, and loss; multilingualism, pidginization and creolization; language planning, standardization, and prescriptivism; writing systems. PREREQUISITE: none.

4. Language as a Cognitive System (4)
Fundamental issues in language and cognition. Differences between animal communication, sign systems, and human language; origins and evolution of language; neural basis of language; language acquisition in children and adults. PREREQUISITE: none.

5. The Linguistics of Invented Languages (4)
Introduction to the study of language through the investigation of invented languages, whether conscious (Elvish, Klingon, Esperanto) or unconscious (twin/sibling languages). Students will participate in the invention of a language fragment. Topics discussed include language structure, history, culture, and writing systems. PREREQUISITE: none.

7. Sign Language and Its Culture (4)
Deaf history since the eighteenth century. The structure of American Sign Language and comparison with oral languages. ASL poetry and narrative and Deaf people's system of cultural knowledge. Basic questions concerning the nature of language and its relation to culture. PREREQUISITE: none.

8. Languages and Cultures in America (4)
Language in American culture and society. Standard and non-standard English in school, media, pop-culture, politics; bilingualism and education; cultural perception of language issues over time; languages and cultures in the 'melting pot,' including Native American, Hispanic, African-American, Deaf. PREREQUISITE: none.

17. Making and Breaking Codes (4)
A rigorous analysis of symbolic systems and their interpretations. Students will learn to encode and decode information using progressively more sophisticated methods; topics covered include ancient and modern phonetic writing systems, hieroglyphics, computer languages, and ciphers (secret codes). PREREQUISITE: none.

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undeclared colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

Undergraduate Seminar (1)
A seminar intended for exposing undergraduate students, especially freshman and sophomores, to exciting research programs and conducted by the faculty.

Upper Division

101. Introduction to the Study of Language (4)
Language is what makes us human, but how does it work? This course focuses on speech sounds and sound patterns, how words are formed, organized into sentences, and understood, how language changes, and how it is learned. PREREQUISITE: none.

105. Law and Language (4)
The interpretation of language in understanding the law: 1) the language of courtroom interaction (hearsay, jury instructions); 2) written legal language (contracts, ambiguity, legal fictions); 3) language-based issues in the law. (First Amendment, libel and slander). PREREQUISITE: none.

108. Languages of Africa (4)
Africa is home to an astonishing variety of languages. This course investigates the characteristics of the major language families as well as population movements and language contact, and how governments attempt to regulate language use. PREREQUISITE: none.

110. Phonology I (4)
How does one language sound different from another? This course analyzes how languages organize sounds into different patterns, how those sounds interact, and how they fit into larger units, such as syllables. Focus on a wide variety of languages and problem-solving. PREREQUISITE: LIGN 110.

119. First and Second Language Learning: From Childhood through Adolescence (4)
same as EDS 119 An examination of how human language learning ability develops and changes over the first two decades of life, including discussion of factors that may affect this ability. PREREQUISITE: upper-division standing or consent of instructor.

120. Morphology (4)
How do some languages express with one word complex meanings that English needs several words to express? Discovery of underlying principles of word formation through problem-solving and analysis of data from a wide variety of languages. PREREQUISITE: LIGN 101 or consent of instructor.

121. Syntax I (4)
What universal principles determine how words combine into phrases and sentences? Introduction to research methods and results. Emphasis on how argumentation in problem-solving can be used in the development of theories of language. PREREQUISITE: LIGN 101 or consent of instructor.

130. Semantics (4)
Introduction to the formal study of meaning. What is the meaning of a word? What is the meaning of a sentence? Which role does the context play in determining linguistic meaning? PREREQUISITE: LIGN 101 or consent of instructor.

140. The Structure of American Sign Language (4)
Examination of ASL phonetics, phonology, morphology, syntax, semantics. Including linguistic facial expressions and uses of physical space in verb agreement, aspectual morphology, and classifier constructions. Discussion of discourse, acquisition, psycholinguistics, and historical change. PREREQUISITE: LIGN 101; in its absence LISL 1CX or consent of instructor.

141. Language Structures (4)
Detailed investigation of the structure of one or more languages. May be repeated for credit as topics vary. PREREQUISITE: LIGN 101 or consent of instructor.

142. Language Typology (4)
The systematic ways languages differ. Cross-linguistics studies of specific topics (e.g., word order, agreement, case, switch reference, phonological systems, and rule types, etc.) in an effort to develop models of language variation. PREREQUISITE: LIGN 101 or consent of instructor.

143. The Structure of Spanish (4)
Surveys aspects of Spanish phonetics, phonology, morphology, and syntax. Topics include dialectal differences between Latin American and Peninsular Spanish (both from a historical and contemporary viewpoint), gender classes, verbal morphology, and clausal structure. PREREQUISITE: LIGN 101 or consent of instructor.

144. Discourse Analysis: American Sign Language and Performing Arts (4)
A discourse-centered examination of ASL verbal arts: rhythm, meter, rhyme, handsigns, non-manual signals, and spatial mapping; creation of scene and mood; properties of character, dialogue, narration, and voice; cultural tropes; poetic constructions in everyday genres; transcription, body memory and performance. PREREQUISITE: LISL 1C/1CX or consent of instructor.

146. Sociolinguistics in Deaf Communities (4)
An examination of sociolinguistic research on Deaf communities throughout the world, including: sociolinguistic contexts for phonological, lexical and syntactic variation, contact between languages, multilingualism, language politics and planning, second language learning, language attitudes, and discourse analysis of specific social contexts. Course will be conducted in ASL. PREREQUISITE: LISL 1C/1CX or consent of instructor.

150. Historical Linguistics (4)
Language is constantly changing. This course investigates the nature of language change, how to determine a language's history, its relationship to other languages, and the search for common ancestors or 'proto-language.' PREREQUISITE: LIGN 101 or consent of instructor.

160. Pragmatics (4)
An introduction to the context-dependent aspects of language meaning. Topics include giver versus new information, Gricean maxim of relevance, presupposition, implicature, reference and cognitive status, discourse coherence and structure, and speech acts. PREREQUISITE: LIGN 101 or consent of instructor.

165. Computational Linguistics (4)
An introduction to the fundamental concepts of computational linguistics, in which we study natural language syntax and semantics from an interpretation perspective, describe methods for programming computer systems to perform such interpretation, and survey applications of computational linguistics technology. PREREQUISITE: none.

170. Psycholinguistics (4)
The study of how humans learn, represent, comprehend, and produce language. Topics include visual and auditory recognition of words, sentence comprehension, reading, sentence production, language acquisition, neural representation of language, bilingualism, and language disorders. PREREQUISITE: LIGN 101, or upper-division standing, or consent of instructor.

171. Child Language Acquisition (4)
A central cognitive, developmental mystery is how children learn their first language. Overview of research in the learning of sound systems, word forms and word combinations, and word formations. Exploration of the relation between cognitive and language development. PREREQUISITE: LIGN 101, or upper-division standing, or consent of instructor.

172. Language and the Brain (4)
The mind/body problem has remained a mystery until recently, when imaging technology and neurophysiology have made it clear that the brain is the organization of multiple systems. This class will explore the relationship between language and the brain, and the role of the brain in language development.

173. Heritage Languages (4)
A heritage language (HL) is a language that an individual has learned as a child. The language may be maintained by the original community into which the language was acquired, or it may be maintained by a successor generation. The language may be used by a fraction of the original community, or it may be used by a new community as a second language. This course will focus on the sociolinguistic and politico-cultural dimensions of HLs, and the role of HLs in the socialization of children. Topics include the status of HLs in society, the relationship between HLs and the dominant language, and the role of HLs in the education of children. PREREQUISITE: none.

174. Gender and Language in Society (4)
Same as SOC/1 181BA This course examines how language contributes to the social construction of gender identities, and how gender impacts language use and ideologies. Topics include the ways language and gender interact across the life span (especially childhood and adolescence); within ethnolinguistic minority communities; and across cultures. PREREQUISITE: LIGN 101, or upper-division standing, or consent of instructor.

175. Sociolinguistics (4)
The study of language in its social context, with emphasis on the different types of linguistic variation and
the principles underlying them. Dialects; registers; sex-based linguistic differences; factors influencing linguistic choice; formal models of variation; variation and change. PREREQUISITE: LIGN 101, or upper-division standing, or consent of instructor.

176. Language of Politics and Advertising (4)
How can we explain the difference between what is literally said versus what is actually conveyed in the language of law, politics, and advertising? How people's ordinary command of language and their reasoning skills are used to manipulate them. PREREQUISITE: none.

177. Multilingualism (4)
Official and minority languages, pidgins and Creoles, language planning, bilingual education and literacy, code switching, and language attrition. PREREQUISITE: LIGN 101, or upper-division standing, or consent of instructor.

179. Second Language Acquisition Research (4)
This course will investigate topics in second language acquisition including the critical period, the processing and neural representation of language in bilinguals, theories of second language acquisition and creolization, exceptional language learners, and parallels with first language acquisition. PREREQUISITE: LIGN 101, or upper-division standing, or consent of instructor.

192. Senior Seminar in Linguistics (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in linguistics (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter, and Seminar seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITES: department stamp and/or consent of instructor.

195. Apprentice Teaching (0–4)
Students lead a class section of a lower-division linguistics course. They also attend a weekly meeting on teaching methods. (This course does not count toward minor or major.) May be repeated for credit, up to a maximum of four units. (P/NP grades only.) PREREQUISITES: consent of instructor, advanced standing.

197. Linguistics Internship (2 or 4)
The student will undertake a program of practical research in a supervised work environment. Topics to be researched may vary, but in each case the course will provide skills for carrying out these studies. PREREQUISITE: consent of instructor.

199. Independent Study in Linguistics (2 or 4)
The student undertakes a program of research or advanced reading in linguistics under the supervision of a faculty member of the Department of Linguistics. (P/NP grades only.) PREREQUISITE: consent of instructor. May be repeated for credit.

199H. Honors Independent Study in Linguistics (4)
The student undertakes a program of research and advanced reading in linguistics under the supervision of a faculty member in the Department of Linguistics. (P/NP grades only.) PREREQUISITE: admission to Honors Program.

GRADUATE

200. Research Forum (2)
A forum for discussion of current issues. (S/U grades only.) May be repeated for credit.

210. Phonetics (4)
This is an introduction to articulatory, acoustic, and auditory phonetics. Major phonetic theories in these areas, and the relationship between phonetics and phonology are discussed. The course also covers experimental design and methodology and provides hands-on experience with laboratory equipment. PREREQUISITE: none.

211A. Introductory Phonology (4)
Introduction to the study of the sound patterns of language. Rules and representations, lexical phonology, segmental processes, autosegmental phonology. PREREQUISITE: LIGN 110 or consent of instructor.

211B. Nonlinear Phonology (4)
This course will introduce topics in prosodic phonology and morphology, including syllable structure, stress, and resegmentation. These topics will be investigated within constraint-based phonology. PREREQUISITE: LIGN 211A or equivalent.

214. Topics in Phonetics (4)
This course examines recent developments in controversial areas of phonetics. Topics will vary, and will address issues in speech production (articulation; acoustics), speech perception, phonetic theory, and the relationship between phonetics and phonology. PREREQUISITE: LIGN 210, 211A, 211B, or consent of instructor.

215. Topics in Phonology (4)
Descriptive and theoretical problems in phonology. Discussion of work in progress and/or theoretical consequences of alternative analyses. May be repeated for credit when topics vary.

221A. Introduction to Grammatical Theory (4)
This course introduces basic syntactic phenomena and argumentation via the Government and Binding Theory of the 1980s. The phenomena, including NP-Movement, Binding, and Wh-Movement, have been important in the development of Generative Grammar and remain central to current generative frameworks.

221B. Introduction to Grammatical Theory (4)
This course continues to develop Principles and Parameters Theory, as introduced in 221A. It concentrates on A-bar dependencies and the Binding Theory. Focus will be on testing theoretical proposals and understanding the role of the theoretical alternatives, underlying assumptions, and the empirical results upon which these theoretical proposals are based.

223. Current Issues in Principles and Parameters Theory (4)
This course examines recent developments in Principles and Parameters Theory. Topics include fundamental work that led to the Minimalist Program and more recent developments in this tradition. May be repeated for credit when topics vary.

224. Lexicalist Theories of Grammar (4)
Introduction to conceptual issues and representational apparatus of lexicalist theories of grammar. Focus on empirical argumentation from numerous languages for lexicalist assumptions. Particular attention to lexical semantics, morphology, and syntax.

225. Topics in Syntax (4)
Descriptive and theoretical problems in syntactic analysis. Theoretical consequences of alternative analyses. May be repeated for credit when topics vary.

230. Semantics (4)
Theories of semantic structure. The relation of meaning to grammar and how it is to be accommodated in a general model of linguistic organization. The application of formal semantics to the description of natural language.

235. Topics in Semantics (4)
Advanced material in special areas of the study of meaning and its relation to formal aspects of human language. As subject matter varies, the course may be repeated for credit.

236. Language Universals and Linguistic Typology (4)
Introduction to the typological study of language, contrasting alternative approaches to research in language universals. Main topics covered: cross-linguistic approach to language study (sampling: universal generalizations; hierarchies); explanations for language universals; the role of cross-linguistic analyses in linguistic theory.

238. Topics in Cognitive Linguistics (0–4)
(Same as CSE 238) Basic concepts, empirical findings, and recent developments in cognitive and functional linguistics. Language viewed dynamically in relation to conceptualization, discourse, meaning construction, and cognitive processing. As topics vary, may be repeated for credit.

240. Field Methods (4)
Techniques for discovering the structure of a language through elicitation of data from native speaker consul-tants. Phonic, morphemic, and syntactic analysis. PREREQUISITE: LIGN 110 or equivalent.

241. Fieldwork (4)
Fieldwork continuing the research of the previous quarter; student-directed elicitations on topics of interest. PREREQUISITE: LIGN 240.

242. Discourse Interpretation (4)
A graduate course examining interpretation from a computational perspective. Theoretically principled algorithms for resolving pronominal and other types of reference. The interpretation of ellipsis. Methods for recovering the structure of a discourse and determining its coherence.

245. Computational Corpus Linguistics (4)
Introduction to computational corpus tools for performing empirically-grounded linguistic investigations. Annotated and unannotated corpora; annotation schemes. Searching using regular expressions. UNIX tools. The PERL programming language. Publically-available language processing systems.

247. Topics in Pragmatics (4)
Advance material covering particular topics relating to the theoretical pragmatics of particular natural languages. May be repeated for credit when topics vary. PREREQUISITE: consent of instructor.

248. Morphology (4)
Theories of word structure are examined and confronted with data from a variety of languages. Topics may include: the distinction between derivational and inflectional morphology, the morphology/phonology interface, and the morphology/syntax interface. May be repeated for credit as topics vary.

251. Probabilistic Methods in Linguistics (4)
Probabilistic approaches to language knowledge, acquisition, and use. Quantitative analysis of linguistic data. Quantitative models in linguistic theory. Covers basic probability theory and tools of statistical analysis for language, including linear regression, ANOVA, generalized linear models (e.g., logistic regression), data visualization. Familiarity with probability theory highly encouraged.

256. Statistical Natural Language Processing (4)
(Same as CSE 256) Introduction to modern statistical approaches to natural language processing: part-of-speech tagging, word-sense disambiguation and parsing, using Markov models, hidden Markov models, and probabilistic context-free grammars. Recommended PREREQUISITE: one of LIGN 165, LIGN 245, CSE 151, CSE 250A, CSE 254. PREREQUISITE: graduate standing or consent of instructor.

265. Topics in Computational Linguistics (4)
Advanced topics in computational linguistics of current interest. Subjects will vary, and may include computational morphology, syntax, semantics, discourse, psycholinguistics, or language over language change. May be repeated for credit. PREREQUISITE: none.

270. Psycholinguistics (4)
Issues of natural language processing in relation to one or more of the following levels of linguistic analysis: phonetics, phonology, the lexicon, morphology, syntax, semantics, information structure, or discourse. May be repeated for credit when topics vary.

272. Topics in Neurolinguistics (4)
Issues of language representation and neural instantiation that arise in studies of neural imaging, language disorders, multilingualism and second language acquisition, animal communication, and the origins and evolution of language. May be repeated for credit when topics vary.

274. Computational Psycholinguistics (4)
In graduate course examining psycholinguistics—the study of how humans learn, represent, comprehend, and produce language—from a computational perspective. Research article readings covering word-level, sentence-level, and discourse-level processing. Prior background in psycholinguistics and/or computational linguistics highly recommended.

278. Research in Second Language Acquisition (4)
This course will investigate topics in second language acquisition including the critical period, the processing and
neural representation of language in bilinguals, theories of second language acquisition and creolization, exceptional language learners, and parallels with first language acquisition.

279. Topics in Language Acquisition (4) Language acquisition is central to theories about human development, cognition, brain organization, and language origins and change. Topics include the role of input and critical periods on language outcome and processing, neural organization, and sign language creation. 

PREREQUISITE: none.

280. Sign Language Research (4) A overview of sign language research in terms of how it informs language theory. Topics include the structure of ASL, acquisition, psycholinguistic and neurolinguistic processing of sign language in comparison to spoken language, and language evolution. 

PREREQUISITE: Graduate standing of consent of instructor.

293. Research Practicum (0-4) Gathering and interpreting data, formulating research questions and hypotheses, making the predictions of hypotheses explicit, finding relevant evidence, and organizing research results into suitable form for presentation in abstracts, talks, and discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. 

PREREQUISITE: C- or better, or equivalent.

296. Directed Research (1-8) Individual research. May be repeated for credit.

299. Doctoral Research (1-12) Directed research on dissertation topic for students who have been admitted to candidacy for the Ph.D. degree. May be repeated for credit. \( \text{PREREQUISITE: advancement to candidacy.} \)

501. Culture, Art, and Technology Apprentice Teaching (4) Consideration and development of pedagogical methods appropriate to undergraduate teaching in the interdisciplinary sixth college core sequence, Culture, Art, and Technology under supervision of Core Program faculty, with assistance of the Core Program director, associate director for the Writing Program, and the associate director of the Thematic Program. 

502. Apprentice Teaching of Linguistics (1-4) The course, designed for graduate students serving as teaching assistants in the department’s linguistics courses, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. The student must be serving as a teaching assistant in a LING course to receive credit.

503. Apprentice Teaching of American Sign Language (1-4) The course, designed for graduate students serving as teaching assistants in American Sign Language, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

504. Apprentice Teaching of French (1-4) The course, designed for graduate students serving as teaching assistants in French, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

505. Apprentice Teaching of German (1-4) The course, designed for graduate students serving as teaching assistants in German, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

506. Apprentice Teaching of Italian (1-4) The course, designed for graduate students serving as teaching assistants in Italian, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

Linguistics courses are self-instructional: intended for reading the language for scholarly purposes. They are particularly aimed at graduate students preparing to fulfill French or German reading requirements. Linguistics 19 courses, offered in more than sixty languages, are designed for self-instructional study at an introductory level. Students may enroll for two or four units of credit. For some languages, depending on the availability of suitable materials, the course may be repeated for credit.

AMERICAN SIGN LANGUAGE

Linguistics/American Sign Language (LISL) 1A. American Sign Language Conversation (2.5) Small tutorial sessions with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1AX. PREREQUISITE: no prior study of ASL.

Linguistics/American Sign Language (LISL) 1AX. Analysis of American Sign Language (2.5) Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural information. The course is taught entirely in ASL. Must be taken with LISL 1A. PREREQUISITE: no prior study of ASL.

Linguistics/American Sign Language (LISL) 1BX. American Sign Language Conversation (2.5) Small tutorial sessions with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1AX. PREREQUISITE: LISL 1A with a grade of C– or better, or equivalent and LISL 1AX with a grade of D or better, or equivalent.

Linguistics/American Sign Language (LISL) 1BX. Analysis of American Sign Language (2.5) Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural information. The course is taught entirely in ASL. Must be taken with LISL 1AX. PREREQUISITE: LISL 1A with a grade of C– or better, or equivalent and LISL 1AX with a grade of D or better, or equivalent.

Linguistics/American Sign Language (LISL) 1CX. American Sign Language Conversation (2.5) Small tutorial sessions with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1CX. PREREQUISITE: LISL 1A with a grade of C– or better, or equivalent and LISL 1AX with a grade of D or better, or equivalent.

Linguistics/American Sign Language (LISL) 1CX. Analysis of American Sign Language (2.5) Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural information. The course is taught entirely in ASL. Must be taken with LISL 1AX. PREREQUISITE: LISL 1A with a grade of C– or better, or equivalent and LISL 1AX with a grade of D or better, or equivalent.

Linguistics/American Sign Language (LISL) 1DX. American Sign Language Conversation (2.5) Small tutorial sessions with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1DX. PREREQUISITE: LISL 1A with a grade of C– or better, or equivalent and LISL 1CX with a grade of D or better, or equivalent.

Linguistics/American Sign Language (LISL) 1DX. Analysis of American Sign Language (2.5) Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural information. The course is taught entirely in ASL. Must be taken with LISL 1AX. PREREQUISITE: LISL 1A with a grade of C– or better, or equivalent and LISL 1AX with a grade of D or better, or equivalent.

Linguistics/American Sign Language (LISL) 1DX. Practice of American Sign Language (2.5) Practice of the grammatical functions indispensable for comprehensible communication in the language. The course is taught entirely in American Sign Language. Must
be taken in conjunction with LISL 1D. Successful comple-
tion of LSL 1D and LSL 1DX satisfies the requirement for 
language proficiency in Eleanor Roosevelt and Revelle 
College courses. PREREQUISITES: LSL 1C with a grade of C– 
or better, or equivalent and LSL 1CX with a grade of D or 
or better, or equivalent.

Linguistics/American Sign Language (LISL) 1E. 
Intermediate American Sign Language 
Conversation (4)
Course aims to improve language skills through discussion 
of topics relevant to the Deaf community. Central topics 
will include education and American Sign Language (ASL) 
literature. Conducted entirely in American Sign Language. 
PREREQUISITES: LSL 1D and LSL 1DX with a grade of C– 
or better, or equivalent.

Linguistics/American Sign Language (LISL) 10. 
French Conversation for ASL Signers (4)
Small tutorial meetings with a signer of French Sign 
Language (Langue des signes francaise), the historical 
ancestors and a close relative of American Sign Language. 
PREREQUISITES: LSL 1C/1CX. Not offered in 2009–10.

Linguistics/American Sign Language (LISL) 5A, 
5B, 5C. Fundamentals of American Sign Language (5)
This course introduces on those language skills essential 
for communication: signing, comprehension, grammar 
analysis, and deaf culture. UCSD students: LISL 5A is equiva-
 lent to LSL 1A/1AX, LSL 5B to LISL 1B/1BX, and LISL 5C to 
LISL 1CX. Enrollment is limited. PREREQUISITES: none 
for SA; for SB two or more years of ASL in high school or 
the first semester of college-level ASL. (Offered in Summer 
Session only.) Not offered summer 2009.

ARABIC
See also: Linguistics/Heritage Language Program

Linguistics/Arabic (LISL) 1A.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target 
language. Emphasis on listening comprehension, speaking, 
vocabulary building, reading, and culture. Must be taken 
in conjunction with LISL 1AX. PREREQUISITE: no prior study of 
Arabic.

Linguistics/Arabic (LISL) 1AX.
Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical struc-
tures needed for oral and written communication and for 
reading. The course is taught entirely in Arabic. Must 
be taken in conjunction with LISL 1A. PREREQUISITE: no prior 
study of Arabic.

Linguistics/Arabic (LISL) 1B.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target 
language. Emphasis on listening comprehension, speaking, 
vocabulary building, reading, and culture. Must be taken 
in conjunction with LISL 1BX. PREREQUISITE: LISL 1A with a 
grade of C– or better, or equivalent and LISL 1AX with a 
grade of D or better, or equivalent.

Linguistics/Arabic (LISL) 1BX.
Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical struc-
tures needed for oral and written communication and for 
reading. This course is taught entirely in Arabic. Must 
be taken in conjunction with LISL 1B. PREREQUISITE: LISL 1A 
with a grade of C– or better, or equivalent and LISL 1AX with a 
grade of D or better, or equivalent.

Linguistics/Arabic (LISL) 1C.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target 
language. Emphasis on listening comprehension, speaking, 
vocabulary building, reading, and culture. Must be taken 
in conjunction with LISL 1CX. PREREQUISITE: LISL 1B with a 
grade of C– or better, or equivalent and LISL 1AX with a 
grade of D or better, or equivalent.

Linguistics/Arabic (LISL) 1CX.
Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical struc-
tures needed for oral and written communication and for 
reading. This course is taught entirely in Arabic. Must be 
taken in conjunction with LISL 1C. PREREQUISITES: LISL 1B 
with a grade of C– or better, or equivalent and LISL 1AX with a 
grade of D or better, or equivalent.

Linguistics/Arabic (LISL) 1D.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target 
language. Emphasis on listening comprehension, speaking, 
vocabulary building, reading, and culture. Must be taken 
in conjunction with LISL 1DX. Successful completion of 
LISL 1D and LISL 1DX satisfies the requirement for language 
proficiency in Revelle and Eleanor Roosevelt Colleges. 
PREREQUISITES: LISL 1C with a grade of C– or better, or 
equivalent and LISL 1CX with a grade of D or better, or equivalent.

Linguistics/Arabic (LISL) 1DX.
Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical struc-
tures needed for oral and written communication and for 
reading. This course is taught entirely in Arabic. Must 
be taken in conjunction with LISL 1D. Successful 
completion of LISL 1D and LISL 1DX satisfies the requirement 
for language proficiency in Revelle and Eleanor Roosevelt Colleges. 
PREREQUISITES: LISL 1C with a grade of C– or better, or 
equivalent and LISL 1CX with a grade of D or better, or equivalent.

Linguistics/Arabic (LISL) 1E.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target 
language. Emphasis on listening comprehension, speaking, 
vocabulary building, reading, and culture. Must be taken 
in conjunction with LISL 1EX. PREREQUISITES: LISL 1B with a 
grade of C– or better, or equivalent and LISL 1AX with a 
grade of D or better, or equivalent.

Linguistics/Arabic (LISL) 1EX.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target 
language. Emphasis on listening comprehension, speaking, 
vocabulary building, reading, and culture. Must be taken 
in conjunction with LISL 1EX. PREREQUISITE: LISL 1B with a 
grade of C– or better, or equivalent and LISL 1AX with a 
grade of D or better, or equivalent.

Linguistics/Arabic (LISL) 1F.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target 
language. Emphasis on listening comprehension, speaking, 
vocabulary building, reading, and culture. Must be taken 
in conjunction with LISL 1FX. PREREQUISITE: LISL 1B with a 
grade of C– or better, or equivalent and LISL 1AX with a 
grade of D or better, or equivalent.

Linguistics/Arabic (LISL) 1FX.
Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical struc-
tures needed for oral and written communication and for 
reading. The course is taught entirely in Arabic. Must 
be taken in conjunction with LISL 1F. PREREQUISITE: LISL 1B 
with a grade of C– or better, or equivalent and LISL 1AX with a 
grade of D or better, or equivalent.

Linguistics/Arabic (LISL) 1Y.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target 
language. Emphasis on listening comprehension, speaking, 
vocabulary building, reading, and culture. Must be taken 
in conjunction with LISL 1YX. PREREQUISITE: LISL 1B with a 
grade of C– or better, or equivalent and LISL 1AX with a 
grade of D or better, or equivalent.

Linguistics/Arabic (LISL) 1YX.
Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical struc-
tures needed for oral and written communication and for 
reading. The course is taught entirely in Arabic. Must 
be taken in conjunction with LISL 1Y. PREREQUISITE: LISL 1B 
with a grade of C– or better, or equivalent and LISL 1AX with a 
grade of D or better, or equivalent.

Linguistics/French (LIFR) 1A.
French Conversation (2.5)
Small conversation sections taught entirely in the target 
language. Emphasis on listening comprehension, speaking, 
vocabulary building, reading, and culture. Must be taken 
in conjunction with LIFR 1AX. PREREQUISITES: LIFR 1A with a 
grade of C– or better, or equivalent and LIFR 1AX with a 
grade of D or better, or equivalent.

Linguistics/French (LIFR) 1AX.
Analysis of French (2.5)
Presentation and practice of the basic grammatical struc-
tures needed for oral and written communication and for 
reading. The course is taught entirely in French. Must 
be taken in conjunction with LIFR 1A. PREREQUISITE: no prior study of French.

Linguistics/French (LIFR) 1B.
French Conversation (2.5)
Small conversation sections taught entirely in the target 
language. Emphasis on listening comprehension, speaking, 
vocabulary building, reading, and culture. Must be taken 
in conjunction with LIFR 1BX. PREREQUISITES: LIFR 1A with a 
grade of C– or better, or equivalent and LIFR 1AX with a 
grade of D or better, or equivalent.

Linguistics/French (LIFR) 1CX.
Analysis of French (2.5)
Presentation and practice of the basic grammatical struc-
tures needed for oral and written communication and for 
reading. The course is taught entirely in French. Must 
be taken in conjunction with LIFR 1C. PREREQUISITE: LIFR 1B 
with a grade of C– or better, or equivalent and LIFR 1AX with a 
grade of D or better, or equivalent.

Linguistics/French (LIFR) 1D.
French Conversation (2.5)
Small conversation sections taught entirely in the target 
language. Emphasis on listening comprehension, speaking, 
vocabulary building, reading, and culture. Must be taken 
in conjunction with LIFR 1DX. Successful completion of 
LIFR 1D and LIFR 1DX satisfies the requirement for language 
proficiency in Eleanor Roosevelt and Revelle Colleges. 
PREREQUISITE: LIFR 1C with a grade of C– or better, or equivalent and LIFR 1CX with a 
grade of D or better, or equivalent.

Linguistics/French (LIFR) 1DX.
Analysis of French (2.5)
Presentation and practice of the basic grammatical functions indispensable for 
comprehensible communication in the language. The 
course is taught entirely in French. Must be taken in 
conjunction with LIFR 1D. Successful completion of LIFR 
1D and LIFR 1DX satisfies the requirement for language 
proficiency in Eleanor Roosevelt and Revelle Colleges. 
PREREQUISITE: LIFR 1C with a grade of C– or better, or equivalent and LIFR 1CX with a 
grade of D or better, or equivalent.

LINGUISTICS
Linguistics/French (LIFR) 11.
Elementary French Reading (2-4)
A self-instructional program designed to prepare graduate students to meet reading requirements in French. Must take a one-week introduction to French orthography/sound correspondence, students work with a self-instructional textbook. Mid-term and final examinations. (F,W,S)

Linguistics/French (LIFR) 5A, 5B, 5C, 5D, Fundamentals of French (5)
This course concentrates on those language skills essential for communication: listening comprehension, conversa-
tion, reading, writing, and grammar analysis. UCSD stu-
dents: LIFR 5A is equivalent to LIFR 1A/1AX, LIFR 5B to LIFR 1B/1BX, LIFR 5C to LIFR 1C/1CX, and LIFR 5D to LIFR 1D/1DX. Enrollment is limited. PREREQUISITE: None for 5A; for 5B, two or more years of French in high school or the first semester of college-level French. (Offered in Summer Session only.)

GERMAN
Linguistics/German (LIGM) 1A.
German Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIGM 1AX. PREREQUISITE: no prior study of German.

Linguistics/German (LIGM) 1AX.
Analysis of German (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in German. Must be taken with LIGM 1A. PREREQUISITE: no prior study of German.

Linguistics/German (LIGM) 1B.
German Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIGM 1BX. PREREQUISITE: LIGM 1A with a grade of C– or better, or equivalent and LIGM 1AX with a grade of D or better, or equivalent.

Linguistics/German (LIGM) 1BX.
Analysis of German (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in German. Must be taken with LIGM 1B. PREREQUISITE: LIGM 1A with a grade of C– or better, or equivalent and LIGM 1AX with a grade of D or better, or equivalent.

Linguistics/German (LIGM) 1C.
German Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIGM 1CX. PREREQUISITE: LIGM 1B with a grade of C– or better, or equivalent and LIGM 1BX with a grade of D or better, or equivalent.

Linguistics/German (LIGM) 1CX.
Analysis of German (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in German. Must be taken with LIGM 1C. PREREQUISITE: LIGM 1B with a grade of C– or better, or equivalent and LIGM 1BX with a grade of D or better, or equivalent.

Linguistics/German (LIGM) 1D.
German Conversation (2.5)
Small conversation sections taught entirely in German. Emphasis on speaking, reading, writing, and culture. Practice of the language functions needed for successful communication. Must be taken in conjunction with LIGM 1DX. Successful completion of LIGM 1D and LIGM 1DX satisfies the requirements for language proficiency in Eleanor Roosevelt and Revelle Colleges. PREREQUISITE: LIGM 1C with a grade of C– or better, or equivalent and LIGM 1CX with a grade of D or better, or equivalent.

Linguistics/German (LIGM) 1DX.
Analysis of German (2.5)
Practice of the grammatical functions indispensable for comprehensible communication in the language. The
course is taught entirely in German. Must be taken in conjunction with LIGM 1D. Successful completion of LIGM 1D and LIGM 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges. PREREQUISITE: LIGM 1C with a grade of C– or better, or equivalent and LIGM 1CX with a grade of D or better, or equivalent.

Linguistics/German (LIGM) 11.
Elementary German Reading (2-4)
A self-instructional program designed to prepare graduate students to meet reading requirements in German. After a one-week introduction to German orthography/sound correspondences, students work with a self-instructional textbook. Mid-term and final examinations. (F,W,S)

Linguistics/German (LIGM) 5A, 5B, 5C, 5D, Fundamentals of German (5)
This course concentrates on those language skills essential for communication: listening comprehension, reading, writing, and grammar analysis. UCSD students: LIGM 5A is equivalent to LIGM 1A/1AX, LIGM 5B to LIGM 1B/1BX, and LIGM 5C to LIGM 1C/1CX. Enrollment is limited. PREREQUISITE: none for 5A; for 5B, two or more years of German in high school or the first semester of college-level German. (Offered in Summer Session only.)

HERITAGE LANGUAGE PROGRAM
“Heritage” or “incomplete” language acquisition refers to the situation of individuals who are exposed to a language used in their environment during child-
hood that they may learn to understand or even speak to some degree, but never fully acquire. The idea behind the department’s innovative Heritage Language Program is that such individuals have a set of skills, competencies, and needs that are distinct from those of both native speakers learning to read and write the language for the first time, and also non-native learners who may study it as a foreign language during adulthood. These individuals therefore require a different type of language instruction, one that builds on and enhances the linguistic skills they already possess, and amplifies their cultural competence and literacy. The Heritage Language Program allows students to work towards developing higher levels of proficiency in order to pursue personal and professional goals.

Linguistics/Filipino for Filipino Speakers (LIHL) 112. (4)
For students who already comprehend informal spoken Filipino but wish to improve their communicative and sociocultural competence and their analytic understand-
ing. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Filipino. Some speaking ability in Filipino recommended. PREREQUISITE: upper-division standing or consent of instructor.

Linguistics/Filipino for Filipino Speakers (LIHL) 132. (4)
Instruction stresses language functions required for ad-
vanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabu-
lar and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Armenian. PREREQUISITE: upper-division standing or consent of instructor.

Linguistics/Filipino for Filipino Speakers (LIHL) 133. (4)
Instruction stresses language functions required for ad-
vanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabu-
lar and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Armenian. PREREQUISITE: upper-division standing or consent of instructor.

Linguistics/Arabic for Arabic Speakers (LIHL) 116. (4)
For students who already comprehend informal spoken Arabic but wish to improve their communicative and sociocultural competence and their analytic understand-
ing. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Arabic. Some speaking ability in Arabic recommended. PREREQUISITE: upper-division standing or consent of instructor.

Linguistics/Arabic for Arabic Speakers (LIHL) 136. (4)
Instruction stresses language functions required for ad-
vanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabu-
lar and texts; dialect differences and formal language styles (registers). Advanced structural analysis and
Linguistics/Persian for Persian Speakers (LIHL) 117. (4)
For students who already comprehend informal spoken Persian but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Persian. Some speaking ability in Persian recommended. Prerequisite: upper-division standing or consent of instructor.

Linguistics/Advanced Persian for Persian Speakers (LIHL) 137. (4)
Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Persian. Prerequisite: upper-division standing or consent of instructor.

Linguistics/Cantonese for Cantonese Speakers (LIHL) 118. (4)
For students who already comprehend informal spoken Cantonese but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Cantonese. Some speaking ability in Cantonese recommended. Prerequisite: upper-division standing or consent of instructor. Not offered in 2009–10.

Linguistics/Advanced Cantonese for Cantonese Speakers (LIHL) 138. (4)
Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Cantonese. Prerequisite: upper-division standing or consent of instructor. Not offered in 2009–10.

Linguistics/Hindi for Hindi Speakers (LIHL) 119. (4)
For students who already comprehend informal spoken Hindi but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Hindi. Some speaking ability in Hindi recommended. Prerequisite: upper-division standing or consent of instructor. Not offered in 2009–10.

Linguistics/Advanced Hindi for Hindi Speakers (LIHL) 139. (4)
Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Hindi. Prerequisite: upper-division standing or consent of instructor. Not offered in 2009–10.

HINDI

Linguistics/Hindi (LIHL) 1A. Hindi Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHL 1AX. Prerequisite: no prior study of Hindi. Not offered in 2009–10.

Linguistics/Hindi (LIHL) 1AX. Analysis of Hindi (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Hindi. Must be taken in conjunction with LIHL 1A. Prerequisite: no prior study of Hindi. Not offered in 2009–10.

Linguistics/Hindi (LIHL) 1B. Hindi Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHL 1B. Prerequisite: no prior study of Hindi. Not offered in 2009–10.

Linguistics/Hindi (LIHL) 1C. Hindi Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHL 1CX. Prerequisite: LIHL 1B with a grade of C– or better, or equivalent and LIHL 1AX with a grade of D or better, or equivalent. Not offered in 2009–10.

Linguistics/Hindi (LIHL) 1CX. Analysis of Hindi (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Hindi. Must be taken in conjunction with LIHL 1B. Prerequisite: LIHL 1A with a grade of C– or better, or equivalent and LIHL 1AX with a grade of D or better, or equivalent. Not offered in 2009–10.

Linguistics/Hindi (LIHL) 1DX. Analysis of Hindi (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Hindi. Must be taken in conjunction with LIHL 1D. Prerequisite: LIHL 1C with a grade of C– or better, or equivalent and LIHL 1CX with a grade of D or better, or equivalent. Not offered in 2009–10.

Linguistics/Hindi (LIHL) 1DX. Analysis of Hindi (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Hindi. Must be taken in conjunction with LIHL 1DX. Prerequisite: LIHL 1C with a grade of C– or better, or equivalent and LIHL 1CX with a grade of D or better, or equivalent. Not offered in 2009–10.
language proficiency in Revelle and Eleanor Roosevelt Colleges. **PREREQUISITES:** LIP 1C with a grade of C– or better, or equivalent and LIP 1CX with a grade of D or better, or equivalent.

**Linguistics/Portuguese (LIPO) 1DX. Analysis of Portuguese (2.5)**

Practice of the grammatical functions indispensable for comprehensible communication in the language. The course is taught entirely in Portuguese. Must be taken in conjunction with LIPO 1D. Successful completion of LIPO 1D and LIPO 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges. **PREREQUISITES:** LIPO 1C with a grade of C– or better, or equivalent and LIPO 1CX with a grade of D or better, or equivalent.

A major in literature opens many career possibilities. Education is a primary option, but specializations in literature (English, Spanish, etc.) and writing also serve as excellent preparation for graduate and professional programs. A degree in literature provides a strong background for the LSAT and law school. Medical schools seek out students who are prepared not only in the sciences, but also in the humanities and writing. The business world seeks college-trained English majors, and international corporations actively recruit students with a specialty in French, German, Italian, Russian, or Spanish. Literature majors find careers in advertising, book editing and publishing, journalism, communications, mass media, and other professions where writers and editors are in demand. The knowledge of a second language and culture provides literature majors with a decided career advantage.

**SECONDARY SCHOOL ENGLISH TEACHING**

The literature department offers an excellent preparation for teaching English/ESL in secondary schools. Suggested majors include Literatures of the World, Literatures in English, and Literature/Writing. If you are interested in receiving a California teaching credential from UCSD, contact Education Studies (EDS) for information about prerequisites and professional preparation requirements. Please consult EDS and the literature department early in your academic career to plan an appropriate literature curriculum.

---

**THE UNDERGRADUATE PROGRAM**

**THE MAJOR IN LITERATURE**

There are ten majors available to students within the Department of Literature: Literatures in Cultural Studies, English, French, German, Italian, Russian, Spanish, Literatures of the World, Writing, and the composite major in two literatures. Requirements vary from major to major as described below. Once a student has decided upon a major in literature, he or she is required to meet regularly with an advisor in the Department of Literature. Worksheets defining major requirements are available in the literature undergraduate office to help students organize their course work.

All departmental courses taken to satisfy the requirements of the literature major, including courses in the secondary literature, must be taken for a letter grade. No grade below C– is acceptable for a course taken in the major.

At least six of the upper-division courses for the major, including a minimum of four in the primary literature, must be taken at UCSD.

**Lower-Division Preparation**

Lower-division requirements vary, depending on the literature major in which the student elects to concentrate. However, the department strongly recommends that, as part of the freshman/sophomore course work, students who have chosen or are considering a major in literature begin an appropriate lower-division language sequence in the Departments of Linguistics or Literature as preparation for upper-division course work in a foreign language and literature. All literature majors require knowledge of a second language.

**Secondary Literature**

All students majoring in literature must study a secondary literature, that is, a literature in a language different from that of their primary literature. The range of secondary literatures includes ASL, Classical Greek, Hebrew, and Latin, as well as the previously mentioned French, German, Italian, Russian,

Rebecca Wells, C.Phil., Russian Language and Literature
Eliot Wirshibo, Ph.D., Classical Languages and Literature

All literature courses at UC San Diego are offered by a single Department of Literature. The department brings together writers, teachers, scholars, and students of several different languages and literatures. Here, they are united by the nature of the studies they pursue. This lends a comparative aspect to both undergraduate and graduate programs, which lead to the bachelor of arts, master of arts, the candidate in philosophy, and doctor of philosophy degrees. All students must show knowledge of a foreign literature by doing upper-division or graduate work in that literature in the original language. Courses are offered not only in the literatures themselves but in the theoretical aspects of literature and — often in cooperation with other departments — in the relationship of literary study to other disciplines such as philosophy, visual arts, music, sociology, history, psychology, linguistics, and communication. With special permission, undergraduates may take graduate courses for credit, and graduate students may also take undergraduate courses for credit.

The UCSD Library’s Mandeville Department of Special Collections offers the undergraduate and graduate literature student an excellent range of resources, including single-author collections, rare and out-of-print books, tapes, maps, and historical archives. Of special interest are the Southworth Collection of Spanish Civil War materials, the Hill Collection of South Pacific Voyages, the Don Cameron Allen Renaissance collection, and the Archive for New Poetry. Within the latter collection are an extensive series of single-author archives, including the papers of Paul Blackburn, Donald Allen, Lew Welch, Charles Reznikoff, Joanne Kyger, Jerome Rothenberg, and others. The Archive for New Poetry is one of the largest collections of contemporary poetry in the United States. Graduate students also have access, facilitated by travel grants, to all other University of California research collections.
Spanish, and for those concentrating in a foreign literature, English is also an option. Students will satisfy this requirement by taking three courses in the secondary literature, given substantially in the native language. At least one of these courses must be upper-division. Students should see an advisor to confirm the selection of the specific courses that will be taken to satisfy both the lower-division and the upper-division components of the secondary literature requirement.

The lower-division component within the secondary literatures may be satisfied by: American Sign Language 1/1DX and 1E; French (LTFR) 2B and either 2C or 50; German (LTGM) 2B and 2C; Hebrew (JUDA) 2 and 3 (see Judaic Studies); Italian (LTIT) 2B and 50; Greek (LTGK) 2 and 3; Latin (LTLA) 2 and 3; Russian (LTRU) 2B and 2C; two courses from Spanish (LTSP) 50A-50B-50C. For majors other than literatures in English, two courses from English (LTEN) 21-22-23-25-26-27-28-29-60 are applicable. Literatures of the World and writing courses may not be applied toward the English secondary literature requirement. 

**NOTE:** World Literature (LTWL) courses taught in English do not apply unless there is a foreign-language discussion section and materials are available in the foreign language. World Literature courses whose primary focus is U.S. Literature may apply toward requirements in literatures in English. Alternative secondary literatures are subject to approval and petition.

Upper-division courses in the secondary literature are counted as part of the total number of upper-division courses required for the major when possible. Students are free to choose from any of the upper-division offerings in their secondary foreign literature. Special studies courses (198s and 199s) cannot be used to satisfy upper-division secondary literature requirements. All departmental courses taken to satisfy the requirements of the literature major, including courses in the secondary literature, must be taken for a letter grade. No grade below C– is acceptable for a course taken in the major.

At least six of the upper-division courses for the major, including a minimum of four in the primary literature, must be taken at UCSD.

**Writing Component in Literature Courses**

It is the departmental expectation that students in lower-division courses will write a minimum of 2,500 words per course. In upper-division courses the minimum requirement is 4,000 words per course.

**Honors Program**

The department offers a special program of advanced study for outstanding undergraduates majoring in literature. Admission to this program requires an overall GPA of 3.5 and a literature major GPA of 3.7 at the beginning of the senior year. Students meeting these requirements will be sent, during the middle of fall quarter, an invitation to participate in the program. Interested students who anticipate that they will not meet the established criteria may petition to participate in the program by submitting a personal statement and a five-page example of their writing by the end of the third week of fall quarter. During the winter quarter of their senior year, all honors students enroll in the honors seminar (LTWL 191), which aims to deepen their understanding of the issues of theory and method implied in the study of literature. This seminar lays the groundwork for an honors thesis, written in spring quarter (LT__ 196), each under the supervision of a faculty member who specializes in the literature of the student’s primary concentration. The Honors Program concludes with an oral examination of each honors candidate by a faculty committee, which is charged with recommending whether departmental honors are warranted and, if so, which degree of honors will appear on the student’s transcript and diploma. Students from this program will also be recommended for the Burckhardt and Williams Prizes, which are awarded at graduation for outstanding achievement in the literature major. The honors seminar and thesis course may be applied toward the primary concentration in the literature major, if applicable. For Literature/Writing majors, the honors seminar is considered to be equivalent to a writing workshop.

**Special Studies**

These upper-division independent study opportuni-
ties are intended for advanced students, able to work on their own, and interested in a topic not normally covered by departmental offerings. Students with upper-division standing, a departmental GPA of at least 3.0, an overall GPA of at least 2.5, and completion of lower-division prerequisites in the subject, are eligible to take special studies courses (198s and 199s). Those not satisfying these criteria may, with justification supported by the proposed special studies instructor, petition for an exception to the regulation. 198s and 199s require at least 4,000 words of writing or an equivalent project as determined by the instructor. Information and Special Studies Enrollment forms are available in the literature undergraduate office. Enrollment requires departmental approval. Special studies courses may not be taken for a grade. These courses may not be used to satisfy upper-division requirements for majors or minors.

**Study Abroad**

Study abroad can significantly enhance a student’s major, particularly in ways in which it relates to international issues. Literature students are encouraged to study abroad before their senior year. Students who take Education Abroad Program or Opportunities Abroad Program (EAP/OAP) courses in a country appropriate to their major may use up to five upper-division courses to satisfy major requirements and up to three toward a minor. For composite majors in literature, six courses from abroad may apply, with no more than four toward either one of the two concentrations. These must be approved by the department after they have been entered on the student’s official record at UCSD. The approval process is described in a handbook on receiving transfer credit, available in the Literature Undergraduate Office. Before leaving to study abroad, students should meet with an advisor to identify which EAP courses are appropriate to fulfill the major or minor requirements.

Information on EAP/OAP is given in the “Education Abroad Program” section of the UC San Diego General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at http://programsabroad.ucsd.edu/. Financial aid can be used for EAP/OAP study, and special study-abroad scholarships are also available.

**INDIVIDUAL PROGRAMS**

**Literature/Cultural Studies**

**Literatures in English**

**Literatures in French**

**Literatures in German**

**Literatures in Italian**

**Literatures in Russian**

**Literatures in Spanish**

**Literatures of the World**

**Literature/Writing**

**Composite Major**

**INDIVIDUAL PROGRAM REQUIREMENTS**

**Primary Concentration in Cultural Studies**

The Literature/Cultural Studies major aims to provide students with broad cultural literacy and critical thinking skills—in language, visual media, social practices, and theories of interpretation—which are basic, necessary cornerstones of a humanities education. With four focus areas—visual culture, popular cultures, culture and globalization, and social identities—the undergraduate major in Literature/Cultural Studies, on the one hand, offers literacy in a range of traditional and modern cultural forms (from literature and texts, to film, art, and visual culture) and methods for interpreting these cultural forms, and on the other hand, prepares students to engage with a society whose “culture” is, and will become increasingly, diverse, international, and multilingual.

1. Three lower-division courses:
   a. LTCS 50 and 52
   b. Third course may be selected from: LTEN 25, 26, 27, 28, 29, 60; LTWL 4A-B-C-D-F-M; TWS 21-22-23-24-26-27; or LTW 19A-B-C.

2. Six upper-division LTCS courses (one of each from the four a–d focus areas):
   a. Reading Visual Culture: LTCS 170, 171, 172, 173
   b. Popular Cultures: LTCS 110, 111, 114, 118
   c. Culture and Globalization: LTCS 125, 133, 140, 141, 145
   d. Social Identities: LTCS 130, 131, 132, 135

   **NOTE:** At least one upper-division LTCS methods course is recommended and will fulfill the upper-division requirement: LTCS 100, 102, 120, 155.

3. Three courses in a secondary literature, that is, a literature taught in a language other than English. At least one of these courses must be upper-division. Upper-division courses taken to satisfy the secondary literature requirement may be counted as part of the twelve upper-division courses. Special studies courses (198s and 199s) and courses in foreign literatures taught in translation do not apply to the secondary literature requirement. See “Secondary Literature,” above.

4. The remaining upper-division electives, to total twelve upper-division courses, can be drawn from these existing Department of Literature courses:
a. Literatures in English: LTEN 150, 160, 178, 180, 181, 183, 184, 185, 186, 187, 188, 189
b. Literatures in French: LTFR 145, 164, 170
c. Literatures in Italian: LTIT 122, 140, 150
d. Literatures in Korean: LTKO 100
e. Literatures in Spanish: LTSP 123, 137, 150A, 150B, 154, 170, 174, 175, 176, 177
f. Literature/Theory: LTHH 110, 115, 150
h. Literature/Writing: LTWR 110, 113, 115, 119, 121

Primary Concentration in Literatures in English
1. Six lower-division courses:
   a. LTEN 21, 22, 23, 25, and 26
   b. One of the following: LTEN 27, 28, or 29
2. Nine upper-division courses from literatures in English offerings, including a course from each of the following four a–d categories:
   a. British Literature before 1660
   b. British Literature after 1660
   c. U.S. Literature before 1860
   d. U.S. Literature after 1860
3. One course in world Anglophone literature(s) with focus other than British or U.S. literatures.
4. One upper-division course in the history of criticism or in literary/cultural theory and methods from among the following: LTHH 110; LTTH 115; or LTCS 100.
5. Three courses in a secondary literature, that is, a literature taught in a language other than English. At least one of these courses must be upper-division. Upper-division courses taken to satisfy the secondary literature requirement may be counted as part of the twelve upper-division courses. Special studies courses (198s and 199s) do not apply to the secondary literature requirement. See “Secondary Literature,” above.
6. Upper-division elective chosen from Department of Literature offerings to make a total of twelve upper-division courses.

Primary Concentration in a Foreign Literature

Literatures in French
1. Nine upper-division courses as follows:
   a. LTFR 115-116, Themes in French Intellectual and Literary History
   b. Seven additional upper-division courses in French literature, including at least one course in each of the following periods: seventeenth or eighteenth century; nineteenth century; and twentieth century.
2. Three courses in a secondary literature, that is, a literature taught in a language other than French. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures which are taught in French do not apply to the secondary literature requirement. See “Secondary Literature,” above.
3. Upper-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

Literatures in Italian
1. Nine upper-division courses in Italian literature as follows:
   a. LTIT 100, Introduction to Italian Literature
   b. LTIT 115, Medieval Studies
   c. LTIT 161, Advanced Stylistics and Conversation
   d. One course in Italian North American Culture
   e. Five additional upper-division courses in Italian literature taught in Italian
2. Three courses in a secondary literature, that is, a literature taught in a language other than Italian. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in Italian do not apply to the secondary literature requirement. See “Secondary Literature,” above.
3. Upper-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

Literatures in Russian
1. LTRU 1A-B-C and 2A-B-C or their equivalent
2. Twelve upper-division courses in Russian:
   a. LTRU 104A-B-C
   b. LTRU 110A-B-C
   c. Six additional upper-division courses in Russian literature
3. Three courses in a secondary literature, that is, a literature taught in a language other than Russian. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in Russian do not apply to the secondary literature requirement. See “Secondary Literature,” above.
   Students in the Russian literature major are encouraged to participate in the Education Abroad Program (EAP) in Moscow and to investigate other options for foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill UCSD degree and major requirements.

Literatures in German
1. Nine upper-division courses in German literature. Two of these should be in literature written before the year 1850.
2. Three courses in a secondary literature, that is, a literature taught in a language other than German. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in German do not apply to the secondary literature requirement. See “Secondary Literature,” above.
3. Upper-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

Literatures in Spanish
1. Two lower-division Spanish literature courses, as indicated:
   a. LTSP 50A, Peninsular Literature
   b. Either LTSP 50B or LTSP 50C, Latin American Literature
2. Nine upper-division courses as follows:
   a. LTSP 130A, Development of Spanish Literature
   b. LTSP 130B, Development of Latin American Literature
   c. Seven additional upper-division courses in Spanish, Latin American, and/or Chicano literature (taught in Spanish)
3. Three courses in a secondary literature, that is, a literature taught in a language other than Spanish. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in Spanish do not apply to the secondary literature requirement. See “Secondary Literature,” above, for applicable lower-division courses.
4. Upper-division electives from Department of Literature offerings, whether in Spanish or in another literature, to make a total of twelve upper-division courses.
   Students majoring in Spanish can choose to concentrate on either Spanish or Latin American literature. All students, however, are encouraged to take courses in the various national literatures as well as in Chicano literature for a broad background in Spanish language literatures.
   Students not having a solid linguistic base in Spanish are advised to take intermediate language courses from the LTSP 2 and 30 sequences for additional review of Spanish grammar, development of writing skills, and introduction to literary analysis. Only LTSP 50A and either 50B or 50C, however, can count toward the major.
   It is strongly recommended that students take LTSP 130A before any other upper-division Spanish (peninsular) literature course and LTSP 130B before any other upper-division Latin American literature course.

Primary Concentration in Literatures of the World
The major in Literatures of the World allows students to expand the focus of their work beyond a single-language literature. They plan an individual program with options in regional studies (for example, Europe, the Americas, East Asia, Africa, Near East) and topical studies (for example, genre, period, gender, ethnic literature, literature and the visual arts, cultural studies, writing, Third World studies) as well as the single-language literatures.
1. Lower-division (three courses):
   A three-course sequence in literature chosen from any section in literature.
   Students can combine courses in an original national language/literature with courses in translation to satisfy this requirement, such as LTFR 2A and 2B plus LTWL 4A (Film and Fiction in Twentieth-Century Societies: French). Students may use either the Revelle College Humanities sequence (HUM 1–5) or Eleanor Roosevelt
College’s Making of the Modern World (MMW 1–6) to satisfy the lower-division sequence for the LTWL major.

2. Upper-division (twelve courses):
   a. six courses in a regional or single-language literature, to be taken in the original language(s) or in translation
   b. four courses focused on a topic or another regional or single-language literature
   c. two courses in non-European and non-U.S. literature; if satisfied under group (a) or group (b), any other two literature courses may be substituted.

3. Three courses in a secondary literature, that is, a literature taught in a language different from that of the primary literature. At least one of these courses must be upper-division. Upper-division courses taken to satisfy the secondary literature requirement may be counted as part of the twelve upper-division courses for the major and may, where appropriate, be applied to requirements in Group B or C. Students should see an advisor when selecting specific courses that will be taken to satisfy this requirement. Special studies courses (198s and 199s) and courses in foreign literatures taught in translation do not apply to the secondary literature requirement. See “Secondary Literature,” above, for applicable lower-division courses.

At least two of the required twelve upper-division courses must be in literature written before 1850. No more than four courses in literature/writing (LTWR) may be taken as part of the world literatures major, and these will generally apply to Group 2.b.

The Pre-Writing Major

Until they are admitted to the writing major, students may indicate their interest in writing by declaring a pre-writing major using the prewriting major code (LT01). Admission to the writing major will be determined by evaluation of each student’s performance in the LTWR 8A/8B/8C sequence.

Students are expected to achieve a grade of B or better in each of these courses to ensure their eligibility for declaring the major.

Primary Concentration in Writing

The writing major is designed to provide direct experience in writing fiction, nonfiction, and poetry as well as engage the student writer in both the world of “writing culture”—public readings, publication, and the media—and literary theory and practical critique. An indispensable feature of this program is that it engages students with one another’s work, both critically and communally. Writing majors will move through a sequence of courses within (and between) genres in order to develop their own style and confidence in the work of writing and critique. Students who are interested in teaching writing will find this major an opportunity both for writing extensively and dealing critically with the act of written composition. Students must complete the sequence LTWR 8A-8B-8C prior to declaring a major in Literature/Writing. The major requirements are as follows:

1. Any one of the following literature sequences:

2. a. LTWL 4A-B-C-D-F-M—any three courses in the sequence (Film and Fiction in Twentieth-Century Societies)
   b. LTWL 19A-B-C (Introduction to the Ancient Greeks and Romans)
   c. LTEN 21 and 22, plus one course chosen from LTEN 23, 25, 26, 27, 28, and 29.
   d. TWS 21, 22, 23, 24, 25, 26—any three courses (Third World Literatures)

2. Twelve upper-division courses:
   a. Six upper-division courses in Literature/Writing from the writing workshop sequence (LTWR 100–129). These workshops may be repeated for credit (see course listing for number of times workshops may be repeated), but the requirement should show a range of writing experience in at least two major writing types. No other courses may be substituted for this basic requirement of six upper-division workshops.
   b. One course from the group numbered LTWR 140–148.
   c. Five upper-division electives chosen from Department of Literature offerings.

3. Three courses in a secondary literature, that is, a literature taught in a language other than English. At least one of these courses must be upper-division. Students should see an advisor when selecting specific courses that will be taken to satisfy this requirement. Special studies courses (198s and 199s) and courses in foreign literatures which are taught in English translation do not apply to the secondary literature requirement. See “Secondary Literature,” above.

Composite Major in Literature

The composite major in literature permits a student to develop a solid foundation in two literatures while remaining within one department. Because the UCSD Department of Literature houses literatures that are divided among different departments at most universities, our composite major allows students to coordinate their studies with a single, closely-knit group of faculty, and to arrange their program without repeating two different sets of major requirements. (For example, since a composite major necessarily combines literatures written in two different languages, it automatically fulfills the secondary language requirement for the literature major.)

Students pursuing a composite major work closely with an advisor to plan a program of study that meets the following requirements:

1. Students will select two literatures of concentration (Literature 1 and Literature 2).
   a. One of the literatures must be in a language other than English.
   b. Both concentrations, however, can be in non-English literatures; thus a student can choose English and French, for example, or Russian and Spanish, French and Italian, German and Latin, Spanish and English, etc., but not Literatures of the World or Literature/Writing.

2. Students will meet all lower-division major requirements for each of the two literatures of concentration. See specific “Primary Concentration” listings above; English, Spanish, and Russian, for example, all have lower-division requirements for the major.

3. Students will take eight upper-division courses in each of the two selected literatures of concentration for a total of sixteen upper-division courses.
   a. These must satisfy the upper-division course requirements for each of the two majors. Thus, for example, if one of the concentrations is English, the student must include courses from each of the four stipulated categories; if one of the concentrations is Spanish, upper-division courses must include LTSP 130A and 130B.
   b. Beyond the upper-division requirements for each literature of concentration (Literature 1 and Literature 2), students will take a sufficient number of elective courses in each of the two literatures of concentration to make a total of eight upper-division courses in each chosen concentration.

Double Major within the Department of Literature in Literature/Writing and Another Literature

Students who wish to major both in Literature/Writing and in literature (any section) should see the department for information regarding appropriate double major requirements. Generally, all requirements for each major must be completed, though the secondary literature and two upper-division courses, where appropriate, may overlap from one major to the other.

Students must submit a double major petition for approval by the department and the student’s provost office.

The MINOR IN LITERATURE

The department offers a wide range of possibilities for noncontiguous minors. The options include courses in a single regional or national literature, courses in more than one literature, and a combination of language and literature courses. The minors require seven courses. All courses taken to complete a literature minor must be taken for a letter grade. No grade below C– is acceptable. Advanced Placement (AP) credit will not satisfy minor requirements.

Please see the department undergraduate office for specific minor requirements.

• A minor in literature will consist of seven courses as described below.
  • French, German, Greek, Italian, Latin, Russian, or Spanish literature: seven courses, at least four of which must be upper-division in the same literature.
  • Literatures in English, Literatures of the World, and Literature/Writing: seven courses, at least five of which must be upper-division.
  • Lower-division courses applicable toward minors: English—LTEN 21, 22, 23, 25, 26, 27, 28, 29, 60 French—LITFR 2A-B-C, 50 German—LTGM 2A-B-C Greek—LTGK 1, 2, 3 Hebrew—JUDA 1, 2, 3 (see Judaic Studies) Italian—LIT 2A-B, 50 Latin—LTLA 1, 2, 3
LITERATURE

THE GRADUATE PROGRAM

DOCTORAL DEGREE PROGRAM

The department offers a single Ph.D. in literature with concentrations in any of the fields in which members of the department do research. The C.Phil. (Candidate in Philosophy) is conferred upon all students who pass the qualifying examination and are advanced to candidacy. Ph.D. students in the doctoral program may also qualify for the M.A. upon completion of their qualifying examinations.

Admission

The following are requirements for admission to graduate study in literature:

1. A baccalaureate or a master’s degree with a major in literature or a related field. Official transcripts required.
2. Satisfactory scores on the Graduate Record Examination (GRE) achieved within the past three calendar years. The Subject Test is not required.
3. Satisfactory score on the Test of English as a Foreign Language (TOEFL) is required for international applicants.
4. Competence in reading, understanding and interpreting both literary and critical texts in a second language, and—when appropriate—ability to follow seminar discussions or lectures in a second or third language.
5. Writing sample (twenty-five page minimum) required for all applicants.

Completed applications and supporting materials must be received by the deadline posted on the department Web site (http://literature.ucsd.edu) for admission to the following fall quarter. Those planning to apply should take the GRE/TOEFL far enough in advance so that the scores will be available to the admissions committee in January.

Please refer to the department Web site http://literature.ucsd.edu for specific guidelines.

Course of Study

Formal study begins with a first-year, three-quarter introductory sequence (Literature/Theory 200A-B-C) having an interdisciplinary and theoretical emphasis. During the first three years, the course of study will include at least four seminars in one literature and two in another (students in comparative literature must take at least one seminar in a third literature); at least four seminars drawn from offerings in literary theory, the second or a third literature, cultural studies, comparative literature, or composition studies; and five additional seminars open entirely to the student’s choice (four for students in comparative literature). Such “open” seminars should generally be related to the intended dissertation field. At most, two seminars in other disciplines may be substituted for any of the latter group, with the advisor’s permission. Students must also fulfill a historical breadth requirement by completing two seminars dealing with texts or cultural practices prior to 1800. For students with M.A. degrees the initial three-year sequence may be reduced, depending on previous course work and on the students’ plans for doctoral study.

Students in comparative literature must take four of the above-described seminars in comparative literature or in other sections, provided that they be clearly comparative in nature. Comparative literature seminars taken for the first, second, or third literature requirement must be substantially focused upon the relevant language and deal with materials in the original.

Students wishing to take these courses in a literature for which seminars are not regularly offered may substitute independent study courses (298) or undergraduate courses enhanced by additional assignments. To do so, students must demonstrate through prior course work that they have already attained graduate-level competency in the literature and language in question. Approval from the comparative literature graduate advisor and the director of Graduate Studies must be obtained.

The third year is spent taking seminars and preparing for the qualifying examinations. During this year, students will register for two four-unit independent study courses (298). The first will be used to prepare reading lists for the subject-area qualifying examinations and the second will focus on the long paper required for the qualifying examinations.

The qualifying examination is usually taken during the ninth quarter of enrollment. It must be completed by the end of the tenth quarter. The fourth, fifth, and sixth years will be devoted to preparation of the dissertation.

Students may write dissertations in any of the fields in which members of the department do research. These fields may include English, American, French, German, Italian, Greek, Latin, Spanish, Chinese, Japanese, Russian, Chicano, Asian-American, and African-American literature, comparative literature, literary theory, women’s studies, cultural studies, early modern studies, and composition studies.

Specialty in Composition Theory, Research, and Practice

The Department of Literature offers special studies to graduate students who wish to concentrate on composition theory, research, and practice. The composition subspecialty is an interdisciplinary course of study that requires students to work with faculty both in the department and across the university. The department regularly offers graduate seminars taught by faculty in composition, along with a variety of seminars on history, theory, cultural studies, and literatures in English of special interest to students in composition. Students in special studies in composition take two research methods courses outside the department on topics such as field work, historiography, or research design in the human sciences to qualify them to conduct the research for their dissertations. Students are also encouraged to apply to teach in one of the six college undergraduate writing programs on campus, to see for themselves how classroom and administrative practice intersect with theory and research.

Language Requirements

Graduate students are expected to read literary and secondary texts and to follow seminar discussions or lectures in a second language (a language other than the one in which the literature of their intended specialization is written). Students in comparative literature should have in-depth knowledge of a second and third language.

To satisfy the language requirements, students must demonstrate language proficiency via completion of two graduate seminars in the literature of the second language. In addition, comparative literature students must complete one seminar in the literature of the third language. With the approval of the director of Graduate Studies, students may satisfy the language requirement by substituting an upper-division undergraduate course enhanced by additional assignments (grade of A must be received). If upper-division courses are not available, students may take independent study courses (298) in the language. These options are only allowed when there is no graduate seminar offered in the chosen language.

Students must pass an examination in reading, interpretation, and translation in each of the two (or three in the case of comparative literature) courses taken to satisfy the second language requirement. The language requirements must be satisfied prior to the qualifying examination.

Advancement to Candidacy

Students should choose a Ph.D. advisor no later than the first quarter of the third year. The advisor, in consultation with the student, will form a qualifying examination committee. The student and the qualifying examination committee will jointly determine the nature of the long research paper, (approximately thirty pages) and the two areas of specialization on which the student will be examined in writing. After satisfactory completion of the paper and the written examinations, the student will take a two-hour oral examination. On passing the oral examination, the student is declared eligible for advancement to candidacy for the Ph.D. The C. Phil. degree is conferred upon successful advancement.

Teaching

The department requires that each Ph.D. student participate in apprentice teaching before the
The following are requirements for admission to M.A. candidates.

DEPARTMENTAL PH.D. TIME LIMIT POLICIES

Students must be advanced to candidacy by the tenth quarter of study. Departmental normative time is six years. Total registered time at UCSD cannot exceed eight years.

FINANCIAL SUPPORT

Ph.D. students entering the program with a B.A. may be supported (either by employment or fellowships) for six years. Students who have an M.A. and have been given transfer credit may be supported for five years. Such support depends upon the funds available, the number of students eligible, and the rate of progress.

MASTER'S DEGREE PROGRAM

The master's degree program is intended to meet the needs of several groups: (1) persons interested in possibly applying later, at UCSD or elsewhere, for admission to a Ph.D. program and wishing to strengthen their preparation for such a program; (2) persons seeking a master's degree only, for reasons of professional development or cultural enrichment; and (3) graduate students who have been admitted to the Ph.D. Program and who decide also to qualify for a master's degree. The M.A. degree is currently available in five fields: literatures in English, French, German, Spanish, and comparative literature. NOTE: The department does not offer financial support for M.A. candidates.

Admission

The following are requirements for admission to graduate study in literature:

1. A baccalaureate degree with a major in literature or a related field. Official transcripts required.
2. Satisfactory scores on the Graduate Record Examination (GRE) achieved within the past three calendar years. The Subject Test is not required.
3. Satisfactory score on the Test of English as a Foreign Language (TOEFL) is required for international applicants.
4. Competence in reading, understanding, and interpreting both literary and critical texts in a second language, and—when appropriate—ability to follow seminar discussions or lectures in a second or third language.
5. Writing sample (twenty-five page minimum) required for all applicants.

Completed applications and supporting materials must be received by the deadline posted on the department Web site (http://literature.ucsd.edu) for admission the following fall quarter. Those planning to apply should take the GRE/TOEFL far enough in advance so that the scores will be available to the admissions committee in early January. Please refer to the department Web site (http://literature.ucsd.edu) for specific guidelines.

M.A. in Literatures in English, Spanish, French, or German

The requirement for the M.A. degree is completion of thirty-six total units distributed as follows:

1. LTH 201 (four units). A required introductory theory course generally taken during the student's first quarter in the program.
2. Twenty-four units of graduate seminars. Students may take a maximum of eight units of enhanced upper-division course work, when graduate seminars are not available in student's specialization (defined as literatures in English, French, etc.). Students may take one independent study course (298) to fulfill requirements in this category, with advisor's permission.
   a. Sixteen units of course work in the specific literature (English, Spanish, French, or German), read in its original language.
   b. Four units of course work in a language other than that of the student's principal concentration. This course may be taken either in the original language or in translation. A graduate seminar in English or American literature may be used to fulfill this requirement by students with a German, Spanish, or French focus.
   c. Four units of course work open to the student's choice. Such "open" units should generally be related to the intended thesis field.
   3. Eight units of guided thesis research (295), culminating in an acceptable master's thesis or master's examination.

M.A. in Comparative Literature

The requirement for the M.A. degree is completion of thirty-six total units distributed as follows:

1. LTH 201 (four units). A required introductory theory course generally taken during the student's first quarter in the program.
2. Twenty-four units of graduate seminars. At least four of these units should be taken in comparative literature (LTCO) or in another section, if the seminar is clearly comparative in nature. Students may take a maximum of eight units of enhanced upper-division course work, when graduate seminars are not available in student's specialization (defined as literatures in English, French, etc.). Students may take one independent study course (298) to fulfill requirements in this category, with advisor's permission.
   a. Twelve units of course work in one literature of concentration. Comparative literature seminars are recommended when their focus is substantially upon the literature in question and they deal with materials in the original language.
   b. Eight units of course work in a language other than that of the student's principal concentration or four units of course work in a second literature and four units of course work in a third literature. Texts or other materials must be dealt with in the original languages. Comparative literature seminars are recommended when their focus is substantially upon the literature in question and they deal with materials in the original language.
   c. Four units of course work open to the student's choice. Such "open" units should generally be related to the intended thesis field.
3. Eight units of guided thesis research (295), culminating in an acceptable master's thesis or master's examination.

Master of Fine Arts Program

The Master of Fine Arts (M.F.A.) in Writing is a two-year residency program that offers a degree in the areas of fiction and poetry, and is designed for students who are interested in innovative and interdisciplinary approaches to narrative and poetics. The program is also distinguished by its commitment to community building, alternative forms of literary distribution, and transborder exchange.

The M.F.A. Program is small, with typically eight new students admitted each year. The intimate nature of the program allows students to work very closely with the writing faculty, as well as to receive support in the form of research assistantships and/or teaching assistantships.

The M.F.A. in Writing is part of the Department of Literature, which also offers a doctoral program in literature that emphasizes cultural studies, gender studies, postcoloniality, and critical theory. The M.F.A. Program co-exists with a thriving undergraduate writing major, and benefits from a long-established reading series and the university's Archive for New Poetry, which holds the papers of George Oppen, Lyn Hejinian, Susan Howe, Alice Notley, James Schuyler, Ron Silliman, and many other important figures. With strong ties to the Departments of Visual Arts, Theatre and Dance, Communication, and Music, and situated at one of the top-ranked science campuses in the country, the program encourages its students to generate writing informed by other disciplines and media. In recognition of the diverse community we serve, our location on the border with Mexico, and the resources offered by our faculty, we look forward to offering bilingual workshops in Spanish and English as the program develops.

The M.F.A. Program in Writing offers students a unique opportunity to develop as writers in a community that integrates a multiplicity of collaborative, interdisciplinary, and theoretical approaches by which to complete a literary project.

Program

The Graduate Program in Writing is a two-year program. The M.F.A. degree is awarded upon the
satisfactory completion of at least six quarters of registration, seventy-two units of required course work, a preliminary reading or presentation after the first year, a completed manuscript or project, and a final reading or presentation.

1. Four-unit course in Writing and Theory.
2. Four-unit course in Modern Art Movements and Aesthetics.
3. Twelve units of graduate seminars (or upper-di-vision course in literature or guided independent study) in literature.
4. Twenty units of writing workshops within a specific genre or in a combination of genres.
5. Four to twelve units of graduate-level courses in either an art practice or theory outside of the writing program. This could be in visual arts, music, or theatre, or in graduate seminars offered by the Department of Literature in a language other than English.
6. Eight to twelve units of guided research culminat-ing in an acceptable manuscript of poetry, fiction, or creative nonfiction (which may include collabo-ration with other genres or media). A discussion of no more than one hour follows submission of the manuscript.
7. Twelve units of apprentice teaching and/or research assistantship at UCSD.

Additional program information available on the department Web site (http://literature.ucsd.edu/grad/mfawriting/).

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

CHINESE LITERATURE

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTCH 101. Readings in Contemporary Chinese Literature (4)

Intended for students who have the competence to read contemporary Chinese texts, poetry, short stories, and criticism in vernacular Chinese. May be repeated for credit as topics vary.

COMPARATIVE LITERATURE

GRADUATE

PREREQUISITE: graduate standing or consent of instructor.

LTCO 202C. History of European Criticism and Aesthetics (4)

A core course for comparative literature, strongly recom-mended for all graduate students in the comparative literature program. A historical survey of criticism and aesthetics divided as follows: 202C, Romanticism to late nineteenth century.

LTCO 210. Classical Studies (4)

Analysis of significant works of the Greek and Roman tradi-tions, with attention to their interest for later European literature. May be repeated for credit as topics vary.

LTCO 214. The Bible and Critical Theory (4)

Reading biblical texts (Hebrew Bible and New Testament) from the perspective of different theoretical methods in literary criticism and cultural studies. Theoretical coverage will vary but may include, for example, postmodernist, postcolonialist, psychoanalytic, gender, and ideological readings of biblical texts.

LTCO 252. Modernism (4)

A sample investigation into the concept of period. Will deal with the question of the existence of modernism, the description of the phenomenon, and the causes to which it is to be attributed. May be repeated for credit as topics vary.

LTCO 264. Oral Literature (4)

An introduction, through the study of recordings of ac-tual oral performance as well as of the written record, to research in oral literature and the theoretical and meth-odological problems entailed. May be repeated for credit as topics vary.

LTCO 274. Genre Studies (4)

A consideration of a representative selection of works relat-ing to a theme, form, or literary genre. May be repeated for credit as topics vary.

LTCO 281. Literature and Film (4)

A study of literature and film in relation to one another, to critical and aesthetic theories, and to historical context. May be repeated for credit when topics vary.

LTCO 282. Literature and Philosophy (4)

Questions and problems from the history of philosophy or from the various fields of philosophy (e.g., epistemology, ethics, logic) in their interaction with intellectual issues and questions, addressed by literary criticism and theory. Repeatable for credit when topics vary.

LTCO 283. Literature and Political Philosophy (4)

An inquiry into philosophical texts viewed as influential in comparative literature and political science (Plato, Aristotle, Augustin, Aquinas, Machiavelli, More, Hobbes, Locke, Hume, Kant, Herder, Hegel, Nietzsche, Kojève, Foucault, Rawls, et al.). May be repeated for credit as topics vary.

LTCO 284. Literature and Ethics (4)

The longstanding relationship of literary studies and eth-ics or the arts of life. From Plato, Aristotle, Renaissance treatises, Kant to Foucault and others. May be repeated for credit as topics vary.

LTCO 285. Literature and Aesthetics (4)

Research in literary theory and aesthetic philosophies of literature. Single and multiple authors and topics: Plato and Aristotle, Renaissance treatises, Winckelmann, Kant and Hegel in the Enlightenment, Warburg, Heidegger and Panofsky, contemporary art theory, et al. May be repeated for credit as topics vary.

LTCO 286. Topics in Islam and Modernity (4)

A survey of developments in the Islamic world during the period of European colonial domination and its aftermath, with special attention to the works of leading Muslim thinkers (e.g., Sayid Ahmed Khan, Muhammad Abduh, Hasan al Banna, Ruhallah Khomeini, among others). May be repeated for credit as topics vary.

LTCO 287. Culture and Political Theory (4)

A comparative approach of political theory based on historical periods (with the tools of new historicism), vari-ous cultures (inspired by anthropological research), and referring to the most important philosophical thinkers from Western and non-Western traditions. May be repeated for credit as topics vary.

LTCO 289. History of the Book (4)

Questions and problems from the history of the book, the history of libraries, materialist bibliography, epistemology, as they relate to literary scholarship and theory. May be repeated for credit as topics vary.

LTCO 295. M.A. Thesis (1–8)

Research for the master’s thesis. Opened for repeated registration up to eight units. (Satisfactory/Unsatisfactory grades only.) PREREQUISITE: enrolled in M.A. program.

LTCO 296. Research Practicum (1–12)

Research practicum for small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTCO 297. Directed Studies: Reading Course (1–12)

This course may be designed according to an individual student’s needs when seminar offerings do not cover sub-jects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTCO 298. Special Projects: Writing Course (1–12)

Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-semester require-ment of the doctoral program. Repeatable for credit.

LTCO 299. Dissertation (1–12)

Research for the dissertation. Offered for repeated registra-tion. Open only to Ph.D. students who have advanced to candidacy.

LITERATURE/CULTURAL STUDIES

LOWER-DIVISION

LTC 50. Introduction to Cultural Studies (4)

An introduction to cultural studies with a focus on the following areas: literary and historical studies, popular culture, women’s studies, ethnic studies, science studies, and gay/lesbian studies. Particular emphasis on the ques-tion of “cultural practices” and their social and political conditions and effects.

LTC 52. Topics in Cultural Studies (4)

This course is designed to complement LTC 50 – Introduction to Cultural Studies. In this course, cultural studies methods are further applied to various concrete topics in order to illustrate the practical analysis of culture and cultural forms.

LTC 87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quar-ter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. PREREQUISITES: none.

LTC 98. Directed Group Studies (4)

Directed group study on a topic or in a field not included in the regular department curriculum by special arrange-ment with a faculty member. (P/NP only.) PREREQUISITES: lower-division standing, completion of at least thirty units of undergraduate study at UCSD, minimum 3.0 GPA at UCSD, consent of instructor, and completed and approved Special Studies form.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTC 100. Theories and Methods in Cultural Studies (4)

Reading in some of the major theoretical texts that have framed work in cultural studies, with particular emphasis on those drawn from critical theory, studies in colonialism, cultural anthropology, feminism, semiotics, gay/lesbian studies, historicism, and psychoanalytic theory.

LTC 102. Practicing Cultural Studies (4)

Survey and application of methods central to cultural studies as a critical social practice, examining the relation-ship between cultural studies and social transformation.
Students will study varieties of material culture, and experiment with techniques of reading, interpretation, and intervention.

**LTCS 110. Popular Culture (4)**
A reading of recent theory on popular culture and a study of particular texts dealing with popular cultural practices, both contemporary and noncontemporary, as sites of conflict and struggle. Repeatable for credit when topics vary.

**LTCS 111. Special Topics in Popular Culture in Historical Context (4)**
Exploration of forms of popular culture in different historical and geographical contexts. Topics may include: folkloric, dime novels and other types of popular literature, racial performances, popular religions, theatrical melodrama, photojournalism, and early film. Repeatable for credit when readings and focus vary.

**LTCS 115. Performance Culture (4)**
An investigation of different types of performances such as theatrical genres ranging from melodrama and minstrelsy to various cultural rituals and speech acts. From the perspective of literary studies, performance studies, postcolonial theory, ethnography and theatre history, the course explores race, gender, sexuality, and nation through performance.

**LTCS 118. Comedy (4)**
Comedy in fiction and film from ancient times to contemporary, including the Bible, Aristophanes, Shakespeare, and modern writers and film makers.

**LTCS 120. Historical Perspectives on Culture (4)**
The course will explore the relation among cultural production, institutions, history, and ideology during selected historical periods. In considering different kinds of texts, relations of power and knowledge at different historical moments will be discussed. Repeatable for credit when topics vary.

**LTCS 125. Cultural Perspectives on Immigration and Citizenship (4)**
Introduction to the studies of cultural dimensions of migration and citizenship. Examines the diverse cultural texts—literary, film, music, the visual images, etc.—that both shape and are shaped by migration and the idea of citizenship in different national and historical contexts.

**LTCS 130. Gender, Race/Ethnicity, Class, and Culture (4)**
The course will focus on the representation of gender, ethnicity, and class in cultural production in view of various contemporary theories of race, sex, and class. Repeatable for credit when topics vary.

**LTCS 131. Topics in Queer Cultures/Queer Subcultures (4)**
This course examines the intersection of sex, sexuality, and popular culture by looking at the history of popular representations of queer sexuality and their relation to political movements for gay and lesbian rights. Repeatable for credit when readings and focus vary.

**LTCS 132. Special Topics in Social Identities and the Media (4)**
A study of the representation of social groups and the media, such as gender, sexuality, race, ethnicity, class, culture, and geopolitical location. Students will consider the various media of film, television, alternative video, advertising, music, and the Internet. Repeatable for credit when readings and focus vary.

**LTCS 133. Globalization and Culture (4)**
Studies of cultural dimensions of immigration and citizenship. This course examines the diverse cultural texts—literature, law, film, music, the visual images, etc.—that both shape and are shaped by immigration and the idea of citizenship in different national and historical contexts.

**LTCS 135. Interdisciplinary Approaches to Lesbian, Gay, BiseXual, and Transgender Studies (4)**
Introduction to interdisciplinary examination of human sexuality and, especially, lesbian, gay, bisexual, and trans gender identities and desires. Juxtaposes perspectives from humanities, social sciences, and natural sciences. Introduces queer theory to understand sexuality in relation to phenomena such as government, family, culture, medicine, race, gender, and class.

**LTCS 141. Special Topics in Race and Empire (4)**
The role of race and culture within the history of empire; may select a single empire for consideration, such as France, Britain, U.S., or Japan, or choose to examine the role of race and culture in comparative histories of colonialism. Repeatable for credit when readings and focus vary.

**LTCS 145. National Cultures in Colonial and Postcolonial Contexts (4)**
Studies of emergence of national cultures under colonial rule and their transformations in the process of decolonization. Investigation of ideological constructions of such cultural institutions as modern national language, national history and historiography, national literary canon, and folk literature and culture.

**LTCS 150. Topics in Cultural Studies (4)**
The course will examine one or more forms of cultural production or cultural practice from a variety of theoretical and historical perspectives. Topics may include: contemporary debates on culture, genres of popular music/fiction/film, AIDS and culture, the history of sexuality, subcultural styles, etc. Repeatable for credit when topics vary.

**LTCS 160. Cultural Studies Approaches to Popular Music (4)**
An investigation of different types of popular music genres, cultures, and practices such as hip hop, punk rock, R&B, jazz, country, and dance music cultures. From the perspective of ethnography and cultural and performance studies, the course explores race, gender, sexuality, and the negotiations of local, as well as national communities and subcultures via popular music.

**LTCS 170. Visual Culture (4)**
The course will focus on visual practices and discourses in their intersection and overlap, from traditional media, print, and photography to film, video, TV, computers, medical scanners, and the Internet.

**LTCS 171. Topics in Television and Popular Media (4)**
Examining the relationship between television and national culture, students will study the emergence of TV as a domestic technology, the history of race and gender in television programming, and the global politics of television distribution. Repeatable for credit when readings and focus vary.

**LTCS 172. Special Topics in Screening Race/Ethnicity, Gender and Sexuality (4)**
Exploring both Hollywood and international filmmaking, an exploration of screen representations with attention to race/ethnicity, gender, and sexuality in different historical and linguistic contexts. Historical periods may extend from silent, through wartime and cold war, to contemporary era of globalization. Repeatable for credit when readings and focus vary.

**LTCS 173. Topics in Violence and Visual Culture (4)**
This course focuses on the critical study of representations of violence, such as war, genocide, sexual violence, and crime, across a range of media, including literature, film, photography, and other forms of visual culture. Repeatable for credit when readings and focus vary.

**LTCS 192. Senior Seminar in Literatures in Cultural Studies (1)**
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature at the upper-division level. Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **PREREQUISITE:** department stamp and/or consent of instructor.

**LTCS 198. Directed Group Study (4)**
Directed group research, under the guidance of a member of the faculty, in an area not covered in courses currently offered by the department. (P/NP only.) **PREREQUISITE:** permission of the department.

**LTCS 199. Special Studies (2 or 4)**
Individual reading in an area not covered in courses currently offered by the department. (P/NP only.) **PREREQUISITE:** permission of the department.

**GRADUATE**

**GRADUATE PREREQUISITE:** graduate standing or consent of instructor.

**LTCS 201. Theories and Methods of Analysis in Cultural Studies (4)**
Contemporary theories of cultural studies. The seminar will concentrate on major interpretive approaches drawn from several areas of cultural and political analysis, including historicism, Marxist theory, feminism, structuralism, psychoanalytic theory, semiotics, postmodernist studies, gay and lesbian studies, and others. The particular focus and approach may vary. Repeatable for credit.

**LTCS 210. History and Culture (4)**
This seminar will focus on the cultural practices of a particular historical period as a means of analyzing the relation between culture/ideology and economic and political modes of production and domination. Topic, historical period, and theoretical approach may vary. Repeatable for credit.

**LTCS 220. Film/TV/Video Studies (4)**
The seminar will concentrate on genres or subgenres within film/TV/video studies or on a stand of film/TV/video theory. Possible topics may include: horror film, melodrama, sitcoms/soap opera talks, show music videos, black or queer cinema, etc. Repeatable for credit.

**LTCS 222. Topics in Theory and History of Film (4)**
This seminar will consider various theoretical approaches to film texts (historical-materialist, feminist, psychoanalytic, semiotic) as well as the history of film, the political economy of film production and distribution, exhibition practices, and spectatorship in national and transnational contexts. Repeatable for credit when topics vary.

**LTCS 225. Interdisciplinary and Historical Analysis of Cultural Texts (4)**
The seminar will focus on a particular historical period and examine a variety of cultural texts vis-a-vis related historical, economic, political, and sociological discourses. The conjunction and disjunction of approaches will be explored in relation to specific texts. Repeatable for credit.

**LTCS 250. Topics in Cultural Studies (4)**
This seminar will be organized around any of various topic areas relating to cultural studies. These might include studies in colonialism, historicism, gender, sexuality, social institutions, popular culture, subaltern practices, etc. May be repeated for credit as topics vary.

**LTCS 255. Cultural Studies, Colonialism, and Decolonization (4)**
This course considers different approaches to the study of colonialism in a variety of national contexts. Educational, legal, religious, military, and cultural apparatuses of colonialism, theories of decolonization, the “postcolonial” and feminist critiques of “modernity”/modernization will also be studied. May be repeated for credit when topics vary.

**LTCS 256. Cultural Studies of Technoscience (4)**
The course will explore work in cultural studies, feminist studies, and queer theory of scientific practices altering social relations, cultural identities, and conceptions of “nature.” Issues may include the AIDS pandemic, genetic research, electronic communities, reproductive technologies, and other topics. May be repeated for credit when topics vary.

**LTCS 260. National Cultures (4)**
Selected topics on the construction of national cultural identities. Investigation of the dynamics of canon formation and nation-building in specific historical contexts. May be repeated for credit when topics vary.

**LTCS 296. Research Practicum (1–12)**
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.
This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTEN 298. Special Projects: Writing Course (1-12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement from a program. Repeatable for credit.

LTEN 299. Dissertation (1-12)
Research toward the dissertation. Open only to Ph.D. students who have advanced to candidacy. Repeatable for credit.

LITERATURES IN ENGLISH

LOWER-DIVISION

LTEN 21. Introduction to the Literature of the British Isles: Pre-1660 (4)
An introduction to the literatures written in English in Britain before 1660, with a focus on the interaction of text and history.

LTEN 22. Introduction to the Literature of the British Isles: 1660-1832 (4)
An introduction to the literatures written in English in Britain and Ireland between 1660 and 1832, with a focus on the interaction of text and history.

LTEN 23. Introduction to the Literature of the United States, Beginnings to 1865 (4)
An introduction to the literatures written in English in the United States from the beginnings to 1865, with a focus on the interaction of text and history.

LTEN 24. Introduction to the Literature of the United States, 1865 to the Present (4)
An introduction to the literatures written in English in the United States from 1865 to the present, with a focus on the interaction of text and history.

LTEN 27. Introduction to African American Literature (4)
A lecture discussion course that examines a major topic or theme in African American literature as it is developed over time and across the literary genres of fiction, poetry, and belles lettres. A particular emphasis of the course is how African American writers have adhered to or departed from conventional definitions of genre.

LTEN 28. Introduction to Asian-American Literature (4)
This course provides an introduction to the literary production of the population of Mexican origin in the United States. Students will examine a variety of texts dealing with the historical, social, economic, and political experiences of this heterogeneous population.

LTEN 29. Introduction to Chicano Literature (4)
This course provides an introduction to the literary production of the population of Mexican origin in the United States. Students will examine a variety of texts dealing with the historical, social, economic, and political experiences of this heterogeneous population.

LTEN 60. Topics in Ethnic American Literature (4)
A lecture and discussion course that critically examines the literary and cultural production emerging out of racialized, ethnic, and immigrant communities in the United States. Course may include fiction, poetry, novels, plays, popular culture, and film.

LTEN 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. PREREQUISITES: none.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTEN 104. Literatures of Medieval England (4)
Lecture/discussion course focusing on literature written in England before 1500. Topics may include themes (e.g., gender, social critique) or focus on specific genre (drama, romance, religious literature). May be repeated for credit when topics vary.

LTEN 107. Chaucer (4)
A study of Chaucer's poetic development, beginning with The Book of the Duchess and The Parliament of Fowls, including Troilus and Criseyde, and concluding with substantial selections from The Canterbury Tales.

LTEN 110. The Renaissance: Themes and Issues (4)
Major literary works of the Renaissance, an exciting period of social and cultural transformation in England as elsewhere in Europe. Topics may include a central theme (e.g., humanism, revolution, reformation), a genre (e.g., pastoral), or comparison with other arts and sciences.

LTEN 112. Shakespeare I: The Elizabethan Period (4)
A lecture/discussion course exploring the development of Shakespeare's dramatic powers in comedy, history, and tragedy, from the early plays to the middle of his career. Dramatic forms, themes, characters, and styles will be studied in the contexts of Shakespeare's theatre and his society.

LTEN 113. Shakespeare II: The Jacobean Period (4)
A lecture/discussion course exploring the rich and varied achievements of Shakespeare's later plays, including the major tragedies and late romances. Dramatic forms, themes, characters, and styles will be studied in the contexts of Shakespeare's theatre and his society.

LTEN 114. Shakespeare III: Stage, Film, and Television (4)
A lecture/discussion/laboratory course involving the close study of six to eight plays representative of Shakespeare's artistic career with particular emphasis upon the interaction of Elizabethan plays and the stage and the critical implications of transposing plays to film and television. (Generally offered in summer session only.)

LTEN 115A. The Sixteenth Century: Themes and Issues (4)
Selected topics concerned with sixteenth-century English literature as a whole.

LTEN 117A. The Seventeenth Century: Themes and Issues (4)
Selected topics in English literature during a period of social change, religious controversy, emergence of the "New Science", and the English Civil War. Readings chosen from writers including Jonson, Donne, Bacon, Milton, Marvell, and Dryden, among others. Repeatable for credit.

LTEN 118. Milton (4)
A critical examination of the major works, including Paradise Lost, by an author who was both a central figure in English political life in a revolutionary age and, in the view of most critics, the greatest non-dramatic poet in the English language. The course will study his poetic development in a variety of historical contexts.

LTEN 119. Restoration Literature (4)
The literature of a period following twenty years of civil war and revolution which saw the reopening of theatres and the rise of the professional writer. Topics may include Restoration comedy and tragedy; satire; neoclassical literary theory.

LTEN 120A. The Eighteenth Century: Themes and Issues (4)
Selected topics in English literature during an age of satiric writing, the shift from neoclassicism to romanticism, the emergence of the novel, and the expansion of the reading and writing public among the middle class and women. Writers such as Defoe, Pope, Swift, Richardson, Johnson, Burke, Walpole, and Scott. May be repeated for credit when topics vary.

LTEN 124A. Romanticism: Themes and Issues (4)
Selected topics concerned with the romantic period as a whole.

LTEN 125B. First Generation Romantic Poets (4)
The poets who came of age during the French Revolution and who inaugurated literary modes that continue in our own time: Wordsworth, Coleridge, Blake, and their contemporaries.

LTEN 125C. Second Generation Romantic Poets (4)
Byron, Keats, Shelley, and their contemporaries.

LTEN 127A. The Victorian Period: Themes and Issues (4)
Selected topics concerned with Victorian literature as a whole.

LTEN 127B. Victorian Poetry (4)
Tennyson, Browning, Arnold, Clough, Hopkins, and their contemporaries.

LTEN 130. Modern British Literature (4)
Selected topics concerned with modern British literature; study of various authors, issues, and trends in literatures of the British Isles from the mid-1850s through the end of the twentieth century. Repeatable for credit when topics vary. (Replaces the former LTEN 130A and 130B)

LTEN 132. Modern Irish Literature (4)
The Irish Revival and its aftermath: Yeats, Synge, O'Casey, Joyce, Beckett, and their contemporaries. Repeatable for credit when topics vary.

LTEN 134. Twentieth-Century British Poetry (4)
Survey of many poets of the United Kingdom including Scotland and Ireland. Included: War poems (1914-18, 1940-45), 30s poems of social commitment, the Movement (1950s), recent postmodern figures (Hughes, Prynne).

LTEN 140. The Early Nineteenth-Century British Novel (4)
Includes the work of Jane Austen, Charlotte Bronte, Emily Bronte, Mary Shelly, and Charles Dickens.

LTEN 141. The High Victorian Novel (4)
Dickens, Thackeray, Trollope, Charlotte Bronte, Emily Bronte.

LTEN 142. The End of Victorianism (4)
The work of Robert Louis Stevenson, H.G. Wells, Thomas Hardy, Rudyard Kipling, and Joseph Conrad.

LTEN 143. The English Novel in the Eighteenth Century (4)
This course studies the writing of the novel in the eighteenth century. The focus of the course may be an introduction to selected major writers and texts, or a particular issue or problem in the literary and social history of the novel. May be repeated for credit when topics vary.

LTEN 144. The English Novel in the Nineteenth Century (4)
This course studies the writing of the novel in English during the nineteenth century. The focus of the course may be a survey of the nineteenth century (an introduction to selected major writers and texts), or a particular issue or problem in the literary and social history of the novel. May be repeated for credit when topics vary.

LTEN 145. The English Novel in the Twentieth Century (4)
This course studies the writing of the novel in English during the twentieth century. The focus of the course may be an introduction to selected major writers and texts, or a
particular issue or problem in the literary and social history of the novel. May be repeated for credit when topics vary.

**LTEN 146. Women and English/American Literature (4)**
Selected topics concerning women and Anglophone litera-
ture. Topics include women, the literary representa-
tion of women, and women as readers. May be repeated for credit when topics vary.

**LTEN 148. Genres in English and American Literature (4)**
An examination of one or more genres in English and/or American literature, for example, satire, utopian fiction, autobiography, theWeek, the familiar essay. May be repeated for credit as topics vary.

**LTEN 149. Themes in English and American Literature (4)**
A consideration of one of the themes that recur in many periods of English or American literature, for instance, love, politics, the role of women in society. May be repeated for credit as topics vary.

**LTEN 150. Gender, Text, and Culture (4)**
This course studies representations of the sexes and of their interrelationship in various forms of writing produced during different phases of English history. Emphasis will be placed upon connections of gender and of literature to other modes of social belief, experience, and practice. Repeatable for credit when topics vary.

**LTEN 152. The Origins of American Literature (4)**
Studies in American writing from the Puritans to the early national period (1620–1830), with emphasis on the thrust and continuity of American culture, social and intellectual, through the beginnings of major American writing in the first quarter of the nineteenth century.

**LTEN 153. The Revolutionary War and the Early National Period in U.S. Literature (4)**
A critical examination of how writing of various kinds—political, philosophical, and literary—functioned in the construction of the political body of the new American republic and the self-conception of its citizens.

**LTEN 154. The Arabic Renaissance (4)**
A study of some of the chief works, and the linguistic, philosophical, and historical attitudes informing them, produced by such authors as Emerson, Hawthorne, Melville, Dickinson, and Whitman during the period 1836–1865, when the role of American writing in the national culture becomes an overriding concern.

**LTEN 155. Interactions Between American Literature and the Visual Arts (4)**
An exploration of the parallels between the work of individ-
ual writers, or movements, in American literature and the style and content of the work of certain visual artists. The writers studied are always American; the artists or art movements may represent non-American influences on these American writers. May be repeated for credit as topics vary.

**LTEN 156. American Literature from the Civil War to World War I (4)**
A critical examination of works by such authors as Mark Twain, Henry James, Kate Chopin and Edith Wharton, who were writing in an age when the frontier was conquered and American society began to experience massive industrialization and urbanization.

**LTEN 158. Modern American Literature (4)**
A critical examination of American literature in several genres produced between the turn of the century and World War II. Attention will be given to historical and cultural contexts for defining American modernism. Repeatable for credit when topics vary.

**LTEN 159. Contemporary American Literature (4)**
A critical examination of American literature in several genres produced since World War II. Attention will be given to historical and cultural contexts for defining American postmodernism. Repeatable for credit when topics vary.

**LTEN 160. Ideas and Photographic Images in American Culture (4)**
Relate the history of photography in America to the history of ideas in American culture. It assumes that photographers think in images and through their images participate in cultural discourse. Repeatable for credit when topics vary.

**LTEN 172. American Poetry II—Whitman through the Modernists (4)**
Reading and interpretation of American poets from Whitman through the principal modernists—Pound, H.D., Eliot, Moore, Stevens, and others. Lectures will set the appropriate context in sociocultural and literary history.

**LTEN 174. American Fiction II—Since Middle James (4)**
Reading and interpretation of American fiction from Henry James through the principal modernists—Fitzgerald, Stein, Wyndham Lewis, Faulkner, and others. Lectures will set the appropri-
ate context.

**LTEN 175A. New American Fiction—Post-World War II to the Present (4)**
Reading and interpretation of American fiction from the mid-1940s to the present. Lectures will set the appropri-
ate context in sociocultural and literary history. May be repeated for credit when topics vary.

**LTEN 175B. New American Poetry—Post-World War II to the Present (4)**
Reading and interpretation of American poets whose work has made its major impact since the last war, for instance Charles Olson, Robert Creeley, Denise Levertov, Adrienne Rich, Allen Ginsberg, Frank O’Hara, and John Ashbery. Lectures will set the appropriate context in sociocultural and literary history. May be repeated for credit as topics vary.

**LTEN 176. Major American Writers (4)**
A study in depth of the works of major American writers. May be repeated for credit as topics vary.

**LTEN 177. California Literature (4)**
Reading and interpretation of such novelists as London, Norris, Steinbeck, West, and Didion and such poets as Jeffers, Rexroth, Erovn, Duncan, and Snyder. May be repeated for credit as topics vary.

**LTEN 178. Comparative Ethnic Literature (4)**
A lecture-discussion course that juxtaposes the experience of two or more U.S. ethnic groups and examines their rela-
tionship with the dominant culture. Students will analyze a variety of texts representing the history of ethnicity in this country. Topics will vary.

**LTEN 180. Chicano Literature in English (4)**
Introduction to the literature in English by the Chicano population, the men and women of Mexican descent who live and write in the United States. Primary focus on the contemporary period.

**LTEN 181. Asian American Literature (4)**
Selected topics in the lives and women of Asian descent who live and write in the United States. Repeatable for credit when topics vary.

**LTEN 183. African American Prose (4)**
Analysis and discussion of the novel, the personal narrative, and other prose genres, with particular emphasis on the developing characteristics of African American narrative and the cultural and social circumstances that influence their development.

**LTEN 184. African American Poetry (4)**
Close reading and analysis of selected works of African American poetry as they reflect styles and themes that recur in the literature.

**LTEN 185. Themes in African American Literature (4)**
An intensive examination of a characteristic theme, spec-
ial issue, or period in African American literature. May be repeated for credit when topics vary.

**LTEN 186. Literature of the Harlem Renaissance (4)**
The Harlem Renaissance (1917–33) focuses on the emer-
gence of the “New Negro” and the impact of this concept on black literature, art, and music. Writers studied include Claude McKay, Zora N. Hurston, and Langston Hughes. Special emphasis on new themes and forms.

Explores roles of music as a traditional form of communica-
tion among Africans, Afro-Americans, and West-Indians. Special attention given to poetry of black music, includ-
ing blues and other forms of vocal music expressive of contestatory political attitudes.

**LTEN 188. Contemporary Caribbean Literature (4)**
This course will focus on contemporary literature of the English-speaking Caribbean. The parallels and contrasts of this Third World literature with those of the Spanish- and French-speaking Caribbean will also be explored.

**LTEN 189. Twentieth-Century Postcolonial Literatures (4)**
The impact of British colonialism, national independence movements, postcolonial cultural trends, and women’s movements on the global production of literary texts in English. Course is organized by topic or geographical/ historical location. May be repeated for credit when topics vary.

**LTEN 190. Seminars (4)**
These seminars are devoted to a variety of special top-
ics, including the works of single authors, genre studies, problems in literary history, relations between literature and the history of ideas, literary criticism, literature and society, and the like. The student may enroll in more than one section in a single quarter.

**LTEN 192. Senior Seminar in Literatures in English (1)**
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **PREREQUISITE:** department stamp and/or consent of instructor.

**LTEN 196. Honors Thesis (4)**
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191L, Oral exam. **PREREQUISITES:** department approval.

**LTEN 198. Directed Group Study (4)**
Research seminars and research, under the direction of a member of the faculty. May be repeated for credit three times. **(P/NP grades only.) PREREQUISITE:** department approval.

**LTEN 199. Special Studies (2 or 4)**
Tutorial; individual guided reading in an area not normally covered in courses. May be repeated for credit three times. **(P/NP grades only.) PREREQUISITE:** department approval.

**GRADUATE**

**PREREQUISITE:** graduate standing or consent of instructor.

**LTEN 214. Topics in Middle English Literature (4)**
Consideration of one or more major figures, texts, or trends in Middle English literature. May be repeated for credit as topics vary.

**LTEN 222. Elizabethan Studies (4)**
Selected topics in the study of literary, dramatic, and other Elizabethan cultural texts. Emphasis will be upon articulations among a range of discourses, practices, and institutions. May be repeated for credit when topics vary.

**LTEN 224. Seventeenth-Century English Literature (4)**
Consideration of one or more figures, texts, or trends in seventeenth-century English literature, including the meta-
physical poets and Jacobean drama. May be repeated for credit as topics vary.

**LTEN 226. Shakespeare (4)**
Shakespeare’s plays in relation to the Elizabethan back-
ground: selected major texts. May be repeated for credit as topics vary.

**LTEN 231. Restoration and Eighteenth-Century English Literature (4)**
Consideration of one or more figures, texts, or trends in Restoration and eighteenth-century English literature,
including Dryden, Pope, Swift, the early novel, satire. May be repeated for credit as topics vary.

LTEN 241. English Literature of the Romantic Period (4)
A study of the major poetry and related prose of early nineteenth-century literature. May be repeated for credit as topics vary.

LTEN 243. Early American Literature and Culture (4)
Consideration of one or more major figures, texts, or trends in Colonial and/or Revolutionary period American Literature, in particular, the relationship between literature and culture.

LTEN 245. Nineteenth-Century American Studies (4)
Consideration of some of the principal writers and movements in American literature. May be repeated for credit as topics vary.

LTEN 246. Victorian Literature (4)
Consideration of one or more major figures, texts, or trends in the Victorian period. May be repeated for credit as topics vary.

LTEN 252. Studies in Modern American Literature and Culture (4)
Consideration of one or more major figures, texts, or trends in American literature, in particular the relationship between literature and culture. May be repeated for credit as topics vary.

LTEN 254. Topics in U.S. Minority Literatures and Cultures (4)
Consideration of one or more topics in “minority” traditions of cultural production in the United States, with an emphasis on the relationship among history, politics, and culture. May be repeated for credit as topics vary.

LTEN 255. Studies in Anglo-American Modernism (4)
A seminar on general topics relating to the study of modernism, utilizing cross-cultural, transnational approaches. Although individual literary texts may provide the focus, this seminar will investigate theoretical and methodological issues relating to modernist cultural studies in general.

LTEN 256. Postcolonial Discourses (4)
A survey of selected responses to imperialism and colonialism as presented in cultural texts produced by colonized or once-colonized peoples. Related issues to be examined: gender dynamics, class, representing others, mimicry, language, cultural theory, and the politics of literary genres. May be repeated for credit when topics vary.

LTEN 258. Studies in Anglophone African and/or African Diaspora Literature and Culture (4)
Consideration of one or more major figures, texts, performances or trends in literature and culture of Africa and/or the African Diaspora. Various theories and methodologies may be applied to the representations being studied. Repeatable for credit as topics vary.

LTEN 259. Transnational Literary Studies (4)
New developments in the study of literature in diverse frameworks, including but not limited to: globalization, queer theory, diaspora studies, environmentalism, world literature systems, international literary awards, transnational feminism, literary markets, human rights discourse, and translation studies.

LTEN 271. Genres in English (4)
Consideration of one or more genres present in English and/or American literature; for instance, the Bildungsroman, landscape poetry, comedy, satire, the familiar essay. May be repeated for credit when topics vary.

LTEN 272. Cultural Traditions in English (4)
The study of writing produced over an extended period of time by members of an identifiable cultural formation as defined, e.g., by political/social ideology, class, religion, ethnicity, or sexual preference. May be repeated for credit when topics vary.

LTEN 281. Practicum in Literary Research and Criticism (4)
This course will focus on strategies for framing, organizing, and drafting projects in literary research. Students will study and apply various forms of literary methodology and will learn about recent developments in bibliographies, textual editing, and research. May be repeated twice for credit as topics vary.

LTEN 295. M.A. Thesis (1-8)
Research for the master’s thesis. Opened for repeated registration. PREREQUISITE: must be enrolled in M.A. program.

LTEN 296. Research Practicum (1-12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTEN 297. Directed Studies: Reading Course (1-12)
This course may be designed according to an individual student’s needs when seminar offerings do not cover subjects of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTEN 298. Special Projects: Writing Course (1-12)
Similar to a 297, but a paper is required. Papers are usually on subject not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LTEN 299. Dissertation (1-12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

LITERATURES IN FRENCH

LOWER-DIVISION

Language and Literature Courses

Ordinarily, students entering the French literature program elect one of the following sequences: LTFR 2A, 2B, and 2C; or 2A, 2B, and 50.

LTFR 2A. Intermediate French I (5)
First course in a three-quarter sequence designed to prepare students for upper-division French courses. The course is taught entirely in French and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. Basic techniques of literary analysis. PREREQUISITES: LTFR 1C/CX or its equivalent, score of 3 on French language AP exam or consent of instructor.

LTFR 2B. Intermediate French II (5)
Second course in a three-quarter sequence designed to prepare students for upper-division French courses. The course is taught entirely in French and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. Basic techniques of literary analysis. PREREQUISITES: LTFR 2A or its equivalent, score of 4 on French language or score of 3 on French literature AP exams or consent of instructor.

LTFR 2C. Intermediate French III: Composition and Cultural Contexts (4)
Designed to improve writing and conversational skills. Develop written expression in terms of organization or ideas, structure, vocabulary, Grammar review. Discussions of Contemporary novel and film. May be taken in lieu of LTFR 50 as a prerequisite for upper-division courses.

PREREQUISITES: LTFR 2B or its equivalent, score of 5 on French language or score of 4 on French literature AP exams or consent of instructor.

LTFR 21. Conversation Workshop I (1)
Designed to allow advanced students to practice and develop their oral skills by expanding the vocabulary necessary to discuss abstract ideas and by building up the confidence necessary to participate in literature classes. PREREQUISITES: LTFR 1C/CX or 1D/1DX or LTFR 2A or LTFR 2B or LTFR 2C or LTFR 50 or consent of instructor.

LTFR 31. Conversation Workshop II (1)
A one-credit course to allow advanced students to develop and maintain oral skills at an advanced level by discussing current cultural issues of the francophone world. PREREQUISITE: LTFR 2B or consent of instructor.

LTFR 50. Intermediate French III: Textual Analysis (4)
Third course in a three-quarter sequence designed to prepare students for upper-division French courses. The course is taught entirely in French and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. It also introduces the student to basic techniques of literary analysis.

PREREQUISITES: LTFR 28 or its equivalent, score of 5 on French language AP exam, or consent of instructor.

LTFR 60A. French for Reading Knowledge I (2)
A course designed for undergraduate and graduate students interested in developing reading skills only. No previous knowledge of French required. Texts are taken primarily from the humanities and social sciences.

LTFR 60B. French for Reading Knowledge II (2)
A continuation of the course for undergraduate and graduate students interested in developing reading skills only. No previous course work in French required, though recommended. Texts are taken primarily from the humanities and social sciences.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. All upper-division courses are taught in French. Additional prerequisites may be specified below.

Students are strongly encouraged to take LTFR 115 and 116 before enrolling in other upper-division French literature courses.

LTFR 115. Themes in Intellectual and Literary History (4)
Course in a two-quarter sequence designed as an introduction to French literature and literary history. Each quarter will center on a specific theme or problem. It is recommended that majors whose primary literature is French take this sequence as early as possible. PREREQUISITE: LTFR 50 or LTFR 2C.

LTFR 116. Themes in Intellectual and Literary History (4)
Course in a two-quarter sequence designed as an introduction to French literature and literary history. Each quarter will center on a specific theme or problem. It is recommended that majors whose primary literature is French take this sequence as early as possible. PREREQUISITE: LTFR 50 or LTFR 2C.

LTFR 121. The Middle Ages and the Renaissance (4)
Major literary works of the Middle Ages and Renaissance as seen against the historical and intellectual background of the period. Medieval texts in modern French translation. May be repeated for credit as topics vary. PREREQUISITE: LTFR 115 or 116.

LTFR 123. Eighteenth Century (4)
Major literary works and problems of the eighteenth century. May be repeated for credit as topics vary. PREREQUISITE: LTFR 115 or 116.

LTFR 124. Nineteenth Century (4)
Major literary works of the nineteenth century. May be repeated for credit as topics vary. PREREQUISITE: LTFR 115 or 116.

LTFR 125. Twentieth Century (4)
Major literary works and problems of the twentieth century. May be repeated for credit as topics vary. PREREQUISITE: LTFR 115 or 116.

LTFR 141. Topics in Literatures in French (4)
Examines one or more periods, themes, authors, and approaches in French literature. Topics will vary with instructor. May be repeated for credit. PREREQUISITE: LTFR 115 or 116.

LTFR 142. Topics in Literary Genres in French (4)
An examination of one or more major or minor genres of French literature: for example, drama, novel, poetry, satire, prose poem, essay. PREREQUISITE: LTFR 115 or 116.
LITERATURE

LTFR 143. Topics in Major Authors in French (4)
A study in depth of the works of a major French writer. Recommended for students whose primary literature is French. May be repeated for credit as topics vary. PREREQUISITE: LTFR 115 or 116.

LTFR 144. Topics in Literature and Ideas in French (4)
This course will center on writers or movements of international literary, cultural, or ideological significance. May be repeated for credit when topics vary. PREREQUISITE: LTFR 115 or 116.

LTFR 145. Contemporary Thought in French (4)
Presentation of major currents and debates in contemporary philosophy, linguistics, psychoanalysis, anthropology, and social and feminist theory that have led to major changes in French culture and literary studies. PREREQUISITE: LTFR 115 or 116.

LTFR 164. Topics in Modern French Culture (4)
A course on changing topics such as France during the 60s, contemporary social and cultural structures (the school system, economy, political parties), myths of America in France, etc. May be repeated for credit as topics vary. PREREQUISITE: LTFR 115 or 116.

LTFR 170. Topics in French Film (4)
May include close analysis of films made in the French-speaking world from 1895 to the present; study of film theory, history, cultural contexts of films’ emergence and changing contexts of reception; particular movements, styles, or individual directors’ work. PREREQUISITE: LTFR 115 or 116.

LTFR 192. Senior Seminar in Literatures in French (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITE: department stamp and/or consent of instructor.

LTFR 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral exam. PREREQUISITE: department approval.

LTFR 198. Directed Group Study (4)
Research seminars and research, under the direction of a member of the faculty. (P/NP grades only.) PREREQUISITE: department approval.

LTFR 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of French literature not normally covered in courses. (P/NP grades only.) PREREQUISITE: department approval.

GRADUATE
PREREQUISITE: graduate standing or consent of instructor.

LTFR 240. Topics in French Literature (4)
An examination of one or more major topics in French literature. May be repeated for credit when topics vary.

LTFR 295. M.A. Thesis (1-8)
Research for the master’s thesis. Opened for repeated registration up to eight units. PREREQUISITE: must be enrolled in M.A. program.

LTFR 296. Research Practicum (1-12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTFR 297. Directed Studies: Reading Course (1-12)
This course may be designed according to an individual student’s needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTFR 298. Special Projects: Writing Course (1-12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-semester requirement of the doctoral program. Repeatable for credit.

LTFR 299. Dissertation (1-12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

LITERATURES IN GERMAN

LOWER-DIVISION
Language and Literature Courses

LTGM 2A. Intermediate German I (5)
LTGM 2A follows the basic language sequence of the Department of Linguistics and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. The course includes grammar review and class discussion of reading and audio-visual materials. Specifically, the course prepares students for LITGM 2B and 2C. PREREQUISITE: LTGM 1C/1CX or its equivalent or score of 3 on AP German language exam or consent of instructor.

LTGM 2B. Intermediate German II (5)
LTGM 2B is a continuation of LTGM 2A for those students who intend to practice their skills in reading, listening comprehension, and writing on a more advanced level. The literary texts are supplemented by readings from other disciplines as well as audio-visual materials. PREREQUISITE: LTGM 2A or score of 4 on AP German language exam or consent of instructor.

LTGM 2C. Intermediate German III (4)
A course designed for students who wish to improve their ability to speak and write German. Students will read and discuss a variety of texts and films, and complete the grammar review begun in 2A. 2C emphasizes speaking, writing, and critical thinking, and prepares students for upper-division course work in German. PREREQUISITE: LTGM 2B or equivalent score of 5 on AP German language exam or consent of instructor.

LTGM 60A. German for Reading Knowledge I (2)
A program for graduate and undergraduate students interested in developing reading skills only. No previous knowledge of German required. Texts are taken primarily from the humanities and social sciences, and include selections from publishers' catalogs, scholarly articles, and books.

LTGM 60B. German for Reading Knowledge II (2)
A continuation of the program for graduate and undergraduate students interested in developing reading skills only. No previous knowledge of German required, though recommended. Texts are taken primarily from the humanities and social sciences and include selections from publishers' catalogs, scholarly articles, and books.

UPPER-DIVISION
PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTGM 100. German Studies I: Aesthetic Cultures (4)
This course offers an overview of German aesthetic culture in its various forms (literature, film, art, music, and architecture) and methods of analysis. Materials will explore the diversity of aesthetic production from the eighteenth century to the present.

LTGM 101. German Studies II: National Identities (4)
This course offers an overview of issues in contemporary and historical German cultures. How has national identity been constructed in the past? What does it mean to be a German in the new Europe? Materials include fiction, historical documents, films, and the Internet.

LTGM 123. Eighteenth-Century German Literature (4)
Major literary works as seen against the historical and intellectual background of the period. May be repeated for credit when topics vary.

LTGM 126. Twentieth-Century German Literature (4)
Major literary works, authors, or movements of the twentieth century. May be repeated for credit as topics vary.

LTGM 130. German Literary Prose (4)
The development of major forms and modes of German literary prose. May be repeated for credit as topics vary.

LTGM 131. German Dramatic Literature (4)
The development of the drama in German. May be repeated for credit as topics vary.

LTGM 132. German Poetry (4)
The development of major forms and modes of German verse. May be repeated for credit as topics vary.

LTGM 190. Seminars in German Culture (4)
These seminars are devoted to a variety of special topics, including the works of single authors, genre studies, problems in literary history, relations between literature and the history of ideas, literary criticism, literature and society, and the like. May be repeated for credit as topics vary.

LTGM 192. Senior Seminar in Literatures in German (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITE: department stamp and/or consent of instructor.

LTGM 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral exam. PREREQUISITE: department approval.

LTGM 198. Directed Group Study (4)
Research seminars and research, under the direction of a member of the faculty. May be repeated for credit. (P/NP grades only.) PREREQUISITE: department approval.

LTGM 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of German literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) PREREQUISITE: department approval.

GRADUATE
PREREQUISITE: graduate standing or consent of instructor.

LTGM 242. Nineteenth-Century German Literature (4)
Consideration of one or more major figures, texts, or trends in nineteenth-century German literature. Topic varies. May be repeated for credit.

LTGM 272. Genres, Trends, and Forms (4)
Seminars on literary genres, trends, movements, schools, and on aspects of literary forms and structures in any given era or over a certain period of time. May be repeated for credit as topics vary.

LTGM 295. M.A. Thesis (1)
Research for the master's thesis. Opened for repeated registration up to eight units. PREREQUISITE: must be enrolled in M.A. program.

LTGM 296. Research Practicum (1-12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTGM 297. Directed Studies: Reading Course (1-12)
This course may be designed according to an individual student’s needs when seminar offerings do not cover subjects,
genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTGM 298. Special Projects: Writing Course (1-12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LTGM 299. Dissertation (1-12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

GREEK LITERATURE
(See also listings under Classical Studies)

LOWER-DIVISION

LTGK 1. Beginning Greek (4)
Study of ancient Greek, including grammar and reading.

LTGK 2. Intermediate Greek I (4)
Continuation of study of ancient Greek, including grammar and reading. PREREQUISITE: LTGK 1 or equivalent.

LTGK 3. Intermediate Greek II (4)
Continuation of study of ancient Greek, including grammar and reading of texts. PREREQUISITE: LTGK 1 and 2 or equivalent.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTGK 101. Greek Composition (4)
Greek prose composition. Corequisites: student must be concurrently enrolled in upper-division Literature/Greek course numbered 110 or above.

LTGK 110. Archaic Period (4)
Readings, in Greek, of texts from the archaic period. May be repeated for credit as topics vary. PREREQUISITE: LTGK 1, 2 or 3, or equivalent.

LTGK 112. Homer (4)
Readings from the works of Homer. PREREQUISITES: LTGK 1, 2 or 3, or equivalent.

LTGK 113. Classical Period I (4)
Readings, in Greek, of texts from the fifth and fourth centuries B.C. May be repeated for credit as topics vary. PREREQUISITE: LTGK 1, 2 or 3, or equivalent.

LTGK 118. Hellenistic Period (4)
Reading, in Greek, of texts from Hellenistic period. PREREQUISITE: LTGK 1, 2 or 3, or equivalent.

LTGK 120. Topics in New Testament Greek (4)
Readings, in Greek, of the Greek New Testament. May be repeated for credit as topics vary. PREREQUISITES: LTGK 1, 2 or 3, or equivalent.

LTGK 130. Tragedy (4)
Readings, in Greek, of one or more of the works of the classical tragedians Aeschylus, Sophocles, and Euripides. May be repeated for credit as topics vary. PREREQUISITE: LTGK 1, 2 or 3, or equivalent.

LTGK 131. Comedy (4)
Readings, in Greek, of one or more of the works of Aristophanes. May be repeated for credit as topics vary. PREREQUISITE: LTGK 1, 2 or 3, or equivalent.

LTGK 132. History (4)
Readings, in Greek, in the works of the ancient historians, including Herodotus, Thucydides, Xenophon, and others. May be repeated for credit as topics vary. PREREQUISITE: LTGK 1, 2 or 3, or equivalent.

LTGK 133. Prose (4)
Readings, in Greek, in the works of ancient prose writers. May be repeated for credit as topics vary. PREREQUISITES: LTGK 1, 2 or 3, or equivalent.

LTGK 135. Lyric Poetry (4)
Readings, in Greek, of the works of the ancient lyric poets. May be repeated for credit as topics vary. PREREQUISITES: LTGK 1, 2, or 3, or equivalent.

LTGK 192. Senior Seminar in Literatures in Greek (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Seminar seniors may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITE: department stamp and/or consent of instructor.

LTGK 198. Directed Group Study (4)
Directed group study in areas of Greek literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) PREREQUISITE: department approval.

PREREQUISITE: graduate standing or consent of instructor.

Graduate

PREREQUISITE: graduate standing or consent of instructor.

LTGK 297. Directed Studies (1-12)
Guided and supervised reading in a broad area of Greek literature. Offered for repeated registration.

LTGK 298. Special Projects (4)
Treatment of a special topic in Greek literature. Offered for repeated registration.

HEBREW LITERATURE

Please see Near Eastern Literatures under Literatures of the World.

LITERATURES IN ITALIAN

LOWER-DIVISION

(See Department of Linguistics for other course offerings in first-year Italian.)

LITT 1A. The Language of Italian Culture I (4)
A beginning course in Italian language based on cultural texts: a short mystery, short movies, and pop music lyrics. An integrated cultural approach to the study of language that emphasizes conversation, grammar, and dramatic flair. No prior study of Italian required.

LITT 1B. The Language of Italian Culture II (4)
A continued study of the elements of Italian conversation and grammar based on cultural texts: an opera libretto, a short mystery, short movies. PREREQUISITE: LITT 1A or consent of instructor.

LITT 1C. The Language of Italian Culture III (4)
Further study of Italian conversation and grammar based on cultural texts: a short novel, folk music lyrics. Preparation for the language sequence. PREREQUISITE: LITT 1B or consent of instructor.

LITT 2A. Intermediate Italian I (5)
A second-year course in Italian language and literature. Conversation, composition, grammar review, and an introduction to literary and nonliterary texts. PREREQUISITE: LITT 1C or LITT 1C/1CX or its equivalent or a score of 3 on AP Italian Language and Culture Exam or placement result of 3 or 4 on the Language Placement Exam–Italian or consent of instructor.

LITT 2B. Intermediate Italian II (5)
Continuation of second-year Italian language and literature. Reading, writing, conversation, grammar review, and an introduction to literary genres and contemporary Italian culture and society. PREREQUISITE: LITT 2A or its equivalent, or consent of instructor, or a score of 4 on the AP Italian Language and Culture exam.

LITT 50. Advanced Italian (4)
This course constitutes the sixth and final quarter of the Italian language sequence. It offers an intensive study of Italian grammar, drills in conversation and composition, and readings in modern Italian literature. PREREQUISITE: LITT 2A and 2B, or consent of instructor.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LITT 100. Introduction to Literatures in Italian (4)
Reading and discussion of selections from representative authors. Review of grammar as needed. PREREQUISITE: LITT 50 or its equivalent, or consent of instructor, or a score of 5 on the AP Italian Language and Culture exam.

LITT 110. Italian Literature (4)
Topics in Italian literature: regional, historic, thematic. Texts will be read in Italian. May be repeated for credit when topics vary. PREREQUISITE: LITT 100.

LITT 113. Love, War, and Conquest in the Italian Renaissance (4)
A critical reading of Italian Renaissance texts with special attention to those themes, forms, and ideological conflicts still operative in today's culture. May be repeated for credit when topics vary.

LITT 115. Medieval Studies (4)
Studies in medieval culture and thought with focus on one of the "three crowns" of Italian literature: Dante, Boccaccio, or Petrarcha. May be repeated for credit when course content varies.

LITT 122. Studies in Modern Italian Culture (4)
Politics, literature, and cultural issues of twentieth-century Italy. May be repeated for credit when topics vary. PREREQUISITE: LITT 50.

LITT 137. Studies in Modern Italian Prose (4)
A study of the chief modern Italian prosatori, including D'Annunzio, Calvino, Pavese, Pasolini, etc.

LITT 143. Major Italian Authors (4)
A study in depth of the works of a major Italian author. May be repeated for credit when topics vary. PREREQUISITE: LITT 100 or permission of instructor.

LITT 161. Advanced Stylistics and Conversation (4)
Analysis of Italian essays, journalism, literature. Intensive practice in writing and Italian conversation. PREREQUISITE: LITT 100 or consent of instructor.

LITT 192. Senior Seminar in Literatures in Italian (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITE: department stamp and/or consent of instructor.

LITT 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the literature honors program and who have completed LITW 191. Oral examination. PREREQUISITE: department approval.

LITT 198. Directed Group Study (4)
Directed group study in areas of Italian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) PREREQUISITE: department approval.

LITT 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of Italian literature not normally covered in courses. May be repeated...
KOREAN LITERATURE

LOWER-DIVISION

LTKO 1A. Beginning Korean: First Year I (5)
Students develop beginning-level skills in the Korean language, beginning with an introduction to the writing and sound system. The remainder of the course will focus on basic sentence structures and expressions. PREREQUISITE: placement test required.

LTKO 1B. Beginning Korean: First Year II (5)
Students develop beginning-level skills in the Korean language, beginning with an introduction to the writing and sound system. The remainder of the course will focus on basic sentence structures and expressions. PREREQUISITE: LTKO 1A.

LTKO 1C. Beginning Korean: First Year III (5)
Students develop intermediate-level skills in the Korean language. Upon completion of this course, students are expected to have good command of Korean in various daily conversational situations. PREREQUISITE: LTKO 1C or placement test for 2A; 2A is prerequisite for 2B; 2B for 2C.

LTKO 2A-8-C. Intermediate Korean: Second Year I-II-III (5-5-5)
This course will help students develop intermediate-level skills in the Korean language. Upon completion of this course, students are expected to have good command of Korean in various formal settings and to understand daily news broadcasts/newspapers. PREREQUISITE: LTKO 2C or placement test and consent of instructor.

LTKO 50. Intermediate Readings and Composition (4)
Designed to enhance reading and writing skills. We will read and discuss a variety of materials, including newspaper and magazine articles, short essays, and prose fiction. Writing exercises will stress improving students' ability to express themselves as well as their critical responses to reading. PREREQUISITE: LTKO 2C and/or recommendation of instructor.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTKO 100. Readings in Korean Literature and Culture (4)
Majors issues in modern Korean history from colonial period to present, such as Japanese colonization, division, U.S.-Soviet occupation, the Korean War, and authoritarian rule, industrialization, labor/agrarian movement and cultural/social issues, emerging within the globalized economy in South Korea. PREREQUISITE: reading knowledge of Korean (two years college-level Korean or equivalent).
LITERATURE IN SPANISH

LOWER-DIVISION

Language and Literature Courses

Students entering the Spanish language/literature program must have completed one year of college-level Spanish (Linguistics/Spansih 1C/1CX) or its equivalent at another institution or have the consent of the instructor. Ordinarily, students take LTSP 2A, 2B, 2C, and one or more courses from the 50 sequence. Native speakers are encouraged to take LTSP 2D, 2E.

LTSP 2A. Intermediate Spanish I: Foundations (5)
Course is taught in Spanish, emphasizing the development of reading ability, listening comprehension, and writing skills. It includes grammar review, weekly compositions and class discussions. Successful completion of LTSP 2A satisfies the requirement for language proficiency in Revelle College. Prerequisite: completion of LISP 1C/1CX or LISP 1D/DX, or the equivalent or score of 3 on AP Spanish Language Exam or placement result of 3 or 4 on the Language Placement Exam—Spanish, or consent of instructor.

LTSP 2B. Intermediate Spanish II: Readings and Composition (5)
Review of major points of grammar with emphasis on critical reading and interpretation of Spanish texts through class discussions, vocabulary development, and written compositions. It is a continuation of LTSP 2A. Prerequisites: LTSP 2A or score of 4 on AP Spanish language or 3 on AP Spanish literature exams or consent of instructor.

LTSP 2C. Intermediate Spanish III: Cultural Topics and Composition (4)
Continuation of LTSP 2B, with special emphasis in writing and translation. It includes discussion of cultural topics as well as grammar review and composition, further developing the ability to read articles, essays, and longer pieces of fiction or poetry. Prerequisites: LTSP 2B or equivalent or score of 5 on AP Spanish language or 4 on AP Spanish literature exams or consent of instructor.

LTSP 2D. Intermediate/Advanced Spanish: Spanish for Bilingual Speakers (4)
Spanish for native speakers. Designed for bilingual students seeking to become biliterate. Reading and writing skills stress the Spanish language development of written expression and problems of grammar and orthography. Prepares native speakers with little or no formal training in Spanish for more advanced courses. Prerequisite: native speaking ability and/or recommendation of instructor.

LTSP 2E. Advanced Readings and Composition for Bilingual Speakers (4)
Second course in a sequence designed for bilingual students seeking to become biliterate. Special emphasis given to improvement of written expression, grammar, and orthography. Prepares bilingual students with little or no formal training in Spanish for more advanced course work. Prerequisites: LTSP 2D and/or recommendation of instructor.

LTSP 21. Conversation Workshop I (1)
Allows students with a basic grounding in Spanish to discuss a variety of topics related to literary and cultural issues. Vocabulary development, use of idiomatic expression, and advancement of oral proficiency in Spanish. Attendance may be taken as an adjunct to lower-division LTSP courses. Recommended for students planning to study abroad. Prerequisites: LISP 1C/1CX or LISP 1D/DX or LTSP 2A or 2B or 2C or 2D or 2E or 50A or 50B or 50C.

LTSP 31. Conversation Workshop II (1)
Enhances intermediate/advanced students' command of spoken Spanish through debates on literary and cultural issues and the formulation and expression of thoughts in Spanish. May be taken as an adjunct to lower- and upper-division LTSP courses. Recommended for students planning to study abroad. Prerequisites: LISP 1C/1CX or LISP 1D/DX or LTSP 2A or 2B or 2C or 2D or 2E or 50A or 50B or 50C.

LTSP 41. Conversion and Genealogy Workshop (1)
The workshop format of this course allows students to attain a stronger command of skills in matters of Spanish orthography, spelling, punctuation, and accent rules. May be taken as an adjunct to lower- or upper-division LTSP courses. Recommended for students planning to study abroad. Prerequisites: LISP 1C/1CX or LISP 1D/DX or LTSP 2A or 2B or 2C or 2D or 2E or 50A or 50B or 50C.

LTSP 50A. Readings in Peninsular Literature (4)
An introduction to Peninsular literature, this course offers a selection of authors and genres, introducing students to literary analysis through reading extensive texts in Spanish. Two or more quarters of LTSP 50 are suggested before proceeding to upper-division courses. Prerequisite: LTSP 2C or 2D or 2E or equivalent.

LTSP 50B. Readings in Latin American Literature (4)
An introduction to Latin American literature, this course offers a selection of authors and genres, introducing students to literary analysis through reading extensive texts in Spanish. Two or more quarters of LTSP 50 are suggested before proceeding to upper-division courses. Prerequisite: LTSP 2C or 2D or 2E or equivalent.

LTSP 50C. Readings in Latin American Topics (4)
An introduction to major topics in Latin American literature, this course focuses on the literature of a particular region, period, or movement. Introduces students to literary analysis through reading extensive texts in Spanish. Prerequisite: LTSP 2C or 2D or consent of instructor.

LTSP 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

NOTE: As of fall 1992, students must have taken at least one (but preferably two) course(s) in the LTSP 50A-5C sequence with a grade of C– or better before enrolling in upper-division courses. Without fulfillment of this prerequisite, students must obtain the consent of the instructor of the requested course.

LTSP 100. Major Works of the Middle Ages (4)
Major Spanish literary works of the Middle Ages and Renaissance as seen against the historical and intellectual background of this period. Prerequisite: LTSP 50A, 50B, or 50C.

LTSP 107. Literature of the Fifteenth Century (4)
Survey of cultural texts including courtly romances, political poetry, Columbus' letters, and the tragicomedia La Celestina. Issues of gender, blood purity, social estates, and colonialism will be discussed. Repeatable for credit when topics vary. Prerequisite: LTSP 130A or consent of instructor.

LTSP 115. Early Modern Spanish Cultural Production (4)
Study of writing and/or spectacle in Spain in the sixteenth and seventeenth centuries. Close reading of texts and analysis of ideological and historical context. Topics may include the comedia (public theatre), religious drama, poetry, or early narrative forms such as the picarones novel. Repeatable for credit as topics vary. Prerequisite: LTSP 130A.

LTSP 116. Representations of Spanish Colonialism (4)
Analysis of selected materials that represent the cultural and political relationship between Spain and its colonies. Close reading of literary texts and historical documents. Specific periods covered will fall between the origins of empire in the early sixteenth century to the demise of imperial Spain in 1898; topics may include cultural exchanges between Spain and Latin America, the Philippines, or the U.S. Southwest. Repeatable for credit as topics vary. Prerequisite: LTSP 50A.

LTSP 119AB. Cervantes: Teatro y Novelas (4)
Study of Cervantes' innovations in the short narrative form and theatrical production during the late sixteenth and early seventeenth centuries. Special attention to textual structures and ideological elements such as gender, religion, and early modern conceptions of ethnicity, “race,” and nation. This course fulfills the Cervantes requirement for Spanish literature majors. Prerequisites: LTSP 50A and 50B or 50C or consent of instructor.

LTSP 119C. Cervantes: Don Quijote (4)
Close reading of the 1605 and 1615 texts with special attention to the social and cultural background of the early
seventeenth century in Spain. **Prerequisites:** LTSP 50A and either SOB or SOC.

**LTSP 122. The Romantic Movement in Spain (4)**
This course will explore the historical context of the emergence of a Romantic movement in Spain, particularly the links between Romanticism and liberalisms. Major trends in Romantic literature in Spain will be studied in depth. **Prerequisite:** upper-division standing or consent of instructor.

**LTSP 123. Topics in Modern Spanish Culture (4)**
Investigation of selected topics concerning Spanish cultural production after 1800. Topics might focus on a genre (film, popular novel, theater) or on the transformation of a theme or metaphor (nation, feminism, the uncanny). Repeatable for credit as topics vary. **Prerequisite:** LTSP 50A.

**LTSP 125. Spanish Modernisms (4)**
Analysis and discussion of forms, movements, and issues arising in Spanish culture between 1898 and 1936 in relation to the loss of empire, accelerating modernization and new social movements. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50A.

**LTSP 129. Spanish Writing after 1939 (4)**
Analysis and discussion of literary production during and after the Franco dictatorship. May focus on specific genres, sub-periods, or regions. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50A.

**LTSP 130A. Development of Spanish Literature (4)**
An introduction to the major movements and periods of Spanish literary history, centered on close reading of representative texts, but aimed at providing a sense of the scope of Spanish literature and its relation to the course of Spain’s cultural and social history. This course is required of all Spanish literature majors. It is strongly recommended that this course be taken before any other upper-division Spanish (peninsular) literature course. **Prerequisites:** LTSP 50A and either SOB or SOC.

**LTSP 130B. Development of Latin American Literature (4)**
An introduction to major movements and periods in Latin American literature, centered on a study of key works from pre-Columbian to the present time. Texts will be seen within their sociohistorical context and in relation to main artistic trends of the period. This course is required of all Latin American literature majors. It is strongly recommended that this course be taken before any other upper-division Latin American literature course. **Prerequisites:** LTSP 50A and either SOB or SOC.

**LTSP 133. Contemporary Latin American Literature (4)**
A study of the major literary works and problems in Latin America from 1900 to the present as seen against the historical context of the period. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 134. Literature of the Southern Cone (4)**
Study of movements, traditions, key authors, or major trends in Argentina, Paraguay, Uruguay, and Chilean literatures, such as gaucho poetry, the realist novel, modern urban narratives, and the Borges School, etc. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 135A. Mexican Literature before 1910 (4)**
Explores the relationships among cultural production, politics, and societal changes in Mexico before the 1910 Revolution, specifically the roles of intellectuals and popular culture in nation-building and modernization. Readings may include didactic literature and historiographic writings, forms of popular discourse, as well as novels and poetry. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 135B. Modern Mexican Literature (4)**
Study of popular novels, movements, traditions, key authors, or major trends in modern Mexican literature. May be repeated for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 136. Andean Literatures (4)**
Study of movements, traditions, key authors, or major trends in Peruvian, Ecuadorian, and Bolivian literatures, such as indigenismo, urban narrative, and the works of authors such as Vallejo, Icaza, Arguedas, Vargas Llosa. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 137. Caribbean Literature (4)**
Study of movements, traditions, key authors, or major trends in Caribbean literature in Spanish, such as the romantic movement, the literature of independence, the essay tradition, Afro-Antillean literature, the historical novel. May be repeated for credit as topics vary.

**LTSP 138. Central American Literature (4)**
Study of movements, traditions, key authors, or major trends in the literatures of Guatemala, El Salvador, Nicaragua, Honduras, Costa Rica, and Panama, such as the anti-imperialist novel, indigenismo, guerrilla poetry, and testimonio. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 140. Latin American Novel (4)**
A study in depth of selected novels of Latin America. May be organized around a specific theme or idea which is traced in its development through the narratives. Course may be repeated for credit when topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 141. Latin American Poetry (4)**
A critical study of some of the major poets of Latin America, focusing on the poet’s central themes, the evolution of poetic style, and the significance of the poetry to the historical context. May be repeated for credit. **Prerequisite:** LTSP 50B or 50C.

**LTSP 142. Latin American Short Story (4)**
Readings and interpretation of the Latin American short story. Focus is primarily nineteenth and/or twentieth-century. May be repeated for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 150A. Early Latin American Literature (4)**
Cross-disciplinary study of nineteenth- and early twentieth-century Latin American literature, folklore, music, testimonio, or other cultural practices. Specific periods covered will fall between the immediate aftermath of the Treaty of Guadalupe Hidalgo to the Cuban revolution. Repeatable for credit when topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 150B. Contemporary Chicano/a/Latino/a Cultural Production: 1960 to Present (4)**
Cross-disciplinary study of late twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, film, or other cultural practices. Specific periods covered will fall between the Kennedy years to the era of neoliberalism and the creation of “Hispanic” or Latino identities. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 151. Topics in Chicano/a-Latino/a Cultures (4)**
Cross-disciplinary study of late twentieth-century Chicano/a-Latino/a literature, visual and performing arts, film, or other cultural practices. Representative areas of study are social movements, revolution, immigration, globalization, gender and sexuality, cultures of the U.S.-Mexico border, and Chicana/o-Mexican/a literary relations. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 153. Chicano/a and Latino/a Poetry (4)**
A study of themes and issues in the poetic production of Latino communities in the U.S. Every effort will be made to select texts in Spanish but some may be bilingual. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 154. Latino/a and Chicano/a Literature (4)**
This course will study the representation of a variety of social issues (immigration, racism, class differences, violence, inter/intra-ethnic relations, etc.) in works written in Spanish by Latino/a and Chicano/a writers. Repeatable for credit as topics, texts, and historical periods vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 160. Spanish Phonetics (4)**
A comparative study of the English and Spanish phonetic systems. Includes a study of the organs of articulation, manner of articulation stress and intonation patterns, as well as dialectal variations of Spanish. **Prerequisites:** upper-division standing, LTSP 50A or 50B or SOC, or consent of instructor.

**LTSP 162. Spanish Language in the United States (4)**
A sociolinguistic study of the popular dialects in the U.S.A. and their relation to other Latin American dialects. The course will cover phonological and syntactic differences between the dialects as well as the influence of English on the Southwest dialects.

**LTSP 166. Creative Writing (4)**
A workshop designed to foster and encourage writing in Spanish of students working on short forms of fiction. The workshop will include discussions of techniques and intense writing. **Prerequisites:** completion of LTSP 50A-B-C or consent of instructor.

**LTSP 170. Contemporary Theories of Cultural Production (4)**
Selected readings in recent cultural and literary theory. Students will be exposed to a variety of methodologies drawn from the Latin American, European, and U.S. traditions. Final project consists of a practical “application” of a method or methods to a specific cultural object. This course is recommended for students who plan to pursue graduate work in literature. **Prerequisite:** LTSP 50A or 50B or SOC.

**LTSP 171. Studies in Peninsular and/or Latin American Literature and Society (4)**
Focuses on the interaction between literary expression and the study of society, covering issues such as the sociology of literature, the historical novel, literature and social change, the writer as the intellectual. May be repeated for credit as topics vary.

**LTSP 172. Indigenista Themes in Latin American Literature (4)**
Study of the literary modes by which nineteenth- and twentieth-century authors have interpreted the themes of indigenous survival and resistance in Latin America, primarily in Mexico and the Andean region. May be repeated for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 173. Problems in Spanish and Latin American Literary History (4)**
Study of the issues involved in understanding the development process of literary expression; the problem of genre; the relation of literature to social institutions; the function of literary influence and tradition; the relation of popular and print cultures. May be repeated for credit as topics vary. **Prerequisite:** LTSP 50A or 50B or SOC.

**LTSP 174. Topics in Culture and Politics (4)**
Study of the relationships between cultural production (literature, film, popular cultures), social change, and political conflict, covering topics such as colonialism, imperialism, modernization, social movements, dictatorship, revolution. Repeatable for credit as topics vary. **Prerequisites:** LTSP 50A or 50B or SOC.

**LTSP 175. Gender, Sexuality, and Culture (4)**
This course will examine issues of gender, sexuality, and culture in Spanish, Latin American, and/or Chicana/a literatures. Repeatable for credit as topics, texts, and historical periods vary. **Prerequisite:** LTSP 50A or 50B or SOC.

**LTSP 176. Literature and Nation (4)**
Study of literature as a means through which the nation has been imagined and as a site of debates over national identity and citizenship. Course materials may focus on Spain and/or Latin America. Repeatable for credit as topics vary. **Prerequisites:** LTSP 50A or 50B or SOC.

**LTSP 177. Literary and Historical Migrations (4)**
This course will focus on a variety of Latin American and/or Chicano/a and inter-national migrations throughout the world and on the literature produced by these exiles or immigrants. Repeatable for credit as topics, texts, and historical periods vary. **Prerequisite:** LTSP 50A or 50B or SOC.

**LTSP 178. Latin American Social Movements (4)**
Course will examine the historical context and cultural production associated with social movements in Latin America. Repeatable for credit as regions, constituencies, and historical periods vary. **Prerequisite:** LTSP 50A or 50B or SOC, or consent of instructor.
LTSP 192. Senior Seminar in Literatures in Spanish (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITES: department stamp and/or consent of instructor.

LTSP 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTLW 191. Oral Exam. PREREQUISITE: department approval.

LTSP 198. Directed Group Study in Spanish Literature (4)
Research seminars and research, under the direction of a member of the faculty. May be repeated for credit three times. (P/NP grades only.) PREREQUISITES: upper-division standing and department approval.

LTSP 199. Special Studies (2 or 4)
Tutorial: individual guided reading in areas of Spanish literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) PREREQUISITES: upper-division standing and department approval.

GRADUATE

PREREQUISITE: graduate standing or consent of instructor.

LTSP 224. Golden Age Studies (4)
Consideration of one or more major figures, texts, trends, or problems in Spanish Golden Age studies. May be repeated for credit as topics vary.

LTSP 252. Topics in Modern Spanish Literature and Culture (4)
Major trends and figures considered in the context of late nineteenth- and twentieth-century Spanish culture. May be repeated for credit as topics vary.

LTSP 258. Spanish American Prose (4)
Consideration of one or more major figures, texts, trends, or problems in Spanish American prose. May be repeated for credit as topics vary.

LTSP 272. Literature and Society Studies (4)
Special topics in practical criticism involving social and economic historical perspectives. May be repeated for credit as topics vary.

LTSP 275. Latin American (st) Literary and Cultural Theories Since the 1960s (4)
A historical survey of late twentieth-century literary and cultural criticism in and about Latin America, focusing on questions of political economy and periodization, cultural heterogeneity and transculturation, gender and sexuality, and the relationships between literary, popular, and mass cultures.

LTSP 295. M.A. Thesis (1-8)
Research for the master's thesis. Open for repeated registration up to eight units. (S/U grades only.)

LTSP 296. Research Practicum (1-12)
Research project to be developed by a small group of students under the direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 course does not count toward the seminar requirement. Repeatable for credit.

LTSP 297. Directed Studies: Reading Course (1-12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

LITERATURE/THEORY

Courses in theory may apply to various literature majors. Please consult your advisor.

Additional theory courses are offered in the various department sections. See quarterly course descriptions in the Department of Literature office, first floor LIT Building.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTH 110. History of Criticism (4)
A critical and interpretive review of some of the major documents in criticism from the classical period to the present time.

LTH 115. Introduction to Critical Theory (4)
A critical review of major contemporary theories of the nature of literature, its sociocultural function, and appropriate modes of evaluation.

LTH 150. Topics in Critical Theory (4)
Selected topics in critical theory such as: a particular mode of literary theory; comparative study of theories of text and image; a problem or theme in the history of theory; issues involved in the relationship between fiction and other discourses (science, law, history, philosophy, music). Repeatable for credit when topics vary.

LTH 198. Directed Group Study (4)
Directed group study, under the guidance of a member of the faculty, in an area not covered in courses currently offered by the department. (P/NP only)

LTH 199. Special Studies (2 or 4)
Individual reading in an area not covered in courses currently offered by the department. (P/NP only)

GRADUATE

PREREQUISITE: graduate standing or consent of instructor.

LTH 200A. Text/Culture/Critical Practice (4)
An introduction to theories and practices of literary and cultural criticism. Topics may vary, but emphasis will be on terminology, methods of readings, modes of interdisciplinary analysis and argumentation, recent debates on questions of theory, history, textual scholarships, etc. PREREQUISITES: registered doctoral student in literature and department stamp.

LTH 200B. Problems in Contemporary Literary Theory (4)
The focus is feminist literary-cultural theories and their relations with major contemporary theoretical discourses (e.g., psychoanalysis, poststructuralism, and various forms of historicism). PREREQUISITES: LTH 200A, registered doctoral student in literature, and department stamp.

LTH 200C. Cultural Perspectives and Cultural Criticism (4)
Literary and cultural relations between the First and Third Worlds, colonialism and neo-colonialism, orality and literacy, construction of ethnicity, formation of canons, and popular culture and the market. PREREQUISITES: LTH 2008, department stamp, and registered doctoral student in literature.

LTH 201. Contemporary Theoretical Debates and Critical Discourses (4)
An introduction to a wide range of theoretical and methodological issues, schools of thought, and interpretative styles in contemporary literary studies. Required of all M.A. students in the Department of Literature, normally in their first quarter in the program. PREREQUISITE: admission to the M.A. program in the Department of Literature or consent of instructor.

LTH 220. Theories of Literary Criticism (4)
Close study of any of the several bodies of literary theory currently applied to literary criticism: psychoanalytic, Marxist, historicist, semiotic, feminist, hermeneutic, reader-response, among others. May be repeated for credit when topics vary.

LTH 296. Research Practicum (1-12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTH 297. Directed Studies: Reading Course (1-12)
This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTH 298. Special Projects: Writing Course (1-12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LTH 299. Dissertation (1-12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

LTH 301. Contemporary African Literatures (4)
Survey of various genres of African and oral literary traditions, oral narrative genres, investigation of proven, riddle, praise poetry, and epic. Development and use of a methodology to analyze aspects of performance, composition, and education in oral traditional systems.

LTH 302. Literature and Film of Modern Africa (4)
This course traces the rise of modern literature in traditional African societies disrupted by the colonial and neocolonial experience. Contemporary films by African and Western artists will provide an additional insight into the complex social self-images of the continent.

LITERATURES OF THE WORLD

AFRICAN LITERATURES

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTA 110. African Oral Literature (4)

LTA 120. Literature and Film of Modern Africa (4)
This course traces the rise of modern literature in traditional African societies disrupted by the colonial and neocolonial experience. Contemporary films by African and Western artists will provide an additional insight into the complex social self-images of the continent.

LITERATURES OF THE AMERICAS

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLS) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

LTAM 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quar-
ter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

LTAM 100. Latino/a Cultures in the United States (4)
An introductory historical and cultural overview of the various Latino/a populations in the U.S. with a study of representative cultural texts.

LTAM 101. Early Latino/a-Chicano/a Cultures: 1848–1960 (4)
A cross-disciplinary study of late nineteenth- and early twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, and other cultural practices. May be repeated for credit as topics vary.

LTAM 102. Contemporary Chicano/a-Latino/a Cultural Production: 1960 to Present (4)
A cross-disciplinary study of late twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, and other cultural practices. May be repeated for credit as topics vary.

LTAM 105. Gender and Sexuality in Latino/a Cultural Production (4)
A study of the construction of differences in gender and sexual orientation in Latino/a-Chicano/a literature and other cultural production with an emphasis on examining various theoretical/ideological perspectives on these issues. May be repeated for credit as topics vary.

LTAM 106. Modern Chicana and Mexican Women Writings (4)
A study of themes and issues in the writings of Chicana and Mexican women with a view toward establishing connections while recognizing national and cultural differences between the two. May be repeated for credit as topics vary.

LTAM 107. Comparative Latino/a and U.S. Ethnic Cultures (4)
A comparative and intersecting study of Latino/a and other U.S. ethnic cultures. Literary texts will be viewed as "windows" into real time and spaces where cultures meet and mix. May be repeated for credit as topics vary.

LTAM 108. Chicano/a and Latino/a Cultures: Intellectual and Political Traditions (4)
The course will center on Chicano/a-Latino/a writers and movements of literary, intellectual, cultural, or political significance. Texts may be read in the original language or in English. May be repeated for credit as topics vary.

LTAM 109. Cultural Production of the Latino/a Diasporas (4)
A study of the cultural production of Latino/a immigrant groups with a focus on the literary representation of homeland, national culture, and the forces that led to migration. May be repeated for credit as topics vary.

LTAM 110. Latin American Literature in Translation (4)
Reading of representative works in Latin American literature with a view to literary analysis (form, theme, meaning), the developmental processes of the literature, and the many contexts: historical, social, cultural. Texts may be read in English. May be repeated for credit as topics vary.

LTAM 111. Comparative Caribbean Discourse (4)
Comparative survey of Caribbean literatures from the Spanish, French, English, and Dutch Caribbean. Literary texts trace historical paradigms including the development of plantation slavery, emancipation, the quest for nationhood, migration, and transnational identities. Films and music may complement discussion.

LTAM 120. Mexican Literature in Translation (4)
Study of popular novels, movements, traditions, key authors, or major trends in modern Mexican literature. Texts may be read in English. May be repeated for credit as topics vary.

LTAM 130. Reading North by South (4)
An analysis of the readings and appropriations of European and U.S. traditions by Latin American, Caribbean, and Filipino writers. The course addresses philosophies, ideologies, and cultural movements and explores the specific literary strategies used by authors in constructing their particular "cosmovision".

LTAM 132. The Dark Side of Enlightenment in Spain, the Americas, and the Philippines (4)
This course deals with the cultural production of Spain, the Latin American and Caribbean, and the U.S. to examine views (both optimistic and pessimistic) on the Enlightenment as a mode of conducting scientific investigation of nature, constituting forms of government, and imagining the future. May be repeated for credit as topics vary.

LTAM 140. Topics in Culture and Politics (4)
Study of the relationships between cultural production (literature, film, popular culture), social change, and political conflict, covering topics such as colonialism, imperialism, modernization, social movements, dictatorship, and revolution. Repeatable for credit when topics vary.

LTAM 192. Senior Seminar in Literatures of the Americas (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITES: department stamp and/or consent of instructor.

EAST ASIAN LITERATURES
PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLs) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

LTEA 100A. Classical Chinese Poetry in Translation (4)
A survey of different genres of traditional Chinese poetry from various periods.

LTEA 100B. Modern Chinese Poetry in Translation (4)
A survey of Chinese poetry written in the vernacular from 1918 to 1949.

LTEA 100C. Contemporary Chinese Poetry in Translation (4)
A survey of Chinese poetic development from 1949 to the present.

LTEA 110A. Classical Chinese Fiction in Translation (4)
The course will focus on a few representative masterpieces of Chinese literature in its classical age, with emphasis on the formal conventions and the social or intellectual presuppositions that are indispensable to their understanding. May be repeated for credit when topics vary.

LTEA 110B. Modern Chinese Fiction in Translation (4)
A survey of representative works of the modern period from 1919 to 1949. May be repeated for credit when topics vary.

LTEA 110C. Contemporary Chinese Fiction in Translation (4)
An introductory survey of representative texts produced after 1949, with particular emphasis on the social, cultural, and political changes. May be repeated for credit when topics vary.

LTEA 120A. Chinese Films (4)
A survey of representative films from different periods of Chinese cinematic development. Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.

LTEA 120B. Taiwan Films (4)
A survey of "New Taiwan Cinema" of the Eighties and Nineties. Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.

LTEA 120C. Hong Kong Films (4)
An examination of representative works of different film genres from Hong Kong. Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.

LTEA 132. Later Japanese Literature in Translation (4)
An introduction to later Japanese (kōgo) literature in translation. Will focus on several "modern" works, placing their form in the historical context. No knowledge of Japanese required. Repeatable for credit when topics vary.

LTEA 136. Special Topics in Japanese Literature (4)
The course will focus on important problematic of literary studies as they relate to Japan (e.g., "feminism," "modernity," "literary mode of production," "Orientalism and nativism"). No knowledge of Japanese required. May be repeated for credit as topics vary.

LTEA 138. Japanese Films (4)
An introduction to Japanese films. Attention given to representative Japanese directors (e.g., Ozu), form (e.g., anime), genre (e.g. feminist revenge horror), or historical context in which films are produced. Priority may be given to Japanese studies majors and literature majors.

LTEA 140. Modern Korean Literature from Colonial Period (4)
A survey of modern Korean prose fiction and poetry from the colonial period. Exploration of major issues such as Japanese colonization, rise of left-wing and right-wing nationalisms, construction of national culture, and relations between tradition and modernity.

LTEA 142. Korean Film, Literature, and Popular Culture (4)
A study of modern Korean society and its major historical issues as represented in film, literature, and other popular cultural media such as TV and music video. We will explore additional issues such as cinematic adaptations of prose fiction, fluid distinctions between popular literature and "serious" literature, and the role of mass media under authoritarian rule.

LTEA 143. Gender and Sexuality in Korean Literature and Culture (4)
A study of constructions of gender and sexuality in pre-modern and modern Korean societies. We will discuss literary works as well as historical and ethnographic works on gender relations, representations of masculinity and femininity, and changing roles of men and women in work and family.

LTEA 144. Korean American Literature and Other Literatures of Korean Diaspora (4)
An examination of the experiences of the Korean diaspora linked to the historical contexts of modern Korea, Japan, the United States, and other countries. We will focus on literature both about Korea and the Korean immigrant experience written in the United States but will also read from and about other Korean diasporic contexts.

LTEA 145. Literature, History, and Colonial and Postcolonial Modernity in Korea (4)
Comparative examination of historiographical and literary representations of major issues such as nationalism, industrialization, class division, gender, and sexuality. Literary re-writings of modern Korean history and recent revisionist historiographical works and trends.

LTEA 151. Readings in Tagalog Literature and Culture I (4)
Courses concentrate on selections of literature, history, and cultural texts (painting, drama, religious artifacts) of the 1896 Spanish revolution and the succeeding U.S. takeover of the Philippines. Intermediate fluency in speaking, reading, and writing Tagalog. Repeatable for credit when topics vary.

LTEA 152A. Topics in Filipino Literature and Culture (Nineteenth Century–World War II) (4)
Surveys the authors, intellectual currents, and cultural politics of Filipino culture from the 1850s to World War II. Topics may include the legacy of Spanish colonialism, European enlightenment, and the emergence of nationalism and socialism, and Filipino literature in English. May be repeated for credit as topics vary.
LITERATURE

LITERATURE 152B. Topics in Filipino Literature and Culture (World War II–Present) (4)
Survey the authors, intellectual currents, and cultural politics of Filipino culture from World War II to the present. Topics may include the Dual Language, the birth of "Filipino-American" literature, the culture of dictatorship, and new approaches to narrative. May be repeated for credit as topics vary.

LITERATURE 198. Directed Group Study (4)
Research seminars and research, under the direction of a faculty member.

LITERATURE 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas not normally covered in courses. (P/NP grades only.)

EUROPEAN AND EURASIAN LITERATURES

LOWER-DIVISION

LITERATURE 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LITERATURE 105. Medieval Studies (4)
Studies in medieval culture and thought with focus on one of the "three crowns" of Italian literature: Dante, Boccaccio, or Petrarch. May be repeated for credit when course content varies.

Topics to be considered include the age of sensibility, enlightenment, neoclassicism. Attention given to historical and cultural contexts.

LITERATURE 110. European Romanticism (4)
Attention given to historical and cultural contexts. Topics to be considered include the concept of nature, the reaction to science, the role of the imagination.

LITERATURE 130. German Literature in Translation (4)
One or more aspects of German literature, such as major authors, the contemporary novel, nineteenth-century poetry, German expressionism. Texts may be read in English or the original language. May be repeated for credit as topics vary.

LITERATURE 137. Seminars in German Culture (4)
These seminars are devoted to a variety of special topics, including the works of single authors, genre studies, problems in literary history, relations between literature and the history of ideas, literary criticism, literature and society, and the like.

LITERATURE 139. Marx/Nietzsche/Freud (4)
Intensive examination of the major ideas of all three writers, with special attention to the literary styles and problematic aspects of their work.

LITERATURE 140. Italian Literature in Translation (4)
One or more periods and authors in Italian literature. Texts will be read in English. May be repeated for credit as topics vary.

LITERATURE 145. Studies in Modern Italian Poetry (4)
Study of the chief modern Italian poets, including Montale, Ungaretti, and Quasimodo, with attention to long, poetic form and contemporary Italian culture. May be repeated for credit as topics vary.

LITERATURE 146. Studies in Modern Italian Prose (4)
A study of the chief modern Italian prosatori including D'Annunzio, Calvino, Pavesi, Pasolini, etc. Repeatable for credit.

LITERATURE 147. Women in Italy (4)
A study of historical, political, and literary texts regarding women and feminism in Italian society.

LITERATURE 150A-B-C. Survey of Russian and Soviet Literature in Translation, 1800 to the Present (4-4-4)
A study of literary works from Pushkin to the present. 150A. 1800–1860 150B. 1860–1917 150C. 1917–present

LITERATURE 154. Russian Culture (4)
An introduction to Russia's past and present through the cross-disciplinary study of literature, the visual and performing arts, social and political thought, civic rituals, popular entertainments, values and practices from 1825 to the present.

LITERATURE 158. Single Author in Russian Literature in Translation (4)
A study of literary works by a single Russian author. All readings will be in English. May be repeated for credit when authors vary.

LITERATURE 192. Senior Seminar in European and Eurasian Literatures (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITE: department stamp and/or consent of instructor.

NEAR EASTERN LITERATURES

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LITERATURE 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

LITERATURE 99. Lower-Division Independent Study (4)
Independent study at the lower-division level, in an area not covered by the department's regular course offerings, under the direction of a member of the Literature Department faculty. PREREQUISITES: lower-division standing; cumulative 3.0 GPA.

TWS 21-22-23-24-25-26. Third World Literatures (4-4-4-4-4-4)
(See entry under "Third World Studies" heading.)

The courses in this sequence are equivalent to world literature courses. The sequence satisfies Marshall College general-education requirements.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LITERATURE 100. Mythology (4)
A study of various bodies of myth: their content, form, and meaning. May be repeated for credit as topics vary.

LITERATURE 102. Women in Antiquity (4)
Selected topics in classical culture, including women and myth, women in Greek and Roman society, and the representation of women in classical literature. May be repeated for credit when topics vary.

LITERATURE 106. The Classical Tradition (4)
Greek and Roman literature in translation. May be repeated for credit as topics vary.

LITERATURE 107. Prose Fiction (4)
Aspects of prose fiction. Not confined to a single national literature. Texts may be read in English. May be repeated for credit as topics vary.

LITERATURE 108. Words and Their Vicissitudes (4)
The history of English and its forebears, focusing on the quirky nature of semantic change in order to equip students with a basis for evaluating metaphor, metonymy, and other forms of verbal deviance.

LITERATURE 110B. Folk and Fairy Tales (4)
A study of folk and fairy tales from various cultures, from the point of view of literary form, psychological meaning, and cultural function. May be repeated for credit as topics vary.

LOWER-DIVISION

LITERATURE 4A-B-C-D-F-M. Film and Fiction in Twentieth-Century Societies (4)
A study of modern culture and of the way it is expressed and understood in novels, stories, and films. The sequence aims at an understanding of relationship between the narrative arts and society in the twentieth century, with the individual quarters treating fiction and film of the following language groups. 4A French, 4B German, 4C Asian, 4D Italian, 4M multiple national literatures and film, 4F Spanish.

LITERATURE 19A-B-C. Introduction to the Ancient Greeks and Romans (4-4-4)
An introductory study of ancient Greece and Rome, their literature, myth, philosophy, history, and art.

LITERATURE 50. Introduction to Literary and Cultural Studies (4)
A preliminary survey of issues and problems raised by literary and cultural studies. Discussion will focus on basic terms in literary analysis (narrative, genre, character, poetics) and on rhetorical techniques for writing advanced expository papers in literary and cultural topics. It is designed for both non-majors and students who anticipate becoming majors in literature who would like a broad-based introduction to the field.

LITERATURE 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

LITERATURE 99. Lower-Division Independent Study (4)
Independent study at the lower-division level, in an area not covered by the department's regular course offerings, under the direction of a member of the Literature Department faculty. PREREQUISITES: lower-division standing; cumulative 3.0 GPA.

TWS 21-22-23-24-25-26. Third World Literatures (4-4-4-4-4-4)
(See entry under "Third World Studies" heading.)

The courses in this sequence are equivalent to world literature courses. The sequence satisfies Marshall College general-education requirements.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LITERATURE 100. Mythology (4)
A study of various bodies of myth: their content, form, and meaning. May be repeated for credit as topics vary.

LITERATURE 102. Women in Antiquity (4)
Selected topics in classical culture, including women and myth, women in Greek and Roman society, and the representation of women in classical literature. May be repeated for credit when topics vary.

LITERATURE 106. The Classical Tradition (4)
Greek and Roman literature in translation. May be repeated for credit as topics vary.

LITERATURE 107. Prose Fiction (4)
Aspects of prose fiction. Not confined to a single national literature. Texts may be read in English. May be repeated for credit as topics vary.

LITERATURE 108. Words and Their Vicissitudes (4)
The history of English and its forebears, focusing on the quirky nature of semantic change in order to equip students with a basis for evaluating metaphor, metonymy, and other forms of verbal deviance.

LITERATURE 110B. Folk and Fairy Tales (4)
A study of folk and fairy tales from various cultures, from the point of view of literary form, psychological meaning, and cultural function. May be repeated for credit as topics vary.
LTWL 111. Medieval Studies (4) A lecture/discussion course designed to explore a variety of topics in medieval literatures and cultures. Topics may include a genre or combination of genres (e.g., drama, romance, lyric, allegory), or a central theme (e.g., the Crusades or courtly love).

LTWL 114. Children’s Literature (4) A study of literature written for children in various cultures and periods. May be repeated for credit as topics vary.

LTWL 115. Contemporary Literature (4) A study of novels and authors of the present and recent times. May be repeated for credit as topics vary.

LTWL 116. Adolescent Literature (4) A study of fiction written for the young adult in various cultures and periods. Consideration will be given to the young adult hero in fiction. May be repeated for credit as topics vary.

LTWL 120. Popular Literature and Culture (4) A study of various popular forms—such as pop music, cult books, film, fashion, magazines, graphic arts—within a broader cultural context; focus may be on a particular genre (e.g., best sellers) or era (e.g., the sixties). May be repeated for credit when topics vary.

LTWL 122. Fantasy (4) Reading and analysis of various works that fall into several categories of the fantastic—e.g., heroic, gothic, irrational, postmodern—with particular attention to the cultural uses of myth, folklore, and fantasy and to the psychological and structuralist theories of same. May be repeated for credit when topics vary.

LTWL 124. Science Fiction (4) An exploration of the genre—past and present, in literature and the visual media—as a cultural response to scientific and technological change, as modern mythmaking, and as an enterprise serving a substantial fan subculture. May be repeated for credit when topics vary.

LTWL 128. Introduction to Semiotics and Applications (4) Semiotics, basically a theory of signification, describes the models and conceptual constructs through which meaning is grasped and produced. Background in the history of semiotics and its dominant models.

LTWL 129. Wisdom: The Literature of Authority (4) What is wisdom? Does wisdom refer to a specific type of discourse; a literary genre; a specific content that holds true transculturally and transtemporally? This class will consider these questions by reading literature from diverse times and places.

LTWL 135. The Buddhist Imaginary (4) An introduction to the imaginative universe of Indian Buddhism, with a focus on the connection between cosmological models and liberative practices. In this class we read Buddhist narrative and doctrinal literatures, supplemented by archaeological and art historical artifacts.

LTWL 137. Sanskrit (4) Study of classical Sanskrit, including grammar and reading.

LTWL 138. Critical Religion Studies (4) Selected topics, texts, and problems in the study of religion. May be repeated for credit when content varies.

LTWL 139. Gnosticism: The Religious Underground from Late Antiquity to the New Age (4) A survey of Gnostic currents in religious thought which influenced the Abrahamic traditions of Judaism, Christianity, and Islam, and which resurfaced periodically as heretical challenges to these mainstream traditions and their doctrinal orthodoxies.

LTWL 141. Islam and Modernity (4) A survey of developments in the Islamic world during the period of European colonial domination and its aftermath, with special attention to the works of leading Muslim thinkers (e.g., Sayid Ahmed Khan, Muhammad Abduh, Hasan al Banna, Ruhullah Khomeini, among others).

LTWL 142. Islam: The Origins and Spread of a World Religion (4) An investigation of the historical and textual beginnings of Islam; the development of the religion in the early Middle Ages; and an examination of the formalization of schools of Islamic law and the confrontation between Sunni and Shi'i versions of praxis. Concludes with the rise of Islamic modernism and the roots of Islamic fundamentalism.

LTWL 145. South Asian Religious Literatures: Selected Topics (4) One or two topics in the religious literature of South Asia will be examined in depth. Repeatable for credit when topics vary.

LTWL 147. Readings in Mahayana Buddhism (4) Students read and discuss Mahayana Buddhist literature, including sutra and narrative literatures, confessional works, doctrinal treatises, and tantric verse. Recommended: completion of LTWL 129 or LTWL 135.

LTWL 149. The Last Turn of the Century in the West (4) A multimedia examination of the momentous cultural and intellectual changes that accompanied the last turn of the century (nineteenth–twentieth) in the West. Areas covered include literature, philosophy, visual arts, music, religion, social movements, and scientific thought.

LTWL 150. Modernity and Literature (4) Explores the various cross-cultural historical, philosophical, and aesthetic ideas which formed the basis of most twentieth-century literature. Literature from the Americas, Europe, Asia, and Africa will be studied through lectures and the reading of texts in English translation. Repeatable for credit when topics vary.

LTWL 151. Religion and Politics (4) Course surveys the historical and theoretical relationships between religion and politics in contemporary South West Asia, focusing on the interpaly of religious movements and politics by looking at countries such as Egypt, Iraq, Israel, Lebanon, Saudi Arabia, Syria, and Turkey.

LTWL 153. Literature, Religion, and Culture in Iran (4) This interdisciplinary course will explore the relationship between culture and religion in the Persian literature from the Abbasid to postrevolutionary Iranian history.

LTWL 154. Literature: Public Sphere (4) Course focuses on the contentious notion of “public sphere,” surveying its historical rise and various theoretical debates in defining the term, ranging from political, social, feminist theories to postcolonial studies.

LTWL 155. Gender Studies (4) The study of the construction of sexual differences in literature and culture. May be repeated for credit when topics vary.

LTWL 157. Iranian Film (4) Course sets out to explore the history and theory of Iranian films in the context of the country's political, cultural, and religious settings since 1945. Students are expected to watch and discuss Iranian films, particularly the postrevolutionary films of Kiarostami and Makhmabaf.

LTWL 158A. Topics in the New Testament (4) Literary and socio-historical considerations of the diverse writings that developed into the New Testament. Topics include Jewish origins of the “Jesus movement” within Greco-Roman culture; varying patterns of belief/practice among earliest communities; oral tradition and development of canon.

LTWL 158B. Topics in Early Christian Texts and Cultures (4) This course investigates the manner in which texts shape religious identities on the individual and communal level in sociohistorical and cultural contexts: various topics include portraits of Jesus, saints lives, death and afterlife, martyrdom, demonology, apocalypticism, Christianity, and empire.

LTWL 158C. Topics in Other Christianities (4) A survey of the Christianities that comprise the fatalities of the battles defining Christian canon: e.g., apocryphal acts, non-canonical gospels, and “Gnostic” texts. Considers the social communities, theological views, religious identities, and practices reflected in largely forgotten texts.

LTWL 160. Women and Literature (4) This course will explore the relationship between women and literature, i.e., women as producers of literature, as objects of literary discourse, and as readers. Foreign language texts will be read in translation. May be repeated for credit as topics vary.

LTWL 165. Literature and the Environment (4) With primarily American (and a couple of English) readings, the course inquires into the relation of human and nonhuman nature. Topics include wilderness, animals, Native American thought, women in nature, description as a kind of writing, the spirituality of place.

LTWL 166. The Yiddish Novel (4) Yiddish literature is much more than folksongs and jokes. We will read major American and European works by Nobel laureate I.B. Singer, his brother I.J. Singer and sister Esther Kreymman, Sholem Aleichem, Michael Shvigel, Chava Rozenzrater, and others. (In English translation.)

LTWL 167. Russia and the Jewish Imagination from the Enlightenment to the Present (4) Course explores Russian Jewish literature, from Hassidic tales to Gary Shyemyet's Absurdist. We will read works translated from Hebrew, Yiddish, and Russian. Written before, during, and since the Soviet period, including literature produced in Russia, Israel, and the U.S.

LTWL 168. Death and Desire in India (4) This class investigates the link between desire and death in classical and modern Hindu thought. It considers the stories of Hindu deities, as well as the lives of contemporary South Asian men and women, in literature and film.

LTWL 172. Special Topics in Literature (4) Studies in specialized literary, philosophic, and artistic movements, approaches to literature, literary ideas, historical moments, etc.

LTWL 176. Literature and Ideas (4) The course will center on writers or movements of international literary, cultural, or ideological significance. The texts studied, if foreign, may be read either in the original language or in English. May be repeated for credit as topics vary.

LTWL 180. Film Studies and Literature: Film History (4) The study of film history and its effects upon methods of styles in literary history. Repeatable for credit when topics vary.

LTWL 181. Film Studies and Literature: Film Movement (4) Study of analogies between literary movements and film movements. Repeatable for credit when topics vary.

LTWL 183. Film Studies and Literature: Director's Work (4) Methods of criticism of author's work applied to the study and analysis of film director's style and work. Repeatable for credit when topics vary.

LTWL 184. Film Studies and Literature: Close Analysis of Filmic Text (4) Methods of literary analysis applied to the study of shots, sequences, poetics, and deep structure in filmic discourse. Repeatable for credit when topics vary.

LTWL 191. Honors Seminar (4) Explorations in critical theory and method. This course, designed to prepare students to write an honors thesis, is open only to literature majors invited into the department's Honors Program.

LTWL 192. Senior Seminar in Literatures of the World (1) The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITES: department stamp and/or consent of instructor.
LTWL 195. Apprentice Teaching (0 or 4)
Undergraduate instructional assistance. Student must (1) prepare reading materials assigned by the professor; (2) lead student discussions; (3) assist professor in grading; and (4) prepare report to professor at conclusion of quarter concerning his/her work.

LTWL 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral exam. PREREQUISITE: department approval.

LTWL 198. Directed Group Study (4)
Research seminars and research, under the direction of faculty member. PREREQUISITE: department approval.

LTWL 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of literature (in translation) not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) PREREQUISITE: upper-division standing and department approval.

GRADUATE

LTWL 500. Apprentice Teaching in Literature (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in literature courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 501. Apprentice Teaching in Humanities (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in humanities sequences under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 503. Apprentice Teaching in Marshall College (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in Marshall College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 504. Apprentice Teaching in Warren College (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in Warren College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 506. Apprentice Teaching in Roosevelt College (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in Eleanor Roosevelt College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

WRITING/LITERATURE

LOWER-DIVISION

LTWR 8A. Writing Fiction (4)
Study of fiction in both theory and practice. Narrative technique studied in terms of subjectivity and atmosphere, description, dialogue, and the editing process will be introduced through readings from the history of the novel and the short story. Writing exercises accompany reading assignments. PREREQUISITE: completion of college writing requirement.

LTWR 8B. Writing Poetry (4)
Study and practice of poetry as artistic and communal expression. Techniques of composition (traditional forms, avant garde techniques, dramatic monologue, performance poetry, and new genre) studied through written and spoken examples of poetry. Writing exercises accompany reading assignments. PREREQUISITE: completion of college writing requirement.

LTWR 8C. Writing Nonfiction (4)
Study of nonfiction prose in terms of genre and craft. Techniques of composition (journalism, essay, letters, reviews) will be studied through written examples of the genre. Practical imitations and exercises accompany the reading assignments. PREREQUISITE: upper-division non-fiction prose workshops. PREREQUISITE: completion of college writing requirement.

UPPER-DIVISION

Departmental approval is required for enrollment in all upper-division literature/writing courses.

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

(See Department of Theatre and Dance for course offerings in dramatic writing.)

Prose Fiction, Poetry, Media Workshops

LTWR 100. Short Fiction (4)
A workshop for students with some experience and special interest in writing fiction. This workshop is designed to encourage regular writing in the short forms of prose fiction and to permit students to experiment with various forms. There will be discussion of student work, together with analysis and discussion of representative examples of short fiction from the present and previous ages. May be taken for credit three times. PREREQUISITES: LTWR 8A; department approval.

LTWR 102. Poetry (4)
A workshop for students with some experience and special interest in writing poetry. This workshop is designed to encourage regular writing of poetry. There will be discussion of student work, together with analysis and discussion of representative examples of poetry from the present and previous ages. May be taken for credit three times. PREREQUISITES: LTWR 8A; department approval.

LTWR 104. The Novella (4)
Workshop for fiction writers ready to tackle longer forms. Each student will produce a novella of at least fifty-pages by the end of the quarter. We'll look at examples of this form as well as films and comic novels to explore editing techniques that facilitate the writer's growing force and complexity of vision. PREREQUISITES: LTWR 100; department approval.

LTWR 106. Science Fiction, Fantasy, Irrealism (4)
In this workshop, students will practice skills of narration, characterization, and style with particular attention to the demands of non-realistic genres, especially the challenge of suspending disbelief in fictional environments that defy conventional logic. Readings and lectures will accompany writing exercises. PREREQUISITES: LTWR 8A; department approval.

LTWR 107. Writing for Children (4)
A workshop in writing for young children (5–8 years). The stories will be directed towards the act of reading aloud, either at bedtime or in a group situation. There will be many weekly readings assigned in, and about, the genre. PREREQUISITES: LTWR 8A; department approval.

LTWR 108. Writing for Young Adults (4)
A workshop in writing for nine- to twelve-year-olds. Students will be asked to write one long chapter story or a series of short stories for young adults to read to themselves. The stories will generally involve young teens. Weekly readings will be assigned. PREREQUISITES: LTWR 8A; department approval.

LTWR 109. Writing and Publishing Children's Literature (4)
A workshop in writing for children, with the additional focus of exploring successful approaches to publication of children's stories. There will be regular weekly reading and writing assignments. PREREQUISITES: LTWR 8A; LTWR 107 recommended; department approval.

LTWR 110. Screen Writing (4)
A workshop designed to encourage writing of original screenplays and adaptations. There will be discussion of student work, together with analysis of discussion of representative examples of screen writing. May be taken for credit three times. PREREQUISITE: department approval.

LTWR 110B. Advanced Screen Writing Workshops (4)
Course for students who have taken one quarter or more of LTWR 110 Screen Writing. Workshop designed to encourage writing of original screenplays and adaptations. Discussion of student work together with analysis and discussion of representative examples of screen writing. Repeatable for credit as topics vary. PREREQUISITE: LTWR 110 and department approval.

LTWR 111. Prose-Poem (4)
Although prose-poems have been written by writers all over the world, the question of what constitutes a prose-poem has never been adequately answered. Through practice, we will explore the inner dynamics central to this mixed genre. PREREQUISITE: department approval.

LTWR 112. Adapting Literature to the Screen (4)
Development of a feature-length screenplay based on poems or works of fiction. Unlike traditional dramatic literature, this course will provide a basic knowledge of the adaptation process from synopsis, through step outline, to fully developed treatment. PREREQUISITES: LTWR 8A or 8B or 8C; department approval.

LTWR 113. Intercultural Writing (4)
This course is an introduction to modes of writing from other cultural systems vastly different from the cultural-aesthetic assumptions of Anglo-American writing. While disclosing the limitations of the English language, this course attempts to provide new language strategies for students. PREREQUISITE: department approval.

LTWR 114. Workshops in Graphic Texts (4)
From illuminated manuscripts to digital literature, from alphabets to concrete poems, from artist's books to comic-books, this course explores the histories and techniques of combinatory image/word literary arts. The course may emphasize specific movements or genres. Repeatable only when materials, assignments, and work vary. PREREQUISITES: LTWR 8A, 8B, and 8C; department approval.

LTWR 115. Experimental Writing (4)
This workshop explores writing for which the traditional generic distinctions of prose/poetry, fiction/ documentary, narrative/discourse do not apply. Students taking this course will be asked to challenge the boundaries of literature to discover new forms and modes of expression. May be taken for credit three times. PREREQUISITE: department approval.

LTWR 117. Landscape Poetry (4)
The differences between landscape poetry written in East Asia and Western counterparts form an exciting subject as well as a challenge to habits of language. We will read from the history of landscape poetry, and produce and critique new poems. PREREQUISITES: LTWR 8B; department approval.

LTWR 119. Writing for Performance (4)
A workshop and survey of experimental approaches to the writing and production of performance works in a range of literary genres. The emphasis will be placed on the integration of written texts with non-verbal elements from the visual arts, theater, and music. PREREQUISITE: LTWR 8A or 8B, to be determined by quarterly offerings of LTWR 119; department approval.

Nonfiction Prose Workshops

LTWR 120. Personal Narrative (4)
A workshop designed to encourage regular writing of all forms of personal experience narrative, including journals, autobiography, firsthand biography, and firsthand chronicle. Instructor and students will discuss student work as well as published personal narratives. PREREQUISITES: LTWR 8C; department approval.
LTWR 121. Media Writing (4)
Workshop focusing on the review, the op-ed piece, the column, the blurb, the profile, the interview, and "content-producing" for Web sites. Well examine current examples of media writing; students will produce a body of work and critique one another's productions. PREREQUISITES: LTWR 8C; department approval.

LTWR 122. Writing for the Sciences (4)
A workshop in writing about science for the public. Students will study and then construct metaphors or analogies which introduce readers to scientific perplexities. May be repeated for credit when topics vary. PREREQUISITES: department approval.

LTWR 126. Creative Nonfiction Workshops (4)
A writing, reading, and critical-thinking workshop designed to produce nonfiction pieces that fall outside the limits of the essay form. Included are travel narratives, memoir, and information-based writing that transform their own materials into compelling literature. Repeatable only when materials, assignments, and work vary. PREREQUISITES: LTWR 8C; department approval.

LTWR 127. General Nonfiction Prose Workshop (4)
A workshop designed to encourage the writing of all forms of nonfiction prose. This workshop is usually limited to advanced students in the writing major. May be taken for credit three times. PREREQUISITES: LTWR 8C; department approval.

LTWR 128. Editing Workshop (4)
A workshop to acquaint students with the fundamentals of bringing written works from concept to publication. Genres covered will vary with instructor. PREREQUISITE: department approval.

LTWR 129. Distributing Literature (4)
Workshop designed to critique and engage the means of distributing literature within culture. Publishing from "zine" through mainstream publication; Web publications; readings and "flams"; publicity and funding; colloquial versus literate writers; politics and literature; and the uses of performance and media. PREREQUISITES: LTWR 100 or LTWR 102 or LTWR 120 or LTWR 127; department approval.

Writing Process, Written Discourse, and Writing Pedagogy
These courses are not writing workshops courses like those listed above. Rather, they examine various aspects of writing as a field of study and writing pedagogy. Writing majors who plan to teach writing may be particularly interested in these courses. See the department for applicability of these courses to the writing major requirements.

Note: As of fall 1991, all writing majors are required to take one course chosen from offerings numbered LTWR 140–148 to fulfill one of their upper-division requirements.

LTWR 143. Stylistics and Grammar (4)
A close look at sentence-level features of written discourse—stylistics and sentence grammars. Students will review recent research on these topics and experiment in their own writing with various stylistic and syntactic options. PREREQUISITE: department approval.

LTWR 144. The Teaching of Writing (4)
Wide reading in current theory and practice of teaching writing in schools and colleges. Careful attention to various models of classroom writing instruction and to different approaches in the individual conference. Students in this course may observe instruction in the UCSD college writing programs or tutor freshman students in those programs. PREREQUISITE: department approval.

LTWR 148. Theory for Writers/Writing for Theory (4)
Hybrid workshop offering writing students a working knowledge of literary theory while exposing literature students to practical techniques from poetry, fiction, and nonfiction to refresh their writing of theoretical nonfiction texts. Discussion of student work and published work. PREREQUISITE: department approval.

Directed Study and Special Study
LTWR 192. Senior Seminar in Literatures in Writing (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITES: department stamp and/or consent of instructor.

LTWR 195. Apprentice Teaching (4)
Undergraduate instruction assistance. Students will 1) assist TA in editing students’ writing for LTWR 8A and 8C during class and outside of class; and 2) prepare a paper and report for the professor at the end of the quarter. PREREQUISITE: LTWR 144

LTWR 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral exam. PREREQUISITE: department approval.

LTWR 198. Directed Group Study (2 or 4)
Directed group study in areas of writing not normally covered in courses. (P/NP grades only.) Repeatable for credit when areas of study vary.

LTWR 199. Special Studies (2 or 4)
Tutorial; individual guidance in areas of writing not normally covered in courses. (P/NP grades only). May be taken for credit three times. PREREQUISITES: upper-division standing and department approval.

GRADUATE
PREREQUISITE: graduate standing or consent of instructor.

LTWR 260. Autoethnographies of Literacy (4)
Designed for public school teachers, this writing seminar concerns ethnographic and autoethnographic studies of "literates" and "illiterates" in the United States.

LTWR 271. Theory and Practice of College Writing Instruction (4)
In this course we will explore the implications for writing instruction of current discourse theory and of linguistics (sentence-level and text-level). We will also review research on writing instruction and look carefully at several models of classroom instruction and individual conferencing.

LTWR 272. Research in Composing and Writing Discourse (4)
This course will survey current research on composing and written discourse. It will also explore various problems and issues in designing research studies.

LTWR 282. Writing Studies (4)
This course will be a cross-genre writing workshop where graduate students in literature with some experience in creative writing can work with other writers and broaden their own practices. The seminar will read selected texts that spur specific writing assignments. Students who already have a new or ongoing writing project can workshop that as an alternative to doing assignments. The group will critique one another’s efforts, each participant creating a twenty-page manuscript. Also at the end of the quarter the students will collectively agree on a project—a reading, performance, video, or publishing project that will document the workshop.

Making of the Modern World, The

OFFICE: Eleanor Roosevelt College, Administration Building
http://roosevelt.ucsd.edu/mmw_core_courses/

The Making of the Modern World (MMW) is an interdisciplinary, six-course program that provides a broad, global overview of the past from the dawn of human history and early societies (MMW 1) to social, environmental, economic, and political challenges facing the contemporary world (MMW 6). It is designed to encourage students to think historically, comparatively, and in an interdisciplinary manner about both the past and the present. MMW also provides instruction in university-level writing and analysis as students examine and interpret both primary and secondary source material. ERC students entering UC San Diego as freshmen are required to complete the full MMW sequence (six quarters), while transfer students, entering UCSD as upper-classmen, are only required to take any three quarters, usually including the transfer specific course MMW 4T. Each course includes lectures, discussion sections, and writing assignments. Courses in the sequence may be taken for a letter grade only.

For further details on Eleanor Roosevelt College requirements, see “Eleanor Roosevelt College, General-Education Requirements.”

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

TRADITIONS
1. Prehistory and the Birth of Civilization (4)
This quarter introduces students to what is known about early humans, including the evolution of the human body and the reconstruction of Paleolithic and Neolithic cultures. It examines contemporary hunting-and-gathering and tribal societies and illuminates the complexity of such cultures with respect to mythology and oral tradition, interpersonal relations, and ecological practices. The course will conclude with an analysis of the emergence of large agrarian societies and the earliest great settled communities and civilizations. Three hours of lecture, one hour of discussion. Open to Eleanor Roosevelt College students only. (Letter grade only.) (F)

MAKING OF THE MODERN WORLD, THE

425
2. The Great Classical Traditions (6)
An introduction to five major classical civilizations of the ancient world. Equal attention will be given to the ancient Near East, Greece, India, China, and the Roman Republic, all of which have left legacies to the present. The course covers the great early systems of religious and social thought, using an approach that combines history and social science. This course includes intensive instruction in writing expository prose. Three hours of lecture, two hours of writing and discussion sections. **Prerequisite:** satisfaction of the UC Entry Level Writing requirement. Open to Eleanor Roosevelt College students only. (Letter grade only.) (W)

3. The Medieval Heritage (6)
A survey of the period from about 29 BCE to 1200 CE, this quarter concentrates on the development of China from the Han to the Sung dynasties, the growth and eventual dissolution of the Roman Empire, the development of Christianity, and the rise of Islam. This course includes intensive instruction in university-level writing. Three hours of lecture, two hours of writing and discussion sections. **Prerequisite:** satisfaction of the UC Entry Level Writing requirement. Open to Eleanor Roosevelt College students only. (Letter grade only.) (S)

**Transformations**

4. New Ideas and the Clash of Cultures (4)
An examination of the world from 1200 to 1750, the course focuses on the transition from medieval to modern by addressing philosophical, social, political, economic, and technological changes in Asia, Europe, and Islamic territories. Topics may include the Mongol invasions and their impact; the European Renaissance, Reformation, and Scientific Revolution; Islamic and Chinese empires; exploration and trade; and European expansion into the Americas. Three hours of lecture, one hour of discussion. **Prerequisites:** satisfaction of the UC Entry Level Writing requirement; successful completion of MMW 2 and/or MMW 3. Open to Eleanor Roosevelt College students only. (Letter grade only.) (F)

4T. Understanding the Premodern World (Transfer Students Only) (4)
This course is designed specifically for transfer students and provides a background to major trends and issues addressed in previous MMW courses. MMW 4T also reviews and strengthens students’ analytical, research, and writing skills. This course helps students adjust to the UCSD environment by preparing them for writing and research for other MMW courses and beyond. A research paper is due at the end of this term. Three hours of lecture, one hour of discussion. **Prerequisites:** transfer student and satisfaction of the UC Entry Level Writing requirement. Open to Eleanor Roosevelt College students only. (Letter grade only.) (F)

5. Revolution, Industry, and Empire (4)
A consideration of the great changes in European society from the late eighteenth century to the Russian Revolution, and their impact on the non-Western world. Topics include industrialization, the rise of nationalism and the nation-state, Western imperialism, and the colonial experience. Developments in non-Western countries during this period will be examined from their own internal perspective. Three hours of lecture, one hour of discussion. **Prerequisites:** transfer student and satisfaction of the UC Entry Level Writing requirement. Open to Eleanor Roosevelt College students only. (Letter grade only.) (F)

6. Twentieth Century and Beyond (4)
The course begins with a consideration of the causes and consequences of World War I, and then looks at the post-war crisis of liberal values and institutions. It addresses the deepening of crisis in the thirties, especially evident in the emergence of ideological politics and extreme nationalism in the context of worldwide depression. This period of crisis provides the background for understanding World War II. Attention is then devoted to the cold war, the competition between capitalism and communism, and the process of decolonization. The course ends with a discussion of the collapse of communism and the emerging world order (or disorder). Three hours of lecture, one hour of discussion. **Prerequisite:** satisfaction of the UC Entry Level Writing requirement; successful completion of MMW 2, MMW 3, and/or MMW 4. Open to Eleanor Roosevelt College students only. (Letter grade only.) (W)

**Management, Rady School of**

http://rady.ucsd.edu

**Professors**

Uri Gneezy, Ph.D., Management/Strategy
Vish Krishnan, Ph.D., Innovation, Technology, and Operations
Harry M. Markowitz, Ph.D., Finance
Craig R.M. McKenzie, Ph.D., Management/Strategy and Psychology
David A. Schkade, Ph.D., Management/Strategy and Associate Dean
Robert S. Sullivan, Ph.D., Dean
Allan Timmermann, Ph.D., Finance

**Associate Professors**

Karsten Theil Hansen, Ph.D., Marketing
Jun Liu, Ph.D., Finance
Rossen Valkanov, Ph.D., Finance
Kevin Zhu, Ph.D., Innovation, Technology, and Operations

**Assistant Professors**

On Amir, Ph.D., Marketing
Terrence W. August, Ph.D., Innovation, Technology, and Operations
Sylvain Champannonois, Ph.D., Finance
Sanjiv Erat, Ph.D., Innovation, Technology, and Operations
Ayelet Gneezy, Ph.D., Marketing
Nikolay V. Halov, Ph.D., Finance
Dominique Olie Lauga, Ph.D., Management/Strategy
Dongmei Li, Ph.D., Finance
Leif D. Nelson, Ph.D., Marketing
Thomas A. Roemer, Ph.D., Innovation, Technology, and Operations
Uri Simonsohn, Ph.D., Management/Strategy

**THE MASTER OF BUSINESS ADMINISTRATION (M.B.A.)**

**Requirements for Admission**

Students interested in pursuing the M.B.A. degree program at UC San Diego's Rady School of Management (RSM) must have earned a B.A., or its equivalent, with training comparable to that provided by the University of California. A minimum scholastic average of 3.0 or better is required for course work completed in upper-division or prior graduate study. No specific undergraduate major or course work is required for admission, though preparation in quantitative methods (such as calculus and statistics) is strongly encouraged. Prior business course work is not necessary. Students who do not have adequate quantitative preparation at the time of admission will need to complete preparatory course work before matriculation.

The admissions committee assesses professional and organizational experience in terms of scope or level of responsibility, evidence of contribution or success, and evidence of career progression or growth in responsibility. The full-time M.B.A. does not require professional work experience; however, the school believes that some prior experience in organizations and teams is critical to effective learning in the M.B.A. program. Most students in the full-time M.B.A. class will have some post-undergraduate professional experience. FlexWeekend and FlexEvening M.B.A. students are working professionals; no specific number of years of work experience is required.

Applicants must submit two letters of recommendation from individuals who can attest to their professional and leadership skills and to their potential for business leadership.

Applicants are required to submit the Graduate Management Admission Test (GMAT) scores (verbal, quantitative, and analytical writing). (Indicate code #4836.) A minimum score of 550 on the paper/pencil version and a minimum score of 213 on the computer-based version of the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. Students who score below 600 on the paper/pencil or 250 on the computer-based TOEFL examination are strongly encouraged to enroll in an English-as-a-second-language program before beginning graduate work. The International English Language Testing System (IELTS) is also accepted with a minimum score of 7.

Interviews are required for admission to the M.B.A. program. Interviews are by invitation after review of the completed application.

The full-time M.B.A. is a two-year, full-time program. The FlexWeekend M.B.A. is twenty-four months, including two summers, and is scheduled on alternate weekends to accommodate the needs of working professionals. The FlexEvening M.B.A. is thirty months, including summers, and is scheduled two nights per week to accommodate the needs of working professionals.

The school's M.B.A. application is available online at the school's Web site.

**The M.B.A. Curriculum (Ninety-Two Units)**

The M.B.A. curriculum (ninety-two units) is made up of a set of core disciplinary and skill-oriented courses with an emphasis on industry sectors, unstructured electives, and the Professional Seminar. The basic curriculum is the same for the full-time and Flex students.

**Industry Sector Emphasis**

The Rady School's M.B.A. is designed to allow students to develop depth in industry sectors of particular interest. Selection of an industry is not required. The program combines a solid core, an integrative course sequence focused on innovation,
a strong elective curriculum, a commitment to leadership development, and an emphasis on cutting-edge industry sectors.

Core Curriculum

The core curriculum provides a comprehensive education in the fundamentals of business and management and lays a strong foundation for further study.

Electives

Students may choose from electives in the full range of business and management disciplines, including accounting, finance, management, marketing, operations and information technology, and strategy. In addition, students may, with approval, take graduate courses offered elsewhere on campus. Prospective students are advised to consult the RSM Office of Admissions for a list of planned elective courses.

Professional Seminar

The Professional Seminar is a one-credit course offered each quarter. The seminar brings business leaders and experts to campus to speak to students and provides workshops focused on professional and leadership development and on personal and career effectiveness. The seminar may be taken multiple times for credit.

Internships

Full-time M.B.A. students are strongly encouraged to participate in internships during the summer between the two years of the academic program. Part-time internships are also available during the academic year. Internships are coordinated through M.B.A. Career Connections, the school's career center.

Executive Mentor Program

The Rady School's Executive Mentor program matches small groups of M.B.A. students with senior business executives. Mentors work directly with their groups, offering perspective, guidance, and expertise based on their deep experience in business. Mentors help guide M.B.A. students as they map out their groups, offering perspective, guidance, and experience.

Career Services

M.B.A. Career Connections, the Rady School's career center, provides students with expertise, guidance, and resources to successfully manage their careers. Services and resources of M.B.A. Career Connections are available to all M.B.A. students, with some limitations for those sponsored by their employers. For full-time M.B.A. students, the center's personalized approach to career management begins before the student's first quarter and continues throughout the program. M.B.A. Career Connections actively works to identify opportunities for students and to enable students to build strong professional networks.

Career services include career assessment, individual career coaching, career fairs, workshops, employer presentations and panels, internship and career employment listings, and on-campus interviews. Specialized M.B.A. career workshops focus on resume writing, interviewing skills (including videotaped mock interviews), effective job search strategies, and job offer evaluation and negotiation.

THE PH.D. IN MANAGEMENT

The Rady School offers a Ph.D. in management designed to prepare graduates for careers in academic research. Only students who intend to pursue a doctorate should apply; the department does not enroll students who seek a master's degree as a terminal degree.

Students with undergraduate preparation in various areas of the social and physical sciences may apply to the program. Students who elect to specialize in management science and finance are required to have additional mathematical knowledge, such as advanced calculus and statistics.

To be considered for admission candidates must:

- Hold an undergraduate degree from an accredited college or university.
- Complete the UCSD Application for Admission with application fee.
- Submit test scores from the Graduate Management Admissions Test (GMAT) or Graduate Record Examination (GRE) taken within five years of the date of application. Official Test of English as a Foreign Language (TOEFL) exam scores are required of applicants whose primary language is not English or who graduate from a university at which the language of instruction was not English.
- Submit two copies of official transcripts from all colleges and universities attended.
- Submit three letters of recommendations that speak to the candidate's potential as a researcher.
- Submit a statement of purpose.
- Take "Mathematics for Economists" from the UCSD economics department prior to the start of the first fall quarter.

Note: At the discretion of the Admissions Committee, personal interviews may be required.

Program instruction includes formal core and domain/methodology course work, directed study in close consultation with faculty in preparation for a research career, and individual research required for the student's dissertation. The core curriculum consists of a mathematics review and two course sequences designed to ensure that students are educated in the fundamentals of economic and social sciences. Individual students may be required to take additional courses depending upon educational background. The domain/methodology course requirement helps the student acquire the deep domain knowledge and methodological skills required to conduct research in his or her areas of interest.

The main Ph.D. requirements are that a student completes the core and elective course work, qualifying examinations, original research papers and presentations, a dissertation acceptable to the doctoral committee, and a final oral examination on the dissertation. Rather than a separate qualifying exam on each topic, students will be required to pass graduate course exams with a cumulative GPA of 3.6. If a student does not have the 3.6 (A-) average, the topic qualifying exams will be required.

Ph.D. students must be in residence a total of six quarters, three of which must be spent in continuous residence at the Rady School on the San Diego campus. A minimum of three quarters of residency must pass between the date of formal advancement to candidacy and the date of the final examination.

Nonresident students who have failed to establish California residency after the first year will be responsible for their own tuition. Normative time (defined as that period of time in which students under normal circumstances are expected to complete their doctoral program) is four to five years, based on the student's background and progress. The maximum length of time that a student may remain a pre-candidate for the Ph.D. degree is three years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

A detailed description of the Ph.D. program is available on the Internet at http://management.ucsd.edu/phd or by contacting the Ph.D. program coordinator at radyphd@ucsd.edu. Residence and other campuswide regulations are described in the graduate studies section of this catalog.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

UPPER-DIVISION UNDERGRADUATE COURSES

MGT 103. Product Marketing and Management (4)

Defining markets for products and services, segmenting these markets, and targeting critical customers within segments. Strategies to position products and services within segments. The critical role of pricing as well as market research, product management, promotion, selling, and customer support. PREREQUISITE: upper-division standing.

MGT 110. Business: Innovative Enterprise Creation and Management (4)

Introductory course covering new innovative venture fundamentals and life cycles. Emphasis on theory, history, and current paradigms in business models, financial and marketing basics, growth strategies, communications, and establishing and working in teams. Offered in summer only. PREREQUISITE: upper-division standing or consent of instructor.

MGT 111. Business: Introduction to Technology Business Start-up Process (4)

Students learn to recognize, screen, and test the feasibility of technology-based business opportunities; determine market demand and financial and other resource requirements, make mini-business plans for start-up, growth, and harvesting. Offered in summer only. PREREQUISITE: upper-division standing or consent of instructor.

MGT 112. Global Business Strategy (4)

Will examine the advantages and complications of the multinational organization with emphasis on translating marketing, financing, and operating plans in light of geographical, cultural, and legal differences across the globe. Will also cover organizational considerations for transglobal management. PREREQUISITES: MGT 103 and MGT 181.

MGT 121A. Innovation to Market A (4)

Consider new project concepts. Discern market needs, competitive environment, and determine “go to market”
strategy. Research potential markets, customers, partners, and competitors. Consider price versus attributes, alternative distribution channels, gaining unfair advantage. Examination of the newsvendor and structure of a start-up team. PREREQUISITE: upper-division standing.

MGT 121B. Innovation to Market B (4)

MGT 164. Organizational Leadership (4)
Will study alternative organizational structures, their stakeholders and cultures and use in meeting strategic enterprise priorities. Insights into motivational factors, communications networks, alternative leadership styles, and change management. Attention given to what the organizational measures, controls, and rewards. PREREQUISITE: upper-division standing.

MGT 166. Business Ethics and Corporate Responsibility (4)
Will cover ethical conduct issues for leaders from a wide array of organizations and industries including consideration of differences among global trading partners. The issues impacting corporate responsibility will be examined as will full-cycle cost analysis of products and services. PREREQUISITE: upper-division standing.

MGT 172. Business Project Management (4)
Addresses effective practices for management of business projects. It includes both project management processes—scheduling, milestone setting, resource allocation, budgeting, risk mitigation—and human capital management—communication, teamwork, leadership. Also considers requirements for effectively working across functional and organizational boundaries. PREREQUISITE: upper-division standing.

MGT 174. Supply Chain and Operations Management (4)
Will cover process design and optimization, inventory control and forecasting, vendor selection and management, operations, planning and management, global distribution techniques, material, labor, and overhead costing, and work-in-process tracking and valuation, quality control along with organizational issues. PREREQUISITE: upper-division standing.

MGT 181. Enterprise Finance (4)
Will cover debt and equity financing of the enterprise, the role of the entrepreneur, and the process of venture formation, and investment banks; along with enterprise valuation, cash flow management, capital expenditure decisions, return on investment, economic value add, and foreign currency translation. PREREQUISITE: upper-division standing.

M.B.A. APPROVED COURSE LIST

MGT 201. Marketing Strategy (4)
Addresses formulation and implementation of marketing strategy, based on an integrative view of competitive brand strategy over the product life cycle. Provides a framework for developing marketing strategies yielding sustainable competitive advantage based on customer, competitor, industry, and environmental analysis. PREREQUISITE: admission to degree program or consent of instructor.

MGT 202. Research for Marketing Decisions (4)
Methods and applications of qualitative and quantitative marketing research to solve substantive marketing problems. Emphasis on integrating problem formulation, research design, questionnaire construction, and sampling to yield the most valuable information, and on the proper use of and interpretation of results. PREREQUISITE: admission to degree program or consent of instructor.

MGT 203. Consumer Behavior (4)
The course identifies the factors that influence the selection and usage of products and services. Students will be introduced to problems/decisions that include evaluating behavior; understanding the consumers’ decision process, and strategies to create desirable consumer behavior.

MGT 204. Marketing Communications (4)
This course differentiates decisions/principles considered when developing an overall communications and promotions strategy. Emphasis on the promotion mix, the design, implementation and evaluation of communications strategies, and the thinking required to develop a creative strategy. PREREQUISITE: admission to M.B.A. program or consent of faculty.

MGT 209. Topics in Marketing (2 or 4)
Introduces advanced topics of special interest in marketing. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. PREREQUISITE: admission to the M.B.A. program or consent of faculty.

MGT 210. Regulation and Innovation (4)
Addresses the complex role of regulation in business innovation. Includes legal issues such as how to structure a business, whether to seek intellectual property protection, and when and how to raise capital or formulate exit strategies, how to make employment decisions. PREREQUISITE: core finance course or consent of instructor.

MGT 211. CEO, the Board of Directors and Corporate Governance (4)
Provides an understanding of relationships among shareholders, managers, and boards. Focuses on the role of the chief executive officer and on the board of directors, including the roles and responsibilities of directors, and the legal, ethical, economic, social, and psychological issues they confront. PREREQUISITE: admission to M.B.A. program or consent of instructor.

MGT 219. Topics in Corporate Governance (2 or 4)
Introduces advanced topics of special interest in corporate governance. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. PREREQUISITE: admission to M.B.A. program or consent of faculty.

MGT 220. Opportunity and Business Model Analysis (4)
Builds on core management courses and deals with identifying and assessing new technological and product opportunities. Assessment methods and frameworks will be introduced for technologies and opportunities. Various business models to profitably address market opportunities will also be covered. Core finance course (MGT 408) or consent of instructor.

MGT 221. Topics in Innovation (2 or 4)
Advanced topics in business innovation, delivered by lecture, case discussion, and online instruction. PREREQUISITE: admission to M.B.A. program or consent of instructor.

MGT 222. Creativity and Innovation (4)
Focuses on fostering and maintaining creativity in entrepreneurial ventures and, more broadly, in general management. Reading materials, cases, classroom, and home exercises will help students understand and be able to use creativity in their own working lives. PREREQUISITE: admission to M.B.A. program or consent of instructor.

MGT 229. Topics in International Business (2 or 4)
Introduces advanced topics of special interest in international business. Key decisions include those related to the rise of Mexican maquiladoras; entrepreneurship in Russia. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. PREREQUISITE: admission to M.B.A. program or consent of faculty.

MGT 230. Strategic Cost Management (4)
The course details the knowledge and analytical skills necessary to use accounting cost information as a basis for formulating and evaluating corporate strategies. Session topics focus on strategic positioning, value chain analysis, and cost driver analysis. PREREQUISITE: admission to M.B.A. program or consent of faculty.

MGT 239. Topics in Accounting (2 or 4)
Introduces advanced topics of special interest in accounting. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. PREREQUISITE: admission to M.B.A. program or consent of faculty.

MGT 240. Decision Analysis (4)
Provides practical techniques to help structure decision problems and analyze them quantitatively. Techniques help students think clearly about objectives, alternatives, consequences, and uncertainties, and enable logical judgments with other types of information. PREREQUISITE: admission to M.B.A. program or consent of faculty.

MGT 249. Topics in Decision Sciences (2 or 4)
Introduces advanced topics of special interest in management and decision sciences. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. PREREQUISITE: admission to M.B.A. program or consent of faculty.

MGT 250. Biotechnology Industry, Structure, and Strategy (4)
Provides a business overview of the life-science industry, its major market segments, financial structure, and financing strategies. Develops an understanding of major industry issues and strategies, including decision making, strategic planning, partnering and alliances, emerging trends, ethical and policy issues. PREREQUISITE: completion of M.B.A. core curriculum or consent of instructor.

MGT 251. Topics in Business Strategy (2 or 4)
Advanced topics in business strategy. Instructional methods include face-to-face lecture sessions and case discussion. PREREQUISITE: admission to M.B.A. program or consent of instructor.

MGT 259. Global Business Intensive (2)
Introduces advanced topics in global business, with a regional emphasis. Instructional methods include lectures, case presentations, readings, and discussions. A substantial portion of learning outcomes will be met by visiting businesses in another world region, observing operations, and interviewing executives. The visit to the foreign region will typically be one to two weeks and may occur outside the normal academic year. PREREQUISITES: admission to M.B.A. program (RS 76, RS 77) or consent of faculty.

MGT 260. Negotiation (4)
Examines methods of conflict resolution needed for effective management in a constantly changing business environment. Applies these tools to the broad spectrum of negotiation problems faced by the manager and professional. Includes simulations, role playing, and cases. PREREQUISITE: admission to M.B.A. program or consent of instructor.

MGT 269. Topics in Organizational Behavior (2 or 4)
Introduces advanced topics of special interest in management and organizational behavior. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. PREREQUISITE: admission to M.B.A. program or consent of faculty.

MGT 270. Project Management (4)
Provides management concepts and tools to enable the more effective design, planning, and control of projects. Includes models of the qualitative and quantitative aspects of project management. PREREQUISITE: admission to M.B.A. program or consent of instructor.

MGT 271. Technology Strategy (4)
Outlines tools for formulating and evaluating technology strategy. Includes an introduction to the economics of technical change, models of technological evolution, and models of organizational dynamics and innovation. Provides an understanding of how technology firms gain and sustain competitive advantage. PREREQUISITE: admission to M.B.A. program or consent of instructor.
MGT 272. New Product Development (4)
Provides comprehensive analytical coverage of the new-product development process, focusing on the basic tools, methods, and organizational structures used in new-product development and management. PREREQUISITE: admission to M.B.A. program or consent of instructor.

MGT 273. Supply Chain Management (4)
Describes the systems approach to managing the entire flow of information, materials, and services from raw materials suppliers through factories and warehouses to the end customer, which is the key to productivity and competitiveness of manufacturing and service enterprises. PREREQUISITE: admission to M.B.A. program or consent of faculty.

MGT 279. Topics in Operations and Technology (2 or 4)
Introducing or present topics of special interest in management and operations. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. PREREQUISITE: admission to M.B.A. program or consent of faculty.

MGT 280. New Venture Finance (4)
Focuses on the financing of new ventures and technological innovation. Includes perspectives of both the entrepreneur and the investor, investigating the venture-capital process and the financial valuation useful in the venture-capital industry and for other technology investments. PREREQUISITE: core finance course or consent of instructor.

MGT 281. Investments (4)
Examines financial theory and empirical evidence useful for making investment decisions. Topics include: portfolio theory, equilibrium models of security prices, the empirical behavior of security prices, market efficiency, and fixed-income markets and behavioral finance. PREREQUISITE: completion of M.B.A. core curriculum or consent of instructor.

MGT 282. Topics in Finance (2 or 4)
Advanced topics in finance. Instructional methods include face-to-face lecture and case discussion, as well as online instruction. PREREQUISITE: admission to M.B.A. program or consent of instructor.

MGT 283. Financial Risk Management (4)
Explains how to identify, measure, and analyze investment risks associated with interest rates, currency exchange, and equity markets, and acquire techniques to manage and control such risks through the use of over-the-counter and exchange-traded derivatives. PREREQUISITE: admission to M.B.A. program or consent of the faculty.

MGT 299. Individual Directed Study (1-4)
Individual study or research under the direction of a selected faculty member. PREREQUISITE: admission to M.B.A. program or consent of instructor.

MGT 401. Professional Seminar (1)
The Professional Seminar presents an up-to-date research, professional skills development, and experts and business leaders as speakers. Topics may vary by term. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 403. Quantitative Analysis (4)
Through lecture and online delivery, students will be introduced to key techniques for using data to make informed management decisions. Covers probability, statistics, decision analysis, and optimization techniques. Emphasizes managerial applications in such areas as operations management, marketing, and finance. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 404. Accounting (4)
Through lecture and online delivery, students will be introduced to the basic concepts and methods used in financial statements. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 405. Managerial Economics (4)
Through lecture and online delivery, this course will introduce students to the tools and concepts of microeconomics to analyze decision problems in technical and service firms through the coverage of microeconomic concepts relevant to managerial decision-making. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 406. Leadership Skills, Values, and Teamwork in Technology Firms (4)
Through lecture and online delivery, introduces principles of effective teamwork and leadership and of strategic managerial communication. Provides an introduction to case study and to ethical issues confronting managers in technology or science-driven firms. Develops managerial communication skills. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 407. Marketing (4)
By taking an analytical approach to the study of marketing problems, this course provides an understanding of customers and competitors as a basis for developing, pricing, promoting, and distributing goods and services that satisfy customer and organizational objectives. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 408. Finance (4)
Through lecture and online delivery, this course will focus on basic financial concepts with particular attention to challenges of finance in start-up and small- and medium-sized enterprises. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 409. Organizational Strategy and Human Resource Management (4)
After identifying characteristics common to technology-driven firms, the implications of living in, managing, and leading such an organization are explored. Covers skills such as leadership of project teams and negotiations. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 410. Strategy (4)
Through lecture and online delivery, this course explores the strategic management of technology-driven firms focusing on the analytical tools and techniques that support strategy formulation and the related managerial skills and decision-making processes that foster strategy implementation. PREREQUISITE: M.B.A. “stamp” or departmental stamp.

MGT 412. Lab to Market: Opportunity and Business Model Analysis (4)
An integrated examination of competencies needed to transform innovations into profitable market opportunities. Focus on processes to generate ideas, assess which are viable business opportunities, and evolve them into products and businesses. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 413. Operations, Information Systems, and Data Analysis (4)
Through lecture and online delivery, students will be familiarized with the problems and issues confronting operations managers, and to introduce language, conceptual models, and analytical techniques that are broadly applicable in confronting such problems. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 414A. Lab to Market Workshop (4)
Through lecture and online delivery, provides broad coverage of leading edge developments in technical and scientific research, with an eye to their potential applicability and value in business. Provides basis for project-based Lab to Market Workshop II. An IP grade will be awarded at the end of the quarter. Final grade will not be given until the completion of MGT 414B. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 414B. Lab to Market Workshop II (4)
Project-based course, requiring identification and completion of major project assessing potential business value of emerging or potential technology or science. Students work individually or in teams. Periodic class meetings include presentation of interim and final reports. PREREQUISITE: M.B.A. “stamp” or departmental stamp.

MGT 490A. Special Topics in Marketing (4)
Through lecture and online delivery, a course at an advanced level on marketing topics. Will fulfill the required elective for students in Communication and Information Technology Services (CITS) Management track. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 490B. Special Topics in Marketing (4)
Through lecture and online delivery, a course at an advanced level on marketing topics. Will fulfill the required elective for students in Management and the Life Sciences and Health Industries track. PREREQUISITE: M.B.A. student or departmental stamp.

MGT 490C. Special Topics in Marketing (4)
Through lecture and online delivery, a course at an advanced level on marketing topics. Will fulfill the required elective for students in Global Management and Policy track. PREREQUISITE: M.B.A. student or departmental stamp.

Marine Biodiversity and Conservation

OFFICE: La Jolla Village Professional Center
8950 Villa La Jolla Drive, Suite A124
(858) 964-1334
E-mail: mbc@ucsd.edu
http://mbc.ucsd.edu

PROGRAM DIRECTOR
Richard Norris, Ph.D., Professor, Geosciences, SIO

ASSOCIATE DIRECTORS
Wolfgang Berger, Ph.D., Professor Emeritus, Oceanography, SIO
Theodore Groves, Ph.D., Professor, Economics
Jeremy Jackson, Ph.D., Professor, Geosciences, SIO

The Master of Advanced Studies (M.A.S.) in Marine Biodiversity and Conservation is a unique program of study equipping its graduates with the knowledge they need to improve conservation of marine biodiversity in the world’s most diverse and threatened ecoregions through development of local capacity and science-based management tools. Led
by faculty of Scripps Institution of Oceanography (SIO), the program is designed to teach current and future professionals about marine ecosystems from the scientific, economic and policy perspectives, as well as provide important cultural and communications skills. The degree is most appropriate for marine resource managers in all regions of the world, practicing marine science professionals who wish to broaden their understanding and influence in this arena, science policy analysts and advocates, and natural scientists interested in obtaining a more firm grounding in the public policy and economics of marine conservation.

The M.A.S. in Marine Biodiversity and Conservation is a full-time, self-supporting degree program that most students complete in a twelve-month period, mid-June through mid-June each year. The UCSD graduate division confers the M.A.S. degree and the Center for Marine Biodiversity and Conservation at SIO is responsible for the academic management of the curriculum. UCSD Extension administers the program and provides student advising and career counseling services.

ADMISSION

New students are admitted in the summer (June) of each academic year. Prospective candidates should submit and complete the official UCSD online graduate application for admission, the application fee, one set of official transcripts from each institution attended after high school, three letters of recommendation, and a current résumé or c.v. The GRE/GMAT is not required. Candidates must normally have a minimum of three years of relevant work experience. International applicants must submit official scores from the Test of English as a Foreign Language (TOEFL). The application deadline is January 31 for the summer through spring academic program.

PROGRAM OF STUDY

The full-time degree program is designed to be completed in one year. In the summer session, classes are scheduled five days a week, eight hours a day. In the fall, summer, and spring, students take courses that are held during regularly scheduled university class hours. Students are required to complete forty-eight units of courses, comprising thirty-seven core units, including a six-unit capstone project, and eleven elective units.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

CORE CURRICULUM

SIO 295S. Introduction to Marine Biodiversity and Conservation—Seminar (8)

Lectures on ecological, economic, social, and legal issues related to marine biodiversity and case studies on socio-economic and legal issues. Students are expected to attend field trips at sea and to various sites around San Diego County as part of the corequisite course. Students who have taken SIO 295 may not receive credit for SIO 295S.

SIO 295LS. Introduction to Marine Biodiversity and Conservation—Lab (8)

Laboratory work on major biological taxa, field trips on biodiversity in situ, computer labs for informatic tools. Students are expected to attend field trips at sea and to various sites around San Diego County as part of the course. Students who have taken SIO 295L may not receive credit for SIO 295LS.

SIO 286. Marine Science, Economics, and Policy (4)

This course investigates global issues in marine conservation and potential policy solutions. The approach is interdisciplinary, fast paced, and discussion oriented. Students will become acquainted with sufficient background in marine biology, ecology, marine and conservation economics, international law and policy as preparation for participation in discussion on real-world issues in marine conservation. Topics and instructors change each quarter. Prerequisite: graduate standing or consent of instructor.

IRCO 400. Policy Making Processes (4)

This course is designed to teach students how to "read" a country's political and economic system. The course will examine how the evolution of different institutional frameworks in the countries of the Pacific Region influences the way in which political choices are made.

IRGN 257. Cost Benefit Analysis (4)

Examination of public policy analysis, such as cost-benefit analysis and project evaluation, for use in policy formation. Sustainable development will receive particular attention. Case studies emphasizing the environment, agriculture and food, and economic development will be included.

IRGN 258. International Environmental Policy and Politics (4)

This course analyzes multilateral environmental agreements and negotiating positions of key countries on climate change, biodiversity conservation, sustainable development, and other subjects. It explores the challenges countries face to balance economic development objectives with global environmental concerns.

IRGN 487. Applied Environmental Economics (4)

This course teaches students how to analyze environmental and natural resource policy issues in developing countries using economic concepts and methods. Weekly spreadsheet exercises based on real-world data provide hands-on practice. Prerequisite: IRCO 401, IRCO 453, IRCO 454, or consent of instructor.

MBC 296. Capstone Independent Study Project (6)

Building on the knowledge and experience gained from the entire curriculum of the Master’s in Marine Biodiversity and Conservation (M.A.S.–MBC) program, students will design and present a specific marine conservation project. Limited to registered students in M.A.S–MBC program. Prerequisite: SIO 296.

MBC 258. Special Topics/Marine Biology-MBC M.A.S. Forum (1)

Required course for M.A.S.–MBC students will focus on development of M.A.S. Capstone Projects and discussions covering marine conservation issues, including informal student presentations on political, economic, historical, educational, and natural science issues related to conservation and analysis of marine biodiversity. Prerequisites: SIO 295S and SIO 295LS summer courses. Limited to registered students in M.A.S–MBC Marine Biodiversity and Conservation program. (S/U grades only.) Jackson, R. Norris (F, W, S)

Electives. Varies (refer to Electives course list). (TI)

PROFESSORS

Sungho Jin, Ph.D., MAE, Program Director
Gustaf Arhenius, Ph.D., Emeritus, SIO
Robert J. Asaro, Ph.D., SE
David J. Benson, Ph.D., MAE
Ami Berkowitz, Ph.D., Emeritus, Physics
John E. Crowell, Ph.D., Chemistry and Biochemistry
Sadik Esener, Ph.D., ECE, NanoEngineering
Yehiaahu Fainman, Ph.D., ECE
Marye Anne Fox, Ph.D., Chemistry and Biochemistry, Chancellor
Eric Fullerton, Ph.D., ECE
Yuan-Cheng Fung, Ph.D., Emeritus, Bioengineering
David Gough, Ph.D., Bioengineering
Gilbert A. Hegemier, Ph.D., SE
Vatsap Karbhari, Ph.D., SE
John B. Kosmatka, Ph.D., SE, MAE
Sergi Krasheninnikov, Ph.D., MAE
Clifford Kubiak, Ph.D., Chemistry and Biochemistry
S.S. Lau, Ph.D., ECE
Hyam Leffert, Ph.D., Pharmacology
Yu-Hwa Lo, Ph.D., ECE
Huey-Lin Luo, Ph.D., Emeritus, ECE
Eduardo Macagno, Ph.D., Biology
M. Brian Maple, Ph.D., Physics
Xanthippi Markenscoff, Ph.D., MAE
Robert Mattrey, Ph.D., Radiology
Joanna McKittrick, Ph.D., MAE
Marc A. Meyers, Ph.D., MAE, Associate Director, Institute for Mechanics and Materials, NanoEngineering
David R. Miller, Ph.D., Emeritus, MAE
Hidenori Murakami, Ph.D., MAE
Siavouche Nemat-Nasser, Ph.D., MAE, Director, Center of Excellence for Advanced Materials
Vitali F. Nesterenko, Ph.D., MAE
M. Lea Rudee, Ph.D., Emeritus, ECE
Michael J. Sailor, Ph.D., Chemistry and Biochemistry
Geert W. Schmid-Schoenbein, Ph.D., Bioengineering
Ivan K. Schuller, Ph.D., Physics
Jan Talbot, Ph.D., NanoEngineering
Frank E. Talke, Ph.D., MAE, CMRR Endowed Chair
Yitzhak Tor, Ph.D., Chemistry and Biochemistry
Charles W. Tu, Ph.D., ECE
George Tynan, Ph.D., MAE
Kenneth S. Vecchio, Ph.D., Chemistry and Biochemistry
Edward T. Yu, Ph.D., ECE
Paul Yu, Ph.D., ECE
ASSOCIATE PROFESSORS
Prabhakar Bandaru, Ph.D., MAE
Richard K. Herz, Ph.D., NanoEngineering
Yu Qiao, Ph.D., Structural Engineering

ASSISTANT PROFESSORS
Adah Almutairi, Ph.D., Skaggs School of Pharmacy and Pharmaceutical Sciences
Gaurav Arya, Ph.D., NanoEngineering
Jennifer Cha, Ph.D., NanoEngineering
Karen Christman, Ph.D., Bioengineering
Adam Engler, Ph.D., Bioengineering
Gabriel A. Silva, M.Sc., Ph.D., Bioengineering and Ophthalmology
Michael Tauber, Ph.D., Chemistry and Biochemistry
Shyni Varghese, Ph.D., Bioengineering
Deli Wang, Ph.D., ECE

ADJUNCT PROFESSOR
Martin Haas, Ph.D., Biology

Materials science and engineering is concerned with the structure, properties, and applications of materials. The university-wide Materials Science and Engineering Program (MSE) at UC San Diego aims to provide fundamental knowledge for understanding of materials with the objective of predicting, modifying, and tailoring the properties of materials to yield enhanced material performance.

The foundations of materials science are the basic sciences of physics, chemistry, mathematics, and engineering principles. The interdisciplinary nature of the program at UCSD is ideally suited to address this requirement. The graduate students in the Materials Science and Engineering Program benefit from the unique and broad combination of faculty members and research facilities existing at UCSD, in the Departments of Mechanical and Aerospace Engineering, Electrical and Computer Engineering, NanoEngineering, Physics, Chemistry and Biochemistry, Bioengineering, Structural Engineering, Scripps Institution of Oceanography, as well as the School of Medicine and the Division of Biological Sciences. Students pursuing their M.S. or Ph.D. degree in the MSE Program can have any faculty member from these participating departments and schools in UCSD as their thesis advisor or co-advisor, based on matching of the interests and/or financial support arrangements.

Of particular emphasis within the program are: a study of microstructure-property relationships; design of electronic, superconducting, magnetic, and nano materials for electronic and high-tech device and energy applications; optical and chemical materials for telecom and display applications; biomaterials and medical device materials for biotech applications; experimental investigation and theoretical modeling of the mechanical behavior of materials; and advanced composite materials for civil structures.

THE GRADUATE PROGRAM

The Materials Science and Engineering Program at UC San Diego is interdisciplinary, with participation of faculty members from several departments. Faculty from the following departments participate in the Materials Science and Engineering Program: Mechanical and Aerospace Engineering, Physics, Scripps Institution of Oceanography, Structural Engineering, Electrical and Computer Engineering, NanoEngineering, Chemistry and Biochemistry, Bioengineering, the Division of Biological Sciences, the School of Medicine, and the School of Pharmacy.

The director of the program, in consultation with the executive committee, carries out the governance of the program. The executive committee coordinates all affairs of the Materials Science and Engineering Program, including student admissions, degree requirements, graduate courses in materials science given by various participating departments, maintenance of laboratory instructional facilities, seminars, special courses, part-time instructors, and related matters.

Undergraduate preparation for pursuing the M.S. and Ph.D. in materials science and engineering at UCSD would normally include a degree in materials sciences, or in engineering or physical sciences, such as physics, chemistry, biology, geology, and related disciplines. Students are expected to have an adequate mathematics, physics, chemistry, and related basic sciences background, as well as acceptable GPA and GRE scores.

MASTERS DEGREE PROGRAM

The program offers the M.S. degree in materials science and engineering under both the Thesis Plan I and the Comprehensive Examination Plan II; see ‘Graduate Studies: Master’s Degree.’ The requirements for the M.S. degree are as follows:
1. All students must complete a total of thirty-six units.
2. All students must complete four Mandatory Core Courses and at least two of the six Elective Core Courses:

Mandatory Core Courses
- MS 201A-B-C, MS 227
Elective Core Courses (required to select at least two to fulfill requirements)
- MS 205A, MS 251A–B, MS 252, MS 253, PHYS 152A (Physics 211A can replace 152A with advisor’s permission.) See “Courses” for description.
3. Students may include up to twelve units of undergraduate courses. These include the one undergraduate core course, Physics 152A.
4. Enroll in MATS200, as required. See “Courses” for descriptions.
5. Remaining courses to complete the thirty-six unit requirement for the M.S. degree may be selected from an approved list of graduate courses with the consent of a faculty advisor.
6. Students either complete a thesis (Plan I) or pass a comprehensive examination (Plan II) as described in the “Graduate Studies” section of this catalog.
7. Students must meet all other requirements established by the university.

Students who transfer with some graduate credit or an M.S. from another institution will have their records reviewed by a faculty advisor, and an appropriate individual course of study may be approved.

THE PH.D. PROGRAM

After completing the M.S. degree (or meeting equivalent requirements) and meeting the minimum standard on the comprehensive examination to be admitted to or continue in the Ph.D. program, a student must:
1. Meet all the university’s residency and other requirements.
2. Successfully complete three advanced graduate courses (in addition to those required for the M.S. degree) which have been approved by the student’s potential dissertation advisor.
3. Enroll in MATS200, as required. See “Courses” for descriptions.
4. Pass the Literature Review Examination. This requirement must be successfully completed within one year after passing the Comprehensive Examination.
5. Pass the Ph.D. Qualifying Examination (Senate Exam) to be advanced to Ph.D. candidacy.
6. Successfully complete and defend a dissertation which, in the opinion of the dissertation committee, contains original work that should lead to publication of at least one significant article in an appropriate refereed journal.

In principle, it should be possible to finish the M.S. degree in three quarters, and a Ph.D. in an additional three years. Ph.D. time limits are as follows: Pre-candidacy—four years; Support limit—six years; Total time limit—seven years; Normative time limit for a properly prepared B.S. student—five years. (See “Graduate Studies—Ph.D. Time Limits” for further explanation.)

DEPARTMENTAL EXAMINATION

THE COMPREHENSIVE EXAMINATION

The examination will consist of twelve questions, two from each of the six core courses. A passing grade is 60 percent for the Master’s degree, and 70 percent for the Ph.D. The examination will not exceed six hours in duration. The examination is usually administered the second week in January, and a week after spring quarter finals week in June. Typically, students take the exam after one year of full-time enrollment. This exam may only be retaken once before the end of the second year of study.

THE LITERATURE REVIEW EXAMINATION

The Literature Review Examination tests the student’s ability to prepare and present a comprehensive overview of a topic based on existing journal literature. It should be a comprehensive discussion of the literature, scientific theory, problems or theoretical deficiencies, and possible areas of research in some area of materials science and engineering. The topic may be in the general area in which the student plans to pursue his or her thesis.
research, or it may be in an unrelated field. The topic must be approved by the three faculty member committee in advance of the seminar. The Literature Review Examination is not to be a discussion of the student’s research project or their research proposal. A presentation which includes the student’s own work which has not been published will constitute a no pass grade. This exam must occur within one year of the student having passed the Comprehensive Examination.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009-10, please contact the department for more information.

GRADUATE

200. Graduate Seminar (0)
Each graduate student in the Materials Science and Engineering Program is expected to attend a weekly seminar in materials science or related areas. M.S. students must enroll for three quarters, Ph.D. students for six quarters, as of fall 1995. (SU grades only) (F,W,S)

201A. Thermodynamics of Solids (4)
The thermodynamics and statistical mechanics of solids. Basic concepts; equilibrium properties of alloy systems; thermodynamic information from phase diagrams, surfaces, and interfaces; crystalline defects. PREREQUISITE: consent of instructor.

201B. Solid State Diffusion and Reaction Kinetics (4)
Thermally activated processes, Boltzmann factor, homogeneously and heterogeneous reactions, solid state diffusion, Fick’s laws, diffusion mechanisms, Kirkendall effect, Boltzmann-Matano analysis, high diffusivity paths. PREREQUISITE: consent of instructor.

201C. Phase Transformations (4)

205A. Imperfections in Solids (4)
Point, line, and planar defects in crystalline solids, including vacancies, self-interstitials, solute atoms, dislocations, stacking faults, and grain boundaries; effects of imperfections on mechanical properties; interactions of dislocations with point defects; strain hardening by micro-obstacles, precipitation, and alloying elements. PREREQUISITE: consent of instructor.

207. Surface Reactions, Corrosion, and Oxidation (4)

211A. Mechanical Properties (4)
Review of basic concepts in mechanics of deformation; elasticity, plasticity, viscoelasticity, and creep; effects of temperature and strain-rate on inelastic flow; microstructure and mechanical properties; application of basic concepts to selected advanced materials. PREREQUISITE: consent of instructor. (Cross-listed with MGE 229.)

213A. Dynamic Behavior of Materials I (4)
Elastic waves in continuum; longitudinal and shear waves. Surface waves. Plastic waves; shock waves; Rankine-Hugoniot relations. Method of characteristics, differential and difference formulation of conservation equations; dynamic plasticity and dynamic fracture. Shock wave reflection and interaction. PREREQUISITE: consent of instructor. (F) (Cross-listed with MGE 273A.)

225. Materials for Magnetic Recording (4)
Properties of magnetic materials utilized as magnetic recording media and heads. Magnetic structure of oxides and metals; fine particle magnetism; micromagnetic analysis; hysteresis and reversal mechanisms of hard materials; dynamic processes and domain patterns of soft materials; thermal fluctuations; multilayer phenomena; giant magnetoresistance. PREREQUISITE: understanding of magnetism and solid state physics or consent of instructor. (Cross-listed with ECE 246A.)

227. Structure and Analysis of Solids (4)
Key concepts in the atomic structure and bonding of solids such as metals, ceramics, and semiconductors. Symmetry operations, point groups, lattice types, space groups, simple and complex inorganic compounds, structure/property comparisons, structure determination with X-ray diffraction. Ionic, covalent, metallic bonding compared with physical properties. Atomic and molecular orbitals, bands versus bonds, free electron theory. PREREQUISITE: graduate student or consent of instructor.

236. Advanced Ceramic (4)
Topics include phase equilibria and crystallography, defects and thermodynamics (Kröger-Vink Notation), glass science, electrical and ionic transport behavior, Brouwer diagrams, powder synthesis and compaction, sintering theory and grain growth, mechanical, optical, magnetic, electrical properties, fuel cells. PREREQUISITE: consent of instructor.

240A. Scanning Electron Microscopy and X-Ray Microanalysis (4)
Electron optics, electron-beam-specimen interactions. Image formation in the SEM. The role of specimen and detector contrast formation. Imaging strategies. X-ray spectral measurements. Qualitative and quantitative X-ray microanalysis. Materials specimen preparation. PREREQUISITE: consent of instructor. The laboratory section will teach the operation of the microscope to conduct material analysis via SEM.

240B. Transmission Electron Microscopy (4)
Operation and calibration of the TEM, lens defects and resolution, formation of images and diffraction patterns, electron diffraction theory (kinematic dynamical), indexing diffraction patterns, diffraction contrast. Quantitative analysis of crystal defects, phase contrast, and specimen preparation. PREREQUISITE: MS 240A or consent of instructor. The laboratory section will teach the operation of the microscope to conduct material analysis via TEM.

243. Modern Materials Analysis (4)
Analysis of the near surface of materials via ion, electron, and x-ray spectroscopy. Topics to be covered include particle-solid interactions, Rutherford Backscattering, secondary ion mass spectroscopy, electron energy loss spectroscopy, particle induced x-ray emission, Auger electron spectroscopy, extended x-ray absorption fine structure and channeling. PREREQUISITE: consent of instructor. (Cross-listed with ECE 237.)

251A. Electronic and Photonic Properties of Materials (4)
The electronic and optical properties of metals, semiconductors, and insulators. The concept of the band structure. Electronic and lattice conductivity. Type I and Type II superconductivity. Optical and electronic using photonic and band gap crystals in one-, two-, and three-dimensions. Current research frontiers. PREREQUISITE: consent of instructor. (Cross-listed with MGE 265A.)

251B. Magnetic Materials: Principles and Applications (4)
The basis of magnetism: classical and quantum mechanical points of view. Magnetic phenomena including anisotropy, magnetostriiction, domains, and magnetization dynamics. Current frontiers of nano-magnetics including thin films and particles. Optical, data storage, and biomedical engineering applications of soft and hard magnetic materials. PREREQUISITE: consent of instructor. (Cross-listed with MGE 265B.)

252. Biomaterials (4)
This class will cover biomaterials and biometric materials. Metal, ceramic, and polymer biomaterials will be discussed. Emphasis will be on the structure-property relationships, biocompatibility degradation issues and tissue/material interactions. Synthesis and mechanical testing of biomimetic materials will also be discussed. PREREQUISITE: consent of instructor. (Cross-listed with MGE 266.)

253. Nanomaterials and Properties (4)
This course discusses synthesis techniques, processing, microstructural control, and unique physical properties of materials in nano-dimensions. Topics include nanowires, quantum dots, thin films, electrical transport, electron emission properties, optical behavior, mechanical behavior, and technical applications of nanomaterials. PREREQUISITE: consent of instructor. (Cross-listed with MGE 267.)

Fabrication of Micro-Electro Mechanical Systems (MEMS) by bulk and surface micromachining of single crystal, polycrystall, and amorphous silicon and other materials. Performance issues including electrostatic, magnetic, piezoelectric actuators, residual stresses, deformation. Novel device applications, future trends in smart materials and nano-electro-mechanical (NEMS) systems. PREREQUISITE: consent of instructor. (Cross-listed with MGE 268.)

255. Presentations, Inventions, and Patents (4)
This course covers methodology and skills for oral and written presentations. Topics include preparation of presentation materials, presentation exercise, publication manuscripts, research work proposals, understanding and securing of inventions and intellectual properties, patent applications and licensing. PREREQUISITE: consent of instructor. (Cross-listed with MGE 269.)

256. Energy Materials and Applications (4)
This class will cover the fundamentals/engineering aspects of various energy materials based on metallic, ceramic, semiconductor; and chemical structures and their applications related to solar cells, fuel cells, batteries, fuel cells, and hydrogen storage will be discussed. (Cross-listed with MGE 278.) PREREQUISITE: consent of instructor or department stamp.

257. Polymer Science and Engineering (4)
Quantitative basic understanding of different branches of polymer science evolving from polymer chemistry, characterization, thermodynamics, rheological properties, smart materials, self-assembly in biopolymers (natural) and synthetic polymers, and applications of polymers ranging from medicine to structure. (Cross-listed with BENG 242) PREREQUISITE: graduate standing in bioengineering (BE 75) or materials science (MS 76) or consent of instructor.

258. Medical Device Materials (4)
In this interdisciplinary course, the nature, properties, and applications of various medical device materials will be discussed. The devices include coronary stents, catheters, drug delivery vehicles, and other implant, surgery, and therapeutic devices. (Cross-listed with MGE 250.)

259. Research Conference (2)
Group discussion of research activities and progress of group members. PREREQUISITE: consent of instructor.

260. Independent Study (4)
PREREQUISITE: consent of instructor.

269. Graduate Research (1-12)
(S/U grades only.)
Subject to the approval of a faculty advisor, students may also choose from the following courses offered by departments participating in the Materials Science and Engineering Program (see the relevant pages of this catalog for descriptions):

MECHANICAL AND AEROSPACE ENGINEERING (MAE)

MAE 229A. Mechanical Properties (4)
MAE 231A. Foundations of Solid Mechanics (4)
MAE 231B. Elasticity (4)
MAE 232A-B-C. Finite Element Methods in Solid Mechanics (4-4-4)
MAE 233A. Fracture Mechanics (4)
MAE 233B. Micromechanics (4)
MAE 238. Stress Waves in Solids (4)
MAE 251. Structure and Analysis of Solids (4)

ELECTRICAL AND COMPUTER ENGINEERING (ECE)
ECE 230A. Solid-State Electronics (4)
ECE 230B. Solid-State Electronics (4)
ECE 230C. Solid-State Electronics (4)
ECE 237. Modern Materials Analysis (4)
ECE 246A. Materials for Magnetic Recording (4)

PHYSICS
Phys. 133/219. Condensed Matter/ Materials Science Laboratory (2)
Phys. 211A. Solid-State Physics (5)
Phys. 211B. Solid-State Physics (4)

Mathematics

SENIOR LECTURERS WITH SECURITY OF EMPLOYMENT
John D. Eggers, Ph.D., Academic Senate Distinguished Teaching Award
Frank B. Thiess, Ph.D., Emeritus

LECTURERS WITH SECURITY OF EMPLOYMENT
Norman A. Shenk, Ph.D., Emeritus
Laura J. Stevens, Ph.D.

THE UNDERGRADUATE PROGRAM

The mathematics department offers a wide range of courses in pure and applied mathematics for its majors and for students in other disciplines. The department offers six majors leading to the B.A. degree: mathematics, applied mathematics, mathematics–applied science, mathematics–computer science, joint major in mathematics and economics, and mathematics–secondary education, and two leading to the B.S. degree: mathematics–scientific computation, and probability and statistics. In addition, students can minor in mathematics or mathematics education. The department also has an Honors Program for exceptional students in any of the eight majors. See the sections on major programs and the other areas mentioned above as well as the course descriptions at the end of this section for more specific information about program requirements and the courses that are offered by the department. You may visit our Web site, http://math.ucsd.edu, for more information, including course Web pages, career advising, and research interests of our faculty.

FIRST-YEAR COURSES

Entering students must take the Mathematics Placement Exam (MPE) prior to orientation unless they have an appropriate score on an AP calculus exam, an appropriate score (600 for Math. 10A; 650 for Math. 20A) on the SAT II Math Level 2 exam, an appropriate score on the International Baccalaureate Higher Level Mathematics Exam, credit by means of a foreign exam (e.g. GCE), or transferable college credit in calculus. The purpose of the MPE is to recommend placement for entering students in Math. 3C, 4C, 10A, or 20A. For more information about the MPE (test dates, test description, sample exams, online practice tests), see the Mathematics Testing and Placement Web site, http://mathtesting.ucsd.edu.

Prerequisites for Math. 3C, 4C, 10A-B-C, 20A-B-C-D-E-F, and 31AH-RH-CH are enforced through TritonLink. Students need to ensure that test scores and transferable college credit are submitted to the Registrar prior to enrollment through WebReg.

Math. 3C is the department’s preparatory course for the Math. 10 sequence, providing a review of algebraic skills, facility in graphing, and working with exponential and logarithmic functions.

Math. 4C is the department’s preparatory course for the Math. 20 sequence, providing a brief review of college algebra followed by an introduction to trigonometry and a more advanced treatment of graphing and functions.

Math. 10A-B-C is one of three calculus sequences. The students in this sequence have completed a minimum of two years of high school mathematics. This sequence is intended for majors in liberal arts and the social and life sciences. It fulfills the mathematics requirements of Revelle College and the option of the general-education requirements of Muir College. Completion of two quarters fulfills the requirement of Marshall College and the option of Warren College and Eleanor Roosevelt College.

The second first-year calculus sequence, Math. 20A-B-C, is taken mainly by students who have completed four years of high school mathematics or
434 MATHEMATICS

have taken a college level precalculus course such as Math. 4C. This sequence fulfills all college level requirements met by Math. 10A-B-C and is required of many majors, including chemistry and biochemistry, bioengineering, cognitive science, economics, mathematics, molecular biology, psychology, MAE, CSE, ECE, and physics. Students with adequate backgrounds in mathematics are strongly encouraged to take Math. 20 since it provides the foundation for Math. 20D-E-F which is required for some science and engineering majors. Note: As of summer 2003, Math. 21C and 21D have been renumbered to Math. 20C and 20D.

Certain transfers between the Math. 10 and Math. 20 sequences are possible, but such transfers should be carefully discussed with an advisor. Able students who begin the Math. 10 sequence and who wish to transfer to the Math. 20 sequence, may follow one of three paths:

1. Follow Math. 10A with Math. 20A, with two units of credit given for Math. 20A. This option is not available if the student has credit for Math. 10B or Math. 10C.

2. Follow Math. 10B with Math. 20B, receiving two units of credit for Math. 20B.

3. Follow Math. 10C with Math. 20B, receiving two units of credit for Math. 20B and two units of credit for Math. 20C.

Credit will not be given for courses taken simultaneously from the Math. 10 and the Math. 20 sequence.

The department also offers a three-quarter Honors Calculus sequence in Multivariable and Vector Calculus and Linear Algebra. This sequence, Math. 31AH-BH-CH, is designed for well-prepared students who have both a strong aptitude and a deep interest in mathematics and who wish to undertake a challenging series of courses. The sequence has a prerequisite of a score of 5 on the AP Calculus BC exam. These demanding, proof-based courses cover the material in Math. 20F, 20C, and 20E respectively—and entering students with a 5 on the Calculus BC exam should consider starting in the Honors sequence if their major (or minor) program requires them to take, at least, Math. 20A-B-C and 20F. Math. majors who complete the entire three-quarter honors sequence will have also satisfied the requirement of Math. 109 for their major program. They would be able to replace Math. 109 with any four-unit upper-division mathematics elective course.

MAJOR PROGRAMS

The department offers six different majors leading to the Bachelor of Arts degree: (1) mathematics, (2) applied mathematics, (3) mathematics–applied science, (4) mathematics–computer science, (5) joint major in mathematics and economics, (6) mathematics–secondary education; and two leading to a B.S. degree: (1) mathematics–scientific computation, (2) probability and statistics. The specific emphases and course requirements for these majors are described in the following sections. All majors must obtain a minimum 2.0 grade-point average in the upper-division courses used to satisfy the major requirements. Further, the student must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. Any mathematics course numbered 100–194 may be used as an upper-division elective. Note: 195, 196, 197, 198, 199, and 199H cannot be used towards any mathematics major.) All courses used to fulfill the major must be taken for a letter grade. No more than three upper-division courses taken externally from UCSD can be counted towards any major. Special exceptions may be considered via petition.

It is strongly recommended that all mathematics majors review their programs at least annually with a departmental advisor, and that they consult with the Advising Office in AP&M 6016 before making any changes to their programs. Current course offering information for the entire academic year is maintained on the department’s Web page at http://www.math.ucsd.edu. Special announcements are also e-mailed to all majors.

Students who plan to go on to graduate school in mathematics should be advised that only the best and most motivated students are admitted. Many graduate schools expect that students will have completed a full sequence of abstract algebra (Math. 100A-B-C) as well as a full sequence of analysis (Math. 140A-B-C). The advanced Graduate Record Exam (GRE) often has questions that pertain to material covered in the last quarter of analysis or algebra. In addition, it is advisable that students consider Summer Research Experiences for Undergraduates. This is a program funded by the National Science Foundation to introduce students to math research while they are still undergraduates. In their senior year or earlier, students should consider taking some graduate courses so that they are exposed to material taught at a higher level. In their junior year, students should begin to think of obtaining letters of recommendation from professors who are familiar with their abilities.

Note: Math. 20D, E, and F do not need to be taken in order. Math majors are strongly advised to take 20F as early as possible after successfully completing 20C.

EDUCATION ABROAD

Students may be able to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP) while still making progress toward the major. Students interested in this option should contact the Programs Abroad Office in the International Center and discuss their plans with the mathematics advising officer before going abroad.

The department must approve courses taken abroad. Information on EAP/OAP can be found in the Education Abroad Program section of the UC San Diego General Catalog and the Web site http://pao.ucsd.edu.

MAJOR IN MATHEMATICS

The upper-division curriculum provides programs for mathematics majors as well as courses for students who will use mathematics as a tool in the biological, physical and behavioral sciences, and the humanities.

Required Courses:

Lower-Division

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D

Upper-Division

2. Mathematical Reasoning: Math. 109 (Note: Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)

3. One of the following sequences:
   b. Advanced Calculus: Math. 142A-B and Math. 120A (Math. 140A-B-C recommended for graduate school)

4. One of the following sequences:
   a. Modern Algebra: Math. 100A-B
   b. Modern Applied Algebra: Math. 103A-B and Math. 102 (Math. 100A-B-C recommended for graduate school)

5. Upper-division electives to complete thirteen four-unit courses, chosen from any mathematics course numbered between 100 and 194 (including those taken from the requirements listed above.)

As with all departmental requirements, more advanced courses on the same material may be substituted with written approval from the departmental advisor.

To be prepared for a strong major curriculum, students should complete the last three quarters of the 20 sequence and Math. 109 before the end of their sophomore year. Either Math. 140A-B or 100A-B should be taken during the junior year.

MAJOR IN APPLIED MATHEMATICS

A major in applied mathematics is also offered. The program is intended for students planning to work on the interface between mathematics and other fields.

Required Courses:

Lower-Division

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D

Programming (one of the following)

a. SE 8A-AL-8 (Intro to Computer Sci: Java)
   b. CSE 11 (Intro to Computer Sci: Java, Accelerated Pace)
   c. MAE 9 (C/C++ Programming)

Upper-Division

3. Mathematical Reasoning: Math. 109 (Note: Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)
4. Linear Algebra: Math. 102 or Math. 170A

5. Advanced Calculus: Math. 140A-B or Math. 142A-B

6. One of the following sequences:
   a. Math. 180A-C-181A
   b. Math. 180A-181A and any two from Math. 181B-C
   c. (Math. 183 or Math. 180A-181A) and any three from Math. 170A-B-C-175-179

7. One additional sequence which may be chosen from the list (6) above or the following list: Math. 110-120A-130A, 120A-B, 130A-132A, 152-184A, 154-184A, 155A-B, 171A-B, 193A-B.

8. Upper-division electives to complete at least thirteen four-unit courses, chosen from any mathematics course numbered between 100 and 194 (including those taken from the requirements listed above) except:
   a. Up to twelve units may be taken from outside the department in an approved applied mathematical area. A petition specifying the courses to be used must be approved by an applied mathematics advisor. No such units may also be used for a minor or program of concentration.
   b. MAE 107, Econ. 120A-B-C, cannot be counted toward the thirteen required courses.

To be prepared for a strong major curriculum, students should complete the last three quarters of the 20 sequence and Math. 109 before the end of their sophomore year.

**MAJOR IN MATHEMATICS—SCIENTIFIC COMPUTATION**

This major is designed for students with a substantial interest in scientific computation. The program is a specialized applied mathematics program with a concentration in computer solutions of scientific problems.

**Required Courses:**

**Lower-Division**

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D

2. Computer Programming: MAE 9 and [CSE 8A-AL-B or CSE 11]

3. Basic Computation: Math. 15A (or CSE 20) and Math. 15B (or CSE 21) and CSE 12

**Upper-Division**

5. Linear Algebra: Math. 102

6. Probability and Statistics: Math. 183 or 180A-181A
   (Note: No credit for Math. 183 if Math. 180A or 181A taken prior or concurrently.)

7. Analysis: Math. 140A-B or 142A-B (note: Students planning to go to grad school should take 140A-B)

10. Scientific Computing: Math. 179

At least 15 upper-division mathematics courses are required for the major, except:

a. Up to 3 upper-division courses may be taken outside the department in an approved mathematical computation area in the sciences or engineering. A petition specifying the courses to be used must be approved by a mathematics-scientific computation advisor. No such units may also be used by a minor or program of concentration.

b. MAE 107, Econ. 120A-B-C, Math. 195, 196, 197, 199, and 199H cannot be counted toward the 13 four-unit upper-division courses.

**MAJOR IN MATHEMATICS—PROBABILITY AND STATISTICS**

**Effective Winter 2007**

This major is designed for students with a substantial interest in probability theory and statistics. It is useful preparation for many fields of employment as well as graduate school.

**Required Courses:**

**Lower-Division**

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
   c. Programming (one of the following)
      a. CSE 8A-AL-B (Java)
      b. CSE 11 (Java: Accelerated Pace)
      c. MAE 9 (C/C++)

**Upper-Division**

4. Linear Algebra: Math. 102 or Math. 170A

5. Analysis/Advanced Calculus: Math. 140A-B or Math. 142A-B

7. Probability: Math. 180A-B-C

9. One of the following: Math. 181C, 181E, 193A, 193B, 194

10. Computational Statistics: Math. 185

At least 15 four-unit upper-division mathematics courses are required, except:

a. Two upper-division electives may be outside the department in an approved applied mathematical area. A petition approved by a math advisor is required. No such units may also be used for a minor or program of concentration.

b. MAE 107, Econ. 120A-B-C, Math. 195-199 cannot be counted toward the upper-division requirements.

To be prepared for a strong major curriculum, students should complete the last three quarters of the 20 sequence and Math. 109 before the end of their sophomore year.

**MAJOR IN MATHEMATICS—APPLIED SCIENCE**

This major is designed for students with a substantial interest in mathematics and its applications to a particular field such as physics, biology, chemistry, biochemistry, cognitive science, computer science, economics, management science, or engineering.

**Required Courses:**

**Lower-Division**

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D

2. Programming (one of the following is recommended):
   a. CSE 8A-AL-B (Intro to Computer Sci: Java)
   b. CSE 11 (Intro to Computer Sci: Java, Accelerated Pace)
   c. MAE 9 (C/C++ Programming)

**Upper-Division Mathematics Requirements:**

4. Linear Algebra: Math. 102 or Math. 170A

5. Any two-quarter, upper-division math sequence

6. Upper-division electives to complete at least seven four-unit courses, chosen from any mathematics course numbered between 100 and 194 (including those taken from the requirements listed above.)

**Upper-Division Applied Science Requirements:**

7. Seven upper-division courses selected from one or two other departments (these cannot be from mathematics). At least three of these seven upper-division courses must require at least Math. 20C as a prerequisite.
Students must submit an individual plan for approval in advance by a mathematics department advisor, and all subsequent changes in the plan must be approved by a mathematics department advisor.

MAJOR IN MATHEMATICS–COMPUTER SCIENCE

Graduates of this program will be mathematically oriented computer scientists who have specialized in the mathematical aspects and foundations of computer science or in the computer applications of mathematics.

As of fall 2000, a mathematics–computer science major is not allowed to also minor in computer science in the Computer Science and Engineering department.

The detailed curriculum is given in the list below:

MATHEMATICS–COMPUTER SCIENCE PRE-MAJOR

In October 2001, the Academic Senate approved a minimum GPA requirement of 2.5 in the lower-division mathematics courses required for the mathematics–computer science major. The 2.5 minimum GPA in the lower-division math courses reflects minimal preparation for the upper-division courses required for the major.

Therefore, students entering UCSD as first-year students for the fall 2002 quarter and later and students entering as transfer students for the fall 2003 quarter and later will be held to this requirement. Applications from students entering UCSD on or after the effective dates above will be held until all lower-division math courses for the major are completed and the minimum GPA in those courses of 2.5 can be verified. Students meeting the 2.5 minimum GPA requirement will be accepted into the mathematics–computer science major.

Required Courses:

Lower-Division:

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
2. Intro to Computer Science—CSE 8A-AL-B
   Introduction to Computer Science: Java, or
   CSE 11 Introduction to Computer Science: Java (Accelerated)
3. Basic Data Structures and Object-oriented Programming: CSE 12
4. Computer Organization and Systems Programming: CSE 30 (Note: CSE 30 requires CSE 20 or Math. 15A as a prerequisite.)

Upper-Division:

   Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109)
6. Modern Applied Algebra: Math. 103A-B or
   Modern Algebra: Math. 100A-B
7. Theory of Computability: Math. 166 (or CSE 105)
8. Intro to Probability: Math. 180A or 183
9. Combinatorics: Math. 184A
10. Computer Implementations of Data Structures: Math. 176 (or CSE 100)
11. Design & Analysis of Algorithms: Math. 188 (or CSE 101)
12. Eight units from: Math. 170A-B-C, 174, 175, 179
    (Note duplication of credit between Math. 174 and 170A-B-C)

JOINT MAJOR IN MATHEMATICS AND ECONOMICS

Majors in mathematics and the natural sciences often feel the need for a more formal introduction to issues involving business applications of science and mathematics. Extending their studies into economics provides this application and can provide a bridge to successful careers or advanced study. Majors in economics generally recognize the importance of mathematics to their discipline. Undergraduate students who plan to pursue doctoral study in economics or business need the more advanced mathematics training prescribed in this major.

This major is considered to be excellent preparation for Ph.D. study in economics and business administration, as well as for graduate studies for professional management degrees, including the MBA. The major provides a formal framework making it easier to combine study in the two fields.

Course requirements of the Joint Major in Mathematics and Economics consist principally of the required courses of the pure mathematics major and the economics/management science major.

Required Courses:

Lower-Division

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
2. Intro. to Economics: Econ. 1 and 3

Upper-Division

Fifteen upper-division courses in mathematics and economics, with a minimum of seven courses in each department, chosen from the courses listed below (prerequisites are strictly enforced):
   Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109)
5. One of the following: Foundations of Analysis: Math. 140A Advanced Calculus: Math. 142A
7. Microeconomics: Econ. 100A-B-C
8. Econometrics: Econ. 120A-B-C or Math. 180A and Econ. 120B-C or Probability: Math. 180A, 181A and Econ. 120C
9. One of the following:
   a. Macroeconomics: Econ. 110A-B
   or two courses from the following:
   a. Decisions Under Uncertainty: Econ. 171
   b. Introduction to Operations Research: Econ. 172A-B, (Note: 172A is a prerequisite for 172B-C)

Other courses which are strongly recommended are Math. 130B, 131, 181B, 193A-B and 194 and Econ. 109, 113, 175, and 178.

MAJOR IN MATHEMATICS–SECONDARY EDUCATION

This major offers excellent preparation for teaching mathematics in secondary schools. Students interested in earning a California teaching credential from UCSD should contact the Education Studies Program (EDS) for information regarding prerequisites and requirements. It is recommended you contact EDS as early as possible.

Lower-Division Requirements

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
   Recommended:
   2. One of the following: Introduction to Computer Science: Java: CSE 8A-AL-B, C/C++ Programming: MAE 9

Upper-Division Requirements:

3. Mathematical Reasoning: Math. 109 (Note: Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109)
4. Number Theory: Math. 104A
5. History of Mathematics: Math. 163
6. Practicum in Learning: EDS 129A-B-C (can use EDS 136 and EDS 138 instead of EDS 129A)
8. One of the following: Intro. to Probability: Math. 180A, Statistical Methods: Math. 183
9. One of the following: Differential Geometry: Math. 150A, Topics in Geometry: Math 151, Geometry for
Secondary Teachers: Math. 153, Intro. to Topology: Math. 190

11. One of the following: Foundations of Analysis: Math. 140A, Advanced Calculus: Math. 142A

12. Upper-division courses must total thirteen courses. Upper-division courses must include at least one two-semester sequence from the following list:

MINOR IN MATHEMATICS

The minor in mathematics consists of seven or more courses. At least four of these courses must be upper-division courses taken from the UCSD Department of Mathematics. Acceptable lower-division courses are Math. 20D, 20E (or 31CH), and 20F (or 31AH).

Math. 195, 196, 197, 198, 199, and 199H are not acceptable courses for the mathematics minor. A grade of C- or better (or P if the Pass/Not Pass option is used) is required for all courses used to satisfy the requirements for a minor. There is no restriction on the number of classes taken with the P/NP option. Upper-division courses cannot overlap between major and minor programs.

MINOR IN MATHEMATICS EDUCATION

The education studies mathematics education minor is intended for students interested in understanding how people learn mathematics, including: students considering K-12 teaching as a career; students interested in teaching at the college level; and students who are interested in becoming better, more reflective learners. All majors are welcome, but the Calculus 10 or 20 sequence is a prerequisite for two of the upper-division courses required for the minor. For more information contact Education Studies:

http://www-tep.ucsd.edu/minormath.shtml

MATHEMATICS HONORS PROGRAM

The Department of Mathematics offers an honors program for those students who have demonstrated excellence in the major. Successful completion of the honors program entitles the student to graduate with departmental honors (see Department Honors in the Academic Regulations section).

Requirements for admission to the program are:

1. Junior standing

2. An overall GPA of 3.0 or higher

3. A GPA in the major of 3.5 or higher

4. Completion of Math. 109 (Mathematical Reasoning) or Math. 31CH (Honors Vector Calculus) and at least one of Math. 100A, 103A, 140A, or 142A. (Completion of additional major courses is strongly recommended.)

Applications to the program should be made the spring quarter before the student is at senior standing.

Completion of the honors program requires the following:

1. At least one quarter of the student colloquium, Math. 196 (Note: Math. 196 is only offered in the fall quarter.)

2. The minimum 3.5 GPA in the major must be maintained

3. An Honors Thesis. The research and writing of the thesis will be conducted over at least two quarters of the junior/senior years under the supervision of a faculty advisor. This research will be credited as eight to twelve units of Math. 199H. The completed thesis must be approved by the department’s Honors Committee, and presented orally at the Undergraduate Research Conference or another appropriate occasion.

The department’s Honors Committee will determine the level of honors to be awarded, based on the student’s GPA in the major and the quality of the honors work. Applications for the mathematics department’s Honors Program can be obtained at the mathematics department Undergraduate Affairs Office (AP&M 7018) or the Mathematics Advising Office (AP&M 6016). Completed applications can be returned to the Mathematics Advising Office.

For Joint Mathematics and Economics Majors:

To graduate with honors requires the following:

1. At least one quarter of the Student Colloquium, Math. 196 (Note: Math. 196 is only offered in the fall quarter.)

2. At least one Economics honors course: Econ 100AH, 100BH, 110AH, 110BH, 120AH, 120BH, 120CH. Note: enrollment in these honors classes is by special permission; check with the undergraduate advisors in the Economics Student Services Office (SH 245).

3. An Honors Thesis. The research and writing of the thesis will be conducted over two quarters of the senior year under the supervision of a faculty advisor. The completed thesis must be approved by the Joint Mathematics and Economics Honors Committee, which comprises the Mathematics Honors Committee and the Economics Honors Committee, and presented orally at the Undergraduate Research Conference or another appropriate occasion.

a. If the student is a declared major in the mathematics department (MA33), this thesis will be credited as eight units of Math. 199H. Enrollment in Math 199H is by special permission; check with the advisors in the mathematics department Undergraduate Affairs Office (AP&M 7018) or the Mathematics Advising Office (AP&M 6016).

b. If the student is a declared major in the economics department (EN28), the student must enroll in Econ 191A-B. Enrollment in Econ 191 is by special permission; check with the undergraduate advisors in the Economics Student Services Office (SH 245).

4. A minimum GPA of 3.0 overall, 3.5 in the upper-division courses required for the major and a 3.5 in the following four classes: Math. 196, Economics Honors class and either Econ 191A-B or two quarters of Math. 199H.

The Joint Mathematics and Economics Honors Committee will determine the level of honors to be awarded, based on the student’s GPA in the major and the quality of the honors work.

DUPLICATION OF CREDIT

Information on duplication of credit (both full and partial) can be found in the course descriptions. It is the student’s responsibility to be aware of the credit restrictions listed.

Faculty Advisors

Advisors change yearly. Contact the undergraduate office at (858) 534-3590 for current information.

THE GRADUATE PROGRAM

The Department of Mathematics offers graduate programs leading to the M.A. (pure or applied mathematics), M.S. (statistics), and Ph.D. degrees.

The application deadline for fall admission is January 7 for Ph.D. candidates, and February 25 for M.A./M.S. candidates. Candidates should have a bachelor’s or master’s degree in mathematics or a related field from an accredited institution of higher education or the equivalent. A minimum scholastic average of B or better is required for course work completed in upper-division or prior graduate study. In addition, the department requires all applicants to submit scores no older than twelve months from both the GRE General Test and Advanced Subject Test in Mathematics. Completed files are judged on the candidate’s mathematical background, qualifications, and goals.

Departmental support is typically in the form of teaching assistantships, research assistantships, and fellowships. These are currently only awarded to students in the Ph.D. program.

GENERAL REQUIREMENTS

All student course programs must be approved by a faculty advisor prior to registering for classes each quarter, as well as any changes throughout the quarter.

Full-time students are required to register for a minimum of twelve (12) units every quarter, eight (8) of which must be graduate-level mathematics courses taken for a letter grade only. The remaining four (4) units can be approved upper-division or graduate-level courses in mathematics-related subjects (Math. 500 may not be used to satisfy any part
of this requirement). After advancing to candidacy, Ph.D. candidates may take all course work on a Satisfactory/Unsatisfactory basis. Typically, students should not enroll in Math. 299 until they have satisfactorily passed both qualifying examinations (see Ph.D. in Mathematics) or obtained approval of their faculty advisor.

MASTER OF ARTS IN PURE MATHEMATICS

[Offered only under the Comprehensive Examination Plan.] The degree may be terminal or obtained on the way to the Ph.D. A total of forty-eight units of credit is required. Twenty-four of these units must be graduate-level mathematics courses approved in consultation with a faculty advisor.

In the selection of course work to fulfill the remaining twenty-four units, the following restrictions must be followed:

a. No more than eight units of upper-division mathematics courses.

b. No more than twelve units of graduate courses in a related field outside the department (approved by the Department of Mathematics).

c. No more than four units of Math. 295 (Special Topics) or Math. 500 (Apprentice Teaching).

d. No units of Math. 299 (Reading and Research) may be used in satisfying the requirements for the master’s degree.

Comprehensive Examinations

Seven written departmental examinations are offered in three areas (refer to “Ph.D. in Mathematics,” Areas 1, 2, and 3, for list of exams). A student must complete two examinations, one from Area 1 and one from Area 2, both with an M.A. pass or better.

Foreign Language Requirement

A reading knowledge of one foreign language (French, German, or Russian) is required. In exceptional cases other languages may be substituted. Testing is administered by faculty in the department who select published mathematical material in one of these languages for a student to translate.

Time Limits

Full-time students are permitted seven quarters in which to complete all degree requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

MASTER OF ARTS IN APPLIED MATHEMATICS

[Offered only under the Comprehensive Examination Plan] The degree may be terminal or obtained on the way to the Ph.D. Out of the total forty-eight units of required credit, two applied mathematics sequences comprising twenty-four units must be chosen from the following list (not every course is offered each year):

202A-B-C. (Applied Algebra)
210A-B-C. (Mathematical Methods in Physics and Engineering)

261A-B-C. (Probabilistic Combinatorics and Algorithms)
264A-B-C. (Combinatorics)
270A-B-C. (Numerical Mathematics)
271A-B-C. (Numerical Optimization)
272A-B-C. (Numerical Partial Differential Equations)
273A-B-C. (Advanced Techniques in Computational Math)

In certain cases, a petition may be approved to substitute one of these requirements from the following list of sequences:

220A-B-C. (Complex Analysis)
231A-B-C. (Partial Differential Equations)
240A-B-C. (Real Analysis)
280A-B-C. (Probability Theory)
281A-B-C. (Mathematical Statistics)
282A-B. (Applied Statistics)

In choosing course work to fulfill the remaining twenty-four units, the following restrictions must be followed:

a. At least eight units must be approved graduate courses in mathematics or other departments (a one-year sequence in a related area outside the department such as computer science, engineering, physics, or economics is strongly recommended);

b. A maximum of eight units can be approved upper-division courses in mathematics; and

c. A maximum of eight units can be approved upper-division courses in other departments.

d. A maximum of four units of Math. 500 (Apprentice Teaching).

e. NO UNITS of Math. 295 (Special Topics) or Math. 299 (Reading and Research) may be used.

Students are strongly encouraged to consult with a faculty advisor in their first quarter to prepare their course of study.

Comprehensive Examinations

Two written comprehensive examinations must be passed at the master’s level in any of the required applied mathematics sequences listed above. The instructors of each course should be contacted for exam details.

Foreign Language Requirement

There is no foreign language requirement for the M.S. in statistics.

Time Limits

Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

PH.D. IN MATHEMATICS

Written Qualifying Examinations

The department offers written qualifying examinations in seven subjects. These are grouped into three areas as follows:

Area #1

Complex Analysis (Math. 220A-B-C) Real Analysis (Math. 240A-B-C)

Area #2

Area #3

Numerical Analysis (Math. 270A-B-C) Statistics (Math. 281A-B-C)

i. Three qualifying exams must be passed. At least one must be passed at the Ph.D. level, and a second must be passed at either the Ph.D. or Provisional Ph.D. Level The third exam must be passed at least at the master’s level.
ii. Of the three qualifying exams, there must be at least one from each of Areas #1 and #2. Algebra and Applied Algebra do not count as distinct exams in Area #2.

iii. Students must pass a least two exams from distinct areas with a minimum grade of Provisional Ph.D. (For example, a Ph.D. pass in Real Analysis, Provisional Ph.D. Pass in Complex Analysis, M.A. pass in Algebra would NOT satisfy this requirement, but a Ph.D. Pass in Real Analysis, M.A. pass in Complex Analysis, Provisional Ph.D. Pass in Algebra would, as would a Ph.D. Pass in Numerical Analysis, Provisional Ph.D. Pass in Applied Algebra, and M.A. pass in Real Analysis.)

iv. All exams must be passed by the September exam session prior to the beginning of the third year of graduate studies. (Thus, there would be no limit on the number of attempts, encouraging new students to take exams when they arrive, without penalty.)

Department policy stipulates that at least one of the exams must be completed with a Provisional Ph.D. Pass or better by September following the end of the first year. Anyone unable to comply with this schedule will lose their funding as a Ph.D. student. They will be terminated from the doctoral program and transferred to one of our Master's programs.

Any Master's student can submit for consideration a written request to transfer into the Ph.D. Program when the qualifying exam requirements for the Ph.D. Program have been met and a dissertation advisor is found. Approval by the Qualifying Exam and Appeals Committee (QEAC) is not automatic, however.

Exams are typically offered twice a year, one scheduled late in the spring quarter and again in early September (prior to the start of fall quarter). Copies of past exams are made available for purchase in the Graduate Office. In choosing a program with an eye to future employment, students should seek the assistance of a faculty advisor and take a broad selection of courses including applied mathematics, such as those in Area #3.

Foreign Language Requirement
A reading knowledge of one foreign language (French, German, or Russian) is required prior to advancing to candidacy. In exceptional cases other languages may be substituted. Testing is administered within the department by faculty who select published mathematical material in one of these languages for a student to translate.

Advancement to Candidacy
It is expected that by the end of the third year (nine quarters), students should have a field of research chosen and a faculty member willing to direct and guide them. A student will advance to candidacy after successfully passing the oral qualifying examination, which deals primarily with the area of research proposed but may include the project itself. This examination is conducted by the student's appointed doctoral committee. Based on their recommendation, a student advances to candidacy and is awarded the C.Phil. Degree.
11L. Elementary Probability and Statistics Laboratory (1)

Introduction to the use of software in probabilistic and statistical analysis. Emphasis on understanding connections between the theory of probability and statistics, numerical results of real data, and learning techniques of data analysis and interpretation useful for solving scientific problems.

**Prerequisites:** AP Calculus BC score of 3, 4, or 5, or Math. 10B with a grade of C– or better, or Math. 20B with a grade of C– or better, and concurrent enrollment in Math. 11L.

15A. Discrete Mathematics (4)

**Prerequisites:** AP Calculus BC score of 3, 4, or 5, or Math. 10B with a grade of C– or better, or Math. 20B with a grade of C– or better, and concurrent enrollment in Math. 11L.

15B. Mathematics for Algorithm and Systems (4)

This course is a mathematical toolbox for the qualitative and quantitative analysis of algorithms and computer systems. Topics to be covered include basic enumeration and counting techniques; recurrence relations; graph theory; asymptotic notation; elementary applied discrete probability. Equivalent to CSE 21. Credit not offered for both Math. 15B and CSE 21.

**Prerequisites:** AP Calculus BC score of 3, 4, or 5, or Math. 10B with a grade of C– or better, or Math. 20B with a grade of C– or better, and concurrent enrollment in Math. 11C.

20A. Calculus for Science and Engineering (4)

Foundations of differential and integral calculus of one variable. Functions, graphs, continuity, limits, derivative, tangent line. Applications with algebraic, exponential, logarithmic, and trigonometric functions. Introduction to the integral. (Two credits given if taken after Math. 1A/10A and no credit given if taken after Math. 1B/10B or Math. 1C/10C.)

**Prerequisites:** AP Calculus AB score of 4 or 5, or AP Calculus BC score of 3, or equivalent AB subscore on BC exam, or SAT II Math. 2C score of 650 or higher, or Math. 3A with a grade of C– or better, or Math. 10A with a grade of C– or better.

20B. Calculus for Science and Engineering (4)

Integral calculus of one variable and its applications, with exponential, logarithmic, hyperbolic, and trigonometric functions. Methods of integration. Infinite series. Polar coordinates in the plane and complex exponentials. (Two units of credit given if taken after Math. 1B/10B or Math. 1C/10C. Formerly numbered Math. 2A.)

**Prerequisites:** AP Calculus BC score of 4 or 5, or AP Calculus BC score of 3, or Math. 20A with a grade of C– or better, or Math. 10B with a grade of C– or better, or Math. 10C with a grade of C– or better.

20C. Calculus and Analytic Geometry for Science and Engineering (4)

Vector geometry, vector functions and their derivatives. Partial differentiation. Maxima and minima. Double integration. Two units of credit given if taken after Math. 10C. Credit not offered for both Math. 20C and 31BH. Formerly numbered Math. 21C.

**Prerequisites:** AP Calculus BC score of 3, 4, or 5, or Math. 20B with a grade of C– or better.

20D. Introduction to Differential Equations (4)

**Prerequisites:** AP Calculus BC score of 4 or 5, or Math. 21C or Math. 31BH with a grade of C– or better.

20E. Vector Calculus (4)

**Prerequisites:** AP Calculus BC score of 4 or 5, or Math. 21C or Math. 31BH with a grade of C– or better.

20F. Linear Algebra (4)

**Prerequisites:** AP Calculus BC score of 4 or 5, or Math. 21C with a grade of C– or better.

31A. Honors Linear Algebra (4)

First quarter of three-quarter honors integrated linear algebra/multivariable calculus sequence for well-prepared students. Topics include: real / complex number systems, vector spaces, linear transformations, bases and dimension, change of basis, eigenvalues, eigenvectors, diagonalization. Credit not offered for both Math. 31A and 20F.

**Prerequisites:** AP Calculus BC score of 5 or 5, or consent of instructor.

31BH. Honors Multivariable Calculus (4)

Second quarter of three-quarter honors integrated linear algebra/multivariable calculus sequence for well-prepared students. Topics include: derivative in several variables, Jacobian matrices, extrema and constrained extrema, integration in several variables. Credit not offered for both Math. 31BH and 20F.

**Prerequisites:** AP Calculus BC score of 4 or 5, or Math. 31AH with a grade of B– or better, or consent of instructor.

31CH. Honors Vector Calculus (4)

Third quarter of honors integrated linear algebra/multivariable calculus sequence for well-prepared students. Topics include: change of variables formula, integration of differential forms, exterior derivative, generalized Stokes' theorem, conservative vector fields, potentials. Credit not offered for both Math. 31CH and 20E.

**Prerequisites:** AP Calculus BC score of 4 or 5, or Math. 31BH with a grade of B– or better, or consent of instructor.

87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen.

95. Introduction to Teaching Math (2)

Cross-listed with EDS 30. Introduces students' learning difficulties in mathematics in more depth to prepare students to make meaningful observations of how K-12 teachers deal with these difficulties. Explore how instruction can introduce the students to rigorous mathematical proof, contradiction, naive set theory, equivalence relations and epsilon-delta proofs. Required of all departmental majors. Possible topics are: congruences, reciprocity laws, quadratic forms, prime number theorem, Riemann zeta function, Fermat's conjecture, diophantine equations, Gaussian sums, algebraic integers, unique factorization into prime ideals in algebraic number fields, class number, units, splitting of prime ideals in extensions, quadratic and cyclotomic fields, partitions. Possible applications are Fast Fourier Transform, signal processing, coding, cryptography. Three lectures.

**Prerequisites:** consent of instructor.

107A. Computer Algebra (4-4)

An introduction to algebraic computation. Computational aspects of groups, rings, fields, etc. Data representation and algorithms for symbolic computation. Polynomials and their arithmetic. The use of a computer algebra system as an experimental tool in mathematics. Programming using algebraic systems. Possible topics: prior or concurrent enrollment in the Math. 100 or 103 sequence.

109. Mathematical Reasoning (4)

This course uses a variety of topics in mathematics to introduce the students to rigorous mathematical proof, emphasizing quantifiers, induction, negation, proof by contradiction, naive set theory, equivalence relations and epsilon-delta proofs. Required of all departmental majors. Possible topics are: congruences, reciprocity laws, quadratic forms, prime number theorem, Riemann zeta function, Fermat's conjecture, diophantine equations, Gaussian sums, algebraic integers, unique factorization into prime ideals in algebraic number fields, class number, units, splitting of prime ideals in extensions, quadratic and cyclotomic fields, partitions. Possible applications are Fast Fourier Transform, signal processing, coding, cryptography. Three lectures.

**Prerequisites:** consent of instructor.

110. Introduction to Partial Differential Equations (4)

Fourier series, orthogonal expansions, and eigenvalue problems. Sturm-Liouville theory. Separation of variables for partial differential equations of mathematical physics, including topics on Bessel functions and Legendre polynomials.

**Prerequisites:** Math. 20D (or 21D) and 20F, or consent of instructor. (F,S)

111A. Mathematical Modeling (4-4)

An introduction to mathematical modeling in the physical and social sciences, concentrating on one or more topics that vary from year to year. Students work on independent research projects. May be repeated for credit when topics change.

**Prerequisites:** Math. 20D and Math. 20F, or consent of instructor.

120A. Elements of Complex Analysis (4)

Complex numbers and functions. Analytic functions, harmonic functions, elementary conformal mappings.
Complex integration. Power series. Cauchy's theorem. Cauchy's formula. Residue theorem. Three lectures, one recitation. Prerequisite or co-registration: Math. 20E, or consent of instructor. (F,W)

120B. Applied Complex Analysis (4)
Applications of the residue theorem. Conformal mapping and applications to potential theory, flows, and temperature distributions, Fourier transformations. Laplace transformations, and applications to integral and differential equations. Selected topics such as Poisson's formula. Dirichlet's problem. Neumann's problem, or special functions. Three lectures, one recitation. Prerequisite: Math. 120A. (W,S)

121A. Foundations of Teaching and Learning Mathematics I (4)
(Cross-listed with EDS 121A.) Develop teachers’ knowledge base (knowledge of mathematics content, pedagogy, and student learning) in the context of advanced mathematics. This course builds on the previous courses where these components of knowledge were addressed exclusively in the context of high-school mathematics. Prerequisites: EDS 30/Math. 95, Calculus 19C or 20C.

121B. Foundations of Teaching and Learning Math II (4)
(Cross-listed with EDS 121B.) Examine how learning theories can consolidate observations about conceptual development with the individual student as well as the development of teaching strategies in the history of mathematics. Examine how teaching theories explain the effect of teaching approaches addressed in the previous courses. Prerequisite: EDS 121A/Math. 121A.

130A. Ordinary Differential Equations I (4)
Linear and nonlinear systems of differential equations. Stability theory, perturbation theory. Applications and introduction to numerical solutions. Three lectures. Prerequisites: Math. 20D and either Math. 20F or Math. 31AH or consent of instructor. (F)

130B. Ordinary Differential Equations II (4)
Existence and uniqueness of solutions to differential equations. Local and global theorems of continuity and differentiability. Three lectures. Prerequisite: Math. 130A or consent of instructor. (W)

131. Variational Methods in Optimization (4)
Maximum-minimum problems. Normed vector spaces, functionals, Gateaux variations. Euler-Lagrange multiplier theorem for an extremum with constraints. Calculus of variations via the multiplier theorem. Applications may be taken from a variety of areas such as the following: applied mechanics, control theory, production planning and resource allocation, astronautics, rocket control, physics, Fermat’s principle and Hamilton’s principle, geometry, geodesic curves, control theory, elementary bang-bang problems. Three lectures, one recitation. Prerequisites: Math. 20D(21D and 20F or consent of instructor. (S)

132A. Elements of Partial Differential Equations and Integral Equations (4)
Basic concepts and classification of partial differential equations. First order equations, characteristics. Hamilton-Jacobi theory, Laplace’s equation, wave equation, heat equation. Separation of variables, eigenfunction expansions, existence and uniqueness of solutions. Three lectures. Prerequisite: Math. 110 or consent of instructor. (W)

132B. Elements of Partial Differential Equations and Integral Equations (4)
Relation between differential and integral equations, some classical integral equations, Volterra integral equations, integral equations of the second kind, degenerate kernels, Fredholm alternative, Neumann-Liouville series, the resolvent kernel. Three lectures. Prerequisite: Math. 132A. (S)

140A. Foundations of Real Analysis I (4)
First course in a rigorous three-quarter sequence on real analysis. Topics include: the real number system, basic topology, metric spaces, sequences and series, continuity. Students may not receive credit for both Math. 140A and Math. 142A. Prerequisite: Math. 31CH or Math. 109, or consent of instructor.

140B. Foundations of Real Analysis II (4)
Second course in a rigorous three-quarter sequence on real analysis. Topics include: differentiation, the Riemann-Stieltjes integral, sequences and series of functions, power series, Fourier series, and special functions. Students may not receive credit for both Math. 140B and Math. 142B. Prerequisite: Math. 140A or consent of instructor.

140C. Foundations of Real Analysis III (4)
Third course in a rigorous three-quarter sequence on real analysis. Topics include: differentiation of functions of several variables, the implicit and inverse function theorems, the Lebesgue integral, infinite-dimensional normed spaces. Prerequisite: Math. 140B or consent of instructor.

142A. Introduction to Analysis I (4)
First course in an introductory two-quarter sequence on analysis. Topics include: infinite series, null and convergent series and sequences, limits of functions, continuity. Students may not receive credit for both Math. 140 and Math. 142A. Prerequisite: Math. 31CH or Math. 109, or consent of instructor.

142B. Introduction to Analysis II (4)
Second course in an introductory two-quarter sequence on analysis. Topics include: differentiation, the Riemann integral, sequences and series of functions, uniform convergence, Taylor and Fourier series, special functions. Students may not receive credit for both Math. 140B and Math. 142B. Prerequisites: Math. 142A or Math. 140A, or consent of instructor.

150A. Differential Geometry (4)
Differential geometry of curves and surfaces. Gauss and mean curvatures, geodesics, parallel displacement, Gauss-Bonnet theorem. Three lectures. Prerequisites: Math. 20E with a grade of C– or better and Math. 20F with a grade of C– or better, or consent of instructor. (F)

150B. Calculus on Manifolds (4)
Calculus of functions of several variables, inverse function theorem. Further topics, selected by instructor, such as exterior differential forms, Stokes’ theorem, manifolds, Sard’s theorem, elements of differential topology, singularities of maps, catastrophes, further topics in differential geometry, topics in geometry of physics. Three lectures. Prerequisite: Math. 150A. (W)

152. Applicable Mathematics and Computer Programming (4)
This course will give students experience in applying theory to real world applications such as Internet and wireless communication problems. The course will incorporate talks by experts from industry and students will be helped to develop software projects. Topics include graph visualization, labelling, and embeddings, random graphs and randomized algorithms. May be taken 3 times for credit. Prerequisites: Math. 20D or 21D, and 20F or consent of instructor.

153. Geometry for Secondary Teachers (4)
Two- and three-dimensional Euclidean geometry is developed from one set of axioms. Pedagogical issues will emerge from the mathematics and be addressed using current research in teaching and learning geometry. This course is designed for prospective secondary school mathematics teachers. Prerequisite: Math. 109.

154. Discrete Mathematics and Graph Theory (4)
Basic concepts in graph theory, graph structures and properties, graphs, trees, and networks. Applications in the computer science field. Prerequisites: Math. 20F and Math. 109, or consent of instructor.

155A. Computer Graphics (4)
Bezier curves and control lines, de Casteljau construction for subdivision, elevation of degree, control points of Hermite curves, barycentric coordinates, rational curves. Three lectures, one recitation, and approximately eight laboratory hours per week. Prerequisites: Math. 20F and programming experience. (F)

155B. Topics in Computer Graphics (4)
Spline curves, spline interpolation, affine and affine cross ratios, polar forms (blossoming), the Oslo algorithm for knot insertion, NURBS and geometric continuity. Three lectures, one recitation, and approximately eight laboratory hours per week. Prerequisite: Math. 155A or consent of instructor. (W)

163. History of Mathematics (4)
Topics will vary from year to year in areas of mathematics and their development. Topics may include the evolution of mathematics from the Babylonian period to the eighteenth century using original sources, a history of the foundations of mathematics and the development of modern mathematics. Prerequisite: Math. 20B or consent of instructor. Three lectures, one recitation, and approximately eight laboratory hours per week. Prerequisite: Math. 155A or consent of instructor. (W)

166. Intro to the Theory of Computation (4)
Introduction to formal languages; regular languages; regular expressions, finite automata, minimization, closure properties, decision algorithms, and non-regular languages; context-free languages, context-free grammars, pushdown automata, parsing and non-context-free languages; computable languages; Turing machines, recursive functions, Church’s thesis, undecidability and the halting problem. Equivalent to CSE 105. Prerequisites: CSE 88 or 98 or 10 or 65 or CSE 20 or 160A or Math. 15A or 109 or 100A or 103A.

168A. Topics in Applied Mathematics–Computer Science (4)
Topics to be chosen in areas of applied mathematics and mathematical aspects of computer science. May be repeated once for credit with different topics. Three lectures, one recitation. Prerequisite: consent of instructor. (W,S)

170A. Introduction to Numerical Analysis: Linear Algebra (4)
Analysis of numerical methods for linear algebraic systems and least squares problems. Orthogonalization methods. Ill conditioned problems. Eigenvalue and singular value computations. Three lectures, one recitation. Knowledge of programming recommended. Prerequisite: Math. 20F. (F,S)

170B. Introduction to Numerical Analysis: Approximation and Nonlinear Equations (4)

170C. Numerical Ordinary Differential Equations (4)
Numerical differentiation and integration. Ordinary differential equations and their numerical solution. Basic existence and stability theory. Difference equations. Boundary value problems. Three lectures, one recitation. Prerequisite: Math. 170B or consent of instructor. (S)

171A. Introduction to Numerical Optimization: Linear Problems (4)
Linear optimization and applications. Linear programming, the simplex method, duality. Selected topics from integer programming, network flows, transportation problems, inventory problems, and other applications. Three lectures, one recitation. Knowledge of programming recommended. Credit not allowed for both Math. 171A and Econ. 172A. Prerequisite: Math. 20F.

171B. Introduction to Numerical Optimization: Nonlinear Problems (4)

173. Mathematical Software–Scientific Programming (4)
Development of high quality mathematical software for the computer solution of mathematical problems. Three lectures, one recitation. Prerequisites: Math. 170A or Math. 174 and knowledge of FORTRAN. (W)

(Conjoined with Math. 274) Floating point arithmetic, direct and iterative solution of linear equations, iterative
181A. Introduction to Probability (4) Probability spaces, random variables, independence, conditional probability, distribution, expectation, joint distributions, central-limit theorem. Three lectures. (2 units of credit offered for Math. 180A if Econ. 120A previously, no credit offered if Econ. 120A concurrently.) PREREQUISITES: Math. 20C or 21C. (F) 180B. Introduction to Stochastic Processes I (4) Random walks, densities, coverage matrix, multivariate normal distribution. Random walk, Poisson process. Other topics if time permits. Three lectures. PREREQUISITES: Math. 20D (or 21D), Math. 20F, and Math. 180A. (W) 180C. Introduction to Stochastic Processes II (4) Markov chains in discrete and continuous time, random walk, recurrent events, if time permits, topics chosen from stationary normal processes, branching processes, queuing theory. Three lectures. PREREQUISITE: Math. 180B. (S) 181A. Introduction to Mathematical Statistics (4) Random samples, linear regression, least squares, testing hypotheses, and estimation. Neyman-Pearson lemma, like-lihood ratio, one- and two-sample tests. (Two units of credit offered for Math. 181A if Econ. 120B previously, no credit offered if Econ. 120B concurrently.) PREREQUISITES: Math. 180A and 20F. (W) 181B. Introduction to Mathematical Statistics (4) Goodness of fit, special small sample distribution and use, nonparametric methods. Kolmogorov-Smirnov statistics, sequential analysis. Three lectures. PREREQUISITE: Math. 181A. (S) 181C. Mathematical Statistics (4) Nonparametric Statistics. Topics covered may include the following: Classical rank test, rank correlations, permutation tests, distribution free testing, efficiency, confidence intervals, nonparametric regression and density estimation, resampling techniques (bootstrap, jackknife, etc.) and cross validations. PREREQUISITES: Math. 181A, 181B previously or concurrently. 181E. Mathematical Statistics (4) Time Series. Analysis of trends and seasonal effects, autoregressive and moving averages models, forecasting, informal introduction to spectral analysis. PREREQUISITES: Math. 181A, 181B previously or concurrently. 183. Statistical Methods (4) Introduction to probability. Discrete and continuous random variables–binomial, Poisson and Gaussian distributions. Central limit theorem. Data analysis and inferential statistics: graphical techniques, confidence intervals, hypothesis tests, curve fitting. (Credit not offered for Math. 183 if Econ. 120A, ECE 109, Math. 180A, Math. 181A, or Math. 186 previously or concurrently taken.) PREREQUISITES: Math. 20C (21C) with a grade of C– or better, or consent of instructor. (F,S) 184A. Combinatorics (4) Introduction to the theory and applications of combinatorics. Enumeration of combinatorial structures. Ranking and unranking. Graph theory with applications and algorithms. Recursive algorithms. Inclusion-exclusion. Generating functions. Polya theory. PREREQUISITE: Math. 109 with a grade of C– or better, or consent of instructor. (WS) 185. Introduction to Computational Statistics (4) Statistical analysis will be presented using computer programs. Regression, analysis of variance, discriminant analysis, principal components, Monte Carlo simulation, and graphical methods. Emphasis will be on understanding the connections between statistical theory, numerical results, and analysis of real data. PREREQUISITES: Math. 181B with a grade of C– or better, or concurrent enrollment. 186. Probability Statistics for Bioinformatics (4) This course will cover discrete and random variables, data analysis and inferential statistics, likelihood estimators and scoring matrices with applications to biological problems. Introduction to Binomial, Poisson, and Gaussian distributions, central limit theorem, applications to sequence and functional analysis of genomes and genetic epidemiology. (Credit not offered for Math. 186 if Econ. 120A, ECE 109, Math. 180A, Math. 181A, or Math. 183 previously or concurrently.) PREREQUISITES: Math. 20C (21C) with a grade of C– or better, or consent of instructor. 187. Introduction to Cryptography (4) An introduction to the basic concepts and techniques of modern cryptography. Classical cryptographic analysis. Probabilistic models of plaintext. Monalphabetic and polyalphabetic substitution. The one-time system. Caesar-Vigenere-Playfair-Hill substitutions. The Enigma. Modern-day devices. The Data Encryption Standard. Public key cryptography. Polya theory. PREREQUISITE: Math. 109 with a grade of C– or better, or consent of instructor. (W) 188. Design and Analysis of Algorithms (4) Introduction to the design and analysis of efficient algo- rithms. Basic techniques for analyzing the time requirements of algorithms. Algorithms for sorting, searching, and pattern matching, algorithms for graphs and networks, NP-complete problems. Equivalent to CSE 101. PREREQUISITES: CSE 100 or Math. 176A for Math. 188; CSE 12, CSE 21, and CSE 100 for CSE 101. 190. Introduction to Topology (4) Topological spaces, subspaces, products, sums and quotient spaces. Compactness, connectedness, separation axioms. Selected further topics such as fundamental group, classification of surfaces, Morse theory, topological groups. May be repeated for credit once when topics vary, with consent of instructor. Three lectures. PREREQUISITE: Math. 109 or consent of instructor. (W) 191. Topics in Topology (4) Topics to be chosen by the instructor from the fields of differential algebraic, geometric, and general topology. Three lectures. PREREQUISITE: Math. 190 or consent of instructor. (S) 192. Senior Seminar in Mathematics (1) The Senior Seminar Program is designed to allow se- nior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in mathematics at the upper-level division. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permis- sion of the department. Limited to twenty students, with preference given to seniors. PREREQUISITES: department stamp and/or consent of instructor. 193A. Actuarial Mathematics I (4) Probabilistic Foundations of Insurance. Short-term risk models. Survival distributions and life tables. Introduction to life insurance. PREREQUISITE: Math. 180A or 183, or consent of instructor. 193B. Actuarial Mathematics II (4) Life Insurance and Annuities. Analysis of premiums and premium reserves. Introduction to multiple life functions and decrement models as time permits. PREREQUISITE: Math. 193A or consent of instructor. 194. The Mathematics of Finance (4) Introduction to the mathematics of financial models. Basic probabilistic models and associated mathematical machinery will be discussed, with emphasis on discrete time models. Concepts covered will include conditional ex- pectation, martingales, optional stopping, arbitrage pricing, hedging, European and American options. PREREQUISITES: Math. 20D (21D), Math. 20F, and Math. 180A or 183. 195. Introduction to Teaching in Mathematics (4) Students will observe and work with the availability of positions, students will work in a local company under the supervision of a faculty member and site supervisor. Units may not be applied toward major graduation requirements. PREREQUISITES: completion of 90 units, 2 upper-division mathematics courses, an overall 2.5 UCSD G.P.A., consent of mathematics faculty coordi- nator, and submission of written contract. Department stamp required. 199. Independent Study for Undergraduates (2 or 4) Independent reading in advanced mathematics by individual students. Three periods. (P/NP grades only.) PREREQUISITE: permission of department. (F,W,S) 199H. Honors Thesis Research for Undergraduates (2-4) Honors thesis research for seniors participating in the Honors Program. Research is conducted under the supervision of a mathematics faculty member. PREREQUISITE: admission to the Honors Program in mathematics, department stamp. GRADUATE 200A–B. C. Algebra (4–4–4) Group actions, factor groups, polynomial rings, linear algebra, rational and Jordan canonical forms, unitary and Hermitian matrices, Sylvow theorems, finitey gener- ated abelian groups, unique factorization, Galois theory, solvability by radicals, Hilbert Basis Theorem, Hilbert Nullstellensatz, Jacobson radical, semisimple Artinian rings. PREREQUISITE: consent of instructor. 201A–B. Basic Topics in Algebra (4–4) Recommended for all students specializing in algebra. Basic topics include categorical algebra, commutative algebra, group representations, homological algebra, nonassocia- tive algebra, ring theory. PREREQUISITES: Math. 200A–B or consent of instructor. (F,W,S) 202A. Applied Algebra I (4) Introduction to algebra from a computational perspective. Groups, rings, linear algebra, rational and Jordan forms,
unitary and Hermitian matrices, matrix decompositions, perturbation of eigenvalues, group representations, symmetric functions, fast Fourier transform, commutative algebra, Grobner basis, finite fields. \textbf{PREREQUISITE:} graduate standing or consent of instructor.

202B. Applied Algebra II (4)
Second course in algebra from a computational perspective. Groups, rings, linear algebra, rational and Jordan forms, unitary and Hermitian matrices, matrix decompositions, perturbation of eigenvalues, group representations, symmetric functions, fast Fourier transform, commutative algebra, Grobner basis, finite fields. \textbf{PREREQUISITE:} Math. 202A or consent of instructor.

202C. Applied Algebra III (4)
Third course in algebra from a computational perspective. Groups, rings, linear algebra, rational and Jordan forms, unitary and Hermitian matrices, matrix decompositions, perturbation of eigenvalues, group representations, symmetric functions, fast Fourier transform, commutative algebra, Grobner basis, finite fields. \textbf{PREREQUISITE:} Math. 202B or consent of instructor.

203A-B-C. Algebraic Geometry (4-4-4)
Planes, Hilbert Nullstellensatz, varieties, product of varieties, Hilbert Nullstellensatz, varieties, product of varieties, algebraic geometry, Grobner basis, finite fields. \textbf{PREREQUISITE:} Math. 202A or consent of instructor.

204. Topics in Number Theory (4)
Topics in analytic number theory, such as zeta functions and L-functions; the distribution of prime numbers, zeros of zeta functions and Siegel's theorem; transcendence theory, modular forms, finite and infinite symmetric spaces. \textbf{PREREQUISITE:} consent of instructor.

205. Topics in Algebraic Number Theory (4)
Topics in algebraic number theory, such as cyclotomic and Kummer extensions, class number, units, splitting of primes in extensions, zeta functions of number fields and the Brauer-Siegel Theorem, class field theory, elliptic curves and curves of higher genus, complex multiplication. \textbf{PREREQUISITE:} consent of instructor.

207A-B-C. Topics in Algebra (4-4-4)
In recent years, topics have included number theory, commutative algebra, noncommutative rings, homological algebra, and Lie groups. May be repeated for credit with consent of advisor. \textbf{PREREQUISITE:} consent of instructor.

208. Seminar in Algebra (1)
Various topics in algebra. \textbf{PREREQUISITE:} graduate standing or consent of instructor. (S/U grade only.)

209. Seminar in Number Theory (1)
Various topics in number theory. \textbf{PREREQUISITE:} graduate standing or consent of instructor. (S/U grade only.)

210A. Mathematical Methods in Physics and Engineering (4)

210B. Mathematical Methods in Physics and Engineering (4)

210C. Mathematical Methods in Physics and Engineering (4)
Calculus of variations: Euler-Lagrange equations, Noether's theorem. Fourier analysis of functions and distributions in several variables. Partial differential equations: Laplace, wave, and heat equations; fundamental solutions (Green's functions); well-posed problems. \textbf{PREREQUISITE:} Math. 210B or consent of instructor. (S)

212A. Introduction to the Mathematics of Systems and Control (4)
Linear and nonlinear systems, and their input-output behavior; linear continuous time and discrete-time systems, reachability and controllability for linear systems, feedback and stabilization, eigenvalue placement, non-linear controllability, feedback linearization, disturbance rejection, non-linear stabilization, Lyapunov and control-Lyapunov functions, linearization principle for stability. \textbf{PREREQUISITE:} Math. 102 or equivalent, Math. 120A or equivalent, Math. 142A or equivalent.

212B. Introduction to the Mathematics of Systems and Control (4)

212C. Introduction to the Mathematics of Systems and Control (4)
Topics of current interest on systems theory, control, and estimation to be chosen by instructor. \textbf{PREREQUISITE:} Math. 212B.

216. Topics in Pure Mathematics (4)
This course brings together graduate students, postdocs, and faculty. Topics will be determined by current research topic of broad interest. Previously covered topics include: noncommutative geometry, Loop groups, geometric quantization. \textbf{PREREQUISITE:} consent of instructor.

217A. Topics in Applied Mathematics (4)
In recent years, topics have included applied complex analysis, special functions, and asymptotic methods. May be repeated for credit with consent of advisor. \textbf{PREREQUISITE:} consent of instructor.

220A-B-C. Complex Analysis (4-4-4)
Complex numbers and functions, Cauchy theorem and its applications, calculus of residues, expansions of analytic functions, analytic continuation, conformal mapping and Riemann mapping theorem, harmonic functions. Dirichlet principle, Riemann surfaces. \textbf{PREREQUISITE:} Math. 140A-B or consent of instructor. (F,W,S)

221A. Topics in Several Complex Variables (4-4-4)
Formal and convergent power series, Weierstrass preparation theorem; Cartan-Ruckert theorem, analytic sets; mapping theorems; domains of holomorphy; proper holomorphic mappings; complex manifolds; modifications. \textbf{PREREQUISITE:} Math. 200A and 220A-B-C or consent of instructor.

231A-B-C. Partial Differential Equations (4-4-4)
Existence and uniqueness theorems. Cauchy-Kovalewski theorem, first order systems. Hamilton-Jacobi theory, initial value problems for hyperbolic and parabolic systems, boundary value problems for elliptic systems. Green's function, eigenvalue problems, perturbation theory. \textbf{PREREQUISITE:} Math. 210A-B or 240A-B-C or consent of instructor.

237A-B. Topics in Differential Equations (4-4)
May be repeated for credit with consent of advisor. \textbf{PREREQUISITE:} consent of instructor.

240A-B-C. Real Analysis (4-4-4)
Lebesgue integral and Lebesgue measure, Fubini theorems, functions of bounded variations, Stieltjes integral, derivatives and indefinite integrals, the spaces L and C, equi-continuous families, continuous linear functionals, general measures and integrations. \textbf{PREREQUISITE:} Math. 140A-B-C. (F,W,S)

241A. Functional Analysis (4-4)
Metric spaces and contraction mapping theorem; closed graph theorem; uniform boundedness principle; Hahn-Banach theorem; representation of continuous linear functionals; conjugate space, weak topologies; extreme points; Krein-Milman theorem; fixed-point theorems; Riesz convexity theorem; Banach algebras. \textbf{PREREQUISITE:} Math.240A-B-C or consent of instructor.

242. Topics in Fourier Analysis (4)
A course on Fourier analysis in Euclidean spaces, groups, symmetric spaces. \textbf{PREREQUISITE:} Math. 240A-B-C or consent of instructor.

247A-B-C. Topics in Real Analysis (4-4-4)
In recent years, topics have included Fourier analysis, distribution theory, martingale theory, operator theory. May be repeated for credit with consent of advisor. \textbf{PREREQUISITE:} consent of instructor.

248. Seminar in Real Analysis (1)
Various topics in real analysis. \textbf{PREREQUISITE:} graduate standing or consent of instructor. (S/U grade only.)

250A-B-C. Differential Geometry (4-4-4)
Differential manifolds, Sard theorem, tensor bundles, Lie derivatives, DeRham's theorem, connections, geodesics, manifolds, embedded manifolds, immersion of manifolds in Euclidean space. \textbf{PREREQUISITE:} graduate standing or consent of instructor. (F,W,S)

251A-B-C. Lie Groups (4-4-4)
Lie groups, Lie algebras, exponential map, subgroup subalgebra correspondence, adjoint group, universal enveloping algebra. Structure theory of semi-simple Lie groups, global decompositions, Weyl group. Geometry and analysis on symmetric spaces. \textbf{PREREQUISITE:} Math. 200 and 250 or consent of instructor. (F,W,S)

256. Seminar in Lie Groups and Lie Algebras (1)
Various topics in Lie groups and Lie algebras, including structure theory, representation theory, and applications. \textbf{PREREQUISITE:} graduate standing or consent of instructor. (S/U grade only) (F,W,S)

257A. Topics in Differential Geometry (4)
In recent years, topics have included Morse theory and general relativity. May be repeated for credit with consent of advisor. \textbf{PREREQUISITE:} consent of instructor.

257B. Topics in Differential Geometry (4)
In recent years, topics have included Morse theory and general relativity. May be repeated for credit with consent of advisor. Math. 257A must be taken before Math. 257B. \textbf{PREREQUISITE:} consent of instructor.

257C. Topics in Differential Geometry (4)
In recent years, topics have included Morse theory and general relativity. May be repeated for credit with consent of advisor. Math. 257B must be taken before Math. 257C. \textbf{PREREQUISITE:} consent of instructor.

258. Seminar in Differential Geometry (1)
Various topics in differential geometry. \textbf{PREREQUISITE:} graduate standing or consent of instructor. (S/U grade only)

259A-B-C. Geometrical Physics (4-4-4)
Manifolds, differential forms, homology, delHams' theorem. Riemannian geometry, harmonic forms. Lie groups and algebras, connections in bundles, homotopy sequence of a bundle, Chern classes. Applications selected from Hamiltonian and continuum mechanics, electromagnetism, thermodynamics, special and general relativity, Yang-Mills fields. \textbf{PREREQUISITE:} graduate standing in mathematics, physics, or engineering, or consent of instructor.

260A. Mathematical Logic (4)
Propositional calculus and first-order logic. Theorem proving, Model theory, soundness, completeness, and compactness, Herbrand's theorem, Skolem-Lowenheim theorems, Craig interpolation. \textbf{PREREQUISITE:} graduate standing or consent of instructor.

260B. Mathematical Logic II (4)
The theory of computation and recursive function theory, Church's thesis, computability and undecidability. Feasible computability and complexity. Peano arithmetic and the incompleteness theorems, nonstandard models. \textbf{PREREQUISITE:} Math. 260A or consent of instructor.

261A. Probabilistic Combinatorics and Algorithms (4)
Introduction to the probabilistic method. Combinatorial applications of the linearity of expectation method, Markov, Chernbyshev, and Azuma inequalities, and
the local limit lemma. Introduction to the theory of random graphs. **Prerequisite:** graduate standing or consent of instructor.

261B. Probabilistic Combinatorics and Algorithms II (4)
Introduction to probabilistic algorithms. Game theoretic techniques. Applications of the probabilistic method to algorithm analysis. Markov Chains and Random walks. Applications to approximation algorithms, distributed algorithms, online and parallel algorithms. Math. 261A must be taken before Math. 261B. **Prerequisite:** Math. 261A.

261C. Probabilistic Combinatorics and Algorithms III (4)

262A-B-C. Topics in Combinatorial Mathematics (4-4-4)
Development of a topic in combinatorial mathematics starting from basic principles. Problems of enumeration, existence, construction, and optimization with regard to finite sets. Some familiarity with computer programming desirable but not required. **Prerequisites:** Math. 100A-B-C.

264A-B-C. Combinatorics (4-4-4)
Topics from partially ordered sets, Mobius functions, simplicial complexes and shellability. Enumeration, formal power series and formal languages, generating functions, partitions. Lagrange inversion, exponential structures, combinatorial species. Finite operator methods, q-analogues, Polya theory, Ramsey theory. Representation theory of the symmetric group, symmetric functions and operations with Schur functions. (F.W.S)

269. Seminar in Combinatorics (1)
Various topics in combinatorics. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

270A. Numerical Linear Algebra (4)
Error analysis of the numerical solution of linear equations and least squares problems for the full rank and rank deficient cases. Error analysis of numerical methods for eigenvalue problems and singular value problems. Iterative methods for large sparse systems of linear equations. **Prerequisites:** graduate standing or consent of instructor.

270B. Numerical Approximation and Nonlinear Equations (4)

270C. Numerical Ordinary Differential Equations (4)

271A-B-C. Numerical Optimization (4-4-4)
Formulation and analysis of algorithms for constrained optimization. Optimality conditions; linear and quadratic programming methods; penalty and barrier function methods; sequential quadratic programming methods. **Prerequisite:** consent of instructor. (F.W.S)

272A. Numerical Partial Differential Equations I (4)

272B. Numerical Partial Differential Equations II (4)

272C. Numerical Partial Differential Equations III (4)
Time dependent (parabolic and hyperbolic) PDEs. Method of lines. Stiff systems of ODEs. Space-time finite element methods. Adaptive meshing algorithms. A posteriori error estimates. **Prerequisites:** Math. 272B or consent of instructor.

273A. Advanced Techniques in Computational Mathematics I (4)
Models of physical systems, calculus of variations, principle of least action. Discretization techniques for variational problems, geometric integrators, advanced techniques in numerical discretization. Project-oriented; projects designed around problems of current interest in science, mathematics, and engineering. **Prerequisite:** graduate standing or consent of instructor.

273B. Advanced Techniques in Computational Mathematics II (4)
Nonlinear functional analysis for numerical treatment of nonlinear PDE. Numerical continuation methods, pseudo-arclength continuation, gradient flow techniques, and other advanced techniques in computational nonlinear PDE. Project-oriented; projects designed around problems of current interest in science, mathematics, and engineering. **Prerequisite:** graduate standing or consent of instructor.

273C. Advanced Techniques in Computational Mathematics III (4)
Adaptive numerical methods for capturing all scales in one model, multiscale and multiphysics modeling frameworks, and other advanced techniques in computational multiscale/multiphysics modeling. Project-oriented; projects designed around problems of current interest in science, mathematics, and engineering. **Prerequisite:** Math. 273B or consent of instructor.

274. Numerical Methods for Physical Modeling (4)
Conjoined with Math. 174. Floating point arithmetic, direct and iterative solution of linear equations, iterative solution of nonlinear equations, optimization, approximation theory, interpolation theory, numerical quadrature, numerical methods for initial and boundary value problems in ordinary differential equations. Students may not receive credit for both Math. 174 and PHYS 105, AMES 153 or 154. Students may not receive credit for both Math. 174 and Math. 170A. B or C has already been taken. Graduate students will complete an additional assignment/exam. **Prerequisites:** Math. 20D with a grade of C- or better and Math. 20F with a grade of C- or better, or consent of instructor.

275. Numerical Methods for Partial Differential Equations (4)
Conjoined with Math. 175. Mathematical background for working with partial differential equations. Survey of finite difference, finite element, and other numerical methods for the solution of elliptic, parabolic, and hyperbolic partial differential equations. Formerly Math. 172; students may not receive credit for Math. 175/175B and Math. 172. Graduate students will do an extra project, paper, or presentation, per instructor. **Prerequisite:** Math. 174 or Math. 274 or consent of instructor.

276. Numerical Analysis in Multi-Scale Biology (4)
Cross-listed with BENG 276/CHEM 276) Introduces mathematical tools to model biologically processes at multiple scales. Numerical methods for ordinary and partial differential equations (deterministic and stochastic), and methods for parallel computing and visualization. Hands-on use of computers emphasized, students will apply numerical methods in individual projects. **Prerequisite:** consent of instructor.

277A. Topics in Computational and Applied Mathematics (4)
Topics vary from year to year. May be repeated for credit with consent of advisor. **Prerequisite:** graduate standing or consent of instructor.

277B. Topics in Numerical Mathematics (4)
Topics vary from year to year. May be repeated for credit with consent of advisor. **Prerequisite:** consent of instructor.

278A. Seminar in Computational Mathematics (1)
Various topics in computational mathematics. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

278B. Seminar in Mathematical Physics/PDE (1)
Various topics in mathematical physics and partial differential equations. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

280A-B-C. Probability Theory (4-4-4)
Probability measures; Borel fields; conditional probabilities, sums of independent random variables; limit theorems; zero-one laws; stochastic processes. **Prerequisites:** advanced calculus and consent of instructor. (F.W.S)

281A. Mathematical Statistics (4)
Statistical models, sufficiency, efficiency, optimal estimation, least squares and maximum likelihood, large sample theory. **Prerequisites:** advanced calculus and basic probability theory or consent of instructor.

281B. Mathematical Statistics (4)
Hypothesis testing and confidence intervals, one- and two-sample problems. Bayes theory, statistical decision theory, linear models and regression. **Prerequisites:** advanced calculus and basic probability theory or consent of instructor.

281C. Mathematical Statistics (4)
Nonparametrics: tests, regression, density estimation, boot-strap and jackknife. Introduction to statistical computing using S plus. **Prerequisites:** advanced calculus and basic probability theory or consent of instructor.

282A-B. Applied Statistics (4-4)
Sequence in applied statistics. First quarter: general theory of linear models with applications to regression analysis. Second quarter: analysis of variance and covariance and experimental design. Third quarter: further topics to be selected by instructor. Emphasis throughout is on the analysis of actual data. **Prerequisite:** Math. 181B or equivalent or consent of instructor. (S/U grades permitted.)

283. Statistical Methods in Bioinformatics (4)
This course will cover material related to the analysis of modern genomic data; sequence analysis, gene expression/functional genomics analysis, and gene mapping/applied biostatistics. The emphasis will focus on statistical modeling and inference issues and not on database min- ing techniques. **Prerequisites:** one year of calculus, one statistics course or consent of instructor.

285. Stochastic Processes (4)
Elements of stochastic processes, Markov chains, hidden Markov models, martingales, Brownian motion, Gaussian processes. **Prerequisite:** Math. 180A (or equivalent) or consent of instructor.

286. Stochastic Differential Equations (4)

287A. Time Series Analysis (4)
Discussion of finite parameter schemes in the Gaussian and non-Gaussian context. Estimation for finite parameter schemes. Stationary processes and their spectral represen-tation. Spectral estimation. **Prerequisite:** Math. 181B or equivalent or consent of instructor.

287B. Multivariate Analysis (4)
Bivariate and more general multivariate normal distribu-tion. Study of tests based on Hotelling’s T2. Principal components, canonical correlations, and factor analysis will be discussed as well as some competing nonparametric
methods, such as cluster analysis. **PREREQUISITE:** Math. 181B (or equivalent) or consent of instructor.

287C. Advanced Time Series Analysis (4)
Nonparametric function (spectral, density, regression) estimation from time series data. Nonlinear time series models (threshold AR, ARCH, GARCH, etc.). Nonparametric forms of ARMA and GARCH. Multivariate time series. **PREREQUISITE:** Math. 207B or consent of instructor.

288. Seminar in Probability and Statistics (1)
Various topics in probability and statistics. **PREREQUISITE:** graduate standing or consent of instructor. (S/U grade only.)

289A-B. Topics in Probability and Statistics (4-4)
In recent years, topics have included Markov processes, martingale theory, stochastic processes, stationery and Gaussian processes, ergodic theory. May be repeated for credit with consent of advisor.

290A-B-C. Topology (4-4-4)
Point set topology, including separation axioms, compactness, connectedness. Algebraic topology, including the fundamental group, covering spaces, homology and cohomology. Homotopy or applications to manifolds as time permits. **PREREQUISITES:** Math. 100A-B-C and Math. 140A-B-C. (F,WS)

291A-B-C. Topics in Topology (4-4-4)
In recent years, topics have included generalized cohomology theory, spectral sequences, K-theory, homotopy theory. **PREREQUISITE:** consent of instructor.

292. Seminar in Topology (1)
Various topics in topology. **PREREQUISITE:** graduate standing or consent of instructor. (S/U grade only.)

294. The Mathematics of Finance (4)
Introduction to the mathematics of financial models. Hedging, pricing by arbitrage. Discrete and continuous stochastic models. Martingales. Brownian motion, stochastic calculus. Black-Scholes model, adaptations to dividend paying equities, currencies and coupon-paying bonds, interest rate market, foreign exchange models. **PREREQUISITE:** Math. 180A (or equivalent probability course) or consent of instructor.

295. Special Topics in Mathematics (1 to 4)
A variety of topics and current research results in mathematics will be presented by staff members and students under faculty direction.

296. Student Colloquium (1 to 2)
A variety of topics and current research in mathematics will be presented by guest lecturers and students under faculty direction. **PREREQUISITES:** for one unit—upper-division status or consent of instructor (may only be taken P/NP), or graduate status (may only be taken S/U); for two units—consent of instructor, standard grading option allowed.

297. Mathematics Graduate Research Internship (2-4)
An enrichment program which provides work experience with public/private sector employers and researchers. Under supervision of a faculty advisor, students provide mathematical consultation services. **PREREQUISITE:** consent of instructor.

299. Reading and Research (1 to 12)
Independent study and research for the doctoral dissertation. One to three credits will be given for independent study (reading) and one to nine for research. **PREREQUISITE:** consent of instructor. (S/U grades permitted.)

### THE JOINT DOCTORAL PROGRAM

UC San Diego and San Diego State University have created this innovative program for students who already have a master’s degree in biology, chemistry, mathematics, or physics. In this program, students will complement their discipline knowledge with studies of how people learn mathematics and science. The UCSD Joint Doctoral Group in Mathematics and Science Education currently consists of faculty from the Division of Biological Sciences and the Departments of Chemistry and Biochemistry, Cognitive Science, Communication, Mathematics, Philosophy, Physics, Psychology, and Sociology. The SDSU Program faculty is drawn from the Departments of Biology, Mathematical Sciences, Natural Sciences, Physics, Psychology, and the School of Education.

The program includes research, practical applications, and formal course work. Students must commit at least four years to the program, and most students will complete the program in four to five years. An individualized course of study will be designed for each student, depending on the student’s background and interests.

The graduates of this program will be able to contribute to the developing body of knowledge about human cognitive processes in mathematics and science. They will be expected to maintain a strong connection to educational practice through teaching and application of research results on learning to instructional situations.

Information regarding admission is found in the current edition of the Bulletin of the Graduate Division of San Diego State University.

---

### PH.D. TIME LIMIT POLICIES

All time limits for this program start when a student first registers in this program. Students must be advanced to candidacy by the end of four years. Total university support to students in this program cannot exceed five years. Total registered time in this program cannot exceed six years. The normative time in this program is five years.

---

### COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

**MSED 290. Issues in Science Education Research (4)**
Survey of recent literature highlighting critical issues in science education research. Specific focus on research in biology education, chemistry education, and physics education. Theoretical perspectives and research methodology (both qualitative and quantitative) used to understand learning will be discussed. **PREREQUISITES:** admission to the Joint Doctoral Program in Mathematics and Science Education or a master’s degree in biology, chemistry/biochemistry, mathematics, or physics with consent of instructor.

**MSED 295. Orientation Practicum (2-6)**
This course should be taken the first year. Each practicum lasts five weeks and is designed to inform students about a faculty member’s research program. Assignment as a research assistant may be used as one practicum. **PREREQUISITE:** admission to MSED Joint Doctoral Program.

**MSED 296A. Theories and Applications of Mathematics and Science Education (4)**
The course is designed to cover several major themes in mathematics and science education. It will address theories and applications of cognition, teaching and learning, and curriculum, with particular emphasis on international perspectives. This is a three-quarter sequence. **PREREQUISITES:** admission to the Joint Doctoral Program in Mathematics and Science Education or a master’s degree in biology, chemistry/biochemistry, mathematics, or physics with consent of instructor.

**MSED 296B. Theories and Applications of Mathematics and Science Education (4)**
The course is designed to cover several major themes in mathematics and science education. It will address theories and applications of cognition, teaching and learning, and curriculum, with particular emphasis on international perspectives. This is a three-quarter sequence. **PREREQUISITES:** admission to the Joint Doctoral Program in Mathematics and Science Education or a master’s degree in biology, chemistry/biochemistry, mathematics, or physics with consent of instructor. MSED 296A must be taken before MSED 296B.

**MSED 296C. Theories and Applications of Mathematics and Science Education (4)**
The course is designed to cover several major themes in mathematics and science education. It will address theories and applications of cognition, teaching and learning, and curriculum, with particular emphasis on international perspectives. This is a three-quarter sequence. **PREREQUISITES:** admission to the Joint Doctoral Program in Mathematics and Science Education or a master’s degree in biology, chemistry/biochemistry, mathematics, or physics with...

James Rauch, Professor, Economics
Gershon Shafir, Professor, Sociology
Melford E. Spiro, Professor Emeritus, Anthropology
Winfred Woodhull, Associate Professor, Literature
Oumelbanine Zhiri, Professor, Literature

THE MINOR

The minor in Middle East studies is an interdisciplinary program aimed at a comparative study of the Middle East (including North Africa).

The program consists of seven courses, of which at least five must be upper-division courses. Three courses have to deal with the Middle East since the emergence of Islam, as listed here under "Core Courses." The remaining courses may be chosen from either the Core Courses or the Supporting Courses; and they may be courses dealing with the ancient, medieval, or modern Middle East or a three-quarter sequence of a Middle Eastern language (in which case only four of the seven courses need to be upper-division). Ordinarily, all seven courses must be taken for a letter grade.

The courses which make up the minor must be approved by the student’s college and by the Middle East Studies Program.

Approved courses taken at other universities or through participation in the Education Abroad Program can be included as part of the minor by petition.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

Dongxian Zhang, Ph.D., Pathology

THE GRADUATE PROGRAM

The Molecular Pathology Program is closed for entrance of new students as of the 2008 academic year. The program has been integrated into the Biomedical Sciences Program as a track in the Biomedical Sciences Program.

The goal of the molecular pathology program is to produce outstanding researchers focused on the molecular basis of human disease who also understand disease at levels of histology and pathology. The molecular pathology graduate program is an interdepartmental and interinstitutional program administered by the UC San Diego Department of Pathology in affiliation with the Burnham Institute.

The program provides a comprehensive knowledge of normal and abnormal biological processes, with a particular emphasis on the molecular mechanisms of human diseases. Faculty research focuses on determining how normal cellular processes are altered in human disease. Research falls within six areas: cancer cell biology; stem cell and developmental biology; neurobiology and neurologic disease; structural biology and signal transduction; microbiology and immunology; and cardiovascular, muscle, and organ development/disease. Most program faculty reside in the Departments of Pathology, Medicine, and Pediatrics at the UCSD School of Medicine, in the Burnham Institute, and in The Scripps Research Institute.

COURSE WORK
The core science curriculum includes classes in Molecular Biology of the Cell, Methods in Cellular and Molecular Pathology, The Molecular Pathology of Cancer, and Neurologic and Muscle Disease. Learning is focused on reading and evaluating current scientific literature, with special attention to identifying the major open questions within a field and designing an effective experimental plan to answer these questions. Two elective classes (6 units total) are required. Electives taught by program faculty are offered in Microbial Pathogenesis (4 units) and Mouse Models for Human Disease (2 units).

Electives may also be selected from graduate-level courses offered by other medical school programs or by other campus departments (e.g., Division of Biological Sciences, Department of Chemistry and Biochemistry, and Department of Bioengineering). This option allows students the opportunity to acquire advanced training in areas they have selected for graduate research. Popular electives are Molecular Modeling, Macromolecular Recognition, Molecular Biology of the Cardiovascular System, and graduate-level courses in Signal Transduction, Immunology, Animal Virology, Developmental Biology, Genetics, and Neurobiology. An education in histology and pathology is acquired by taking the School of Medicine course in Histology and an overview course in human pathology developed by pathology faculty for molecular pathology and pharmacy students. Students may elect to take in-depth pathology training in their particular disease(s) of interest by attending a set of comprehensive lectures (eight to twelve) taught as part of the comprehensive medical school pathology curriculum. Concurrent with their thesis research, third-year students can acquire a practical consideration of the clinical treatment of disease by attending pathology conferences: Breast Pathology Conference, Tumor Board, Pediatric Autopsy, Neuropathology “Brain-Cutting” Conference, Infectious Disease Rounds, or Hematology Conference. In such conferences, students learn how disease presents and progresses, how physicians currently treat disease, what the practical obstacles are in disease treatment, and where opportunities are for development of molecular therapeutics.

EXAMINATIONS
First Qualifying Examination (Minor Proposition)
The purpose of this examination is to test the student’s ability to choose a research problem in molecular pathology and to propose an experimental approach to its solution. The problem should be unrelated to the student’s thesis project. The student is expected to demonstrate knowledge in molecular biology and basic pathology. The first qualifying examination will be taken by the end of the fall quarter of the second year.

Second Qualifying Examination (Major Proposition)
The second qualifying examination, a university requirement, consists of an oral report by the student about research accomplished and the goals to be achieved for completion of the examination, the student will advance to candidacy. The second qualifying examination should be complete by the end of the third year and must be completed by the end of the fourth year.

DEPARTMENTAL PH.D. TIME LIMIT POLICIES
Students must be advanced to candidacy by the end of four years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

PATH 208G. Human Disease (8)
An integrated consideration of the general principles of pathology and microbiology, epidemiology, and medical therapeutics of the important diseases. An example of their application to a specific organ system will be included. (Not offered in 2009–10.)

PATH 220. Mechanisms of Neurological Disease (4)
This course will explore the molecular pathology associated with various diseases other than cancer. Emphasis will be placed on understanding the abberant cellular processes, caused by mutation or environmental factors, that are associated with the disease state. Cardiovascular, neurologic, immunological, and other diseases will be investigated.

PATH 221. Molecular Pathology of Cancer (4)
The purpose of this course is to present exciting new developments in molecular carcinogenesis, with particular emphasis on oncopgene expression and functions of oncogenic proteins. The relevance of molecular mechanisms for understanding human cancer will be discussed.

PATH 222. Microbial Pathogenesis (4)
Topics covered in this course include molecular and cellular mechanisms of viral, bacterial, and protozoan pathogenesis. Host response and microbial mechanisms of host defense will also be discussed. Sessions will consist of faculty and student presentations of current literature.

PATH 223. Mouse Models of Human Disease (2)
This course provides an overview of the use of mouse models in biomedical research. Sessions will cover general mouse biology, genetics, and technologies for generating mutant mice; and will focus on model selection, methodological approaches, data interpretation, experimental design, and ethics of animal research. Student participation and discussion will be encouraged. PREREQUISITE: graduate standing or consent of instructor.

PATH 225. Molecular Pathology Research Seminars (2)
This course presents developments in cellular and molecular pathology research. Both faculty and students actively participate in the individual sessions. All students are required to give one to two formal presentations (under faculty supervision) during the year. The relevance of molecular mechanisms for understanding human disease will be discussed. PREREQUISITE: consent of instructor.
PATH 228/PHAR 228/BIOM 228. Modern Drug Discovery Technologies (2)
Drug discovery is an emerging science available to academic investigators. This course provides an overview of these drug discovery techniques, including high throughput screening, cell-based screening, computational methods of lead compound discovery, and chemical methods of optimization. PREREQUISITE: graduate student status or consent of graduate program director.

PATH 230G. Molecular Biology of the Cell (2)
This course offers a concise overview of the biochemical basis of gene expression and of diverse signal transduction pathways, and integrates this background in the context of cellular processes such as cell division, development, cell-cell interactions, and inflammation. This course will highlight recent discoveries in cellular and molecular biology and will highlight human diseases that result from inappropriate regulation of cellular processes. (Not offered in 2009–10.)

PATH 231. Modern Methods in Molecular and Cell Biology (2)
This course presents key concepts and methodologies used in cellular and molecular pathology research. Topics include protein purification, biochemical characterization, identification of post-translational modifications, DNA/protein microinjection, immunofluorescence, digital imaging, electron microscopy, stem cell culture, gene/promoter analysis, protein–protein interaction analysis using the yeast 2-hybrid system, transgenic and knockout mouse construction, analysis of bacterial virulence factors, and genomic/proteomic approaches to disease analysis. (Not offered in 2009–10.)

PATH 232. Statistical Methods and Experimental Design (2)
This course will emphasize the relationships between experimental design, statistical methods, and biomedical research. The content of the course will include basic issues in experimental design and commonly used statistical methods. The assumptions behind the statistical tests, their appropriate use, and examples of misuse will be discussed. (Not offered in 2009–10.)

PATH 296. Directed Reading (1-4)
Reading and laboratory study of special topics under the direction of a faculty member. Exact subject matter to be arranged in individual cases.

PATH 299. Independent Study or Research (1-12)
Independent study or research.

SOM 213. Histology (2)
This course teaches the structural basis of normal and abnormal function at the cellular and tissue levels. Emphasis is based on microscopic study conducted in small laboratory groups under close faculty supervision.

SPPS 215. Human Disease (3)
This introduction to human disease includes etiology and mechanisms of common disease states and integrates pathology with previous core curriculum. The focus will be to understand disease processes and the dynamics of changes related to drug therapy. Our goal is to give the student an overview of the illnesses and disorders of human organs, systems and functions, in other words, human disease, with the hope that this background will lead the students to clinical understanding of patients and future insight into the pathogenesis of disease and new treatments. This course will include general pathology and system based pathology, taught in lecture, case discussion, and lab format.

THE WRITING PROGRAM

OFFICE: 2346 Humanities and Social Sciences Building, Muir College
(858) 534-2522
http://muir.ucsd.edu/muir-writing

The Muir College Writing Program is a sequence of courses in critical thinking and writing during which students must advance beyond the basic competency expected at entrance to understand and write discourse acceptable at the university level. Even when faced with challenging topics, students must demonstrate the ability to comprehend textual arguments at more than a superficial level; their writing must exhibit an understanding of academic arguments including focused theses, systematic methods of analysis and argumentation, awareness of audience, strong organization and development, clear presentation of ideas, appropriate syntax and diction, and—needless to say—correct grammar and usage.

To achieve these ends, the courses focus on principles of analysis and reasoned argumentation. Students will learn to identify underlying assumptions and values in arguments from such fields as the sciences, social and behavioral sciences, and the humanities. They will then write reasoned arguments of their own. Students will also write annotated bibliographies, paper proposals, and research papers as appropriate. In addition, students learn to monitor and adapt their own writing processes. Since the ability to evaluate one’s own writing and carry out appropriate revision strategies is crucial to effective writing and argument, all students are required to revise their papers several times. Attention is devoted to developing skill in evaluation and revision in classes and in individual conferences with instructors. Sections of MCWP 50 vary in theme and content, giving students the opportunity to write in areas that interest them or that may be relevant to their major fields. (Descriptions of the MCWP 50 sections are available each quarter in the Muir Writing Program office during pre-enrollment.)

Students are required to take both MCWP 40 and MCWP 50 for a letter grade in their first year of residence. All transfer students, upon satisfaction of Subject A, must take MCWP 40 and MCWP 50 in their first year of residence. In cases where more than one quarter of practice is needed to prepare a student for MCWP 50, an IP grade is given in MCWP 40, and the student takes MCWP 41. MCWP 41 is then followed by MCWP 50. Completion of the sequence allows students to meet the Muir College writing requirement.

Certain exceptionally well-prepared students, particularly transfer students, may satisfy the MCWP 40 or MCWP 50 requirement by examination. The Muir challenge examinations are given at the beginning of fall and winter quarters only. Students may not take the challenge in the same quarter in which they expect to graduate. IGETC and TAG certified transfer students: please contact the Muir Writing Program Office.

MCWP 40. Critical Writing (4)
First course of sequence in university reading and writing which satisfies the Muir College graduation requirement in writing. Required of all Muir College first-year students and of transfer students who have not completed a comparable course elsewhere. MCWP 40 introduces students to the basic elements of argument and analysis. Students engage in close reading of texts, weekly writing and revision, and individual conferences. Course must be taken for a letter grade. Those who need additional work to prepare for MCWP 50 will be given a grade of IP and will be required to take MCWP 41. PREREQUISITE: satisfaction of the UC Entry Level Writing requirement.

MCWP 41. Special Study in Writing (4)
Second course of sequence in reading and writing which satisfies the Muir College graduation requirement in writing. Required of all Muir College first-year students and of transfer students. MCWP 41 focuses on advanced skills of argument and analysis. Students engage in close reading of texts, weekly writing and revision, and individual conferences. Course must be taken for a letter grade. PREREQUISITE: satisfaction of MCWP 40 requirement or completion of TAG or IGETC agreement.

MCWP 50. Critical Writing (4)
An advanced course in argumentation and analysis, with particular attention both to constructing arguments and analyzing the logic and rhetoric of others’ arguments. Students will engage in close reading of texts, weekly writing and revision, and individual conferences. A course specially designed for and required of transfer students who enter Muir College under the agis of TAG or IGETC. PREREQUISITE: departmental approval.

MCWP 125. Argument and Analysis (4)
An advanced course in argumentation and analysis, with particular attention both to constructing arguments and analyzing the logic and rhetoric of others’ arguments. Students will engage in close reading of texts, weekly writing and revision, and individual conferences. A course specially designed for and required of transfer students who enter Muir College under the agis of TAG or IGETC. PREREQUISITE: departmental approval.

MCWP 199. Muir Special Project (1-6)
A course of independent work on a research or creative project to satisfy a Muir graduation requirement. (Only Muir students who have had Muir Special Project proposals approved may enroll in this course.) Students wishing to enroll must submit a written request with a description of the project. (Muir students must submit the Muir Special Project 199 form to the major advisor and to the Office of the Provost by the seventh week of the quarter prior to the quarter in which the 199 is to be undertaken. For information on other requirements, consult the provost’s office.) PREREQUISITES: upper-division status, approval by project advisor and by provost. (Letter grades only.)
The Department of Music maintains highly sophisticated, continuously upgraded facilities for the support of graduate and undergraduate instruction. http://music.ucsd.edu/facilities/

**Computer Music Instructional Laboratory (CML)**—Established in 1987 to support undergraduate and graduate studies in computer music, CML is a 900-square-foot facility with recessed storage and printing areas, machine isolation, acoustical treatments, a presentation console, ergonomic workstation components, a high-resolution data projection system, CD and DVD authoring, and integrated digital audio equipment for student access to audio processing, duplicating, high-definition digital mixing and high-quality (Dynaudio) multichannel audio monitoring. The facility provides adequate space for instrumental rehearsal and interfacing experimentation, and provides several FireWire interfaces for laptop computing. Mobile desktop systems optimized for live performance applications are also maintained in CML.

Our server has high-speed network and wireless connections, mass storage, and archiving systems. Intel and Macintosh computer workstations run unique music software packages developed at UC San Diego. Pd is a new, real-time, interactive musical and graphics programming environment written and under continuing development by Professor Miller Puckette. Other audio and graphics editing and processing software packages are also supported, including Pro Tools HD, development compilers, and several standard music-production packages. The facility is configured and optimized to support direct connection of musical instruments to computers for prototyping of real-time interactive performance and compositional projects using MAX/MSP/Jitter and Pd computer music software. The facility is also used for advanced seminars and classes in such topics as sound spatialization, music software programming, computer music techniques, repertoire analysis, and research.

**Digital Music Project Studio**—This is a 900-square-foot facility, including an isolation booth, absorption and diffusion treatments, data connections, and audio tie-lines to CML and Erickson Hall. The studio houses Macintosh and Linux systems and many dedicated devices for music production and recording, including a Pro Tools HD digital audio production package with sixteen channels of digital I/O for precise digital recording and editing. Recent upgrades include improved microphone preamps and an array of new software packages, including Waves plug-ins and convolution reverb. The studio features a Yamaha 02R96 digital mixing console with all upgrades, 5.1 and stereo monitoring, and sound-for-picture capabilities. The studio supports MIDI for synthesis, processing, and control in music composition and performance, and includes hardware and software for CD and DVD mastering.

**Open Computing Laboratory (OCL)**—This facility occupies 1,950 square feet, with audio and printer connections to CML and the Digital Music Project Studio. Most workstations are networked, and several stations are equipped with CD and DVD burning equipment. OCL was established in 1990 to support many facets of the department curriculum, and has been upgraded incrementally every year thereafter. It now comprises seventeen computer

Recent upgrades include improved microphone preamps and an array of new software packages, including Waves plug-ins and convolution reverb. The studio features a Yamaha 02R96 digital mixing console with all upgrades, 5.1 and stereo monitoring, and sound-for-picture capabilities. The studio supports MIDI for synthesis, processing, and control in music composition and performance, and includes hardware and software for CD and DVD mastering.

**Open Computing Laboratory (OCL)**—This facility occupies 1,950 square feet, with audio and printer connections to CML and the Digital Music Project Studio. Most workstations are networked, and several stations are equipped with CD and DVD burning equipment. OCL was established in 1990 to support many facets of the department curriculum, and has been upgraded incrementally every year thereafter. It now comprises seventeen computer
workstations (iMacs, desktop G4s and GSs, and several Intels), most with MIDI interfaces and Yamaha SY22/33 synthesizers. Coda Finale, Max/MSP, Soundhack, Metasynth, DVD Studio Pro, Final Cut, Pd, Pro Tools, and IRCAM Forum are some of the packages supported in the lab. Large-format music and text printing are supported. For instructional presentation, the room features a high-quality data projection and surround sound system. The presentation station also features a PC workstation, a G5 Mac with Pro Tools editing, DAT, Bias Peak editor and SpectraFoo, signal display software, and DVD-authoring software burner.

Music Center Studios—All instructional labs and all of the Department of Music's performance spaces and classroom spaces have been upgraded for wireless and fast Ethernet and media networking. Media networking allows advanced students and researchers to "stream" digital video and audio among diverse on-campus facilities and onto the Internet. Additionally, there is wireless connectivity at most campus locations. All UCSD music production and research facilities are designed for ease of data portability and as complementary components of a powerful, well-designed, thoroughly integrated continuum of resources serving the needs of entering students through postdoctorate students and faculty researchers.

Music Technology Equipment Checkout—The music department maintains an inventory of technology equipment available to music majors and graduate students for overnight and weekend checkout. Equipment includes laptop computers with music software installed, FireWire audio interfaces, MIDI keyboards and interfaces, microphones, cables, and other recording and production sound equipment. This equipment is provided primarily to support class-related, dissertation, thesis and ICAM senior projects.

Concert Recording and CD Releases—All faculty and most student concerts are recorded by professional staff or their assistants, and qualified students can utilize the department’s extensive high-tech resources for experimental projects resulting in public performance and recordings of new works. Regularly released CDs, under advisement by faculty mentors, feature advanced graduate students who perform, compose, edit, and collaborate to produce a snapshot of musical achievement that predicts distinguished careers and new avenues of musical thought and practice.

Music Center Studios—The Department of Music has a state-of-the-art recording and faculty research complex, completely refurbished in 2004-05, with studios designed to meet the following objectives:
- Serve as an unsurpassed facility for recording and mastering classical and contemporary music.
- Serve as a reference-critical listening space for the evaluation of audio production.
- Support faculty research in psychoacoustics, computer music, and digital signal processing (DSP) for audio.

The facility incorporates two large recording studios (50 x 60 feet) with variable wall and floor surfaces for diverse acoustical configurations, a control room (20 x 30 feet), an isolated machine room, and other support spaces. Music center studios host live performances as well as six-camera video shoots, and are well suited for high-tech presentations and concert recording. A 120-dimmer grid with a digital lighting board supports theatrical lighting for performance, and for television and video production.

The control room features highly refined acoustical qualities and new all-digital mixing and editing systems including Pyramid and Pro Tools HD. ATC monitoring systems have been upgraded for surround sound. An excellent range of microphones supports an unusual array of recording possibilities; a fine selection of pianos, percussion, and electronic instruments is also part of the holdings of the complex. Grad students may apply for staff positions and recording-project support at music center studios, and ICAM majors may apply for engineering and production internship credits. The department's instructional labs are designed to serve as networked, media-compatible satellites to the music center studios. http://music.ucsd.edu/facilities

Center for Research in Computing and the Arts (CRCA), and California Institute for Telecommunications and Information Technology (Calit2)

The Center for Research in Computing and the Arts (CRCA) is an organized research unit of UCSD. Historically rooted in the Center for Music Experiment (CME), CRCA now exists to foster collaborative working relationships among a wide array of artists, scientists, and technologists by identifying and promoting projects in which common research interests may be advanced through computing.

Music projects at CRCA cover a wide spectrum, from pure research to technically advanced creative endeavors. Current research includes, but is not limited to, interactive multimedia and performance, digital audio and synthesis techniques, video/image processing, spatial audio, computer music languages, virtual environments, robotics, computer composition, installation, artificial intelligence, and Web art.

CRCA offers a broad array of events in its facilities, reflecting the research and artistic expression of faculty, students, associates, and visiting scholars. Research residencies and fellowships are available for undergraduate and graduate students on an annual, competitive basis.

In fall 2005 CRCA moved into its new home in the Media Arts wing of UCSD’s new Calit2 building. This impressive new structure houses offices, labs, and performance spaces on a world-class stage that places CRCA at the crossroads of artistic and technical innovation. CRCA affiliates work alongside leading researchers in the areas of wireless communications, computer imaging, signal processing, bioinformatics, chip design, immersive media, and a host of new and emerging disciplines. http://www.cra.ucsd.edu, http://www.calit2.net/

Music Library

The Music Library (located in Geisel Library) maintains extensive collections of materials in all areas of music, and is known internationally for contemporary music holdings. Ethnic music collections are aggressively being expanded. The Music Library’s Services Room has fifty-two stations for playback of the recordings collection, including CD, DVD, VHS, LP, or tape formats. Ten of the remote control stations are equipped with video monitors. The Seminar Room is equipped with audio and video equipment for group presentations. Digital Audio Reserves (DAR) provides students with 24/7 access, including off-campus access, to course listening assignments, via the UCSD network. http://orpheus.ucsd.edu/music

THE UNDERGRADUATE PROGRAM

Undergraduate courses offered in the Department of Music satisfy a wide range of interests for non-music majors as well as for students majoring in music. Students wishing to acquire a musical background to support further study should take MUS 1A-B-C, which develops skills musicians use in the analysis and performance of music. Students interested in "music appreciation" should choose from the following courses, which introduce aspects of the rich heritage of music: MUS 4–15. None of the aforementioned courses have prerequisites. For students with prior musical background who wish to continue in upper-division theory courses, MUS 2A-B-C (in lieu of 1A-B-C) is essential.

MUSIC MAJOR PROGRAMS

The undergraduate program at UCSD offers a bachelor of arts degree in music and in music humanities. The curriculum emphasizes the development of musical listening and performance skills as applied to both contemporary and traditional music. A third degree program, interdisciplinary computing in the arts (ICAM-music), is also offered. The music major is intended for students who may choose to engage in music as a profession. This major thus requires extensive development of musical skills. A student without the appropriate level of those skills upon entrance to UCSD must devote considerable time to attaining them, either in lower-division courses or independent study. Students can concentrate in composition, performance, literature, technology, or jazz and the music of the African diaspora.

The Department of Music is committed to creative music making; thus all music majors are required to enroll in ensemble performance for at least three quarters (see #8 below).

The music/humanities major is intended for students who wish to pursue a broad liberal arts program that includes music as a central element. This program emphasizes music history and literature, and allows the individual student to select an area of interest for the major within the broad field of the humanities.

The interdisciplinary computing in the arts major is intended for students who wish to pursue the field of music specializing in the art and technology of our time. Below is a detailed description of this major.

MUSIC MAJOR REQUIREMENTS

The lower-division prerequisites for the music major are MUS 2A-B-C, and MUS 2AK-BK-CK. Jazz emphasis students take MUS 2JK in lieu of 2CK. To continue within the major, all students must pass Music 2C or an equivalent proficiency exam. Composition emphasis students must take Music 33A-B-C,
Introduction to Composition I, II, and III, or take a proficiency exam for the three-quarter sequence course. All required music major courses must be taken for a letter grade, with the exception of MUS 143, which is taken on a Pass/Not Pass basis. All courses to be counted toward satisfying the major requirements must be passed with a grade of C or better.

To complete the music major the following courses are required. Courses which are specific to each area of emphasis are shown in parentheses.

1. One of the following sequences:
   - MUS 101A-B-C (performance, composition, literature, and technology)
   - MUS 101A-B and 104 (jazz)

2. One of the following sequences:
   - MUS 102A-B-C (performance, composition, literature, and technology)
   - MUS 137A-B-C (jazz)

3. MUS 120A-B-C

4. One quarter of MUS 133 (normally taken in the winter quarter of the junior or senior year)

5. One of the following:
   - MUS 107, 110, 116, or 150 (performance, composition, literature, and technology)
   - MUS 150 (jazz)

6. One of the following:
   - three quarters of MUS 132 or 132V (performance)
   - MUS 103A-B-C (composition)
   - three courses from the series MUS 107-116, 126, 127A-B, and 150, of which at least one must be 107, 110, 116, or 150 [in addition to #5 above] (literature)
   - Music 170/171/175 (technology)
   - two courses from MUS 105, 126, 127A, and 127B; plus one course from MUS 107, 110, 111, 114, 115, 116, or 150 [in addition to #5 above] (jazz)

7. One additional course to be selected from:
   - MUS 107-116, 126, 127A-B, and 150 (performance, composition, literature, and technology)
   - MUS 151-154 (jazz)

8. One of the following sequences:
   - Two quarters chosen from MUS 95C, 95D, or 95K and one quarter from MUS 95B-W, 130, 131, and 134 (performance, composition, literature, and technology)
   - Two quarters of MUS 95C or 131, and one quarter of MUS 95C, 95D, 95G, or 95K (jazz)

9. MUS 143 every quarter

MUSIC/HUMANITIES MAJOR REQUIREMENTS

The prerequisite for the music/humanities major is Music 1A-B-C (or 2A-B-C, if qualified). To complete the major the following courses are required:

1. MUS 120A-B-C.

2. Three courses chosen from MUS 107-116, 126, 127A-B, and 150, of which at least one must be 107, 110, 116, or 150

3. A coherent set of six upper-division courses selected from the humanities or fine arts (including music) that focuses on a specific topic, chosen in consultation with the music/humanities academic advisor.

4. Two quarters chosen from MUS 95C, 95D, or 95K, and one quarter from MUS 95B-W, 130, 131, and 134

5. MUS 143 every quarter

Students interested in this major should confer with the music/humanities faculty advisor to work out a course of study, which must be submitted at the beginning of the junior year for the advisor's written approval.

INTERDISCIPLINARY COMPUTING AND THE ARTS (ICAM) MAJOR

The Interdisciplinary Computing and the Arts major in the Departments of Music and Visual Arts draws upon and brings together ideas and paradigms from computer science, art, and cultural theory. It takes for granted that the computer has become a metamedium and that artists working with computers are expected to combine different media forms in their works. All of this makes the program unique among currently existing computer art programs which, on the one hand, usually focus on the use of computers for a particular media (for instance, specializing in computer animation, or computer music, or computer design for print) and, on the other hand, do not enter into a serious dialogue with current research in computer science, only teaching the students off-the-shelf software. The goals of the program are to:

- prepare the next generation of artists who will be functioning in a computer-mediated culture
- give students necessary technical, theoretical, and historical backgrounds so they can contribute to the development of new aesthetics for computer media
- prepare students to mediate between the worlds of computer science and technology, the arts, and the culture at large by being equally proficient with computing and cultural concepts
- give students sufficient understanding of the trajectories of development in computer science so they can anticipate and work with the emerging trends, rather than being locked in particular software currently available on the market.

Major Course Requirements

Twenty courses are required in the computing and the arts major for the attainment of the Bachelor of Arts degree. A minimum of twelve of these courses must be upper division.

All courses taken to satisfy major requirements must be taken for a letter grade, and only grades of C- or better will be accepted in the major.

MUS 4. Introduction to Western Music

VIS 1. Introduction to Art-Making

ICAM 40/140. Introduction to Computing in the Arts

Math. 20A. Calculus for Science and Engineering

Math. 20B. Calculus for Science and Engineering

CSE 11. Introduction to Computer Science: JAVA

and choose one from

MUS 1A. Musical Literacy

MUS 2A. Basic Musicianship

MUS 5. Sound in Time and

and choose one from

MUS 6. Electronic Music

MUS 7. Music, Science, and Computers

MUS 14. Contemporary Music

* Math. 20A and Math. 20B is an accelerated calculus course for science and engineering. Math. 10A-B-C covers similar material in a non-accelerated format, and can be substituted. CSE 11 is an accelerated course in the JAVA programming language. CSE 8A and CSE 8B, which cover the same material in a non-accelerated format, may be substituted.

Upper-Division (twelve courses required)

SURVEY (ONE COURSE REQUIRED)

ICAM 110. Computing in the Arts: Current Practice

FOUNDATION (THREE COURSES REQUIRED)

ICAM 101/VIS 140. Digital Imaging: Image and Interactivity

ICAM 102/VIS 145A. Digital Media I: Time, Movement, Sound

ICAM 103/MUS 170. Musical Acoustics

ADVANCED (FOUR COURSES REQUIRED)

Choose one from

MUS 172. Computer Music II

VIS 141B. Computer Programming for the Arts II

VIS 145B. Time- and Process-Based Digital Media II

VIS 147B. Electronic Technologies for Art II

Choose three from

ICAM 120. Virtual Environments

ICAM 130/VIS 149. Seminar in Contemporary Computer Topics

MUS 171. Computer Music I

MUS 173. Audio Production: Mixing and Editing

MUS 174A-B. Audio and MIDI Studio Techniques

MUS 175. Musical Psychoacoustics

MUS 176. Music Technology Seminar

VIS 109. Advanced Projects in Media

VIS 131. Special Projects in Media

VIS 132. Installation Production and Studio

VIS 141A. Computer Programming for the Arts I

VIS 147A. Electronic Technologies for Art I

VIS 174. Media Sketchbook

THEORY AND HISTORY (TWO COURSES REQUIRED)

ICAM 150/VIS 159. History of Art and Technology

and choose one of

MUS 111. World Music Traditions

MUS 114. Music of the Twentieth Century

MUS 175. Musical Psychoacoustics

VIS 123CN. Early Print Culture: The First Media Revolution

VIS 125E. History of Performance

VIS 150. History and Art of the Silent Cinema

VIS 151. History of the Experimental Film

VIS 152. Film in Social Context

VIS 153. The Genre Series

VIS 154. Hard Look at the Movies

VIS 155. The Director Series
1. To be admitted into the honors program a student must have completed by the end of the third quarter.

2. Once admitted to the honors program
   - Students must be supervised by a faculty advisor throughout the honors program.
   - Composition students admitted to the honors program will enroll in twelve units of the Composition Honors course (MUS 103D-E-F).
   - Performance students will enroll in twelve units of MUS 132R (after at least three quarters of MUS 132).
   - Technology students will enroll in twelve units of MUS 199, 150, or 107.

3. To receive honors
   - A student must publicly demonstrate an appropriate level of excellence, an acceptable GPA, and suitable participation in department presentations and seminars, as determined by the student’s honors committee.
   - Jazz and music of the African diaspora students will have a recital in the spring quarter of their senior year. The recital will include a program of a minimum of 50 percent of original compositions.

**PLEASE NOTE:** Being admitted to the honors curriculum does not guarantee that a student will receive honors.

For further information on the Department of Music Honors Program and to obtain an application form, students should make an appointment with the undergraduate staff advisor.

**TRANSFER STUDENTS**

Students who plan to transfer into the music major should have strong skills in basic musicianship. For those planning to emphasize performance, solid proficiency on the instrument is required. A general course in the history of music is recommended. All transfer students must pass a proficiency examination in MUS 2C (Basic Musicianship) and MUS 2CK (Basic Keyboard) or take the two sequence courses. To verify the acceptability of transfer music courses, students must make an appointment with the undergraduate staff advisor.

**MINOR PROGRAMS**

Students who entered UCSD before winter quarter 1998 may select either the new minor or one of the music minors offered at the time of their entry into the university. A minor with an emphasis in ICAM consists of seven specific courses, of which at least five must be upper division. Prospective minors should consult with the respective departmental advisor for a complete list of appropriate classes acceptable for the minor.

**ADVISING OFFICE**

Undergraduate Staff advisor
Eileen Voreades
Room 195, Conrad Prebys Music Center
(858) 534-8226
evoreades@ucsd.edu

**THE GRADUATE PROGRAM**

UC San Diego offers the master of arts and doctor of philosophy in music as well as a doctor of musical arts. Areas of emphasis for the M.A. include Composition, Computer Music, Integrative Studies, and Performance. For the Ph.D., areas of emphasis offered are Composition, Computer Music, and Integrative Studies. The doctor of musical arts has an emphasis in Contemporary Music Performance.

**COMPOSITION**

http://music.ucsd.edu/grad/composition.php

The Composition Program is committed to nourishing the individual gifts and capacities of student composers in a diverse and active environment, with an emphasis on intensive personal interaction between faculty and student. The faculty mentor considers a student’s particular goals and then attempts to strengthen his or her technical capacity to meet them. The diversity and liveliness
of our program itself often challenges students to reevaluate their goals.

An incoming member in the M.A. or Ph.D. program begins with a year-long seminar (taught by a different faculty composer each quarter) and continues with individual studies thereafter. At the close of the first year fall quarter and again after the following spring quarter, the entire composition community gathers for a day-long "jury." Each seminar member is allotted a block of time during which the composition that has just been completed is performed and recorded in a carefully rehearsed presentation. There is a detailed discussion of each work by the faculty composers, and the student has opportunity to comment, explain, and pose questions. Following the performance and discussions of this day, the composition faculty meets to assess the students' work collectively and to offer any guidance deemed necessary. This process is at the root of the uniqueness of the UCSD program, and manifests the range, seriousness, and vitality with which compositional issues are explored here.

After completing three quarters of seminar and two juries, students come to know something about the ideas and perspectives of each faculty composer; the faculty, in turn, is aware of each student's objectives and needs. At this point, an individual mentor is agreed upon and this relationship becomes the center of the student's continuing work as the degree is completed. A Third Year Forum presents, under departmental auspices, a work composed by each third-year Ph.D. composer in the four quarters since his or her second jury. As a part of preparation for this forum, each student composer is expected to have a faculty performer on his or her Ph.D. committee (as a regular member, or as an additional sixth member). The faculty performer is the student's performance mentor and guide in interfacing with the performance community. There is also a biweekly Focus on Composition Seminar at which faculty, students and selected visitors present work of interest (compositional, analytical, technological, and even whimsical).

The seminars serve to foster mutual awareness within the student composer group. Collegial relationships develop which lead not only to friendships but also to further creative outlets in cooperative projects, including the student-run Composers' Forums, performance collectives, and recital projects. UCSD performers—faculty and student—are all committed to the playing of new music, and frequent composer/performer collaborations are a vital aspect of life in the Department of Music.

COMPUTER MUSIC

http://music.ucsd.edu/grad/comp_music.php

The Computer Music Program emphasizes research in new techniques for electronic music composition and performance, catalyzed through an active concert program of new works by students, faculty, and visitors. Areas of research include:

- new audio synthesis techniques
- audio signal processing
- music cognition
- live improvisation with and by computers
- integrating audio and video
- electronic spatialization of sounds
- techniques for live electronic music performance
- computer music software and HCL design
- audio analysis and feature detection

The Computer Music Program encourages work which overlaps with the other programs of study: Composition, Performance, and Integrative Studies. Analyzing and performing electronic music repertoire as well as writing new music involving electronics are encouraged.

The first-year computer music curriculum is centered on a yearlong "backbone" course covering the essentials of the computer music field. This material divides naturally into three portions (audio signal processing, compositional algorithms, and musical cognition).

In their second year, students work individually with faculty members to deepen their mastery of their subject areas of concentration. For example, a student wishing to focus on signal processing aspects might study techniques for digital audio analysis and resynthesis, drawing on the current research literature.

Also during these first two years, students take seminars on music analysis, composition, and performance practice. After having taken a critical mass of such subjects, Ph.D. students enter a qualifying examination preparation period, and, once successful, they start their dissertation research.

UCSD's Center for Research in Computing and the Arts (http://crica.ucsd.edu) offers an ideal research environment for graduate students in this area. The Department of Music also provides extensive laboratory and computing support for computer music.

INTEGRATIVE STUDIES

(formerly Critical Studies/Experimental Practices)

http://music.ucsd.edu/grad/is.php

The graduate program in Integrative Studies (IS) promotes an engagement with contemporary music activity and discourse that integrates diverse methodologies, experiences, learning styles, and resources. IS respects multiple ways of knowing and seeks to explore connections among ideas and processes in the arts, humanities, and sciences. Students are encouraged to combine their artistic and academic pursuits; to think systematically, critically, and reflectively; and to focus on the articulation and points of overlap between specialized and generalized knowledge. Drawing on diverse fields, including cultural theory, new media studies, ethnomusicology, improvisation, cognitive science, and systems theory, among others, the IS program combines an exploration of contemporary Western and non-Western music making with an examination of ideas and concepts that are relevant to its nature, creation, production, and reception.

This integrative and interactive environment encourages cross-fertilization and hybridity between diverse musical forms and the theoretical and critical discourses that surround them, often drawing in those who may not fit categories of "composer" or "performer," or those whose work is not constrained by traditional disciplinary boundaries. Core seminars explore multiple ways of thinking about music—including critical, cognitive, and intercultural approaches—in tandem with creative practices that frequently incorporate new technologies and integrate diverse media and forms. Student-generated projects and collaborations are encouraged and promoted with formal juries conducted by the faculty.

The program comprises four interconnected specialties: critical studies, ethnomusicology, systems inquiry, and creative practice. IS graduate students initially enroll in introductory courses taught by core faculty members designed to present an overview of each specialty and to generate possibilities for future independent and collaborative research. In subsequent quarters students choose between a variety of focused and revolving topic seminars in each of the four primary specialties. By the end of their first year in residency, students declare a primary and secondary specialty within the program. Seminars offered in other departments—for instance in visual arts, literature, theatre and dance, anthropology, communication, ethnic studies, cognitive science, psychology, or computer science—are encouraged and may fulfill degree requirements, if approved by a student's faculty advisor.

Exposure to a range of disciplines and inter-disciplinary methods prepares students to pursue innovative artistic/academic projects and careers. The program teaches students to situate and contextualize knowledge and practices on a broad intellectual and artistic continuum and to recognize the responsibilities and opportunities associated with living in an increasingly interconnected and interdependent world.

PERFORMANCE

http://music.ucsd.edu/grad/performance.php

Fostering the creative, intelligent, and passionate performance of contemporary music is the mission of the Performance Program of the Department of Music. As once stated by founding faculty composer Robert Erickson, we at UCSD are a "community of musicians." Performers act and interact in a communal environment by means of collaboration with faculty and student composers, research in the areas of new performance modalities, music technology, and improvisation, among many other pursuits. The performance of contemporary music is viewed as a creative act which balances expertise and exploration.

Graduate performance students pursue either a master of arts or a doctor of musical arts degree in contemporary music performance. The course of study for both programs involves the completion of required graduate seminars and intensive study with a mentoring faculty member. Students are encouraged to adopt a vigorous, exploratory orientation in their private study. Final degree requirements include a recital, or in the case of the DMA, two recitals and the presentation of personal performance research.

The work of graduate performance students forms an integral component of a rich musical environment, which produces an astonishing quantity and variety of performances. Students may perform in collaborative performances with fellow students and faculty. Ensembles include groups specializing in the interpretation of unconventionally notated scores, the percussion group red fish blue fish and other ensembles. The Performance
Forum, a student-initiated concert series, provides an opportunity for students to present a wide variety of repertoire which may include improvised music, world music, and music with technology. A strong, collaborative spirit among the curricular areas of the department (Performance, Composition, Music Technology, and Integrative Studies) also yields many new projects each year. Works by graduate student composers are performed on the annual Spring Festival and other concert series. The sense of musical community engendered by diverse interactions permeates the atmosphere and makes the Department of Music at UCSD a uniquely rewarding place to create the newest of music.

**GRADUATE ADMISSIONS**

Students are admitted to begin in fall quarter only. The deadline for submission of ALL application materials is January 10. Failure to meet this deadline jeopardizes admission and financial support.

**Step 1 Preliminary Application**

The application process begins at the Department of Music Web site http://music.ucsd.edu with a preliminary online application. We encourage all applicants to apply as early as September.

**Step 2 Portfolio**

Music applicants must submit a portfolio consisting of the following by January 10 to: UCSD, Department of Music, MC 0326, La Jolla, CA 92039. Please include your most recent works as well as twentieth-century pieces, when possible.

- For all applicants, a repertory list of works (solo and chamber) performed or composed during the past few years and a sample of printed concert programs in which you have participated, either as performer, composer, or collaborator.
- For all applicants, a minimum of two papers illustrating writing ability in any of the following areas: musical analysis, criticism, aesthetics, music theory, or music technology.

—in addition—

- For composition applicants only, a minimum of three scores of instrumental works with taped examples of the works being performed. (These may include, but should not be exclusively, electroacoustic works.)
- For computer music and IS applicants only, representative documentation (e.g., papers, performances, intermedia works, computer programs, etc.) of prior work.
- For performance applicants only, tapes or CD demonstrating the level of vocal and/or instrumental performance. In person auditions are desirable when possible, but not required.

**Step 3 UCSD Application for Graduate Admission**

All sections of the official online UCSD Application for Graduate Admission with the $70 nonrefundable fee, or $90 for international students, must be submitted by January 10. Applications must include all supporting documents:

- statement of purpose
- three letters of recommendation
- official transcripts
- Graduate Record Examination (GRE) required for all applicants.
- TOEFL (Test of English as a Foreign Language) or International English Language Testing System (IELTS) required for all applicants whose country of citizenship does not have English as its primary language. Minimum TOEFL score is 550 for the paper-based test, 213 for the computer-based test, or 80 for the Internet-based test. The minimum IELTS score is 7.

**ADVISORY EXAMINATIONS**

After completion of an advisory examination during Welcome Week, each new student will meet with the departmental M.A. or Ph.D. advisor. Students found to be deficient in any areas covered on the advisory examination (dictation, sight reading, keyboard proficiency, history, and literature) will be advised to remedy deficiencies during their first year.

**CORE GRADUATE CURRICULUM**

All graduate students are required to take Music 201 (Projects in New Music Performance) as outlined under each area, Music 210 (Musical Analysis), Music 228 (Conducting), and Music 291 (Problems and Methods of Music Research and Performance). Students who completed Music 210, 228, and 291 during their master’s degree program at UCSD, do not need to retake those courses for their doctoral curriculum.

To assure that all requirements are being adequately met, all graduate students must make an appointment with the graduate staff advisor for a degree check no later than the winter quarter of the second year.

**MASTER’S DEGREE PROGRAM**

The master of arts in music degree includes areas of emphasis in Composition, Computer Music, Integrative Studies, and Performance. The degree requires completion of at least thirty-six quarter units of graduate courses (courses numbered 201–299), including six units of Music 500 (Apprentice Teaching in Music) and six units of Music 299 (Advanced Research Projects and Independent Study) bearing directly on completion of the master’s thesis. Master’s students are expected to complete all requirements for the degree in six quarters of residence.

**COURSE REQUIREMENTS**

In addition to the core graduate curriculum, all master’s degree students are required to complete requirements in their area of emphasis:

**Composition**

- MUS 201 (A, B, C, D, E, or F)—must take at least two times.
- MUS 203A-B-C—successful completion of the jury process is necessary to get a passing grade in the corresponding seminar.

- MUS 203D—after successful completion of 203C, students must enroll in Music 203D (with their committee chair) every quarter until graduation.
- MUS 204—every quarter until graduation.
- MUS 206 and/or 207—a combination of any two courses.

**Computer Music**

- MUS 201 (A, B, C, D, E, or F)—must take at least two times.
- MUS 270A-B-C—must take within the first year of the program.
- MUS 270D—required every quarter of the second year.
- MUS 206, 207, and/or 267—a combination of any two courses.

**Integrative Studies**

- MUS 201 (A, B, C, D, E, or F)—must take at least one time.
- MUS 205—every quarter until graduation.
- MUS 206 or 207—at least three courses; two approved for a student’s primary specialty and one approved for his or her secondary specialty.
- MUS 211, 212, 213, and 214—must complete the series of four courses within the first year of the program.
- MUS 251, 252, 253, or 254—at least once course corresponding to the student’s primary specialty. Additional courses from this series may also be taken for corresponding 206 or 207 credit if approved by the student’s faculty advisor.

It is the student’s responsibility to check if a given course will count towards his or her primary or secondary specialty prior to enrolling.

**Performance**

- MUS 201(A, B, C, D, E, or F)—every quarter until graduation.
- MUS 206 or 207—a combination of any two courses.
- MUS 232—every quarter until graduation.
- MUS 245—every quarter in residence.

**MASTER’S DEGREE COMPLETION REQUIREMENTS**

A folio of three research papers in professional format (normally to be written in connection with the courses the student will be taking) must be accepted by the student’s committee prior to approval of the thesis.

MA candidates will present a thesis consisting of the following under the supervision of the student’s committee chair in MUS 299:

- Candidates emphasizing Composition will prepare a folio of three chamber compositions together with tape recordings of at least two of them.
• Candidates emphasizing Computer Music will write a research paper (thesis) and present a lecture-performance in which the scientific, technological, and musical aspects of an original computer music composition are documented, played, and discussed.

• Candidates emphasizing Integrative Studies with a primary specialty in critical studies, ethnomusicology, or systems inquiry must complete a master’s thesis of roughly sixty pages.

• Candidates emphasizing Performance will present a recital supported by lecture-quality notes. The program must be approved by the student’s committee chair.

All of the above master’s requirements must have final approval from the student’s individual committee upon completion.

DOCTORAL DEGREE PROGRAM

Students of superior musical competence may pursue a program with emphasis in Composition, Computer Music, or Integrative Studies leading to the Ph.D. or doctor of musical arts (D.M.A.) degree in Contemporary Music Performance.

All doctoral students within the Department of Music must complete the Core Graduate Curriculum (outlined in the section above the Master’s Degree Program) plus additional core requirements for the Ph.D. or D.M.A. program. These additional core requirements are

• Successful completion of an M.A. degree, including requirements equivalent to those described above for the M.A. in music. UCSD M.A. students who apply to the Ph.D./D.M.A. program must complete all departmental requirements, obtain OGS approval, and file the M.A. degree at Geisel Library before enrolling in any Ph.D./D.M.A. level courses.

• The Department of Music strongly recommends that entering students have acquired a reading ability in at least one of the standard reference foreign languages (French, German, Italian, or Spanish) in addition to their native language.

• All Ph.D./D.M.A. students are required to complete six units of credit in Music 500 (Apprentice Teaching) unless the student has completed this requirement in UCSD’s master’s degree program.

• After completing the qualifying examination, all students must remain in residence for at least three quarters, during which time they must enroll in twelve units of Music 299 (Advanced Research Projects and Independent Study) with their committee chair or members every quarter.

COURSE REQUIREMENTS

In addition to the core graduate and Ph.D./D.M.A. curriculum, doctoral students (according to their area of emphasis) must complete the following courses prior to the qualifying examination:

Composition

• MUS 201 (A, B, C, D, E, or F)—must take at least two times.

• MUS 203A—successful completion of the jury process is necessary to get a passing grade in the corresponding seminar. Continuing students from the UCSD Composition M.A. program may be excused from MUS 203A-C by successfully completing MUS 203A at the Ph.D. level.

• MUS 200—after successful completion of 203C, students must enroll in MUS 203D (with their committee chair) every quarter in residence.

• MUS 204—every quarter in residence.

• MUS 206 and/or 207—a combination of any three courses.

• MUS 209—must be taken at least three times.

• MUS 298—must complete at least six units.

Computer Music

• MUS 201 (A, B, C, D, E, or F)—must take at least two times.

• MUS 270A—must be taken within the first year of the program unless previously taken as a UCSD M.A. student.

• MUS 270D—after successful completion of 270C, students must enroll in MUS 270D (with their committee chair) every quarter in residence.

• MUS 206, 207, 209, and/or 267—a combination of any six courses.

• MUS 298—must complete at least six units.

Integrative Studies

• MUS 201 (A, B, C, D, E, or F)—must take at least two times.

• MUS 205—every quarter until advanced to candidacy.

• MUS 206 or 207—at least five courses with three approved for a student’s primary specialty and two approved for his or her secondary specialty.

• MUS 209—must be taken at least three times.

• MUS 251, 252, 253, or 254—must take two courses, one to correspond with student’s primary specialty and one to correspond with the student’s secondary specialty; additional courses from this series may also be taken for corresponding credit if approved by the student’s faculty advisor.

• MUS 298—must complete at least six units.

Those students declaring creative practice as their primary specialty for the Ph.D. are required to pass a jury at the end of their first year of doctoral study. Each student is allotted a block of time to present and/or perform his or her work in front of a panel comprising area and affiliated faculty. Each presentation is followed by a detailed discussion of the student’s work at which students have the opportunity to comment, explain, and pose further questions. After the completion of the jury process, the faculty meets in order to further assess each student’s work and to offer additional guidance.

It is the student’s responsibility to check if a given course will count towards his or her primary or secondary specialty prior to enrolling.

Performance

• MUS 201(A, B, C, D, E, or F)—every quarter until completion of qualifying examination.

• MUS 206/207/209—as approved by D.M.A. advisor, a combination of any six seminars related to the primary and secondary area of specialization. Music 296 may be substituted for up to four seminars with permission of D.M.A. advisor.

• MUS 232—every quarter until completion of qualifying examination.

• MUS 245—every quarter in residence.

• MUS 250—must be taken at least three times.

• MUS 298—must complete at least six units.

QUALIFYING EXAMINATION/ADVANCEMENT TO CANDIDACY

Requirements prior to taking the qualifying examination:

• Completion of all Ph.D./D.M.A. required course work.

• Formation of the Doctoral Committee. Students must choose the chair of their Doctoral Committee no later than their last quarter of course work. They must choose two more internal members of the Doctoral Committee by the end of the fall quarter of their third year. In consultation with the chair of the Doctoral Committee, two faculty members from outside the department should be added to the committee by the end of the spring quarter of the third year. All internal members of the committee must be faculty of the Department of Music. The final composition of the committee is approved by the Office of Graduate Studies.

• For Ph.D. students, one research paper judged to be of publishable quality must be completed prior to qualifying examinations. The subject of the publishable paper will be developed during the student’s first two years and must be approved by the student’s Ph.D. committee chair.

• For Composition students, in addition to the publishable paper, a folio of not fewer than three compositions (not previously accepted for an M.A. degree) must be completed prior to qualifying examinations. A Third Year Forum presents, under departmental auspices, a work composed by each third-year Ph.D. composer in the four quarters since his or her second jury. As a part of preparation for this forum, each student composer is expected to have a faculty performer on his or her Ph.D. committee (as a regular member, or as an additional sixth member). The faculty performer is the student’s performance mentor and guide in interfacing with the performance community.

• For D.M.A. students, one major recital; plus either (a) an abstract of the thesis or research project which will be given to the Doctoral Committee at the qualifying examination; or (b) a substantial
portion of the works from the student's first two "major recitals" will be presented at the qualifying examination.

- For Integrative Studies students, a dissertation prospectus must be submitted to the student's committee no later than three weeks prior to the oral portion of the qualifying examination. The dissertation prospectus is a document that presents the research topic of the dissertation, places it in the context of the relevant literature or in the context of recent artistic developments, discusses its significance, specifies and justifies the research methods, theoretical orientation, and/or artistic approach, and indicates the anticipated steps leading to completion.

The qualifying examination for all doctoral students will consist of the following:

A written and oral defense of three questions provided by the Doctoral Committee pertaining to appropriate areas of specialization. For Integrative Studies students, one question will involve a defense of the student’s dissertation prospectus and the remaining two questions will pertain to the student’s primary and secondary specialties. Successful completion of the qualifying exam marks the student’s advancement to doctoral candidacy, which must take place no later than the end of the spring quarter of the fourth year.

**PH.D./D.M.A. DEGREE COMPLETION REQUIREMENTS**

- For Composition students, completion of a major composition project.
- For Computer Music students, completion of an acceptable dissertation.
- For Integrative Studies students with a primary specialty in ethnomusicology, systems inquiry, or critical studies, completion of a book-length dissertation demonstrating original research and critical insight. For Integrative Studies students with a primary specialty in creative practice, a major creative work and a written defense of that work. Prior to the dissertation defense, the student’s work must be reviewed by a faculty jury and performed publicly (see the description of the jury process given above for more details).
- For D.M.A. students, completion of a second major recital plus one of the following: (a) thesis or research project; (b) a concert that is innovative in design and/or content and which is supported by a document containing extensive stylistic or analytical discussion of the program; (c) a lecture/concert pertaining to innovative and/or original material, with appropriate documentation as determined by the committee; or (d) two approved chamber music concerts, with appropriate documentation as determined by the committee.
- For all doctoral students, a final public defense of the composition/dissertation/recitals.
- A full copy of the student's dissertation/research project must be in the hands of each of the student's Doctoral Committee members four weeks before the dissertation defense.
- It is understood that the edition of the dissertation given to committee members will not be the final form, and that the committee members may suggest changes in the text at the defense. Revisions may be indicated and, in extreme cases, may require this examination to be taken more than once.
- Acceptance of the dissertation by the university librarian represents the final step in completion of all requirements for the Ph.D.

Materials previously submitted for other degrees are not acceptable for submission for the Ph.D./D.M.A. degree.

**TIME LIMIT POLICY FOR THE DOCTORAL DEGREE**

**Normative Time Limits**

4 years: Students entering the Ph.D./D.M.A. program with a master's degree from another institution.

6 years: Students continuing into the Ph.D./D.M.A. program with a master's degree from UCSD. Time limit is calculated from the beginning of the M.A. program (i.e., two years for M.A. program plus four years normative time for Ph.D./D.M.A.).

**Support Time Limits**

6 years: Students entering the Ph.D./D.M.A. program with a master's degree from another institution.

7 years: Students continuing into the Ph.D./D.M.A. program with a master's degree from UCSD. Time limit is calculated from the beginning of the M.A. program.

**Total Registered Time Limits**

6 years: Students entering the Ph.D./D.M.A. program with a master's degree from another institution.

8 years: Students continuing into the Ph.D./D.M.A. program with a master's degree from UCSD. Time limit is calculated from the beginning of the M.A. program.

Students who have not completed all Ph.D. requirements within the maximum total registered time will no longer be permitted to register for classes.

**ADVISING OFFICE**

**COURSES**

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

**NOTE:** The following course offerings outline the general scope of our program. Not all courses are offered every year. It is essential that students work closely with departmental advisors when planning their degree programs.

**LOWER-DIVISION**

1A. Fundamentals of Music A (4)
This course, first in a three-quarter sequence, is primarily intended for students without previous musical experience. It introduces music notation and basic music theory topics such as intervals, scales, keys, and chords, as well as basic rhythm skills. **PREREQUISITES:** none.

1B. Fundamentals of Music B (4)
This course, second in a three-quarter sequence, focuses on understanding music theory and in developing musical ability through rhythm, ear training, and sight singing exercises. Topics include major and minor scales, seventh-chords, transportation, compound meter and rudiments of musical form. **PREREQUISITE:** Music 1A.

1C. Fundamentals of Music C (4)
This course, third in a three-quarter sequence, offers solid foundation in musical literacy through exercises such as harmonic and melodic dictation, sight singing exercises and rhythm in various meters. Topics include complex rhythm, harmony, and basic keyboard skills. **PREREQUISITE:** Music 1B.

2A-B-C. Basic Musicianship (4-4-4)

2AK-BK-CK. Basic Keyboard (2-2-2)
Scales, chords, harmonic progressions, transposition, and simple pieces. **PREREQUISITES:** concurrent enrollment in Music 2A, 2B, 2C.

2JK. Jazz Keyboard (2)
This course will introduce basic voicings and voice leading, stylistically appropriate accompaniment, and basic chord substitution. For majors with a Jazz and the Music of the African Diaspora emphasis to be taken concurrently with Music 2C. **PREREQUISITES:** Music 2AK and 2BK or passing proficiency exam, or consent of instructor. Concurrent enrollment in Music 2C. Majors only.

4. Introduction to Western Music (4)
A brief survey of the history of Western Music from the Middle Ages to the present. Much attention will be paid to the direct experience of listening to music and attendance of concerts. **PREREQUISITE:** none.

5. Sound in Time (4)
An examination and exploration of the art and science of music making. Topics include acoustics, improvisation, composition, and electronic and popular forms. There will be required listening, reading, and creative assignments. No previous musical background required. **PREREQUISITE:** none.

6. Electronic Music (4)
Lectures and listening sessions devoted to the most significant works of music realized through the use of computers and other electronic devices from the middle of this century through the present. **PREREQUISITE:** none.

Exploration of the interactions among music, science, and technology, including the history and current development of science and technology from the perspective of music. **PREREQUISITE:** none.

8. American Music (4)
A course designed to study the development of music in America. The focus will be on both the vernacular traditions including hymn singing, country music, jazz, big band, rock, etc., as well as the cultivated traditions of various composers such as William Billings to John Cage. **PREREQUISITE:** none. (Offered in selected years.)

9. Symphony (4)
The symphonic masterworks course will consist of lectures and listening sessions devoted to a detailed discussion of a small number of recognized masterworks (e.g., Mozart,

cultural studies, musicology, and sociology. Topics vary. May be repeated once for credit. PREREQUISITE: Music 104 or consent of instructor.
107. Critical Seminar in Composition (4)
This seminar explores the history of music in relation to
critical issues, such as race, gender, sexuality, the environ-
note: Materials fee required.
UPPER-DIVISION
101A. Music Theory and Practice I (4)
Study of modal counterpart in the style of the sixteenth
two-voice species counterpart studies. Analysis of
classical forms: Sonata, Variation, Minuet and Trio, Rondo. Musicianship studies: sight-singing, dictation, and keyboard skills. PREREQUISITE: Music 101A and 101B.
105. Jazz Composition (4)
This course will explore a range of compositional possibili-
ty: Materials fee required.
American art form. We will witness the emergence of Louis Armstrong in New Orleans and examine the composer's role in Jazz with Jelly Roll Morton and Duke Ellington. (Cross-listed with Ethnic Studies 179A.) PREREQUISITE: none.

127B. Jazz Since 1946: Freedom and Form (4)
This course will examine the evolution of Jazz from 1943 to the present. The course will survey the contrasting and competing styles in Jazz from BEBOP to COOL to the avant garde and fusion. (Cross-listed with Ethnic Studies 179B.) PREREQUISITE: none.

128. Principles and Practice of Conducting (4)
The theory and practice of instrumental and/or choral conducting as they have to do with basic baton techniques, score reading, interpretation, orchestration, rehearsal, building, and functional analysis. Members of the class will be expected to demonstrate their knowledge in the conducting of a small ensemble performing literature from the eighteenth, nineteenth, and twentieth centuries. PREREQUISITE: Music 2A-B-C and 101A-B-C. Department stamp required.

129. Orchestration (4)
This course will give practical experience in orchestration. Students will study works from various eras of instrumental music and will demonstrate their knowledge by orchestrating works in the styles of these various eras, learning the capabilities, timbre, and articulation of all the instruments in the orchestra. PREREQUISITE: Music 101B.

130. Chamber Music Performance (2-4/0)
Instruction in the preparation of small group performances of representative vocal chamber music literature. May be taken for credit six times, after which students must enroll for zero units. PREREQUISITE: consent of instructor through audition.

131. Advanced Improvisation Performance (4/0)
Master class instruction in advanced improvisation performance for declared majors and minors only or consent of instructor. Audition required at first class meeting. May be repeated six times for credit. PREREQUISITE: consent of instructor through audition. Department stamp required.

132. Pro-Seminar in Music Performance (4)
Individual or master class instruction in advanced instrumental performance. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course. May be taken six times for credit. PREREQUISITE: audition and department stamp.

132C. Vocal Coaching (4)
Individual instruction in advanced vocal coaching. Emphasis placed on diction and musical issues. For declared music majors and minors only. Students must be simultaneously enrolled in the Vocal Masterclass, Music 32VM. May be taken six times for credit. PREREQUISITE: at least one quarter of Music 132V and consent of instructor. Department stamp required.

132R. Recital Preparation (4)
Advanced instrumental/vocal preparation for senior music majors pursuing honors in performance. Repertoire for a solo recital will be developed under the direction of the appropriate instrumental/vocal faculty member. Special audition required during Welcome Week preceding fall quarter. PREREQUISITE: Music 132R only; Music 132C. Department stamp required.

132V. Pro-Seminar in Vocal Instruction (3)
Individual instruction in advanced vocal performance. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course and in the Vocal Masterclass, Music 32VM. May be taken six times for credit. PREREQUISITE: at least one quarter of Music 132V and consent of instructor. Department stamp required.

133. Projects in New Music Performance (4)
Performance of new music of the twentieth century. Normally offered winter quarter only. Required a minimum of one time for all music majors. May be taken two times for credit. PREREQUISITE: consent of instructor through department.

134. Symphonic Orchestra (4)
Repertoire is drawn from the classic symphonic literature of the eighteenth, nineteenth, and twentieth centuries with a strong emphasis on recently reinforced and new music. Distinguished soloists, as well as The La Jolla Symphony Chorus, frequently appear with the orchestra. The La Jolla Symphony Orchestra performs two full-length programs each quarter, each program being performed twice. May be repeated six times for credit. PREREQUISITE: audition and department stamp required.

137A. Jazz Theory and Improvisation (4)
Study of jazz theory and improvisation, focused on fundamental rhythmic, harmonic, melodic, and formal aspects of modern jazz style. Application of theoretical knowledge to instruments and concepts will be reinforced through listening, transcription work, and composition and improvisation exercises. First course of a year-long sequence. PREREQUISITE: MUS 2A-B-C, proficiency exam, or consent on instructor.

137B. Jazz Theory and Improvisation (4)
Study of jazz theory and improvisation, focused on fundamental rhythmic, harmonic, melodic, and formal aspects of modern jazz style. Application of theoretical knowledge to instruments and concepts will be reinforced through listening, transcription work, and composition and improvisation exercises. Second course of a year-long sequence; continuation of Music 137A. PREREQUISITE: MUS 2A-B-C and 137A, proficiency exam, or consent on instructor.

137C. Jazz Theory and Improvisation (4)
Study of jazz theory and improvisation, focused on fundamental rhythmic, harmonic, melodic, and formal aspects of modern jazz style. Application of theoretical knowledge to instruments and concepts will be reinforced through listening, transcription work, and composition and improvisation exercises. Third course of a year-long sequence. PREREQUISITE: MUS 137B. PREREQUISITE: MUS 2A-B-C and 137B, proficiency exam, or consent on instructor.

137D. Seminar in Jazz Studies (4)
Advanced individual projects for senior music majors pursuing honors in jazz and music of the African diaspora. Projects will be critically reviewed in seminar with fellow students and jazz faculty. First course of a year-long sequence. PREREQUISITE: MUS 137A-B-C and admission into the Music Department Honors Program in jazz. Department stamp required.

137E. Seminar in Jazz Studies II (4)
Advanced individual projects for senior music majors pursuing honors in jazz and music of the African diaspora. Projects will be critically reviewed in seminar with fellow students and jazz faculty. Second course of a year-long sequence; continuation of MUS 137D. PREREQUISITE: MUS 137D and department stamp.

137F. Seminar in Jazz Studies III (4)
Advanced individual projects for senior music majors pursuing honors in jazz and music of the African diaspora. Projects will be critically reviewed in seminar with fellow students and jazz faculty. Third course of a year-long sequence; continuation of MUS 137E. PREREQUISITE: MUS 137E and department stamp.

143. Department Seminar (1)
The department seminar serves both as a general department meeting and as a forum for the presentation of research and search for students and faculty, and students. Required of all undergraduate music majors every quarter.

150. Jazz and the Music of the African Diaspora: Special Topics Seminar (4)
In-depth writing and listening intensive investigation into a jazz or diaspora-related music history topic. Topics vary from year to year. May be repeated once for credit. PREREQUISITE: Music 126, 127A or 127B, or consent of instructor.

151. Race, Culture, and Social Change (4)
Aggregated group generalization of distinct cultural expressions by turning negative ascription into positive affirmation and by transforming segregation into congregation. This course examines the role of cultural expressions in struggles for social change by these communities inside and outside the U.S. (Cross-listed with Ethnic Studies 108.) PREREQUISITE: upper-division standing or consent of instructor.
152. Hip Hop: The Politics of Culture (4)
Examination of hip-hop’s music, technology, lyrics, and its influence in graffiti, film, music video, fiction, advertising, gender, corporate investment, government and censorship with a critical focus on race, gender, popular culture, and the politics of creative expression. (Cross-listed with Ethnic Studies 128.) PREREQUISITE: upper-division standing or consent of instructor.

153. African Americans and the Mass Media (4)
Examination of media representations of African Americans from slavery to the present focusing on emergence and transmission of enduring stereotypes, their relationship to changing social, political, and economic frameworks, and African Americans’ responses to and interpretations of these media images. (Cross-listed with Ethnic Studies 164.) PREREQUISITE: upper-division standing or consent of instructor.

154. Black Music/Black Texts: Communication and Cultural Expression (4)
Explores roles of music as a traditional form of communication among Africans, Afro-Americans, and West Indians. Special attention given to poetry of black music, including blues and other forms of vocal music expressive of contestatory political attitudes. (Cross-listed with Ethnic Studies 176 and Literature in English 187.) PREREQUISITE: upper-division standing or consent of instructor.

171. Computer Music I (4) *(Formerly MUS 160C) A practical introduction to computer techniques for desktop audio, including audio editing, MIDI control, and real-time music algorithms using the MAX programming environment. PREREQUISITES: MUS 170; music majors, ICAM-music and ICAM-audio arts majors and minors, or consent of instructor.

172. Computer Music II (4) *(Formerly Music 161) Computer synthesis techniques including wavetable and additive synthesis, waveshaping, and sampling. Transformation of musical sounds using filters, modulation, and delay effects. Fourier analysis of sounds. PREREQUISITES: Music 171 (formerly Music 160C); music majors, ICAM-music and ICAM-audio arts majors and minors, or consent of instructor.

173. Audio Production: Mixing and Editing (4) *(Formerly Music 162) Theoretical and practical aspects of recording, mixing, and editing sound for both musical and multimedia applications. Covers audio montage, equalization, effects processing, spatialization, mastering, and diffusion. PREREQUISITES: Music 170 (formerly Music 160A); music majors, ICAM-music and ICAM-audio arts majors and minors, or consent of instructor.

174A. Audio/MIDI Studio Techniques I (2)
First of three-part sequence, detailing digital studio resources and production techniques. Hardware and software techniques explored in project setting. Topics include microphones, digital recording and editing, analog and digital interfaces, waveform, analytical listening. PREREQUISITES: Music 170, music majors, ICAM-music and ICAM-audio visual arts majors and minors, or consent of instructor.

174B. Audio/MIDI Studio Techniques II (2)
Second of three-part sequence, detailing digital studio resources and production techniques. Hardware and software techniques explored in project setting. Topics include electronic and acoustic mixing, signal processing, MIDI, synchronization and basic sound-for-picture. PREREQUISITE: Music 170. Music 174A; music majors, ICAM-music and ICAM-audio visual arts majors and minors, or consent of instructor.

174C. Audio/MIDI Studio Techniques III (2)
Third of three-part sequence, detailing digital studio resources and production techniques. Hardware and software techniques explored in project setting. Topics include audio quality, compression, metering, surround sound, large-scale production management. PREREQUISITES: Music 170, Music 174B; music majors, ICAM-music and ICAM-audio visual arts majors and minors, or consent of instructor.

176. Music Technology Seminar (4) *(Formerly Music 163) Selected topics in music technology and its application to composition and/or performance. Offerings vary according to faculty availability and interest. May be repeated for credit. PREREQUISITE: Music 172 (formerly Music 161) and consent of instructor.

192. Senior Seminar in Music (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in music (at the upper-division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITES: upper-division standing, department stamp and/or consent of instructor required.

195. Instructional Assistance (2)
Assisting in the instruction of an undergraduate music class under the direct and constant supervision of a faculty member. May be taken for credit three times. PREREQUISITES: consent of instructor and departmental approval.

198. Directed Group Study (1-4)
Concentrated inquiry into various problems not covered in the usual undergraduate courses. PREREQUISITE: consent of instructor and department chair approval. Pass/Not Pass grade only.

199. Independent Study (1-4)
Independent reading, research, or creative work under the direction of a faculty member, provided no course covering the material to be studied already exists, and the study area derives from previous course work. PREREQUISITES: consent of instructor and department chair approval. Department stamp required. Pass/Not Pass grade only. May be taken for credit two times.

ICAM 101. Digital Imaging: Image and Interactivity (4) *(Cross-listed with VIS 140) Introduction to digital image involving images, texts, and interactive display and operates both within computer mediated space (i.e., Web site) and in physical space (i.e., artist book). Interactive narrative and computer programming are explored. Materials fee required. PREREQUISITE: Music 170; media, ICAM, and studio majors; computing and ICAM minors only.

ICAM 102. Digital Media I: Time, Movement, Sound (4) *(Cross-listed with VIS 145A) Exploration of time dependent media components, creation and manipulation of digital sound as well as moving images and their integration in multimedia works. Use of computer programming to control time is emphasized. Materials fee required. PREREQUISITES: VIS 40 or ICAM 40 and VIS 140 or ICAM 101. Open to media, ICAM, and ICAM minors only. Two production course limitation.

ICAM 110. Computing in the Arts: Current Practice (4) Designed around the presentations by visiting artists, critics, and scientists. Topics with contemporary issues related to computer arts. Lectures by the instructor and contextual readings provide background material for the visitor presentations. PREREQUISITES: none. Note: Materials fee required.

ICAM 120. Virtual Environments (4)
Students create virtual reality artworks. Projects may be done individually or in groups. Exploration of theoretical issues involved will underlie acquisition of techniques utilized in the construction of virtual realities. Materials fee required. PREREQUISITES: VIS 145A or ICAM 102; CSE 11 recommended. Open to ICAM majors and minors only. Two production course limitation.

ICAM 130. Seminar in Contemporary Computer Topics (4) *(Cross-listed with VIS 149) Topics relevant to computer-based art and music-making, such as computer methods for making art/music, design of interactive systems, spatialization of visual/musical elements, critical studies. Topics will vary. May be repeated for credit. Materials fee required. PREREQUISITES: VIS 140 or ICAM 101; VIS 145A or ICAM 102 and MUS 170 or ICAM 103 recommended. Open to media, and ICAM majors; ICAM minors only. Two production course limitation.

ICAM 150. History of Art and Technology (4) *(Cross-listed with VIS 159) This course aims to provide historical context for computer arts by examining the interaction between the arts, media technologies, and sciences in different historical periods. Topics vary. Examples of topics which may be considered are: Renaissance perspective, the introduction of the printing press, the history of visual illusion in Western art, new physics and the avant-garde in the early twentieth century, futurism and technology, early electronic and computer art of the 1950s and 1960s. PREREQUISITE: none. Note: Materials fee required.

ICAM 160A. Senior Projects in Computer Arts I (4) Students pursue projects of their own design over two quarters with support from faculty members. Project proposals are developed, informed by project development guidelines from real world examples. Collaborations are possible. Portfolio required for admis- sions. PREREQUISITES: VIS 141B or VIS 145B or VIS 147B or MUS 172. Open to ICAM majors only. Department stamp required. Two production course limitation.

ICAM 160B. Senior Projects in Computer Arts II (4) Continuation of ICAM 160A. Completion and presenta- tion of independent projects along with documentation. PREREQUISITE: ICAM 160A. Open to ICAM majors only. Department stamp required. Two production course limitation.

192. Senior Seminar in Music (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in music (at the upper-division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITES: upper-division standing, department stamp and/or consent of instructor.

ICAM 199. Special Studies (2/4) Independent reading, research or creative work under direction of faculty member. PREREQUISITES: department stamp and upper-division standing required.

GRADUATE
All courses numbered 200 and above are intended for students admitted to the graduate program in music.

202. Advanced Projects in Performance (1-4) Advanced performance of new music with members of the performance faculty (SONOR). Students taking this course do not need to take Music 201 that quarter. Enrollment by consent of instructor/director of SONOR. PREREQUISITES:
graduate standing in music; others by written consent of instructor and department stamp.

203A. Advanced Projects in Composition (6)
Meetings and laboratory sessions devoted to the study of composition in small groups. Consent of instructor required.

203B. Advanced Projects in Composition (6)
Meetings and laboratory sessions devoted to the study of composition in small groups. Consent of instructor required.

203C. Advanced Projects in Composition (6)
Meetings and laboratory sessions devoted to the study of composition in small groups. Consent of instructor required.

203D. Advanced Projects in Composition (1-4)
Meetings on group basis with faculty composer in sessions devoted to the study of composition. PREREQUISITES: 203A-B-C and consent of instructor.

204. Focus on Composition (2)
The purpose of this seminar is to bring to the entire population of the graduate composition program (all students and faculty) for in-depth discussion of critical issues in music theory and composition. Each meeting will feature a formal presentation by a student, faculty member, or visitor, followed by lively and challenging debate on relevant issues. PREREQUISITE: consent of instructor.

205. Focus on Integrative Studies (2)
Meets on a biweekly basis to facilitate presentations by advanced students and invited guests and to encourage in-depth discussion between students, faculty, and visitors about theoretical and artistic issues of interest. Participation is required of all enrolled IS students until advanced to candidacy. Others are welcome to participate. PREREQUISITE: graduate standing in music.

206. Experimental Studies Seminar (4)
Seminars growing out of current faculty interests. The approach tends to be speculative and includes individual projects or papers as well as assigned readings. In the past, such areas as new instrumental and vocal resources, mixed media, and compositional linguistics have been offered. PREREQUISITES: graduate standing in music; others by written consent of instructor and department stamp.

207. Theoretical Studies Seminar (4)
Seminars on subject areas relating to the established dimensions of music and in which theoreticians have produced a substantial body of work. These include studies in analysis, timbre, rhythm, notation, and psychoacoustics. Offerings are made on faculty availability and interest. Analytical paper required. PREREQUISITES: graduate standing in music; others by written consent of instructor and department stamp.

209. Advanced Music Theory and Practice (4)
Advanced integrated studies in music theory; composition and styles study through analysis and performance. This course is intended primarily for doctoral students and may be taken by M.A. students only with special approval of M.A. advisor and course instructor. A major research or analytical publishable paper required. PREREQUISITES: graduate standing in music; others by written consent of instructor and department stamp.

210. Musical Analysis (4)
The analysis of complex music. The course will assume that the student has a background in traditional music analysis. The goal of the course is to investigate and develop analytical procedures that yield significant information about specific works of music, old and new. Reading, projects, and analytical papers. PREREQUISITES: graduate standing in music; others by written consent of instructor and department stamp.

211. Introduction to Ethnomusicology (2)
Introduces the field of ethnomusicology by highlighting important thinkers, concepts, and issues and by orienting students toward work of an anthropological, ethnographic, or comparative nature. Students who have taken and passed MUS 208A may not get credit for MUS 211. PREREQUISITE: graduate standing in music.

212. Introduction to System Inquiry (2)
Introduces the network of concepts and approaches that comprise systems inquiry and explores the theoretical, philosophical, and methodological implications of systems thinking for musical research and practice. Students who have taken MUS 208B for credit may not take MUS 212 for credit. PREREQUISITE: graduate standing in music.

213. Introduction to Critical Studies (2)
Introduces important themes and thinkers from the fields of critical theory and cultural studies and explores how musical behaviors and phenomena relate to matters of ideology, nationality, ethnicity, social class, race, and gender. Students who have taken MUS 208C for credit may not take MUS 213 for credit. PREREQUISITE: graduate standing in music.

214. Introduction to Creative Practices (2)
Surveys the terrain of contemporary creative music and investigates the social, cultural, historical, and technologi- cal dimensions of its manifestations and practice. Students who have taken MUS 208D for credit may not take MUS 214 for credit. PREREQUISITE: graduate standing in music.

228. Conducting (4)
This course will give practical experience in conducting a variety of works from various eras of instrumental and/or vocal music. Students will study problems of instrumental or vocal techniques, formal and expressive analysis of the music, and manners of rehearsal. Required of all graduate students. PREREQUISITES: graduate standing in music; others by written consent of instructor and department stamp. (Offered in selected years.)

229. Seminar in Orchestration (4)
A seminar to give practical experience in orchestration. Students will study works from various eras of instrumental music and will demonstrate their knowledge by orchestrating works in the styles of these various eras, learning the capabilities, timbre, and articulation of all the instruments in the orchestra. PREREQUISITE: graduate standing. (Offered in selected years.)

230. Chamber Music Performance (4)
Performance of representative chamber music literature, instrumental and/or vocal, through coached rehearsal and seminar studies. Course may be repeated for credit since the literature studied varies from quarter to quarter. PREREQUISITE: consent of instructor.

232. Pro-Seminar in Music Performance (1-4)
Individual or master class instruction in advanced instrumental/vocal performance. PREREQUISITE: consent of instructor through audition.

234. Symphonic Orchestra (4)
Repertoire is drawn from the classic symphonic literature of the eighteenth, nineteenth, and twentieth centuries with a strong emphasis on recently composed and new music. Distinguished soloists, as well as The La Jolla Symphony Chorus, frequently appear with the orchestra. The La Jolla Symphony Orchestra performs two full-length programs each quarter, each program being performed twice. May be repeated six times for credit. PREREQUISITE: audition required.

245. Focus on Electronic Music (4)
Theoretical bases for analyzing musical sound. Approaches to perception and cognition, including psychoacoustics and information processing, both ecological and computational. Models of audition including Helmholz’s consonance/dissonance theory and Bregman’s streaming model. Musical cognition theories of Lerdahl and Narmour. Neural network models of music perception and cognition. Models of rhythm. The problem of timbre and timbre perception. PREREQUISITE: consent of instructor.

246. Focus on Composition (4)
Advanced topics in music technology and its application to composition and/or performance. Offerings vary according to faculty availability and interest. May be repeated for credit. PREREQUISITES: Music 173 or equivalent and consent of instructor.

270A. Digital Audio Processing (4)

270B. Musical Cognitive Science (4)
Theoretical bases for analyzing musical sound. Approaches to perception and cognition, including psychoacoustics and information processing, both ecological and computational. Models of audition including Helmholz’s consonance/dissonance theory and Bregman’s streaming model. Musical cognition theories of Lerdahl and Narmour. Neural network models of music perception and cognition. Models of rhythm. The problem of timbre and timbre perception. PREREQUISITE: consent of instructor.

270C. Compositional Algorithms (4)

270D. Advanced Projects in Computer Music (4)
Meetings on group basis with computer music faculty in support of individual student research projects. PREREQUISITE: consent of instructor and completion of Music 270A-B-C.

271A. Survey of Electronic Music Techniques I (4)
A hands-on encounter with several important works from the classic electronic repertory, showing a representative subset of the electronic techniques available to musicians. Students who have taken MUS 271 for credit may not take MUS 271A for credit. PREREQUISITE: graduate standing in music.

271B. Survey of Electronic Music Techniques II (4)
A continuation of 271A, with emphasis on live interactive techniques (e.g., audio processing: analysis/resynthesis; score following). PREREQUISITES: Music 271A and graduate standing in music.

271C. Survey of Electronic Music Techniques III (4)
A continuation of 271A and B, with emphasis on compositional techniques (e.g., computer-aided composition; production; spatialization). PREREQUISITES: Music 271B and graduate standing in music.

DIRECTOR, NEUROSCIENCES GRADUATE PROGRAM
Anirvan Ghosh, Ph.D., Biology

PROFESSORS
Henry Abarbanel, Ph.D., Physics
Thomas Albright, Ph.D., Adjunct/Psychology and Neurosciences
Ursula Bellugi, Ed.D., Adjunct/Psychology
Darwin K. Berg, Ph.D., Biology-Neurobiology Section
Karen Britton, M.D., Ph.D., In-Residence/Psychiatry
Joan Heller Brown, Ph.D., Pharmacology
Nigel Calcutt, Ph.D., Pathology
Edward M. Callaway, Ph.D., Adjunct/Neurosciences and Biology
Gert Cauwenberghs, Ph.D., Biology
Andrew Chisolm, Ph.D., Biology
Senyon Choe, Ph.D., Chemistry and Biochemistry/Biological Sciences

Jerald Chun, M.D., Ph.D., Adjunct/Pharmacology
Robert Clark, Ph.D., In-Residence/Psychiatry
Don Cleveland, Ph.D., Medicine/Neurosciences
Eric Courchesne, Ph.D., Neurosciences
Anders M. Dale, Ph.D., Neurosciences
Karen Dobbins, Ph.D., Psychology
Jeffrey L. Elman, Ph.D., Cognitive Science
Mark H. Ellisman, Ph.D., Neurosciences
Edmund J. Fantino, Ph.D., Psychology
Fred H. Gage, Ph.D., Adjunct/Neurosciences and Biology
Douglas R. Galasko, M.D., In-Residence/Neurosciences
Mark A. Geyer, Ph.D., In-Residence/Psychiatry and Adjunct/Neurosciences
Lawrence S.B. Goldstein, Ph.D., Cellular and Molecular Medicine
Michael Gorman, Ph.D., Psychology
Philip M. Groves, Ph.D., Emeritus, Psychiatry and Neurosciences
Richard H. Haas, M.D., Neurosciences and Pediatrics
Eric Halgren, Ph.D., Radiology
Shelley Halpain, Ph.D., Biology
Richard L. Hauger, M.D., In-Residence/Psychiatry
Stephen F. Heinemann, Ph.D., Adjunct/Neurosciences
Steven A. Hillyard, Ph.D., Neurosciences and Adjunct/Psychology
Vivian Y.H. Hook, Ph.D., Pharmacology
Paul A. Insel, M.D., Pharmacology and Medicine
Vincette J. Iragui-Madrazo, M.D., Ph.D., Clinical Neurosciences
Dilip J. Jeste, M.D., In-Residence and Psychiatry and Adjunct/Neurosciences
Yishi Jin, Ph.D., Biology
Michael W. Kalichman, Ph.D., Adjunct/Pathology
Harvey J. Karten, M.D., Neurosciences and Psychiatry
John Kelsoe, M.D., Psychiatry
Christopher Kintner, Ph.D., Adjunct/Biology
David Kleinfeld, Ph.D., Physics
Edward Koo, M.D., Neurosciences
George F. Koob, Ph.D., Adjunct/Psychology and Psychiatry
William B. Kristan, Ph.D., Biology and Adjunct/Neurosciences
Ronald Kuczenski, Ph.D., In-Residence/Psychiatry and Adjunct/Neurosciences
Marta Kutas, Ph.D., Cognitive Science and Adjunct/Neurosciences
Kuo-Fen Lee, Ph.D., Adjunct/Biology
Greg Lemke, Ph.D., Adjunct/Neurosciences
Stuart A. Lipton, M.D., Ph.D., Adjunct/Neurosciences
John Liu, Ph.D., Adjunct/Ophthalmology
Patrick D. Lyden, M.D., In-Residence/Neurosciences
Eduardo Macagno, Ph.D., Biology
Roberto Malinow, Ph.D., Professor/Neurosciences
Athina Markou, Ph.D., In-Residence/Psychiatry
Maryann Martone, Ph.D., In-Residence/Neurosciences
Eliezer Masliah, M.D., Neurosciences and Pathology
Pamela Mellon, Ph.D., Neurosciences and Reproductive Medicine
Arnold L. Miller, Ph.D., Emeritus/Neurosciences-Neurobiology Section
Ulrich Mueller, Ph.D., Adjunct/Neurosciences
Robert R. Myers, Ph.D., Emeritus/Anesthesiology and Pathology
R. Glenn Northcutt, Ph.D., Neurosciences
Daniel T. O’Connor, M.D., In-Residence/Medicine
Dennis O’Leary, Ph.D., Adjunct/Neurosciences and Biology
Martin Paulus, M.D., In-Residence/Psychiatry
Samuel Pfaff, Ph.D., Adjunct/Neurobiology
John Polich, Ph.D., Adjunct/Neuropharmacology
Henry C. Powell, M.D., D.Sc., Pathology
Morton Printz, Ph.D., Pharmacology
Vilayanur S. Ramachandran, M.D., Psychology
Barbara Ranscht, Ph.D., Adjunct/Neurosciences
David H. Rapoport, Ph.D., Surgery
Michael G. Rosenfeld, M.D., Medicine
Allen F. Ryan, Ph.D., Surgery and Adjunct/Neurosciences
David P. Salmon, Ph.D., In-Residence/Neurosciences
Massimo Scanziani, Ph.D., Neurobiology
Nicholas Schork, Ph.D., Adjunct/Psychiatry
Gary Schulteis, Ph.D., In-Residence/Anesthesiology
Terrence J. Sejnowski, Ph.D., Biology-Neurobiology Section and Adjunct/Neurosciences, Cognitive Science, Computer Science and Engineering, and Physics
Linda Sorkin, Ph.D., Anesthesiology
Nicholas C. Spitzer, Ph.D., Biology-Neurobiology Section
Larry R. Squire, Ph.D., Psychiatry, Neurosciences
Charles Stevens, M.D., Ph.D., Adjunct/Pharmacology
Neal Swerdlov, M.D., Ph.D., Psychiatry
Palmer W. Taylor, Ph.D., Pharmacology
Robert D. Terry, M.D., Emeritus/Neurosciences and Pathology
Doris A. Trauner, M.D., Neurosciences and Pediatrics
Roger Tsien, Ph.D., Pharmacology, Chemistry and Biochemistry
Eric Turner, M.D., Ph.D., In-Residence/Psychiatry
Mark Tuszyński, M.D., Ph.D., Neurosciences
Wylie Vale, Ph.D., Adjunct/Biology and Medicine
Ajit Variki, M.D., Medicine
Mark C. Whitehead, Ph.D., Surgery
David Williams, Ph.D., Adjunct/Pharmacology and Neurosciences
Anthony Wynshaw-Boris, M.D., Ph.D., Pediatrics and Medicine
Tony Yakshe, Ph.D., Anesthesiology and Pharmacology
Justin Zivin, M.D., Ph.D., Neurosciences
Charles Zuker, Ph.D., Biology-Neurobiology Section and Neurosciences

ASSOCIATE PROFESSORS
Armin Blesch, Ph.D., Adjunct/Neurosciences
Wendy Campana, Ph.D., Anesthesiology
Andrea Chiba, Ph.D., Cognitive Science
E.J. Chichilnisky, Ph.D., Adjunct/Neurosciences
Sascha du Lac, Ph.D., Adjunct/Neurosciences

Yimin Zou, Ph.D., Biology

272. Seminar in Live Computer Music (4)
Group projects to create new pieces of live electronic music involving research in electronic music and/or instrumental techniques. May be repeated for credit. PREREQUISITES: Music 271A-B-C or consent of instructor and graduate standing in music.

291. Problems and Methods of Music Research and Performance (2)
The course will give practical experience in historical research, including use of important source materials, evaluation of editions, and examination of performance practice problems. (S/U grade option only.)

296. Directed Group Research in Performance (4)
This group research seminar involves the investigation and exploration of new and experimental performance concerns. May be repeated for credit. (S/U grades permitted.) PREREQUISITES: graduate standing. (S/U grade option only.)

298. Directed Research (1-4)
Individual research. (S/U grades permitted.) May be repeated for credit. Enrollment by consent of instructor only.

299. Advanced Research Projects and Independent Study (1-12)
Individual research projects relevant to the student’s selected area of graduate interest conducted in continuing partnership with a faculty advisor in preparation of the master's thesis or doctoral dissertation. PREREQUISITES: graduate standing in music; others by written consent of instructor and department stamp. (S/U grades permitted.)

500. Apprentice Teaching (1-4)
Participation in the undergraduate teaching program is required of all graduate students at the equivalent of 25 percent time for three quarters (six units is required for all graduate students). PREREQUISITES: graduate standing in music; others by written consent of instructor and department stamp. (S/U grade option only.)

501. Apprentice Teaching—Nondepartmental (4)
Consideration and development of pedagogical methods appropriate to undergraduate teaching. PREREQUISITES: graduate standing and consent of instructor. (S/U grade option only.)
Students in this specialization will be required to fulfill all of the academic requirements of students in the Neurosciences Graduate Program. In addition to these requirements, students in the Computational Neuroscience specialization must successfully complete a set of three core computational courses, an advanced laboratory, and computational neuroscience journal clubs.

Required courses include:

**Core Courses:**
- Neurosci. 200A-B-C
- Neurosci. 225
- Neurosci. 241
- Neurosci. 257
- Neurosci. 276

**Computational Neuroscience Specialization Courses:**
- BGNN 246A-B
- BGNN 260
- BGNN 266
- Cog. Sci. 260
- Physics 271

**Course Work**

By the time of the minor proposition (see below), students are expected to demonstrate competence in the basics of neuroscience by taking five quarters of mandatory course work—three quarters of Basic Neuroscience (Neurosci. 200 A-B-C), and one quarter each of Neuroanatomy Lab (Neurosci. 257) and Statistical Methods and Experimental Design (Neurosci. 225). In addition, students choose among various core elective courses, such as Molecular and Cellular Neuroendocrinology (Neurosci. 222), Neurpsychopharmacology (Neurosci. 277), Molecular and Cellular Neurobioloy (Neurosci. 268), Developmental Neuroscience (Neurosci. 263) and approved courses from other graduate departments. Students are also permitted to substitute previous courses that are similar to the Neurosciences core courses. Such a substitution would require approval of the chair of the Curriculum Committee or the director of the Graduate Program.

**Minor Proposition**

The purpose of this examination is to test the student’s ability to choose a problem in the neurosciences and propose an experimental approach to its solution. The problem should be broad, requiring experimental approaches from more than one discipline. The problem should be outside the area of the student’s anticipated dissertation research. Students will be required to demonstrate a working knowledge of the disciplines involved in the minor proposition.

Oral defense of the minor proposition will be required at the end of the winter quarter of the second year of study.

**Dissertation**

During the second year, students are expected to propose and initiate work on a dissertation problem under the guidance of a faculty preceptor. The neurosciences group at UCSD currently conducts animal research and clinical studies in the fields of neuroanatomy, neurochemistry, neuropharmacology, neurophysiology, comparative neurology, physiology of excitable membranes, synaptic transmission, neuronal integration and coding, nervous system tissue culture, neuroimmunology, brain function, sensory physiology, motor mechanism, and systems analysis as applied to neurological problems.

**Qualifying Examination**

This examination, a university requirement, focuses on the proposed research that the student will undertake for his or her dissertation. This examination is conducted by the approved doctoral committee.

**Dissertation Examination**

The required formality listed in the Instruction for Preparation and Submission of Doctoral Dissertations issued by the Office of Graduate Studies and Research to students should be followed closely. The final examination includes both a public presentation followed by a closed defense of the dissertation with members of the Committee.

**Teaching**

All students are required to perform as a teaching assistant for at least one quarter during their graduate career. To this end, opportunities to lecture and assist in laboratory exercises and demonstrations are available through a number of departments, including neurosciences, biology, and cognitive science.

**Ph.D. Time Limit Policies**

Students must advance to candidacy by the end of four years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

**Courses**

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

**Undergraduate**

199. Independent Research (2 or 4)

Laboratory research under the supervision of individual members of the faculty of the neurosciences department in one or a combination of neurosciences disciplines, e.g., neuroanatomy, neurophysiology, neurochemistry, neuropharmacology. (P/NP grades only.) (F,W,S)

**Graduate**

200A–B–C. Basic Neuroscience (4–4–4)

These courses are designed for graduate students in the neurosciences and other departments that are part of the interdisciplinary program (i.e., Biology, Cog. Sci.). These courses have been designed to cover as much basic neuroscience as possible in three quarters of study. It will combine two three-hour meetings each week with a 1.5 hour lecture and a 1.5 hour discussion of papers. These will be required courses for all first-year neurosciences graduate students. Biology will cross-list courses under Biology headings, making it a requirement of first-year Biology graduate students. **Prerequisite:** graduate student or consent of instructor. (F,W,S)
220. Neurology Boot Camp (4)
For incoming doctoral students in Neurobiology, Computational Neurobiology, and Neurosciences. During the first two weeks in September, students commit to 10–15 hours per day in lectures and laboratories in electrophysiology, cellular anatomy, molecular biology, optical imaging, and computational neurobiology. Students also attend weekly seminars during fall quarter. PREREQUISITES: graduate standing only for students in the following major codes: BI77, BI79, NE75.

221. Advanced Topics in Neurosciences (2)
Specialized advanced topic areas in neurosciences will be addressed in an interactive seminar course format. A different specific topic will be considered each quarter as announced in advance. Students will each present an aspect of the topic area and participate in discussions. PREREQUISITES: graduate student or consent of instructor. (F,W,S)

222. Molecular and Cellular Neuroendocrinology (4)
This course will examine the role of the CNS in controlling reproductive functions, stress, growth and behavior, with emphasis on the cellular and molecular mechanisms of neuroendocrine function. The lectures will be given by experts on each of the topic subjects. Lectures will include a basic introduction on the topic followed by a description of the current research in the area.

225. Statistical Methods and Experimental Design (2)
This is a problem-based course designed to emphasize the relationships between experimental design, statistical methods, and biomedical research. The assumptions behind the statistical tests, their appropriate use, and examples of misuse will be discussed. PREREQUISITES: registered student in SOM graduate program or approval of instructor.

241. Ethics and Survival Skills in Academia (3)
This course will cover “ethical” issues in academia, including dishonesty, plagiarism, attribution, sexual misconduct, etc. We will also discuss “survival” issues, including job hunting, grant preparation, journal reviews, writing letters of recommendation, mentoring, etc. (W)

243. Physiological Basis of Human Information (2)
Psychological processes including attention, perception, and memory will be studied in connection with event-related potentials of the human brain. The interrelations among psychological and physiological events will be explored in order to arrive at unified concepts of human information processing. PREREQUISITES: Neurosci. 238 or Phys. 231, and consent of instructor. (S/U grades only) (F)

259. Workshop in Electron Microscopy (4)
This course is to introduce graduate students in the neurosciences to research methods used in electron microscopy (EM) through one hour of formal lecture, one hour of seminar, three hours of demonstration, and three hours of supervised laboratory work per week. Students will become familiar with sectioning EM, scanning EM, and freeze-fracture EM. PREREQUISITES: graduate student standing in neurosciences doctoral program and consent of instructor. Enrollment limited. (S/U grades only) (S)

263. Developmental Neuroscience (3)
A graduate reading course that highlights selected topics in the molecular study of neural development.

266. Development of Neural Circuits (4)
Course focuses on developmental processes during formation of neural circuits. Molecular, genetic, cellular mechanisms controlling neurogenesis, neuronal differentiation, positioning (migration), axon/dendrite patterning, and synapse formation will be discussed. Role of neural activity shaping circuit formation will be explored. PREREQUISITES: graduate standing only. For students in the following major codes: NE75, BI77, BI79, or consent of instructor. PREREQUISITE: graduate standing only. For students in the following major codes: NE75, BI77, BI79, or consent of instructor.

268. Molecular and Cellular Neurobiology (4)
Molecular and cellular approaches to the study of the nervous system are advancing neurobiology at an increasingly rapid pace. This graduate-level course will address the latest molecular advances in the areas of: 1) synapse formation, neurotransmitter release, and neurotransmitter receptors; 2) nerve growth factors, their receptors, and neuronal apoptosis; 3) transcriptional regulation in the brain and peripheral nervous system; 4) cell culture, transgenic, and knock-out mouse model systems; 5) the molecular bases of genetic, psychiatric, and degenerative diseases of the nervous system; and 6) the current molecular knowledge of vision, sensorimotor preparation, circadian rhythms, learning, memory, and behavior.

276. Neurosciences Research Rounds (1)
Neurosciences group faculty members and graduate students will present and discuss ongoing research. Attendance will be mandatory for first- and second-year graduate students. Faculty, advanced graduate students, medical students, postdoctoral trainees, and other interested parties are encouraged to attend. (F,W,S)

277. Neuropsychopharmacology (4)
An examination of the molecular and biochemical bases of drug and transmitter action. The course is devoted to receptor mechanisms, neuropharmacology, and drug action on excitable tissues. PREREQUISITE: graduate standing. (S)

285. Clinical Trails: Issues and Dilemmas in Clinical Trials (1)
This course provides a methodological perspective on clinical trials. Topics will include ethics, design of Phase I–IV trials, randomization/blinding, bias, and sample-size power. Lectures will also cover “application” with eminent UCSD trialists describing conduct, design, and statistical issues of specific studies. PREREQUISITES: medical or graduate student standing.

296. Neurosciences Research Rotation (1-12)
Independent study. (S/U grades only) (F,W,S)

298. Neurosciences Independent Study Project (ISP) (1-12)
PREREQUISITE: approved ISP proposal. (F,W,S)

299. Neurosciences Research (1-12)
Independent study. (S/U grades only) (F,W,S)

401. Neurology General Clinical Selective Clerkship (7)
Provides opportunities for practical application of neurological skills to the understanding and treatment of a variety of clinical disorders of the nervous system. PREREQUISITE: successful completion of first two years of medical school. (F,W,S)

426. Subinertial Pediatric Neurology (7)
Subinertial Pediatric Neurology (7) Subinertials are responsible for the primary care of hospitalized pediatric neurology patients under direct resident and attending physician supervision. Students will perform procedures such as lumbar puncture and participate in night call, daily teaching rounds, neurology Grand Rounds, and Journal Clubs. PREREQUISITE: Neurology 401 or consent of instructor. (F,W,S)

427. Neurology Outpatient (7)
The student will rotate through the general and subspecialty (stroke, epilepsy, headache, nerve, and muscle) neurology clinics based at UCSD Medical Center, Perlman, VAMC, and Children's Hospital. There are lectures and clinical conferences. PREREQUISITE: Neurosciences 401或 equivalent. (F,W,S)

496. Clinical Independent Study (1-21)
Independent clinical study for medical students (S/U grades only) (F,W,S)

500. Apprenticeship Teaching (1-4)
Participation in the department teaching program is required of all students working toward a Ph.D. degree. In general, students are not expected to teach in the first year, but are required to serve as teaching assistants or tutors for one quarter at any time during their four years of training. The amount of teaching required is equivalent to the duties expected of a 50 percent assistant for one quarter. PREREQUISITE: neurosciences graduate students. (S/U grades only) (F,W,S)

Dana Nelkin, Ph.D., Undergraduate Faculty Advisor

ASSISTANT PROFESSORS
Monte Johnson, Ph.D.
Clinton Tolley, Ph.D.
Christian Wüthrich, Ph.D.

PROFESSORS EMERITI
Henry E. Allison, Ph.D., Research Professor (not in residence)
Edward N. Lee, Ph.D., Professor Emeritus
Frederick A. Olafson, Ph.D., Professor Emeritus
Avrum Stroll, Ph.D., Research Professor

INTRODUCTION TO THE DEPARTMENT

Philosophy addresses some of the most basic questions humans ask about the world. Some questions are very broad, such as how can minds know about the external world, themselves, and other minds? How can we arrive at reasonable answers to ethical questions about right and wrong? What distinguishes science from other kinds of knowledge and are there limits to science? What is the role of moral choice and values in human life? Do standards of truth and logic apply in areas such as religion, art, politics, and law? Philosophy also seeks answers to particular problems in specific areas of science, medicine, law, ethics, and technology. For example, it explores the ways that modern physics impacts our notions of space, time, causation, and nature itself. It considers the ways that neuroscience and genetics impact the traditional ideas about free will and responsibility. It debates the limits of democratic governments.

http://philosophy.ucsd.edu
in regulating individuals’ conduct. It wrestles with problems about the right to die and the varied responsibilities of medical professionals. It inquires into the relation between science and religion. Related issues concern privacy, the limits of private property, and who should have access to what information.

**CAREER GUIDANCE**

Philosophy is a broad field with diverse subfields. Some students may want to pursue a general course of study for the major, sampling courses across several of these distinct subfields. This strategy develops a solid foundation for graduate work in philosophy and for any career that requires breadth of knowledge, intellectual flexibility, as well as communicative and analytic skills.

Other students may wish to pursue a more specialized program of studies. Below are descriptions of several areas of emphasis within philosophy. These illustrate the possibilities of developing your own coherent and focused set of courses that fulfill the requirements for the major in ways that are tailored to your specific intellectual and career interests. Philosophy is preparation for a wide range of careers—including science, law, medicine, teaching, business, and public policy.

Choosing a philosophy major is an excellent way to follow a disciplined and rigorous course of study that joins the breadth of a traditional college education with specialization in a chosen area.

---

**UNDERGRADUATE PROGRAM—MAJOR**

The Department of Philosophy offers the degree of bachelor of arts (B.A.) in philosophy for the undergraduate major. A major in philosophy requires a total of fifteen philosophy courses, at least twelve of which must be upper-division (courses numbered 100 and above). Up to two upper-division courses outside of philosophy can count among the twelve required for the major if they are drawn from a related field and contribute to the major’s philosophical program; such credit must be approved by the undergraduate advisor. Honors and directed study courses (Philosophy 191–199) may not be used to satisfy the major requirement of fifteen philosophy courses. Major requirements may be met by examination.

There is no required introduction to philosophy or the major. The department offers a variety of lower-division courses and sequences (numbered 1–99), any of which could be a suitable introduction to philosophy. The only required lower-division course for majors is Philosophy 10, Introduction to Logic. At the upper-division level, majors are encouraged to take courses in the central areas of philosophical study:

- Metaphysics and Epistemology
- Law, Ethics, and Politics
- Philosophy of Science and Logic
- History of Philosophy

Though many upper-division courses have no prerequisite, any combination of three lower-division courses would provide a good foundation for taking most upper-division courses.

**CORE REQUIREMENTS FOR THE MAJOR**

1. History of Philosophy. Majors must complete three courses in the history of philosophy. At least one course must be in ancient philosophy (courses 31, 100–102) and one course must be in modern philosophy (courses 32–33 and 104–107). This requirement can be met by taking the lower-division sequence 31, 32, 33 or by taking any suitable combination of courses from the sequences 31–33 and 100–109.

2. Logic. Philosophy 10 and Philosophy 120 are required of all majors. Because Philosophy 120 is a prerequisite for a variety of upper-division courses, prospective majors are strongly encouraged to take Philosophy 10 and Philosophy 120 as early as possible.

3. Moral and Political Philosophy. Majors must take at least one upper-division course in moral or political philosophy from among Philosophy 160, 161, 166, or 167.

4. Metaphysics and Epistemology. Majors must take at least one upper-division course in traditional areas of analytic philosophy—metaphysics, epistemology, philosophy of language, and philosophy of mind—from among Philosophy 130, 132, 134, or 136.

**OPTIONAL AREAS OF EMPHASIS IN THE MAJOR**

The Department of Philosophy offers four optional areas of emphasis within the major, as described below. Students selecting an optional area of emphasis for the major must take and pass five of the courses listed under that area. Courses taken to complete an area of emphasis are counted toward the fifteen courses required for the major. Particular courses may be applied both to the completion of the area of emphasis and in fulfillment of a core requirement for the major. Students should be aware, as they plan their course of study, that only some of the courses listed for an area of emphasis will be taught in any given year.

The department encourages students considering a philosophy major to consult with the philosophy undergraduate coordinator and the philosophy faculty undergraduate advisor to plan a program of study that is suitable to their particular interests and needs. The department Web site http://philosophy.ucsd.edu provides additional information about courses falling within each area of emphasis. Areas of emphasis are not noted on transcripts or diplomas. The optional areas of emphasis are

1. Law, Ethics, and Society
   - This area targets the nature and source of our moral rights and obligations, the authority of the state and law, the basis of value and goodness. Several courses in this area target ethical issues in medicine, the environment, technological change, economic inequality, and matters concerning race, gender, class, ethnicity, and nationality. In this area, students will learn how

2. Science, Technology, and Medicine
   - This emphasis focuses on the insights and challenges presented by science. Modern science and technologies affect our view of ourselves and of nature, introducing novel promises and problems. For instance, how do we balance technical, economic, environmental, and ethical values in making decisions concerning which technologies or drugs to develop? Modern science has also changed our understanding of nature. Quantum physics, the genetic revolution, and neuroscience (to name a few) present problems and have important implications for human life. Finally, there are questions about science itself. What are the methods of modern science? Do they vary from one science to another? Can the sciences be value free?

   This area will appeal especially to those students interested in pursuing careers in philosophy, science, clinical medicine, medical research, the social sciences, science journalism, and public policy.

   - Philosophy of Logic
   - Philosophy of Science
   - Philosophy of Physics
   - Philosophy of Biology
   - Philosophy and the Environment
   - Philosophy of Psychology
   - Philosophy of Cognitive Sciences
   - Philosophy of Neuroscience
   - Philosophy of Social Science
   - Philosophy of History
   - Biomedical Ethics
   - Technology and Human Values

3. Mind, Brain, and Cognitive Sciences
   - Traditional epistemology (the theory of how and what we know) and philosophy of mind (the theory of that-which-perceives-and-thinks) have recently been joined by several scientific disciplines in a collective search for illuminating theories. Psychology, cognitive neurobiology, computer science, and sociology have all made explosive contributions to a tradition as old as Plato and Aristotle. For example, our growing understanding of the biological brain has given new life to our traditional attempts to understand the
nature of the mind. New accounts of the various mechanisms of cognition—both at the cellular and the social levels—have provided entirely new perspectives on the nature of consciousness, the self, knowledge and free will, and on the nature of science itself.

This area is excellent preparation for careers in cognitive science, neuroscience, artificial intelligence, science journalism, and philosophy.

132. Epistemology
134. Philosophy of Language
136. Philosophy of Mind
145. Philosophy of Science
147. Philosophy of Biology
149. Philosophy of Psychology
150. Philosophy of Cognitive Sciences
151. Philosophy of Neuroscience
180. Phenomenology

4. Historical Perspectives on Philosophy, Science, and Religion

Throughout its history, philosophy has developed in a complex relationship with the natural sciences and religion. Philosophical ideas have both contributed to and challenged our understanding of nature and God, and developments in the sciences and religion have posed new challenges for philosophical thinking. The historical perspectives emphasis focuses on the fertile interplay between philosophy, science, and religion in several key periods: ancient Greece, the Scientific Revolution, and Enlightenment and post-Enlightenment Europe. The aim is not simply to document the history of philosophical ideas, but to use this history as a way of better understanding contemporary debates about the basic questions of human life.

This area prepares students for postgraduate work in philosophy, and for any career that requires breadth of knowledge, intellectual flexibility, as well as communicative and analytical skills.

100. Plato
101. Aristotle
102. Hellenistic Philosophy
104. The Rationalists
105. The Empiricists
106. Kant
107. Hegel
108. Nineteenth-Century Philosophy
109. History of Analytic Philosophy
161. Topics in the History of Ethics
166. Classics in Political Philosophy
180. Phenomenology
181. Existentialism
183. Topics in Continental Philosophy

GRADUATE PROGRAM

The department offers programs leading to the M.A. and Ph.D. It is the intention of the graduate program to enable the student to obtain an understanding of diverse traditions and to develop as a philosopher in his or her own right. To this end, the department offers courses and seminars in the history of philosophy and in traditional and contemporary philosophical issues, from a variety of perspectives.

HONORS PROGRAM

The philosophy department offers an honors program for outstanding students in the major. Majors who have a 3.7 GPA in philosophy (3.25 overall) at the end of their junior year and who have taken at least four upper-division philosophy courses are eligible to apply. Interested students must consult with a faculty sponsor by the last day of classes during the spring term of their junior year. Admission to the honors program requires nomination by a faculty sponsor and approval of the undergraduate advisor. Nominating Petitions can be obtained from the philosophy department.

In addition to the usual major requirements, an honors student is required to complete a senior honors thesis by the end of winter quarter. During the fall and winter quarters, the student will be registered for Philosophy 191A and 191B and will be engaged in thesis research that will be supervised and evaluated by the student’s faculty sponsor. A departmental committee will read and assess the completed thesis and determine if philosophy honors are to be awarded. Honors students are expected to maintain an average of 3.7 or better for all work taken in the program. (Qualified students wishing to participate in the honors program according to a different timetable than the one described above can apply to do so by petitioning the undergraduate advisor.)

TRANSFER CREDIT

Courses taken at other institutions may be applied toward the major by petition only. Petitions should be submitted to the Department of Philosophy main office, and must be accompanied by supporting materials (transcripts, syllabi, course work, etc.). Students are required to submit one petition per transfer course.

For specific regulations regarding transfer credit for Philosophy 10 (Introduction to Logic), please see the information on the department Web site: http://philosophy.ucsd.edu.

It is important to note that seven of the twelve upper-division courses in the major must be taken in the Department of Philosophy at UCSD.

Note: All courses applied toward major must be taken for a letter grade.

UNDERGRADUATE PROGRAM—MINOR

The Department of Philosophy offers a minor in philosophy. As with the major, the minor is an attractive option for a wide range of career paths, including medicine, law, research in the natural and social sciences, journalism, education, and government. A minor requires a total of seven philosophy courses, at least five of which must be upper division. If choosing an area of emphasis, at least four upper-division courses must be from the chosen area of emphasis. All courses must be taken for a letter grade, C– or better.

ADVISING OFFICE

Students who desire additional information concerning our course offerings or program may contact individual faculty or the assistant director of the undergraduate program through the department main office at 7002 H&SS, (858) 534-3070.

DOCTORAL DEGREE PROGRAM

COURSE WORK

During the first two years of residence the student’s work will normally total thirty-six units (nine courses) per year. At least twelve of these units in each year must be graduate philosophy seminars (those numbered 201–285). The balance may be made up from additional graduate courses in philosophy, upper-division courses in philosophy (those numbered 100–199), approved upper-division or graduate courses in related departments, and, if the student is a teaching assistant, Philosophy 500 (Apprentice Teaching).

After consultation with the graduate advisor, each entering student shall be assigned a faculty advisor. Students are encouraged to meet with their faculty advisor periodically to plan their course of study during their first two years and must meet once a year in the spring to review progress in the program.

LOGIC REQUIREMENT

During the first term of residence, all entering graduate students will take an examination designed to demonstrate their level of proficiency in formal logic. The examination covers the predicate calculus, up to and including functions, relations, and identity. Students who pass the examination with a grade of B+ or better have satisfied the first component of...
the logic requirement. Students who do not score a B+ or better must take Philosophy 120 (Symbolic Logic) during the first year of study and achieve a grade of B+ or better. By the end of the sixth term of residence, all students must also pass an advanced logic course (Philosophy 121, 122, 221, or another logic class approved by the graduate advisor) with at least a grade of B+.

**PROSEMINAR**

In fall quarter of their first year of residence, graduate students shall take a proseminar designed to introduce them to philosophical methods and improve their skills at writing and analysis. Enrollment in the proseminar is limited to first-year students. The proseminar is normally team-taught. The topics to be covered will address some central area of areas of philosophy and will vary from year to year. The proseminar is a regular four-unit seminar and as such may be counted toward satisfaction of the distribution requirement.

**CORE COURSES**

In the following areas, the department shall offer “core” or advanced introductory seminars: philosophy of mind, philosophy of language, philosophy of science, the history of philosophy, epistemology, metaphysics, and ethics. The department shall offer at least three of these courses in each academic year. Students must take two of these core courses by the end of their sixth quarter of residence. Courses taken to satisfy this requirement may be applied toward the distribution requirement. A core course provides a point of entry into a field that is suitable for graduate students with no prior work in this area of philosophy as well as students with some background knowledge. A core course need not be and normally should not be a general survey of the field, but will take up some central topic. A core course will normally offer students the option of writing shorter papers rather than one long seminar paper; as an alternative, a final examination may be offered.

**DISTRIBUTION REQUIREMENTS**

By the end of the seventh quarter of residence, a student must have completed ten graduate seminars in philosophy with a grade of B+ or better. The seminars must be distributed as follows:

1. Four seminars in the history of philosophy. At least one of these courses must be in ancient philosophy; at least one must be in modern philosophy.
2. Six seminars in the four areas listed below. Students must take at least one seminar in every area and two seminars in any two of the areas.
   a. Philosophy of science and philosophy of logic
   b. Philosophy of mind and philosophy of language
   c. Ethics and political philosophy
   d. Metaphysics and epistemology

Courses used to satisfy a requirement in one category cannot be used to satisfy a requirement in another category. The determination as to what category or categories a particular seminar taught in a given quarter may count toward is normally made by the seminar instructor. The proseminar and courses used to satisfy the core course requirement may be counted toward fulfillment of the distribution requirement. At the end of the fifth quarter of residence, a student must have completed eight of the required seminars. In order to remain in the program, a student must have attained an average of B+ or better in all philosophy seminars completed by this point.

**PHILOSOPHY WRITING WORKSHOP**

In fall term of their third year of study, graduate students shall enroll in the Philosophy Writing Workshop, a one- to three-unit course depending on the expected enrollment. This course is graded on a Satisfactory/Unsatisfactory basis. In this workshop each student shall produce a polished original philosophical essay (this may be based on a paper written for a seminar), criticize the essays produced by other workshop participants, and present the essay as a talk to an audience of workshop participants, the faculty instructor, and other interested graduate students and faculty.

**INDEPENDENT STUDY COURSES**

Philosophy 290 (Directed Independent Study) is appropriate for a graduate student still in the process of fulfilling course requirements for the degree.

Philosophy 295 (Research Topics) is an appropriate course for a student in the process of coming up with a dissertation prospectus.

Philosophy 299 (Thesis Research) is appropriate for a student working on his or her dissertation.

**LANGUAGE REQUIREMENT**

Before advancing to candidacy, all students must demonstrate reading proficiency in one of the following languages:

- German
- French
- Latin
- Classical Greek

If a student’s chosen dissertation topic requires competence in a second language from the above list, then the student’s dissertation advisor can require a suitable demonstration of competence. In special circumstances students may be permitted to substitute a different language or a special competency (such as advanced work in mathematics or in one of the sciences) if educationally compelling reasons can be given for doing so. These exceptions will be decided on a case-by-case basis. The language requirement must be met before the student can be advanced to candidacy.

**THIRD-YEAR ADVISING**

At the end of the student’s sixth quarter of study, the department appoints a three-member faculty committee for that student. The composition of the committee will reflect the student’s preferences and the area of philosophy in which the student is inclined to do dissertation work. The committee’s task is to help the student to develop a sound dissertation project and advance to candidacy in a timely manner. There is no expectation that the members of this third-year committee necessarily will serve on the dissertation committee.

**DISSERTATION PROSPECTUS AND ORAL CANDIDACY EXAM**

Some time after completing the distribution requirements, the student must submit a dissertation prospectus to his or her doctoral committee. The committee will then orally examine the student on the intended subject and plan of research. The examination will seek to establish that the thesis proposed is a satisfactory subject of research and that the student has the preparation and the abilities necessary to complete that research. This oral qualifying exam must be passed before the end of the twelfth quarter of residence. Students who are passed and have met the other requirements will be advanced to candidacy for the Ph.D.

**TEACHING REQUIREMENTS**

Participation in undergraduate teaching is one of the requirements for a Ph.D. in philosophy. The student is required to serve as a teaching assistant for the equivalent of one-quarter time for three academic quarters. The duties of a teaching assistant normally entail grading papers and examinations, conducting discussion sections, and related activities, including attendance at lectures in the course for which he or she is assisting.

**DOCTORAL DISSERTATION**

Under the supervision of a doctoral committee, each candidate will write a dissertation demonstrating a capacity to engage in original and independent research. The candidate will defend the thesis in an oral examination by the doctoral committee. (See “Graduate Studies: The Doctor of Philosophy Degree.”)

**APPLICATION REQUEST**

For information regarding the graduate program call (858) 534-6809 or write to University of California, San Diego Graduate advisor, Philosophy 9500 Gilman Drive # 0119 La Jolla, CA 92093-0119 E-mail: casmann@ucsd.edu

**INTERDISCIPLINARY DEGREE PROGRAMS**

The philosophy department at UCSD participates in two interdisciplinary programs, the requirements for which are outlined below.

**INTERDISCIPLINARY DEGREE PROGRAM IN COGNITIVE SCIENCE**

The Interdisciplinary Ph.D. Program in Cognitive Science includes faculty from a number of UCSD departments including anthropology, biology and neurobiology, cognitive science, communication, computer science and engineering, linguistics, music, neurosciences, philosophy, psychiatry, psychology, and sociology. This group includes many outstanding figures in contemporary cognitive science.

Students wishing to pursue a Ph.D. in “Philosophy and Cognitive Science” register in the philosophy program in the normal fashion, but pursue a
significant portion of their studies with faculty in the several departments participating in the interdisciplinary program. Students may apply for admission to the interdisciplinary program at the same time that they apply to the Department of Philosophy, or at some point after entering UCSD. (All students wishing to transfer into any interdisciplinary program must do so prior to the end of the fifth quarter of residency.)

Students in philosophy/cognitive science are required to do the following:

1. Complete all requirements for the philosophy Ph.D. except that the distribution requirement is amended. By the end of the ninth quarter of residency, a philosophy/cognitive science degree student must have completed ten graduate seminars in philosophy with a grade of B+ or better in each course distributed across the areas of (A) philosophy of science and philosophy of logic, (B) philosophy of mind and philosophy of language, (C) ethics and political philosophy, (D), epistemology and metaphysics, and (E) history of philosophy. Students must take at least one seminar from each of these five areas and at least two seminars form any four of these areas.

2. The equivalent of one year's course work (usually in six courses) in one or more of the other departments affiliated with the Department of Cognitive Science. (It should be noted that a philosophy graduate student who completes this requirement is deemed thereby to have satisfied the philosophy language requirement by gaining an approved special competency.)

3. Three quarters of Cognitive Science 200

A plan detailing the course of study must be approved by the Cognitive Science Program Committee. The dissertation should be interdisciplinary, reflecting the two areas of specialization.

**SCIENCE STUDIES PROGRAM**

The Science Studies Program at UCSD is committed to interdisciplinary investigations. Understanding, interpreting, and explaining the scientific enterprise demand a systematic integration of the perspectives developed within the history, sociology, and philosophy of science. The program offers students an opportunity to work toward such integration, while receiving a thorough training at the professional level in one of the component disciplines.

Students enrolled in the program choose one of the component disciplines for their major field of specialist studies, and are required to complete minor field requirements in the others. The core of the program, however, is a year-long seminar in science studies, led by faculty from all participating departments.

To obtain a Ph.D. in "Philosophy/Science Studies," students must take a total of eighteen courses, including

1. Nine seminars in philosophy with a grade of B+ or better, distributed across the areas of (A) philosophy of science and philosophy of logic, (B) philosophy of mind and philosophy of language, (C) ethics and political philosophy, (D) metaphysics and epistemology, and (E) history of philosophy. Students must take at least one seminar from each of these five areas and at least two seminars from any three of these areas. This requirement must be completed by the end of the seventh quarter of residence. By the end of the fifth quarter of residence, a student must have taken at least five Philosophy seminars (distributed across at least three areas), and must have achieved an average B+ or better in all philosophy seminars taken up to that point. Failure to take a sufficient number of seminars or to achieve a B+ average means that the student may not continue in the program after the fifth quarter.

2. The Introduction to Science Studies 209A, plus the Seminar in Science Studies 209B, to be taken twice with changed content, plus Colloquium in Science Studies 209C, to be taken once on a Satisfactory/ Unsatisfactory basis and once for a letter grade.

3. Two additional Science Studies courses outside philosophy drawn from a list of approved courses available each year from the Science Studies Program office. (One course in one of the sciences may be substituted for one of these courses as part of an approved program of study.)

The student's program of study must be approved by the philosophy faculty advisor for Science Studies.

Students may apply for admission to the interdisciplinary program at the same time that they apply to the Department of Philosophy, or at some point after entering UCSD. (All students wishing to transfer into any interdisciplinary program must do so prior to the end of the fifth quarter of residency.)

**PH.D. TIME LIMIT POLICIES**

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

**FINANCIAL AID**

Almost all philosophy graduate students are supported by some form of financial aid. Most work as teaching assistants at 50 percent time (approximately $14,143 for nine months). Typically this involves running discussion sections and grading papers for lecture and introductory courses in philosophy, humanities, and writing programs. An assistantship is also regarded as a full-credit course, so teaching assistants usually take two graduate classes each quarter.

In addition, some Regents' fellowships are available for first-year students, and the department usually awards one or more dissertation fellowships a year for its advanced graduate students. Various fee scholarships, tuition and tuition/fee scholarships are also available, as are San Diego fellowships. Advanced graduate students who have just completed or nearly completed their dissertations are sometimes hired by the department as teaching associates or visiting lecturers. Under these titles advanced graduate students autonomously plan and teach their own courses.

**COURSES**

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

**LOWER-DIVISION**

1. **The Nature of Philosophy (4)**

   What is philosophy? A study of major philosophical questions, making use of both classical and contemporary sources. An introduction to the basic methods and strategies of philosophical inquiry.

2. **Introduction to Logic (4)**

   Basic concepts and techniques in both informal and formal logic and reasoning, including a discussion of argument, inference, proof, and common fallacies, and an introduction to the syntax, semantics, and proof method in sentential (propositional) logic. (May be used to fulfill general-education requirements for Warren and Eleanor Roosevelt Colleges.)

3. **Logic and Decision Making (4)**

   An introduction to the study of probability, inductive logic, scientific reasoning, and rational choice among competing hypotheses and alternative courses of action when the evidence is incomplete or uncertain. (May be used to fulfill general-education requirements for Marshall, Warren, and Eleanor Roosevelt Colleges.)

4. **Introduction to Philosophy: Ethics (4)**

   An inquiry into the nature of morality and its role in personal or social life by way of classical and/or contemporary works in ethics. (May be used to fulfill general-education requirements for Muir and Marshall Colleges.)

5. **Introduction to Philosophy: Metaphysics (4)**

   A survey of central issues and figures in the Western metaphysical tradition. Topics include the mind-body problem, freedom and determinism, personal identity, appearance and reality, and the existence of God. (May be used to fulfill general-education requirements for Muir and Marshall Colleges.)

6. **Introduction to Philosophy: Theory of Knowledge (4)**

   A study of the grounds and scope of human knowledge, both commonsense and scientific, as portrayed in the competing traditions of Continental rationalism, British empiricism, and contemporary cognitive science. (May be used to fulfill general-education requirements for Muir and Marshall Colleges.)

7. **Ethics and Society (4)**

   (Same as Poli. Sci. 27.) An examination of ethical principles (e.g., utilitarianism, individual rights, etc.) and their social and political applications to contemporary issues: abortion, environmental protection, and affirmative action. Ethical principles will also be applied to moral dilemmas in government, law, business, and the professions. Satisfies the Warren College ethics and society requirement. Letter grade only. **Prerequisites:** CAT 2 and 3, DDC 2 and 3, MCWP 40 and 50, Hum. 1 and 2, MMW 2 and 3, WCWP 10A-B or WCWP 11A-B.

8. **Ethics and Society II (4)**

   (Same as Poli. Sci. 28.) An examination of a single set of major contemporary social, political, or economic issues (e.g., environmental ethics, international ethics) in light of ethical and moral principles and values. Warren College students must take course for a letter grade in order to satisfy the Warren College general-education requirement. **Prerequisite:** Phil./Poli. Sci. 27.

9. **History of Philosophy: Ancient Philosophy (4)**

   A survey of classical Greek philosophy with an emphasis on Socrates, Plato and Aristotle, though some consideration may be given to Presocratic and/or Hellenistic philosophers. (May be used in fulfilling the Muir College breadth requirement.)

    A survey of early modern philosophy. Beginning with the contrast between medieval and modern thought, the
course focuses on modern philosophy and its relation to the scientific revolution of the sixteenth and seventeenth centuries. Philosophers to be studied include Descartes, Hobbes, Spinoza, and Leibniz. (May be used in fulfilling the Muir College breadth requirement.)

33. History of Philosophy: Philosophy in the Age of Enlightenment (4)
A survey of the major philosophers of the late eighteenth and nineteenth centuries with a focus on the British empiricists—Locke, Berkeley, and Hume—and the critical philosophy of Kant. (May be used in fulfilling the Muir College Breadth requirement.)

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshmen are welcome to enroll. Credit is available to self-declared freshmen and undergraduates, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

UPPER-DIVISION

100. Plato (4)
A study of Socrates and/or Plato through major dialogues of Plato. Possible topics include the virtues and happiness; weakness of the will; political authority and democracy; the theory of Forms and sensible flux; mortality, relativity, skepticism, and knowledge. May be repeated for credit with change of content and approval of instructor. PREREQUISITE: upper-division standing or consent of instructor.

101. Aristotle (4)
A study of major issues in Aristotle's works, such as the categories; form and matter; substance; essence, and accident; the soul; virtue, happiness, and politics. PREREQUISITE: upper-division standing or consent of instructor.

102. Hellenistic Philosophy (4)
A study of selected texts from the main schools of Hellenistic philosophy—Stoicism, Epicureanism, and Skepticism. PREREQUISITE: upper-division standing or consent of instructor.

104. The Rationalists (4)
The major writings of one or more of the seventeenth-century rationalists—Descartes, Spinoza, and Leibniz. Topics include the existence of God, the mind-body problem, free will, the nature of knowledge, belief, and error. May be repeated for credit with change of content and approval of instructor. PREREQUISITE: upper-division standing or consent of instructor.

105. The Empiricists (4)
The major writings of one or more of the British empiricists—Locke, Berkeley, Hume, and Reid. May be repeated for credit with change of content and approval of instructor. PREREQUISITE: upper-division standing or consent of instructor.

106. Kant (4)
A study of selected portions of the Critique of Pure Reason and other theoretical writings and/or his major works in moral theory. PREREQUISITE: Philosophy 33 or 105 or consent of instructor. May be repeated for credit with change in content and approval of the instructor.

107. Hegel (4)
A study of one or more of Hegel's major works, in particular, The Phenomenology of Spirit and The Philosophy of Right. Readings and discussion may also include other figures in the Idealist tradition—such as Fichte, Hölderlin, and Schelling—and critics of the idealist tradition—such as Marx and Kierkegaard. PREREQUISITE: upper-division standing or consent of instructor.

108. Nineteenth-Century Philosophy (4)
A study of one or more figures in nineteenth-century philosophy, such as Schopenhauer, Nietzsche, Kierkegaard, Marx, Emerson, Thoreau, James, and Mill. The focus may be on particular figures or intellectual themes and traditions. May be repeated for credit with change of content and approval of instructor. PREREQUISITE: upper-division standing or consent of instructor.

109. History of Analytic Philosophy (4)
Central texts, figures, and traditions in analytic philosophy. Figures may include Frege, Russell, Wittgenstein, Carnap, Moore, Austin, Turing, Kripke, and Putnam. May be repeated for credit with change of content and approval of the instructor. PREREQUISITE: Philosophy 120 or consent of instructor.

115. Philosophical Methods Seminar (4)
This course provides an introduction to the techniques of philosophical inquiry through detailed study of selected philosophical texts and through extensive training in philosophical writing based on those texts. Enrollment limited and restricted to majors; must be taken for letter grade. May not be repeated for credit. PREREQUISITE: open to philosophy majors only.

120. Symbolic Logic (4)
The syntax, semantics, and proof-theory of first-order predicate logic with identity, emphasizing both conceptual issues and practical skills (e.g., criteria for logical truth, consistency, and validity, the application of logical methods to everyday as well as scientific reasoning). PREREQUISITE: Philosophy 10 or consent of instructor.

122. Topics in Logic (4)
A study of new, extended, or alternative logics and/or special issues in meta-logic. Topics include the nature of logic, modal logic, higher-order logic, generalized logic, free logic, the Löwenheim-Skolem theorem, the incompleteness of arithmetic, and decidability. May be repeated for credit with change in content and approval of instructor. PREREQUISITE: Philosophy 120 (and for advanced topics: Philosophy 121) or consent of instructor.

123. Philosophy of Logic (4)
Philosophical issues underlying standard and non-standard logics, the nature of logical knowledge, the relation between logic and mathematics, the revisability of logic, truth and logic, ontological commitment and ontological relativity, logical consequence, etc. May be repeated for credit with change in content and approval of instructor. PREREQUISITE: Philosophy 120 or consent of instructor.

124. Philosophy of Mathematics (4)
The character of logical and mathematical truth and knowledge; the relations between logic and mathematics; the significance of Godel's incompleteness theorem; Platonism, logicism, and more recent approaches. PREREQUISITE: Philosophy 120 or consent of instructor.

125. Games and Decisions (4)
Formal and philosophical issues in the theory of games and the theory of rational decision. PREREQUISITE: Philosophy 12 or consent of instructor.

126. Topics in the History of Logic (4)
Problems and figures in history of logic. Subject matter varies, in some cases a single author or text (e.g., Aristotle, The Port Royal Logic, Leibniz, Kant, Frege, Tarski), in other a particular tradition or problem (e.g., Hilbert's Program, intuitionism, quantification, logicism and psychologism, modality). PREREQUISITE: Philosophy 120 or consent of instructor.

130. Metaphysics (4)
Central problems in metaphysics, such as free will and determinism, the mind-body problem, personal identity, causation, primary and secondary qualities, the nature of universals, necessity, and identity. PREREQUISITE: upper-division standing or consent of instructor.

131. Topics in Metaphysics (4)
An in-depth study of some central problem, figure, or tradition in metaphysics. May be repeated for credit with change of content and approval of instructor. PREREQUISITE: upper-division standing or consent of instructor.

132. Epistemology (4)
Central problems in epistemology such as skepticism; a priori knowledge; knowledge of other minds; self-knowledge; the problem of induction; foundationalist, coherence, and causal theories of knowledge. PREREQUISITE: upper-division standing or consent of instructor.

134. Philosophy of Language (4)
Examination of contemporary debates about meaning, reference, truth, and thought. Topics include descriptive theories of reference, sense and reference, compositionality, truth, theories of meaning, vagueness, metaphor, and natural and formal languages. PREREQUISITE: upper-division standing or consent of instructor.

136. Philosophy of Mind (4)
Different conceptions of the nature of mind and its relation to the physical world. Topics include identity theories, functionalism, eliminative materialism, internalism and externalism, subjectivity, other minds, consciousness, self-knowledge, perception, memory, and imagination. PREREQUISITE: upper-division standing or consent of instructor.

145. Philosophy of Science (4)
Central problems in philosophy of science, such as the nature of confirmation and explanation, the nature of scientific revolutions and progress, the unity of science, and realism and antirealism. PREREQUISITE: upper-division standing or consent of instructor.

146. Philosophy of Physics (4)
Philosophical problems in the development of modern physics, such as the philosophy of space and time, the epistemology of geometry, the philosophical significance of Einstein's theory of relativity, the interpretation of quantum mechanics, and the significance of modern cosmology. PREREQUISITE: upper-division standing or consent of instructor.

147. Philosophy of Biology (4)
Philosophical problems in the biological sciences, such as the relation between biology and the physical sciences, the status and structure of evolutionary theory, and the role of biology in the social sciences. PREREQUISITE: upper-division standing or consent of instructor.

149. Philosophy of Psychology (4)
Philosophical issues raised by psychology, including the nature of psychological explanation, the role of nature versus nurture, free will and determinism, and the unity of the person. PREREQUISITE: upper-division standing or consent of instructor.

150. Philosophy of the Cognitive Sciences (4)
Theoretical, empirical, methodological, and philosophical problems at work in the cognitive sciences (e.g., Psychology, Linguistics, Neuroscience, Artificial Intelligence, and Computer Science), concerning things such as mental representation, consciousness, rationality, explanation, and nativism. PREREQUISITE: upper-division standing or consent of instructor.

151. Philosophy of Neuroscience (4)
An introduction to elementary neuroanatomy and neurophysiology and an examination of theoretical issues in cognitive neuroscience and their implications for tradi- tional philosophical conceptions of the relation between mind and body, perception, consciousness, understanding, emotion, and the self. PREREQUISITE: upper-division standing or consent of instructor.

152. Philosophy of Social Science (4)
Philosophical issues of method and substance in the social sciences, such as causal and interpretive models of explanation, structuralism and methodological individualism, value neutrality, and relativism. PREREQUISITE: upper-division standing or consent of instructor.

160. Ethical Theory (4)
Systematic and/or historical perspectives on central issues in ethical theory such as deontic, contractualist, and consequentialist conceptions of morality; rights and special obligations; the role of happiness and virtue in morality;
moral conflict, ethical objectivity and relativism, and the rational authority of morality. **Prerequisite:** upper-division standing or consent of instructor.

161. Topics in the History of Ethics (4)
Central issues and texts in the history of ethics. Subject matter can vary, ranging from one philosopher (e.g., Aristotle, Hobbes, Kant, or Mill) to a historical tradition (e.g., Greek ethics or the British moralists). May be repeated for credit with change in content and approval of instructor. **Prerequisite:** upper-division standing or consent of instructor.

162. Contemporary Moral Issues (4)
An examination of contemporary moral issues, such as abortion, euthanasia, war, affirmative action, and freedom of speech. **Prerequisite:** upper-division standing or consent of instructor.

163. Biomedical Ethics (4)
Moral issues in medicine and the biological sciences, such as patient's rights and physician's responsibilities, abortion and euthanasia, the distribution of health care, experimentation, and genetic intervention. **Prerequisite:** upper-division standing or consent of instructor.

164. Technology and Human Values (4)
Philosophical issues involved in the development of modern science, the growth of technology, and control of the natural environment. May be repeated for credit with change in content and approval of instructor. **Prerequisite:** upper-division standing or consent of instructor.

165. Classics in Political Philosophy (4)
Central issues about the justification, proper functions, and limits of the state through classical texts in the history of political philosophy by figures such as Plato, Aristotle, Hobbes, Locke, Rousseau, Mill, and Marx. **Prerequisite:** upper-division standing or consent of instructor.

166. Contemporary Political Philosophy (4)
Different perspectives on central issues in contemporary political philosophy, such as the nature of state authority and political obligation, the limits of government and individual liberty, liberalism and its critics, equality and distributive justice. **Prerequisite:** upper-division standing or consent of instructor.

168. Philosophy of Law (4)
A study of issues in analytical jurisprudence such as the nature of law, the relation between law and morality, and the nature of legal interpretation and issues in normative jurisprudence such as the justification of punishment, paternalism and privacy, freedom of expression, and affirmative action. **Prerequisite:** upper-division standing or consent of instructor.

170. Philosophy and Race (4)
A philosophical investigation of the topics of race and racism. The role of "race" in ordinary speech. The ethics of racial discourse. Anthropological and biological conceptions of race. The social and political significance of racial categories. Post-racist conceptions of race. **Prerequisite:** upper-division standing or consent of instructor.

175. Aesthetics (4)
Central issues in philosophical aesthetics such as the nature of art and aesthetic experience, the grounds of artistic interpretation and evaluation, artistic representation, and the role of the arts in education, culture, and politics. **Prerequisite:** upper-division standing or consent of instructor.

177. Philosophy and Literature (4)
A study of philosophical themes contained in the major works of English literature. May be repeated for credit with change in content and approval of instructor. **Prerequisite:** upper-division standing or consent of instructor.

180. Phenomenology (4)
An examination of the phenomenon of subjective consciousness in the works of its major classical and/or contemporary representatives. Authors studied will vary and may include Brentano, Husserl, Heidegger, Merleau-Ponty, Levinas, and Bourdieu. **Prerequisite:** upper-division standing or consent of instructor.

181. Existentialism (4)
Classical texts and issues of existentialism. Authors studied will vary and may include Nietzsche, Kierkegaard, Sartre, and Heidegger. **Prerequisite:** upper-division standing or consent of instructor.

183. Topics in Continental Philosophy (4)
The focus will be on a leading movement in continental philosophy, e.g., the critical theory of the Frankfurt school, structuralism and deconstruction, postmodernism, or some particular issue that has figured in these traditions (e.g., freedom, subjectivity, historicity, authenticity). May be repeated for credit with change in content and approval of instructor. **Prerequisite:** upper-division standing or consent of instructor.

185. Philosophy of Religion (4)
A general introduction to the philosophy of religion through the study of classical and/or contemporary texts. Among the issues to be discussed are the existence and nature of God, the problem of evil, the existence of miracles, the relation between reason and revelation, and the nature of religious language. **Prerequisite:** upper-division standing or consent of instructor.

191A. Philosophy Honors (4)
Independent study by special arrangement with and under the supervision of a faculty member, including a proposal for the honors essay. An IP grade will be awarded at the end of this quarter; a final grade will be given for both quarters at the end of 191B. **Prerequisite:** department stamp; consent of instructor.

191B. The Honors Essay (4)
Continuation of 191A: independent study by special arrangement with and under the supervision of a faculty member, leading to the completion of the honors essay. A letter grade for both 191A and 191B will be given at the end of this quarter. **Prerequisite:** consent of instructor.

192. Senior Seminar (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in PHIL. (at the upper-division level). Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** upper-division standing; department stamp and/or consent of instructor.

195. Introduction to Teaching Philosophy (4)
Under the supervision of the instructor, student will lead one discussion section of a lower-division philosophy class. The student must attend the lecture for the class and meet regularly with the instructor. Applications are available in the Department of Philosophy. **Prerequisites:** consent of instructor and department chair; G.P.A. of 3.0 or higher, over ninety units.

199. Directed Individual Study (4)
Directed individual study by special arrangement with and under the supervision of a faculty member. (P/NP grades only.) **Prerequisite:** consent of instructor.

200. Proseminar (4)
Introduction to philosophical methods of analysis through study of classic historical or contemporary texts. Writing intensive. Enrollment limited to entering graduate students.

201A. Core Course in History (4)
A study of selected texts or topics in the history of philosophy. Usually the focus will be on a single major text. May be taken for credit three times with changed content.

202. Core Course in Ethics (4)
An introduction to some central issues in ethical theory with emphasis on classic texts or contemporary authors. May be taken for credit three times with changed content.

204A. Core Course in Philosophy of Science (4)
An introduction to one or more central problems in the philosophy of science, or in the philosophy of one of the particular sciences, such as the nature of confirmation and explanation, the nature of scientific knowledge, reductionism, the unity of science, or realism and antirealism. May be taken for credit three times with changed content.

205A. Core Course in Metaphysics (4)
An introduction to central topics in metaphysics with emphasis on classic texts or contemporary authors. May be taken for credit three times with changed content.

206A. Core Course in Epistemology (4)
An introduction to central topics in epistemology with emphasis on classic texts or contemporary authors. May be taken for credit three times with changed content.

209A. Introduction to Science Studies (4)
Study and discussion of classic work in history of science, philosophy of science, and of work that attempts to develop a unified science studies approach. Required of all students in the Science Studies Program.

209B. Seminar in Science Studies (4)
Study and discussion of selected topics in the science studies field. Required of all students in the Science Studies Program. The topic varies from year to year and students may, therefore, repeat the course for credit. May be taken for credit three times with changed content.

209C. Colloquium in Science Studies (4)
A forum for the presentation and discussion of research in progress in science studies, by graduate students, faculty, and visitors. May be taken for credit two times with changed content.

214. Early Modern Philosophy (4)
A study of selected texts or topics from the history of Greek philosophy. Usually centers on works by Plato or Aristotle. May be taken for credit six times with changed content.

215. Eighteenth-Century Philosophy (4)
A study of selected texts or topics from philosophers of the eighteenth century: for example, Kant or Hume. May be taken for credit six times with changed content.

218. Contemporary Analytical Philosophy (4)
A study of the historical development of the analytical movement, with emphasis on major texts. May be taken for credit six times with changed content.

222. Philosophy of Logic (4)
A study of selected issues in the philosophy of logic. The focus may be on contemporary texts or historical works or both. May be taken for credit six times with changed content.

230. Metaphysics (4)
Topics may include identity, personal identity, universals and particulars, modality and possible worlds, causation, reduction, supervenience, freedom and determinism, space and time, and realism versus antirealism. May be taken for credit six times with changed content.

232. Epistemology (4)
This seminar will cover issues such as rival accounts of knowledge, justification, and warrant, traditional and contemporary perspectives on empiricism, rationalism, and pragmatism, and skepticism. May be taken for credit six times with changed content.

234. Philosophy of Language (4)
Central issues in contemporary philosophy of language, such as the nature of linguistic meaning, truth, content, reference, the syntax and semantics of various linguistic constructions, presuppositions of speech acts, the epistemology of language understanding and language learning, the mental/psychological basis of linguistic understanding and use. May be taken for credit six times with changed content.
236. Philosophy of Mind (4)
Contemporary debates on the nature, function, and operation of the mental. May include questions about the mind-body relation, mental causation, perception, consciousness, and mental representation. May be taken for credit six times with changed content.

245. Philosophy of Science (4)
This seminar will cover current books and theoretical issues in the philosophy of science. May be taken for credit seven times with changed content.

246. Philosophy of Physics (4)
Systematic problems and historical and contemporary perspectives on foundational issues in physics. May include issues in the philosophy of space and time, the interpretation of relativity theory and quantum mechanics, or the foundations of statistical mechanics and probability. May be taken for credit six times with changed content. **PREREQUISITE:** graduate standing or consent of instructor.

247. Philosophy of Biology (4)
Historical and contemporary perspectives on foundational issues about biology. May include questions about the nature of biological explanation, the relation of biology to chemistry and physics, the status of attributions of function, and the relation of biology to the social sciences. May be taken for credit six times with changed content.

250A. Philosophy of the Cognitive Sciences (4)
Contemporary debates about the study of the mind-brain as studied in one or more of the empirical cognitive sciences. May include questions about the different strategies of explanation invoked, the conceptions of representation employed, and the connections between theoretical models developed. May be taken for credit six times with changed content.

260. Ethics (4)
Topics may include metaethics (e.g., the semantics, metaphysics, epistemology, and normativity of ethics), consequentialism and deontology, moral psychology (e.g., freedom, responsibility, and weaknesses of will), or substantive moral problems. The approach may be systematic, historical, or both. May be taken for credit six times with changed content.

267. Political Philosophy (4)
Topics may include the nature and limits of state authority, liberty and equality, distributive justice, liberalism and its critics (e.g., feminists, libertarians, and others), or issues in jurisprudence. The focus may be on classic texts or contemporary authors. May be taken for credit six times with changed content.

276. German Translation Workshop (1-2)
This course meets biweekly with students reading and presenting material from the phenomenological literature. The course is designed both for students doing active research in phenomenology and for those seeking to gain some familiarity with that tradition. Can be taken nine times for credit with changed content.

277. Phenomenology Reading Group (1-2)
This course meets biweekly with students reading and presenting material from the phenomenological literature. The course is designed both for students doing active research in phenomenology and for those seeking to gain some familiarity with that tradition. Can be taken nine times for credit with changed content.

278. Topics and Methods in Contemporary Philosophy (1-2)
Investigation of central issues in contemporary philosophy. Content varies but typically will center on a recent and important philosophical book. Can be taken nine times for credit with changed content.

279. Experimental Philosophy Laboratory (1-2)
A weekly forum of presentations, EPL provides a wider range of content than a traditional seminar. Content varies, but the focus is on philosophical problems of mind, representation, language and consciousness through empirical and philosophical methods. Can be taken nine times for credit with changed content.

280. Philosophy of Science Topics and Methods (1-2)
This course meets weekly to discuss recent books or articles in philosophy of science. The reading is designed both for students doing active research in the field and for those seeking to gain some familiarity with it. Can be taken nine times for credit with changed content.

281. History of Philosophy Research and Methods (1-2)
This course meets to discuss work in progress in the history of philosophy. Its aim is to introduce understanding of the methods and standards of research in the field through constructive criticism of each other’s work. Can be taken nine times for credit with changed content.

282. Topics and Methods in Ethics (1-2)
Weekly or biweekly meetings to discuss recent literature in ethics, broadly construed so as to include ethical theory, normative ethics, jurisprudence, and historical traditions in these fields. The course is suitable for those specializing in ethics and for those seeking some familiarity with the field. Can be taken nine times for credit with changed content.

283. Topics and Methods in Political Philosophy (1-2)
Weekly or biweekly meetings to discuss recent literature in political philosophy and historical tradition of this field. The course is suitable for those specializing in ethics and for those seeking some familiarity with the field.

284. Philosophy of Biology Research Group (1-2)
A research group for graduate students engaged in philosophy of biology or history of the biological sciences. The group discusses biological, historical, and philosophical articles and books and ongoing research projects. Can be taken nine times for credit with changed content. **PREREQUISITE:** graduate standing or consent of instructor.

285. Seminar on Special Topics (4)
Focused examination of specific problems or themes in some area of philosophy. May be taken for credit nine times with changed content.

286. Philosophy of Physics Reading Group (1-2)
A research group for graduate students engaged in philosophy or history of the physical sciences. The group discusses physical, historical, and philosophical articles and books and ongoing research projects. Can be taken nine times for credit with changed content. **PREREQUISITE:** graduate standing or consent of instructor.

287. Greek Reading Group (1-2)
This group provides training in reading and translating philosophical Greek. Students prepare in advance written translations of assigned passages. The course helps train graduate students preparing to take the Departmental Greek Exam. Can be taken nine times for credit with changed content.

290. Directed Independent Study (4)
Supervised study of individually selected philosophical topics. S/U grades permitted.

292. Writing Workshop (1-3)
Each enrolled student produces a research essay ready for publication, presents it to students and faculty, and offers critiques of other students’ presentations. Units will vary according to enrollment in course. To be taken in fall quarter of third year of philosophy graduate study.

295. Research Topics (1-12)
Advanced individual research studies under the direction of a member of the staff. Hours of outside prep. will vary with number of units taken. May be taken for credit nine times with changed content.

299. Thesis Research (1-12)
S/U grades permitted.

500. Apprentice Teaching (1-4)
A course designed to satisfy the requirement that graduate students should serve as teaching assistants, either in the Department of Philosophy or in one of the writing programs offered by the various colleges. Each Ph.D. candidate must teach the equivalent of quarter time for three academic quarters. Students are permitted to sign up as TAs for a maximum of eighteen quarters.

The Department of Physics presents the Shang-keng Ma Award at commencement each year to a graduating physics student who has shown exceptional ability and promise during the UCSD undergraduate years. The award was established in 1984 to commemorate the contributions of Professor Ma to the UCSD Department of Physics and to the field of theoretical condensed matter physics.

JOHN HOLMES MALMBERG PRIZE
The John Holmes Malmberg Prize is presented annually at commencement to a graduating physics student who is recognized for potential for a career in physics and a measure of experimental inquisitiveness. This prize was established in 1993 in memory of Professor Malmberg who pioneered the use of non-neutral plasmas for sophisticated tests of plasma equilibrium, wave, and transport effects. He was an involved teacher of undergraduate and graduate students and was active in departmental and campus affairs.

THE UNDERGRADUATE PROGRAM
The Department of Physics offers undergraduate programs leading to the following degrees:

- B.S., Physics
- B.S., Physics with Specialization in Astrophysics
- B.S., Physics with Specialization in Biophysics
- B.S., Physics with Specialization in Computational Physics
- B.S., Physics with Specialization in Earth Sciences
- B.S., Physics with Specialization in Materials Physics
- B.A., General Physics
- B.A., General Physics/Secondary Education

A grade-point average of 2.0 or higher in the lower-division major is required. All courses (lower- and upper-division) are accepted. All courses (lower- and upper-division) required for the major must be taken for a letter grade.

SHANG-KENG MA AWARD
The Department of Physics presents the Shang-keng Ma Memorial Award at commencement each year to a graduating physics student who has shown exceptional ability and promise during the UCSD undergraduate years. The award was established in 1984 to commemorate the contributions of Professor Ma to the UCSD Department of Physics and to the field of theoretical condensed matter physics.

JOHN HOLMES MALMBERG PRIZE
The John Holmes Malmberg Prize is presented annually at commencement to a graduating physics student who is recognized for potential for a career in physics and a measure of experimental inquisitiveness. This prize was established in 1993 in memory of Professor Malmberg who pioneered the use of non-neutral plasmas for sophisticated tests of plasma equilibrium, wave, and transport effects. He was an involved teacher of undergraduate and graduate students and was active in departmental and campus affairs.

PHYSICS MAJOR (B.S. DEGREE)
The physics major provides a core of basic education in several principle areas of physics, with sufficient flexibility to allow students to prepare either for graduate school or a career in industry. Since in preparing for either goal, more than the required core courses are necessary, it is important for students to meet with a physics department advisor in deciding a schedule.

In the junior year, the emphasis is on macroscopic physics; the two principal physics subjects are electromagnetism and mechanics. The mathematics and computer background required for the physics program is completed in this year.

In the senior year, a sequence of courses in quantum physics provides the student the modern view of atomic and some aspects of sub-atomic physics and the principal analytical methods appropriate in this domain. The relation of the microscopic to the macroscopic world is the subject of courses in thermodynamics and statistical physics, with illustrations drawn from gas dynamics and solid-state physics. Upper-division laboratories teach students the essentials of physical measurement and building advanced equipment, as well as other aspects of experimental science.

The following courses are required for the physics major:

Lower-Division
1. Physics 4A-B-C-D-E or Physics 2A-B-C-D-E
2. Physics 2CL and 2DL
3. Chemistry 6A or a programming course such as MAE 9 or MAE 10
4. Mathematics 20C-D-E-F

Upper-Division
1. Physics 100A-B, 105A, 110A, 120A, 130A-B, 140A, and an additional laboratory course from the lab group: 120B, 121, 133, 173
2. Two courses from either the theoretical or experimental pre-grad-school sequence
   Theoretical pre-grad-school sequence: Phys. 100C, 105B, 110B, 130C, 140B
   Experimental pre-grad-school sequence: Phys. 100C, 110B, 120B, 130C, 140B
3. Restricted electives: Three upper-division (four-unit) or graduate courses in physics or mathematics (only one). Courses in other science disciplines may be substituted by petition.

For students wishing to prepare for graduate school it is important that all courses in either the theorist or experimentalist pre-grad-school sequence be taken. Mathematics 120A is also recommended.
Suggested Schedule (pre-graduate school)

PHYSICS MAJOR WITH SPECIALIZATION IN ASTROPHYSICS (B.S. DEGREE)

The astrophysics specialization is appropriate for students who would like to gain an in-depth understanding of modern astronomy and astrophysics, and/or who wish to prepare for graduate school in astronomy or astrophysics. It is similar to the standard physics major with electives being chosen from astronomically oriented courses. A wide variety of technical, academic, and professional careers are possible for students who choose this specialization.

The following courses are required for the physics major with specialization in astrophysics:

Lower-Division
1. Physics 4A-B-C-D-E or Physics 2A-B-C-D¹
2. Physics 2CL and 2DL
3. Chemistry 6A or a programming course such as MAE 9 or MAE 10
4. Mathematics 20C-D-E-F

¹ The Physics 4 series is recommended, but the Physics 2 sequence is acceptable, in which case both
² Chemistry 6A and a programming course are required.

Upper-Division
1. Physics 100A-B, 105A, 110A, 120A, 130A-B, 140A and an additional laboratory course from the lab group: 120B, 121, 133.

2. Two courses from either the theoretical or experimental pre-grad-school sequence.
3. It is recommended that students take the three quarter astrophysics sequence—Physics 160, 161, 162—but any three courses selected from the following list are acceptable:
   - Physics 160. Stellar Astrophysics
   - Physics 161. Compact Objects and the Milky Way
   - Physics 162. Galaxies and Cosmology
   - Physics 163. Solar System
   - ECE 120. Solar System Physics
   - Chem. 170. Cosmochemistry
   - SIO 130. Geodynamics of Terr. Planets
   - MAE 180A. Space Science and Engineering 180
   - Physics 223. Stellar Structure and Evolution; with consent of Instructor
   - Physics 224. Interstellar Medium; with consent of Instructor
   - Physics 226. Galaxies & Galactic Dynamics; with consent of Instructor
   - Physics 227. Cosmology; with consent of Instructor
   - Physics 228. High Energy and Compact Objects; with consent of Instructor
   - Theoretical pre-grad-school sequence: Phys. 100C, 105B, 110B, 130C, 140B
   - Experimental pre-grad-school sequence: Phys. 100B, 110B, 120B, 130C, 140B

PHYSICS MAJOR WITH SPECIALIZATION IN BIOPHYSICS (B.S. DEGREE)

The Department of Physics offers an undergraduate program that prepares students for careers in biophysics. This program leads to a degree in ’B.S., Physics with Specialization in Biophysics.’ As a terminal degree, it is an excellent education for students who wish to work in the biotechnology industry, and provides an ideal background for students who plan to attend graduate or professional school in biological or biomedical fields.

This program is intended for students with a strong interest in bringing the concepts and technical advances from the physical sciences to bear on issues in biology. The curriculum is chosen to prepare students as rigorously trained but broad-minded generalists, so that they may attack problems in the biological, biochemical, and biomedical sciences with the tools and confidence that come from rigorous training in the physical sciences.

The curriculum for Physics Major with Specialization in Biophysics is designed to allow premedical students to complete all necessary courses for admission to medical schools.

The lower-division program for physics majors with specialization in biophysics includes basic courses in biology and chemistry as well as physics. Although the sequence Physics 4A through 4E is strongly recommended, students have the choice of petitioning the department to substitute the sequence Physics 2A through 2D.

The following courses are required for the physics major with specialization in biophysics:

Lower-Division
1. Physics 4A-B-C-D-E and 2CL-DL; or Physics 2A-B-C-D and 2CL-DL (Physics 4 sequence is strongly recommended)
2. Chemistry 6A-B-C and 6BL
3. Biology, BILD 1 and BILD 2
4. Mathematics 20A-B-C-D-E-F

The upper-division program includes advanced courses in physics, including two core lecture courses and one core laboratory course in biophysics, as well as organic chemistry.

Upper-Division
2. Chemistry 140A

Additional electives, to achieve a count of twelve upper-division courses in the major, may be selected from biology, chemistry and physics. Three additional upper-division courses, in any subject, are required in order to satisfy UCSD requirements.

Premedical students will need to take two additional quarters of organic chemistry (Chemistry 140B and 140C), one quarter of organic chemistry laboratory (Chemistry 143A), and one quarter of an upper level biology course. In addition, some medical schools also require a quarter of biochemistry (Biology BIBC 100 or Chemistry 114A). The premedically requirements may be used to satisfy elective requirements for upper-division courses.

As a guide to prospective students, we consider a schedule of required classes for a Muir College student.

Suggested Schedule
B.S. IN PHYSICS WITH SPECIALIZATION IN COMPUTATIONAL PHYSICS

The computational physics specialization is designed to support a broad range of career development tracks, so students may pursue (1) a terminal B.S. degree for gainful employment in information technology and high-tech industry, (2) preparation for graduate studies in computational science with an M.S. degree, and (3) graduate work in physics with strong interest in computational physics. This flexibility is afforded by a wide array of restricted electives which allows students to design much of their own program (subject to advisor’s approval) while simultaneously maintaining the essential physics-based curriculum. Academic advising will be provided by physics faculty in the Computational Physics Specialization Program to assist students in designing their optimal career development track in the flexible curriculum.

The following courses are required for Physics Major with Specialization in Computational Physics:

Lower-Division
1. Physics 4A-B-C-D-E or Physics 2A-B-C-D, Physics 2CL-DL
2. Mathematics 20C-F
3. Chemistry 6A
4. MAE 9, or MAE 10, or CSE 11

The 2A-B-C-D sequence is an allowed substitute by petition.

*MAE 11 must be completed by junior year.

Upper-Division
2. Six restricted electives from following groups:

Substitute Upper-Division courses

Suggested Schedule (restricted electives not shown)

<table>

Students may wish to incorporate a small portion of the major program into their lower-division studies, for example, SIO 50.

Career Track Examples with Restricted Electives

The program of electives is intended to be flexible, and can be tailored to the student’s needs and interests in consultation with the academic advisor.

Grad. School Theorist with Computational Interest
Track for student with interest in theoretical physics based computational science:
- Physics 100C, 110B, 130C, 140B
- Mathematics 132A-B

Grad. School Experimentalist with Computational Interest Track for students with interest in experimental physics based computational science:
- Physics 100C, 120B, 142
- Mathematics 183
- CSE 80

Information Technology Track for student with interest in physics based software oriented applications:
- Physics 100C, 140B
- CSE 12, 30, 80
- Mathematics 173

Numerical Science/Engineering Application
Develop Track for students with interest in physics and engineering applications of numerical algorithms:
- Physics 100C, 140B
- Mathematics 170A-C, 172

High Tech Instrumentation Track for students with interest in physics based instrumentation:
- Physics 100C, 120B, 140B
- Mathematics 183
- CSE 12, 80

PhysicS Major with Specialization in Earth Sciences (B.S. Degree)

The upper-division program for physics majors with specialization in earth sciences is essentially the same as the standard physics major augmented by courses in earth sciences offered through the Scripps Institution of Oceanography.

Students may wish to take additional courses in the upper-division studies, for example, SIO 50.

Suggested Schedule (restricted electives not shown)

Restricted Electives: Example

As examples of restricted electives, a student opting for a terminal B.S. Degree (Option 1) might choose to take MAE 160, ECE 103, 136, and Physics 121.

Students preparing for graduate work in materials...
science (Option 2) might consider MAE 160, ECE 103, 134, and a fourth elective. Students preparing for graduate work in physics (Option 3) might consider Physics 100C, 110B, 140B, and a fourth elective. The program of electives is intended to be flexible, and can be tailored to the student’s needs and interests in consultation with the academic advisor.

See entry for Integrated Bachelor’s/Master’s Degree Program in Materials Physics.

GENERAL PHYSICS MAJOR
(B.A. DEGREE)

This program covers the essential topics in physics and provides a broadly based education in the natural sciences. Starting with lower-division courses in mathematics, physics, computing, biology and/or chemistry, students proceed to upper-division mechanics, electricity and magnetism, thermal physics, quantum physics, and a physical measurements laboratory course. In addition, students take sixteen units of upper-division elective courses in the natural sciences or mathematics.

While the B.A. Program is suitable for students who pursue a terminal degree in physics or use it as a preparation for other professional careers, it is not intended for those who wish to proceed to the Ph.D. in physics. The latter should enroll in the B.S. Program.

The following courses are required for the general physics major:

Lower-Division
1. Physics 2A-B-C-D and 2CL-DL
2. Mathematics 20C-F
3. Three restrictive elective courses in science and engineering (a list of acceptable courses is given below)

Upper-Division
1. Physics 100A-B, 105A, 110A-B, 120A, 130A, 140A or Chemistry 127 or 131
2. Restricted Electives: Sixteen units of upper-division elective courses in science and engineering (excluding mathematics)

Approved Lower-Division Elective Courses

One course in computing chosen from the following list:
MAE 10, FORTRAN for Engineers
MAE 03, Introduction to Engineering Graphics and Design
CSE 10, Introduction to Programming Techniques
CSE 30, Introduction to Systems Programming

Physics 105B, Mathematical and Computational Physics
Plus two of the following courses:
BILD 1, The Cell
BILD 2, Multicellular Life
BILD 3, Organismic and Evolutionary Biology
Chem. 6A, General Chemistry
Chem. 6B, General Chemistry
Chem. 6C, General Chemistry

GENERAL PHYSICS/SECONDARY EDUCAION MAJOR (B.A. DEGREE)

This program is intended for students preparing for a career as a physics teacher in secondary schools. It covers the essential topics in physics and provides a broadly based education in the natural sciences. The program includes three courses in general chemistry plus a lab, one course in organic chemistry plus a lab, and a course in earth science as required by the Single Subject Credential Program of the state of California. It also includes three courses in Practicum in Learning offered by the Education Studies Program. This degree is particularly suitable for students pursuing a Single Subject (Physics) credential for high schools. If you are interested in earning a California teaching credential from UCSD, contact the Education Studies Program (EDS) for information about the prerequisite and professional preparation requirements. It is recommended that you contact EDS as early as possible in your academic career.

The following courses are required for the general physics/secondary education major:

Lower-Division
1. Physics 2A-B-C-D and 2CL-DL
2. Chemistry 6A-B-C and 6BL
3. SIO 10, 12, or 30
4. Mathematics 20C-F

Upper-Division
1. Physics 100A-B, 105A, 110A-B, 120A, 130A
2. Chemistry 140A and 143A
3. SIO 50
4. EDS 129A-B-C

ENGINEERING PHYSICS PROGRAM

The engineering physics program is offered jointly by the Departments of Physics, MAE, and ECE, and is administered by the Department of ECE. (See “ECE, Engineering Physics Program.”) Transfer students who have had prior course work in the major at other institutions must consult with the Department of Physics, Student Affairs Office, 1110-115 Urey Hall Addition to make an appointment to see a faculty advisor.

MINOR IN PHYSICS

Students may arrange minor programs or programs of concentration in physics by consulting with the Department of Physics Student Affairs Office, 1110-115 Urey Hall Addition, and their college for specific requirements. The Department of Physics requires at least twenty-eight units, of which at least twenty units must be upper-division. All courses must be taken for a letter grade. Lower-division transfer courses are permitted.

ADVISING OFFICE

All students are assigned an academic advisor. It is strongly recommended students see their advisor at least once a quarter.

Additional advising information may be obtained from the Department of Physics Student Affairs Office, 1110-115 Urey Hall Addition (858) 534-3290.

HONORS PROGRAM

The Department of Physics offers an Honors Program for students who demonstrate excellence in the major. Students interested in the Honors Program should consult the Student Affairs Office. Eligibility for the Honors Program includes completion of all required lower-division physics courses, ten upper-division physics courses, and a GPA of at least 3.50 in the physics major.

The Honors Program consists of a minimum of eight units of Honors Thesis Research (Physics 199H), an Honors Thesis, and the presentation of the research to faculty and peers at UCSD’s Undergraduate Research Conference or an Undergraduate Seminar. Admission to the Honors Program is contingent upon the prior approval of the Honors Thesis “research topic” by the Vice Chair for Education.

INTEGRATED BACHELOR’S/MASTER’S DEGREE PROGRAM IN MATERIALS PHYSICS

The program offers a M.S. in physics with specialization in materials physics. It is open only to UCSD undergraduates, and is a Plan I program only (thesis). During the fourth quarter prior to receipt of the B.S. Degree, students enrolled in the B.S. Degree program with specialization in materials physics (see above) may apply for admission to the M.S. program. To be eligible, students must have completed the first two quarters of their junior year in residence at UCSD and have a GPA of at least 3.0 in both their major and overall undergraduate curriculum. It is strongly recommended that B.S. students who intend to apply to the M.S. program take MAE 160, ECE 103, and ECE 134 as restricted B.S. electives. It is the responsibility of the prospective B.S./M.S. student to select a faculty member (from the Department of Physics or, with physics department approval, from the MAE, ECE, or chemistry departments) who would be willing to serve as the student’s advisor and with whom the student would complete at least twelve units of S/U graded research, which could commence as early as the undergraduate senior year. (Taken during the senior year, the units would count only toward the M.S. degree and not...
toward the B.S.) The student must confirm that the selected faculty advisor will not be on-off campus sabbatical leave during any quarter of the scheduled B.S./M.S. project. Students are expected to meet the requirements for the M.S. degree in one year (three consecutive, contiguous academic quarters) from the date of receipt of the B.S. Degree Any deviation from this plan, such as a break in enrollment for one or more quarters, may result in the student being dropped from the program.

The requirements for the M.S. degree are as follows:

1. Completion of at least twelve and no more than twenty-four units of research, which may begin as early as the first quarter of the senior undergraduate year.

2. Completion of three required courses during the fifth (graduate) year (MAT SCI 201A-B-C), and two restricted electives (see below).

3. Completion of restricted elective courses so that the total number of units (research plus required courses plus elective courses) totals no less than 36 units taken as a graduate student. Students accumulate units for their research by enrolling in Physics 295 (M.S. Thesis Research), which may be taken repeatedly.

4. Maintenance of a grade-point average of at least 3.0 for all course work, both cumulatively and for each quarter of enrollment in the B.S./M.S. program.

5. Completion of a thesis, with an oral presentation to, and approval of, a three-member committee from the Department of Physics including the faculty advisor. If the faculty advisor is from outside the physics department, the committee shall consist of the advisor and two members from the physics department faculty.

6. Three complete, separate, and consecutive quarters of full-time residency as a graduate student, which will commence the quarter immediately following the quarter in which the B.S. Degree is awarded (not counting summer session).

7. Although students may receive research or teaching assistantships if available from their advisor or through the Department of Physics, there is no guarantee of financial support associated with the M.S. program.

8. M.S. candidates will be permitted to serve as teaching assistants, although teaching will not be a requirement for the degree. Students who obtain a teaching assistantship should make sure that it does not interfere with completion of the M.S. degree requirements within the one year time frame allotted.

M.S. Program: Fifth Year Curriculum

1. MAT SCI 201A-B-C

2. Physics 295 (M.S. Thesis Research)

3. Two restricted electives, to be chosen from Physics 201, 211A-B; MAT SCI 227, 240A-B-C; ECE 231, 233: other courses allowed by petition

THE GRADUATE PROGRAM

The Department of Physics offers curricula leading to the following degrees:

M.S., Physics

C.Phil., Physics

Ph.D., Physics

Ph.D., Physics (Biophysics)

Ph.D. Physics Specialization in Computational Science

Biophysics students will receive their M.S. and C.Phil. degrees in physics. Only their Ph.D. will be in physics (biophysics).

Entering graduate students are required to have a sound knowledge of undergraduate mechanics, electricity and magnetism; to have had senior courses or their equivalent in atomic and quantum physics, nuclear physics, and thermodynamics; and to have taken upper-division laboratory work. An introductory course in solid-state physics is desirable.

Requirements for the master of science degree can be met according to Plan II (comprehensive examination). (See “Graduate Studies: The Master’s Degree.”) The comprehensive examination is identical to the first-year departmental examination for Ph.D. Students A list of acceptable courses is available in the Department of Physics Graduate Student Affairs office. There is no foreign language requirement.

DOCTORAL DEGREE PROGRAM

The department has developed a flexible Ph.D. Program which provides a broad, advanced education in physics while at the same time giving students opportunity for emphasizing their special interests. This program consists of graduate courses, apprenticeship in research, teaching experience, and thesis research.

Entering students are assigned a faculty advisor to guide them in their program. Many students spend their first year as teaching assistants or fellows and begin apprentice research in their second year. When a student’s association with a research area and research supervisor is well established, a faculty research progress committee is formed with the responsibility of conducting an annual review of progress and, at the appropriate time, initiating the formation of a doctoral committee. After three years of graduate study, or earlier, students complete the departmental examinations and begin thesis research. Students specializing in biophysics make up deficiencies in biology and chemistry during the first two years and complete the departmental examinations by the end of their third year of graduate study. There is no foreign language requirement.

ENTRANCE TESTING

An entrance test covering undergraduate physics is given to entering students during the first week of orientation to give better guidance to students in their graduate program. The results are not entered in the student’s file. Entering students are encouraged, but not obliged, to bring the results to the first meeting with their academic advisor. Entering students may elect to take the departmental examination instead of taking the entrance test.

REQUIREMENTS FOR THE PH.D.

Students are required to pass a departmental examination, advanced graduate courses, a qualifying examination, teaching requirement and a final defense of the thesis as described below.

1. Departmental Written Examination

Physics students are required to take the departmental written examination after completing one year of graduate work at UCSD. The examination is on the level of material usually covered in upper-division courses and the graduate courses listed below:

Fall

Physics 200A (Theoretical Mechanics)

Physics 201 (Mathematical Physics)

Physics 212A (Quantum Mechanics)

Winter

Physics 200B (Theoretical Mechanics)

Physics 203A (Adv. Classical Electrodynamics)

Physics 212B (Quantum Mechanics)

Spring

Physics 203B (Adv. Classical Electrodynamics)

Physics 210A (Equilibrium Statistical Mechanics)

Physics 212C (Quantum Mechanics)

The examination is offered twice a year, at the beginning of the fall and spring quarters, and lasts two days, four hours per day. The examination may be repeated once, the next time it is offered.

Biophysics Ph.D. students are required to take the departmental written examination within two years of graduate work at UCSD; not later than the beginning of the third year.

The University requires an annual evaluation of each graduate student’s progress toward Ph.D. candidacy and thesis defense. To this end, a Research Progress Committee (RPC) is formed for every student during the spring quarter of the second year of graduate study. Students must demonstrate proficiency in giving technical talks through an oral presentation to the RPC.

2. Advanced Graduate Courses

Physics students are required to take five advanced graduate courses (with a grade of C or better) from at least three of the groups listed below no later than the end of the third year of graduate work. A 3.0 in four of the five courses is required. (In lieu of the course requirement, students may petition to take an oral examination covering three areas of physics.)

- Group 1: Physics 218A-B-C (Plasma); 235 (Nonlin. Plas. Th.)
- Group 4: Physics 220 (Group Th.); 221A, 221B (Nonlinear Dyn.); Physics 241 and 242 (Comp. Phys); Physics 243 (Stochastic Methods) and 244 (Parallel Computing in Science and Engineering);
PH.D. IN PHYSICS (BIOPHYSICS)

The Department of Physics offers a graduate program which prepares students for a career in biophysics and which leads to the following degrees:

- C.Phil. in Physics
- Ph.D. in Physics (Biophysics)

Biophysics students will receive their M.S. and C.Phil. degrees in physics. Only their Ph.D. will be in physics (biophysics).

The Ph.D. program consists of graduate courses, apprenticeship in research, teaching experience, and thesis research. Research in biophysics is being actively pursued in several departments (physics, chemistry/biochemistry, and biology) that also offer courses in, or courses relevant to, biophysics.

Requirements for the Ph.D. in Physics (Biophysics)

The specialization in biophysics requires that students complete many of the same requirements as for the physics Ph.D. Students must pass a departmental written examination, advanced graduate courses, Ph.D. candidacy examination, teaching requirement, and a final defense of the thesis. However, the requirements for the written examination and advanced courses differ slightly from those of the Ph.D. degree.

Biophysics Ph.D. students are required to take the departmental written examination within two years of beginning graduate studies at UCSD, and no later than the beginning of the third year. Biophysics students are required to pass five courses (with a grade of C or better) from biology, chemistry, biochemistry, or physics no later than the end of the third year of graduate study. The course plan shall be determined in consultation with the advisor. At least three of these courses must be graduate courses. A 3.0 in four of the five courses is required. (In lieu of the course requirement, students may petition to take an oral examination covering three areas of physics.)

PH.D. IN PHYSICS WITH SPECIALIZATION IN COMPUTATIONAL SCIENCE

See “Computational Science in Mathematics & Engineering (CSME)” for more information.

The UCSD campus is offering a new comprehensive Ph.D. specialization in computational science that will be available to doctoral candidates in participating academic departments at UCSD.

This Ph.D. specialization is designed to allow students to obtain training in their chosen field of science, mathematics, or engineering with additional training in computational science integrated into their graduate studies. Prospective students must apply and be admitted into the Ph.D. program in physics, and then be admitted to the CSME program.

Areas of research in the Department of Physics will include computational astrophysics and cosmology, studying star formation and the large scale structure of the universe, computational condensed matter physics studying nanodevices, computational quantum field theory studying the four basic forces of nature, computational biological physics of protein folding and other biologically important complex structures, computational nonlinear dynamics, and computational plasma physics. Each faculty member works with graduate students on the listed research topics that will greatly benefit from the new program.

The specialization in computational science requires that students complete all home requirements for the physics Ph.D. degree. Students are required to pass the departmental written examination, advanced course requirements, Ph.D. candidacy examination, teaching requirement, and a final defense of the thesis. The qualifying and elective courses for the CSME program (e.g., Physics 241-244) can be used as part of the advanced course requirement, which is the same as for the physics Ph.D.

Requirements for the Ph.D. in Physics with Specialization in Computational Science:

Qualifying Requirements: In addition to the home department qualifying exam requirements, Ph.D. students must take the final exams in three qualifying exam courses from the list below. Courses taken to satisfy the qualifying requirements will not count toward the elective requirements.

1. Math. 275 or MAE 290B (Numerical PDEs)
2. Phys. 244 or CSE 260 (Parallel Computing)
3. One course to be selected from List A

List A: CSME Qualifying Exam Courses

1. Phys. 243 (Stochastic Methods)
2. Math. 270A, B, or C (Numerical Analysis)
3. Math. 272A, B, or C (Advanced Numerical PDEs)
4. MAE 223 (Computational Fluid Dynamics)
5. MAE 232A or B (Computational Solid Mechanics)
6. MAE 280A or B (Linear Systems Theory)
7. To be determined by Executive Committee

Elective Requirements: To encourage Ph.D. students to both broaden themselves in an area of science or engineering as well as to obtain more specialized training in specific areas of computational science, students will be required to take and pass three elective courses from the following approved List B (four units per course). The Executive Committee may approve the use of courses not appearing on the following list on a case-by-case basis. Courses taken to satisfy the elective requirements will not count toward the qualifying requirements.

List B: Relevant Elective Graduate Courses in Mathematics, Science, and Engineering

1. Math. 270A-B-C (Numerical Analysis; not permitted for mathematics students)
2. Math. 271A-B-C (Optimization)
3. Math. 272A-B-C (Advanced Numerical PDEs)
4. Math. 273A-B-C (Computational Mathematics Project)
5. Phys. 141/241 (Computational Physics I)
6. Phys. 142/242 (Computational Physics II)
7. Phys. 221A-B (Nonlinear Dynamics)
8. Chem. 215 (Modeling Biological Macromolecules)
DEPARTMENTAL COLLOQUIUM
The department offers a weekly colloquium on topics of current interest in physics and on departmental research programs. Students are expected to register and attend the colloquium.

SUPPLEMENTARY COURSE WORK AND SEMINARS
The department offers regular seminars in several areas of current interest. Students are strongly urged to enroll for credit in seminars related to their research interests and, when appropriate, to enroll in advanced graduate courses beyond the departmental requirement. To help beginning students choose a research area and a research supervisor, the department offers a special seminar (Physics 261) that surveys physics research at UCSD.

COURSE CREDIT BY EXAMINATION
Students have an option of obtaining credit for a physics graduate course by taking the final examination without participating in any class exercises. They must, however, officially register for the course and notify the instructor and the Department of Physics graduate student affairs office of their intention no later than the first week of the course.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

LOWER-DIVISION
The Physics 1 sequence is primarily intended for biology.
The Physics 2 sequence is intended for physical science and engineering majors and those biological science majors with strong mathematical aptitude.
The Physics 4 sequence is intended for all physics majors and for students with an interest in physics. This five-quarter sequence covers the same topics as the Physics 2 sequence, but it covers these topics more slowly and in more depth. The Physics 4 sequence provides a solid foundation for the upper-division courses required for the physics major.

NOTE: Since some of the material is duplicated in the Physics 1, 2 and 4 sequences, credit cannot be obtained for both. Please check with the Physics Student Affairs Office when switching sequences. (Example: Physics 1A followed by Physics 2A, no credit for Physics 2A.)

Physics 5, 6, 7, 8, 9, 10, 11, and 12 are intended for non-science majors. Physics 5, 6, 7, 8, 9, 10, and 12 do not use calculus while Physics 11 uses some calculus.

1A. Mechanics (3)
First quarter of a three-quarter introductory physics course, geared towards life-science majors. Equilibrium and motion of particles in Newtonian mechanics, examples from astronomy, biology and sports, oscillations and waves, vibrating strings and sound.

1B. Electricity and Magnetism (3)
Second quarter of a three-quarter introductory physics course geared toward life-science majors. Electric fields, magnetic fields, DC and AC circuitry.

1C. Waves, Optics and Modern Physics (3)
Third quarter of a three-quarter introductory physics course geared toward life-science majors. Behavior of systems under combined thermal and electric forces, the interaction of light with matter as illustrated through optics and quantum mechanics. Examples from biology and instrumentation.

1L. Waves, Optics, and Modern Physics Laboratory (2)
Physics laboratory course to accompany Physics 1C. Experiments in waves, optics, and modern physics.

2A. Physics–Mechanics (4)
A calculus-based science-engineering general physics course covering vectors, motion in one and two dimensions, Newton's first and second laws, work and energy, conservation of energy, linear momentum, collisions, rotational kinematics, rotational dynamics, equilibrium of rigid bodies, oscillations, gravitation.

2B. Physics–Electricity and Magnetism (4)
Continuation of Physics 2A covering charged matter, the electric field, Gauss's law, electric potential, capacitors and dielectrics, current and resistance, electromotive force and circuits, the magnetic field, Ampere's law, Faraday's law, inductance, electromagnetic oscillations, alternating currents and Maxwell's equations.

2BL. Physics Laboratory–Mechanics and Electrostatics (2)
One hour lecture and three hours laboratory. Experiments include gravitational force, linear and rotational motion, conservation of energy and momentum, collisions, oscillations and springs, gyroscoops. Experiments on electrostatics involve charge, electric field, potential, and capacitance. Data reduction and error analysis are required for written laboratory reports.

2CL. Physics Laboratory–Electricity and Magnetism, Waves, and Optics (2)
One hour lecture and three hours laboratory. Experiments on refraction, interference/diffraction using lasers and microwaves; lenses and the eye; acoustics; oscilloscope and L-R-C circuits; oscillations, resonance and damping, measurement of magnetic fields; and the mechanical equivalence of heat.

2D. Physics–Relativity and Quantum Physics (4)
A modern physics course covering atomic view of matter, electricity and radiation, atomic models of Rutherford and Bohr, relativity, x-rays, wave and particle duality, matter waves, Schrodinger’s equation, atomic view of solids, natural radioactivity.

2E. Advanced Mechanics (3)
A one-year course covering vectors, motion in one and two dimensions, Newton's first and second laws, work and energy, conservation of energy, linear momentum, collisions, rotational kinematics, rotational dynamics, equilibrium of rigid bodies, oscillations, gravitation, quantum mechanics.

2L. Waves, Optics, and Modern Physics Laboratory (2)
Physics laboratory course to accompany Physics 2B. Experiments in electricity and magnetism. Course materials fee is required.

3. Waves, Optics, and Modern Physics (3)
Third quarter of a three-quarter introductory physics course geared toward life-science majors. Behavior of systems under combined thermal and electric forces, the interaction of light with matter as illustrated through optics and quantum mechanics. Examples from biology and instrumentation.

3L. Waves, Optics, and Modern Physics Laboratory (2)
Physics laboratory course to accompany Physics 3C. Experiments in waves, optics, and modern physics. Course materials fee is required.

P. Physics 10A or 10B, concurrent enrollment in Physics 1AL laboratory.

R. Prior or concurrent enrollment in Physics 10B or 20B, concurrent enrollment in Physics 1AL laboratory.

S. Prior or concurrent enrollment in Mathematics 20D. (F, W, S)

T. Prior or concurrent enrollment in Physics 1C, 2A, and concurrent enrollment in Mathematics 20D. (F, W, S)

U. Physics 5, 6, 7, 8, 9, 10, 11, and 12 are intended for non-science majors. Physics 5, 6, 7, 8, 9, 10, and 12 do not use calculus while Physics 11 uses some calculus.

W. Mechanics (3)
First quarter of a three-quarter introductory physics course, geared towards life-science majors. Equilibrium and motion of particles in Newtonian mechanics, examples from astronomy, biology and sports, oscillations and waves, vibrating strings and sound.

X. Electricity and Magnetism (3)
Second quarter of a three-quarter introductory physics course geared toward life-science majors. Electric fields, magnetic fields, DC and AC circuitry.

Y. Waves, Optics, and Modern Physics (3)
Third quarter of a three-quarter introductory physics course geared toward life-science majors. Behavior of systems under combined thermal and electric forces, the interaction of light with matter as illustrated through optics and quantum mechanics. Examples from biology and instrumentation.

Z. Waves, Optics, and Modern Physics Laboratory (2)
Physics laboratory course to accompany Physics 2B. Experiments in electricity and magnetism. Course materials fee is required.
Physics 4A, Mathematics 20B, and concurrent enrollment in Mathematics 20C. (S)

4C. Physics for Physics Majors—Electricity and Magnetism (4)
Continuation of Physics 4B covering charge and Coulomb's law, energy, Gauss's law, electric potential, capacitors and dielectrics, current and resistance, magnetic field, Ampère's law, Faraday's law, inductance, magnetic properties of matter, LRC circuits, Maxwell's equations.

PREREQUISITES: Physics 4B, Mathematics 20C, and concurrent enrollment in Mathematics 20D. (F)

4D. Physics for Physics Majors—Electromagnetic Waves, Optics, and Special Relativity (4)
Continuation of Physics 4C covering electromagnetic waves and the nature of light, cavities and wave guides, electromagnetic radiation, reflection and refraction with applications to geometrical optics, interference, diffraction, holography, special relativity.

PREREQUISITES: Physics 4C, Mathematics 20E, and prior or concurrent enrollment in Mathematics 20D, and concurrent enrollment in Mathematics 20F. (W)

4E. Physics for Physics Majors—Quantum Physics (4)
Continuation of Physics 4D covering experimental basis of quantum mechanics: Schrödinger equation and simple applications; spin; structure of atoms and molecules; selected topics from solid state, nuclear, and elementary particle physics.

PREREQUISITES: Physics 4D, Mathematics 20D, and concurrent enrollment in Mathematics 20D, 20E, and prior or concurrent enrollment in Mathematics 20F. (S)

5. The Universe (4)
Introduction to astronomy. Topics include the earth's place in the universe; the atom and light; the birth, life, and death of stars; the Milky Way galaxy; normal and active galaxies; and cosmology. Physics 5 or 7, and SIO 10 and 30 form a three-quarter sequence. Students may not receive credit for both Physics S and Physics 5 and Physics S. Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (F,S)

7. Introductory Astronomy (4)
Introduction to astronomy and astrophysics. Topics same as Physics 5. This course uses basic pre-calculus level mathematics (algebra, proportions, logs, similar triangles). Physics 5 or 7 and Earth Sciences 10 and 30 form a three-quarter sequence. Students may not receive credit for both Physics 5 and Physics S. Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (W)

8. Physics of Everyday Life (4)
Examines phenomena and technology encountered in daily life from a physics perspective. Topics include waves, music, acoustics, telecommunication, sports, appliances, transportation, computers, and energy sources. Physics concepts will be introduced and discussed as needed employing some algebra. No prior physics knowledge is required. Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (S)

9. The Solar System (4)
A non-mathematical exploration of our Solar System and other planetary systems for non-science majors. The sun, terrestrial and giant planets, satellites, asteroids, comets and meteors. The formation of planetary systems, space exploration, the development and search for life. (F)

10. Concepts in Physics (4)
This is a one-quarter general physics course for nonscience majors. Topics covered are motion, energy, heat, waves, electric current, radiation, light, atoms and molecules, nuclear fission and fusion. This course emphasizes concepts with minimal mathematical formulation.

PREREQUISITE: college algebra or equivalent. Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (W)

11. Survey of Physics (4)
Survey of physics for non-science majors with strong mathematical background, including calculus. Physics 11 describes the laws of motion, gravity, energy, momentum, and relativistic effects. A laboratory component consists of two experiments with gravity and conservation principles.

PREREQUISITES: Mathematics 10A or 20A and concurrent enrollment in Math 10B or 20B. (F)

12. Energy and the Environment (4)
A course covering energy fundamentals, energy use in an industrial society and the impact of large-scale energy consumption. It addresses topics on fossil fuel, heat engines, solar energy, nuclear energy, energy conservation, transportation, air pollution and global effects. Concepts and quantitative analysis. (S)

87. Freshman Seminar in Physics and Astrophysics (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all department campuses and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

98. Directed Group Study (2)
Directed group study, such as in a field not included in the regular departmental curriculum. (P/NP grades only)

99. Independent Study (2)
Independent reading or research on a topic by special arrangement with a faculty member. (P/NP grading only)

UPPER-DIVISION

100A. Electromagnetism (4)
Coulomb's law, electric fields, electrostatics; conductors and dielectrics; steady currents, elements of circuit theory. Four hours lecture.

PREREQUISITES: Physics 2C or 4D, Mathematics 20D, 20E, 20F. (Concurrent enrollment in Math. 20F permitted.) (F)

100B. Electromagnetism (4)
Magnetic fields and magnetostatics, magnetic materials, induction, AC circuits, displacement currents; development of Maxwell's equations. Four hours lecture.

PREREQUISITE: Physics 100A. (W)

100C. Electromagnetism (4)
Electromagnetic waves, radiation theory; application to optics; motion of charged particles in electromagnetic fields; relation of electromagnetism to relativistic concepts. Four hours lecture.

PREREQUISITE: Physics 100B. (S)

105A. Mathematical and Computational Physics (4)
A combined analytic and mathematics-based numerical approach to the solution of common applied mathematics problems in physics and engineering. Topics: Fourier series and integrals, special functions, initial and boundary value problems, Green's functions; heat, Laplace and wave equations.

PREREQUISITES: Mathematics 20E and 20F or Physics 4E or 2D. (F)

105B. Mathematical and Computational Physics (4)
A continuation of Physics 105A covering selected advanced topics in applied mathematical and numerical methods. Topics include statistics, diffusion and Monte-Carlo simulations; Laplace equation and numerical methods for non-separable geometries; waves in inhomogeneous media, WKB analysis; nonlinear systems and chaos.

PREREQUISITE: Physics 105A. (W)

110A. Mechanics (4)
Phase flows, bifurcations, linear oscillators, calculus of variations, Lagrangian dynamics, conservation laws, central forces, systems of particles, collisions, coupled oscillations. Four-hour lecture.

PREREQUISITES: Physics 2C or 4D, Mathematics 20D, 20E, 20F (concurrent enrollment in Mathematics 20F permitted). (F)

110B. Mechanics (4)
Noninertial reference systems, dynamics of rigid bodies, Hamilton's equations, Liouville's theorem, chaos, continuum mechanics, special relativity.

PREREQUISITES: Physics 110A and Mathematics 20E. (W)

SIO 111/Physics 111. Introduction to Ocean Waves and Tides (4)
This course will cover a broad range of physical oceanography topics, including linear dynamics of surface gravity waves, dispersion relations, spectral descriptors, group velocity, shoaling waves, ray theory, edge waves, Coriolis force, the tide-generating force, Laplace's tide equations, Kelvin waves.

PREREQUISITES: Math. 20A-E and Physics 2A-C or consent of instructor. (W)

120A. Physical Measurements (4)
A laboratory-lecture course in physical measurements with an emphasis on electronic methods. Topics include circuit theory, special circuits. Fourier analysis, noise, transmission lines, transistor theory, amplifiers, feedback, operational amplifiers, oscillators, pulse circuits, digital electronics.

Three hours lecture, four hours laboratory. PREREQUISITES: Physics 2CL and 2DL, Physics 100A. (S,F) Course materials fee is required.

121. Experimental Techniques (4)
A laboratory-lecture courses providing content and experiences useful in modern physics laboratories. Topics include: mechanical design and machining; mechanics of materials; thermal design/control; vacuum and cryogenic technologies; optical raytracing and design; practical electronics; computer interface to scientific equipment.

PREREQUISITE: Physics 120A. (W)

130A. Quantum Physics (4)
Phenomena which led to the development of quantum mechanics. Wave mechanics; the Schrödinger equation, interpretation of the wave function, the uncertainty principle, piece-wise constant potentials, simple harmonic oscillator, central field and the hydrogen atom. Observables and measurements. Four hours lecture.

PREREQUISITES: Physics 2C or 2D, 4E, or equivalent. (S)

130B. Quantum Physics (4)
Matrix mechanics, angular momentum and spin, Stern-Gerlach experiments, dynamics of two-state systems, approximation methods, the complete hydrogen spectrum, identical particles. Four hours lecture.

PREREQUISITE: Physics 130A. (F)

130C. Quantum Physics (4)
Scattering theory, symmetry and conservation laws, systems of interacting particles, interaction of electromagnetic radiation with matter, Fermi golden rule, the relativistic electron.

PREREQUISITES: Physics 100C or equivalent, 130B. (W)

133/219. Condensed Matter/Materials Science Laboratory (4)
A project-oriented laboratory course utilizing state-of-the-art experimental techniques in materials science. The course prepares students for research in a modern condensed matter/materials science laboratory. Under supervision, the students develop their own experimental ideas after investigating the current literature. With the use of sophisticated state-of-the-art instrumentation students conduct research, write a research paper, and make verbal presentations.

PREREQUISITES: Physics 2CL and 2DL, Physics 152A or Physics 211A for graduate students. (S) Course materials fee is required.

137. String Theory (4)

PREREQUISITES: Physics 100A and 110A or consent of instructor, Physics 130A may be taken concurrently. (S)

140A. Statistical and Thermal Physics (4)
Integrated treatment of thermodynamics and statistical mechanics; statistical treatment of entropy, review of elementary probability theory, canonical distribution, partition function, free energy, phase equilibrium, introduction to ideal quantum gases.

PREREQUISITE: Physics 130A, or consent of instructor.

140B. Statistical and Thermal Physics (4)
Applications of the theory of ideal quantum gases in condensed matter physics, nuclear physics and astrophysics; advanced thermodynamics, the third law, chemical equilibrium, low temperature physics; kinetic theory and transport in non-equilibrium systems; introduction to critical phenomena including mean field theory.

PREREQUISITE: Physics 140A, or consent of instructor. (W)
141. Computational Physics I: Probabilistic Models and Simulations (4)
Project-based computational physics laboratory course for students’ choice of Fortran90/95, or C/C++. Applications of materials science to the structure of the early universe are chosen from molecular dynamics, classical and quantum Monte Carlo methods, physical and chemical properties of nanodevices and nanomaterials, superconductivity and superfluidity, radiation and energy transport.

142. Computational Physics II: PDE and Matrix Models (4)
Project-based computational physics laboratory course for modern physics and engineering problems with student’s choice of Fortran90/95, or C/C++. Applications of finite element PDE models are chosen from quantum mechanics and nanodevices, fluid dynamics, electromagnetism, materials physics, and other modern topics. Graduate students will do advanced projects. PREREQUISITE: upper-division standing or consent of instructor. Conjointed with Physics 241. (W)

151. Elementary Plasma Physics (4)
Particle motions, plasmas as fluids, waves, diffusion, equilibrium and stability, nonlinear effects, controlled fusion. Three hours lecture. PREREQUISITE: Math 20D or consent of instructor. Physics 100 (B,C) or ECE 107 and Physics 110A are suggested. Cross-listed with MAE 117A. (S)

152A. Condensed Matter Physics (4)
Physics of the solid state. Binding mechanisms, crystal structures and symmetries, diffraction, reciprocal space, phonons, free and nearly free electron models, energy bands, solid-state thermodynamics, kinetic theory and transport, semiconductors. PREREQUISITES: Physics 130A or Chemistry 133, and Physics 140A. (W)

152B. Electronic Materials (4)

154. Elementary Particle Physics (4)
The constituents of matter (quarks and leptons) and their interactions (strong, electromagnetic, and weak). Symmetries and conservation laws. Fundamental processes involving quarks and leptons. Unification of weak and electromagnetic interactions. Particle-astrophysics and the Big Bang. PREREQUISITES: Physics 130B.

155. Nonlinear Dynamics (4)
Qualitative aspects of Hamiltonian and dissipative dynamical systems: stability of orbits, integrability of Hamiltonian systems, chaos and periodic motion, transition to chaos. Examples to be drawn from mechanics, fluid mechanics, and related physical systems. Numerical work and graphical display and interpretation will be emphasized.
Three hours lecture. PREREQUISITE: Physics 100B and 110B. (S)

160. Stellar Astrophysics (4)
Introduction to stellar astrophysics: observational properties of stars, stellar structure, evolution and energy transport in stars, stellar spectroscopy, nuclear processes in stars, stellar structure and evolution, degenerate matter and compact objects, supernovae and nucleosynthesis. Physics 160, 161, and 162 may be taken as a three-quarter sequence for students interested in pursuing graduate study in astrophysics or individually as topics of interest. PREREQUISITE: Physics 2A, 2B, 2C, 2D or 4A, 4B, 4C, 4D, 4E. (F)

161. Black Holes and The Milky Way Galaxy (4)
The structure and content of the Milky Way galaxy and the physics of black holes. Topics will be selected from: general relativity, gravitational radiation, black hole spacetime, stochastic x-ray sources, galactic structure, physical processes in the interstellar medium, star formation. Physics 160, 161, and 162 may be taken as a three-quarter sequence for students interested in pursuing graduate study in astrophysics or individually as topics of interest. PREREQUISITE: Physics 2A, 2B, 2C, 2D or 4A, 4B, 4C, 4D, 4E. (W)

162. Galaxies and Cosmology (4)
The structure and properties of galaxies, galaxy dynamics and dark matter, the expanding universe, some of the following topics: the big bang, early universe, galaxy formation and evolution, large scale structure, active galaxies and quasars. Physics 160, 161, and 162 may be taken as a three-quarter sequence for students interested in pursuing graduate study in astrophysics or individually as topics of interest. PREREQUISITE: Physics 2A, 2B, 2C, 2D or 4A, 4B, 4C, 4D, 4E. (S)

170. Medical Instruments: Principles and Practice (4)
The principles and clinical applications of medical diagnostic instruments, including electromagnetic measurement, spectroscopy, microscopy, ultrasound, X-ray, MRI, tomography, lasers in surgery, fiber optics in diagnostics. PREREQUISITE: Physics 1C, or 2C, or equivalent. (F)

171/271. Biophysics of Neurons and Networks (4-4)
Fundamental limits to measurements on nervous systems, the biophysics of excitable membranes and neurons, and the fundamentals of recurrent neuronal networks. The emphasis will be on the study of physical systems through physical reasoning and mathematical analysis. Three hours lecture. The graduate version, Physics 271, will include a report at the level of a research proposal. PREREQUISITES: Physics 100A and 110A, or 201A, CHEM 6C and Physics 140A, for graduate students, consent of instructor. The graduate version, Physics 271, will include a report at the level of a research proposal. (F)

172/272. Biophysics of Molecules (4-4)
Physical concepts and techniques used to study the structure and function of biological molecules, the thermodynamics, and kinetic properties of biological activity, and physical descriptions of biological processes. Examples from enzyme action, protein folding, photobiology, and molecular motors. Three hours lecture. PREREQUISITES: Physics 100A and 110A, or 201A, CHEM 6C and Physics 130A, for graduate students, consent of instructor. The graduate version, Physics 272, will include a report at the level of a research proposal. (W)

173. Modern Physics Laboratory: Biological and Quantum Physics (4)
A selection of experiments in contemporary physics and biophysics. Students select among pulsed NMR, Mossbauer, Zeeman effect, light scattering, X-ray crystallography, optical trapping, voltage clamp and genetic transcription of ion channels in oocytes, florescent imaging, and flight control in flies. PREREQUISITES: Physics 120A, or 140B, or Engineering 68L. (S)

180/280. Teaching and Learning Physics (4)
How people learn and think in physics. Readings in physics, physics education research, and cognitive science. Field work teaching and evaluating pre-college and college students. Useful for students interested in teaching and learning physical sciences. PREREQUISITES: Physics 1, 2, or 4 series, or consent of instructor. Cross-listed with ED S 105. (S)

191. Undergraduate Seminar on Physics (1)
Undergraduate seminars organized around the research interests of various faculty members. PREREQUISITE: Physics 2A or 4A series. (P)

192. Senior Seminar in Physics (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in Physics at the upper-division level. Senior Seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior Seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. (P)

195. Physics Instruction (2-4)
Students will be responsible for and teach a class section of a lower-division physics course. They will also attend a weekly meeting on teaching methods and materials conducted by the professor who supervises their teaching, (P/NP grades only). PREREQUISITE: consent of instructor. (F, W, S)

197. Physics Internship (4)
An enrichment program which provides work experience with industry, government offices, etc., under the supervision of a faculty member and industry supervisor.

199. Directed Group Study (2 or 4)
Directed group study on a topic or in a field not included in the regular departmental curriculum. (P/NP grades only). PREREQUISITE: consent of instructor and departmental chair. (F, W, S)

199H. Honors Thesis Research for Undergraduates (2-4)
Honors thesis research for seniors participating in the Honors Program. Research is conducted under the supervision of a physics faculty member. PREREQUISITE: admission to the Honors Program in physics. (F, W, S)

GRADUATE

200A. Theoretical Mechanics (4)
Lagrangian and Hamilton’s principle; symmetry and constants of the motion. Applications: charged particle motion; central forces and scattering theory; small oscillations; anharmonic oscillations; rigid body motion; continuum mechanics. PREREQUISITE: Physics 110B or equivalent. (F)

200B. Theoretical Mechanics (4)
Hamilton’s equations, canonical transformations; Hamilton-Jacobi theory; action-angle variables and adiabatic invariants; introduction to canonical perturbation theory, nonintegrable systems and chaos; Liouville equation; ergodicity and mixing entropy; statistical ensembles. PREREQUISITE: Physics 200A. (W)

201. Mathematical Physics (5)
An introduction to mathematical methods used in theoretical physics. Topics include: a review of complex variable theory, applications of the Cauchy residue theorem, asymptotic series, method of steepest descent, Fourier and Laplace transforms, series solutions for ODE’s and related special functions, Sturm Liouville theory, variational principles, boundary value problems, and Green’s function techniques. (F)

203A. Advanced Classical Electrodynamics (5)
Electrostatics, symmetries of Laplace’s equation and methods of solution, boundary value problems, multipole expansions in macroscopic media, magnetostatics, Maxwell’s equations, Green functions for Maxwell’s equations, plane wave solutions, plane waves in macroscopic media. PREREQUISITE: Physics 100C or equivalent. (W)

203B. Advanced Classical Electrodynamics (4)
Special theory of relativity, covariant formulation of electrodynamics, radiation from current distributions and accelerated charges, multipole radiation fields, waveguides and resonant cavities. PREREQUISITE: Physics 203A. (S)

210A. Equilibrium Statistical Mechanics (4)
Approach to equilibrium: BBGKY hierarchy; Boltzmann equation; H-theorem. Ensemble theory; thermodynamic potentials; Quantum statistics; Bose condensation. Interacting systems: Cluster expansion; phase transition via mean-field theory; the Ginzburg criterion. PREREQUISITES: Physics 140A-B, 152A, 200A-B, or equivalent; concurrent enrollment in Physics 212C. (S)

210B. Nonequilibrium Statistical Mechanics (4)
Transport phenomena; kinetic theory and the Chapman-Enskog method; hydrodynamic theory; nonlinear effects and the mode coupling method. Stochastic processes; Langevin and Focker-Planck equation; fluctuation-dissipation relation; multiplicative processes; dynamic field

479 PHYSICS
215C. Statistical Field Theory (4)
Phase transition and critical phenomena: Landau-Ginzburg model and statistical field theory; Goldstone modes; breakdown of the Higgs mechanism; non-linear sigma model; spinodal decomposition; second order transitions; critical exponents; universality classes. Prerequisite: Physics 210A. (F)

211A. Solid-State Physics (5)
The first of a two-quarter course in solid-state physics. Covers a range of solid-state phenomena that can be understood within an independent particle description. Topics include: chemical versus band-theoretical description of solids, electronic band structure calculation, lattice dynamics, dispersion relations, electron-phonon interactions, band structure, semiconductors, metals, optical properties, semiconductor physics. Prerequisite: Physics 152A or equivalent. (F)

218B. Plasma Physics (4)
This course deals with magnetized plasma. Topics include: Ambipolar diffusion, the collisional plasma, wave-plasma interaction, stability of plasma waves in cold plasma, wave-particle interactions, radiation theory: quantum theory of the photon, wave-particle interactions, statistical mechanics, plasma physics. Prerequisite: Physics 211A. (W)

215B. Particles and Fields (4)
Continuation of 215A. Deals with collective effects in solids arising from interactions between constituents. Topics include electron-electron and electron-phonon interactions, screening, band structure effects, Landau Fermi liquid theory, Magnetism in metals and insulators, superconductivity; occurrence, phenomenology, and microscopic theory. Prerequisites: Physics 210A, 211A. (offered in alternate years) (W)

212A. Quantum Mechanics (4)
Hilbert space formulation of quantum mechanics and applications to simple systems: states and observables, uncertainty relations and measurements, time evolution, and mixed states and density matrices. Symmetry: commuting observables and symmetries, rotation group representations, Clebsch-Gordan coefficients, Wigner-Eckart theorem, and discrete symmetries (parity, time reversal, etc.). Prerequisite: Physics 130B or equivalent. (F)

212B. Quantum Mechanics (4)
Time independent perturbation theory: non-degenerate and degenerate cases, Zeno effect, fine structure, exclusion principle, and many-electron atoms. Time dependent perturbation theory: interaction picture and Dyson series, transition rates. Radiation theory: quantization of EM field, calculation of atomic level transition rates, line width, and spontaneous decay. Prerequisite: Physics 212A. (W)

212C. Quantum Mechanics (4)

214. Physics of Elementary Particles (4)
Classification of particles using symmetries and invariance principles, quarks and leptons, quantum electrodynamics, weak interactions, e-p scattering, deep-inelastic lepton-nucleon scattering, pp collisions, introduction to QCD. Prerequisite: Physics 215A. (W)

215A. Particles and Fields (4)
The first quarter of a two-quarter course on field theory and elementary particle physics. Topics covered include the relation between quantum mechanics and classical mechanics, the calculation of cross sections and reaction rates, covariant perturbation theory, and quantum electrodynamics. (F)

215B. Particles and Fields (4)
Continuation of 215A. Gauge theory quantization by means of path integrals, SU(3) symmetry and the quark model, spontaneous symmetry breakdown, introduction to QCD, quark confinement, QCD and the electroweak theory, calculation of cross sections and reaction rates, covariant perturbation theory, and quantum electrodynamics. (F)

215C. Particles and Fields (4)
Modern applications of the renormalization group in quan-
tum chromodynamics and the weak interactions. Unified gauge theories, particle cosmology, and special topics in particle theory. Prerequisite: Physics 215A-B. (offered in alternate years) (S)

217. Field Theory and the Renormalization Group (4)
Applications of field theoretic and renormalization group methods to problems in condensed matter, or particle physics. Topics may include phase transitions and critical phenomena; many body quantum systems; quantum chromodynamics and the electroweak model. Prerequisite: Physics 210A.

218A. Plasma Physics (4)
The basic physics of plasmas is discussed for the simple case of an unmagnetized plasma. Topics include: thermal equilibrium statistical properties, fluid and Landau theory of electron and ion plasma waves, velocity space instability, quasi-linear theory, fluctuations, scattering or radiation, Fokker-Planck equation. (F)

218B. Plasma Physics (4)
This course deals with magnetized plasma. Topics include: Ambipolar diffusion, the collisional plasma, wave-plasma interaction, stability of plasma waves in cold plasma, wave-particle interactions, radiation theory: quantum theory of the photon, wave-particle interactions, statistical mechanics, plasma physics. Prerequisite: Physics 211A. (W)

218C. Plasma Physics (4)
This course deals with the physics of confined plasmas with particular emphasis on tokamak fusion. Topics include: topology of magnetic fields, confined plasma equilibria, energy principles, ballooning and kink instabilities, resistive MHD modes (tearing, rippling and pressure-driven), gyro-kinetic theory, microinstabilities and anomalous transport, and laser-plasma interactions relevant to inertial fusion. Prerequisite: Physics 218B. (S)

133/219. Condensed Matter/Materials Science Laboratory (4)
A project-oriented laboratory course utilizing state-of-the-art experimental techniques in materials science. The student prepares students for research in a modern condensed matter-matters science laboratory. Under supervision, the students develop their own experimental ideas after investigating current research literature. With the use of sophisticated state-of-the-art instrumentation students conduct research projects, write a research paper, and make oral presentations. Prerequisites: Physics 2CL 1D and 2D or 2D for undergraduates; Physics 152A or Physics 211A for graduate students. (S)

220. Group Theoretical Methods in Physics (4)
Study of group theoretical methods with applications to problems in high energy, atomic, and condensed matter physics. Relevant physical systems include: gauge fields, superconductivity, quantum chromodynamics and the electroweak model. Prerequisite: Physics 212C. (S)

221A. Nonlinear and Nonequilibrium Dynamics of Physical Systems (4)
An introduction to the modern theory of dynamical systems and applications thereof. Topics include maps and flows, bifurcation theory and normal form analysis, chaotic attractors in dissipative systems, Hamiltonian dynamics and the KAM theorem, and time series analysis. Examples from real physical systems will be stressed throughout. Prerequisite: Physics 208. (Offered in alternate years) (W)

221B. Nonlinear and Nonequilibrium Dynamics of Physical Systems (4)
Nonlinear dynamical systems and chaos. Material to be covered includes fluid mechanical instabilities, the amplitude equation approach to pattern formation, reaction-diffusion dynamics, integrable systems and solitons, and an introduction to coherent structures and spatio-temporal chaos. Prerequisites: Physics 210B and 221A. (Offered in alternate years) (S)

222A. Elementary Particle Physics (4)
Weak interactions; neutrino physics; CP and CP violation; electroweak gauge theory and symmetry breaking. Design of detectors and experiments; searches for new phenomena. Prerequisites: Physics 214. (W)

223. Stellar Structure and Evolution (4)
Energy generation, flow, hydrostatic equilibrium, equation of state. Dependence of stellar parameters (central surface temperature, radius, luminosity, etc.) on stellar mass and relation to physical constants. Relationship of these parameters to the H-R diagram and stellar evolution. Stellar interiors, opacity sources, radiative and convective energy transport, nuclear reactions, nuclear astrophysics, and Polytropic models. White dwarfs and neutron stars. Prerequisites: Physics 130C or equivalent, Physics 140A-B or equivalent. (S/U grades permitted.) (Offered in alternate years.) (F)

224. Physics of the Interstellar Medium (4)
Gaseous nebulae, molecular clouds, ionized regions, and dust. Low energy processes in neutral and ionized gases. Interaction of matter with radiation, emission and absorption processes, formation of atomic lines. Energy balance, steady state temperatures, and the physics and properties of dust. Maser and molecular line emission. Dynamics and shells in the interstellar medium. Prerequisites: Physics 130A-B or equivalent, Physics 140A-B or equivalent. (S/U grades permitted.) (Offered in alternate years.)

225A-B. General Relativity (4-4)
This is a two-quarter course on gravitation and the general theory of relativity. The first quarter is intended to be offered every year and may be taken independently of the second quarter, the second quarter will be offered in alternate years. Topics covered in the first quarter include special relativity, differential geometry, the equivalence principle, the Einstein field equations, and experimental tests of general relativity. The second quarter will focus on more advanced topics, including gravitational collapse, Schwarzschild and Kerr geometries, black holes, gravitational radiation, cosmology, and quantum gravitation. (225B offered in alternate years) (W)

226. Galaxies and Galactic Dynamics (4)
The structure and dynamics of galaxies. Topics include potential theory, the theory of self-consistent equilibria of stellar systems, stability and dynamics of stellar systems including relaxation and approach to equilibrium. Collisions between galaxies, galactic evolution, dark matter, and galaxy formation. Prerequisite: consent of instructor. (Offered in alternate years.)

227. Cosmology (4)
An advanced survey of topics in physical cosmology. The Friedmann models and the large-scale structure of the universe, including the observational determination of Ho (the Hubble constant) and q (the deceleration parameter). Galaxy number counts. A systematic exposition of the physics of the early universe, including vacuum phase transitions; inflation; the generation of net baryon number, fluctuations, topological defects and textures. Primordial nucleosynthesis, both standard and nonstandard models. Precision cosmology: an in-depth analysis of alternatives density fluctuations. Discussion of dark matter candidates and constraints from observation and experiment. Neutrino cosmology and the determination of the age of the universe. Prerequisite: consent of instructor. (Offered in alternate years.)

228. High-Energy Astrophysics and Compact Objects (4)
The physics of compact objects, including the equation of state of dense matter and stellar stability theory. Maximum mass of neutron stars, white dwarfs, and super-massive objects. Black holes and accretion disks. Compact x-ray sources and transient phenomena, including x-ray and g-ray bursts. The fundamental physics of electromagnetic radiation mechanisms: synchrotron radiation, Compton scattering, thermal and nonthermal bremsstrahlung, pair production, pulsars, particle acceleration models, neutrino production and energy loss mechanisms, supernovae, and neutron star production. Prerequisites: Physics 130A-B-C or equivalent. (Offered in alternate years.)

230. Advanced Solid-State Physics (4)
Selection of advanced topics in solid-state physics; material covered may vary from year to year. Examples of topics covered: disordered systems, surface physics, strong-coupling superconductivity, quantum Hall effect, low-dimensional solids, heavy fermion systems, high-temperature superconductivity, solid and liquid helium. Prerequisite: Physics 211B. (S)

1520. Electronic Materials (4)
258. Astrophysics and Space Physics Special Topics Seminar (0–1)
Discussions of current research in astrophysics and space physics. (S/U grades only) (F,W,S)

260. Physics Colloquium (0–1)
Discussions of recent research in physics directed to the entire physics community. (S/U grades only) (F,W,S)

261. Seminar on Physics Research at UCSD (0–1)
Discussions of current research conducted by faculty members in the Department of Physics. (S/U grades only) (W,S)

266. Recent Topics in Condensed Matter Physics (1–3)
The course is dedicated to recent developments in the area of condensed matter physics through lectures given by graduate students and postdocs. The course teaches practical skills, delivering research lectures, and answering questions in front of a research audience. PREREQUISITE: physics graduate students in good standing. (F,W,S)

171/271. Biophysics of Neurons and Networks (4–4)
Fundamental limits to measurements on nervous systems, the biophysics of excitable membranes and neurons, and the fundamentals of recurrent neuronal networks. The emphasis is on information processing by the nervous system through physical reasoning and mathematical analysis. Three hours lecture. The graduate version, Physics 271, will include a report at the level of a research proposal. PREREQUISITES: Physics 100A and 110A, BILD 1, Chemistry 6C and Physics 140A, for graduate students, consent of instructor. The graduate version, Physics 271, will include a report at the level of a research proposal. (W)

172/272. Biophysics of Molecules (4–4)
Physical concepts and techniques used to study the structure and function of biological molecules, the thermodynamics and kinetics of biological activity, and physical descriptions of biological processes. Examples from enzyme action, protein folding, photobiology, and molecular motors. Three hours lecture. PREREQUISITES: Physics 100A and 110A, BILD 1, Chemistry 6C and Physics 130A and graduate students consent of instructor. The graduate version, Physics 272, will include a report at the level of a research proposal. (S)

180/280. Teaching and Learning Physics (4)
How people learn and understand key concepts in physics. Readings in physics, physics education research, and cognitive science. Field work teaching and evaluating pre-college and college students. Useful for students interested in teaching and learning physical sciences. Undergraduate students are required to read and discuss papers in class. Graduate students are expected to read the papers and prepare an annotated bibliography on the background and literature, then lead the in-class discussion on the topics covered in the papers. PREREQUISITES: Physics 1, 2, or 4 series, or consent of instructor.

295. M.S. Thesis Research in Materials Physics (1–12)
Directed research on M.S. dissertation topic. (F,W,S)

297. Special Studies in Physics (1–4)
Studies of special topics in physics under the direction of a faculty member. PREREQUISITE: consent of instructor and departmental vice chair, education. (S/U grades permitted) (F,W,S)

298. Directed Study in Physics (1-12)
Research studies under the direction of a faculty member. (S/U grades permitted) (F,W,S)

299. Thesis Research in Physics (1-12)
Directed research on dissertation topic. (F,W,S)

500. Instruction in Physics Teaching (1-4)
This course, designed for graduate students, includes discussion of teaching, techniques and materials necessary to teach physics courses. One meeting per week with course instructors, one meeting per week in an assigned recitation section, problem session, or laboratory section. Students are required to take a total of two units of Physics 500. (F,W,S)

DISCLAIMER. Magnets: dia-/para-/ferro-/antiferromagnetism, phase transitions, low temperature properties. Superconductors: pairing, Meissner effect, flux quantization, BCS theory. Physics 152A, Phys. 211 or consent of instructor. Graduate students in Phys. 232 will complete a special topics paper. (S)

235. Nonlinear Plasma Theory (4)
This course deals with nonlinear phenomena in plasmas. Topics include: orbit perturbation theory, stochasticity, Arnold diffusion, nonlinear wave-particle and wave-wave interaction, resonance broadening, basics of fluid and plasma turbulence, closure models, models of coherent structures. PREREQUISITE: Physics 218C or consent of instructor. (Offered in alternate years.) (W)

239. Special Topics (1–3)
From time to time a member of the regular faculty or a resident visitor will find it possible to give a self-contained short course on an advanced topic in his or her special area of research. This course is not offered on a regular basis, but it is estimated that it will be given once each academic year. (S/U grades permitted.)

141/241. Computational Physics I: Probabilistic Models and Simulations (4-4)
Project-based computational physics laboratory course with student’s choice of Fortran90/95 or C/C++. Applications from materials science to the structure of the early universe are chosen from molecular dynamics, classical and quantum Monte Carlo methods, physical Langevin/Fokker-Planck processes, and other modern topics. Graduate students will do advanced projects. PREREQUISITES: upper-division standing or consent of instructor; graduate standing for 241. (W)

142/242. Computational Physics II: PDE and Matrix Models (4-4)
Project-based computational physics laboratory course for modern physics and engineering problems with student’s choice of Fortran90/95 or C/C++. Applications of finite element PDE models are chosen from quantum mechanics and nanodevices, fluid dynamics, electromagnetism, materials physics, and other modern topics. Graduate students will do advanced projects. PREREQUISITES: upper-division standing; graduate standing for 242. (S)

243. Stochastic Methods (4)
Introduction to methods of stochastic modeling and simulation. Topics include: random variables; stochastic processes; Markov processes; one-step processes; the Frobenius-Planck equation and Brownian motion; the Langevin approach; Monte-Carlo methods; fluctuations and the Boltzmann equation; and stochastic differential equations. (F)

244. Parallel Computing in Science and Engineering (4)
Introduction to basic techniques of parallel computing, the design of parallel algorithms, and their scientific and engineering applications. Topics include: parallel computing platforms; message-passing model and software; design and application of parallel software packages; parallel visualization; parallel applications. (S)

250. Condensed Matter Physics Seminar (0–1)
Discussion of current research in physics of the solid state and of other condensed matter. (S/U grades only) (F,W,S)

251. High-Energy Physics Seminar (0–1)
Discussions of current research in nuclear physics, principally in the field of elementary particles. (S/U grades only) (F,W,S)

252. Plasma Physics Seminar (0–1)
Discussions of recent research in plasma physics. (S/U grades only) (F,W,S)

253. Astrophysics and Space Physics Seminar (0–1)
Discussions of recent research in astrophysics and space physics. (S/U grades only) (F,W,S)

257. High-Energy Physics Special Topics Seminar (0–1)
Discussions of current research in high-energy physics. (S/U grades only) (F,W,S)

288. Special Topics in Physics (1-12)
This course, designed for graduate students, includes discussions of teaching, techniques and materials necessary to teach physics courses. One meeting per week with course instructors, one meeting per week in an assigned recitation section, problem session, or laboratory section. Students are required to take a total of two units of Physics 288. (F,W,S)

POLITICAL SCIENCE 481
The Major Program

Political science addresses some of the fundamental problems facing human society. Questions concerning world peace, government policies aimed at achieving economic stability and growth, the management of environmental quality, control over political competition, the possibility of using law to affect social and political change, and the gap between the rich and poor in the United States and abroad are all on the research agenda of contemporary political scientists. The general purpose of the major is to address these and other issues systematically, and, simultaneously, to raise the broad theoretical questions which can help students relate today’s political debates to those debates about politics which have kept a theoretical tradition alive for over 2,000 years.

Students may major in political science as a general program of study, or they may concentrate in one of six areas: (1) American politics, (2) comparative politics, (3) international relations, (4) political theory, (5) public law, and (6) public policy. All majors in political science must satisfy the following sixteen courses: PS 30 (Political Inquiry), three of the following four lower-division courses (Political Science 10, 11, 12 and 13) and twelve upper-division courses. (Please note: lower-division courses PS 27 Science 10, 11, 12 and 13) and twelve upper-division courses.

The premise of our educational philosophy is that the best professional preparation for productive careers which we can provide is one which is broad.
Continuing students may political science 27 and 40, with a minimum of
and visit its Web site at http://programsabroad.ucsd.
Programs Abroad Office in the International Center
Catalog
Abroad Program" section of the
Information on EAP/OAP is given in the "Education
political science should stop by the Department of
mended that you contact TEP as early as possible in
professional preparation requirements. It is recom-
Project for information about the prerequisite and
found that they develop a keen understanding of the
role of law in the general political process. This helps
students understand the limits and possibilities of the
legal process in fostering change or in preserving the
status quo. This same curriculum provides a solid
foundation for a career in journalism. Students with
any specific questions regarding law are advised to consult
with career services.
Increasingly, political science majors are preparing
for careers in business or as policy analysts in both the public and private sectors. Many of these
students pursue advanced degrees in public policy or study for a master's in business administration.
Students interested in this option should look into public policy, American, or comparative politics as an
area of concentration. Some political science majors are interested in careers in international organiza-
ion or diplomacy. These students should look into international relations as an area of concentration.
In addition, a broad array of courses in comparative politics is essential for anyone interested in a career of international service.
A political science major offers excellent preparation for teaching in the elementary schools. If you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program for information about the prerequisite and professional preparation requirements. It is recom-
manded that you contact TEP as early as possible in your academic career.
Students interested in majoring or minoring in political science should stop by the Department of Political Science Office, SSB 301, or visit our Web site: http://www.polisci.ucsd.edu.
STUDY ABROAD
Political science majors are encouraged to partici-
pate in the UC Education Abroad Program (EAP)
and UCSD’s Opportunities Abroad Program (OAP).
Information on EAP/OAP is given in the “Education Abroad Program” section of the UC San Diego General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at http://programsabroad.ucsd.
edu. Financial aid can be used for EAP/OAP study, and special study-abroad scholarships are also available.
MINOR IN POLITICAL SCIENCE
For students entering UCSD winter 1998 or later the following guidelines for a political science minor will apply: seven political science courses, not including political science 27 and 40, with a minimum of five upper-division. Continuing students may follow the guidelines for a minor of a total of six political science courses, with a minimum of three upper-division. All courses taken for a political science minor must be taken for a letter grade.
INTERDISCIPLINARY MINORS
The Department of Political Science takes part in two interdisciplinary minors offered at UCSD. The law and society minor offers students the opportunity to examine the role of the legal system in society. Students should note that Law and Society 101 (Contemporary Legal Issues) may be used in fulfilling the twelve upper-division course requirement for the political science major. The minor in health care–social issues offers students a variety of perspectives that will enhance their ability to deal with complex social and ethical issues in modern health care. Additional information on these programs is available through the Warren Interdisciplinary Programs Office.
RESEARCH
The Department of Political Science is closely affiliated with several research centers/institutes/projects currently on campus. Faculty members directly involved include: Steven Errie, director, Urban Studies Program; J. Lawrence Broz, coordinator, Project in International Affairs; Germaine Hoston, director, Center for TransPacific Studies in Values, Culture, and Politics; Mathew McCubbins, director, Public Policy Research Project, Zoltan Hajnal and Thaddeus Kousser, coordinators, American Political Institutions Project; Wayne Cornelius, director, Center for Comparative Immigration Studies; and Clark Gibson, coordinator, Political Economy of Development Series. For further information please refer to the General Catalog section on “Research at UCSD.”
THE PH.D. PROGRAM
The Department of Political Science at the University of California, San Diego offers a program of graduate studies leading to the Ph.D. degree. Instruction is provided in the major fields of the discipline. For purposes of comprehensive examinations, the discipline is broken into four fields: American politics, comparative politics, international relations, and political theory. The department also offers a variety of courses that are of a methodological or epistemological nature, spanning the various fields.
Students take two years of course work in preparation for their comprehensive exams, including the First-Year Core Curriculum (POLI 200A-C and 204A-C). Students also attend regularly scheduled colloquia which feature presentations by faculty, outside speakers, and dissertation students.
A student must complete one seminar paper in one of his or her examination fields. This paper may be written as part of the requirements for a regularly scheduled seminar course or in an independent research course. The paper will involve original research or other creative effort.
By the end of the second year, a student must stand for the General Examination, which consists of written examinations in each of two fields and in a focus-area, and an oral examination.
The comprehensive exams are both written and oral. They test more than just mastery of course work and hence there is no single set of courses required for any field exam. To pass the exams a student is expected not only to master the relevant literature, but also to be able to synthesize and analyze the major issues in the field.
Each comprehensive exam tests both knowledge of the major theoretical approaches in the field and the ability to apply those theories to important questions in the field. For one of the two exam fields, the student also designates a specific area of interest (a “focus area”). The written focus area exam tests the student’s in-depth knowledge and understanding. The focus area exam is taken the same week as the general field exam, and there is one oral covering both exams. Each field publishes a list of focus areas; students may, with approval, craft their own focus area. Each field, in addition, publishes a list of suggested ways to prepare for its exams; each field also determines the research tools required for scholars in that field.
Students are expected to complete their comprehensive exams no later than the end of their second year.
After passing both exams, students are expected to write a dissertation prospectus. This prospectus must be defended before a committee of five faculty, including two members outside the department. This committee also administers the final oral defense of the dissertation.
It is expected that students will complete their dissertations within six years of starting the program. Students interested in the program should consult the department Web site for more detailed information.
DEPARTMENTAL PH.D. TIME LIMIT POLICIES
Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.
COURSES
For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.
LOWER-DIVISION
10. Introduction to Political Science: American Politics (4)
This course surveys the processes and institutions of American politics. Among the topics discussed are indi-
vidual political attitudes and values, political participa-
tion, voting, parties, interest groups, Congress, presidency, Supreme Court, the federal bureaucracy, and domestic and foreign policy making.
11. Introduction to Political Science: Comparative Politics (4)
The nature of political authority, the experience of a social revolution, and the achievement of an economic trans-
formation will be explored in the context of politics and government in a number of different countries.
12. Introduction to Political Science: International Relations (4)
The issues of war/peace, nationalism/internationalism, and economic growth/redistribution will be examined in both historical and theoretical perspectives.
13. Power and Justice (4)
An exploration of the relationship between power and justice in modern society. Materials include classic and contemporary texts, films and literature.

27. Ethics and Society (4)
(Same as Phil 27) An exploration of ethical principles (e.g., utilitarianism, individual rights, etc.) and their social and political applications to contemporary issues such as abortion, environmental protection, and affirmative action. Ethical principles will also be applied to moral dilemmas familiar in government, law, business, and the professions. Satisfies the Warren College ethics and society requirement. **PREREQUISITES:** CAT 2 and 3, DOC 2 and 3, MCPP 40 and 50, Hum 1 and 2, MMW 2 and 3, WCRP 10A-B, or WARR 11A-B.

30. Political Inquiry (4)
Introduces skills of inference in social science and to quantitative analysis in political science and public policy including research design, data collection, data description and computer graphics, and the logic of statistical inference (including linear regression).

40. Introduction to Law and Society (4)
This course is designed as a broad introduction to the study of law as a social institution and its relations to other institutions in society. The focus will be less on the substance of law (legal doctrine and judicial opinions) than on the process of law—how legal rules both reflect and shape basic social values, and their relation to social, political, and economic conflicts within society.

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen. May not be used to fulfill any major or minor requirements in political science.

99R. Independent Study (1)
Independent study or research under direction of a member of the faculty. **PREREQUISITES:** Student must be of freshman class standing, and a Regents Scholar; Approved Special Studies Form.

**UPPER-DIVISION**

Minimum requirement for all upper-division courses is at least one quarter of lower-division political science, or upper-division standing.

**AMERICAN POLITICS**

100A. The Presidency (4)
The role of the presidency in American politics. Topics will include nomination and election politics, relations with Congress, party leadership, presidential control of the bureaucracy, international political role, and presidential psychology.

100B. The U.S. Congress (4)
This course will examine the nomination and election of congressmen, constituent relationships, the development of the institution, formal and informal structures, leadership, comparisons of House with Senate, lobbying, and relationship with the executive branch.

100C. American Political Parties (4)
This course examines the development of the two major parties from 1789 to the present. Considers the nature of party coalitions, the role of leaders, activists, organizers, and voters, and the performance of parties in government.

100DA. Voting, Campaigning, and Elections (4)
A consideration of the nature of public opinion and voting in American government. Studies of voting behavior are examined from the viewpoints of both citizens and candidates, and attention is devoted to recent efforts to develop models of electoral behavior for the study of campaigns. The role of mass media and money also will be examined.

100E. Interest Group Politics (4)
The theory and practice of interest group politics in the United States. Topics of pluralism and collective action, the influence of lobbies, the role of political action committees, and other important aspects of group action in politics are examined. **PREREQUISITE:** sophomore standing.

100H. Race and Ethnicity in American Politics (4)
This course examines the processes by which racial and ethnic groups have/ have not been incorporated into the American political system. The course focuses on the political experiences of European immigrant groups, blacks, Latinos, and Asians.

100J. Race in American Political Development (4)
Readings examine how the multiracial character of the United States has shaped the broad outlines of American politics. Cases include the founding/the Constitutionsouthern politics, social organization in formerly Mexican regions, the New Deal, consequences of limited suffrage. **PREREQUISITE:** upper-division standing.

100K. Railroads and American Politics (4)
The railroads transformed the economy and politics of the United States in the nineteenth century. The railroads were the first big businesses and their sheer size lead inevitably to conflict with governments at all levels. This conflict shaped modern politics. **PREREQUISITE:** upper-division standing.

100M. Political Psychology (4)
We begin with hypotheses about how people develop political attitudes, and methods to test those hypotheses. The second half focuses on emerging cognitive neuroscience insights, including brain imaging, and asks how these informations theories of political cognition, affect, and behavior. **PREREQUISITE:** upper-division standing.

100N. Politics in Washington (4)
Examines Washington as a political community, its institutions, culture, and history. In addition to its elected officials, it examines Washington's subcommunities: the national news industry, diplomatic service, the representation of interests. **PREREQUISITE:** department approval is required.

100O. Perspectives on Race (4)
Drawing heavily from the political psychology literature, this course looks at race in American politics from a variety of perspectives. We consider psychological, genetic, neuroscience, economic, political, sociological, and legal views of what drives powerful dynamics of race in our country. **PREREQUISITE:** department approval is required.

100P. Economic Entrepreneurs and American Politics (4)
This course is concerned with the interaction between representative democracy and capitalism in American political history. The key to understanding this interaction is the role of the entrepreneur in the economy and how unexpected economic change shapes politics. **PREREQUISITE:** upper-division standing.

100S. Political Science in Action (4)
Examines the legal issues surrounding the rights of “mar- riands” and the mentally ill. Also includes a discussion of the nature of discrimination in American society.

100T. The Politics of Urbanization (4)
The lives of individuals living in ghetto poverty in the United States. Causes and consequences of ghetto poverty. Political debates surrounding the underclass and different possible solutions. **PREREQUISITE:** upper-division standing.

100U. The Politics of Regulation (4)
Politics and policy-making issues in regulation. Themes: regulation versus legislation; general versus specific grants of regulatory power; market versus command mechanisms; private property; and risk assessment. Emphasis on American regulatory policy, examples from current regulatory debates (e.g., health care and environment). **PREREQUISITE:** upper-division standing.

103A. California Government and Politics (4)
(Same as USP 109) This survey course explores six topics: 1) state's political history; 2) campaigning, the mass media, and elections; 3) actors and institutions in the making of state policy; 4) local government; 5) contemporary policy issues; e.g., Proposition 13, school desegregation, crime, housing and land use, transportation, water; 6) California's role in national politics.

103B. Politics and Policymaking in Los Angeles (4)
(Same as USP 113) This course examines politics and policymaking in the five-county Los Angeles region. It explores the historical development of the city, suburbs, and region; politics, power, and governance; and major policy challenges facing the city and metropolitan area. **PREREQUISITE:** upper-division standing.

103C. Politics and Policymaking in San Diego (4)
(Same as USP 115) This course examines how major policy decisions are made in San Diego. It analyzes the region's power structure (including the roles of non-governmental organizations and the media), governance systems and reform efforts, and the politics of major infrastructure projects. **PREREQUISITE:** Upper-division standing or consent of instructor.

104A. The Supreme Court and the Constitution (4)
An introduction to the study of the Supreme Court and constitutional doctrine. Topics will include the nature of judicial review, federalism, race, and equal protection. The relation of judicial and legislative power will also be examined.

104B. Civil Liberties—Fundamental Rights (4)
This course will examine issues of civil liberties from both legal and political perspectives. Topics will include the First Amendment rights of speech, press, assembly, and religion; other “fundamental” rights, such as the right to privacy; and some issues of risk assessment. Conflicts between governmental powers and individual rights will be examined.

104C. Civil Liberties—The Rights of Criminals and Minorities (4)
Examines the legal issues surrounding the rights of “mar- ginal” groups such as aliens, illegal immigrants, and the mentally ill. Also includes a discussion of the nature of discrimination in American society.
104D. Judicial Politics (4)
Introduction to the study of law and courts as political institutions and judges as political actors, including the role of the judiciary in our constitutional system and decision making both within the Supreme Court and within the judicial hierarchy.

104F. Seminar in Constitutional Law (4)
This seminar will provide an intensive examination of a major issue in constitutional law, with topics varying from year to year. Recent topics have included equal protection law and the legal status of civilians in wartime. Students will be required to do legal research on a topic, write a legal brief, and argue a case to the seminar. PREREQUISITES: PS 104A/B; department stamp.

104I. Law and Politics—Courts and Political Controversy (4)
This course will examine the role of the courts in dealing with issues of great political controversy, with attention to the rights of speech and assembly during wartime, questions of internal security, and the expression of controversial views on race and religion. The conflict between opposing Supreme Court doctrines on these issues will be explored in the context of the case studies drawn from different historical periods.

104L. Positive Political Theory of Law (4)
We will discuss modern theories of the origins of law and legal behavior.

104M. Law and Sex (4)
How law regulates and impacts sexuality and orientation with focus on constitutional law in areas of privacy, free speech, association, regulation of sexual conduct under criminal law pornography, procreation, reproductive rights, and regulation of family status. PREREQUISITE: upper-division standing. Credit will not be allowed for students who have taken Political Science 102G Law and Sex in the following quarters: spring 2002, (section A00); spring 2001 (section A00); fall 1999 (section A00).

105A. Latino Politics in the U.S. (4)
This course examines contemporary issues in Latino politics in the U.S.; comparisons of racial and ethnic group experiences in the U.S.; Latino access to the political system through political participation. PREREQUISITE: upper-division standing.

105B. Understanding Intercultural Conflict (4)
This course examines and seeks to explain patterns of conflict and cooperation between different racial and ethnic groups within the United States. Why do groups cooperate under certain circumstances and fall into conflict in others? PREREQUISITE: upper-division standing.

108. Politics of Multiculturalism (4)
This course will examine central issues in debates about race, ethnicity, and multiculturalism in the United States. It will look at relations not only between whites and minorities, but also at those among racial and ethnic communities. PREREQUISITE: upper-division standing.

POLITICAL THEORY

110A. Citizens and Saints: Political Thought from Plato to Augustine (4)
This course focuses on the development of politics and political thought in ancient Greece, its evolution through Rome and the rise of Christianity. Readings from Plato, Aristotle, Augustine, Machiavelli, and others.

110B. Sovereigns, Subjects, and the Modern State: Political Thought from Machiavelli to Rousseau (4)
The course focuses on the period which marks the rise and triumph of the modern state. Central topics include the gradual emergence of human rights and the belief in individual autonomy. Readings from Machiavelli, Hobbes, Locke, Rousseau, and others.

110C. Revolution and Reaction: Political Thought from Kant to Nietzsche (4)
The course deals with the period which marks the triumph and critique of the modern state. Central topics include the development of the idea of class, of the irrational, of the unconscious, and of rationalized authority as they affect politics. Readings drawn from Rousseau, Kant, Hegel, Marx, Nietzsche, and others.

110DA. Freedom and Discipline: Political Thought in the Twentieth Century (4)
This course addresses certain problems which are characteristic of the political experience of the twentieth century. Topics considered are revolution, availability of tradition, and the problems of the rationalization of social and political relations. Readings from Nietzsche, Weber, Freud, Lenin, Gramsci, Dewey, Derrida, Arendt, Merleau-Ponty.

110EA. American Political Thought from Revolution to Civil War (4)
The first quarter examines the origins and development of American political thought from the revolutionary period to the end of the nineteenth century with special emphasis on the formative role of eighteenth-century liberalism and the tensions between "progressive" and "conservative" wings of the liberal consensus.

110EB. American Political Thought from Civil War to Civil Rights (4)
The second quarter examines some of the major themes of American political thought in the twentieth century including controversies over the meaning of democracy, equality, and distributive justice, the nature of "neoconservatism," and America's role as a world power.

110EC. American Political Thought: Contemporary Debates (4)
This course explores contemporary issues in American political thought. Topics may include liberalism and rights, gender and sexuality, race and ethnicity, cultural diversity, and the boundaries of modern citizenship. Readings include political pamphlets, philosophical treatises, court decisions, and works of literature. PREREQUISITES: upper-divisionstanding; department stamp.

110H. Democracy and Its Critics (4)
This course will examine the historical development of the ideal of democracy from Periclean Athens to the present in the light of criticism by such thinkers as Plato, Tocqueville, and Mosca and difficulties encountered in efforts to realize the ideal.

110J. Power in American Society (4)
This course examines how power has been conceived and contested during the course of American history. The course explores the changes which have occurred in political rhetoric and strategies as America has moved from a relatively isolated agrarian and commercial republic to a military and industrial empire.

110T. Modern Political Ideologies (4)
An examination of some of the ideas and values associated with major social and political movements in Europe and the United States since the French Revolution. Topics will vary and may include liberalism, populism, democracy, communism, nationalism, fascism, and feminism.

112A. Economic Theories of Political Behavior (4)
An introduction to theories of political behavior developed with the assumptions and methods of economics. General emphasis will be upon theories linking individual behavior to institutional patterns. Specific topics to be covered will include collective action, leadership, voting, and bargaining.

112C. Political Theory and Artistic Vision (4)
The course explores the modes of political thinking found in arts, especially in drama and literature. It may include ends and means, political leadership, and political economy. Students may not receive credit for both POLI 112C and POLI 112C. PREREQUISITES: upper-division standing.

113A. East Asian Thought in Comparative Perspective (4)
This course examines the major traditions of East Asian thought in comparative perspective. Topics include Confucianism, Taoism, Buddhism, and contemporary nationalist and East Asian political thought. Throughout, focused comparisons and contrasts will be made between western and eastern thought. PREREQUISITE: upper-division standing.

113B. Chinese and Japanese Political Thought I (4)
Examinations of philosophical traditions of ancient and modern China and Japan, to understand how these have been refected in Chinese and Japanese development. Course will be in English; however, students with Chinese or Japanese language skills will have opportunity to use these. Graduate students will be required to complete a seminar-length research paper; undergraduate students will write a paper. PREREQUISITES: upper-division standing for 113B.

113B. Marxist Political Thought (4)
An introduction to Marxist thought from its roots in the western tradition through its development in non-western contexts. Emphasis is placed on how adaptations were made in Marxism to accommodate the specific challenges of each environment.

115A. Gender and Politics (4)
Our understanding of politics, power, conflict, and quality continue to be challenged and transformed by considering gender as it intersects with nationality, race, class, and ethnicity. We will consider the importance of gender in each of the subfields of political science.

116A. Feminist Theory (4)
Readings in historical and contemporary feminist theory; development of gender as a category of political analysis; alternative perspectives on core concepts and categories in feminist thought.

118B. The Political Theory of Liberation Theology (4)
A comparative study of liberation theologies, including Continental, Latin American, South African, and East Asian. PREREQUISITE: PS 118A.

119A. Special Topics in Political Theory (4)
An undergraduate course designed to cover various aspects of political theory. May be repeated for credit two times, provided each course is a separate topic, for a maximum of twelve units.

COMPARATIVE POLITICS

120A. Political Development of Western Europe (4)
An examination of various paths of European political development through consideration of the conflicts which shaped these political systems: the commercialization of agriculture; religion and the role of the church; the army and the state bureaucracy; and industrialization. Stress will be on alternative paradigms and on theorists.

120B. The German Political System (4)
An analysis of the political system of the Federal Republic of Germany with an emphasis on the party system, elections, executive-legislative relations, and federalism. Comparisons will be made with other West European democracies and the Weimar Republic.

120C. Politics in France (4)
This course will examine the consequences of social and economic change in France. Specific topics will include institutional development under a semi-presidential system, parties, and elections.

120D. Germany: Before, During, and After Division (4)
Consideration of political, economic, and security factors that have kept Germany at the center of European developments for more than a century.

120E. Scandinavian Politics (4)
Introduction to the politics and societies of the Scandinavian states (Denmark, Finland, Norway, and Sweden). Focuses theories and political institutions, political culture and arrangements, political institutions, and foreign policy. PREREQUISITE: upper-division standing.

120H. European Integration (4)
This course reviews the origins and development of the European Community/European Union and its institutions, theories of integration and political culture, and the consequences in the creation of a supranational political regime.

120I. Politics in Italy (4)
This course will provide a comparative perspective on the development and functioning of the Italian political
120K. Politics of Developing Countries (4)
This course critiques the theories and practices of political development, and assesses their utility in understanding political, economic, and social change in three regions of the developing world: Latin American, sub-Saharan Africa, and Southeast Asia.

121. Government and Politics of the Middle East (4)
This course examines general themes affecting the region (society in grassroots political organizations; religion and modernization, bonds and tensions), the character of major states, and efforts to resolve the conflict between Israel and its Arab and Islamic neighbors. **PREREQUISITE:** upper-division standing.

121B. Politics in Israel (4)
An interdisciplinary study of Israel as both a unique and yet a common example of a modern democratic nation-state. We will examine Israel's history, its political, economic, and legal systems, social structure and multicultural tensions, the relation between state and religion, national security, and international relations.

123. Politics of Empire in Comparative Perspective (4)
In between "rise" and "decline," empires are political entities with highly heterogeneous populations that must be governed. The course examines the similarities and differences in imperial governance, comparing the internal and external political dynamics of traditional (Roman, Ottoman, modernizing Habsburg), and modern (British) empires. **PREREQUISITE:** upper-division standing.

125. The Politics of Conservation in Developing Countries (4)
Conservation in developing countries concerns resources that are extremely important to policymakers, militaries, environmental organizations, communities, and individuals. This course examines these groups' struggle for control over wildlife and forests—from the capital to the villages—on several continents.

125A. Communities and the Environment (4)
A popular new idea in environmental protection is to include local communities in conservation efforts. But what are these communities? What challenges do they face in governing their own resources? This course uses both theory and case studies to explore the political economy of community-based conservations.

126A. Fundamentals of Political Economy: Modern Capitalism (4)
This course explores how economic factors affect political institutions and how political action affects economic behavior in the United States and Western Europe. Particular attention is given to relations between business and labor, economic policy choices, and the impact of international trade. **PREREQUISITE:** PS 11 or consent of instructor.

126B. Politics and Economics in Eastern Europe (4)
This course explores the interrelationship of politics and economics in Eastern Europe, analyzing the historic evolution of the area, the socialist period, and contemporary political and economic change there. **PREREQUISITE:** upper-division standing.

127. Politics of Developing Countries (4)
This course critically examines central concepts and theories of development, and assesses their utility in understanding political, economic, and social change in the developing world. Central case studies are drawn from three regions: Latin America, Sub-Saharan Africa, and Southeast Asia. **PREREQUISITE:** upper-division standing.

130A.A. The Soviet Successor States (4)
An overview of the historical background and contemporary politics of the fifteen successor states of the Soviet Union.

130A.D. The Politics of the Russian Revolution (4)
An examination of the origins of the Russian Revolution from 1905 through the Stalinist period and recent years in light of theories of revolutionary change. Emphasis is placed on the significance of political thought, socio-economic stratification, and culture-historical conditions.

131C. The Chinese Revolution (4)
An analysis of the dynamics of the Chinese Revolution from the fall of the Qing Dynasty (1644–1911) to the present. Emphasis is placed on the relationship between political thought and the dynamics of the revolutionary process.

132C. Political Development and Modern China (4)
Political development has dominated the study of comparative politics among U.S. academicians since the revival of the Cold War in 1947. This course examines critically this paradigm and its Western philosophical roots in the context of the experience of modern China.

133A. Japanese Politics: A Developmental Perspective (4)
This course will analyze the political systems of modern Japan in comparative-historical perspective.

133D. Political Institutions of East Asian Countries (4)
This course discusses the following major topics in three East Asian countries (Japan, South Korea, and Taiwan) from a comparative perspective: (a) economic and political development (b) political institutions (c) public policies.

133D.D. Comparative Analysis of East Asian Institutions (4)
This seminar is designed to be advanced follow-up to PS 133D. It examines present-day East Asian government institutions in much greater depth. **PREREQUISITE:** PS 133D.

133J. Korean Politics (4)
This course is primarily about the politics and political economy of South Korea, but will also briefly look at politics and political economy of North Korea as well as foreign and unification policies of the two Koreas. **PREREQUISITE:** upper-division standing.

134A.A. Comparative Politics of Latin America (4)
Comparative analysis of contemporary political systems and development profiles of selected Latin American countries, with special reference to the ways in which revolutionary and counter-revolutionary movements have affected the political, economic, and social structures observable in these countries today. Analyzes the performance of "revolutionary" governments in dealing with problems of domestic political management, reducing external economic dependency, redistributing wealth, creating employment, and extending social services. Introduction to general theoretical works on Latin American politics and development. **PREREQUISITE:** PS 11 or consent of instructor.

134B. Politics in Mexico (4)
General survey of the Mexican political system as it operates today. Emphasis on factors promoting the breakdown of Mexico's authoritarian regime and the transition to a more democratic political system. Changing relationship between the social segments of Mexico society (economic elites, peasants, urban labor, and the Church). New patterns of civilian-military relations.

134D. Selected Topics in Latin American Politics (4)
A comparative analysis of contemporary political issues in Latin America. Material to be drawn from two or three countries. Among the topics: development, nationalism, neoimperialism, political change. **PREREQUISITE:** upper-division standing.

134I. Politics in the Southern Cone of Latin America (4)
This course is a comparative analysis of twentieth-century political developments and issues in the southern cone of Latin America: Argentina, Chile, and Uruguay. The course will also examine the social and economic context and results of contrasting political experiments. **PREREQUISITE:** upper-division standing.

134N. Politics in Central America (4)
Focused examination of political conflict in one or more countries of the region, emphasizing issues, ideology, and process in grassroots political organizations. Limited coverage of international politics. (Not offered in 2006-07.)

136A. Nationalism and Ethnic Conflict (4)
Appropriate case studies from around the world will be selected.

136B. Comparative Politics and Political Culture (4)
This course is designed to provide undergraduates with a sound introduction to cultural interpretations of power and politics. The course will also attempt to provide an explicit account of the process of theory formation in social science. Special attention will be given to Africa and Asia.

136C. Comparative Bureaucracy (4)
Politics of the administrative state in the world's democracies. How political institutions influence governance across different types of democratic institutional environments.

137A. Comparative Political Parties and Interest Groups (4)
This course serves as an introduction to the comparative study of political parties and interest groups as well as an analytical introduction to parties, interest groups, and their role in democratic representation. **PREREQUISITE:** upper-division standing.

138D. Special Topics in Comparative Politics (4)
An undergraduate course designed to cover various aspects of comparative politics. May be repeated for credit two times, provided each course is a separate topic, for a maximum of twelve units.

INTERNATIONAL RELATIONS

140A. International Law and Organizations (4)
International law and organizations are central to the efforts to create a world order to limit armed conflict, regulate world economy, and advance programs for economic redistribution among nations, and set minimum standards of human rights. This course explains the theory of international law and organizations that is accepted by diplomats and compares this viewpoint to the analysis of social scientists concerning the past record and likely future of world order concerning conflict, economic redistribution, and human rights.

140B. Concepts and Aspects of Revolution (4)
Introduction to the analytical and comparative study of revolutionary movements and related forms of political violence. Topics include: the classical paradigms of revolutionary episodes; psychological theories; ideology and belief systems; coups; insurgencies; civil wars; terrorism and revolutionary outcomes. **PREREQUISITE:** upper-division standing.

140C. International Crisis Diplomacy (4)
A survey of international peacekeeping and peace enforcement in civil conflicts with a simulation of international diplomacy. **PREREQUISITE:** upper-division standing.

141B. Scientific Analysis of Conflict and Peace (4)
The use of data to evaluate theories of conflict. Course will examine the relationship between theory and evidence, measurement and research design. Specific issues examined include the relative importance of preferences, economic factors, political institutions, and domestic politics to conflict and peace. **PREREQUISITES:** POLI 12 and POLI 30.

142A. United States Foreign Policy (4)
United States foreign policy from the colonial period to the present era. Systematic analysis of competing explanations for U.S. policies—strategic interests, economic requirements, or the vicissitudes of domestic politics. Interaction between the U.S., foreign states (particularly allies), and transnational actors are examined. **PREREQUISITE:** PS 12 or consent of instructor.

142I. National and International Security (4)
A survey of theories of defense policies and international security.

142J. National Security Strategy (4)
A survey of American strategies for national defense. Topics may include deterrence, coercive diplomacy, limited war, and unconventional warfare.

142K. Politics and Warfare (4)
This course offers an exploration of general theories of the origins of warfare; the impact of the state on war in the modern world; and the micro-foundations of combat and compliance in the context of the costs of war and military mobilization. The course should be of special interest to students in international relations and comparative politics.
142L. Insurgency and Terrorism (4)
“Terrorism” uses “illegitimate” violence to achieve political goals. This course uses philosophical, historical, and contemporary perspectives to understand which actions are defined as “terrorist,” who uses them, why, and when, as well as the determinants of their effectiveness.

142M. U.S. Foreign Policy/Regional Security (4)
Lectures and readings examine U.S. foreign policy in Europe, Latin America, and East Asia with attention to current problems with specific nations (e.g., Bosnia) and understand issues (e.g., terrorism). This course integrates historical, comparative, and foreign perspectives on regional security dynamics. Credit will not be given to students who took PS 154 Special Topic/International Relations with the subtitle U.S. Foreign Policy/Regional Security, in spring 1998, spring 2001, or fall 2002.

142N. American Defense Policy (4)
An introduction to analytic techniques for assessing policy options in the field of national security. PREREQUISITE: upper-division standing.

142O. International Terrorism (4)
(Same as SOCD 177.) This course covers the definitions, history, and internationalization of terrorism; the interrelation of religion, politics, and terror; and the representation of terrorism in the media. A number of organizations and their activities in Europe and the Middle East are examined. PREREQUISITE: upper-division standing.

142P. Crisis Areas in World Politics (4)
This course examines the most critical areas in contemporary world politics. While the emphasis will be placed on American involvement in each crisis, an effort will be made to acquaint the student with its historical and political background. Credit will not be allowed for students who have taken POLI 154 “Crisis Areas in World Politics” in the following quarters: SP01; SP02; SP03; SP04; SP05; WI06; SP06; SI06; FA06; WI07; SP07(A00); SI07(A00). PREREQUISITE: upper-division standing.

143A. War and Society (4)
How has war fighting evolved over the centuries? How has it varied across cultures? What has war been like for soldiers and civilians? How do societies mobilize for war, and how do they change in the short and long term from fighting? PREREQUISITE: upper-division standing.

144AB. Selected Topics in International Political Economy (4)
This course will consider major theories purporting to explain and predict the workings of the international order from the perspective of world political economy. An extended discussion of one aspect of the economic order (e.g., the multinational corporation) will be served as the test case. PS 144AA and one quarter of economics recommended. PREREQUISITE: PS 12.

144E. The Politics of International Trade (4)
Examines theories of trade and protectionism, focusing both on relations among advanced industrial nations and on relations between developed and developing countries. Topics include standard and strategic trade theory, nontariff barriers to trade, export-led growth strategies, regional trade agreements, and the future of the WTO.

144F. The Politics of International Trade and Finance (4)
Examines the welfare and distributional aspects of international trade and finance as they relate to the politics of economic policymaking. Topics include: globalization in historical perspective; origins and consequences of trade policy; exchange-rate arrangements; international capital flows; currency crises; economic development.

145A. International Politics and Drugs (4)
This course examines the domestic and international aspects of the drug trade. It will investigate the drug issues from the perspectives of consumers, producers, traffickers, money launderers, and law enforcement. Course material covers the experience of the United States, Latin America, Turkey, Southeast Asia, Western Europe, and Japan.

145C. International Relations After the Cold War: Theory and Prospect (4)
The nature of international politics appears to have changed dramatically since 1989. This course applies different theoretical approaches to enhance our understanding of the new international environment, future prospects for peace and war, and current problems of foreign policy. PREREQUISITE: upper-division standing.

146A. The U.S. and Latin America: Political and Economic Relations (4)
An analytical survey of U.S. relations with Latin America from the 1820s to the present, with particular emphasis on the post-Cold War environment. Topics include free trade and economic integration; drugs and drug trafficking; illegal migration and immigration control. Focus covers U.S. policy, Latin American reactions, dynamics of cooperation, and options for the future.

150A. Politics of Immigration (4)
Comparative analysis of attempts by the United States and other industrialized countries to initiate, regulate and reduce immigration from Third World countries. Social and economic factors shaping outcomes of immigration policies, public opinion toward immigrants, anti-immigration movements, and immigration policy reform options in industrialized countries. PREREQUISITES: upper-division standing required.

154. Special Topics in International Relations (4)
An undergraduate course designed to cover various aspects of international relations. May be repeated for credit two times, provided each course is a separate topic, for a maximum of twelve units.

POLICY ANALYSIS

160AA. Introduction to Policy Analysis (4)
(Same as USP 101) This course will explore the process by which the preferences of individuals are converted into public policy. Also included will be an examination of the complexity of policy problems, methods for designing better policies, and a review of tools used by analysts and policy makers. PREREQUISITE: PS 10 or 11.

160AB. Introduction to Policy Analysis (4)
In this course, students will use their knowledge of the political and economic foundations of public policy making to conduct research in a wide variety of public policy problems. PREREQUISITE: PS 160AA.

162. Environmental Policy (4)
This course will explore contemporary environmental issues such as global warming, endangered species, and land use. Students will be asked to analyze various policy options and to write case analyses. Policies may be debated in class.

163. Analysing Politics (4)
Politics are understood as the combination of individual preferences and decisions into collective choices. What are the issues involved in aggregating individual preferences, what is the choice of rules—formal and informal—for doing so?

165. Special Topic: Policy Analysis (4)
An undergraduate course designed to cover various aspects of policy analysis. May be repeated for credit two times, provided each course is a separate topic, for a maximum of twelve units.

168. Policy Assessment (4)
The use of real data to assess policy alternatives. Introduction to benefit/cost analysis, decision theory, and the valuation of benefits and costs. Applications to health, environmental, and regulatory economic policy making.

170A. Introductory Statistics for Political Science and Public Policy (4)
Introduction to the use of statistics in both political science and public policy concentrating on regression based approaches. Students may complete one quantitative analyses and one project. PREREQUISITES: upper-division standing.

RESEARCH METHODS

181A. Field Research Methods for Migration Studies: Seminar (4)
Introductory survey of methods used by social scientists to gather primary research data on international migrant and refugee populations, including sample surveys, unstructured interviewing, ethnographic observation, and archival research. Basic fieldwork practices and problem-solving techniques will also be covered. Students planning to take the continuation of this course, Political Science 181B, must note that conversational fluency Spanish is a requirement for Political Science 181B. PREREQUISITES: upper-division status, permission of instructor.

181B. Field Research Methods for Migration Studies: Practicum (12)
Continuation of Political Science 181A. Students will apply one or more data collection methods learned in Political Science 181A to collect data from a sample of international migrants, refugees, or returned migrants in a high-migration community. Students participate in team field research, write a detailed individual report on the fieldwork experience and submit a detailed outline of a research paper to be based on data from the fieldwork, required of students who take the continuation of this course, Political Science 181C. Prior to fieldwork, students will read intensively about the research site and write a literature review essay. PREREQUISITES: upper-division status, Political Science 181A, conversational fluency in Spanish, permission of instructor.

181C. Field Research Methods for Migration Studies: Data Analysis (4)
Continuation of Political Science 181B. Students will analyze primary data that they have helped to collect in a field research site and write a major paper based on these data for publication as a section of a co-authored report on the field research project. Methods for organizing and processing field research data for analysis, techniques of quantitative data analysis, and report preparation conventions will be covered. PREREQUISITES: upper-division status, Political Science 181B, permission of instructor.

SPECIAL STUDIES

191A-B. Senior Honors Seminar: Frontiers of Political Science (4-4)
This course is open only to seniors interested in qualifying for departmental honors. Admission to the course will be determined by the department. Each student will write an honors essay under the supervision of a member of the faculty.

192. Senior Seminar in Political Science (1)
The senior seminar is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in political science at the upper-division level. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. PREREQUISITE: department stamp and/or consent of instructor.

(Same as Com/Gen 194; USP 194, H101 193, Soc 194, CGS 194) Course attached to six-unit internship taken by students participating in the UCDC program. Involves weekly seminars, meetings with faculty and teaching assistant and a substantial research paper. PREREQUISITE: participating in UCDC program.

1971. Political Science Washington Internship (6, 8)
This internship is attached to the UC in DC Program. Students participating in the UC in DC Program are placed in an internship in the Washington, D.C., area, requiring approximately seventeen to twenty hours per week. PREREQUISITES: must be enrolled in the UC in DC Program; departmental stamp required.

199. Independent Study for Undergraduates (2 or 4)
Independent reading in advanced political science by individual students. (P/NP grades only.) PREREQUISITE: consent of instructor.

POLITICAL SCIENCE 487
GRADUATE

All graduate courses are categorized as either seminars or independent study.

SEMINARS

200A. Foundations of Political Science (4) An introduction to the theoretical concepts in the discipline of political science that are commonly used across various sub-fields. Each week will introduce the core concept(s) and discuss applications from several, if not all sub-fields in the department. PREREQUISITE: graduate student standing.

200B. Democracy (4) An overview of the normative and positive issues associated with contemporary democracies. The appeal and the social, political, and economic arrangements of democracies will be explored. PREREQUISITE: graduate student standing.

200C. States and Markets (4) An overview of the normative and positive issues associated with decentralized (market) versus centralized (political) mechanics of allocation. The appropriate role of government intervention in the economy will be explored. PREREQUISITE: graduate student standing.

204A. Research Design (4) This course will study various approaches to knowledge accumulation in social science. A basic outline of scientific method will be used to examine the difference between theories as assumptions and axioms and hypotheses as “if-then” statements derived from theory. Experimental, quasi-experimental, and qualitative designs will be discussed. PREREQUISITE: graduate student standing.

204B. Quantitative Methods I (4) The use of quantitative methods (particularly multiple regression and its extensions) in political science. Emphasis on understanding the methods and using them in political science applications. PREREQUISITE: graduate student standing.

204C. Game Theory I (4) This course introduces students to the rudiments of decision theory and game theory. Emphasis will be placed on modeling and solving games. PREREQUISITE: graduate student standing.

210A. Systems of Political Thought: Thucydides to Auguste Comte (4) This course is a preparation for the field examination in political theory. It will provide an intensive and critical introduction to European political thought from Thucydides to Auguste Comte. Some of the secondary literature on this period will also be explored. PREREQUISITE: graduate student standing or consent of instructor.

210B. Systems of Political Thought: Machiavelli to Rousseau (4) This course is a preparation for the field examination in political theory. It will provide an intensive and critical introduction to European political thought from Machiavelli to Rousseau. Some of the secondary literature on this period will also be explored. PREREQUISITE: graduate student standing or consent of instructor.

210C. Systems of Political Thought: Kant to Nietzsche (4) This course is a preparation for the field examination in political theory. It will provide an intensive and critical introduction to European political thought from Kant to Nietzsche. Some of the secondary literature on this period will also be explored. PREREQUISITE: graduate student standing or consent of instructor.

210D. Systems of Political Thought: Contemporary (4) This course is a preparation for the field examination in political theory. It will provide an intensive and critical introduction to twentieth-century political thought. Some of the secondary literature on this period will also be explored. PREREQUISITE: graduate standing or consent of instructor.

214. Marxist and Post-Marxist Political Philosophy (4) An examination of selected texts in Marxism and post-Marxist political philosophy, with a focus on the theme of individual and collective identity including issues concern-
253. Research in State Politics (4)
This seminar will survey the existing literature in state politics with an eye toward proposing new research designs. Topics will include the variation across states in electoral systems, campaign finance laws, political culture, legislative institutions, judicial arrangements, and policy outcomes. **PREREQUISITE:** graduate standing or consent of instructor.

254. American Political Development (4)
This course examines the historical evolution of the American state with particular attention to theories of political development. Special topics include the development of the party system, electoral and policy realignments, and the evolution of national political institutions. **PREREQUISITE:** graduate standing in any discipline of the social sciences or humanities or consent of instructor.

255. Urban Politics (4)
Examines central works on the development of political institutions in U.S. cities; analyses of community power structures; who governs, why, and to what ends; processes and prospects for minority empowerment; the prominence of “growing machines”; the political economy of contemporary cities. **PREREQUISITE:** graduate standing or consent of instructor.

256A. Judicial Politics (4)
Judicial politics is the study of law and courts as political institutions and judges as political actors, focusing on decision-making and power relations within courts, within the judicial hierarchy, and within the constitutional system. **PREREQUISITE:** graduate standing or consent of instructor.

257. Voting and Elections (4)
This course is designed to acquaint graduate students with the central themes and issues in the study of voting in national elections. **PREREQUISITE:** graduate standing or consent of instructor.

259. Special Topics in American Politics (4)
This seminar is an examination of the different approaches to the study of American politics. Issues and research areas will vary each time the course is offered. **PREREQUISITE:** graduate standing or consent of instructor.

270. Mathematical and Statistical Foundations (4)
This course reviews essential calculus and linear algebra and introduces probability theory (probability rules, random variables, univariate and multivariate distributions) and mathematical statistics (sampling distributions, estimation and inference frameworks). **PREREQUISITE:** graduate standing.

276. Mathematical Modeling (4)
This course demonstrates how to construct mathematically models of phenomena of interest to political science. Specific applications examined may include models for the distribution of state size, war magnitude, and democracy over time and space. **PREREQUISITE:** graduate standing.

277. Measurement Theory (4)
This course is concerned with methods of estimating latent dimensions of preference and similarity from individual observed choices and judgements. Factor Analysis, Multidimensional Scaling, and related techniques are studied both with classical maximum likelihood and Bayesian methods. **PREREQUISITE:** graduate standing.

279. Special Topics in Methodology (4)
This seminar is an examination of the different approaches to the study of methodology. Issues and research areas will vary each time the course is offered. **PREREQUISITE:** graduate standing or consent of instructor.

282A-B-C. Workshop on State and Society (4-4-4)
Examination of recent research in American politics, comparative politics, and political theory concerning the relationship of politics to society; development and presentation of research projects by graduate students; presentations of research projects by faculty. Second-year students present seminar paper; third-year students present dissertation prospectus; candidates make yearly presentations of dissertation research. **PREREQUISITE:** PS 202 or consent of instructor.

283A-B-C. Workshop in International Relations (4-4-4)
Examination of recent research in international politics; development and presentation of research projects by graduate students; presentations of research projects by faculty. Second-year students present seminar paper; third-year students present dissertation prospectus; candidates make yearly presentation of dissertation research. **PREREQUISITE:** PS 202 or permission of instructor.

284. Workshop on Scientific Communication (4)
Forms of scientific communication, practical exercise in scientific writing and short oral communication, and in criticism and editing; preparation of illustrations, preparation of proposals; scientific societies, and the history of scientific communication. Examples from any field of science, most commonly political science, economics, and law. **PREREQUISITE:** PS 202 or consent of instructor.

INDEPENDENT STUDY

298. Directed Reading (1-12)
Guided and supervised reading in the literature of the several fields of political science.

299. Dissertation Research (1-12)
Independent work by graduate students engaged in research and writing of second-year paper and doctoral dissertation, under direct supervision of advisor.

500. Apprentice Teaching (1-4)
A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation, and grading of examinations and other written exercises, and student relations. Twenty-four units of teaching apprenticeship meets the department teaching requirement for the Ph.D. degree.

501. Seminar on Teaching Development—American Politics (1-4)
A seminar designed for teaching assistants in American politics, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. **PREREQUISITE:** graduate standing.

502. Seminar on Teaching Development—Comparative Politics (1-4)
A seminar designed for teaching assistants in comparative politics, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. **PREREQUISITE:** graduate standing.

503. Seminar on Teaching Development—International Relations (1-4)
A seminar designed for teaching assistants in international relations, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. **PREREQUISITE:** graduate standing.

504. Seminar on Teaching Development—Political Theory (1-4)
A seminar designed for teaching assistants in political theory, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. **PREREQUISITE:** graduate standing.

THE UNDERGRADUATE PROGRAM

MAJOR PROGRAMS
The department offers three degree programs: bachelor of arts (B.A.), bachelor of science (B.S.), and the integrated bachelor of science (B.S.)/master of arts (M.A.). We offer courses in all major areas of experimental psychology, with emphasis in behavior analysis, clinical psychology, cognitive psychology and cognitive neuropsychology, developmental psychology, human information processing, neuroscience and behavior, psychopathology, sensation and perception, and scientific communication.
perception, and social psychology. The department emphasizes research in the experimental and theoretical analysis of human and animal behavior, and the study of the mind. Students who major in psychology can expect to develop a knowledge of a broad range of content areas, as well as basic skills in experimental and analytic procedures. Once a student has decided upon a major in psychology, he or she is highly encouraged to consult with the Psychology Student Affairs Office.

Majors must have departmental approval for electives taken outside the department. Of the required courses in the area of specialization (three regular upper-division courses and two research experiences), no more than two may be taken outside the department. We recommend consulting the department before enrolling in courses offered by other departments.

PREREQUISITES FOR THE B.A.

Experimental psychology uses the tools and knowledge of science: calculus, probability theory, computer science, chemistry, biology, physics, and statistics. Accordingly, students in upper-division courses must have an adequate background in these topics. Prerequisites for individual courses are specified in the catalog.

The prerequisites for the bachelor of arts degree in psychology are as follows:

1. Three lower-division, general-introductory natural science courses from the listing of the approved UC San Diego courses below or their equivalent. (The three courses can be distributed in any manner.)
   - Biology: 1, 2, 3, 10, 20, 24, 26
   - Chemistry: 4A, 6A, 6B, 6C, 11, 12, 13
   - Physics: Any of the 1 and 2 series, 10, 11

2. Three formal skills courses, at least one of which must be calculus. The other two courses may consist of any combination of courses in calculus or logic. Acceptable calculus courses at UCSD include Mathematics 10A-B-C, 20A-B-C. Acceptable logic courses at UCSD include Philosophy 10 and 12.

3. One introduction to computer programming course. Acceptable courses at UCSD are CSE 3, CSE 5A, CSE 5B, CSE 6A, CSE 6B, CSE 11, CSE 12, MAE 5, MAE 9, MAE 10, or CogSci 18. Other courses will be considered by petition only if they are primarily concerned with programming in a high-level computer language.

   All courses listed under 1–3 may be taken Pass/Not Pass.

4. One quarter of statistics. Acceptable courses at UCSD are Psychology 60, Economics 120A, Sociology 60, Mathematics 111, 181, or 183, BIOL 100, Cognitive Science 14, or equivalent. Statistics MUST be taken for a letter grade.

   Students should complete these prerequisite requirements by the end of the sophomore year.

MAJOR REQUIREMENTS FOR THE B.A.

A minimum of twelve upper-division courses in psychology is required. Five must be taken from the core courses (Psychology 101–106), and at least seven from the upper-division elective courses. A minimum of six upper-division psychology courses must be taken at UCSD. These courses must be taken for a letter grade; courses taken as Pass/Not Pass prior to declaring psychology as a major cannot be used to satisfy the major requirement. Excluded from credit toward the major are Psychology 199 (Special Studies); however, Psychology 195 (Undergraduate Instructional Apprentice) can be credited once. Majors must obtain departmental approval for electives taken outside the department. A grade-point average of at least 2.0 in the upper-division courses of the major is required for graduation.

PREREQUISITES FOR THE B.S.

In general, the lower-division courses required for the B.S. degree in psychology overlap with the B.A. major. However, to fulfill the formal skills, we require the mathematics sequence 20A-B-C.

MAJOR REQUIREMENTS FOR THE B.S.

A minimum of twelve upper-division courses is required. Five of these courses must come from the core courses (Psychology 101–106). The seven elective courses may be chosen from any of the upper-division courses listed for the psychology program at UCSD.

B.S. students must choose an area of concentration (behavior analysis, clinical psychology, cognitive psychology, and cognitive neuropsychology, development psychology, neuroscience and behavior, sensation and perception, or social psychology), and three courses of the seven electives must be in the chosen area of concentration.

In addition to the twelve upper-division courses, all B.S. degree students must complete course(s) to fulfill the research experience requirement. Research experience courses may comprise either one laboratory course or two Psychology 199 courses (Independent Study). If two Psychology 199 courses are taken to fulfill this requirement, they must be directed by the faculty within the chosen area of concentration and culminate in a research paper approved by the advisor and submitted to the Psychology Student Affairs Office no later than the graduating quarter. The 199 sequence should be taken with the same faculty member.

UPPER-DIVISION COURSE REQUIREMENTS FOR THE B.S.

Core Courses, of which five have to be taken for any area of concentration

   PSYC 101. Intro to Developmental Psychology
   PSYC 102. Intro to Sensation and Perception
   PSYC 103. Intro to Principles of Behavior
   PSYC 104. Intro to Social Psychology
   PSYC 105. Intro to Cognitive Psychology
   PSYC 106. Intro to Physiological Psychology

Areas of concentration and their associated courses are listed in alphabetical order below. (Subject to change—for additional qualifying courses, see the department’s Student Affairs Office, 1533 Mandell Hall).

Concentration in Behavior Analysis

Behavior analysis is based on the principles of Pavlovian and operant conditioning, and other aspects of contemporary associative learning theory. It also includes the application of reinforcement principles and other behavior modification techniques in applied settings (applied behavior analysis).

Courses

PSYC 109. Lab/Applied Behavior Analysis
PSYC 120. * Learning and Motivation
PSYC 121. * Lab/Operant Psychology
* to be taken concurrently with PSYC 120
PSYC 132. Hormones and Behavior
PSYC 134. Eating Disorders
PSYC 135. Evolutionary Principles/Animal Social Behavior
PSYC 140. * Lab/Human Behavior
* to be taken concurrently with PSYC 120
PSYC 143. Control and Analysis of Human Behavior
PSYC 154. Behavior Modification
PSYC 168. Psychological Disorders of Childhood
PSYC 171. Neurobiology Learning and Memory
PSYC 184. Choice and Self Control
PSYC 188. Impulse Control Disorders
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Neuroscience and Behavior

This area studies how the nervous system mediates behavioral effects in the realms of motivation, perception, learning and memory, and attention. It also includes human neuropsychology and aphasia.

Courses

PSYC 107. Lab/Substance Abuse Research
PSYC 114. Lab/Psychophysiological Perspectives on the Social Mind
PSYC 125. Clinical Neuropsychology and Assessment
PSYC 129. Logic of Perception
PSYC 132. Hormones and Behavior
PSYC 133. Circadian Rhythms—Biological Clocks
PSYC 134. Eating Disorders
PSYC 135. Evolutionary Principles/Animal Social Behavior
PSYC 150. Cognitive Neuroscience of Vision
PSYC 159. Physiological Basis of Perception
PSYC 169. Brain Damage and Mental Function
PSYC 170. Introduction to Cognitive Neuropsychology
PSYC 171. Neurobiology Learning and Memory
PSYC 179. Drugs, Addiction, and Mental Disorders
PSYC 181. Drugs and Behavior
PSYC 188. Impulse Control Disorders
PSYC 189. Brain, Behavior, and Evolution
PSYC 190. Parenting
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Clinical Psychology

This area studies psychological and physiological causes of and treatments for mental illness in children and adults.
Courses
PSYC 107. Lab/Substance Abuse Research
PSYC 109. Lab/Applied Behavior Analysis
PSYC 124. Intro to Clinical Psychology
PSYC 125. Clinical Neuropsychology and Assessment
PSYC 132. Hormones and Behavior
PSYC 133. Circadian Rhythms—Biological Clocks
PSYC 134. Eating Disorders
PSYC 151. Test and Measurement
PSYC 154. Behavior Modification
PSYC 155. Social Psychology and Medicine
PSYC 163. Abnormal Psychology
PSYC 168. Psychological Disorders in Children
PSYC 172. Human Sexuality
PSYC 184. Choice and Self-Control
PSYC 188. Impulse Control Disorders
PSYC 190. Parenting
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Cognitive Psychology and Cognitive Neuropsychology

a. The cognitive area studies reasoning, thinking, language, judgment, and decision-making in adults and children (including attention, memory, and visual and auditory information processing).

b. The cognitive neuropsychology area studies cognitive processes and their implementation in the brain. Cognitive neuropsychologists use methods drawn from brain damage, neuropsychology, cognitive psychology, functional neuroimaging, and computer modeling.

Courses
PSYC 108. Introduction to Cognitive Neuroscience
PSYC 114. Lab/Psychophysiological Perspectives on the Social Mind
PSYC 115. Lab/Cognitive Psychology
PSYC 118. Lab 118A/B: Language Processing
PSYC 119. Lab/Psycholinguistics
PSYC 128. Psychology of Reading
PSYC 129. Logic of Perception
PSYC 137. Social Cognition
PSYC 141. Evolution and Human Nature
PSYC 142. Psychology of Consciousness
PSYC 144. Memory and Amnesia
PSYC 145. Psychology of Language
PSYC 146. Language and Conceptual Development
PSYC 148. Psychology of Judgment and Decision
PSYC 150. Cognitive Neuroscience of Vision
PSYC 152. Concepts of Intelligence
PSYC 156. Cognitive Development in Infancy
PSYC 161. Introduction to Engineering Psychology
PSYC 170. Introduction to Cognitive Neuropsychology
PSYC 171. Neurobiology Learning and Memory
PSYC 187. Development of Social Cognition
PSYC 191. Psychology of Sleep
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Developmental Psychology
This area studies all aspects of human development with emphasis on social and personality development, perceptual development, and language acquisition. Also includes the study of developmental psychopathology.

Courses
PSYC 109. Lab/Applied Behavior Analysis
PSYC 114. Lab/Psychophysiological Perspectives on the Social Mind
PSYC 133. Circadian Rhythms—Biological Clocks
PSYC 135. Evolutionary Principles/Animal Social Behavior
PSYC 136. Cognitive Development
PSYC 141. Evolution and Human Nature
PSYC 145. Psychology of Language
PSYC 152. Concepts of Intelligence
PSYC 156. Cognitive Development in Infancy
PSYC 158. Interpersonal Relationships
PSYC 168. Psychological Disorder of Childhood
PSYC 172. Human Sexuality
PSYC 180. Adolescence
PSYC 185. Applied Developmental Psychology
PSYC 187. The Development of Social Cognition
PSYC 190. Parenting
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Sensation and Perception
This area studies how our sense organs and brain make it possible for us to construct our consciously experienced representation of the environment. Experiments using stimuli and computer control are used to test models of sensory or perceptual processes. Processes of particular interest include color vision, motion perception, and auditory illusions and paradox.

Courses
PSYC 125. Clinical Neuropsychology and Assessment
PSYC 128. Psychology of Reading
PSYC 129. Logic of Perception
PSYC 138. Sound and Music Perception
PSYC 150. Cognitive Neuroscience of Vision
PSYC 159. Physiological Basis of Perception
PSYC 169. Brain Damage and Mental Functions
PSYC 182. Allusions and the Brain
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Social Psychology
This area studies human behavior in social situations, with specialization in such topics as emotion, aggression, social cognition, and aesthetics. It also encompasses applied social psychology, including psychology and the law and behavioral medicine.

Courses
PSYC 114. Lab/Psychophysiological Perspectives on the Social Mind
PSYC 127. Applied Social Psychology
PSYC 130. Delay of Gratification
PSYC 135. Evolutionary Principles/Animal Social Behavior
PSYC 137. Social Cognition
PSYC 139. Social Psychology of Sports
PSYC 141. Evolution and Human Nature
PSYC 149. Social Psychology of Theater
PSYC 152. Concepts of Intelligence
PSYC 153. Psychology of Emotion
PSYC 155. Social Psychology and Medicine
PSYC 157. Happiness
PSYC 158. Interpersonal Relationships
PSYC 160. Groups
PSYC 162. Psychology and the Law
PSYC 172. Human Sexuality
PSYC 175. Psychology and the Arts
PSYC 178. Industrial Organization Psychology
PSYC 186. Psychology and Social Policy
PSYC 187. Development of Social Cognition
PSYC 190. Parenting
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

HONORS PROGRAM
Students are encouraged to participate in the department’s honors program. It is strongly recommended for all students interested in graduate school. A minimum overall GPA of 3.3 (3.5 for transfer students, based on transfer GPA) is a prerequisite. Admission is granted by application in the fall quarter of the junior year (Deadline: October 31). This program is composed of the following courses.

1. Junior Year:
   Winter:
   • Junior Honors Research Seminar (PSYC 110)
   • Advanced Statistics and Research Methods (PSYC 111A)
   Spring:
   • Advanced Statistics and Research Methods (PSYC 111B)

2. Senior Year: A year-long independent research project (PSYC 194-A-B-C) under the sponsorship of a faculty advisor. This research culminates in an honors thesis.

3. At least one laboratory course (Psychology 107, 109, 114, 115, 118A, 118B, 119, 120/121, 120/140, 127) or, upon petitioning, two Psychology 199 Independent Study courses culminating in a research paper accepted by the advisor (199s, however, do not count as upper-division credit toward the major).

Successful completion of the Honors Program requires a grade of A- in the Psychology 194 series and a minimum GPA of 3.5 in the upper-division courses taken for the major.

MINOR PROGRAM
The minor in psychology consists of seven four-unit courses from the Department of Psychology course offerings, of which at least twenty units (five
ELIGIBILITY AND ENROLLMENT
To be eligible, students must have completed the first two quarters of their junior year in residence at UCSD and must have an overall UCSD GPA of at least 3.0 and students’ major GPA should be at least 3.3. It is the responsibility of the prospective student to select a faculty member who would be willing to serve as the student’s advisor and in whose laboratory the student would complete at least twenty-four units of research over a two-year period. Twelve of the twenty-four units of research Psychology (194A-B-C or 196A-B-C) must be completed during the student’s senior undergraduate year and must be taken in addition to the requirements for the bachelor of science degree. The remaining twelve units of research will be taken in their year of graduate study as part of their M.A.

There are two applications:
1. In fall quarter of the junior year, students apply to the integrated B.S./M.A. track if they fulfill the above requirements.
2. In the spring quarter of their senior year, students apply to the M.A. program.

REQUIREMENTS FOR THE M.A.
For an M.A. in psychology, students must pick a concentration in one of six areas: Behavioral, Cognitive, Developmental, Neuroscience and Behavior, Sensation and Perception, and Social.

Students who have been approved (by both the Department of Psychology and UCSD Office of Graduate Studies) for the program must enroll in their graduate year in
• PSYC 201A-B. Quantitative Methods
• PSYC 270A-B-C. Introduction to Laboratory Experimentation
• Four psychology seminars, two of which are in their area of concentration. In addition, three of the four seminars must be pro-seminars, which include:
  • PSYC 217. Developmental Psychology
  • PSYC 218. Cognitive Psychology
  • PSYC 219. Behavioral Psychology
  • PSYC 220. Social Psychology
  • PSYC 221. Sensation and Perception
  • PSYC 222. Behavioral Psychology
• One PSYC 500. Teaching Instruction

This amounts to forty units of graduate work. All courses must be completed with the grade of B+ or better. All course work is to be approved by the advisors (forms available from the Psychology Student Affairs Office). Students are expected to meet the graduate requirements for the M.A. in one year (three consecutive, contiguous, academic quarters, beginning in the fall after graduation). Any deviation from this plan, such as a break in enrollment for one or more quarters, will cause the student to be dropped from the program.

All forms required for the program must be submitted and approved by the Psychology Student Affairs Office, including the Application for Candidacy. Students must pay fees and be officially enrolled at UCSD during the quarter that the master’s degree is to be awarded. The thesis draft should be submitted to the Office of Graduate Studies for review before the final copy is officially submitted. See the Psychology Student Affairs Office for further details.

THE GRADUATE PROGRAM
The Department of Psychology provides broad training in experimental psychology. Increased specialization and the general burgeoning of knowledge make it impossible to provide training in depth in every aspect of experimental psychology, but most aspects are represented in departmental research.

PREPARATION
Apart from the general university requirements, the department generally expects adequate undergraduate preparation in psychology. A major in the subject, or at least a strong minor, is normally a prerequisite, but applicants with good backgrounds in such fields as biology and mathematics are also acceptable.

LANGUAGE REQUIREMENTS
There is no foreign language requirement.

GRADUATE CURRICULUM
Students must fulfill all course requirements (stated below) while registered as graduate students in psychology at UCSD. There may occasionally be exceptions granted to this rule. Requests for exception should be in the form of petitions from students and their advisors to the Committee on Graduate Affairs. It is in the best interest of the student if these petitions are forthcoming at the time of admission to the graduate program. In this way, the committee, the students, and their advisors will all be aware of the course requirements before any of them are taken.

PROGRAM OF STUDY
Courses are divided into six areas: behavior analysis (including basic and applied), biopsychology (including neuropsychology and neurophysiology), cognitive (including attention, language, and perception), developmental (including language acquisition), sensation and perception (including vision and audition), and social (including health and law). The Graduate Affairs Committee provides an approved list of courses from these areas. In the first year of study, each student must fulfill the following four requirements:
1. Each student must fulfill a quantitative methods requirement, either by taking two quantitative methods courses approved by the Graduate Affairs Committee (currently 201A and 201B), or by showing a satisfactory knowledge of these courses through an examination.
2. In addition to the quantitative methods requirement, each student is expected to take four proseminars and four approved courses from the list prepared by the Graduate Affairs Committee. All course work must be completed by the end of the third year.

four-unit courses) must be upper-division. At least four upper-division courses must be taken at UCSD for a letter grade. PSYC 199 (Independent Study) may count for one upper-division course towards the minor.

If Psychology 60 (Statistics) is chosen as one of the lower-division courses, it, too, has to be taken for a letter grade. The application for a minor can be obtained from your college. A grade-point average of at least 2.0 is required for graduation.

EDUCATION ABROAD
Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP) while still making progress toward the major. Students considering this option should discuss their plans with the Psychology Student Affairs Office before going abroad, and courses taken abroad must be approved by the department. Students may only receive credit for up to two core courses (PSYC 101-106) from their courses taken abroad. Information on EAP/OAP is detailed in the Education Abroad Program of the UC San Diego General Catalog. Interested students should contact the Program Abroad Office in the International Center.

TRANSFER CREDIT
In general, all introductory courses in experimental psychology are accepted for lower-division credit toward a psychology minor. Lower-division courses covering special topics in psychology (e.g., personal adjustment, human sexuality) will be accepted only if: 1) the student had a general introductory course as a prerequisite, and 2) the student had satisfied this prerequisite before taking the special topics course. Upper-division psychology courses will be evaluated for transfer credit on a course by course basis.

Major Requirements for the Integrated B.S./M.A.
An integrated program leading to a bachelor of science degree and a master of arts degree in psychology is offered to those undergraduate students who are enrolled in the bachelor of science major offered in the Department of Psychology at UCSD. Qualified students are able to obtain the M.A. degree within one year following receipt of the B.S. degree. Students interested in applying to this program must consult with the B.S./M.A. advisor in the Psychology Student Affairs Office fall quarter of their junior year.

The program is open only to UCSD undergraduates. The Department of Psychology does not have financial aid available for students enrolled in this program.

MAJOR REQUIREMENTS FOR THE INTEGRATED B.S./M.A.
An integrated program leading to a bachelor of science degree and a master of arts degree in psychology is offered to those undergraduate students who are enrolled in the bachelor of science major offered in the Department of Psychology at UCSD. Qualified students are able to obtain the M.A. degree within one year following receipt of the B.S. degree. Students interested in applying to this program must consult with the B.S./M.A. advisor in the Psychology Student Affairs Office fall quarter of their junior year.
3. Each first-year graduate student is required to submit a research paper on the research project (Psychology 270ABC). The paper should be comparable in style, length, and quality to papers published in the normal, refereed journals of the student’s research area. (The publication manual of the American Psychological Association, fourth edition, 1995, gives an acceptable format.) The research paper will be read and evaluated by the student’s research advisor and by at least two other readers appointed by the graduate advisor. The research paper is presented orally at a research meeting held at the end of the spring quarter. Attendance at this meeting is a requirement for the department’s graduate students and faculty. Typically, each student is allowed ten minutes to present the paper, with a five-minute question period following the presentation.

4. A teaching requirement must be met. (See below.) All students are evaluated by the entire faculty at the end of the academic year. The normal minimum standards for allowing a student to continue beyond the first year are:
   a. Satisfactory completion of the first-year research project (including oral presentation)
   b. At least a B+ in the quantitative methods courses
   c. At least a B+ average in the courses which fulfill the area requirements
   d. Having a faculty advisor in the Department of Psychology

Any student whose needs cannot be reasonably met with courses conforming to these guidelines may petition the Graduate Affairs Committee. The petition should contain a specific list of courses and a statement of justification and must be approved by the student's advisor.

ADVANCING TO CANDIDACY
In order to advance to Ph.D. candidacy a student must
1. Complete all first-year requirements
2. Complete an additional four elective courses from the list prepared by the Graduate Affairs Committee
3. Complete the qualifying examination for the Ph.D.

The qualifying examination is divided into two sections to be taken separately by all students. Part I of the qualifying exam consists of a paper written by the student that is modeled after those published in Psychological Bulletin or Psychological Review. Ideally, the paper would consist of a detailed review and theoretical synthesis of a coherent body of research. The paper should demonstrate independent and original thinking on the part of the student, and should either take a theoretical stance or recommend experiments designed to resolve theoretical ambiguities (i.e., the paper should not merely review published research).

Students form a qualifying committee in much the same way that they form a dissertation committee. The same rules apply, except that members from outside the department need not be included (although up to two may be). Once the committee is formed, the student should prepare a brief (e.g., three pages) proposal defining the area of research and the theoretical issues that will be addressed in the paper. A proposal meeting is then arranged (usually in spring quarter of the student’s second year), and committee members may at that time recommend changes in the scope of the paper and define their expectations.

The paper does not have a prescribed length, although low-end and high-end limits of thirty and fifty pages, respectively, seem reasonable. An oral defense of the paper is required (and should be completed by the end of the student’s third year).

Part II of the qualifying examination is the defense of the dissertation proposal. This will normally follow Part I of the qualifying examination and will be an oral examination including outside examiners.

TEACHING
In order to acquire adequate teaching experience, all student are required to participate in the teaching activities of the department for at least four years (one quarter for the first year and two quarters the second through the fourth year).

RESIDENCY
Each student must complete the requirements for qualification for candidacy for the Ph.D. degree by the end of the third year of residence. Any student failing to qualify by this time will be placed on probation. A student who fails to qualify by the end of the spring quarter of the fourth year of residence will automatically be terminated from the department.

No students may allow more than eight calendar years to elapse between starting the graduate program and completing the requirements for the Ph.D. Degree Students will automatically be terminated from the program at the end of the spring quarter of their eighth calendar year in the department.

RESEARCH
In each year of graduate study, students enroll in a research practicum (Psychology 270 in the first year; Psychology 296 in subsequent years). Students are assigned to current research projects in the department and receive the personal supervision of a member of the staff.

DEPARTMENTAL PH.D. TIME LIMIT POLICIES
Students must be advanced to candidacy by the end of four years. Total university support cannot exceed eight years. Total registered time at UCSD cannot exceed eight years.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

LOWER-DIVISION

EXPERIMENTAL REQUIREMENTS
Psychology at UCSD is a laboratory science. We are concerned with the scientific development of knowledge about human and animal behavior and thought. Accordingly, experience with experimental procedures plays an important role in the undergraduate and graduate training of students.

1. Psychology (4)
   A comprehensive series of lectures covering the basic concepts of modern psychology in the areas of human information processing, learning and memory, motivation, developmental processes, language acquisition, social psychology, and personality.

2. General Psychology: Biological Foundations (4)
   A survey of physiological and psychological mechanisms underlying selected areas of human behavior. Emphasis will be upon sensory processes, especially vision, with emphasis also given to the neuropsychology of motivation, memory, and attention.

3. General Psychology: Cognitive Foundations (4)
   This course is an introduction to the basic concepts of cognitive psychology. The course surveys areas such as perception, attention, memory, language, and thought. The relation of cognitive psychology to cognitive science and to neuropsychology is also covered.

4. General Psychology: Behavioral Foundations (4)
   This course will provide a basic introduction to behavioral psychology, covering such topics as classical conditioning, operant conditioning, animal learning and motivation, and behavior modification.

6. General Psychology: Social Foundations (4)
   This course will provide a basic introduction to social psychology, covering such topics as emotion, aesthetics, behavioral medicine, person perception, attitudes and attitude change, and behavior in social organizations.

60. Introduction to Statistics (4)
   Introduction to the experimental method in psychology and to mathematical techniques necessary for experimental research. PREREQUISITE: one year mathematics or consent of instructor.

87. Freshman Seminar (1)
   The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. PREREQUISITE: none.

90. Undergraduate Seminar (1)
   This seminar introduces the various subdisciplines in psychology and their research methods, and also explores career and graduate school opportunities. This includes informal presentations by faculty, graduate students, and other professionals.

99. Independent Study (2-4)
   Independent study or research under direction of a member of the faculty. PREREQUISITES: lower-division standing, completion of at least thirty units of undergraduate study at UCSD with a minimum UCSD GPA of 3.0; completed and approved Special Studies form.

UPPER-DIVISION

101. Introduction to Developmental Psychology (4)
   A lecture course on a variety of topics in the development of the child, including the development of perception, cognition, language, and sex differences. PREREQUISITE: upper-division standing Psychology 60 or BIB 100 or COGS 14 or Econ. 120A or Math. 11 or Math. 181A or Math. 183 or Soc/Pol 60.
102. Introduction to Sensation and Perception (4)
An introduction to problems and methods in the study of perception and cognitive processes. **Prerequisites:** Upper-division standing; Psychology 60 or BIEB 100 or COGS 14 or ECON 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

103. Introduction to Principles of Behavior (4)
An example of the principles of conditioning and their application to the control and modification of human behavior. **Prerequisites:** Upper-division standing; Psychology 60 or BIEB 100 or COGS 14 or ECON 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

104. Introduction to Social Psychology (4)
An intensive introduction and survey of current knowledge in social psychology. **Prerequisites:** Upper-division standing; Psychology 60 or BIEB 100 or COGS 14 or ECON 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

105. Introduction to Cognitive Psychology (4)
Introduction to experimental study of higher mental processes. Topics to be covered include pattern recognition, perception, and comprehension of language, memory, and problem solving. **Prerequisites:** Upper-division standing; Psychology 60 or BIEB 100 or COGS 14 or ECON 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

106. Introduction to Physiological Psychology (4)
Intensive introduction to current knowledge of physiological factors in learning, motivation, perception, and memory. **Prerequisites:** Upper-division standing; Psychology 60 or BIEB 100 or COGS 14 or ECON 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

107. Lab/Substance Abuse Research (4)
This lab course examines theory and research design and methods for substance abuse in adolescent adult populations. This course serves as preparation for individual research topics culminating in a paper.

108. Introduction to Cognitive Neuroscience (3)
This course covers background history, neuroanatomy, methods, and results from neuroimaging and neuropsychological studies of behavior. Topics include attention, motor control, executive function, memory, learning, emotion, and language. **Prerequisites:** Upper-division standing; Psychology 60 or BIEB 100 or COGS 14 or ECON 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

109. Lab/Applied Behavior Analysis (4)
This course will provide students with hands-on training in the application of behavioral research technology to a clinical population. Students will meet weekly for lecture, discussion, research articles reviews, and specific technique training. In addition, students will work on a research project. **Prerequisite:** Psychology 199 in the Schreiber autism laboratory recommended.

110. Juniors Honors Research Seminars (4)
Meeting in small groups to discuss research seminars by a range of departmental faculty, exposing students to contemporary research problems in all branches of experimental psychology. Class discussions will follow faculty presentations. Evaluation is based on assignments. **Prerequisites:** Admission by application with a minimum UCSD GPA of 3.3. Department stamp required.

*Application forms are available from the Student Services Office and due by the end of October of each fall quarter.

111A. Research Methods I (4)
Designed to provide training in the applications of advanced statistical methods in the context of initial instruction in experimental design. Emphasis will be placed on the development of statistical problem-solving skills, practical computer applications, and scientific report writing. **Prerequisites:** Psychology 60 or BIEB 100 or COGS 14 or equivalent and junior standing. Open to honors students or consent of instructor. Department stamp required.

111B. Research Methods II (4)
Designed to extend the material of Psychology 111A. Focusing on the techniques developed previously. Participation in data collection, data organization, statistical analysis, and graphic displays, emphasis placed on developing scientific report writing, presentations, and critical thinking about experimental methods. **Prerequisite:** Psychology 111A or consent of instructor.

114. Laboratory in Psychophysiological Perspectives on the Social Mind (4)
Lab course on the use of psychophysiological methods to investigate "the social mind," or the cognitive and emotional processes involved in understanding and reacting to other people. Overview of major research topics and methods applying selected techniques in actual experiments. Students will engage in developing individual research questions to actively participate in designing and conducting their experiments. **Prerequisites:** Upper-division standing.

115. Laboratory in Cognitive Psychology (4)
Lecture and laboratory work in human information processing. **Prerequisite:** Upper-division standing or consent of instructor.

118A. Real-Time Examination of Language Processing (4)
This lab course examines the design and methods for the real-time examination of language processing in normal and disordered (aphasic, dyslexic, child language impaired, etc.) language populations. This course serves as preparation for individual research projects in Psychology 118B.

118B. Real-Time Examination of Language Processing (4)
This lab is a continuation of Psychology 118A. The introduction to laboratory methods is now applied to individual research projects culminating in a lab presentation and paper. **Prerequisites:** Psychology 118A or consent of instructor.

119. Psycholinguistics/Cognition Laboratory (4)
Methods and practicum in experimental study of language, reading, and related cognitive processes (reasoning, problem solving) in young adult populations. **Prerequisites:** Psychology 118B or consent of instructor. Department stamp required.

120. Learning and Motivation (4)
Survey of research and theory in learning and motivation. Includes instincts, reinforcement, stimulus control, choice, aversive control, and human application. **Prerequisite:** Upper-division standing. Must be taken concurrently with Psychology 121 or Psychology 140.

121. Laboratory in Operant Psychology (4)
Lecture and laboratory in operant psychology. **Prerequisite:** Upper-division standing. May be taken concurrently with Psychology 120.

124. Introduction to Clinical Psychology (4)
Introduction to major concepts and models used in psychological assessment and psychotherapeutic intervention. Several modalities of psychotherapy (individual, group, and family) will be discussed from various perspectives including en-docrinological, neurobiological, psychological, sociological, and evolutionary. **Prerequisite:** Upper-division standing.

135. Animal Behavior (4)
Mechanisms that regulate the free behavior of animals, including neural, endocrine, genetic, and environmental mechanisms, with a strong emphasis on evolution (natural and sexual selection). Topics include communication, sociality, mating strategies, and parental behavior. **Prerequisites:** Upper-division standing and consent of instructor.

138. Social Cognition (4)
Social cognition blends cognitive and social psychology to show how people make sense of the social world. Social perception, inference, memory, motivation, and affect, understanding of the self, stereotypes, and cultural cognition. **Prerequisite:** Upper-division standing.

136. Sound and Music Perception (4)
Topics include the physiology of the auditory system, perception and pitch, loudness and timbre, localization of sound in space, perception of melodic and temporal patterns, handedness correlates, and musical illusions and paradoxes. There will be a substantial number of sound demonstrations. **Prerequisites:** Upper-division standing and consent of instructor.

139. Social Psychology of Sports (4)
This course focuses on the applications of social psychological principles and finding to the understanding of sports. Topics include the role of motivation, level of aspiration, competition, cooperation, social comparison, and optimal arousal, spectators' perspective, motivation and perceptions of success, stereotypes, etc. **Prerequisite:** Upper-division standing or consent of instructor.

140. Lab/Human Behavior (4)
Laboratory on the principles of human behavior, including choice behavior, self-control, and reasoning. **Prerequisites:** (May be taken concurrently); Upper-division.
141. Evolution and Human Nature (4)
Can important aspects of human behavior be explained as a result of natural selection? Focus on sex differences, selfishness and social cooperation, war and violence, and context effects in human reasoning. PREREQUISITE: upper-division standing and consent of instructor.

142. Psychology of Consciousness (4)
This course will survey research on consciousness from an experimental psychology perspective. Special emphasis will be placed on cognitive, neuro-imaging, and clinical/psychiatric investigative techniques, and on the scientific assessment of the mind-body problem. PREREQUISITE: upper-division standing.

143. Control and Analysis of Human Behavior (4)
An overview of the behavioral approach including basic principles, self-control, clinical applications, and the design of cultures. PREREQUISITE: upper-division psychology majors.

144. Memory and Amnesia (4)
This course will review basic research into the nature of memory. It begins with an examination of historical milestones in the study of memory and then considers research concerned with contemporary models of memory and amnesia. PREREQUISITE: upper-division standing.

145. Psychology of Language (4)
Introduction and development of language comprehension and production. Focus on brain basis of language, language origin and universal structure, language disorders (aphasia, dyslexia), animal language, linguistic community differences, and the mental processes underlying normal language processing. PREREQUISITE: a course in language, cognition, or philosophy of mind recommended.

146. Language and Conceptual Development (4)
Introduction to research on language acquisition and how it relates to conceptual development. Focus on theoretical foundations (e.g., learning mechanisms, universal grammar, theories of concepts) and empirical case studies, including word learning, syntax and semantics, and language and thought. Recommend course in language/linguistics, cognition, or cognitive development. PREREQUISITE: upper-division standing or consent of instructor.

148. Psychology of Judgment and Decision (4)
Broadly defined, the field of judgment and decision making examines preferences and subjective probability, and how they are combined to arrive at decisions. The course will cover history and current topics.

149. Social Psychology of Theater (4)
Exploration of the relationship between social psychology and drama, focusing on the use of psychological principles in plays (by playwrights) and their performance (by directors, actors, and choreographers). PREREQUISITE: upper-division standing, major in psychology or theater, or consent of instructor.

150. Cognitive Neuroscience of Vision (4)
Cognitive neuroscience is an interdisciplinary field of research dedicated to understanding how the brain supports different cognitive abilities. This course will focus on the neural basis of visual experience, or how our brain creates what we see in the world around us. PREREQUISITE: PSYC 102 or PSYC 108.

151. Tests and Measurement (4)
This course provides an introduction to psychological testing presented in three components: 1) psychometrics and statistical methods of test construction; 2) application of psychological tests in industry, clinical practice, and other applied settings; and 3) controversies in the application of psychological tests. PREREQUISITE: Psychology 60.

152. Conceptions of Intelligence (4)
This course will examine the concept of intelligence from several perspectives: its historical development, its measure in terms of IQ test, and its role in practical affairs. Also included will be its role in comparative psychology and attempts to analyze intelligence in terms of more fundamental cognitive processes. PREREQUISITE: Psychology 60 or consent of instructor.

153. Psychology of Emotion (4)
Past and current findings and theories on emotion. Facial expressions of emotions, psychophysiology, evolutionary perspectives on emotions, and the specific emotions: anger, fear, and jealousy. PREREQUISITE: upper-division standing or consent of instructor.

154. Behavior Modification (4)
Extension of learning principles to human behavior, methods of applied behavior analysis, and applications of behavioral principles to clinical disorders and to normal behavior in various settings. PREREQUISITE: upper-division standing.

155. Social Psychology and Medicine (4)
Examines a variety of theoretical and empirical perspectives, including health, illness, and treatment, and social and psychological perspectives in the medical area. PREREQUISITE: Psychology 60 or equivalent and 104.

156. Cognitive Development in Infancy (4)
Examines perception and cognition in the first year of life. Different theories of cognitive change in infancy will be evaluated. PREREQUISITE: Psychology 60 and either Psychology 101 or HDP 1.

157. Happiness (4)
This course will address the psychology of happiness. The discussions and readings, consisting largely of original research articles, will explore such questions as: What is happiness? How do we measure it, and how do we tell who has it? What is the biology of happiness and what is its evolutionary significance? What makes people happy—youth, fortune, marriage, chocolate? Is the pursuit of happiness pointless? PREREQUISITE: upper-division standing.

158. Interpersonal Relationships (4)
Sociocultural context to examine theories and empirical work pertaining to interpersonal relationships; attraction, jealousy, attachments, love. PREREQUISITE: upper-division standing.

159. Physiological Basis of Perception (4)
A survey of sensory and perceptual phenomena and the physiological mechanisms underlying them. PREREQUISITE: Psychology 102 or consent of instructor.

160. Groups (4)
Causes and consequences of gregariousness, stress, validating attitudes, improving efficiency, consolidating power, permitting loafing, rejecting deviates, and isolating group members from unpleasant outside influence. PREREQUISITE: upper-division standing.

161. Introduction to Engineering Psychology (4)
Surveys human perceptual and cognitive limitations and abilities important in designing “user-friendly” computers and devices, improving aviation and traffic safety, and other engineering challenges. Topics include human vision as it bears on display design (including virtual-reality), short-term memory limitations, learning and retention, and the effects of noise and stress, causes of human error and their minimization. PREREQUISITE: upper-division standing.

162. Psychology and the Law (4)
Research dealing with psychological factors in the legal system will be surveyed. Particular emphasis will be placed on applying psychological theory and methods to the criminal justice system in an attempt to understand the behavior of its participants. PREREQUISITE: Psychology 60 and 104.

163. Abnormal Psychology (4)
Surveys origins, characteristics and causes of abnormal behavior and the biological and environmental causes of abnormality. PREREQUISITE: upper-division standing.

164. History of Psychology (4)
Survey of the major trends and personalities in the development of psychological thought. Emphasis given to such selected topics as mind-body problem, nativism vs. empiricism, and genetics of behaviorism. Open to psychology majors with senior standing only.

165. Psychological Disorders of Childhood (4)
Examines different forms of psychological deviance in children (psychosis, neurosis, mental retardation, language disorders and other behavior problems). Emphasis on symptomatology, assessment, etiological factors, and various treatment modalities. PREREQUISITE: upper-division standing.

166. Brain Damage and Mental Functions (4)
Studies neural mechanisms underlying perception, memory, language, and other mental capacities. What happens to these capacities when different parts of the brain are damaged? What can we learn about the normal brain by studying patients? PREREQUISITE: upper-division standing.

167. Introduction to Cognitive Neuropsychology (4)
What are the neural mechanisms underlying mental phenomena such as perception, attention, and memory? The two disciplines, neuropsychiology and psychology, both have a long history but until recently there has been very little interaction between them. This course will take students to the interface between these two fields and we will discuss a wide range of topics that are of current interest. PREREQUISITE: upper-division standing.

169. Neurobiology of Learning and Memory (4)
Studies the neurobiology of learning and memory, from cognitive to molecular neuroscience, including human, animal, and cellular; and molecular studies of memory. Topics include amnesia, mental retardation, exceptional intelligence, aging, and Alzheimer’s disease. PREREQUISITES: Psychology 2 or 106 or 181, upper-division standing or consent of instructor.

172. The Psychology of Human Sexuality (4)
Important issues in human sexuality including sex and gender, sexual orientation, reproductive technology, and sexual dysfunction. PREREQUISITE: upper-division standing.

173. Psychology of Food and Behavior (4)
Reviews the psychology of food and behavior. Topics will include biological, psychological, and social influences; taste preferences and aversions and how they are learned; how culture influences food selection; and food-related behaviors across the lifespan. PREREQUISITE: upper-division standing or consent of instructor.

175. Psychology and the Arts (4)
An interdisciplinary course focusing on theoretical ideas and empirical research that relate contemporary psychology (social and cognitive, psychophysiology, motivation and emotion) to issues in various artistic and aesthetic domains, as visual arts, music, literature, criticism, and the performance arts. PREREQUISITES: upper-division standing: major in Psychology, Music, Visual Arts, Communications, Theatre, or Literature, or permission of instructor.

176. Organizational Psychology (4)
Examines human behavior in industrial, business, and organizational settings; and psychological principles as applied to selection, placement, management, and training. The effectiveness of individuals and groups within organizations, including leadership and control, conflict and cooperation, motivation, and organizational structure and design, is examined. PREREQUISITE: upper-division standing.

179. Drugs, Addiction, and Mental Disorders (4)
Considers the use, abuse, liability, and psychotherapeutic effects of drugs in humans. Lectures are supplemented by guest lectures from clinical experts in psychology and psychiatry. PREREQUISITE: one lower-division psychology course (1, 2, 3, or 4) or upper-division standing.

180. Adolescence (4)
This course will adopt a multidisciplinary approach toward understanding the period of human adolescence. A strong focus on the neurobiological aspects of adolescence will be combined with psychological, anthropological, and sociological considerations. PREREQUISITE: upper-division standing.

181. Drugs and Behavior (4)
Develops basic principles in psychopharmacology while exploring the behavioral effects of psychoactive drugs and mechanisms of action of drugs. PREREQUISITE: psychology major or minor, or biology major or minor.

182. Illusions and the Brain (4)
This course explores the bases of illusions in terms of perceptual and cognitive principles, and the underlying
184. Choice and Self-Control (4) Experimental analysis of choice behavior, with an emphasis on the types of choice involved in self-control. Focus on conditions under which decision-making is optimal. PREREQUISITE: upper-division standing.

185. Applied Developmental Psychology (4) This seminar course deals with how developmental psychologists conduct scientific studies that have direct practical implications for children’s well-being. Major issues to be discussed are: child witnesses, literacy, school violence, impact of media on child development, and developmental psychopathology. PREREQUISITES: upper-division standing and Psychology 101.

187. Development of Social Cognition (4) This course will examine reasoning about people from a developmental perspective. Topics will include emotional understanding, achievement motivation, peer relations, social categories, and culture. PREREQUISITE: Psychology 101.

188. Impulse Control Disorders (4) Problems of impulse control are important features of major psychiatric disorders but also of atypical impulse control disorder such as: pathological gambling, compulsive shopping, including shopping, Focus: development, major common features, treatment, and neurobiological basis of impulse control disorders. PREREQUISITE: upper-division standing.

189. Brain, Behavior, and Evolution (4) A survey of natural behaviors, including birdsong, prey capture, localization, electro-reception, and echo-location, and the neural control over them, emphasizing broad fundamental relationships between brain and behavior across species. PREREQUISITES: Psychology 103 and 106, or permission of instructor.

190. Parenting (4) This course adopts an interdisciplinary approach to the complex construct of parenting. Parenting is explored with respect to thinking, culture, development, psychology, biology, etc. Controversial issues such as the influence of the media, family structure, and discipline strategies are analyzed. PREREQUISITE: upper-division standing.

191. Psychology of Sleep (4) Topics include basic psychology, evolutionary models of the purpose of sleep, the role of sleep in learning/creativity, dreams, and sleep disorders. PREREQUISITE: upper-division standing.

193. Topics in Psychology (4) Selected topics in the field of psychology. May be repeated for credit as topics vary. PREREQUISITE: upper-division standing and consent of instructor.

194A-B. C. Honors Thesis (4-4-4) Students will take part in a weekly research seminar. In addition, they will plan and carry out a three-quarter research project under the guidance of a faculty member. The project will form the basis of the senior honors thesis. PREREQUISITE: acceptance to the Honors Program in the junior year (110A-B) (GPA 3.3), in addition one laboratory course (114-127), two 199s which culminate in a research paper (by petition only) and Psychology 110, 111A-B and consent of instructor.

195. Instruction in Psychology (4) Introduction to teaching a class section in a lower-division psychology course, hold office hours, assist with examinations and grading (P/NP grades only). This course counts only once towards the major. PREREQUISITES: junior or senior psychology major with GPA of 3.0 or A in the course and consent of instructor.

196A-B-C. Research Seminar (4-4-4) Weekly research seminar, three quarter research project under faculty guidance which culminates in a thesis. PREREQUISITES: one laboratory course, 3.3 GPA, and/or consent of instructor.

199. Independent Study (2 or 4) Independent study or research under direction of a member of the faculty. PREREQUISITE: GPA 2.5 and ninety units completed. (P/NP grades only) Not counted for credit toward the major. See section on 199 information.

GRADUATE

201A-B-C. Quantitative Methods in Psychology (4-4-4) An intensive course in statistical methods and the mathematical treatment of data, with special reference to research in psychology. PREREQUISITE: restricted to graduate students in psychology.

204. Neurobiology of Social Development (4) The goal of this class is to acquaint students with research on the neurological underpinnings of social and social cognitive development. Students will be expected to become familiar with the existing research in the area, and to understand the neural structures that comprise the limbic system and related structures. Students will be expected to form hypotheses about the neural correlates of aspects of social development based upon an understanding of the development of structures involved in social behavior.

205. Emotion (4) This seminar provides a selective overview of the scientific study of emotion. We will discuss various theoretical perspectives on emotion and will focus on specific topics such as emotion regulation, affect in social interactions, individual differences, and particular emotions (e.g., embarrassment, envy, and jealousy). PREREQUISITE: graduate standing.

206. Mathematical Modeling (4) This course is designed to teach the basics of mathematical modeling. Topics include when, why, and how to use signal detection theory (an essential theory for anyone interested in attention, perception, memory, or decision making), how to analyze reaction time distributions (instead of simply measuring mean RT), how to engage in the fine art of model comparison, and how to avoid creating models that are more complex than the data they seek to explain.

209. Topics in Judgment and Decision Making (3) This seminar examines issues in the psychology of judgment and decision making. Topics include the heuristics and biases approach, over confidence, framing effects, intertemporal choice, and rationality.

210. Skill Acquisition and Development of Expertise (4) The course examines the transition from novice to highly skilled performance and the transfer of that skill to novel problems and contexts. Emphasis will be on information-processing accounts of learning and performance for relatively simple cognitive tasks.

211. The Development of Social Cognition (3) This seminar will cover the development of concepts about people. Topics include emotional understanding, “theory of mind,” trait thinking, social categories, psychological essentialism, achievement motivation, and social and cultural influences on person perception. PREREQUISITE: graduate standing.

212. Current Topics in Visual Science (3) Each year a different topic in visual science is selected for in-depth review and discussion based on current readings. PREREQUISITE: consent of instructor.

213. Professional Procedures and Survival in Psychology (3) This course provides a forum for presentation and discussion of the basic issues associated with surviving in a professional (particularly, academic) psychology environment. It covers such issues as: 1) how to get a job; 2) how to keep a job; 3) general issues in professional survival. The course will include the presence of a number of the psychology faculty in topic specific areas (e.g., journal editors from our faculty; faculty sitting on grant review panels, etc.). The issue of ethics will be examined and discussed relative to each topic raised.

214. Applied Developmental Psychology (4) This seminar deals with how developmental psychologists conduct scientific studies that have direct practical implications for children’s well-being. Major issues to be discussed are: child witnesses, literacy, school violence, impact of media on child development, and developmental psychopathology.

217A. Proseminar in Developmental Psychology I (3) The course examines cognitive development through the first-second period. It begins with an examination of early neurological, sensory, motor, and perceptual functions and then focuses on issues in linguistic and cognitive development.

217B. Proseminar in Developmental Psychology II (3) The course examines social and personality development from infancy through early adolescence. The class will first discuss general developmental theory and methods and then topics such as attachment, temperament, self-concept, aggression, family relations, play, and peers.

218A-B. Cognitive Psychology (3-3) A two-quarter survey of basic principles and concepts of cognitive psychology. This course is intended to serve as the basic introduction for first-year students. Basic areas include knowledge, memory, thought, perception, and performance. The areas are taught by faculty members who work within the specialty. PREREQUISITE: graduate status in psychology or consent of instructor.

219. Prosseminar in Learning and Motivation (3) An overview of the experimental and applied analysis of behavior. Includes topics such as: 1) How do they use this information to find rewards? 2) How do they use systemic control and conditioning? 3) General issues in professional survival. The course will cover such topics as: 1) how to get a job; 2) how to keep a job; 3) general issues in professional survival.

220. Prosseminar in Social Psychology (3) An introduction to social psychology. Psychology and the social, interpersonal, and ecological context. Emphasis will be on sociological approaches to the study of these social modalities, as well as some essential aspects of their neurophysiological bases.

223. Advanced Topics in Vision (4) An in-depth analysis of empirical and theoretical issues in a specialized area of vision or visual perception. Emphasis most likely will be on a topic of ongoing vision research at UCSD. PREREQUISITE: Psychology 212 or special consent of instructor.

229. Happiness (4) This course will address the psychology of happiness. The discussions and readings, consisting largely of original research articles, will explore such questions as: What is happiness? How do we measure it, and how do we tell who has it? What is the biology of happiness and what is its evolutionary significance? What makes people happy–youth, fortune, marriage, chocolate? Is the pursuit of happiness pointless?

230. Comparative Social Cognition (4) This seminar will address the following questions: What do nonhuman animals know about the identity and characteristics of nonspecifics? How do they use this information to guide their actions? How do animals modify their behavior in relation to social context? What kinds of information are culturally transmitted? What are the brain mechanisms for social cognition in nonhumans, and how do they compare to ours? PREREQUISITE: graduate standing or consent of instructor.

233A. Topics in Learning and Motivation (3) Advanced topics in learning and motivation, with special emphasis on current research. PREREQUISITE: Psychology 210.

236. Substance Abuse (3) Theory and research on the development, progression, and resolution of substance use and abuse will be reviewed and evaluated. Normal and abnormal patterns of substance involvement will be contrasted across the life span.
258. Delay of Gratification (3)
This course will review the research on delay of gratification. We will cover what makes it in general so tough, what situations make it possible, who can do it, and what the implications of this ability are. We will draw from research in social, personality, and animal psychology as well as economics.

259. Social Psychology/Psycho-aesthetics (3)
This course will be an intensive examination of social psychology (legal decision-making, emotion, aggressive behavior) and the psychology of visual art and music (psycho-aesthetics).

261. Proseminar in History of Psychology (3)
This course will consider the intellectual context in the nineteenth century from which psychology developed as an independent discipline. Emphasis will be on early German psychology and evolutionary theory. The second part of the course will consider the histories of different areas of psychology (e.g., behavioral, cognitive).

262. Functional Construction of the Vertebrate Brain’s Social Behavior Network (4)
The vertebrate brain contains a network of strongly interconnected structures that play essential roles in the regulation of social behavior. In this seminar we will read and discuss primary literature that details the structure and behavioral functions of this network.

264A-B-C. Advanced Topics in Language Processes (4-4-4)
Research and discussion on selected topics in language processes.

267A-B-C. Advanced Topics in Behavior Medicine (3-3-3)
Research and discussion on selected topics in behavior medicine.

269A-B-C. Advanced Topics in Sound and Music Perception (3-3-3)
Research and discussion on selected topics in sound and music perception.

270A-B-C. Introduction to Laboratory Experimentation (1-4)
A basic laboratory course, designed to introduce first-year graduate students to experimental methods in psychology. The student will select a research topic, do a thorough literature review of the area, design and carry out new, original studies of problems in the selected area, and prepare a final formal report of the study at the end of the spring quarter. This course is required of all first-year graduate students in the department. PREREQUISITE: first-year psychology graduate students only.

271. Neurobiology of Learning and Memory (4)
This seminar will span the study of learning and memory from an interdisciplinary neuroscience perspective: the goal will be to gain a broad perspective on memory. The course will also touch on dysfunctions of learning and memory such as in amnesia, mental retardation, aging, and Alzheimer’s disease. The course will end with exciting developments in the field, including the possibility of genetic and pharmacological enhancement of memory and intelligence.

272. Selected Topics in Cognitive Psychology (3)
An in-depth analysis of selected empirical and theoretical topics in cognitive psychology. The course will focus on areas where notable progress appears to be taking place in contemporary research.

280. Seminar in Communication and Information Processing (1)
(S/U grades only.)

282. Advanced Topics in Auditory Neuroscience (4)
An in-depth analysis of current theoretical and empirical issues in the neurobiological study of auditory perception and cognition. Example topics include auditory stream segregation, localization, natural stimulus coding, pattern recognition and communication in multiple species.

296. Research Practicum (1-12)
Research in psychology under supervision of individual staff members. (S/U grades only) (F,W,S)

298. Library Research (1-12)
Reports and surveys of the literature on selected topics. PREREQUISITE: graduate students in psychology. (S/U grades only) (F,W,S)

299. Independent Research (1-12)
Independent research and thesis research. (S/U grades only) (F,W,S)

500. Apprentice Teaching (4)
Required teaching practicum for students enrolled in graduate program in psychology. One four-unit course per year for four years. (S/U grades only.)
the Department of Family and Preventive Medicine in the School of Medicine at UC San Diego and the Graduate School of Public Health at San Diego State University (SDSU). Students in the program complete course work and conduct research at both institutions. Faculty from each campus serve on advisory and dissertation committees, providing students with extensive exposure to experts whose research interests represent the interdisciplinary nature of modern public health. Dr. John P. Pierce (UCSD) and Dr. Joni Mayer (SDSU) codirect the program.

Emphasis is on producing graduates with a mastery of the central concepts and analytic processes of health behavior. Graduates of the program are expected to establish advanced skills in applied behavioral analysis for population application; to establish expertise in advanced qualitative and quantitative research methods; to establish advanced skills in the application of interventions and research methods to health behavior in disenfranchised populations; and to establish skills necessary to understand and change health policy. Graduates of the program are competitive for a variety of research, teaching, and community service positions in areas such as academic institutions, local and state health departments, federal and international agencies, and both private and public-sponsored research institutions.

Areas of specialization currently include physical activity, tobacco control, skin-cancer prevention, nutrition and obesity, and HIV/AIDS and tuberculosis prevention and control. An additional emphasis will be placed on methodologies, such as measurement and related research issues; and ecological approaches to understanding health behavior. San Diego is ideally located in a large and ethnically diverse metropolitan center bordering Mexico and the Pacific Rim, enabling students to carry out community-based multicultural and multinational studies of health problems.

Time Limits

The goal of this policy is to encourage Ph.D. completion in a timely manner.

Pre-candidacy limit. Maximum registered time to advance to Ph.D. candidacy: 4 years

Support limit. Maximum registered time doctoral student is eligible for support: 6 years

Total time limit. Maximum registered time to complete all Ph.D. requirements: 7 years

Information regarding admission is found in the current edition of the Bulletin of the Graduate Division of San Diego State University. To receive an application for admission, contact SDSU/UCSD Joint Doctoral Program in Public Health, San Diego State University, 5500 Campanile Drive, San Diego 92182-4162, (619) 594-2743.

For more information, please contact UCSD Graduate Coordinator, 3855 Health Sciences Drive, Room 3063, La Jolla, CA 92039-0901, (858) 822-2382.

THE JOINT DOCTORAL PROGRAM (JDP) IN HEALTH BEHAVIOR

OFFICE: Moores UCSD Cancer Center, Room 3063
Mail Code 0901
SDSU—http://famprevmed.ucsd.edu/educational.html
UCSD—http://publichealth.ucsd.edu

A Ph.D. in public health with a concentration in health behavior is offered by the joint faculties of

Public Service Minor

OFFICE: Office of the Provost
Thurgood Marshall College
Administration Building

AFFILIATED FACULTY AND STAFF
Amy Binder, Associate Professor, Sociology, Director of Public Service Minor
Tricia Taylor-Oliveira, Director, Academic Internship Program
Kerry Shannon, Public Service Internship Specialist

SPECIALIZATION CHAIRS
Aurora Zepeda, M.P.A., Education Studies—Education
Steven P. Erie, Ph.D., Political Science—Government
Lawrence A. Palinkas, Ph.D., Family and Preventive Medicine, School of Medicine—Health
Joel Robbins, Ph.D., Anthropology—Social Issues

The public service minor at UCSD encourages students to understand the history and practices of public service and to participate in the development of civic skills. Those skills and practices are essential cornerstones of participation in a democratic society regardless of one’s chosen profession.

The course work for the minor emphasizes the history and emergence of the non-profit sector as a national institution distinct from the private and public sectors. The practicum aspects of the minor coupled with the traditional academic work encourage students to see the connection between the needs of charitable service and the historic worth of citizen participation in the common public franchise, regardless of professional interests or gain.

The minor in public service is open to all UCSD students in good standing. Students first complete TMC 15, Public Service in America, and must choose one area of specialization from education, government, social issues, or health. A list of specific courses appropriate for these specializations is available through the Marshall College Provost’s Office. Approval of the minor is based on completion of TMC 15 and two of the three upper-division specialization courses with a 2.0 GPA or better, and a cumulative GPA of 2.5 on ninety units. Students approved to complete the minor are placed into specific internships in public service through the Academic Internship Program.

The following twenty-eight units comprise the public service minor:

• TMC 15, Public Service in America
• Three upper-division specialization courses (education, government, social issues, or health)
• Three upper-division academic internships in public service
• Capstone seminar in public service

For more information regarding the requirements for the minor, see the Office of the Provost, or Academic Advising, Thurgood Marshall College, TMC Administration Building, or visit the Web site at http://publicsvcminor.ucsd.edu.

THE JOINT DOCTORAL PROGRAM (JDP) IN GLOBAL HEALTH

OFFICE: Ash Building, Room 109
Mail Code 0622

Since 2007, a Ph.D. in public health with a concentration in global health has been offered by multidisciplinary faculty in UCSD’s School of Medicine and the Graduate School of Public Health at San Diego State University. Global health relates to health issues and concerns that transcend national borders, class, race, ethnicity, and culture, stresses the commonality of health issues, and calls for collective, partnership-based action to resolve these issues. Accordingly, emphasis is on preparing graduates with the fundamental knowledge, understanding, and specific skills necessary to become public health researchers and professional leaders in global health settings. Proximity to the U.S./Mexico border and expertise of many current faculty support and encourage a focus on infectious diseases (e.g., HIV, TB, STDs) and health of migrant populations, although students are expected to develop other areas of specialization within the global health concentration. These may be content areas, such as chronic/infectious disease surveillance and prevention, environmental health, health policy, and substance abuse, or methodological areas such as quantitative, qualitative, and spatial research methodologies that are applied to address health problems of global health significance. Dr. Steffanie Stratathdee (UCSD) and Dr. Jenny Quintana (SDSU) direct the program.

Requirements for the joint doctoral degree include:

1. Successful completion of required course work
2. Passing written and oral qualifying examinations
3. Demonstrated proficiency in teaching
4. Demonstrated cultural competence appropriate to dissertation area
5. Completion and successful formal defense of a dissertation
The program engages in the academic study of religious phenomena in many regions of the world and within many different religious cultures and traditions; and it studies literature, history, and society in relation to religion. Faculty and students associated with the program give primacy to humanistic and social-scientific methods of study that have become established in the academic community during the nineteenth and twentieth centuries.

The location of the program in the Division of Arts and Humanities and its use of courses from a variety of departments and divisions imply that neither the study of religion nor its data are the privileged possession of a single discipline. The hallmark of the program is its interdisciplinary and interdepartmental structure. At UC San Diego, faculty from the Departments of Anthropology, History, Literature, Philosophy, Political Science, Sociology, and Visual Arts provide students with the opportunity to examine religious artifacts, texts, institutions, and communities within a particular cultural and historical context and in the context of comparable manifestations within the general history of religions.

A concentration in the Study of Religion aims at fostering a student's understanding of religion as one of the primary expressions of the human condition and as an historically powerful force in the shaping of human cultures; and it aims to foster an understanding of multiple religious traditions. It seeks to develop a student's appreciation of the difficulties and possibilities inherent in undertaking a critical, disciplined, cross-cultural study of religion. Since the program endorses an interdisciplinary and comparative approach to the study of religion, lower-division preparation should be wide and varied. Lower-division courses in which religion figures prominently (e.g., Introduction to Religion, Making of the Modern World, or the Revelle College Humanities Program), as well as courses which focus on textual and contextual analysis and employ the analytical tools and conceptual categories of the human sciences, would all be useful in preparing the student for a major in the Study of Religion. The program strongly encourages foreign language study. The ability to read the languages of original sources and of modern scholarship is highly recommended, especially for students planning to attend graduate school in religion.

**MAJOR**

The major in the Study of Religion consists of twelve upper-division courses; achieving a balance between courses which focus on a single religious tradition or issue and those which explore various traditions and methodologies. These courses should include the following:

- Three required courses in the Study of Religion, (1) RELI 110A or B and (2) RELI 111 or 112 or 113 and (3) RELI 189, or one other seminar approved by the program director;
- Nine courses from the approved course list to be selected in consultation with the program director. Students should see the program coordinator for further details.

**DOUBLE MAJOR**

Students may choose to pursue the Study of Religion as their second major. In such cases, it may be possible for up to two courses to overlap with the other major. Students should consult the program coordinator for further information.

**HONORS IN THE STUDY OF RELIGION**

The program for the Study of Religion offers an Honors Program for students who demonstrate excellence in the major. The minimum eligibility requirements for the Honors Program are stated below. In most cases students are completing their last two quarters (winter and spring) when they enroll in the Honors Program.

**Minimum Eligibility Requirements**

- RELI 110A or 110B completed prior to honors project
- Junior or senior standing (completion of at least 90 units)
- GPA of 3.3 overall and a 3.5 in the major to enter or remain in the Honors Program
- Eight units of RELI 196H taken over two quarters (typically winter and spring)
- Research paper (at least twenty pages; most students write between thirty and fifty pages)

Students interested in the Honors Program should consult with the program coordinator for a detailed list of requirements and an application. Participation in the Honors Program is contingent upon the prior approval of the Honors Thesis research topic by the director. Honors proposals are due at the program office by the tenth week of the quarter (usually fall quarter of the senior year) prior to being enrolled. Final approval must take place before the first day of the quarter in which the student plans to enroll in RELI 196H.

The Honors student’s faculty director must certify by the end of the first term that the student is making timely progress toward the completion of his or her project.

The notations “distinction,” “high distinction,” and “highest distinction” will be determined on the following basis: major GPA, the grade for the research paper, and the grade for the public presentation.

**MINOR**

The minor in the Study of Religion consists of seven courses, of which five must be upper-division. These seven courses must include two required courses in the Study of Religion as delineated under the major:

1. RELI 110A or 110B, and
2. RELI 111 or 112 or 113.

Some students may apply two lower-division college requirements to the minor (e.g., Revelle students may apply HUM 1 and HUM 2, and ERC students may apply MMW 2 and MMW 3).

**Student Advising**

All students are assigned a faculty advisor and are encouraged to meet with their advisor at least once a quarter to develop their course of study. Additional advising information may be obtained from the
program coordinator, Literature Building, First Floor, Room 146.

Study Abroad

Students are encouraged to investigate the University of California Education Abroad Program (EAP) and other options for foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill major and minor requirements. More information about studying abroad can be obtained in the Education Abroad section of the catalog.

Career Opportunities and Preparation for Graduate Study

Among its many aims, the major in the Study of Religion is designed to develop fundamental skills in critical thinking, comparative analysis, research, and written expression. As such, the B.A. degree is appropriate for careers in education, government, business, and non-profit agencies. It is also an excellent preparation for graduate study in a variety of fields and disciplines. Students interested in earning a California teaching credential from UCSD should contact the Teacher Education Program for further information.

Students are encouraged to consult the program director for further information about career opportunities and graduate study. Information is also available on the program's Web site.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

RELI 1. Introduction to Religion (4)

An introduction to key topics in the study of religion through a comparative reading of religious texts and/or artifacts. The intent is to develop basic strategies of interpretation for undertaking a critical, disciplined study of religion.

RELI 110A. The Modern Study of Religion: Religion in Modernity (4)

This course examines the history of the term "religion," focusing upon the development of religion's contemporary significance within the Reformation and Enlightenement, and questioning what it means to be "modern." Topics change yearly. Special attention to contemporary culture and politics.

RELI 110B. The Modern Study of Religion: Social and Cultural Theories of Religion (4)

An introduction to basic strategies of interpretation in the study of religion, including issues of category formation, theory, and method. Special attention paid to prominent voices of the nineteenth and twentieth centuries, including Marx, Freud, Durkheim, Eliade, etc.

RELI 111. Texts and Contexts: The Holy Book in Christianity and Judaism (4)

This course examines the development of sacred scripture in Judaism and Christianity. Topics include the variety and use of texts in religious communities; the process of canonization; the formation and transformation of textual communities. 

RELI 112. Texts and Contexts: The Holy Book in Islam (4)

An overview of the history and thematic issues in the study of Quran. It will focus on historical events, issues, and various interpretive practices in the development of Quran as a sacred text. PREREQUISITE: upper-division standing or department stamp.

RELI 113. Texts and Contexts: Textual Communities in South Asia (4)

This class considers important texts belonging to one or more of the following South Asian Traditions: Hinduism, Buddhism, Jainism, or Sikhism. It introduces students to the ways in which religious identities are formed and contested within a pluralistic society.

RELI 130. Religion, Science, and Magic (4)

Religion, science, and magic provide scholars with a set of analytic categories for the comparative study of cultural forms and modes of thinking. What are the ideological underpinnings and political implications of these categories? This course addresses these questions using comparative avenues involving literary sources. 

RELI 131. Topics in Religion and Sexuality (4)

How does religiosity as a significant cultural component help mold gender and sexuality identities? The class offers topical investigations into this question. PREREQUISITE: upper-division standing or consent of instructor.

RELI 132. Topics in Orthodoxy and Heterodoxy (4)

Religious dogmas often develop in dialogue with alternative viewpoints that ultimately are rejected by heterodoxy by the dominant group. This class presents case studies in the interpretation of such ideological and sociological pairings using scriptural, literary, and analytic sources.

RELI 134. Topics in American Religion (4)

Topical studies in the history of religion in American society, ranging from the Puritans to the New Age. PREREQUISITE: upper-division standing or consent of instructor.

RELI 140. Death and Religion (4)

This interdisciplinary course uses literary sources to explore the relationship between death and religion on a historical and global scale; the relationship between political religious rituals and symbolism of rebirth; examination of carnival, death pollution, and symbolism of gender.

RELI 141. Public Sphere and Religion (4)

This interdisciplinary course will explore the historical and theoretical relationship between public sphere and religion, particularly focusing on the manifestation of religious power, public ritual, and sacred theatricality in everyday spaces of life. PREREQUISITE: upper-division standing or consent of instructor.

RELI 142. Secularization and Religion (4)

Surveys the relationship between religion and modernity, in particular the problematic of the secularization theory; covers cases such as Catholic liberation theology and Islamic fundamentalism, with particular focus on the "deprivatization of modern religion." PREREQUISITE: upper-division standing or consent of instructor.

RELI 143. Topics in Performing Religion (4)

This course explores religion as a system of bodily practices, rather than one of tenets or beliefs. How do day-to-day activities as well as significant rituals express and inform people's religious lives? Why is doctrine an insufficient basis for understanding religion? May be taken up to three times as topics vary. PREREQUISITE: upper-division standing or consent of instructor.

RELI 188. Special Topics in Religion (4)

Students in this lecture will investigate important problems in the study of religion or the history of particular religions. May be repeated for credit up to three times when topics vary. PREREQUISITE: upper-division standing.

RELI 189. Seminar in Religion (4)

This seminar requires the intensive analysis of critical problems in the study of religion or the history of particular religions. May be repeated for credit up to three times when topics vary. PREREQUISITE: upper-division standing; RELI 110A or 110B or consent of instructor.

RELI 196H. Honors Thesis Research (4)

Honors thesis research for students accepted into the Honors Program. Research is conducted under the supervision of a program faculty member. PREREQUISITE: program approval into the Honors Program.

RELI 197. Directed Advanced Readings (4)

A faculty member will direct a student in advanced readings on a topic not generally included in the Program for the Study of Religion's curriculum. Students must make arrangements with the program and individual faculty. May be repeated for credit up to three times for credit. 

APPROVED ELECTIVE COURSES

The following lower- and upper-division courses are offered on a regular basis, although not every course is available every year. Please contact the program coordinator for approved courses in any given quarter or visit the program's Web site, http://religion.ucsd.edu. Students may petition other courses, including independent study and Education Abroad Program courses when appropriate.

LOWER-DIVISION

ANTH 1. Introduction to Culture

HUM 1. The Foundations of Western Civilization: Israel and Greece

HUM 2. Rome, Christianity, and the Middle Ages

MMW 2. The Great Classical Traditions

MMW 3. The Medieval Heritage

PHIL 14. Introduction to Philosophy: Metaphysics

PHIL 31. History of Philosophy: Ancient Philosophy

RELI 1. Introduction to Religion

SOC 1A, B. The Study of Society

UPPER-DIVISION

METHODOLOGICAL

ANSC 120. Anthropology of Religion

ANSC 167. Rituals and Celebrations

SOCA 100. Classical Sociological Theory

SOCC 156. Sociology of Religion

GENERAL COMPARATIVE

ANSC 104. Anthropology of Fantasy

ANSC 160. Nature, Culture, and Environmentalism

LTWL 100. Mythology

RELI 130. Religion, Science, and Magic

RELI 131. Topics in Religion and Sexuality

RELI 132. Topics in Orthodoxy and Heterodoxy

RELI 134. Topics in American Religion

RELI 140. Death and Religion

RELI 188. Special Topics in Religion
Revelle Seminars 90 (1.0 unit credit) are sponsored by Revelle College to promote student/ faculty interaction in a small group setting.

Revelle 90. Undergraduate Seminar (1)
A seminar intended for exposing undergraduate students, especially freshmen and sophomores, to exciting research programs conducted by the faculty. PREREQUISITE: none. Pass/Not Pass grades only. (F,W,S)

Revelle 91. Art, Book, and Life (1)
This interdisciplinary seminar will look at some selective relationships between visual arts and literature generally building chronologically and culminating with slide-illustrated visits to the world’s great museums. Short student presentations. PREREQUISITE: Humanities or consent of instructor.

Russian and Soviet Studies

OFFICE: 3008 Humanities and Social Sciences Building, Muir College

Faculty

Steven Cassedy, Ph.D., Professor in Literature
Frantisek Deak, Ph.D., Professor Emeritus in Theatre and Dance
Robert Edelman, Ph.D., Professor in History
Amelia Glaser, Ph.D., Assistant Professor in Literature
Timothy McDaniel, Ph.D., Professor in Sociology
Philip Roeder, Ph.D., Professor in Political Science
Rebecca Wells, Lecturer in Literature

Russian and Soviet Studies is an interdisciplinary program that provides a broad range of courses in the history, language, literature, and social and political life of Russia (before, during, and after the Soviet period). It is designed for students who do not wish to restrict their Russian studies to literature.

The Minor

The minor consists of seven courses, at least four of which must be upper-division. In addition, there must be at least one course each from two of the three following areas: literature, history, and social science. No more than three of the seven courses may be language courses. Knowledge of the language is not a requirement for the minor, but it is strongly recommended.

The Major

The major requires a study of Russian language. It consists of LTRU 1A-B-C (First-Year Russian), LTRU 2A-B-C (Second-Year Russian), or their equivalent, and a minimum of twelve upper-division courses. All students are required to take LTRU 104A-B-C (Advanced Practicum in Russian), HIEU 134 (History of Russia, Ninth Century to 1855), HIEU 156 (History of Russia, 1855 to the Present), and LTRU 110A-B-C (Survey of Russian Literature in Translation). In addition, students will take four electives, of which at least two must be from the social sciences (sociology or political science).

Students in the major are encouraged to participate in the Education Abroad Program (EAP) in Russia and to investigate other options for foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill UCSD degree and major requirements. Please visit the Web site at http://historyweb.ucsd.edu/RussianSovietStud.html for further details.

Courses

Literature

LTRU 1A-B-C. First-year Russian (4-4-4)
LTRU 2A-B-C. Second-year Russian (4-4-4)
LTRU 104A-B-C. Advanced Practicum in Russian (4-4-4)
LTRU 110A-B-C. Survey of Russian and Soviet Literature in Translation (4-4-4)

110A. 1800–1860
110B. 1860–1917
110C. 1917–present

LTRU 123. Single Author in Russian Literature (4)
LTRU 150. Russian Culture: The Modern Period (4)
LTRU 198. Directed Group Study (4)
LTRU 199. Special Studies (2 or 4)

History

HIEU 134. Russia: Ninth Century to 1855 (4)
HIEU 156. Russia: 1855 to the Present (4)
HIEU 157. Early Soviet Social History (4)
HIEU 178. Special Topics in Modern Russian History (4)

Sociology

Course offerings vary by quarter.

Political Science

POLI 130AA. Soviet Politics and After (4)
POLI 130B. The Soviet State and Society (4)
POLI 130AC. Seminar: Post-Soviet Politics (4)

Science Studies

OFFICE: 3008 Humanities and Social Sciences Building, Muir College
http://sciencestudies.ucsd.edu/
Interim Director, Robert S. Westman

Professors

William Bechtel, Ph.D., Philosophy
Craig Callender, Ph.D., Philosophy
Lisa Cartwright, Ph.D., Communication
Nancy Cartwright, Ph.D., Philosophy
COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009-10, please contact the department for more information.

GRADUATE

COCR 225A, HIGR 238, PHIL 209A, SOC 255A.

Introduction to Science Studies (4)

Study and discussion of classic work in history of science, sociology of science, and philosophy of science, and of work that attempts to develop a unified science studies approach. Required for all students in the Science Studies Program. PREREQUISITE: enrollment in Science Studies Program.

COCR 225B, HIGR 239, PHIL 209B, SOC 255B.

Seminar in Science Studies (4)

Study and discussion of selected topics in the science studies field. Required for all students in the Science Studies Program. The topic varies from year to year, and students may, therefore, repeat the course for credit. PREREQUISITE: enrollment in Science Studies Program.

COCR 225C, HIGR 240, PHIL 209C, SOC 255C.

Colloquium in Science Studies (4)

A forum for the presentation and discussion of research in progress in science studies, by graduate students, faculty, and visitors. Required for all students in the Science Studies Program. PREREQUISITE: enrollment in the Science Studies Program.

COCR 225D, HIGR 241, PHIL 209D, SOC 255D.

Advanced Approaches to Science Studies (4)

Contemporary themes and problems in Science Studies. Focus on recent literature in the history, philosophy and sociology of science, technology, and medicine. Required of all students in the Science Studies Program. PREREQUISITE: completion of COGR 225A, HIGR 238, PHIL 209A, or SOC 255A; enrollment in Science Studies Program; or instructor’s permission.

HIGR 235.

Science, Empire, and Exploration (4)

Examines links between scientific work, particularly expeditions and exploration, and political programs of empire in the seventeenth to twentieth centuries. Topics: collecting expeditions as expressions of empire; role of colonial administrative networks in facilitating field-based investigations; relation between European and non-European knowledge systems. PREREQUISITE: graduate standing or consent of instructor.

HIGR 236A-B.

Seminar in History of Science (4-4)

A two-quarter research seminar, comprising intensive study of a specific topic in the history of science. The first quarter will be devoted to readings and discussions; the second chieffly to the writing of individual research papers. The topic varies from year to year, and students may repeat the course for credit. (IP grade to be awarded the first quarter; final grade will be given at the end of the second quarter): PREREQUISITE: graduate standing.

HIGR 242.

Topics in the History of Earth and Life Sciences (4)

Intensive study of specific problems in the history of the life sciences, ranging in period from the Renaissance to the twentieth century. May be repeated for credit as topics will vary annually. PREREQUISITE: graduate standing.

HIGR 243.

Historical Scholarship in Technology (4)

An introduction to the historiography of technology. This reading seminar provides an overview of scholarly approaches to the history of technology by critically examining classic and contemporary works in the field. PREREQUISITE: graduate standing or consent of instructor.

HIGR 244.

Introduction to Sound Studies (4)

Study and discussion of classic and recent scholarship on sound production and cultures of listening. Emphasizes historical literature but also includes works in literary studies, art history, music, and other fields.

HISC 160.

Historical Approaches to the Study of Science (4)

This colloquium course will introduce students to the rich variety of ways in which the scientific enterprise is currently being studied historically. Major recent publications on specific topics in the history of science selected to illustrate this diversity will be discussed and analyzed; the topics will range in period from the seventeenth century to the late twentieth, and will deal with all major branches of natural science. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students may be expected to submit a more substantial piece of work. PREREQUISITE: consent of instructor; department stamp required.

HISC 163/263.

History, Science, and Politics of Climate Change (4)

The complex historical development of human understanding of global climate change, including key scientific work, and the cultural dimensions of proof and persuasion. Special emphasis on the differential political acceptance of the scientific evidence in the U.S. and the world. Graduate students are required to submit an additional paper. PREREQUISITE: upper-division or graduate standing; department stamp required.

HISC 164/264.

Topics in the History of the Physical Sciences (4)

Intensive study of specific problems in the physical (including chemical and mathematical) sciences, ranging in period from the Renaissance to the twentieth century. Topics vary from year to year, and students may therefore repeat the course for credit. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students may be expected to submit a more substantial piece of work. PREREQUISITES: consent of instructor; department stamp required.

HISC 165.

Topics in Twentieth-Century Science and Culture (4)

This is a seminar open to advanced undergraduate and graduate students that explores topics at the interface of science, technology, and culture, from the late nineteenth century to the present. Topics change yearly; may be repeated for credit with instructor’s consent. Requirements vary for undergraduates, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. PREREQUISITES: upper-division standing or consent of instructor; department stamp required.

HISC 166/266.

The Galileo Affair (4)

Galileo’s condemnation by the Catholic Church in 1633 is a well-known but misunderstood episode. Was Galileo punished for holding dangerous scientific views? Personal arrogance? Religious transgressions? Readings in original sources, recent historical interpretations. Graduate students will be expected to submit a more substantial piece of work. PREREQUISITES: upper-division standing or consent of instructor.

HISC 167/267.

Gender and Science (4)

Why have women been traditionally excluded from science? How has this affected scientific knowledge? Have scientists constructed gendered representations not only of women, but also of science and nature? We will address these questions from perspectives including history, philosophy, and psychoanalytic theory. PREREQUISITE: upper-division standing or consent of instructor.

HISC 168/268.

The Extraterrestrial Life Question (4)

The changing fortunes of the belief in the existence of life beyond the Earth (pluralism) from 1750 to the present as it evolved from a marginal speculation to a central scientific question with wide-ranging consequences for traditional religious belief systems. PREREQUISITE: upper-division standing or graduate standing or consent of instructor. Graduate students will be expected to submit a more substantial piece of work.

HISC 170/270.

Topics in the History of Science and Technology (4)

This seminar explores topics at the interface of science, technology, and society, ranging from the seventeenth century to the twentieth. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit an additional paper. PREREQUISITE: upper-division standing or consent of instructor; department stamp required.

HISC 172/272.

Building America: Technology, Culture, and the Built Environment in the United States (4)

The history of the built environment in the United States, from skyscrapers to suburbs, canals and railroads to factories and department stores. The technological history of structures and infrastructures, and the social and cultural values that have been “built into” our material environment. Graduate students are required to submit an additional paper. PREREQUISITE: upper-division standing or consent of instructor; department stamp required.

Phil. 204A.

Core Course in Philosophy of Science (4)

An introduction to one or more central problems in the philosophy of science, or in the philosophy of one of the particular sciences, such as the nature of confirmation and explanation, the nature of scientific knowledge, reduction-
Science, Technology, and Public Affairs

OFFICE: Galbraith Hall, Room 180, Revelle College
The program offers an opportunity to study the important social policy issues that lie at the intersection of science, technology, and decision making and to develop awareness of the social and political factors that condition technology on the social order.

The program will serve as a meeting place for those interested in approaching policy questions from the perspective of the physical and biological sciences and for those in the social sciences having an interest in the scientific and technological component of present social, political, and environmental problems.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

LOWER-DIVISION

35. Society and the Sea (4)
Introduction to the oceans and their relationship to humankind. Selected topics include ocean-related science, engineering, research, economics, and international relations (emphasizing countries of the Pacific Rim); living and nonliving resources; coastal zone management; military and social aspects; and the sea in weather and climate.

UPPER-DIVISION

181. Essentials of Global Health (4)
Illustrates and explores ecologic settings and frameworks for study and understanding of global health and international health policy. Students acquire understanding of diverse determinants and trends of disease in various settings and inter-relationships between socio-cultural-economic development and health.

199. Special Project (2 or 4)
Directed study on topics in science, technology, and public affairs; especially for Warren College students. (P/NP grades only) PREREQUISITE: senior standing.

RELATED COURSES
Courses in other departments (change somewhat from year to year):
Economics 130
MAE 110B, 118A, 118B, 118C

INTRODUCTION
Scripps Institution of Oceanography is one of the oldest, largest, and most important centers for marine science research, education, and public service in the world. Its preeminence in the marine sciences is reflective of its excellent programs, distinguished faculty and research scientists, and outstanding facilities. Scripps Institution was founded in 1903 as an independent biological research laboratory, which became an integral part of the University of California in 1912. At that time, the laboratory was given the Scripps name in recognition of donors Ellen Browning Scripps and E. W. Scripps. Research and education at Scripps encompasses physical, chemical, biological, geological, and geophysical studies of the oceans. Among the hundreds of research programs that may be under way at any one time are studies of air-sea interaction, climate prediction, earthquakes, the physiology of marine organisms, the geological history of the ocean basins, and multidisciplinary aspects of global change and the environment.

THE UNDERGRADUATE PROGRAM

The Scripps Institution of Oceanography Department offers over forty-five undergraduate courses covering a wide breadth of earth and marine sciences on several different levels. There are several introductory classes for non-majors, and upper-division courses intended for a wide range of students in natural science majors. For students interested in careers in earth sciences, the Scripps
Institution of Oceanography offers a B.S. degree and a contiguous B.S./M.S. degree in earth sciences. In addition, students may follow a chemistry/earth sciences major, a physics major with a specialization in earth sciences, or an environmental systems/earth sciences major (see the "Chemistry," "Physics," or "Environmental Systems" sections of the catalog for details). The program also offers an academic minor in earth sciences.

For students interested in broadening their understanding of and opportunity in marine science and oceanography, the program offers an academic minor in marine science. The marine science minor is designed to complement the strong disciplinary training of UCSD basic natural science and engineering majors (i.e., chemistry, physics, biological sciences, earth sciences, engineering, mathematics, etc.) by providing a broad interdisciplinary perspective with an applied environmental focus.

**EARTH SCIENCES MAJOR**

Earth sciences encompass broad scientific study of the origin and evolution of the earth system and its life forms. The earth sciences major embraces a wide range of topics, including the physical and chemical evolution of the planet, the evolution of life, the causes of earthquakes and volcanic eruptions, earth-surface processes, the origin and behavior of oceans and atmosphere, and the impact of humans on the environment. Earth science investigations are increasingly quantitative and experimental, and thus upper-division courses require a strong foundation in chemistry, physics, and mathematics.

The earth sciences curriculum takes advantage of the unique opportunities offered by Scripps Institution of Oceanography. Classes beyond introductory level are usually small, permitting personalized instruction. Field trips are an important part of the instructional program. Earth sciences students are encouraged to consult with their instructors about incorporating appropriate courses and research opportunities at the Scripps Institution of Oceanography into their undergraduate curriculum. A degree in earth sciences is an appropriate start for a broad range of career and graduate school opportunities in various areas, including research, government, state and federal survey jobs, environmental management, the petroleum and mining industries, consulting, ocean sciences, industrial institutions, elementary or secondary education, environmental policy, or environmental law. Program advisors and faculty can provide additional information on career and graduate school opportunities.

There are three specializations, each with slightly different course requirements, in the earth sciences major: The Earth Sciences/Geology major, Earth Sciences/Geochemistry major, and Earth Sciences/Geophysics major. It is strongly recommended that all earth sciences majors meet regularly with the earth sciences academic advising staff and a faculty advisor to discuss and update curriculum choices. The earth sciences academic staff are located in the Scripps Office of Undergraduate Programs in Galbraith Hall, room 188.

Lower-division requirements are designed to provide the foundations in mathematics, physics, chemistry, and biology that are essential in modern quantitative earth science disciplines. In addition, there are four upper-division courses introducing basic concepts, SIO 100, SIO 102, SIO 103, and SIO 104. SIO 100 and SIO 102 should be taken during the sophomore year to provide the appropriate background for other upper-division courses. A grade-point average of 2.0 or higher in the upper-division major program is required for graduation. Students must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. In exceptional cases, students with a grade-point average in the major of 2.5 or greater may petition to have one grade of D accepted. All courses (lower- and upper-division) required for the major must be taken for a letter grade.

**Special Studies Courses**

Special studies in the earth sciences are offered as the courses SIO 198 and SIO 199. These courses are subject to consent of the instructor and approval by the earth sciences faculty advisor. They are open to students who have accrued at least ninety quarter-units and have a GPA of at least 3.0. Two quarters of earth sciences special studies may be counted toward any earth sciences major.

**EARTH SCIENCES/GEOL OGY**

The earth sciences/geology major is designed to allow students maximum flexibility in tailoring the curriculum to their interests, within the constraints of obtaining the necessary background in physical, biological, and earth sciences. Compared to the earth sciences/geochemistry and earth sciences/geophysics tracks, it requires more earth science and fewer non-earth science courses.

**Lower-Division Requirements**

Math. 20A–B–C (may allow Math. 10A–B–C by petition) and Math. 20D
Phys. 2A–B–C (may allow Phys. 1A–B–C by petition)
Chem. 6A–B–C
BILD 3
SIO 50

**Upper-Division Requirements**

**Earth Sciences Upper-Division Core Requirements**

SIO 100. Introduction to Field Methods
SIO 102. Introduction to Geochemistry
SIO 103. Introduction to Geophysics
SIO 104/255. Paleobiology and History of Life

**Upper-Division Earth Science Requirements**

SIO 105. Sedimentology and Stratigraphy
SIO 120. Mineralogy
SIO 152. Petrology and Petrography
SIO 160. Introduction to Tectonics
SIO 162. Structural Geology
SIO 182A. Environmental and Exploration Geophysics A
SIO 182B. Environmental and Exploration Geophysics B

**Upper-Division Restricted Electives, at least four courses from:**

Chem. 173. Atmospheric Chemistry
SIO 101. California Coastal Oceanography
SIO 110. Introduction to GIS and GPS for Scientists
SIO 111/Phys. 111. Introduction to Waves and Tides
SIO 112. Urban Landscapes
SIO 117. The Physical Climate System
SIO 135/236. Satellite Remote Sensing
SIO 141/Chem. 174. Chemical Principals of Marine Systems
SIO 144/252A. Introduction to Isotope Geochemistry
SIO 148/248. Evolution of Earth’s Biosphere
SIO 154/254. Macroevolution
SIO 155/251. Petrology and Geochemistry of the Solid Earth
SIO 170. Introduction to Volcanology
SIO 185. Applied Complexity
SIO 195. Methods of Teaching Earth Sciences
SIO 197. Earth Science Internship
SIO 199. Independent Study
SIO 210. Physical Oceanography
SIO 226. Introduction to Marine Geophysics
SIO 240. Marine Geology
SIO 247. Rock Magnetism and Paleomagnetism
SIO 260. Marine Chemistry
SIO 280. Biological Oceanography

**EARTH SCIENCES/GEOCHEMISTRY MAJOR**

This specialization focuses on the Earth as a chemical system and on its evolution. Emphasis is placed on the fundamental observations that allow geoscientists to understand better the past history of the planet, the energetics of its evolution, and the major “cycles” (e.g., water, carbon) that characterize and control planetary-scale changes on a broad range of time scales. The major is appropriate for students interested in modern geochemistry, in “global change” studies, and in global and local environmental problems, including biochemical and anthropogenic effects.

**Lower-Division Requirements**

Math. 20A–B–C–D
Phys. 2A–B–C (2D recommended)
Chem. 6A–B–C and Chem. 6BL
BILD 3

SIO 102. Introduction to Geochemistry
SIO 103. Introduction to Geophysics
SIO 104/255. Paleobiology and History of Life

Upper-Division Earth Science Requirements
SIO 120. Mineralogy
SIO 144/252A. Introduction to Isotope Geochemistry
SIO 152. Petrology and Petrography

Upper-Division Chemistry Requirements
Chem. 120A. Inorganic Chemistry
Chem. 131. Physical Chemistry or Chem. 127
Chem. 140A. Organic Chemistry

Chemistry Restricted Electives, at least two courses from:
Chem. 149A. Environmental Chemistry
Chem. 149B. Environmental Chemistry
Chem. 173. Atmospheric Chemistry

Upper-Division Restricted Electives, at least three courses from:
SIO 101. California Coastal Oceanography
SIO 105. Sedimentology and Stratigraphy
SIO 110. Introduction to GIS and GPS for Scientists
SIO 111/Phy. 111. Introduction to Waves and Tides
SIO 112. Urban Landscapes
SIO 135/236. Satellite Remote Sensing
SIO 141/Chem. 174. Chemical Principles of Marine Systems
SIO 148/248. Evolution of Earth’s Biosphere
SIO 154/SIO 254. Macroevolution
SIO 155/251. Petrology and Geochemistry of the Solid Earth
SIO 160. Introduction to Tectonics
SIO 162. Structural Geology
SIO 170. Introduction to Volcanology
SIO 182A. Environmental and Exploration Geophysics A
SIO 182B. Environmental and Exploration Geophysics B
SIO 185. Applied Complexity
SIO 195. Methods of Teaching Earth Sciences
SIO 197. Earth Science Internship
SIO 199. Independent Study
SIO 226. Introduction to Marine Geophysics
SIO 240. Marine Geology
SIO 247. Rock Magnetism and Paleomagnetism
SIO 260. Marine Chemistry

An example schedule is outlined below.

EARTH SCIENCES/GEOPHYSICS MAJOR

This specialization focuses on the mechanical, dynamical, and thermodynamical aspects of the Earth. Emphasis is placed on a solid background of fundamental physics, from mechanics and electromagnetism to continuum- and quantum mechanics, and on the necessary mathematical skills. The major introduces basic techniques used to investigate the internal structure of the Earth, from seismology to the study of potential fields, and space geodesy. Elementary geodynamics, including the physics of simple convective systems, introductory rock mechanics, and plate kinematics are among topics introduced. At the same time, a “hands-on” exposure to field problems and techniques will be accessible through an applied geophysics sequence.

Lower-Division Requirements

Math. 20A-B-C-D-E-F
Phys. 4A-B-C-D or Phys. 2A-B-C (Phys. 4 sequence recommended)
Chem. 6A-B-C
BILD 3
SIO 50

Upper-Division Requirements

Earth Sciences Upper-Division Core Requirements
SIO 100. Introduction to Field Methods
SIO 102. Introduction to Geochemistry
SIO 103. Introduction to Geophysics
SIO 104/255. Paleobiology and History of Life

Upper-Division Earth Sciences Requirements
SIO 130. Geodynamics of Terrestrial Planets or SIO 160. Introduction to Tectonics
SIO 182A. Environmental and Exploration Geophysics A
SIO 182B. Environmental and Exploration Geophysics B

Upper-Division Physics Requirements
Phys. 100A-B-C. Electromagnetism
Phys. 110A-B. Mechanics

Physics Restricted Electives, at least one course from:
Phys. 105A. Mathematical and Computational Physics
Phys. 105A. Mathematical and Computational Physics
Phys. 121. Experimental Techniques

Phys. 140A-B. Statistical and Thermal Physics
MAE 131A. Solid Mechanics I
MAE 180A. Spacecraft Guidance I

Upper-Division Restricted Electives, at least two courses from:
SIO 101. California Coastal Oceanography
SIO 105. Sedimentology and Stratigraphy
SIO 110. Introduction to GIS and GPS for Scientists
SIO 111/Phy. 111. Introduction to Waves and Tides
SIO 112. Urban Landscapes
SIO 117. The Physical Climate System
SIO 120. Introduction to Mineralogy
SIO 130. Geodynamics of Terrestrial Planets
SIO 135/236. Satellite Remote Sensing
SIO 141/Chem. 174. Chemical Principals of Marine Systems
SIO 144/252A. Introduction to Isotope Chemistry
SIO 148/248. Evolution of Earth’s Biosphere
SIO 152. Petrology and Petrography
SIO 154/254. Macroevolution
SIO 155. Petrology and Geochemistry of the Solid Earth
SIO 160. Introduction to Tectonics
SIO 162. Structural Geology
SIO 170. Introduction to Volcanology
SIO 185. Applied Complexity
SIO 195. Methods of Teaching Earth Sciences
SIO 197. Earth Science Internship
SIO 199. Independent Study
SIO 223. Geophysical Data Analysis
SIO 226. Introduction to Marine Geophysics
SIO 227A. Introduction to Seismology

An example schedule is outlined below.

HONORS PROGRAM

The Honors Program in Earth Sciences is offered for a limited number of students who have demonstrated excellence in the earth sciences major. Students are eligible for admission to the program when they have:
1. Completed ninety units of courses including twelve units of earth sciences courses.
2. Achieved a GPA of 3.3 overall and 3.5 in earth science courses.
3. Submitted to the Earth Sciences Steering Committee, and had approved, an honors thesis research proposal.
Successful completion of the Honors Program requires:
1. Maintenance of a GPA of 3.3 overall and 3.5 in earth sciences courses.
2. Completion, with a B grade or higher, of a minimum of eight units of SIO 196 related to the honors thesis research, distributed over at least two quarters. These units must be in addition to the ordinary major requirements. However, students who subsequently fail to complete the Honors Program may apply up to four of these 196 units to their major.
3. Acceptance of a written honors thesis report by a committee of not fewer than three faculty members.
4. Satisfactory presentation of an oral report on the thesis research, preferably at a public undergraduate research conference on campus, or at an earth sciences conference. Alternatively, the oral report may be given at a seminar involving honors students and at least three faculty members.

Students who successfully complete the Honors Program will graduate with “high distinction.” Students who are interested in the Honors Program should contact the program advisor in Galbraith Hall, room 188, Revelle College.

CONTIGUOUS BACHELOR’S/MASTER’S EARTH SCIENCES DEGREE PROGRAM
The program leading to a bachelor of science and a master of science degree in earth sciences is offered to undergraduate students who are enrolled in the earth sciences major, and to qualified students who are completing a specialization or minor in earth sciences. It is open only to UCSD undergraduates, and entails participation in research in an area of the earth sciences to be determined jointly by the student and a committee of earth sciences faculty members from the Scripps Institution of Oceanography Department. Applications will only be accepted during the final quarter of the applicant’s junior year, or the first or second quarter of the senior year. A minimum undergraduate GPA of 3.0 overall and 3.3 in upper-division earth sciences courses is required for admission. Applications must include a written statement of purpose, a summary of the research proposal, and a letter of support from the potential M.S. advisor. Students must complete requirements for the B.S. degree before they are enrolled in the M.S. program, and are expected to meet the requirements for the M.S. degree within three consecutive academic quarters after obtaining the B.S. Students may be dropped from the program if breaks in enrollment occur. The Scripps Institution of Oceanography Department does not have financial aid available for students enrolled in the contiguous B.S./M.S. program. Please contact the undergraduate education program office in Galbraith Hall, room 188, for information.

EARTH SCIENCES MINOR
A minor in earth sciences consists of twenty-eight units of earth sciences courses, at least twenty of which must be upper-division, focused on geology, geochemistry, or geophysics. Courses required by a student's major may not be applied toward a minor and neither can SIO 198 nor SIO 199. Courses for the minor may be taken on a Pass/Not Pass basis if the student’s college permits. Students interested in the earth sciences minor should meet with the earth sciences academic advising staff to discuss their curriculum choices.

MARINE SCIENCE MINOR
The Scripps Institution of Oceanography offers an undergraduate minor program in marine science. The minor curriculum is designed to complement the strong disciplinary training of UCSD basic science majors by providing a broad interdisciplinary perspective with an environmental focus. Ocean-related science is relevant to many contemporary environmental issues and problems and central to understanding earth-system evolution, dynamics, climate, and sustainability. The minor consists of courses and research opportunities offered primarily through faculty and researchers at Scripps. The mix of these components can be tailored to reflect students’ career interests through an “all courses” track or a “research” track. The “all courses” track offers a very flexible curriculum that serves students with a broad range of educational and career interests including environmental management and regulation, teaching, environmental law, economics and policy and a wide variety of graduate programs. The “research” track is designed for students interested in an undergraduate research experience at Scripps and serves as excellent preparation for graduate research studies.

The minor consists of twenty-eight units of course work, at least twenty of which must be upper-division. Courses required by a student’s major may not be applied toward the minor. Up to two courses for the minor may be taken on a Pass/Not Pass basis (upper- or lower-division). Students must earn at least a letter grade of C- in the remaining five or more courses used for the minor. The marine science minor places a strong emphasis on a rigorous natural science foundation; thus, several of the upper-division courses related to the minor have significant prerequisites. Students planning the minor should check catalog course descriptions carefully and should meet with advising staff in the Scripps Institution of Oceanography Office of Undergraduate Programs, Galbraith Hall, room 188.

LOWER-DIVISION REQUIREMENTS
1. SIO 30. The Oceans
2. Any one of the following lower-division courses may be applied to the minor requirements:
   - STPA 35. Society and the Sea
   - SIO 10. The Earth
   - SIO 12. History of the Earth and Evolution
   - SIO 20. The Atmosphere
   - SIO 35. Water
   - SIO 40. Life and Climate on Earth
   - SIO 50. Introduction to Earth and Environmental Sciences

   Additionally: any math, chemistry, physics, or biology course that is a prerequisite for an upper-division elective for the marine science minor (ex., Math. 20 series; Chem. 6A, 6B, 6C; Phys. 2 series; BILD 1, 2, 3) may be applied, by petition, as a lower-division requirement for the minor if not already used as a lower-division requirement for the student’s major.

UPPER-DIVISION REQUIREMENTS
Option 1—All Courses Track:
At least five courses from the list (below) of upper-division electives
Option 2—Research Track:
At least five courses from the list (below) of upper-division electives, at least three of which must be courses satisfying Option #1 and at least two of which must be Independent Study (SIO 199; eight units total) Note: The Independent Study must be designed in mutual agreement and arrangement with an SIO faculty member. Students interested in the marine science minor “Research Track” must meet with a Scripps Undergraduate Program advisor for information and policies.

UPPER-DIVISION ELECTIVES
SIO 101. California Coastal Oceanography
SIO 102. Introduction to Geochemistry
SIO 103. Introduction to Geophysics
SIO 104/255. Paleobiology and History of Life
SIO 105. Sedimentology and Stratigraphy
SIO 110. Introduction to GIS and GPS for Scientists
SIO 111/Phy. 111. Introduction to Ocean Waves and Tides
SIO 117. The Physical Climate System
BIMM 126. Marine Microbiology
BIMM 127/SIO 288. Marine Microbiology Lab
BIEB 132. Introduction to Marine Biology
BIBC 130/SIO 281. Marine Biochemistry
BIEB 134. Introduction to Biological Oceanography
SIO 135/236. Satellite Remote Sensing
SIO 141/Chem. 174. Chemical Principles of Marine Systems
SIO 148/248. Evolution of Earth’s Biosphere
SIO 154/254. Microevolution
SIO 160. Introduction to Tectonics
SIO 198. Directed Group Study
SIO 199. Independent Study
ECE 156/MAE 149/SIO 238. Sensor Networks
SIO 201. Geologic Record of Climate Change
SIO 210. Physical Oceanography
SIO 260. Marine Chemistry
SIO 265. Chemical Ecology of Marine Organisms
Other SIO courses may be submitted by petition.

STUDY ABROAD
Study abroad through the Education Abroad Program (http://programsabroad.ucsd.edu) or Opportunities Abroad Program can enhance a student’s major, particularly as an opportunity for diverse field experiences. However, careful planning is important to meet all major requirements. Please contact the Scripps Office of Undergraduate Programs as early as possible if you are an earth sciences major and planning to study abroad.
Students interested in a teaching career should be aware that the earth sciences major, because of its broad course requirements in the sciences, fulfills many of the subject requirements for obtaining a California Teaching Credential through UCSD's Educational Studies Program. The projected high demand over the next decade for well-trained teachers, particularly in the sciences, makes this an attractive option for many students. Students who wish to take advantage of this opportunity may wish to complete a minor in science education. Please contact the Education Studies office directly for further details.

**THE DOCTORAL PROGRAM**

The graduate department of Scripps Institution of Oceanography offers instruction leading to Ph.D. degrees in oceanography, marine biology, and earth sciences. Although students are not admitted specifically for an M.S. degree, it is possible to obtain an M.S. on the way to completing the Ph.D. program. A graduate student's work normally will be concentrated in one of the curricular programs within the department: applied ocean science, biological oceanography, climate sciences, geosciences, geophysics, marine biology, marine chemistry and geochemistry, and physical oceanography.

**THE CURRICULAR PROGRAMS**

**Applied Ocean Science** is a multidisciplinary program focused on the application of advanced technology to ocean exploration and observation. AOS students perform research in marine acoustics, optics, electromagnetics, geophysics, ecology, sediment transport, coastal processes, physical oceanography, and air-sea interaction. The emphasis is on the resolution of key scientific issues through novel technological development. The science focus of the Scripps AOS program is complemented by parallel Applied Ocean Science programs in the Mechanical and Aerospace Engineering, Structural Engineering (SE), (MAE) and Electrical and Computer Engineering (ECE) departments. Students have access to professors, courses, and research facilities across all three departments.

**Biological Oceanography** is concerned with the interactions of populations of marine organisms with one another and with their physical and chemical environment. Because these interactions are frequently complex, and because the concepts and techniques used are drawn from many fields, biological oceanography is, of necessity, interdisciplinary. Therefore, studies in physical oceanography, marine chemistry, marine geology, and several biological areas are pertinent. Research is conducted on space/time scales ranging from short-term interactions between individual organisms (mm, sec.) to interdecadal variation in widely dispersed populations. The techniques used in these investigations are diverse, and can include field observation and manipulations, experimentation in the laboratory, and mathematical modeling.

Research topics include primary and secondary productivity and nutrient regeneration, fishery biology and management, community ecology of benthic and pelagic organisms, population dynamics, habitat changes and disruptions, systematics and biogeography, population genetics and evolution, and behavior as it affects distribution. Development and testing of new tools (molecular, optical, acoustic), design of sampling programs, and statistical/mathematical analyses of data also are significant activities.

**Climate Sciences** concerns the study of oceanic and air interactions of the atmosphere, ocean, land, ice, and the terrestrial and marine biospheres. The program encompasses changes on seasonal to interannual time scales and those induced by human activities, as well as paleoclimatic changes on time scales from centuries to millions of years. Examples of current research activities include: interannual climate variability; physics and dynamics of El Niño; studies of present and future changes in the chemical composition of the atmosphere in relation to global warming and ozone depletion; effects of cloud and cloud feedbacks in the climate system; paleoclimate reconstructions from ice cores, banded corals, tree-rings, and deep-sea sediments; the origin of ice ages; air-sea interactions; climate theory; terrestrial and marine ecosystem response to global change.

**Geosciences** emphasizes the application of general principles of geology, geochemistry, and geophysics to problems in the marine and terrestrial environments of the Earth. Graduate students routinely participate in expeditions at sea and on land and many doctoral theses evolve from these experiences.

Research areas in the geological sciences include: the origin and evolution of the ocean-atmosphere and global climate; geology, geochemistry, and geophysics of oceanic crustal rocks and near-shore environments; tectonic and structural evolution of the oceans, plate margins, and back-arc basins; the role of fluids in the crust; chemistry of rare gases in active volcanoes; the use of natural nuclear processes for understanding physical and chemical processes in the Earth; paleomagnetic applications in geology and geophysics.

**Geophysics** emphasizes the application of general principles of mathematics and experimental physics to fundamental problems of the oceans, oceanic and continental lithosphere, and crust and deep interior of the Earth. Research interests of the group include: observational and theoretical studies of electric and magnetic fields in the oceans and on the land; paleomagnetism; theoretical seismology with special emphasis on the structure of the Earth from free-oscillation and body wave studies; broadband observational seismology, including ocean bottom and multichannel seismology; earthquake source mechanisms; the measurements of slow crustal deformations using satellite and observatory methods on continents and in the oceans; marine geodynamics and tectonophysics; gravity measurements; geophysical inverse theory; magnetohydrodynamics of the core of the Earth; geophysical instrumentation for oceanic and continental geophysical measurements; acoustic propagation in the oceans.

**Marine Biology** is the study of marine organisms. It is concerned with evolutionary, organismic, genetic, physiological, and biochemical processes in these organisms, and the relationship between them and their biotic and physical environment. Marine biology encompasses several major areas of modern biology, and is interpreted by understanding the physical and chemical dynamics of the oceans. Faculty research focuses on microbiology, photobiology, high pressure biology, deep-sea biology, developmental biology, genetics, biomechanisms, comparative biochemistry and physiology, behavior, ecology, biogeography, and evolution of marine prokaryotes and eukaryotes. Processes ranging from the fertilization of sea urchin eggs to the role of bacteria in marine food web dynamics are under study in over twenty independent research laboratories.

**Marine Chemistry and Geochemistry** concerns chemical and geochemical processes operating in a broad range of study areas: the oceans, the solid earth, the atmosphere, marine organisms, polar ice sheets, lakes, meteorites, and the solar system.

Areas of advanced study and research include the physical and inorganic chemistry of seawater; ocean circulation and mixing based on chemical and isotopic tracers; marine organic and natural products chemistry; marine bioinorganic chemistry; geochemical interactions of sediments with seawater and interstitial waters; geochemistries of volcanic and geothermal phenomena; chemical exchanges between the ocean and the atmosphere; geochemical cycles of carbon, oxygen, sulfur, nitrogen, and other elements; isotopic geochemistry of the solid earth and meteorites; atmospheric trace gas chemistry; paleoatmospheric composition recorded in polar ice cores, corals and sediments; and chemistry of lakes and other freshwater systems.

Studies are typically interdisciplinary and involve integration of chemical concepts with information about the physical, biological, or geological processes that influence natural systems. Students in the marine chemistry and geochemistry curricular group are encouraged to explore these links.

**Physical Oceanography** is the field of study that deals with mechanisms of energy transfer through the sea and across its boundaries, and with the physical interactions of the sea with its surroundings, especially including the influence of the seas on the climate of the atmosphere. Research activities within this curricular group are both observational and theoretical and include: study of the general circulation of the oceans, including the relations of ocean currents to driving forces and constraints of the ocean basins; fluctuations of currents, and the transport of properties; the mechanisms of transport of energy, momentum, and physical substances within the sea and across its boundaries; properties of wind waves, internal waves, tsunami and planetary waves; the thermodynamic description of the sea as a system not in equilibrium; optical and acoustic properties of the sea; and the influence of surf on near-shore currents and the transport of sediments.

**REQUIREMENTS FOR ADMISSION**

Candidates for admission should have a bachelor's or master's degree in one of the physical, biological, or earth sciences; degrees in mathematics or engineering science are also accepted. A scholastic average of B or better in upper-division courses, or prior graduate study, is required. The student's preparation should include:

1. mathematics through differential and integral calculus
2. physics, one year with laboratory (the course should stress the fundamentals of mechanics, electricity, magnetism, optics, and thermodynamics, and should use calculus in its exposition)

3. chemistry, one year with laboratory

4. an additional year of physics, chemistry, or mathematics

5. all applicants are required to submit scores from the general test of the Graduate Record Examinations (GRE) given by the Educational Testing Service of Princeton, New Jersey. Marine biology applicants must also submit scores of the GRE biology (or biochemistry, cell, and molecular biology) subject test.

All international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English must take the TOEFL and submit their test scores to the UCSD Office of Graduate Admissions.

Specific additional requirements for admission to the various curricular programs are as follows:

**Programs of Study**

Programs of study vary widely among the curricular groups, but generally first-year students are expected to enroll in core courses that cover physical, geological, chemical, and biological oceanography and in other courses recommended by the student’s faculty advisor. Then, by the end of the first year, students usually select a particular area of focus and choose a major professor. As students advance beyond the first year, they begin to function effectively as research assistants or, in some cases, as teaching assistants. During their third to fifth year, they are working toward writing their dissertations.

The interdisciplinary nature of research in marine and earth sciences is emphasized; students are encouraged to take courses in several programs and departments, and to select research problems of interdisciplinary character. The curricular programs of study are as follows:

**Applied Ocean Science**—Students are admissible with a strong background in physical science, engineering science, or mathematics. Three years of physics or applicable engineering and three years of mathematics at college level are expected.

**Biological Oceanography**—Two years of chemistry, including general and organic chemistry, and a year of general biology are required. Physical chemistry requiring calculus may be substituted for physics requiring calculus where a more elementary physics course was taken. Zoology or botany may be substituted for general biology. Preparation should also include a course in general geology and may include a course in general geology. Preparation beyond the first year, they begin to function effectively as research assistants or, in some cases, as teaching assistants. During their third to fifth year, they are working toward writing their dissertations.

The interdisciplinary nature of research in marine and earth sciences is emphasized; students are encouraged to take courses in several programs and departments, and to select research problems of interdisciplinary character. The curricular programs of study are as follows:

**Applied Ocean Science**—The AOS academic program is designed to provide both a broad background and a core technical base to support the diverse interests and activities of the students. Early participation in an ongoing research project is encouraged. However, specialization and focus on a specific thesis topic is not required until the second or third year of the program. Required courses include SIO 214A Introduction to Fluid Mechanics, and the two-quarter Wave Physics sequence SIO 202A–B.

Two of the four SIO introductory courses (SIO 210, 240, 260, 280), must be completed during the first year, with the remaining two required prior to passing the doctoral qualifying exam at the end of the third year. In addition, the applied math sequence SIO 203 A–B or MAE 294 A–B is taken in either the first or second year of study. The AOS Seminar (SIO 208) serves as a communications bridge across the program; enrollment in this seminar is required during the student’s entire period of study. Beyond these core classes, the majority of each student’s academic program is tailored to individual interests. The AOS departmental examination, held at the end of the first year, is based on the core technical courses SIO 214A, SIO 202A–B, and two of the four introductory courses (chosen by the student). The exam has both oral and written components.

**Biological Oceanography**—The student will be expected to be familiar with the material presented in the following courses: SIO 210, 240, 260, 270 or 270A, 275A or 277, 280, and at least one of SIO 271, 282, 284, or 294. Other course work ordinarily will be recommended by the student’s advisory committee, usually including 278 (or equivalent participatory seminar) one quarter of each year, a course in introductory parametric statistics, and at least one advanced-level course in physical, chemical, or geological oceanography. Participation in an oceanographic cruise (minimum of two weeks’ duration) and service as a teaching assistant (one quarter) are required.

**Climate Sciences**—The emphasis of this curricular group is on education through interdisciplinary research. All students are responsible for the fundamental material in the following “core” courses: SIO 210, 217A–B–C, 260. Students are also expected to supplement their backgrounds with five to seven additional courses, including, for most Climate Sciences students, at least one additional quarter of fluid dynamics. These additional course(s) will be chosen in consultation with the students’ advisors. It is recommended that students participate actively in at least two quarters of seminar courses designed to complement and stimulate individual research. Though the group stresses interactions across disciplines, students will specialize in a particular subdiscipline or track that will be chosen by the student following discussions with a 3-person faculty advisory committee soon after arrival. Examples of current tracks include: (1) atmospheric/ocean/climate dynamics and physics; (2) atmospheric chemistry (emphasizing climatic interactions); and (3) paleoclimate studies. Additional course requirements for these tracks will be tailored to the needs of the individual student.

**Geosciences**—The geosciences curriculum consists of a series of core courses and a series of research focus courses. All students whether pursuing an earth sciences or an oceanography degree are responsible for material in the core courses: Marine Geology (SIO 240), Marine Chemistry (SIO 260), and Physical Oceanography (SIO 210) during their first year of study. The research courses are selected from three themes: Geochmistry, Paleoclimate and Earth History, and Geology and Geophysics. A total of four research courses are required during the first year of study, with at least one from each theme. Additional courses offered by other curricular programs (e.g., geophysics, marine chemistry, and geochemistry) can be selected and scheduled depending on the student’s background and interests any time during the student’s career at SIO. A three-member faculty advisory committee is assigned to each student to help select the research and additional courses to be taken. Each student is also encouraged to participate in the Special Topics seminars (SIO 249) every quarter during the first two years of graduate study. Students wishing to graduate with an oceanography degree are also responsible for the material in SIO 280 (Biological Oceanography). Normally, students will take a comprehensive oral departmental examination near the end of their third quarter of residence. The qualifying examination will be given before the end of the third year.

**Geophysics**—There is no single course of study appropriate to the geophysics curriculum; instead, the individual interests of the student will permit, in consultation with the advisor, a choice of course work in seismology, geomagnetism, etc., although the content of certain core courses is usually taken during most of the first year. In the summer or early fall quarter following that year each student will be given written and oral departmental examinations, which are intended to cover the student’s formal training. A brief presentation of possible research interests will also be expected at this exam.
Any exception to the policy above requires written approval by the department chair in consultation with the curriculum advisor.

Physical oceanography students are required to take the departmental examination after completing one year of graduate work at UCSD. The examination covers the material in the four required courses and in eight additional first-year graduate courses chosen by the student in consultation with the curriculum advisor.

The SIO Department offers regular seminars in several areas of current interest. After the departmental exam, students in residence are strongly encouraged to enroll for credit in at least one one-unit seminar class each quarter.

**LANGUAGE REQUIREMENTS**

The department has no formal language requirements. All students must be proficient in English.

**DEPARTMENTAL AND QUALIFYING EXAMINATIONS**

Doctoral candidates normally will be required to take a departmental examination not later than early in the second year of study. The examination will be oral and/or written depending on the curricular group. The student will be required to demonstrate, in a quantitative and analytical manner, comprehension of required subject material and of the pertinent interactions of physical, chemical, biological, or geological factors.

When the student has passed the departmental examination, and has completed an appropriate period of additional study, the department will recommend appointment of a doctoral committee which will supervise the student’s performance and reporting of his or her research. The doctoral committee must be formed before the student may proceed to the qualifying examination.

The doctoral committee will determine the student’s qualifications for independent research by means of a qualifying examination, which will be administered no later than the end of the third year. The nature of the qualifying examination varies between curricular groups. In biological oceanography, marine biology, geosciences, physical oceanography, applied ocean science, and climate sciences the student will be expected to describe his or her proposed thesis research and satisfy the committee, in an oral examination, as to mastery of this and related topics. In marine chemistry and geochemistry the student, in an oral examination, is required to present and defend a single research proposition in his or her specialized area. The student also is required to provide a written summary of the research proposition, with references, prior to the examination. In geophysics, the student presents an original research problem, in the form of a written proposition, to the doctoral committee. The student’s oral presentation and defense of this proposition completes the examination.

**DISSERTATION**

A requirement for the Ph.D. degree is the submission of a dissertation and a final examination in which the thesis is publicly defended. We encourage students to publish appropriate parts of their theses in the scientific literature. Individual chapters may be published as research articles prior to completion of the dissertation.

**DEPARTMENTAL PH.D. TIME LIMIT POLICIES**

Students must complete a qualifying examination by the end of three years, and must be advanced to candidacy for the Ph.D. Degree by the end of four years. Total university support may not exceed seven years and total registered time at UCSD may not exceed eight years.

**SPECIAL FINANCIAL ASSISTANCE AND FELLOWSHIPS**

In addition to teaching assistantships, and graduate student researcher positions, fellowships, traineeships, and other awards available on a campus-wide competitive basis, the department has available a certain number of fellowships and graduate student researcher positions supported from research grants and contracts, or from industrial contributions.

**COURSES**

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

**LOWER-DIVISION**

1. The Planets (4)
Space exploration has revealed an astonishing diversity among the planets and moons in our solar system. The planets and their histories will be compared to gain insight and a new perspective on planet Earth. **PREREQUISITE:** none. (S)

10. The Earth (4)
An introduction to structure of the Earth and the processes which form and modify it. Emphasizes material which is useful for understanding geological events as reported in the news and for making intelligent decisions regarding the future of our environment. **PREREQUISITE:** none. (W)

12. History of the Earth and Evolution (4)
Evolution of the Earth from its origin in the early solar system to formation of continents and ocean basins, and how the planet became habitable. It examines the geologic record of evolution, extinction, plate tectonics, and climate changes through time. **PREREQUISITE:** none. (S)

15. Natural Disasters (4)
Introduction to environmental perils and their impact on everyday life. Geological and meteorological processes, including earthquakes, volcanic activity, large storms, global climate change, mass extinctions throughout Earth’s history, and human activity that causes and prevents natural disasters. **PREREQUISITE:** none. (F)

16. Geology of the National Parks (4)
An introduction to fundamental concepts of geology and environmental science through the lens of the national park system. Topics covered include the geologic time scale; plate tectonics; igneous, metamorphic, and sedimentary processes; geomorphology; climate change; and environmental degradation. **PREREQUISITE:** none. (W)

20. The Atmosphere (4)
Descriptive introduction to meteorology and climate studies. Topics include global and wind and precipitation patterns, weather forecasting, present climate and past climate changes (including droughts, El Niño events), “greenhouse” gas effects, ozone destruction, the “little ice age,” acid rain. **PREREQUISITE:** none. (W)

25. Climate Change and Society (4)
Climate change is one of the most complex and critical issues affecting societies today. This course will present...
the scientific evidence for climate change and its impacts and consider governmental policy responses and possible adaptation strategies. **PREREQUISITE:** none.

30. The Oceans (4)

 Presents modern ideas and descriptions of the physical, chemical, biological, and geological aspects of oceanography, and considers the interactions between these aspects. Intended for students interested in the oceans, but who do not necessarily intend to become professional scientists. **PREREQUISITE:** none. (F)

35. Water (4)

 This course will examine the properties of water that make it unique and vital to living things. Origin of water on Earth and neighboring planets will be explored. Socially relevant issues concerning water use and contamination will be covered. **PREREQUISITE:** none. (S)

40. Life and Climate on Earth (4)

 Explores life on Earth and its relationship to the environment—past, present, and future. Topics include origins of life, Earth's history, elemental cycles, global climate variability and human impacts on our environment. **PREREQUISITE:** none.

50. Introduction to Earth and Environmental Sciences (6)

 This course is an introduction to how our planet works, focusing on the formation and evolution of the solid earth, and the processes affecting both its surface and interior. Laboratories and substantial field component complement and extend the lecture material. Program and/or material fee may apply. **PREREQUISITE:** none. (F)

87. Freshman Seminar (1)

 The freshman seminar program is designed to provide the new students with the opportunity to explore and intellectual topic with a faculty member in a small setting. Topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. (IP/NP grades only). (F,WS)

90. Undergraduate Seminar (1)

 Provides an introduction to earth sciences. Faculty members from natural sciences, geosciences, and marine sciences will offer perspectives in these areas. Formerly ERTH 90. (Students may earn up to three units of credit of SIO 90 and/or ERTH 90/J). **PREREQUISITE:** none.

95. Frontiers in the Earth Sciences (2)

 An introduction to current research in the earth sciences. Background in science not required, but may be useful for some topics. Areas covered vary from year to year. **PREREQUISITE:** none.

99. Independent Study (2 or 4)

 Independent reading or research on a problem by special arrangement with a faculty member. **PREREQUISITE:** lower-division standing, completion of thirty units of UCSD undergraduate study, a minimum UCSD GPA of 3.0, and a completed and approved Special Studies form, UCSD Application for Enrollment Special Studies Courses 97, 98, 99.

UPPER-DIVISION

100. Introduction to Field Methods (4)

 Mapping and interpretation of geologic units. Field work is done locally and the data are analyzed in the laboratory. There will be one mandatory weekend field trip to Anza Borrego Desert. Program and/or material fee may apply. **PREREQUISITE:** SIO 50 or consent of instructor. (F)

101. California Coastal Oceanography (4)

 This course emphasizes oceanographic connections between physical and climate forcing and marine ecosystem responses using examples from and activities in the California coastal environment. The approach is inquiry-based, combining classroom and experiential learning to build critical and quantitative thinking and research insights and abilities. **PREREQUISITE:** Chem. 6A or consent of instructor. (S)

102. Introduction to Geochemistry (4)

 An introduction to the chemical composition and evolution of the Earth and solar system. Applications of chemical methods to elucidate the origin and geologic history of the Earth and the planets, evolution of oceans and atmosphere, and human environmental impacts. **PREREQUISITE:** SIO 50, Chem. 6A-B-C, or consent of instructor. (W)

103. Introduction to Geophysics (4)

 An introduction to the structure and composition of the solid earth. Topics include seismology, the gravity and magnetic fields, high-pressure geophysics, and concepts in geodynamics. Emphasis is on global geophysics, i.e., on the structure and evolution of the planet. **PREREQUISITE:** Math. 20A-B-C and Phys. 2A-B-C, SIO 50, or consent of instructor. SIO 160 recommended. (F)

104/255. Paleobiology and History of Life (6)

 An introduction to the major biological transitions in Earth history from the origins of metabolism and cells to the evolution of complex societies. The nature and limitations of the fossil record and patterns of adaptation and diversity, and the tempo and mode of biological evolution. Laboratories and substantial field component complement and extend the lecture material. Program and/or material fee may apply. **PREREQUISITE:** Undergraduate: BILD 3 or consent of instructor. Graduate: graduate-level standing or consent of instructor. Graduate students, additionally, will give oral presentation or research paper. (S)

105. Sedimentology and Stratigraphy (4)

 This course will examine sedimentary environments from mountain tops to the deep sea across a variety of time scales. The focus is to develop the skills to interpret stratigraphy and read the history of the Earth that it records. Laboratories and substantial field component complement and extend lecture material. Program and/or course material fee may apply. **PREREQUISITE:** SIO 50 or consent of instructor. (F)

110. Introduction to GIS and GPS for Scientists (4)

 A hands-on introduction to the science applications of geographic information systems and global positioning system. Students acquire data through GPS field surveys, design and construct GIS using ESRI's ArcGIS software, analyze spatial data, and present the results in a Web-based environment. **PREREQUISITE:** upper-division standing or consent of instructor. (S)

111/Phys. 111. Introduction to Ocean Waves and Tides (4)

 This course will cover a broad range of physical oceanography topics including: linear dynamics of surface gravity waves, dispersion relations, spectral descriptions, group velocity, shoaling waves, ray theory, edge waves, Coriolis force, the tide generating force, LaPlace's tide equations, Kelvin waves. **PREREQUISITE:** Math. 20A-E and Phys. 2A-C or consent of instructor. (W)

112. Urban Landscapes (4)

 Introduction to scientific principles, such as conservation of mass and energy and spatial patterns of urban form, that guide the development of urban centers as complex systems. Contrasts between natural and urban landscapes will be highlighted, with examples including water routing and disease transmission. **PREREQUISITE:** upper-division standing or consent of instructor. (S)

117. The Physical Climate System (4)

 This course quantitatively examines the physical processes controlling Earth's climate including radiative transfer and energy balance, atmospheric and oceanic circulations, clouds and the hydrological cycle, climate sensitivity and climate feedbacks, and Earth system's response to extraterrestrial forcing. **PREREQUISITE:** Math. 20A-B-C and Phys. 2A-B-C or consent of instructor. (S)

120. Introduction to Mineralogy (4)

 Application of mineralogical and x-ray crystallographic techniques in earth sciences. Topics include symmetry, crystal structure, chemical, and physical properties of minerals with special emphasis on classification and systematic relations. Laboratory component includes polarizing microscope and x-ray powder diffraction methods. **PREREQUISITE:** SIO 50, SIO 102. (W)

130. Geodynamics of Terrestrial Planets (4)

 Geodynamical processes fundamentally control the formation and evolution of planets on geological time scales. Study of similarities and differences between Earth, Venus, Mars, and other terrestrial planets and satellites that elucidate the processes which shape a planet's formation and evolution. **PREREQUISITE:** Math. 20A-B-C-D and Physics 2 sequence or consent of instructor. (F)

135/236. Satellite Remote Sensing (4)

 Satellite remote sensing provides global observations of Earth's atmosphere, oceans, and ice. Overview, physical principles of remote sensing including: orbits, electromagnetic radiation, diffraction, electromagnetic, and microwave systems. Weekly labs explore remote sensing data sets. Graduate students will also be required to write a term paper and present a seminar presentation. **PREREQUISITE:** Undergraduate: Phys. 2A-B or Phys. 4A-B-C or consent of instructor. Graduate: graduate-level standing or consent of instructor. (S)

138. The Coral Reef Environment (4)

 Assessment of the physical, chemical, and biological interactions that define the coral reef system; essential geography and evolutionary history of reefs; natural and human perturbations to the coral reef ecosystem; aspects of reef management and sustainability. **PREREQUISITE:** BILD 3, Math. 10A, Chem. 6B, or consent of instructor.

 Introduction to the chemistry and distribution of the elements in seawater, emphasizing basic chemical principles such as electron structure, chemical bonding, and group and periodic properties and showing how these affect the chemistry of marine systems. **PREREQUISITE:** Chem. 6C with a grade of C- or better or consent of instructor. (F)

142. Atmospheric Chemistry and the Biochemical Cycles of Atmospheric Trace Gases (4)

 Evolution and processes of the Earth's atmosphere. Topics include effects of "greenhouse" gases such as H2O, CO2 and CH4 in climate modification, destruction of the ozone layer, biogeochemical cycles of radioactively important trace gases and atmospheres of other terrestrial planets. **PREREQUISITE:** Chem. 6 sequence or consent of instructor. (W)

144/245A. Introduction to Isotope Geochemistry (4)

 Radioactive and stable isotope studies in geology and geochemistry, including geochronology, isotopes as tracers of magmatic processes, cosmic-ray produced isotopes as tracers in the crust and weathering cycle, isotopic evolution of the crust and mantle. **PREREQUISITE:** Undergraduate: SIO 50, SIO 102, and 120 or consent of instructor. Graduate: graduate-level standing or consent of instructor. Graduate level requires student presentation. (W)

148/248. Evolution of Earth's Biosphere (6)

 Paleoeological development of marine and terrestrial environments during Earth's evolution. Ecological and chemical evolution of the oceans, atmosphere, biogeochemical cycles, and biomes with particular emphasis on the long-term history and climate of the Earth's surface. Additionally, at graduate level, oral presentation or research paper required. Substantial field component (three weekend field trips in San Diego County) complement and extend the lecture material. **PREREQUISITE:** Undergraduate: SIO 104 or consent of instructor. Graduate: graduate-level standing or consent of instructor. (W)

152. Petrology and Petrography (4)

 Mineralogic, chemical, textural and structural properties of igneous, metamorphic, and sedimentary rocks; their origin and relations to evolution of the crust and mantle. Laboratory emphasizes hand specimens and microscopic studies of rocks in thin sections. **PREREQUISITE:** SIO 50, SIO 102, and SIO 120 or consent of instructor. (S)

154/254. Macroevolution (4)

 Tempo and mode of evolution with emphasis on the marine fossil record. Large-scale patterns and trends in evolution, diversity, speciation, extinction, adaptation, and adaptive radiation. Evolutionary turnover and the role of the environment in macroevolution. Graduate students will also be required to write a term paper and do oral presentation. **PREREQUISITE:** Undergraduate: SIO 104 or EEB 150 or consent of instructor. Graduate: graduate-level standing or consent of instructor. (W)
155/251. Petrology and Geochemistry of the Solid Earth (4)
A geochemical and petrogenetic overview of the Earth and planets. Topics include formation and differentiation of the Earth into core, mantle, crust, and atmosphere/hydrosphere, generation of magma, and isotope and trace element geochemistry of igneous and metamorphic rocks. PREREQUISITES: Undergraduate: SIO 152 or consent of instructor; graduate level standing or consent of instructor. Graduate students, additionally, must submit a term paper in one aspect of work discussed during the quarter to be presented orally in class. (W)

160. Introduction to Tectonics (4)
The theory of plate tectonics attempts to explain how forces within the Earth rise to continents, ocean basins, mountain ranges, earthquake belts, and most volcanoes. In this course we will learn how plate tectonics works. PREREQUISITES: SIO 50 or consent of instructor. (S)

162. Structural Geology (4)
Principles of stratigraphy and structural geology applicable to field geologic studies. Discussion and laboratory exercises. Two to three field trips required. Program and/or material fee may apply. PREREQUISITES: SIO 50 or SIO 100, or consent of instructor. (W)

170. Introduction to Volcanology (6)
This course teaches fundamental aspects of physical and chemical volcanology with a major field study compo- nent on an active volcano on Hawaii (two weeks early September). Subjects are introduced in lectures and reinforced and expanded in field exercises. Students return to campus to attend regular lectures and to prepare final field report during fall quarter. Additional fees may be required. PREREQUISITES: SIS 190, or SIO 100, and Chem. 5A, or consent of instructor. Department stamp required. (F)

182A. Environmental and Exploration Geophysics A (4)
First of two-part sequence on theory and application of practical geophysics. Lectures are supplemented by the collection of gravity, magnetic, and seismic data and production of field reports. Includes introduction to MATLAB for analysis and interpretation of data. SIO 103 recommended. PREREQUISITES: Math. 20D and Phys. 2C and 2D, or consent of instructor. (W)

182B. Environmental and Exploration Geophysics B (4)
Second of two-part sequence on theory and application of practical geophysics. Lectures are supplemented by the collection of electrical and ground penetrating radar data. Continued use of MATLAB for analysis and interpretation of geophysical data. PREREQUISITES: SIO 182A or consent of instructor. (S)

185. Applied Complexity (4)
Techniques from the study of complex systems, including genetic algorithms, neural networks, forecasting, artificial life and agent-based modeling, are introduced and applied to problems in geophysics, geology, engineering, biology, and economics. PREREQUISITES: Math. 20A-B-C-D or consent of instructor. Experience with MATLAB recommended. (S)

190. Special Topics in Earth Sciences (4)
A seminar course designed to treat emerging or topical subjects in the earth sciences. Involves reading from the literature and student participation in discussion. Topics vary from year to year. Enrollment by permission of instructor. (Students may enroll in SIO 190 and or ERTH 190 no more than two times for credit.) PREREQUISITE: upper-division standing, a minimum UCSD GPA of 3.0 or consent of instructor.

192. Senior Seminar in Scripps Institution of Oceanography (1)
The Senior Seminar Program is designed to allow SIO senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in SIO (at the upper division level). Topics will vary from quarter to quarter. Senior Seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors.

Course attached to a six-to-eight-unit internship taken by students participating in the UCDC Program. Involves weekly seminars with faculty and teaching as- sistant and a substantial research paper. PREREQUISITES: departmental approval. Participation in the UCDC Program during quarter enrolled in seminar.

195. Methods of Teaching Earth Sciences (4)
Introduction to teaching earth sciences class section in a lower-division class, hold office hours, assist with examina- tions. This course counts only once towards the major. PREREQUISITES: junior or senior earth sciences major with GPA of 3.0 or an A in the course, overall GPA of 3.0 or higher, ninety units or more, and consent of instructor, plus department stamp.

196. Honors Thesis Research (4)
Independent research on a problem in earth sciences by special arrangement with a faculty member (letter grade only). Students may take ERTH 196 and/or SIO 196 two times for credit. PREREQUISITES: completed ninety units of courses including twelve units of ERTH and/or SIO courses. Achieved a GPA of 3.0 overall and 3.5 in SIO/ERTH courses. Submitted to ERTH Steering committee, and had approved, an honors thesis research proposal. Department stamp.

197. Earth Science Internship (2 or 4)
The earth science internship program is designed to complement the program's academic curriculum with practical field experience. PREREQUISITES: completion of ninety units with a GPA of 2.5, and a completed and approved Special Studies form, UCSD Application for Enrollment Special Studies Courses 197, 198, 199, and department stamp.

198. Directed Group Study (2–4)
This course covers a variety of directed group studies in areas not covered by formal SIO courses. (P/N grades only.) PREREQUISITE: consent of instructor.

199. Independent Study for Undergraduates (4)
Independent reading or research on a problem. By special arrangement with a faculty member. (P/N grades only.)

BS/MS COURSE

228. Research Seminar (2)
A three-quarter required sequence for B.S./M.S. earth sciences students to prepare students for thesis writing. PREREQUISITES: current earth sciences B.S./M.S. student. Department stamp required. (F,WS)

GRADUATE

200A. Computational Ocean Acoustics and Signal Processing I (4)
Overview of ocean acoustics. Acoustics Wave Equation with some analytic solution techniques. Ray Methods. Introduction to Spectral and Normal Modes methods. Introduction to beamforming including matched field processing. Computer programs will be constructed on all subjects covered. PREREQUISITE: graduate standing or consent of instructor. Kuperman (F)

200B. Computational Ocean Acoustics and Signal Processing II (4)
Continuation of SIO 200A. Range dependent propagation models including adiabatic and coupled mode models and parabolic equations. More advanced topics in matched field processing. PREREQUISITES: graduate standing and SIO 200A or consent of instructor. Kuperman (W)

200C. Computational Ocean Acoustics and Signal Processing III (4)
Continuation of SIO 200B. Modeling interference such as ambient noise. Time domain methods. Matched field tomography, nonlinear optimization methods, and geo- physical inversion. PREREQUISITES: graduate standing and SIO 200B or consent of instructor. Kuperman (S)

201. Geological Record of Climate Change (4)
Introduction to geological archives; the tools for paleocli- matic reconstruction and a sampling of important issues from the geological record, including the development of “greenhouse” and “icehouse” worlds, the origin and evolution of glacial cycles, and the origin of “millennial scale” climate variability. PREREQUISITE: chemistry and physics required for graduate admission to SIO, SIO 101 or equivalent, or consent of instructor. Charles (S)

202A-B. Fundamentals of Wave Physics (4–4)
This two-quarter sequence is designed to introduce a broad background of students to basic principles of wave physics, including generation, propagation, dispersion, refraction, diffraction, reflection, waveguides, etc. A variety of wave motions of environmental relevance, including acoustic, ocean surface and internal (SIO 220A), optical and seismic (SIO 220B) are used to illustrate these principles. In-class experiments, data collection, and analysis exercises are incorporated. PREREQUISITES: calculus and partial differen- tial equations. Buckings, Kuperman, Stramski, Melville, Hildebrand, Dorman (W,S)

203A. Introduction to Applied Mathematics I (4)

203B. Introduction to Applied Mathematics II (4)
(Cross-listed with MAE 294B.) Asymptotic methods: method of matched asymptotic expansions, steepest descent, Laplace’s method for multiple scales, boundary layer theory. Elements of com- plex analysis. PREREQUISITES: MAE 294A or SIO 203A or consent of instructor.

203C. Introduction to Applied Mathematics III (4)
(Cross-listed with MAE 294C.) Partial differential equations: characteristics, similarity solutions, Green’s functions, im- ages, wave equation, diffusion equation. Laplace’s equation; Applications to continuum mechanics, potential fields, and transport phenomena such as diffusion, linear and non- linear waves, Burger’s equation and shocks. Other topics according to the interests of the instructor. PREREQUISITES: MAE 294B or SIO 203B or consent of instructor.

204B. Advanced Acoustics II (4)
Theory of radiation, transmission and scattering of sound with special application to ocean acoustics. PREREQUISITES: concurrent registration in ECE 145BL recommended; SIO 204A or consent of instructor. Buckingham (W)

206. Land Surface Hydrology (4)
Advanced introduction to natural processes that govern water occurrence and transport over the land surface. Principles of global hydrological cycle and land surface-water balance, runoff and fluvial geomorphology, infiltration and subsurface water flow, evaporation and plant transpiration. PREREQUISITE: graduate standing or consent of instructor. Staff (S)

207A. Fundamentals of Digital Signal Processing (4)
Discussion of discrete-time signals and systems. Discrete-Time Fourier Transform (DFT) and window functions, Fast Fourier Transform (FFT), design of Finite Impulse Response (FIR) and Infinite Impulse Response (IIR) digital filters and their implementations, finite word length effects, appli- cations to data acquisition and analysis. PREREQUISITE: graduate standing or consent of instructor. Hodgkiss (F)

207B. Digital Signal Processing I (4)
Discrete random signals; conventional (FFT based) spectral estimation. Coherence and transfer function estimation; model-based spectral estimation; linear prediction and AR-modeling, Levinson-Durbin algorithm for lattice filters, minimax variance spectrum estimation. Cross-listed with ECE 251A. PREREQUISITES: ECE 161 and ECE 153 or consent of instructor. Hodgkiss, Rao (W)

207C. Digital Signal Processing II (4)
Adaptive filter theory, estimation errors for recursive least squares and gradient algorithms, convergence and tracking analysis of LMS, and filtered-X LMS algorithms, comparative performance of Wiener and adap- tive filters, transversal and lattice filter implementations, performance analysis for equalization, noise canceling, and linear prediction applications. Cross-listed with ECE 251B. PREREQUISITES: graduate standing and SIO 207B and SIO 207C. Hodgkiss (S)
207D. Array Processing (4)
The coherent processing of data collected from sensors distributed in space for signal enhancement and noise rejection purposes or wavefield directionality estimation. Conventional and adaptive beamforming. Matched field processing. Sparse array design and processing techniques. Applications to acoustics, geophysics, and electromagnetics. Cross-listed with ECE 251D. PREREQUISITES: graduate standing and EIO 207C, Hodgekiss (F)

208. Seminar in Applied Ocean Sciences (1)
Topics in applied ocean sciences. One-hour seminar. (S/U grades only.) Staff (F,WS)

209. Special Topics (1-4)
Within the next few years, lectures on various special subjects will be offered by members of the staff. The emphasis will be on topics that reveal the interdependence of the biological, chemical, geological, and physical processes operating in the oceans. (S/U grades permitted.) Staff (F,WS)

210. Physical Oceanography (4)
Physical description of the sea; physical properties of seawater; methods and measurements, boundary processes, regional oceanography. PREREQUISITE: graduate standing or consent of instructor. Hendershot, Talley (F)

211A-B. Ocean Waves (4-4)
Propagation and dynamics of waves in the ocean including the effects of depth, waves, and wind. Linear and nonlinearity. PREREQUISITE: graduate standing or consent of instructor. Hendershot, Guza (WS)

212A-B. Geophysical Fluid Dynamics (4-4)
The equations of motion for rotating stratified flow and their application to the atmospheric and oceanic dynamics; Ekman layer dynamics, potential vorticity dynamics, the quasigeostrophic approximation, theories of the wind-driven oceanic circulation, theories of the atmospheric Hadley circulation, geostrophic adjustment, and baroclinic instability. PREREQUISITE: graduate standing; for SIO 212A, SIO 212A, and SIO 214A, or consent of instructor. Cessi, Salmon, Young (WS)

213. Turbulence and Mixing (4)
Mixing mechanisms, their identification, description, and modeling. Introduction to turbulence, semi-empirical theories, importance of coherent structures, effects of stratification and rotation on turbulent structure, entrainment and mixing. Cross-listed with MAE 216. (S/U grades permitted.) Armi (S)

214A. Introduction to Fluid Mechanics (4)
A survey of classical problems in fluid mechanics and approximate techniques of analysis. Topics include conservation equations, straight laminar flows, low and high Reynolds number laminar flow, stability of laminar flows, turbulent flows. PREREQUISITE: graduate standing or consent of instructor. Winant (F)

214B. Environmental Fluid Dynamics (4)
Single-layer flows with a free surface, two-layer flows including exchange flows in harbors, estuaries, seas, and buildings. Continuously stratified flows with meteorological and oceanographic applications. Topographic effects, plumes, jets, and thermal. Cross-listed with MAE 224. PREREQUISITE: introductory graduate-level course in fluid mechanics. Armi (S)

216. Introduction to the Physics of Complex Systems (4)
Emergent complex behavior in nonlinear, dissipative, open dynamical systems will be investigated by studying fundamental properties and their manifestation in examples drawn from the physical and biological sciences. Topics to include fractals, chaos, self-organization, artificial life, and neural networks. PREREQUISITE: graduate standing or consent of instructor. (S/U grades permitted.) Werner (W)

217A. Atmospheric and Climate Sciences I (4)
Thermodynamics and statics of dry and moist air, atmospheric composition, Earth radiation budget, vertical structure of the atmosphere, global energy balance, thermodynamic feedbacks in the climate system. PREREQUISITE: graduate standing or consent of instructor. (S/U grades permitted.) J. Norris (W)

217B. Atmospheric and Climate Sciences II (4)
Structure of midlatitude synoptic systems; equations of motion, scale analysis, elementary applications and wave solutions; baroclinic instability theory; atmospheric general circulation and energetics; tropical dynamics; relationships among atmospheric dynamics, CO2 clouds, precipitation, and other weather and climate phenomena. PREREQUISITES: graduate standing and SIO 217A or equivalent background. J. Norris (W)

217C. Atmospheric and Climate Sciences III (4)
Physical and dynamical processes that determine climate and climate change; role of aerosols; water vapor; CO2 and other greenhouse gases; cloud-radiative interactions; atmospheric general circulation; role of convection; tropical climate modeling. PREREQUISITES: graduate standing and SIO 217A and SIO 217B or equivalent background, or consent of instructor. Ramanathan (S)

217D. Atmospheric and Climate Sciences IV (4)
Atmospheric chemistry that impacts climate change, including photochemical reactions, ozone chemistry, and aerosol evolution in the troposphere and stratosphere. Atmospheric applications of catalytic cycles, heterogeneous chemistry, and microphysical processes will include the ozone hole, urban smog, and aerosol-cloud interactions. PREREQUISITES: undergraduate general physics, chemistry, and mathematics (including differential equations), Riehl (S)

219. Special Topics in Physical Oceanography (1-4)
Example topics are case histories and methods in physical oceanography, theories of the ocean circulation, numerical methods in large-scale ocean and atmospheric models, and natural electromagnetic phenomena in the earth and the oceans. (S/U grades permitted). Staff (F,WS)

220. Observations of Large-Scale Ocean Circulation (4)
General circulation of the oceans; tropical, subtropical, and high-latitude current systems of the Atlantic, Indian, and Pacific Oceans and marginal seas; ocean heat flux and thermal-haline circulations; observational basis of large-scale dynamics. PREREQUISITE: graduate standing or consent of instructor. (S/U grades permitted.) Roemmich (S)

221A. Analysis of Physical Oceanographic Data (4)
Fundamental elements of analysis of geophysical and oceanographic time series, including sampling problems, least squares techniques, spectral analysis, interpretation of series, design of experiments. PREREQUISITE: consent of instructor. (S/U grades permitted.) Pikel (F)

221B. Analysis of Physical Oceanographic Data (B) (4)
Techniques for analysis of physical oceanographic data involving many simultaneous processes including probability densities, sampling errors, spectral analysis, empirical orthogonal functions, correlation, linear estimation, objective mapping. PREREQUISITE: graduate standing or consent of instructor. (S/U grades permitted.) Rudnick (W)

221C. Data Analysis Laboratory (4)
This course is to give students practical experience with analysis techniques. Students complete three projects. Topics include empirical orthogonal functions, objective mapping, complex demodulation, inference of geometric flow, minimization of CTD salinity sloping, isolation of wind-driven currents, wavelets. PREREQUISITE: graduate standing or consent of instructor. (S/U grades only) Rudnick, Gille (F)

222. Underwater Bioacoustics (4)
Introductory course to familiarize a broad spectrum of participants to underwater sound and its relationship to underwater animal behavior. Basic physics of sound propagation, use of sound to study underwater animals and, the sounds made by the animals themselves for echolocation and communication will be covered. PREREQUISITE: consent of instructor. (S/U grades permitted.) Jaffe (F)

223A. Geophysical Data Analysis I (4)
Probability and statistics and their application to make inferences from geophysical data: point processes, distributions, maximum likelihood estimation, hypothesis testing and confidence intervals, least squares, density estimation, interpolation and smoothing. PREREQUISITE: graduate standing or consent of instructor. Agnew, C. Constable (W)

223B. Geophysical Data Analysis II (4)
Analysis of geophysical measurements, especially time series, Fourier theory digital signal processing, and spectral analysis. PREREQUISITES: consent of instructor. (S/U grades permitted) ISO 223A or consent of instructor. Agnew, C. Constable (S)

224. Internal Constitution of the Earth (4)
An examination of current knowledge about the composition and state of the earth's interior revealed by geophysical observations. Seismic velocity and mass density distributions; equations of state; phase changes; energy balance and temperatures; constraints on composition from extraterrrestrial samples and exposed rocks; spherical and aspherical variations of properties. PREREQUISITES: calculus and differential equations, basic chemistry and physics, or consent of instructor. Masters (S)

225. Physics of Earth Materials (4)
Mathematics and physics of the Earth's surface material, focusing on geophyical problems. Topics include deformation, stress, conservation laws, elasticity, attenuation, viscoelasticity, fracture mechanics, and porous media. PREREQUISITE: graduate standing or consent of instructor. Agnew, Fialko (W)

226. Introduction to Marine Geophysics (4)
Methods of exploration geophysics with emphasis on those useful at sea. Magnetic and gravitational potential field methods, multi-beam echo sound reflection and refraction seismology will be covered. Recent papers from the literature will also be read and discussed. PREREQUISITES: differential equations; at least one geology course. (S/U grades permitted.) Doran, Hildebrant (S)

227A. Introduction to Seismology (4)
Introduction to seismometers and seismograms; stress and strain; potentials and the wave equation; geometrical ray theory and travel times in layered media; representation of seismic sources; WKBJ and synthetic seismograms; seismic hazards and other applications of seismology. PREREQUISITE: consent of instructor. (S/U grades permitted.) Shearer (F)

227B. Advanced Seismology I (4)
Introduction to low-frequency digital data; continuum mechanics and the equations of motion; free oscillation solutions; construction of Earth models; excitation of free-oscillations and source mechanism retrieval; array processing of long-period data; modelling aspherical structure; surface waves. PREREQUISITE: consent of instructor. (S/U grades permitted.) Staff (W)

227C. Advanced Seismology II (4)
High-frequency wave propagation; methods for computing synthetic seismograms including WKBJ, reflectivity and finite differences; body-wave spectra; attenuation of body waves; source physics; reflection and refraction seismology; seismic tomography. PREREQUISITE: consent of instructor. (S/U grades permitted.) Staff (S)

229. Gravity and Geomagnetism (4)
Introduction to potential theory, with applications to gravity and geomagnetism. Topographical harmonics, Laplace's equation, the Dirichlet problem on a sphere, and Fourier methods. Gravity anomalies and geomagnetic field modeling and sources are discussed; also paleomagnetic observations. PREREQUISITE: graduate standing or consent of instructor. (S/U grades permitted.) C. Constable, Parker (S)

230. Introduction to Inverse Theory (4)
Solution of linear and nonlinear inverse problems in geophysics by optimization techniques such as norm minimization and linear programming. Construction of models by regularization; inference by bounding functionals. Illustrations from gravity, geomagnetism, and seismology. PREREQUISITE: graduate standing or consent of instructor. (S/U grades permitted.) Parker (W)

231. Introduction to EM Methods in Geophysics (4)
Introduction to electromagnetic methods for both global geophysics and applied/exploration methods. Covers history of EM induction, conduction in rocks, binary mixing laws, self potential, induced polarization, DC resistivity, magnetotellurics, electromagnetic depth sounding, elementary inverse methods, global conductivity structure, and marine EM methods. PREREQUISITE: graduate standing or consent of instructor. (S/U grades permitted.) S. Constable (F)
233. Introduction to Computing at SIO (4)
Introduction to the SIO computing environment and common software tools in geophysics and other disciplines. Topics include: PostScript, HTML, and a scientific programming language such as C or Fortran.90. PREREQUISITE: graduate standing or consent of instructor. (S/U grades permitted.) Kent, Shearer (F)

234. Geodynamics (4)
A general course on the dynamics and kinematics of the solid earth based on the text of Turcotte and Schubert. Topics include plate tectonics, heat flow, lithosphere, mantle, flexure, viscous flow, crust, gravitational, and other related topics. PREREQUISITE: graduate standing or consent of instructor. (S/U grades permitted.) Sandwell (W)

236. Satellite Remote Sensing (4)
Satellite remote sensing provides global observations of Earth to monitor current changes in land, ocean, and ice. Overview of data production by satellites and related ground receiver system impacts. Optics of air-water interface. Light fields within and beyond the ocean. Ocean of marine particles. Measurement methods and instrumentation. PREREQUISITES: basic physics and differential calculus, or consent of instructor. Stramski (F)

237A. Introduction to Ocean Optics (4)

237B. Ocean Color Remote Sensing (4)

237C. Optical-Biological Interactions in the Ocean (4)
A discussion class with emphasis on the interaction of light with marine plankton. Topics will include light absorption, fluorescence, and scattering by phytoplankton and effects of growth conditions on phytoplankton optical properties. Classic and contemporary papers dealing with these topics will be discussed. PREREQUISITES: basic physics and biology, or consent of instructor. (S/U grades only.) Stramski (F)

238. Sensor Networks (4)
Characteristics of chemical, biological, seismic, and other physical sensors; signal processing techniques supporting distributed detection of salient events; wireless communication and networking protocols supporting formation of robust sensor fabrics; current experience with low power, low cost sensor deployments. Conjoined with MAA 149 and ECE 156. PREREQUISITE: upper-division standing and approval of instructor, or graduate student in science or engineering. (S/U grades permitted.) Hodgkiss (S)

239. Special Topics in Geophysics (1-4)
Special course offerings by staff and visiting scientists. Example topics include: tectonics, geophysics, prospecting methods, diacritical theory and seismic mechanisms, tectonic interpretation of geodetic data, and dynamo theory. (S/U grades permitted.) Staff (F,W,S)

240. Marine Geology (4)
Introduction to the geomorphology, sedimentation, stratigraphy, vulcanism, structural geology, tectonics, and geologic evolution of the ocean floor. PREREQUISITES: physics and chemistry required for admission to the graduate curriculum in SIO, and ES 101 or equivalent, or consent of instructor. Cande, Charles, Hilton (F)

242. Marine Biotechnology (4)
The class will contain lectures discussing current topics and new technologies in the marine sciences (biology, chemistry). Faculty that are part of the marine biotechnology training grant will lecture on their own research and techniques that are being used. The students will select and present a paper that is an application of topics discussed. The areas of genomics, proteomics, expression analysts, mutagenesis, microbial diversity, etc., will be presented. Bartlett (F)

243. Marine Paleoclimates (4)
Palaeoclimates of marine plankton, nektonton, and benthos. Patterns and changes in marine communities and ecosytems over geologic time in relation to changes in the physical, chemical, and geologic environment and biotic interactions. The preservation filter and inference of ecological processes from fossils and biogeochemical proxies. Biotic interchanges, incumbency, escalation and trends, mass extinctions, and recovery. Lectures, seminar discussions, laboratory, and field trips. PREREQUISITE: bachelor’s degree in science or consent of instructor; open to undergraduates with completion of SIO 104 and either BIEB 130 or BIEB 140, or equivalent. Jackson, Staff (F)

244. Shape and Structure of the Ocean Floor (4)
Description and explanation of the structural geomorphology of oceanic crust, and of the tectonic and volcanic processes responsible for it. Description and interpretation of deep-sea sedimentary landforms (e.g., deep-sea fans, drifts, bedforms); and of the bottom currents that shape them. Offered in alternate years. PREREQUISITE: any previous graduate/undergraduate earth science or geology course. Lonsdale (W)

245. Sedimentary Geochemistry for Chemical Paleoclimatology (2)
Chemical paleoclimatology will be the focus, emphasis, on seawater and/or sediment chemical and isotopic records; discussions will concentrate on some of the following isotope systems: Li, C, O, S, Sr, Nd, and the select chemical tracers such as C1 and Ir; on the marine phases that most reliably record seawater chemical and isotopic compositions; and on diagenetic problems, how to identify and deal with them. PREREQUISITE: SIO 260 and consent of instructor. (Offered in alternate years.) (S/U grades permitted.) Kastner (S)

246. Global Tectonics and Basin Formation (4)
Plate tectonics of the crust and upper mantle, examining a variety of environments from ridge crests to continental margins, including plate interiors, with an emphasis on basin formation in these tectonic settings. PREREQUISITE: graduate standing. Cande, Driscoll (W)

247. Rock Magnetism and Paleomagnetism (4)
Rock magnetism and acquisition of magnetic remanence in geological materials as well as laboratory procedures and data analysis (isolating remanence components and statistical approaches). The paleomagnetic literature will be used to illustrate applications of rock magnetism to illustrate problems. PREREQUISITES: one year each of college-level physics and geology; mathematics through calculus. (S/U grades permitted.) Tauxe (S)

248. Evolution of Earth’s Biosphere (4)
Paleocological development of marine and terrestrial environments during Earth’s evolution. Ecological and chemical evolution of the oceans, atmosphere, biogeochemical cycles, and environments with particular emphasis on the long-term history and climate of the Earth’s surface. Substantial field component (three weekend field trips in San Diego County) complement and extend the laboratory material. Additionally, at graduate level oral presentation or research paper required. Conjoined with SIO 148. PREREQUISITE: graduate-level standing or consent of instructor. Jackson, R. Norris (S)

249. Special Topics in Marine Geology (1-4)
Special course offerings by staff and visiting scientists. (S/U grades only.) Staff (F,W,S)

251. Petrology and Geochemistry of the Solid Earth (4)
A geochemical and petrogenetic overview of the Earth and planets. Topics include formation and differentiation of the Earth into core, mantle, crust, and atmosphere/hydrosphere, generation of magma, and the role of the Earth’s deep interior. PREREQUISITE: chemistry; igneous rocks; geologic history of igneous and metamorphic rocks. Graduate students, additionally, must submit a term paper in one aspect of work discussed during the quarter to be presented orally in class. Conjoined with SIO 155. PREREQUISITE: graduate-level standing or consent of instructor. Castillo (W)

252A. Introduction to Isotope Geochemistry (4)
Radioactive and stable isotope studies in geology and geochemistry, including geochronology, isotopes as tracers of magmatic processes, carbon/nitrogen cycles, paleotemperature; isotopes as tracers in the crust and weathering cycle, isotopic evolution of the crust and mantle. Graduate level requires student presentation. Conjoined with SIO 144. PREREQUISITE: graduate-level standing or consent of instructor. Hilton, Beutler (S)

252B. Advanced Isotope Geochemistry I (4)
An advanced treatment of noble gas and stable isotope geochemistry. Offered in alternate years with SIO 252C. PREREQUISITE: SIO 252A/SIO 144. Hilton, Keeling, Lal (S)

252C. Advanced Isotope Geochemistry II (4)
An advanced treatment of radiogenic and cosmogenic isotope geochemistry. Offered in alternate years with SIO 252B. PREREQUISITE: SIO 252A/SIO 144. Lal (S)

253. Interactions of Oceanic Plates and the California Margin (4)
How the geology of Alta and Baja California has been shaped, especially in the past 30 Myr, by changing patterns of oceanic plates and microplates that have subducted beneath the North American Margin, slid obliquely past it, and formed new continental margins. PREREQUISITE: graduate standing, or consent of instructor and any other earth science class for undergraduates. Lonsdale, Castillo (S)

254. Macroevolution (4)
Tempo and mode of evolution with emphasis on the marine fossil record. Large-scale patterns and trends in diversity, speciation, and extinction. Innovation, disparity, and adaptive radiation. Evolutionary turnover and the role of natural selection. Conjoined with SIO 154. PREREQUISITE: graduate-level standing or consent of instructor. Jackson, R. Norris (S)

255. Paleobiology and History of Life (6)
An introduction to the major biological transitions in Earth history from the origins of metabolism and cells to the evolution of complex societies. The nature and limitations of the fossil record, patterns of adaptation and diversity, and the tempo and mode of biological evolution. Laboratories and substantial field component complement and extend lecture material. Program and/or material fee may apply. Graduate students, additionally, will give oral presentation or research paper. Conjoined with SIO 104. PREREQUISITE: graduate-level standing or consent of instructor. Jackson, R. Norris (S)

255A. Topics in Paleobiology and History of Life (3)
Lecture topics on the major transitions in the evolutionary history of life including origin of metabolism, microbes, major eukaryote radiations, ecosystems and societies. PREREQUISITE: graduate standing or consent of instructor. Jackson, R. Norris (S)

256A. Introduction to Field Geology (4)
Principles of stratigraphy and structural geology applicable to field geologic studies. Discussion and laboratory exercises. PREREQUISITES: consent of instructor. Brown (W)

256L. Structural Geology (4)
Principles of stratigraphy and structural geology applicable to field geologic studies. Discussion and laboratory exercises. Two to three field trips required. Graduate students will complete an in-depth literature-based focused study consisting of a written report and a forty-five-minute seminar on topics related to structural geology. PREREQUISITE: graduate-level standing or consent of instructor. (W)

257. Seminar in Petrology (4)
Discussion of current research in petrology and mineralogy. (S/U grades permitted.) Castillo (W)

259. Atmospheric Geochemistry (4)
Topics in this introductory course include: structure and composition of the atmosphere; isotopes of natural and man-made carbon-, nitrogen-, and sulfur-bearing trace gases; ozone and hydroxyl radicals; halogenated gases; sea-air exchange; aerosols; climatic effects. (S/U grades permitted.) Wahlen, Weiss (S)
260. Marine Chemistry (4)
Chemical description of the sea; the distribution of chemical species in the world oceans, and their relationships to physical, biological, and geological processes. Alushaire, Barbeau, R. Kelling (W)

261. Energetics and Kinetics in Marine Systems (4)
This course teaches the physical chemical principles that control chemistry in marine systems. After a basic introduction to thermodynamics and its application to an understanding of the marine environment, the emphasis will be on the study of a variety of kinetic processes. **PREREQUISITE:** graduate standing or consent of instructor. Dickson (S)

262. Seminar in Marine Natural Products (1)
Students will give seminars on current research topics in marine natural products chemistry. **PREREQUISITE:** graduate standing or consent of instructor. (S/U grades only.) Fenical (F,W,S)

263. Aqueous Chemistry (4)
This course emphasizes the chemical principles that control basic aqueous chemistry in marine systems. The focus will be to show that the geochemistry of the various elements in sea water and biological systems can be understood as a consequence of basic general chemical concepts such as electron structure, chemical bonding, and group and periodic properties. **PREREQUISITE:** undergraduate chemistry equivalent to UCSD Chemistry 6 sequence. Dickson (F)

264. Special Topics in Marine Natural Products Chemistry (3)
This course provides the foundation for advanced study in the field of marine natural products chemistry. Topics vary from the history of natural products to the organic chemistry of terpenes, alkaloids, and others, and natural product classes. Varying by topic quarterly, this class is given each quarter and may be repeated. **PREREQUISITE:** one year general organic chemistry. (S/U grades only). Fenical (F,W,S)

265. Biogeochemistry (4)
Examines quantitatively the impact of the biota on the chemistry of the atmosphere and ocean. Emphasis given to isotope as tracers of biogeochemical processes. Attention given to paleoclimatic and paleoceanographic data from ice cores to reveal mechanisms. **PREREQUISITE:** graduate standing or consent of instructor. Seevengerhaus, R. Kelling (S)

266. Seminar in Geochemistry and Marine Chemistry (1)
Student seminars on topics related to geochemistry and the chemistry of the marine environment. (S/U grades only.) Dickson (S)

267. Special Topics in Marine Chemistry (1-4)
Special course offerings by staff and visiting scientists. (S/U grades permitted.) Staff (F,W,S)

270. Pelagic Ecology (4)
An analysis of the concepts and theories used to explain the grades permitted.) Staff (~S) and life history biology. Offered in alternate years with SIO 275B. **PREREQUISITE:** consent of instructor; open to undergraduates. (S/U grades permitted.) Levin, Dayton (W)

275B. Natural History of Coastal Habitats (6)
Two three-hour laboratory per week. Two week-long field trips to coastal habitats in the Southwest and northern Mexico. Several day field trips to local habitats. Offered in alternate years with SIO 275A. **PREREQUISITE:** consent of instructor. (S/U grades permitted.) Dayton, R. Norris (S)

276. Quantitative Theory of Populations and Communities (4)
An introduction to the quantitative tools and conceptual issues underlying the study of the dynamics and structure of ecological systems. **PREREQUISITE:** calculus (three quarters) or consent of instructor. (S/U grades permitted.) Sugihara (F)

277. Deep-Sea Biology (4)
The ecology, zoogeography, taxonomy, and evolution of deep-sea organisms, with emphasis on the benthos. Offered alternate years. **PREREQUISITE:** consent of instructor. (S/U grades only.) Levin (W)

278. Seminar in Ocean Biosciences (2)
Presentations of reports, review of literature, and discussion of current research in the marine biological and oceanographic sciences. (S/U grades permitted.) Staff (F,W,S)

279. Special Topics in Biological Oceanography (1-4)
(S/U grades permitted.) Staff (F,W,S)

280. Biological Oceanography (4)
The biology and ecology of marine plankton, nekton, and benthos. Emphasis will be on processes regulating species, community, and ecosystem patterns and changes, including productivity, trophic relationships and species interactions with the physical, chemical, and geological environment. One or more field trips. **PREREQUISITE:** bachelor's degree in science or consent of instructor. Franks or Checkley, Levin (F)

281. Environmental Physiology and Biochemistry of Marine Organisms (4)
Biochemical mechanisms of adaptation of organisms to the marine environment. Special emphasis on the effects of pressure, temperature, salinity, oxygen, and light on the physiology and biochemistry. Conjoined with BBC 130. **PREREQUISITE:** BBC 102 or consent of instructor. Felbeck (F)

282. Phytoplankton Diversity (4)
Molecular, biochemical, ecological, and evolutionary perspectives on the diversity of eukaryotic and prokaryotic phytoplankton. **PREREQUISITE:** consent of instructor. Palenik (W)

285. Physical-Biological Interactions (4)
Physical and biological processes affecting growth and patchiness of plankton. Concepts and equations from physical oceanography will be presented and explored in a biological context. Ideas will be treated both theoretically and with examples from the literature. **PREREQUISITE:** introductory calculus and SIO 210, or consent of instructor. Franks (S)

286. Marine Science, Economics, and Policy (4)
This course investigates global issues in marine conservation and potential policy solutions. The approach is interdisciplinary, fast-paced, and discussion oriented. Students will become acquainted with sufficient background in marine biology, ecology, marine and conservation economics, international law, and policy as preparation for participation in discussion on real-world issues in marine conservation. Topics and instructors change each quarter. **PREREQUISITE:** graduate standing or consent of instructor. (S/U grades permitted) Staff (F,W)

287A. Marine Microbial Ecology (4)
Recent developments in the study of marine bacteria. Emphasis will be on biochemical and physiological adaptations of marine bacteria to the ocean environment. Bacterial metabolism, growth, and death will also be discussed in the context of trophic interactions and flows of material and energy in marine ecosystems. Molecular biology techniques used in the study of bacterial ecology will also be discussed. **PREREQUISITE:** consent of instructor. (S/U grades permitted.) Azam (W)

287B. Microbial Physiology (4)
Prokaryotic microbial physiology will be discussed primarily from a biochemical standpoint with emphasis on mechanism. Topics will vary from year to year but will include the following themes: Central Metabolism. Bioenergetics, Biosynthesis, Regulation, Differentiation. Prokaryotic Structure-Function Relationships. Conjoined with BMI 130. **PREREQUISITES:** BBC 100 or BBC 102 or equivalent. Sailer (S)

288. Marine Microbiology Laboratory (4)
Advanced techniques and theory in environmental microbiology. Students will perform experiments concerning (a) enrichment of diverse microbes (b) microbial enumeration and identification (c) metabolic and physiochemical adaptations, and (d) biotechnology, along with an independent project. **PREREQUISITE:** consent of instructors. Bartlett, Brahma (S)

290. Marine Biology (4)
An introduction to the field of marine biology, especially to the diversity of marine organisms at all taxonomic levels and their adaptations to the marine environment. **PREREQUISITE:** graduate standing. Palenik and Staff (W)

291. Biology Graduate Research Presentations (1)
Graduate students in the biological sciences present their research in a seminar or poster format. Class participants and instructors provide written feedback on the presentations. Required of third-year and beyond marine biology curricular group students during spring quarter. Open to all SIO graduate students. (S/U grades only.) Latz (S)

294. Biology of Fishes (5)
The comparative evolution, morphlogy, physiology, and ecology of fishes. Special emphasis on local and deep-sea and pelagic forms in laboratory. **PREREQUISITE:** graduate standing or consent of instructor. Hastings (S)

295S. Introduction to Marine Biodiversity and Conservation—Seminar (8)
Lectures on ecological, economic, social, and legal issues related to marine biodiversity and case studies on socio-economic and legal issues. Students are expected to attend field trips at sea and to various sites around San Diego County as a part of the corequisite course. Students who have taken SIO 295S may not receive credit for SIO 295S. Corequisite: SIO 295S. **PREREQUISITE:** MAS students only; consent of instructor. Jackson (Su)

295LS. Introduction to Marine Biodiversity and Conservation—Lab (8)
Laboratory work on major biological taxa, field trips on biodiversity in situ, computer labs for informatic tools. Students are expected to attend field trips at sea and to various sites around San Diego County as a part of the course. Students who have taken SIO 295LS may not receive credit for SIO 295LS. Corequisite: SIO 295S. **PREREQUISITE:** MAS students only; consent of instructor. Jackson (Su)

296. Special Topics in Marine Biology (1-5)
Example topics are reproduction in marine animals, adaptation to marine environments, larval biology, marine fisheries, macromolecular evolution, physical chemical topics in physiology, philosophy of science. (S/U grades permitted.) Staff (F,W,S)

297. Marine Biology Seminar (1)
Lectures given by visiting scientists and resident staff and students. (S/U grades only.) Staff (F,W,S)
Senior Seminar Program

Office of the Senior Vice Chancellor—
Academic Affairs
Associate Vice Chancellor—
Undergraduate Education
OFFICE: University Center, Room 104
(858) 822-5855
http://ugsseminars.ucsd.edu

The Senior Seminar Program was launched in fall 2006 as an additional venue to enhance the undergraduate student experience at UC San Diego. By design, the small informal class setting promotes intellectual discussions with faculty, and fosters an ideal learning environment for polishing critical thinking and analytical skills.

Some twenty unique seminars are offered each quarter by faculty representing most UCSD academic departments. Senior seminars are designated by the course number 192 (e.g., POLI 192), are graded Pass/Not Pass, and carry one unit of credit. A department stamp is required prior to enrollment and is obtained by simply contacting the department or program offering the seminar. Prerequisites vary by seminar. Students are highly encouraged to incorporate senior seminars into their upper-division studies at UCSD.

Please visit the Senior Seminar Program Web site at http://ugsseminars.ucsd.edu for a description of seminars currently offered. This site also contains useful information such as enrollment procedures and additional program details. Questions about a specific senior seminar should be directed to the department offering the seminar.

Sixth College

Provost, Naomi Oreskes
Pepper Canyon Hall, Second Floor

CULTURE, ART, AND TECHNOLOGY

See “Culture, Art, and Technology” core sequence.

SIXTH COLLEGE HONORS PROGRAM

OFFICE: Academic Advising
Pepper Canyon Hall, 2nd floor

Sixth College Honors Program nurtures academically high achieving students intellectually and socially, increases their awareness about opportunities of academic, social, and cultural engagement, and motivates them to become community leaders in Sixth College, at UC San Diego, and in communities outside the university.

• Through seminars, research, and social and cultural events, students are introduced to the academic, cultural, artistic, and social richness of the campus, provide information about resources, support students in finding extracurricular activities, and create opportunities to make connections to people, peers, faculty, staff, and campus community leaders.

• Through special advising by Sixth College provost and Sixth College associated faculty, honors students will receive mentoring and guidance.

FRESHMAN HONORS SEQUENCE

Students who have distinguished themselves academically in their high schools are invited to participate in the Freshman Honors Program. The qualifications are outstanding high school grade-point averages (3.8) and College Board Scholastic Aptitude Test scores (SAT math: 700 and above, and SAT reading and writing: 700 and above). In the fall quarter, freshmen are invited to enroll in SXTH 20—Freshman Seminar, which is noted on the UCSD transcript for zero units. Students who were not originally invited and who completed at least twelve graded units with a 3.7 cumulative GPA, will be invited to join the honors program. Students need to maintain a 3.5 cumulative GPA in order to remain in the honors program.

The weekly Freshman Honors seminars include cultural and social events such as lectures, hikes, dinners, plays, music events, and visits to museums are also an important component of the program.

SOPHOMORE HONORS SEQUENCE

Sixth College students who distinguish themselves academically during their freshman year and maintain a minimum cumulative GPA of 3.5 have two additional academic enrichment opportunities available to them:

• Second-year honors can participate in the Sixth College Honors Apprentice Research Program by enrolling in SXTH 96 (2 units P/NP) — Honors Project. Second-year projects may extend for one to three quarters and may lead to the creation of a Practicum project. Students are encouraged to present their projects at the UCSD Undergraduate Research Conferences held each spring and summer.

• A second option is participation in SXTH 60 (1 unit) — Sophomore Honors Seminar, a series that deals with Technology and Society and the Arts issues.

Sociology studies societies and human groups: their composition, organization, culture, and development. It combines scientific and humanistic methods to investigate a subject that is both relevant and broad—ranging from social interaction in everyday life to social changes taking place on a global scale. The Department of Sociology at UC San Diego offers an innovative program that covers the breadth of the discipline while giving students opportunities to specialize in areas of their choice, to conduct independent research, and to participate in an Honors Program. The department also encourages majors to study abroad and to take courses in other humanities and social science departments in order to expand their perspective on sociological topics.

Students at UCSD can explore a full range of sociological inquiry through courses in such established fields as Third World development, law, culture, social movements, religion, race and ethnic relations, gender roles, medicine, and mental illness. In addition, students have the opportunity to participate in courses found in few other sociology departments, such as the politics of language, ethnographic film, the Holocaust, comparative sex stratification, mass media, and revolutions. The faculty also teach an exceptional array of courses focusing on specific societies or world regions, including Africa, Japan, China, Latin America, eastern Europe, the former Soviet Union, and the United States.

Thus sociology is a valuable major for students who want to enter law, medicine, architecture, business, or politics. It also provides a solid liberal arts education for students who plan careers in such fields as criminal justice, public health, urban planning, social welfare, counseling, public administration, international relations, or market research. For students who wish to pursue graduate study in the social sciences for careers in teaching or scholarly research, an undergraduate degree from the Department of Sociology will provide a thorough grounding in recent theoretical and methodological advances in the discipline. A sociology major offers excellent preparation for teaching in the elementary schools. If you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program for information about the prerequisite and professional preparation requirements. It is recommended that you contact TEP as early as possible in your academic career. Whatever the career choice, the study of sociology can help the student cultivate a critical awareness of social life.

Students interested in majoring or minoring in sociology should stop by the Department of Sociology office, SS 8401, for program information and handouts. These clarify specific procedures and guidelines, and provide recommendations for areas of specialization within the major, as well as for graduate studies and careers in sociology.

THE UNDERGRADUATE PROGRAM

THE MAJOR

Students may choose to major in general sociology or in one of several concentrations, described below. Some basic requirements for the B.A. are common to all of these majors. All students must complete four lower-division and twelve upper-division courses in sociology.

A 2.0 GPA is required in the major, and students must earn at least a C– in each course used for the major. No courses taken to apply toward the major may be taken on a Pass/Not Pass basis except Sociology 199. Only one such special studies course (including internships) may be applied toward the major. Special studies courses must be applied for and approved by the department before the beginning of the quarter in which the student wishes to enroll, and can only be taken on a Pass/Not Pass basis. See the staff undergraduate coordinator for the necessary application forms and deadlines.

Lower-Division

The four lower-division requirements for a major in sociology are:

- Sociology 1, 2 and 60. (We strongly recommend you take Sociology 1 and 2 in sequence.)
- One course from the following: Sociology 10, 20, 30, 40 or 50

It is advisable that students complete these required lower-division courses (which should be taken during the freshman or sophomore year) before continuing with their upper-division work. Sociology 60 is a prerequisite for all upper-division methods courses.

Upper-Division

Twelve upper-division courses are needed for the major. Sociology 100 is required (students are strongly advised to complete this course by the end of their junior year), as well as one of the following methods courses:

- Sociology 103M
- Sociology 104
- Sociology 105
- Sociology 106
- Sociology 106M
- Sociology 108
- Sociology 109
- Sociology 110
- Sociology 60 is a prerequisite for these methods courses.

Students are encouraged to complete their theory and methods courses early in their program, since theoretical perspectives and skills in methods will enhance their subsequent course work. Ten additional upper-division classes are required for the major. The specific choices will depend on the student’s major concentration.

REQUIREMENTS FOR MAJOR IN GENERAL SOCIOLOGY

Students who seek a B.A. in General Sociology may complete any ten additional upper-division Sociology classes.

Requirements for Major Concentrations

Students may graduate with a B.A. in one of seven concentrations by choosing at least five upper-division courses from the course offerings in that concentration, as part of the ten upper-division courses for the major. Only one major concentration is allowed.

Concentration in International Studies

Students may graduate with a B.A. in Sociology/International Studies by completing at least five of the following courses as part of the ten upper-division courses required for the major. This concentration would be especially appropriate for those interested in international business, foreign service, or international law.

SOCIETY 111E. Human Rights: Principles and Problems
SOCIETY 111F. Human Rights: Practices and Cases
SOCIETY 130. Population and Society
SOCIETY 145. Violence and Society
SOCIETY 148. Political Sociology
SOCIETY 151. Comparative Race and Ethnic Relations
SOCIETY 152. Urban Sociology
SOCIETY 157. Religion in Contemporary Society

SOCIETY 182. Ethnicity and Indigenous Peoples in Latin America
SOCIETY 183. Minorities and Nations
SOCIETY 185. Globalization and Social Development
SOCIETY 187. African Societies through Film
SOCIETY 188D. Latin America: Society and Politics
SOCIETY 188E. Community and Social Change in Africa
SOCIETY 188F. Modern Jewish Societies and Israeli Society
SOCIETY 188G. Chinese Society
SOCIETY 188J. Change in Modern South Africa
SOCIETY 189. Special Topics in Comparative-Historical Sociology

NOTE: Sociology SOCIETY 189 must be preapproved by undergraduate advisor.

It is recommended that students concentrating in this area take Sociology 20 as part of their lower-division requirements.
**Concentration in American Studies**

Students may graduate with a B.A. in Sociology/American Studies by completing at least five of the following courses as part of the ten upper-division courses required for the major. This concentration is especially appropriate for those interested in careers in American politics, education, and social work.

- **SOCI 115. Social Problems**
- **SOCI 117. Language, Culture, and Education**
- **SOCI 125. Sociology of Immigration**
- **SOCI 127. Immigration, Race, and Ethnicity**
- **SOCI 126. Social Organization of Education**
- **SOCI 129. The Family**
- **SOCI 148. Political Sociology**
- **SOCI 151. Comparative Race and Ethnic Relations**
- **SOCI 151M. Chicanos in American Society**
- **SOCI 153. Urban Sociology**
- **SOCI 154. Religious Institutions in America**
- **SOCI 155. The City of San Diego**
- **SOCI 157. Religion in Contemporary Society**
- **SOCI 163. Migration and the Law**
- **SOCI 180. Social Movements and Protest**
- **SOCI 188K. American Society**

It is recommended that students concentrating in this area take Sociology 10 as part of their lower-division requirements.

**Concentration in Science and Medicine**

Students may graduate with a B.A. in Sociology/Science and Medicine by completing at least five of the following courses as part of the ten upper-division courses required for the major. This concentration is especially appropriate for those interested in careers in the health professions or technology-related fields.

- **SOCI 113. Sociology of the AIDS Epidemic**
- **SOCI 134E. The Making of Modern Medicine**
- **SOCI 135. Medical Sociology**
- **SOCI 136E. Sociology of Mental Illness: An Historical Approach**
- **SOCI 136F. Sociology of Mental Illness in Contemporary Society**
- **SOCI 138. Genetics and Society**
- **SOCI 149. Sociology of the Environment**
- **SOCI 167. Science and War**
- **SOCI 168E. Sociology of Science**
- **SOCI 168T. Sociology of Technology**

It is recommended that students concentrating in this area take either Sociology 30 or 40 as part of their lower-division requirements.

**Concentration in Culture and Communication**

Students may graduate with a B.A. in Sociology/Culture and Communication by completing at least five of the following courses as part of the ten upper-division courses required for the major. This concentration is especially appropriate for those interested in careers related to education, the media, or marketing.

- **SOCI 116. Gender and Language in Society**
- **SOCI 117. Language, Culture, and Education**
- **SOCI 118. Sociology of Gender**
- **SOCI 120T. Special Topics in Communication and Culture**
- **SOCI 131. Sociology of Youth**
- **SOCI 137. Sociology of Food**
- **SOCI 156. Sociology of Religion**
- **SOCI 157. Religion in Contemporary Society**
- **SOCI 160. Sociology of Culture**
- **SOCI 162. Popular Culture**
- **SOCI 162R. Religion and Popular Culture in East Asia**
- **SOCI 165A. American News Media**
- **SOCI 166. Sociology of Knowledge**
- **SOCI 172. Films and Society**
- **SOCI 174. Sociology of Literature**
- **SOCI 184. Gender and Film**

*Note:* Sociology SOCI 120T must be preapproved by undergraduate advisor.

It is recommended that students concentrating in this area take Sociology 10 as part of their lower-division requirements.

**Concentration in Social Inequality**

Students may graduate with a B.A. in Sociology/Social Inequality by completing at least five of the following courses as part of the ten upper-division courses required for the major. This concentration is especially appropriate for those interested in careers related to contemporary business.

- **SOCI 114. Culture and Ethnicity**
- **SOCI 116. Gender and Language in Society**
- **SOCI 117. Language, Culture, and Education**
- **SOCI 118. Sociology of Gender**
- **SOCI 119. Sociology of Sexuality and Sexual Identities**
- **SOCI 126. Social Organization of Education**
- **SOCI 127. Immigration, Race, and Ethnicity**
- **SOCI 129. The Family**
- **SOCI 132. Gender and Work**
- **SOCI 139. Sociology Inequality: Class, Race, and Gender**
- **SOCI 148. Political Sociology**
- **SOCI 151. Comparative Race and Ethnic Relations**
- **SOCI 151M. Chicanos in American Society**
- **SOCI 153. Urban Sociology**
- **SOCI 161. Sociology of the Life Course**
- **SOCI 163. Migration and the Law**
- **SOCI 180. Social Movements and Protest**
- **SOCI 184. Gender and Film**

It is recommended that students concentrating in this area take Sociology 10 or 20 as part of their lower-division requirements.

**Concentration in Law and Society**

Students may graduate with a B.A. in Sociology/Law and Society by completing at least five of the following courses as part of the ten upper-division courses required for the major. This concentration is especially appropriate for those interested in careers in law and criminology.

- **SOCI 111E. Human Rights: Principles and Problems**
- **SOCI 111F. Human Rights: Practices and Cases**
- **SOCI 140. Sociology of Law**
- **SOCI 140F. Law and the Workplace**
- **SOCI 141. Crime and Society**
- **SOCI 142. Social Deviance**
- **SOCI 146. Law Enforcement in America**
- **SOCI 147. Organizations, Society, and Social Justice**
- **SOCI 159. Special Topics in Social Organizations and Institutions**
- **SOCI 160E. Law and Culture**
- **SOCI 163. Migration and the Law**

**Concentration in Economy and Society**

Students may graduate with a B.A. in Sociology/Economy and Society by completing at least five of the following courses as part of the ten upper-division courses required for the major. This concentration is especially appropriate for those interested in careers related to contemporary business.

- **SOCI 121. Economy and Society**
- **SOCI 125. Sociology of Immigration**
- **SOCI 137. Sociology of Food**
- **SOCI 132. Gender and Work**
- **SOCI 139. Social Inequality: Class, Race, and Gender**
- **SOCI 140F. Law and the Workplace**
- **SOCI 148E. Inequality and Jobs**
- **SOCI 152. Social Inequality and Public Policy**
- **SOCI 163. Migration and the Law**
- **SOCI 167. Science and War**
- **SOCI 185. Globalization and Social Development**

It is recommended that students concentrating in this area take either Sociology 10 or 20 as part of their lower-division requirements.

**Education Abroad Program**

Students are encouraged to participate in the UC Education Abroad Program (EAP) or UCSD’s Opportunities Abroad Program (OAP) while still making progress toward completing their major. Students considering this option should discuss their plans with the undergraduate advisor prior to going abroad, and courses taken abroad must be approved by the department. It may be possible to use some related courses outside of the discipline of sociology toward the major. For more information on EAP, see the section of this catalog on the Education Abroad Program. Interested students should contact the Programs Abroad Office in the International Center. To petition particular courses taken abroad, see the undergraduate advisor in the Department of Sociology.

**RECOMMENDATIONS FOR TRANSFER STUDENTS**

Students transferring from a community college or other university may petition for sociology credit for courses taken at their previous institution. For students transferring from the California Community College System, articulation agreements for many courses have been developed that facilitate the petition process.

**Transferring Lower-Division Credit**

The four lower-division requirements for a major in sociology are:

- Sociology 1, 2, and 60: Articulations exist at most community colleges
- Sociology 10, 20, 30, 40, or 50: If your community college does not offer an already articulated course, please see the undergraduate coordinator for information about petitioning potential
lower-division sociology transfer credit.

It is important to note that eight of the twelve upper-division courses in the undergraduate program must be taken in the Department of Sociology at UCSD, unless students obtain special acceptance of additional courses from the chair and the faculty undergraduate advisor.

THE MINOR
The minor consists of seven sociology courses: two lower-division and five upper-division. Unless colleges specify specific courses to be taken, the student may choose any two lower-division sociology courses (Soc. 1, 2, 10, 20, 30, 40, or 60) and any five upper-division courses (Soc. 100 to 190). Courses for the minor must be taken for a letter grade only. Special study courses or internships may not be applied toward the minor.

SCIENCE AND SOCIETY MINOR
OFFICE: Social Sciences Building, Room 401
(858) 534-4627

FACULTY
Andrew T. Scull, Ph.D., Professor of Sociology
Charles R. Thorpe, Ph.D., Associate Professor of Sociology

The Science and Society Minor offers an opportunity for students to examine in a systematic and extended fashion the nature, significance, and development of modern scientific, technological, and medical enterprises. Science, technology, and medicine permeate modern society, and scientific developments often spark heated public debate. Yet undergraduate education rarely offers the chance to engage in systematic reflection upon how science influences society and how society influences science. The Science and Society Minor provides students with an innovative and inter-linked series of courses that permit precisely such a disciplined discussion of these issues.

Students complete the Science and Society Minor by taking two lower-division and five upper-division courses, a sequence that allows them to explore how modern scientific and medical knowledge and their associated technologies developed from the Scientific Revolution to the present; to understand how the roles of the scientist and the physician assumed their modern forms; to grasp how the scientific, technological, and medical communities came to possess their current authority; and to consider the appropriate role of the public in debating scientific and technological issues. A number of the courses offered focus on present-day scientific, technological, and medical topics and controversies: the impact of the Internet, the problems and prospects of molecular medicine, the disputes over the reality and the possible impact of global warming, scientific fraud, the ethics of medical experimentation, the AIDS epidemic, etc. Others provide students with historical perspectives on the changing meaning and character of science, medicine, and technology as key features of modernity.

The Science and Society Minor is of particular relevance to prospective science and engineering majors interested in developing a broader understanding of the scientific enterprise; to pre-medical students wishing to understand the intellectual and institutional foundations of modern medicine; and to social science and humanities students wanting to obtain a systematic grasp of contemporary scientific and technological society.

Science and Society Minor Requirements
The minor consists of two lower-division courses and five upper-division courses, chosen from the list below. One or more relevant upper-division courses offered in other departments or taken at another university may be petitioned for the minor, with the prior approval of the coordinator of the minor.

Lower-Division Courses
SOCI 30. Science and Society
SOCI 40. Sociology of Health Care Issues

Upper-Division Courses
SOCI 134E. The Making of Modern Medicine
SOCI 135. Medical Sociology
SOCI 136E. Sociology of Mental Illness: An Historical Approach
SOCI 136F. Sociology of Mental Illness in Contemporary Society
SOCI 168E. Sociology of Science
SOCI 168T. Sociology of Technology

THE HONORS PROGRAM
The Department of Sociology offers an honors program to those students who have demonstrated excellence in the sociology major. Successful completion of the honors program enables the student to graduate "With Highest Distinction," “With High Distinction," or "With Distinction," depending upon performance in the program.

Eligibility
Students may apply to the honors program if they meet the following requirements:
1. junior standing (ninety units completed)
2. GPA of 3.5 or better in the major
3. recommendation of a faculty sponsor familiar with student’s work
4. must have completed at least four upper-division sociology courses
5. overall GPA of 3.2 or better
6. must have completed SOCI 100 and one upper-division methods course prior to the fall quarter when the honors course begins; alternatively, the consent of the honors program director or the undergraduate advisor must be obtained

Interested students may pick up an application from the staff undergraduate coordinator in the Department of Sociology. Completed applications must be in the department office no later than week five of the spring quarter prior to the start of the honors program in the fall.

Students traveling abroad during their junior year should note that the deadline for applications still applies to them and should make arrangements accordingly.

Enrollment in the honors program is limited. Final decisions on acceptance into the program will be made by the presiding faculty member.

Course Requirement
The student must take Sociology 196A, Advanced Studies in Sociology, and Sociology 196B, Supervised Thesis Research, which will count as two of the twelve upper-division courses required for the major. Each student will choose a faculty advisor to help supervise the thesis research and writing with the honors program director.

Students whose GPA in the major falls below 3.5 or who do not earn at least an A– in the honors seminars will not graduate with distinction, but they may count the two honors courses among the twelve upper-division courses required for the major. Students must maintain a 3.5 GPA in the major and a 3.2 overall GPA until final graduation, in order to receive honors in the sociology honors program. To graduate “With Highest Distinction” the student must earn an A+; to graduate “With High Distinction” the student must earn an A; and to graduate “With Distinction” the grade must be an A-.

THE GRADUATE PROGRAM
The graduate program in sociology at the University of California, San Diego is organized on the basis of programs of specialization in comparative and historical sociology, the sociology of culture, social inequalities, and science, technology, and medicine. It is designed to prepare students for two main goals: to contribute to the increase of knowledge about societies and thereby advance the discipline of sociology; and to teach sociology at the graduate and undergraduate levels. The majority of graduates from the program find teaching and research positions in colleges and universities, although some also work in non-academic research and social policy positions. The department offers a course of study leading to the doctor of philosophy degree. While the Master of Arts degree is awarded as a step toward the completion of the Ph.D., applicants seeking only an M.A. degree are not accepted.

DEPARTMENTAL RESEARCH AND TEACHING
Members of the department are engaged in a wide variety of research and teaching activities that fall into four broad areas of concentration that correspond to our programs of specialization. Much of the research carried out by departmental students and faculty is distinguished by unique intersections of these areas:

Comparative and Historical Sociology
Many members of our faculty have research interests in the historical and/or comparative analysis of social institutions, structures, and processes, and social change in general. Using methods of comparative historical research and concepts drawn from social theory, individual faculty are engaged in research on, among other things: (1) political sociology, including revolution, social and political movements, and the evolution of the modern state, (2) economic transformation in contemporary societies (industrial
countries, “emerging markets,” and agrarian societies, including the labor process, stratification and the organization of work, and the development of market economies, (3) collective identities and social relations, including nationalism, class, gender, race, and ethnicity, and (4) social control and institutionalization. The department is among the most internationally oriented departments of sociology in the world, with specialists in most regions of the world, including Eastern and Western Europe, the former Soviet Union, Japan, China, southern Africa, Latin America, the Middle East, as well as the United States.

Sociology of Culture

A great number of the faculty have research and teaching interests in the sociology of culture broadly conceived. Sociology of culture involves topics such as: (1) the interpretation of the symbol systems that constitute meaningful resources for social action, (2) the analysis of the processes through which patterns of meaning are socially reproduced, and (3) the study of the interaction between culture change and social change. Many faculty have an interest in the comparative study of cultural traditions around the world. Others are interested in the relationship of culture to social movements and collective identities. And some see the sociology of culture not simply as a subdiscipline but as a general theoretical perspective on social experience. More specific substantive interests include sociology of knowledge and intellectuals, political culture, the culture of work, education and socialization, comparative moral cultures, the cultural dimensions of ethnicity, gender, sexuality, and popular culture.

Sociology of Social Inequalities

A large number of departmental faculty have expertise in the study of social inequalities, including those based on distinctions of gender, race, ethnicity, class, language, citizenship, and sexuality. Unique to our program are (1) focus on the processes by which social distinctions and identities are themselves constructed, represented, and maintained over time, (2) comprehensive training in both qualitative and quantitative approaches to studying inequality, (3) emphasis on international and historical inequality research, and (4) expertise in social movements as products of and challenges to inequality. Many members of the department study inequalities in workplaces, schools, markets, states, families, politics, law, and medicine.

Sociology of Science, Technology, and Medicine

A substantial fraction of the faculty has research and teaching interests focused on the interrelationships between science, technology, and medicine and modern society. Drawing on a range of sociological and historical methodologies, individual faculty are engaged in research on science and social movements, scientists and the state, biomedicine, the social history of madness and psychiatry, the historical sociology of scientific knowledge and practice, and sociological approaches to the Scientific Revolution. (For information on the interdisciplinary Science Studies Program, see below Specialized Programs of Study.)

ADMISSION

Admission to the graduate program in sociology is open to students with excellent undergraduate records in any field. Some previous work in sociology or the social and behavioral sciences is advisable, but not required. New students are admitted in the fall quarter of each academic year. A bachelor's degree from an accredited college or university is a prerequisite for admission to the graduate program. Prospective applicants should submit the official online application for admission and awards (same form), one set of official transcripts from each institution attended after high school, official scores from the Graduate Record Examination, application fee, at least three letters of recommendation, and one or more samples of the applicant's own writing, such as a term paper. Additionally, foreign applicants must submit official scores from the Test of English as a Foreign Language (TOEFL) and the Test of Written English (TWE). Applicants are encouraged to contact and communicate with the department to talk with faculty and graduate students. The application deadline is January 4, of each year.

PROGRAM OF STUDY

The graduate programs in the University of California system work under the "normative time" standard. Normative time refers to the time period in which students, under normal circumstances, are expected to complete their requirements for the Ph.D. degree. Each department establishes a normative time for its doctoral program, and for the Department of Sociology, as for most graduate programs in the university, it is six years.

Course Requirements

Students are required to enroll as full-time graduate students, to carry a minimum enrollment of twelve units of graduate-level courses each quarter, and to maintain a grade-point average of 3.5 or better.

Theory and Methods Requirements

Students take almost all the courses on theory and methods in their first year in the program. They are required to take two courses in classical sociological theory (Sociology 201A/B) and one in contemporary theory (Sociology 202), two in quantitative methods (Sociology 205 and 206), and two in qualitative methods (from among Sociology 203, Field Methods; Sociology 204, Text and Discourse Analysis; or Sociology 207, Comparative-Historical Methods). In addition, students enroll in a two-credit introduction to the faculty and their research (Sociology 208). Note: Sociology 208 is in addition to other requirements.

The remaining theory and methods requirements are Sociology 252 and 253, a two-quarter practicum sequence, which will be taken in the fall quarters of the second and third year. In these courses, students will complete a piece of research they have started in a previous seminar, write a paper, and revise it for submission to a journal. The emphasis in the first quarter will be on the completion of the research for this project, and the second quarter will focus on the writing of the results and revision of drafts.

Core Seminars

These are survey courses in major substantive fields. Students must take three out of the following eight, which the department offers regularly: Sociology 264, Economic Sociology; Sociology 226, Political Sociology; Sociology 216, Sociology of Culture; Sociology 234, Intellectual Foundations of the Study of Science, Technology, and Medicine; Sociology 212, Social Stratification; Sociology 267, Sociology of Gender; Sociology 244, Sociology of Race and Ethnicity; and Sociology 222, Social Movements. These are major areas of sociology and fields in which several of the members of our faculty specialize. Moreover, several of these seminars serve as introductions to the programs of specialization on which the program is based (see below).

Remaining Courses

Beyond these requirements, students must take four seminars, at least two of which must be in the program of specialization selected by the student. In total, sixteen graduate courses, plus the introduction to the faculty, are required for advancing to candidacy.

The Programs of Specialization

The department currently offers specialized Ph.D. programs in comparative and historical sociology, sociology of culture, sociology of social inequalities, and the sociology of science, technology, and medicine. Affiliation to the clusters is voluntary and non-exclusive, and the department encourages multiple participation and joint activities among the groups. Students could qualify in more than one concentration, if they wish, and they will not be required to specialize in any one of them (although we are confident that most will find it advantageous to do so). The curriculum for each specialization is relatively light, in order to provide students with a solid common background in theory and methods, and allow for as much interface as possible between the programs. The requirements are: appropriate qualitative methods courses, one of the core seminars (see above) in areas relevant for the concentration, two specialized seminars, pertinent specialties for the field examination, and the dissertation. The qualitative methods requirement varies according to the program of specialization. Students who concentrate in comparative and historical sociology must take Sociology 207, Comparative-Historical Methods. For sociology of culture, Sociology 203, Field Methods, is required. Students specializing in social inequalities should take at least one of the following courses: Sociology 203, Field Methods; Sociology 204, Text and Discourse Analysis; or Sociology 207, Comparative-Historical Methods. Finally, students specializing in sociology of science, technology, and medicine must choose two of the following three courses in qualitative methods: Sociology 203, Field Methods; Sociology 204, Text and Discourse Analysis; and Sociology 207, Comparative-Historical Methods. The required core seminars are survey courses in major substantive fields. Students must take three out of the following eight, which the department offers regularly: Sociology 264, Economic Sociology; Sociology 226, Political Sociology; Sociology 216, Sociology of Culture; Sociology 234, Intellectual Foundations of the Study of Science, Technology, and Medicine; Sociology 212, Social Stratification; Sociology 267, Sociology of Gender; Sociology 244, Sociology of Race and Ethnicity; and Sociology 222, Social Movements.
of the Study of Science, Technology, and Medicine: Sociology 212, Social Stratification; Sociology 267, Sociology of Gender; Sociology 244, Sociology of Race and Ethnicity; and Sociology 222, Social Movements. These are major areas of sociology and fields in which several of the members of our faculty specialize. Moreover, several of these seminars serve as introduction to the programs of specialization on which the program is based.

The core seminars required for each program of specialization are the following:

**Sociology 264, Economic Sociology** or **Sociology 226, Political Sociology, for comparative and historical sociology**

**Sociology 216, Sociology of Culture, for sociology of culture**

**Sociology 232, Social Stratification or Sociology 244, Sociology of Race and Ethnicity or Sociology 267, Sociology of Gender, for social iniquities**

**Sociology 234, Intellectual Foundations of the Study of Science, Technology, and Medicine, for sociology of science, technology, and medicine**

### PROGRAM OVERVIEW

#### First-Year Evaluation

All students are evaluated by the department faculty toward the end of the academic year. At the end of the student’s first year in the program, student performance is also evaluated by the Graduate Program Committee, including the director of Graduate Studies, the faculty teaching the core sequences, and by their faculty advisor. Students whose performance is satisfactory are allowed to continue the regular course of study; others may be asked to repeat some courses or to do additional course work; others may be asked to withdraw from the program. Evaluations are communicated to students in writing.

#### Second-Year Evaluation and the M.A. Degree

The master’s degree is earned as one of the requirements of the Ph.D. and is based on the quality of the student’s course work described below. At the end of the second year, students are evaluated by the Graduate Program Committee for the master’s degree. At that time, the committee ascertains the student’s suitability for doctoral work.

The fifteen core courses required to receive the M.A. degree are:

**Sociology 201A, Classical Sociological Theory I**

**Sociology 201B, Classical Sociological Theory II**

**Sociology 202, Contemporary Sociological Theory**

**Sociology 205, Quantitative Methods I**

**Sociology 206, Quantitative Methods II**

**Sociology 252, Research Practicum I**

Two courses chosen from:

**Sociology 203, Field Methods**

**Sociology 204, Text and Discourse Analysis**

**Sociology 207, Comparative-Historical Methods**

Three seminars from:

**Sociology 212, Social Stratification**

**Sociology 216, Sociology of Culture**

**Sociology 222, Social Movements**

**Sociology 226, Political Sociology**

**Sociology 234, Intellectual Foundations of the Study of Science, Technology, and Medicine**

**Sociology 244, Sociology of Race and Ethnicity**

**Sociology 264, Economic Sociology**

**Sociology 267, Sociology of Gender**

#### Three elective sociology graduate seminars.

One may be outside the department and may be taken S/U.

At the beginning of the spring quarter of their second year in the program or at the beginning of the quarter in which they wish to be considered, students must submit to the committee for evaluation three papers they have written for seminars taught by different faculty. Reviewers assess the quality of the overall record and determine whether it indicates a potential for conducting doctoral research.

The final decision regarding the M.A. degree is based on the student’s GPA, the three papers, and yearly faculty evaluations. The committee makes one of the following recommendations: pass, M.A. only, and non-pass. Pass means that students may proceed toward the Ph.D. Those given M.A. only evaluations are granted the degree but may not continue toward the Ph.D. Students who received non-pass evaluations are asked to withdraw without a graduate degree.

Students admitted for a Ph.D. with a master’s degree in sociology may not be candidates for a second master’s degree.

#### The Field Examination

In the quarter in which students expect to finish the theory and methods requirements, the three core seminars, and the six elective seminars, students become eligible to take the field examination. This examination must be completed by the end of the student’s third year in the program. The object of the field examination is to demonstrate mastery of two established, broad, and distinct fields of sociological inquiry, selected from a list of fields provided by the department. The examination is carried out by a faculty committee composed of no fewer than four departmental faculty, one of whom serves as chair. The choice of fields and the composition of the committee must be approved by the Graduate Program Committee before the student starts preparing for the exam. Faculty from departments other than sociology may be added (or, if necessary, substituted) by petition to the Graduate Program Committee.

The demonstration of mastery has both written and oral components. The written part consists of two papers, one in each field, and a course syllabus for a course they would teach in one of the two fields in which they take their orals. In these papers, students are expected to demonstrate a grasp of key issues and debates, and of the broad, conceptual history of the field. These reviews are based on a bibliography drawn up by the student in consultation with relevant committee members and other faculty in each field. Students are expected to know the central arguments of all the books and papers in the bibliographies, regardless of the extent to which these books and articles have been used in the papers. Field papers must be a minimum of thirty and a maximum of fifty pages each, exclusive of notes and should include at least twenty to thirty books or article equivalents. The two bibliographies may not significantly overlap, either in literature surveyed or in specific titles. The papers, the bibliographies, and the syllabus must be submitted to the committee at least two weeks before orals, or the orals cannot go forward.

The oral part lasts two hours and covers both fields. It is given by the examining committee, sitting as a whole, and is based on the bibliographies, papers, and course syllabus submitted by the student. The exam does not focus on the papers, but on the students’ knowledge of the fields. Following the oral examination, the committee evaluates the student on the basis of both the written and the oral components of the examination. Possible grades are high pass, pass, conditional pass, and no pass. High pass recognizes exceptional performance.

Conditional pass indicates that the committee has passed the student pending the completion of additional work. Students receiving a grade of no pass will have an opportunity to retake the examination, should they so desire, no later than the end of the subsequent quarter. Students electing not to retake the examination or receiving a grade of no pass a second time will be asked to withdraw from the graduate program.

Students will have to constitute their field examination committee two months before the proposed date of the exam. Once the committee is constituted it can be changed only if a faculty member becomes unavailable. Students will have to submit one copy of their two (or, if necessary, substituted) field papers one month in advance to the graduate coordinator, who then distributes them to the committee members. Faculty, in, turn will commit to read and comment on the papers in two weeks time.

All papers (as opposed to the drafts) and the syllabus must be submitted to the committee two weeks before the fields.

#### The Dissertation Prospectus and Hearing

The central intellectual activity leading to the award of the Ph.D. degree is the doctoral dissertation: an original contribution to knowledge, based on substantial, original research on a topic of intellectual significance within the field of sociology.

Following successful completion of the field examination, the student establishes a doctoral committee to supervise dissertation research. This is a five-person committee, including three faculty from within the department and two from other departments within the university. The committee should include the faculty members whose fields of expertise make them most appropriate for supervising the students’ research. The student approaches the faculty member he or she would like to include, but the committee must be approved by the director of Graduate Studies and the department chair before the student starts working on the prospectus. The composition of the committee may or may not overlap with the committee that carried out the field examination. If the student elects to have a six member committee, the sixth member has all the same obligations as the other committee members.

By the end of the spring quarter of the fourth year in the department, the student must have a dissertation prospectus approved by his or her doctoral committee. The dissertation prospectus is a document that presents the research topic of the
dissertation, places it in the context of the relevant literature, discusses its significance, specifies and justifies the methods the student intends to use, establishes the feasibility of the research, and indicates the anticipated steps leading to completion.

Following submission of the dissertation prospectus, the student must defend it at a hearing before the doctoral committee. The purpose of the hearing is to certify that the prospectus is significant and feasible, that the research design is appropriate, and that the student is prepared to carry it out successfully. Based on the written prospectus and the hearing, the committee may choose to approve the prospectus or to ask for revisions and resubmission. The prospectus hearing serves, in effect, as a qualifying examination, and approval of the dissertation prospectus is the final step to advancement to candidacy for the Ph.D. Degree.

Students will have to constitute their dissertation committee three months before the proposed date of the exam. Once the committee is constituted it can be changed only if a faculty member becomes unavailable. Students will have to submit one copy per member of a substantial draft of their prospectus one month in advance to the graduate coordinator, who then distributes them to the committee members. Faculty in turn, will commit to read and comment on the papers in two weeks time.

The Doctoral Dissertation

Upon approval of the dissertation prospectus, the student proceeds with dissertation research. Students are expected to consult with committee members as the research progresses and to keep the committee chair advised of progress made.

Once the dissertation is substantially completed and committee members have had the opportunity to review drafts of the written work, the committee meets at least one month before the defense takes place, with or without the student present, to consider the progress made and to identify concerns, changes to be made, or further work to be done. Once the committee members are substantially satisfied with the written work, the student, in consultation with the committee, schedules the oral defense of the dissertation. By university regulation, this defense is open to the public.

The final version of the dissertation must be approved by each member of the doctoral committee. All members of the committee must be present at the defense. Exceptions may be made only under very restrictive conditions. Further, the student must consult with the Office of Graduate Studies to be told of appropriate requirements for the thesis to be filed. Having obtained this approval and successfully defended the dissertation in oral examination, the student may file. Having obtained this approval and successfully defended the dissertation in oral examination, the student may file. Having obtained this approval and successfully defended the dissertation in oral examination, the student may file. Having obtained this approval and successfully defended the dissertation in oral examination, the student may file.

Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years (PCL—Precandidacy Time Limit). Normative time is six years. Total university financial support (SUTL—Support Time Limit) cannot exceed seven years. Total registered (TRL—Total Registered Time Limit) time at UCSD cannot exceed eight years.

INTERDISCIPLINARY PROGRAMS OF STUDY

Sociology of Science, Technology, and Medicine and the Science Studies Program

Students interested in the interrelationships between science, technology, and medicine (STM) and the larger social order can opt for one of two specialized programs of study. The first of these is undertaken wholly within the department (see above). The second approach is to seek admission to the Science Studies Program, a joint doctoral program that brings together graduate students from the Departments of Sociology, History, Philosophy, and Communication. Students in the Program pursue a cross-disciplinary curriculum leading to dissertation research in the sociology of science, technology, or medicine, broadly conceived. Sociology faculty affiliated with this Program have research interests across the broad spectrum of science studies, from the philosophy and history of science to the organization of scientific discovery and the culture of specific work. Students may seek admission to the Science Studies Program at the same time they apply for admission to the Department of Sociology, or may, in certain circumstances, request to be accepted into the Program at some point after entering the University of California, San Diego. The requirements of the Science Studies Program are similar to those of the standard graduate program. However, there are some distinct curricular requirements in the first two years of the Program, as well as some distinct emphases in the qualifying examination. The core of the Program is a two-quarter team-taught seminar sequence taken in the first year, the first quarter being an interdisciplinary introduction to science studies and the second quarter (or core seminar) being devoted to special topics in science studies which vary from year to year.

For details on the Science Studies Program, including information about requirements, write to the University of California, San Diego, Coordinator, Science Studies Program 0104, 9500 Gilman Drive, La Jolla, CA 92093-0104; or telephone the program coordinator at (858) 534-0491. Visit their Web site: http://sciencestudies.ucsd.edu

Interdisciplinary Program in Sociology and Cognitive Science

This program allows students to earn a Ph.D. in sociology and cognitive science. Students must complete all the regular sociology requirements. In addition, they take six cognitive science seminars and select a dissertation committee composed of three Sociology and three Cognitive Science Program faculty. Admission to this program requires a separate application and is contingent on acceptance into the Department of Sociology. For more information, contact the coordinators in the Department of Sociology, (858) 534-4626, or the Cognitive Science Department, (858) 534-7141. Please view our Web site for application and department handbook information: http://sociology.ucsd.edu

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

LOWER-DIVISION

SOCI 1. The Study of Society (4)

An introduction to the organizing themes and ideas, empirical concerns, and analytical approaches of the discipline of sociology. The course focuses on both classical and contemporary views of modern society, on the nature of community, and on inequality, with special attention to class, race, and gender. Materials include both theoretical statements and case studies. Will not receive credit for SOCI 1 and SOCL 1A.

SOCI 2. The Study of Society (4)

A continuation of Sociology/L 1A. The focus here is on socialization processes, culture, social reproduction and social control, and collective action. As in 1A, materials include both theoretical statements and case studies. While 1B may be taken as an independent course, it is recommended that students take 1A and 1B in sequence, as the latter builds on the former. Will not receive credit for SOCI 2 and SOCL 1B.

SOCI 20. Social Change in the Modern World (4)

A survey of the major economic, political, and social forces that have shaped the contemporary world. The course will provide an introduction to theories of social change, as well as prepare the student for upper-division work in comparative-historical sociology. Will not receive credit for SOCI 20 and SOCL 20.

SOCI 30. Science, Technology, and Society (4)

A series of case studies of the relations between society and modern science, technology, and medicine. Global warming, reproductive medicine, AIDS, and other topical cases prompt students to view science-society interactions as problematic and complex. Will not receive credit for SOCI 30 and SOCL 30.

SOCI 40. Sociology of Health Care Issues (4)

Designed as a broad introduction to medicine as a social institution and its relationship to other institutions as well as its relation to society. It will make use of both micro and macro sociological work in this area and introduce students to sociological perspectives of contemporary health care issues. Will not receive credit for SOCI 40 and SOCL 40.

SOCI 50. Introduction to Law and Society (4)

Interrelationships between law and society, in the U.S. and other parts of the world. We examine law’s norms, customs, culture, and institutions to explain the proliferation of lawyers in the U.S. and the expansion of legal “rights” worldwide. Will not receive credit for SOCI 50 and SOCL 50.

SOCI 60. The Practice of Social Research (4)

This course introduces students to the fundamental principles of the design of social research. It examines the key varieties of evidence, sampling methods, logic of comparison, and causal reasoning researchers use in their study of social issues. Will not receive credit for SOCI 60 and SOCL 60.

SOCI 87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminar topics will vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

SOCI 98. Directed Group Study (4)

Small group study and research under the direction of an interested faculty member in an area not covered in regular sociology courses. (P/NP grades only.) PREREQUISITES: lower-division standing; completion of thirty units of UCSD undergraduate study; minimum UCSD GPA of 3.0; completion and approval of Special Studies form. Consent of instructor and department approval required.
SOCI 99. Independent Study (4)
Individual study and research under the direction of an interested faculty member. P/NP grades only. PRE REQUISITES: lower-division standing; completion of thirty units of UCSD undergraduate study; minimum UCSD GPA of 3.0; completion and approval of Special Studies form. Consent of instructor and department approval required.

UPPER-DIVISION

SOCI 100. Classical Sociological Theory (4)
Major figures and schools in sociology from the early nineteenth century onwards, including Marx, Tocqueville, Durkheim, and Weber. The objective of the course is to provide students with a background in classical sociological theory, and to show its relevance to contemporary social problems. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 100 and SOCA 100.

SOCI 103M. Computer Applications to Data Management in Sociology (4)
Develop skills in computer management and analysis of sociological data. Practical experience with data produced by sociological research. Students will develop competency in the analysis of sociological data, by extensive acquaintance with computer software used for data analysis and management (e.g., SPSS). PRE REQUISITE: SOCI 60. Will not receive credit for SOCI 103M and SOCI 103M.

SOCI 104. Field Research: Methods of Participant Observation (4)
Relationship between sociological theory and field research. Strong emphasis on theory and methods of participant observation: consideration of problems of entry into field situations, data collection, description/analysis of field data, ethical problems in field work. Required paper using field methods. PRE REQUISITE: SOCI 60; majors only. Will not receive credit for SOCI 104 and SOCA 104.

SOCI 104Q. Qualitative Interviewing (4)
This course provides students with tools to conduct original research using qualitative interviews. Students will learn how to prepare, conduct, and analyze qualitative interviews. Special emphasis will be placed on the presentation of research in written form. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 104Q and SOCA 104Q.

SOCI 105. Ethnographic Film: Media Methods (6)
(Conjoined with Soci G/227.) Ethnographic recording of field data in written and audiovisual formats including film, video, and CD Rom applications. Critical assessment of ethnographies and audiovisual ethnographic videotape. PRE REQUISITE: graduate standing or consent of instructor for SOCI G/227. Will not receive credit for SOCI 105 and SOCA 105.

SOCI 106. Comparative and Historical Methods (4)
A broad-based consideration of the use of historical materials in sociological analysis, especially as this facilitates empirically oriented studies across different societies and through time, and their application in student research projects. PRE REQUISITE: SOCI 60. Will not receive credit for SOCI 106 and SOCA 106.

SOCI 106M. Holocaust Diaries (4)
Methods for interpreting diaries, letters, and testimonies written by victims and perpetrators of the Holocaust. Students use these sources for original research about life in the death camps. Includes techniques for making comparisons and for generalizing from evidence. PRE REQUISITE: SOCI 60 and SOCI 178 or the consent of instructor. Will not receive credit for SOCI 106M and SOCA 106M.

SOCI 107. Epidemiological Methods:
Statistical Study of Disease (4)
Epidemology, as the statistical study of disease, and epidemiological methods are a powerful tool for understanding the causes of certain diseases, e.g., AIDS, scurvy, cholera, and lung cancer. These fundamental epidemiological methods will be taught. PRE REQUISITE: SOCI 60. Will not receive credit for SOCI 107 and SOCA 107.

SOCI 108. Survey Research Design (4)
Translation of research goals into a research design, including probability sampling, questionnaire construction, data collection (including interviewing techniques), data processing, coding, and preliminary tabulation of data. Statistical methods of analysis will be limited primarily to percentages and cross-tabulations. PRE REQUISITE: SOCI 106 and SOCA 108.

SOCI 109. Analysis of Sociological Data (4)
Students test their own sociological research hypotheses using data from recent American and International social surveys and state-of-the-art computer software. Application of classical scientific method, interpretation of statistical results, and clear presentation of research findings. PRE REQUISITE: SOCI 60. Will not receive credit for SOCI 109 and SOCA 109.

SOCI 110. Qualitative Research in Educational Settings (4)
Basic understanding of participant observation, interviewing, and other ethnographic research techniques through field experiences in school and community settings sponsored by CREATE. Students will learn to take field notes, write-up interviews, and compose interpretive essays based on their field experiences. PRE REQUISITE: SOCI 60. Will not receive credit for SOCI 110 and SOCA 110A.

SOCI 111E. Human Rights: Principles and Problems (4)
An inquiry into the concept of human rights, the history of human rights in the twentieth century, and problems in both the concept and its implementation in modern societies. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 111E and SOCA 111A.

SOCI 111F. Human Rights: Practices and Cases (4)
An investigation into human rights practices in contemporary society, focusing on abuses and understanding both their causes and responses to them. We will look at several key cases, probably including the Islamic world and East Asia. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 111F and SOCA 111B.

SOCI 112. Social Psychology (4)
This course will deal with human behavior and personality development as affected by social group life. Major theories will be compared. The interaction dynamics of such substantive areas as socialization, normative and deviant behavior, learning and achievement, the social construction of the self, and the social identities will be considered. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 112 and SOCB 112.

SOCI 113. Sociology of the AIDS Epidemic (4)
This course considers the social, cultural, political, and economic aspects of HIV/AIDS. Topics include the social context of transmission of HIV/AIDS and the social impact of AIDS; and the impact of race and class differences. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 113 and SOCB 113.

SOCI 114. Culture and Ethnicity (4)
Examines cultural identity, the links between culture and ethnic variations in socio-economic achievement, and the intersection of culture with ethnicity and politics. Topics include intermarriage, ethnic conflict, multicultural education and affirmative action. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 114 and SOCB 114.

SOCI 115. Social Problems (4)
Analyzes selected social problems in the United States, such as those regarding education, race relations, and wealth inequality, from various sociological perspectives, and also examines current public debate discussion, like political institutions, TV and other media, and religious institutions. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 115 and SOCB 115.

SOCI 116. Gender and Language in Society (4)
(Same as LIGN 174.) This course examines how language contributes to the social construction of gender identities, and how gender impacts language use and ideologies. Topics include the ways language and gender interact across the life span (especially childhood and adolescence); within ethnonlinguistic minority communities; and across cultures. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 116 and SOCB 116A.

SOCI 117. Language, Culture, and Education (4)
(Same as EDS 117.) The mutual influence of language, culture, and education will be explored; explanations of students’ academic success and failure that employ linguistic and cultural variables will be considered; bilingualism; cultural transmission through education. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 117 and SOCB 117.

SOCI 118. Sociology of Gender (4)
An analysis of the social, biological, and psychological components of becoming a man or a woman. The course will survey a wide range of information in an attempt to specify what is distinctively social about gender roles and identities; i.e., to understand how a most basic part of the “self”-womanhood or masculinity-is defined and socially learned behavior. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 118 and SOCB 118.

SOCI 118E. Sociology of Language (4)
An examination of how the understanding of language can guide and inform sociological inquiries and a critical evaluation of key sociological approaches to language, including ethnomethodology, frame analysis, sociolinguistics, functionalism and poststructuralism, and others. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 118E and SOCB 118E.

SOCI 119. Sociology of Sexuality and Sexual Identities (4)
Introduces both to the sociological study of sexuality and to sociological perspectives in gay/lesbian studies. Examines the social construction of sexual meanings, identities, movements, and controversies; the relation of sexuality to other institutions; and the intersection of identity with gender, race, etc. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 119 and SOCB 119.

SOCI 120T. Special Topics in Culture, Language, and Social Interaction (4)
This course will examine key issues in culture, language, and social interaction. Content will vary from year to year. PRE REQUISITE: upper-division standing.

SOCI 121. Economy and Society (4)
An examination of a central concern of classical social theory: the relationship between economy and society, with special attention (theoretically and empirically) on the problem of the origins of modern capitalism. The course will investigate the role of technology and economic institutions in society; the influence of culture and politics on economic exchange, production, and consumption; the process of rationalization and the social division of labor; contemporary economic problems and the welfare state. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 121 and SOCB 121.

SOCI 125. Sociology of Immigration (4)
Immigration from a comparative, historical, and cultural perspective. Topics include: factors influencing amount of immigration and destination of immigrants; varying modes of incorporation of immigrants; immigration policies and rights; the impact of immigration on host economies; refugees; assimilation; and return migration. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 125 and SOCB 125.

SOCI 126. Social Organization of Education (4)
(Same as EDS 126.) The social organization of education in the U.S. and other societies; the functions of education for individuals and society; the structure of schools; educational decision making; educational testing; socialization and education; formal and informal education; cultural transmission. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 126 and SOCB 126.

SOCI 127. Immigration, Race, and Ethnicity (4)
Examines the role of race and ethnicity play in immigrant group integration. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; public opinion; comparisons between contemporary and historical waves of immigration. PRE REQUISITE: upper-division standing. Will not receive credit for SOCI 127 and SOCB 127.
SOCI 129. The Family (4)
An examination of historical and social influences on family life. Analyzes contemporary families in the United States, the influence of gender, class, ethnicity, race, and current issues such as divorce, domestic violence, and the feminization of poverty. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 129 and SOCI 129.

SOCI 130. Population and Society (4)
This course offers insight into why and how populations grow (and decline), and where and under what conditions changes in population size and/or structure change have positive and negative consequences for societies and environment. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 130 and SOCI 130.

SOCI 131. Sociology of Youth (4)
Chronological age and social status; analysis of social processes bearing upon the socialization of children and adolescents. The emergence of “youth cultures,” generational succession as a cultural problem. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 131 and SOCI 131.

SOCI 132. Gender and Work (4)
Examination and analysis of empirical research and theoretical perspectives on gender and work. Special attention to occupational segregation. Other topics include: the interplay between work and family; gender, work and poverty; gender and work in the Third World. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 132 and SOCI 132.

SOCI 133. Immigration in Comparative Perspective (4)
Societies across the world are confronting new immigration. In this course, we will focus on Europe, Asia, and North America, and examine issues of nationalism, cultural diversity and integration, economic impacts, and government policy. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 133 and SOCI 133.

SOCI 134E. The Making of Modern Medicine (4)
A study of the social, intellectual, and institutional aspects of the nineteenth-century transformation of clinical medicine, examining both the changing content of medical knowledge and therapies, and the organization of the medical profession. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 134E and SOCC 134A.

SOCI 135. Medical Sociology (4)
An inquiry into the roles of culture and social structure in mediating the health and illness experiences of individuals and groups. Topics include the social construction of illness, the relationship between illness and health professions, and the organization of medical work. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 135 and SOCI 135.

SOCI 136A. Sociology of Mental Illness: An Historical Approach (4)
An examination of the historical, social, cultural, and political factors involved in the identification and treatment of mental illness. This course will emphasize historical material, focusing on the eighteenth, nineteenth, and early twentieth centuries. Developments in England as well as the United States will be examined from a historical perspective. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 136E and SOCC 136A.

SOCI 136B. Sociology of Mental Illness in Contemporary Society (4)
This course will focus on recent developments in the mental illness sector on the contemporary sociological literature on mental illness. Developments in England as well as the United States will be examined. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 136F and SOCC 136B.

SOCI 137. Sociology of Food (4)
Topics include food as a marker of social indifferences (e.g., gender, class, ethnicity, race), the changing character of food production and distribution; food as an object of political conflict; and the symbolic meanings and rituals of food preparation and consumption. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 137 and SOCC 137.

SOCI 138. Genetics and Society (4)
The class will first examine the direct social effects of the “genetic revolution”: eugenics, genetic discrimination, and the politics of TERF. Establishing the framework of medical science in terms of genetics, specifically—sociobiology, social Darwinism, evolutionary psychology, and biology. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 138 and SOCC 138.

SOCI 139. Social Inequality: Class, Race, and Gender (4)
Massive inequalities in wealth, power, and prestige is ever-present in industrial societies. In this course, causes and consequences of class, gender, racial, and ethnic inequality (“stratification”) will be considered through examination of classical sociological theory and research. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 139 and SOCI 139.

SOCI 140. Sociology of Law (4)
This course analyzes the functions of law in society, the social sources of legal change, social conditions affecting the administration of justice, and the role of social science in jurisprudence. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 140 and SOCC 140.

SOCI 140F. Law and the Workplace (4)
This course examines how the U.S. legal system has responded to workplace inequality and demands for employee rights. Particular attention is given to racial, gender, and socioeconomic inequality as well as the role of labor unions, the global economy, and sweatshop labor. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 140F and SOCC 140F.

SOCI 141. Crime and Society (4)
A study of the social origins of criminal law, the administration of justice, causes, and patterns of criminal behavior, and the prevention and control of crime, including individual and social factors in the decision to deviate from the law’s rules. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 141 and SOCC 141.

SOCI 142. Social Deviance (4)
This course studies the major forms of behavior seen as rule violations by large segments of our society and analyzes the major theories trying to explain them, as well as processes of rule making, rule enforcing, techniques of neutralization, stigmatization and status degradation, and rule change. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 142 and SOCC 142.

SOCI 143. Suicide (4)
Traditional and modern theories of suicide will be reviewed and tested. The study of suicide will be treated as one method for investigating the influence of society on the individual. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 143 and SOCC 143.

SOCI 144. Forms of Social Control (4)
The organization, development and diffusion of social control agencies in the twentieth and twentieth centuries, with emphasis on crime and madness; agencies involved in the control movements (police, psychiatrists, correctional work, etc.); theories of social control movements. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 144 and SOCC 144.

SOCI 145. Violence and Society (4)
Focusing on American history, this course explores violence in the light of three major themes: struggles over citizenship and nationhood; the drawing and maintenance of racial, ethnic, and gender boundaries; and the persistence of notions of "masculinity" and its relation to violence. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 145 and SOCC 145.

SOCI 146. Law Enforcement in America (4)
Provides a sociological understanding of policing in practice in the United States. Examines the social, political, and historical forces behind the development and shaping of policy decisions in America—including the functions of police, the "working personality" of police offices, as well as police misconduct and its control. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 146 and SOCC 146.

SOCI 147. Organizations, Society, and Social Justice (4)
Organizations are dynamic forces in society. This course examines how organizations address human and social justice issues in national and international settings, focusing on the links between internal dynamics of organizations and macro-level political, economic, and cultural factors. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 147 and SOCI 147.

SOCI 148. Political Sociology (4)
Course focuses on the interaction between state and society. It discusses central concepts of political sociology (social cleavages, mobilization, the state, legitimacy, institutional characteristics, causes, and consequences of contemporary political regimes, liberal democracies, authoritarianism, communism), and processes of political change. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 148 and SOCI 148.

SOCI 148E. Inequality and Jobs (4)
Some people do much better than others in the world of work. Causes and consequences of this inequality will be examined: How do characteristics of individuals (e.g., class, gender, race, education, talent) and characteristics of jobs affect market outcomes? PREREQUISITE: upper-division standing. Will not receive credit for SOCI 148E and SOCI 148E.

SOCI 149. Sociology of the Environment (4)
This course will examine a number of important or iconic films on this subject. By examining them against a background provided by relevant scholarly materials, we shall develop a critical perspective on these cultural artifacts. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 150 and SOCI 150.

SOCI 150. Madness and the Movies (4)
Hollywood has had an ongoing fascination with mental illness. This course will examine a number of important or iconic films on this subject. By examining them against a background provided by relevant scholarly materials, we shall develop a critical perspective on these cultural artifacts. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 150 and SOCI 150.

SOCI 151. Comparative Race and Ethnic Relations (4)
An historical and comparative analysis of race and ethnic relations in various national settings, with emphasis on the United States. The course will analyze the origins of ethnic stratification systems, their maintenance, the adaptation of minority communities, and the role of reform and revolutionary movements and government policies in promoting civil rights and social change. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 151 and SOCI 151.

SOCI 151M. Chicanos in American Society (4)
Survey of contemporary sociological issues affecting Mexican-origin people in the United States. Lectures and reading will be oriented toward understanding the range of experiences within the Mexican-origin population. Focus will also be placed on evaluating theories and evidence used to understand this population. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 151M and SOCC 151M.

SOCI 152. Social Inequality and Public Policy (4)
(Same as SP 153.) Primary focus on understanding and analyzing poverty and public policy. Analysis of how current debates and public policy decisions add to our understanding of the social scientific explorations of poverty. PREREQUISITE: upper-division standing. Will not receive credit for SOCI 152 and SOCI 152.

SOCI 153. Urban Sociology (4)
(Same as SP 155.) Introduces students to the major approaches in the sociological study of cities and to what sociological analysis can add to our understanding of urban processes. PREREQUISITE: upper-division standing or consent of instructor. Will not receive credit for SOCI 153 and SOCI 153.

SOCI 154. Religious Institutions in America (4)
Examination of sociological theories for why people have religious beliefs. Also examines types of religious organizations, secularization, fundamentalism, religion and immigration, religion and politics, and religiously inspired...
violation and terrorism. The class will tend to focus on the American context. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOC 154 and SOC 154.

**SOCI 155. The City of San Diego (4)**
A research-oriented course studying a specific city. Students will analyze and describe a local community/area of San Diego. Additional work on one citywide institution. Guest lecturers from San Diego organizations and government. Readings largely from city reports and news media. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOC 155.

**SOCI 156. Sociology of Religion (4)**
Diverse sociological explanations of religious ideas and religious behavior. The social consequences of different kinds of religious beliefs and religious organizations. The influence of religion upon concepts of history, the natural world, human nature, and the social order. The significance of such notions as “sacred peoples” and “sacred places.” The religious-like character of certain political movements and certain sociocultural attitudes. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 156 and SOCC 156.

**SOCI 157. Religion in Contemporary Society (4)**
Sacred texts, religious experiences, and ritual settings are explored from the perspective of sociological analysis. The types and dynamic of religious sects and institutions are examined. African and contemporary U.S. religious data provide a framework for comparative and historical analysis. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 157 and SOCC 157.

**SOCI 158. Islam in the Modern World (4)**
The role of Islam in the society, culture, and politics of the Muslim people during the nineteenth and twentieth centuries; attempts by Muslims to accommodate or resist rival ideologies (such as nationalism and socialism); and a critical review of the relationship between Islam and the West. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 158 and SOCC 158.

**SOCI 159. Special Topics in Social Organizations and Institutions (4)**
Readings and discussion of particular substantive issues and research in the sociology of organizations and institutions, including such areas as population, economy, education, family, medicine, law, politics, and religion. Topics will vary from year to year. \textit{Prerequisite:} upper-division standing.

**SOCI 160. Sociology of Culture (4)**
This course will examine the concept of culture, its “disintegration” by the early twentieth century, and the repercussions on the integration of the individual. We will look at this process from a variety of perspectives, each focusing on one cultural fragment (e.g., knowledge, literature, religion) and analyzing various means to reify culture and consequently the individual. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 160 and SOCC 160.

**SOCI 160E. Law and Culture (4)**
This course examines major formulations of the relationship between law and culture in the sociological literature. Topics include formal law versus embedded law, law and morality, law and the self, legal consciousness, the rule of law, and the construction of legality. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 160E and SOCC 160E.

**SOCI 161. Sociology of the Life Course (4)**
This course explores concepts, theory and empirical research related to demographic, socio-psychological, and institutional aspects of the different stages of human development. It considers social influences on opportunities and constraints by gender, class, race/ethnicity, and historical period. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 161 and SOCC 161.

**SOCI 162. Popular Culture (4)**
An overview of the historical development of popular culture from the early modern period to the present. Also a review of major theories explaining how popular culture reflects and/or affects patterns of social behavior. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 162 and SOCC 162.

**SOCI 162R. Religion and Popular Culture in East Asia (4)**
(Same as HIEA 119.) Historical, social, and cultural relationships between religion and popular culture. Secularization of culture through images, worldviews, and concepts of right and wrong, which may either derive from or pose challenges to the major East Asian religions. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 162R and SOCC 162R.

**SOCI 163. Migration and the Law (4)**
Provides a global sociological perspective on the development and consequences of laws regulating migration within and across nation-state borders. The ability of the nation-state to control migration using law and its policy instruments. The history of different legal statuses and the effects of illegal and unethical practices, the social and political consequences of the legal statuses on the rights of illegal migrants and certain sociocultural attitudes. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 163 and SOCC 163.

**SOCI 165A. American News Media (4)**
History, politics, social organization, and ideology of the American news media. 165A surveys the development of the news media as an institution, from earliest newspapers to modern mass media news. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 165A and SOCC 165A.

**SOCI 166. Sociology of Knowledge (4)**
This course provides a general introduction to the development of the sociology of knowledge, and will explore questions concerning social determination of consciousness as well as theoretical ways to articulate a critique of ideology. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 166 and SOCC 166.

**SOCI 167. Science and War (4)**
This class examines how science has been mobilized in the development of nuclear weapons and other weapons of mass destruction. The class applies sociological concepts to the analysis of modern technological violence. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 167 and SOCC 167.

**SOCI 168E. Sociology of Science (4)**
A survey of theoretical and empirical studies concerning the workings of the scientific community and its relations with the wider society. Special attention will be given to the institutionalization of the scientific role and to the social constitution of scientific knowledge. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 168E and SOCC 168E.

**SOCI 168T. Sociology of Technology (4)**
An introduction to classic and recent sociological perspectives on technology, giving special attention to the relations between technology and science, technology and work, and technology and politics. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 168T and SOCC 168T.

**SOCI 169. Citizenship, Community, and Culture (4)**
Will survey the liberal, communitarian, social-democratic, nationalist, feminist, post-nationalist, and multicultural views on the construction of the modern citizen and good society. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 169 and SOCC 169.

**SOCI 172. Films and Society (4)**
An analysis of films and how they portray various aspects of American society and culture. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 172 and SOCC 172.

**SOCI 173. Elite Crime (4)**
Explores theoretical and conceptual dimensions in the analysis of the systematic violation of the laws and ethics of business and politics in the United States. Covers a range of illegal and unethical practices, the social and political advantages of such violators, as well as the historical basis in both theory and research that has contributed to our lack of understanding of such behaviors. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 173 and SOCC 173.

**SOCI 174. Sociology of Literature (4)**
Literature will be discussed in the context of the ideas of national and regional culture, “historical situation,” and “social order.” Other issues to be studied are literary men and women as spokespersons and as rebels, literary movements and social conditions, and literary works as social documents. \textit{Prerequisite:} upper-division standing.

**SOCI 175. Nationality and Citizenship (4)**
Surveys the development of nationality and citizenship law in historical and comparative perspective with an emphasis on the United States, Latin America, and Europe. Examines competing sociological accounts for national variation and convergence; consequences of the law; and local, transnational, and extraterritorial forms of citizenship. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 175 and SOCC 175.

**SOCI 176. War and Society (4)**
This course considers classical and contemporary theories that address the social organization of war-making and the effects of war on society since the Middle Ages, emphasizing more recent history. Topics include state formation, citizenship, gender, social stratification, and social protest. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 176 and SOCC 176.

**SOCI 177. International Terrorism (4)**
(Same as POLI 142.) This course covers the definitions, history, and internationalization of terrorism; the interrelation of religion, politics and terror; and the representation of terrorism in the media. A number of organizations and their activities in Europe and the Middle East are examined. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 177 and SOCC 177.

**SOCI 178. The Holocaust (4)**
The study of the unique and universal aspects of the Holocaust. Special attention will be paid to the nature of discrimination and racism, those aspects of modernity that make genocide possible, the relationship among the perpetrators, the victims and the bystanders, and the teaching, memory, and denial of the Holocaust. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 178 and SOCC 178.

**SOCI 179. Social Change (4)**
Course focuses on the development of capitalism as a worldwide process, with emphasis on its social and political consequences. Topics include: pre-capitalist societies, the rise of capitalism in the West, and the social and political responses to its expansion elsewhere. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 179 and SOCC 179.

**SOCI 180. Social Movements and Social Protest (4)**
An examination of the nature of protests and violence, particularly as they occur in the context of larger social movements. The course will further examine those generic facets of social movements having to do with their genesis, characteristic forms of development, relationship to established, institutional and personal configurations and gradual fading away. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 180 and SOCC 180.

**SOCI 181. Modern Western Society (4)**
This course examines the nature and dynamics of modern western society in the context of the historical process by which this type of society has emerged over the last several centuries. The aim of the course is to help students think about what kind of society they live in, what makes it the way it is, and how it shapes their lives. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 181 and SOCC 181.

**SOCI 182. Ethnicity and Indigenous Peoples in Latin America (4)**
Ethnicity and the reassertion of Indian identity in contemporary Latin America. Issues related to these trends are examined in comparative perspective, with attention to changes in global conditions and in the socioeconomic, political, and cultural contexts in modernization. \textit{Prerequisite:} upper-division standing. Will not receive credit for SOCI 182 and SOCC 182.

**SOCI 183. Minorities and Nations (4)**
We will study minority rights and aspirations as well as the logic and dynamic of nationalist movements in selected cases. We will conclude by examining the chances and challenges of a post-nationalist world. \textit{Prerequisite:}
upper-division standing. Will not receive credit for SOCI 183 and SOCD 183.

SOCI 184. Gender and Film (4)
This class will examine issues of masculinity and femininity through analysis of films. Emphasis is on contemporary American society and will include varying issues such as race, class, and sexualities; worlds of work; romance, marriage, and family. **PREREQUISITE:** upper-division standing. Will not receive credit for SOCI 184 and SOCD 184.

SOCI 185. Globalization and Social Development (4)
Social development is more than sheer economic growth. It entails improvements in the overall quality of human life, particularly in terms of access to health, education, employment, and income for the poorer sectors of the population. Course examines the impact of globalization on the prospects for attaining these goals in developing countries. **PREREQUISITE:** upper-division standing. Will not receive credit for SOCI 185 and SOCD 185.

SOCI 187. African Societies through Film (4)
Exploration of contemporary African urbanization and social change via film, including 1) transitional African communities, 2) social change in Africa, 3) Western vs. African filmmakers' cultural codes. Ideological and ethnographic representations, aesthetics, social relations, and market demand for African films are analyzed. **PREREQUISITE:** upper-division standing. Will not receive credit for SOCI 187 and SOCD 187.

SOCI 187. The Sixties (4)
A sociological examination of the era of the 1960s in America, its social and political movements, its cultural expressions, and its cultural significance, including those reflected in video documentaries. Comparisons will also be drawn with events in other countries. **PREREQUISITE:** upper-division standing. Will not receive credit for SOCI 1877 and SOCD 1875.

SOCI 188D. Latin America: Society and Politics (4)
Course focuses on the different types of social structures and political systems in Latin America. Topics include positions in the world economy, varieties of class structure and ethnic cleavages, political regimes, mobilization and legitimacy, class alignments, reform and revolution. **PREREQUISITE:** upper-division standing. Will not receive credit for SOCI 188D and SOCD 188D.

SOCI 188E. Community and Social Change in Africa (4)
The process of social change in African communities, with emphasis on changing ways of seeing the world and the effects of religion and political philosophies of social change. The methodologies and data used in various village and community studies in Africa will be critically examined. **PREREQUISITE:** upper-division standing. Will not receive credit for SOCI 188E and SOCD 188A.

SOCI 188F. Modern Jewish Societies and Israeli Society (4)
Contradicts the effects of modernization on Jewish society in Western and Eastern Europe and the plethora of Jewish responses: assimilation, fundamentalism, emigration, socialism, diaspora nationalism, and Zionism. Special attention will be paid to issues of discontinuity between Jewish societies and Israeli society. Simultaneously, we will scrutinize the influence of the Palestinian-Israeli conflict on Israeli society, state, and identity. **PREREQUISITE:** upper-division standing. Will not receive credit for SOCI 188F and SOCD 188F.

SOCI 188G. Chinese Society (4)
The social structure of the People's Republic of China since 1949, including a consideration of social organization at various levels: the economy, the policy, the community, and kinship institutions. **PREREQUISITE:** upper-division standing. Will not receive credit for SOCI 188G and SOCD 188G.

SOCI 188J. Change in Modern South Africa (4)
Using sociological and historical perspectives, this course examines theories of apartheid and assesses the progress that has been made since 1994, when apartheid was officially ended. Contrasts of racism in South Africa and the United States. **PREREQUISITE:** upper-division standing. Will not receive credit for SOCI 188J and SOCD 188J.

SOCI 188K. American Society (4)
Comparative and historical perspectives on U.S. society. The course highlights “American exceptionalism:” did America follow a special historical path, different from comparable nations in its social relations, politics, and culture? Specific topics include class relations, race, religion, and social policy. **PREREQUISITE:** upper-division standing. Will not receive credit for SOCI 188K and SOCD 188K.

SOCI 189. Special Topics in Comparative-Historical Sociology (4)
Readings and discussion in selected areas of comparative and historical macro-sociology. Topics may include the analysis of a particular research problem, the study of a specific society or of cross-national institutions, and the review of different theoretical perspectives. Contents will vary from year to year. **PREREQUISITE:** upper-division standing.

SOCI 192. Senior Seminar in Sociology (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in sociology (at the upper-division level). Topics will vary from quarter to quarter. Senior Seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. (P/NP grades only.) **PREREQUISITE:** instructor permission or department stamp, upper-division standing.

SOCI 194A. Research Seminar in Washington, D.C. (4)
(Same as PS 194, COGN 194, ERTH 194, HIST 193, USP 194.) Course attached to six-unit internship taken by students participating in the UCDC Program. Involves weekly seminar meetings with faculty and teaching assistant and a substantial research paper. **PREREQUISITE:** department approval. Participating in UCDC Program. Will not receive credit for SOCI 194 and SOCD 194.

SOCI 196A. Honors Seminar: Advanced Studies in Sociology (4)
This seminar will permit honors students to explore advanced issues in the field of sociology. It will also provide honors students the opportunity to develop a senior thesis proposal on a topic of their choice and begin preliminary work on the honors thesis under faculty supervision. **PREREQUISITE:** acceptance into Department of Sociology Honors Program.

SOCI 196B. Honors Seminar: Supervised Thesis Research (4)
This seminar will provide honors candidates the opportunity to complete research on and preparation of a senior honors thesis under close faculty supervision. **PREREQUISITE:** completion of Soc 196A.

SOCI 198. Directed Group Study (4)
Group study of specific topics under the direction of an instructor. Course also stresses the benefits and drawbacks of survey and aggregate data and some common ways in which these data are used incorrectly. **PREREQUISITE:** graduate standing in sociology.

SOCI 201A. Comparative-Historical Methods (4)
A broad-based consideration of the use of historical materials in sociological analysis, especially as this facilitates empirically oriented studies across different societies and through time. **PREREQUISITE:** graduate standing in sociology.

SOCI 208A. Faculty Research Seminar (2)
An introduction for entering graduate students to the range and variety of research and scholarly interest of the department's faculty. Through this introduction students will be better able to relate their own research interests and professional objectives to the ongoing work of faculty. **PREREQUISITE:** graduate standing in sociology. (S/J grades only.)

SOCI 212. Social Stratification (4)
The causes and effects of social ranking in various societies. Theories of stratification: the dynamics of informal social grouping; determinants of institutional power, and the nature of struggles for power; the distribution of wealth and its causes; the dynamics of social mobility; the effects of stratification on life chances, role strain, and deviance. **PREREQUISITE:** graduate standing in sociology.

SOCI 216. Sociology of Culture (4)
The history of the concept of culture; cultural pluralism in advanced industrialized societies; the differentiation of cultural institutions; cultural policy and social structure; culture as a property of social groups; conflict and accommodation over efforts to change and sustain traditional culture.

SOCI 217. Globalization, Culture, and Everyday Life (4)
This course explores the cultural, economic, and political processes which constitute globalization. Particular emphasis will be placed on understanding how consciousness and daily life practices are formed and transformed in a globalizing world. **PREREQUISITE:** graduate standing in sociology.

SOCI 222. Social Movements (4)
An examination of theories accounting for the causes and consequences of social movements, including a discussion of the origins and weaknesses of such theories for understanding historically specific revolutions, rebellions, and violent and nonviolent forms of protest in various parts of the world. **PREREQUISITE:** graduate standing in sociology.
THEATRE AND DANCE

Todd Salovey, M.F.A., Acting and Directing
Toniie Sammartano, B.A., Dance
Judith A. Sharp, B.S., Dance
Linda Vickersman, D.M.A., Singing
Terry Wilson, M.F.A., Dance

THE UNDERGRADUATE PROGRAM

The curriculum of the Department of Theatre and Dance is based on the belief that a good undergraduate education in theatre or dance should provide the student with a solid background in dramatic literature and the aesthetics and history of theatrical performance as well as exposure to the different artistic components of theatrical art—performance, playwriting, design, and choreography.

In addition to providing an integrated program for students desiring a theatre or dance major, the curriculum provides a sequence of courses to fulfill the fine arts and/or humanities requirements for Muir College; courses fulfilling Warren College’s program of concentration requirements; courses to fulfill Revelle, Thurgood Marshall, and Eleanor Roosevelt Colleges’ fine arts requirements; public speaking courses to fulfill requirements in the Schools of Engineering and Pharmacy; and elective courses for the general student desiring experience in theatre or dance.

Any student who has been accepted to the University of California, San Diego is eligible to declare theatre or dance as a major, double major, or minor. Auditions are not required. Continuing UCSD students who are changing their major to theatre or dance must file a Change of Major form with the UCSD Registrar’s Office.

DEPARTMENT OF THEATRE AND DANCE ADVISING

The department’s undergraduate faculty advisors can provide guidance and answers to students’ questions concerning specific course content, transfer course work, honors research projects, academic success, production, auditioning procedures, postgraduate opportunities, and departmental policy changes.

The undergraduate coordinator can answer students’ questions regarding major requirements, procedural matters, class enrollment, and the petition process, and give referrals to faculty and other campus resources for specific information.

Undergraduate student representatives are another important resource for theatre and dance majors. The student reps organize quarterly meetings at which students and faculty discuss departmental issues and concerns.

The department regularly communicates with the majors and minors, as well as other students involved in classes and productions, through the campus e-mail and Listserv systems. Students are strongly urged to check their campus e-mail accounts for timely messages or to make arrangements with Academic Computing Services to have campus e-mail forwarded to any other e-mail account they may use. Additionally, a handbook containing useful information is available in the department office, Room 202, Galbraith Hall.

PROGRAMS ABROAD

The department encourages students to enrich their undergraduate experience by studying abroad. Students majoring in theatre and/or dance are encouraged to participate in the Education Abroad Program (EAP) and to investigate other options of foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill UCSD degree and major requirements. Please visit the Programs Abroad Web site at http://orpheus.ucsd.edu/center/pao for further details. Financial aid is applicable and special study abroad scholarships are readily available.

The Department of Theatre and Dance will accept a maximum of three courses per semester abroad, and students are encouraged to take courses abroad that will fulfill major elective requirements. Please meet with the undergraduate coordinator prior to the EAP/OAP application deadline.

THE THEATRE MAJOR

The theatre major provides a student with a solid artistic and academic background. The required lower-division courses equip the student with the skills and knowledge necessary for more advanced work in each of the areas of study. The major is structured to respond to the needs of students who seek a broad-based liberal arts education in theatre as well as those who plan to pursue their studies at the graduate level with the aim of acquiring either an M.F.A. or a Ph.D. degree. Students should meet with the department’s undergraduate coordinator during the quarter in which they declare a theatre major in order to plan an appropriate individual course of study.

The major requirements are those published in the catalog in effect for the first quarter that a
first-year student attends UCSD; transfer students will be held to the catalog requirements two years previous to their first quarter at UCSD. Any student in good standing may declare a theatre major by completing a Change of Major form and delivering it to the Registrar’s Office. A department stamp is not required.

THE DANCE MAJOR

The dance major offers students an opportunity to specialize their training in the creative, aesthetic, and conceptual discipline of expressive movement as a contemporary art form, within the context of a broad undergraduate education. The primary focus of the dance major will be the study of contemporary and ballet techniques, dance history, theory, and choreographic methods, emphasizing innovation and interdisciplinary collaboration, and pushing the dancer’s creative artistic potential, physical skills, and interdisciplinary techniques to greater and more complex levels. Students are not permitted to major in both dance and dance studies.

Satisfying Your Major Requirements

Fifty percent of all course work required for the theatre or dance major (including both upper- and lower-division courses) must be taken at UCSD, regardless of approved transfer work and petitions. Theatre practicum (TPDR) classes completed elsewhere do not satisfy the theatre and dance department’s requirements unless they have been formally petitioned and approved. Only one practicum class from another institution may be petitioned. All courses required for the major or minor must be taken for a letter grade. A theatre and dance department course for which a student earns a grade lower than C– will not satisfy any of the department’s graduation requirements. Four units of Instructional Assistance (TDGE 195, P/NP credit) may be used as an upper-division elective for the theatre major, double major, or minor. Courses taken outside the Department of Theatre and Dance will not satisfy core or elective major requirements.

DANCE MINOR

The dance minor consists of seven courses, one of which is the Practicum. The dance minor will provide a balanced educational experience for the student who has a strong interest in dance but who wishes to major in another area of study. It is recommended that students declare the dance minor as soon as possible as priority enrollment in the Practicums is given to majors and minors.

MAJOR REQUIREMENTS

Theatre majors are required to complete ten lower-division courses. Dance majors are required to complete three lower-division courses. All lower-division courses should be satisfied before starting upper-division coursework in the respective areas.

Theatre and Dance majors and minors should complete a Practicum course—either TDPR 1, TDPR 2, TDPR 3, or TDPR 5—with three quarters of declaring their major or minor. Theatre majors should plan to complete their second Practicum requirement as soon as possible thereafter, as space in these classes is limited. The second Practicum course must be in an area different from the initial Practicum course.

Theatre History 10, 21, 22, and 23 are prerequisites for most upper-division theatre history and theory courses. Introduction to Acting (TDAC 1), Theatre Design (TDDE 1), and Theatre Playwriting (TDPW 1) are all prerequisites for any upper-division coursework in their respective areas. Students should take these classes as soon as possible after declaring their major. Prerequisites ensure that students are properly prepared for the work required.

Theatre Major

Please refer to the major requirements section for an overview of the theatre major.

Lower-Division Requirements

1. Two courses selected from
   TDPR 1. Practicum–Scenery
   TDPR 2. Practicum–Costume
   TDPR 3. Practicum–Lighting

2. Each of the following:
   TDHT 10. Introduction to Play Analysis
   TDHT 21. Performance Dynamics: Spaces, Performers, and Audiences
   TDHT 22. One Actor, Two, or More: How Theatre Peoples the World
   TDHT 23. Social Contexts of Performance

3. TDGE 1. Introduction to Theatre

4. Each of the area threshold classes:
   a) TDAC 1. Introduction to Acting
   b) TDDE 1. Introduction to Design
   c) TDPW 1. Introduction to Playwriting

NOTE: The threshold classes listed above must be completed before taking upper-division courses in their respective areas.

Upper-Division Requirements

5. One upper-division four-unit directing course

6. One upper-division four-unit design course

7. One upper-division four-unit directing course

8. One upper-division four-unit playwriting course

9. One upper-division four-unit stage management course

10. Three upper-division four-unit theatre history courses

11. Four upper-division four-unit theatre electives

NOTE: THGE 197 and 199 may not be used as upper-division electives by theatre majors unless approved by petition.

Dance Major

Lower-Division Requirements

1. One course from
   TDPR 1. Practicum–Scenery
   TDPR 2. Practicum–Costume
   TDPR 3. Practicum–Lighting
   TDPR 5. Practicum–Sound

TDPR 5. Practicum–Sound

2. Each of the following:
   TDHT 10. Introduction to Play Analysis
   TDHT 21. Performance Dynamics: Spaces, Performers, and Audiences
   TDHT 22. One Actor, Two, or More: How Theatre Peoples the World
   TDHT 23. Social Contexts of Performance

3. TDGE 1. Introduction to Theatre

4. Each of the area threshold classes:
   a) TDAC 1. Introduction to Acting
   b) TDDE 1. Introduction to Design
   c) TDPW 1. Introduction to Playwriting

NOTE: The threshold classes listed above must be completed before taking upper-division courses in their respective areas.

Upper-Division Requirements

5. One upper-division four-unit acting course

6. One upper-division four-unit design course

7. One upper-division four-unit directing course

8. One upper-division four-unit playwriting course

9. One upper-division four-unit stage management course

10. Three upper-division four-unit theatre history courses

11. Four upper-division four-unit theatre electives

NOTE: THGE 197 and 199 may not be used as upper-division electives by theatre majors unless approved by petition.

Theatre Minor

The theatre minor consists of seven theatre courses, one of which is the Practicum. It is recommended that students declare the theatre minor as soon as possible as priority enrollment in the Practicums is given to majors and minors.

Dance Minor

The dance minor consists of seven courses, one of which is the Practicum. The dance minor will provide a balanced educational experience for the student who has a strong interest in dance but who wishes to major in another area of study. It is recommended that students declare the dance minor as soon as possible as priority enrollment in the Practicums is given to majors and minors.
TDHD 174. Dance Aesthetics and Criticism
TDHD 175. Cultural Perspectives on World Dance

8. Forty-eight units of movement courses in ballet and contemporary dance chosen from the following (each of the courses listed below may be repeated up to four times):

TDMV 110. Intermediate Ballet
TDMV 111. Advanced Ballet
TDMV 112. Advanced Ballet for Contemporary Dance
TDMV 120. Intermediate Contemporary Dance
TDMV 122. Advanced Contemporary Dance

9. Eight units of electives chosen from the following:

TDAC 109. Singing for the Actor
TDAC 111. Freeing the Voice
TDAC 115. Movement for Actors
TDCH 143. Choreography and Dramatic Text
TDVM 133. Advanced Jazz
TDVM 142. Latin Dance of the World
TDVM 143. West African Dance
TDVM 144. Asian Dance
TDTR 102. Movement Research
TDTR 103. Dance and Technology
TDTR 104. Dance Theory and Pedagogy

Theatre and Dance Double Major

Lower-Division Requirements

1. One course from
TDPR 1. Practicum—Scenery
TDPR 2. Practicum—Costumes
TDPR 3. Practicum—Lighting
TDPR 5. Practicum—Sound

2. TDAC 1. Introduction to Acting
3. TDCH 40. Principles of Choreography
4. Each of the following threshold classes:
TDDE 1. Introduction to Design
TDPW 1. Introduction to Playwriting

Upper-Division Requirements

5. One upper-division four-unit acting course
6. One upper-division four-unit design course
7. One upper-division four-unit directing course
8. One upper-division four-unit playwriting course
9. One upper-division four-unit stage management course
10. Six upper-division four-unit theatre and dance history courses (TDHT 114 required as one of the six upper-division history courses)
11. Four upper-division theatre electives (with no more than two from the core dance curriculum)
12. TDTR 101. Dance Movement Analysis
13. TDDE 121. Theatre Process: Lighting
14. TDCH 140. Improvisation/Composition
TDCH 142. Choreographic Workshop
TDCH 145. Music for Dance Composition
15. Twelve units of advanced movement courses in one of the following areas of emphasis:

TDMV 111. Advanced Ballet
TDMV 122. Advanced Contemporary Dance
TDMV 133. Advanced Jazz

16. One four-unit advanced movement course outside the area of emphasis selected in number 15.

Note: TDGE 197 and 199 may not be used as upper-division electives by theatre and dance majors unless approved by petition.

The Theatre Minor

Minor forms are available at the advising office of the student’s college. Minor courses may not be taken on a Pass/Not Pass basis.

The minor requirements are those published in the catalog in effect for the first quarter that a first-year student attends UCSD; transfer students will be held to the catalog requirements two years previous to their first quarter at UCSD.

Lower-Division Requirements

1. One course from
TDPR 1. Practicum—Scenery
TDPR 2. Practicum—Costumes
TDPR 3. Practicum—Lighting
TDPR 5. Practicum—Sound

2. One course from the following list:
TDHT 21. Performance Dynamics: Spaces, Performers, and Audiences
TDHT 22. One Actor, Two, or More: How Theatre Peoples the World
TDHT 23. Social Contexts of Performance
TDAC 1. Introduction to Acting
TDDE 1. Introduction to Design
TDPW 1. Introduction to Playwriting

Upper-Division Requirements

3. Any five four-unit, upper-division theatre courses chosen from the following subjects: TDAC, TDDE, TDTR, TDGE, TDHT, TDPR, TDPW.

The Dance Minor

Minor forms are available at the advising office of the student’s college. Minor courses may not be taken on a Pass/Not Pass basis.

The minor requirements are those published in the catalog in effect for the first quarter that a first-year student attends UCSD; transfer students will be held to the catalog requirements two years previous to their first quarter at UCSD.

Dance Minor Requirements

Lower-Division Requirements

1. One course from
TDPR 1. Practicum—Scenery
TDPR 2. Practicum—Costumes
TDPR 3. Practicum—Lighting
TDPR 5. Practicum—Sound

2. TDTR 10. Introduction to Dance

Upper-Division Requirements

3. One choreography course chosen from
TDCH 140. Improvisation/Composition
TDCH 142. Choreographic Workshop
TDCH 145. Music for Dance Composition

One dance history course chosen from
TDHD 171. Dance History I (Ancient to 1900)
TDHD 172. Dance History II (1900 to 1960)
TDHD 173. Dance History III (1960 to present)
TDHD 174. Dance Aesthetics and Criticism
TDHD 175. Cultural Perspectives on World Dance

4. Three movement courses:

TDMV 110. Intermediate Ballet
TDMV 111. Advanced Ballet
TDMV 112. Advanced Ballet for Contemporary Dance

TDMV 120. Intermediate Contemporary Dance
TDMV 122. Advanced Contemporary Dance

5. Four units movement, theory, or choreography chosen from

TDMV 133. Advanced Jazz
TDMV 142. Latin Dance of the World
TDMV 143. West African Dance
TDMV 144. Asian Dance
TDTR 101. Dance Movement Analysis
TDTR 103. Dance and Technology
TDTR 104. Dance Theory and Pedagogy
TDCH 143. Choreography and Dramatic Text

Honors Program

The department offers a special program of advanced study for outstanding undergraduates majoring in theatre or dance. Successful completion of the Honors Program enables the student to graduate With Highest Distinction (A+), With High Distinction (A), or With Distinction (A-), depending upon performance in the program.

Eligibility

1. Junior standing (ninety units or more completed)
2. 3.7 GPA or better in the major
3. 3.5 GPA or better overall, which student must maintain until final graduation
4. Completion of at least four upper-division theatre courses
5. Recommendation of a faculty sponsor who is familiar with the student’s work

Guidelines

Application to the Honors Program may be made upon completion of ninety units or no later than the fifth week of the quarter preceding the final two quarters before graduation. The Undergraduate Committee will consider the application and, if approved, the student and the principal advisor will have the responsibility of proposing an Honors Thesis Committee to the Undergraduate Committee for final approval.

Students are required to take THGE 196A, Honors Studies in Theatre, and 196B, Honors Thesis in Theatre, in addition to the thirteen upper-division
required courses for the major, THGE 196A-B are to be taken consecutively and may not be taken concurrently.

Placement and Proficiency for Dance Majors

The technical command and the expansion of a vocabulary of movement are essential to the dancer’s creative expression. The faculty advise new students in dance to participate in beginning dance in all areas for a minimum of one year, as well as enrolling in TDTR 10, Introduction to Dance. These courses are designed to give the student the basic information needed to move on to the intermediate level. Students should remain in this level for a minimum of one year unless the instructor encourages them to move up to the advanced level. All students are required to audition and be approved by the faculty to be enrolled in advanced dance courses. If you come to UCSD with a background in dance and would like to take an advanced class, you need to audition in the class of your choice on the first day of the class meeting so that the teacher can accept you in the class or recommend another more appropriate class.

Undergraduate Student Petitions

Undergraduate student petitions are required whenever an exception to a rule is being requested. They are required for major or minor requirement substitutions, substitution of courses from other departments or institutions, late course adding or dropping, or requesting a retroactive incomplete grade. Students should submit petitions for course substitutions well in advance of taking the course. If they have difficulty with the form, students should have the Department of Theatre and Dance undergraduate coordinator assist them with the petition process to ensure that the petition is complete and well documented.

Receiving Transfer Credit

Students must petition the department to substitute courses taken in another department or institution for courses required by the Department of Theatre and Dance. The following procedures and guidelines will help students with the transfer petition process.

First, review the Department of Theatre and Dance residency requirement. It is generally a good idea to petition a course before taking it. The Department of Theatre and Dance undergraduate coordinator will review petitions for all transfer courses. Students may obtain a General Undergraduate Student Petition form on TritonLink. A detailed syllabus for the course to be evaluated must be attached to the completed petition form. Any petition relating to courses within the Department of Theatre and Dance should be dropped off at the main office during normal business hours.

Transfer credits must be accepted by the Admissions Office at the appropriate level and for the appropriate number of units for the substitution to be effective. Upper-division credit cannot be given for lower-division work. Course work done at a junior college can only transfer to UCSD as lower-division credit.

Theatre and Dance Performance and Production Opportunities

The Department of Theatre and Dance produces undergraduate productions throughout the academic year. These productions range in scale from student-directed “black box” productions to full-scale faculty directed undergraduate productions on the main stage. Every effort is made to provide a faculty directed opportunity for undergraduates each quarter.

Each of these productions is staged with undergraduate actors and dancers. Historically, where there are design assignments to be made (sets, costumes, lights, sound), those assignments are given to qualified undergraduates. Upper-division credit is available for students involved in the design or staging of department productions. Students may not work on department productions unless they are formally enrolled in a related class. Information regarding design and advanced crew opportunities is typically available from the design faculty or may be posted on the bulletin board in the lobby of Galbraith Hall as opportunities arise.

Cabaret

Cabarets are independent productions that are produced in Galbraith Hall Studio Theatre 157. Students may submit proposals for cabarets one quarter in advance to the cabaret manager. The cabaret policy is subject to revision on a quarterly basis. Please check at the front desk for details and deadlines.

Undergraduate Audition Policy

Undergraduates are encouraged to audition for all shows produced in the department. Auditions are typically held in the quarter preceding the staging of a production. Audition announcements will be posted on the bulletin board in the lobby of Galbraith Hall. Undergraduates who have completed or are currently enrolled in TDAC 1, Introduction to Acting are eligible to audition. Qualified undergraduates may audition for roles in graduate productions as they are available.

UCSD Dance Repertory

This repertory is open to dance students through auditions. The company will perform lecture-demonstrations, and performances, and teach master classes in the community or at other UC campuses.

Annual Dance Concerts

Two main stage and one studio theatre dance concert are presented each year. In fall quarter a small-scale faculty-directed laboratory or cabaret performance is presented in the Molli and Arthur Wagner Dance Building’s Studio Theatre. In winter quarter’s Dance Alive concert, students perform choreography created by the professional faculty and international guest artists in the Mandell Weiss Center for the Performing Arts, Forum Theatre, or the Potiker Theatre; and in spring quarter’s New Works student dance concert, students perform the faculty-directed experimental choreographic works for other students at the Potiker Theatre. In addition, smaller productions and student cabarets take place in our intimate Studio Theatre, located in the dance facility. Auditions are held at the beginning of the quarter for all productions. Students interested in performing in the winter concert must audition for a specific repertory class taught by the faculty or guest choreographer with whom they wish to work. Students who are then cast must enroll in both the appropriate Dance Repertory (TDPF 160, 161, 162) and Studies in Performance (TDPF 163). Students interested in performing in the spring concert must audition at the beginning of spring quarter; if cast, they enroll in Studies in Performance (TDPF 160, 161, 162). Students participating in either dance production are required to be concurrently attending a technique class. Students who wish to choreograph for the spring concert must have completed or be concurrently enrolled in a choreography class.

Ushering

A fantastic and simple way for students to become involved with the Department of Theatre and Dance is to be a volunteer usher. When a student volunteers, he or she will receive a complimentary ticket and a guaranteed seat to a predetermined performance in exchange for carrying out easy but important front-of-house tasks (such as tearing tickets, seating patrons, or handing out programs). Ushering is fun and easy—no experience is required and all majors are welcome.

To inquire about usher availability, contact the Theatre and Dance promotions manager at promotions@ucsd.edu and put the word “USHER” (in all caps) in the subject line. Someone will respond to your inquiry with more information in a timely manner.

Comps

Declared Theatre or Dance majors are eligible to receive one free complimentary ticket per departmental production. The complimentary tickets are on a first-come-first-served basis. Majors need to come into the department office and fill out a complimentary request form at least forty-eight hours prior to the performance. Majors will be notified through e-mail if the request cannot be filled. For the complete Complimentary Ticket Policy, please visit our Web site (http://theatre.ucsd.edu) or come into the office.

THE GRADUATE PROGRAM
MASTER OF FINE ARTS IN THEATRE
JOINT DOCTORAL DEGREE PROGRAM

M.F.A. IN THEATRE

The Department of Theatre and Dance has set an ambitious goal for its M.F.A. program: the training of artists who will shape the future direction of the theatre. The professional theatre training program is ranked third in the nation (and first west of the Hudson River), according to U.S. News & World Report, 1997.

The curriculum for all students involves studio classes and seminars. These are integrated with a progressive sequence of work on productions and with a professional residency at the La Jolla Playhouse.
The M.F.A. program at UCSD is built around the master-apprentice system of training. All the faculty are active professionals who teach at UCSD because of a shared commitment to training young artists. Instruction takes place not just in the classroom, but in theatres around the country where faculty, with students as assistants, are involved in professional productions, including those at the La Jolla Playhouse.

Students graduating from the M.F.A. program at UCSD should be prepared to take positions in the professional theatre in the United States and abroad. Students are now working in New York, in resident theatres, in the film and television industry, and in European repertory theatres. M.F.A. candidates in acting, dance theatre, design, directing, playwriting, and stage management will complete at least ninety quarter-units of academic work during their tenure in the program.

PROGRAM DESCRIPTIONS

Acting
The body and mind of the actor are synthesized to serve as an instrument of expression. Actors must depend on their instrument to perform, and the program places great emphasis on the strengthening and tuning of that instrument. The innate talent of the student is nurtured, coaxed, and challenged with individual attention from an extraordinary team of professionals and specialists in actor training.

Classes
Each year, intensive studio work in movement, voice, speech, and singing accesses, expands, and frees the physical body. Acting process introduces a range of improvisational and rehearsal techniques that help the actor approach onstage events with imagination and a rich emotional life. In the first year, studio classes guide the actor through daily explorations that encourage, change, and enhance artistic expression. The second year is devoted to the study of classical texts as well as the specific vocal and physical skills required to perform them. In the final year, classes focus on the needs of individual actors as they prepare to enter the professional world.

Productions
Actors work on classical and contemporary texts as well as new plays with graduate students, faculty, and professional guest directors. Each year the department schedules from fifteen to twenty productions of varying size and scope. Graduate students are given casting priority for all but a few plays. Student-scheduled and produced cabaret/ workshop productions occur year-round and provide additional acting opportunities.

Externship
All graduate students serve a residency with the La Jolla Playhouse and are cast in positions ranging from supporting to leading roles alongside professional actors and directors of national and international stature. For many actors this opportunity establishes valuable networking relationships and exposure for future employment.

Research and Other Opportunities

Modest funds are sometimes available for the pursuit of research, special technique workshops, and travel to auditions and festivals. In addition, in the third year, the entire acting class receives a showcase presentation in both Los Angeles and New York at which specially invited groups of film, television, and theatre professionals are in attendance.

Dance Theatre

With an emphasis on the collaborative process, the purpose of the Dance Program is to create an intensive laboratory for candidates to pursue artistic processes that will hone their unique artistic voices. Dance Theatre artists are encouraged to explore and develop processes that employ both theatre and dance methodology, leading to the synthesis between choreographic, theatrical, visual, technological, and sound media.

Classes

The M.F.A. program in Dance Theatre provides an intensive laboratory for candidates to pursue processes that will hone their particular artistic voice in dance theatre. The curriculum is designed to allow graduate students to explore their own unique creative processes, to define their own particular aesthetic, and to discover and develop their own distinctive movement and performance language. Core courses consist of Choreography Seminars in the study and practice of aesthetic concepts, history, and methodology for choreographic creation of dance theatre; Dance Theatre Topics Seminars that provide in-depth discussion and research on a full spectrum of topics from collaborative processes to professional practice; costume, lighting, sound, and scenic design; and a rich offering of electives across media and between disciplines that allow each student to pursue individual areas of interest. Graduate students maintain a physical practice chosen from Graduate Studio offerings in contemporary practices, improvisation, ballet for contemporary dance, yoga, Pilates, and a range of Latin, African, and Asian dance forms.

Productions

Dance Theatre students will have the opportunity to create work throughout their time at UCSD in studio, workshop, cabaret, and site-specific productions. Second-year students will present a short work in the existing production in the spring quarter. Thesis projects of a significant dance theatre work will be fully executed by the extensive production talents of the M.F.A. design program in the winter quarter of the third year.

Externship

Students are encouraged to work or research in the field when time permits, and they are assisted with professional opportunities, typically in the spring or summer of the second year. Dance Theatre candidates may have an opportunity to gain production experiences in a variety of theatres and venues in San Diego, New York, Seattle, Los Angeles, and London, at the La Jolla Playhouse, or through a comparable professional residency experience.

Design

The design program aims to train students in the best professional practices of regional and commercial theatre. The design faculty are award-winning working professionals also committed to teaching. The design training program stresses an interaction with the works of many visual and sound artists from a wide range of disciplines. Students are trained to create designs that “comment” on the play and the text, not merely “illustrate” it. Students’ talent and design work are showcased at a number of venues that have directly resulted in many national grants, awards, and other work opportunities for our alumni.

Classes

All students take a core curriculum of first-year design studio classes in scenery, costume, lighting, and sound (taken together with directors), and a design seminar where all three years come together in a forum to share production experiences, portfolios, and professional career techniques and skills. This is followed in subsequent years by more specialized advanced design classes that combine with production work in the student’s own area of concentration. A double-emphasis study (e.g., scenery and costume design combined) is offered to appropriate students. Classes in other areas (e.g., drafting, text analysis, visual arts, music) are also normally offered.

Productions

There are a generous number of (fully executed) production opportunities, and generally all productions are designed by students. Designers collaborate with student, faculty, and internationally prominent guest directors. Students are fully supported by the same professional workshop staff as the La Jolla Playhouse and are not expected to build or run their own productions.

Externship

Student designers participate in a residency program at the La Jolla Playhouse, and normally work as assistants to visiting professional designers. However, there are also some opportunities for talented students to be hired as principal designers by the Playhouse during its season.

Research and Other Opportunities

Students may also be offered opportunities to travel with faculty as assistants on professional assignments to major regional theatres, Broadway, England, or Europe. Modest funds are sometimes available for student research and travel to see productions and to attend conferences and workshops.

Directing

With an emphasis on the collaborative process, the purpose of the Directing Program is to develop directors with a solid foundation in the components of production and the interpretation of text. Individuals are encouraged to make challenging choices, to break down barriers, and to create exciting, meaningful theatre. Graduates of the program are prepared to select and get to the heart of a text, to communicate effectively with and inspire produc-
tion designers, and to elicit expressive performances from the actors with whom they work.

Classes
The core curriculum of the Directing Process Program offers students opportunities to hone their skills in text analysis and scene work in all three years. The first-year student also completes a sequence in the acting process, develops a visual vocabulary in theatrical design and visual arts courses, and explores the nature of the collaborative process.

Productions
Directing students will direct from two to four department scheduled and supervised productions in the Mandell Weiss Center for the Performing Arts during their time at UCSD. In addition, studio, workshop, and cabaret productions of the director’s choice are strongly encouraged. The production season also offers opportunities to assist guest and faculty directors.

Externship
In the students’ second year, the La Jolla Playhouse provides a residency during which students typically serve as assistant directors.

Additional Opportunities
It is common for the directing faculty to take M.F.A. directors with them to work as assistant directors at theatres around the United States and the world.

Playwriting
Playwrights are more than mere writers. They are artists who unleash their imagination in incredibly dramatic ways. The successful playwright writes with intellectual power and emotional honesty, with a distinct and essential voice that speaks with vulnerability and sentiment to the heart and soul of the audience. The dedicated, individual attention and formidable production opportunities of the program offer talented writers the ability to stretch, expand, and witness the unfolding of their work onstage in the bodies of very gifted actors.

Classes
In Playwriting Seminar—the core course—writers in all three years read and discuss their ongoing work, focusing on style, character, and structure. They also observe their work being read by M.F.A. actors at times throughout the year. Writing for Television, Screenwriting, and Dramatization/Adaptation are offered in rotation within a three-year cycle. In addition, students take a variety of topics in theatre and dramatic literature along with individual practicum courses. Playwrights can take advantage of rich offerings in literature, music, visual arts, and language study, as well as in dramatic texts, theory, and design.

Production
First-year students receive a one-act showcase production each year, while second- and third-year students receive a fully designed production. These are produced in the New Plays Festival each spring, which is attended by literary managers, agents, and artistic directors from across the country. Typically, these productions are directed, designed, and acted by students in the M.F.A. program. Production of plays in any year of study is dependent on the readiness of the work for staging.

Externship
Each student is assisted with a carefully chosen assignment, typically in the summer of the second year. Our playwrights may have an opportunity to gain exceptional literary and production experiences in a variety of theatres and venues in New York, Seattle, Los Angeles, London, Germany, and Romania.

Stage Management
The stage manager is a pivotal member of the collaborative process and creates the environment that supports the work of the other members of the artistic team. The stage manager is the prime communicator and liaison who synthesizes the disparate elements of production into a cohesive whole and is responsible for the implementation of diverse artistic choices throughout the production process.

The Stage Management Program at UCSD integrates a comprehensive knowledge of all critical components of this complex field in order to prepare students for work in leading professional theatres. The program develops individualized, creative artists with personal approaches to their work. UCSD creates a supportive and stimulating environment that allows each student to develop the confidence and flexibility necessary to meet the challenges of production in a wide variety of professional venues.

Classes
All first-year students take a core curriculum in stage management process that explores the role of the stage manager in professional theatre today and offers a comprehensive investigation of the work from pre-production to closing a show. Students in all three years attend the stage management seminar, which serves as a weekly forum for sharing insights and solving problems on current production assignments, meeting with a variety of guest artists, and examining the bigger picture of stage management and theatre in America today. Additional course work is offered in various aspects of theatre administration and management, professional practice, directing, design, and collaborative process.

Productions
Great emphasis is placed on the student’s ability to apply the theories learned in class to the production process. Students typically serve as both assistant stage manager and stage manager on a number of studio and main stage productions in a variety of theatrical spaces. In addition to established scripts directed by M.F.A. students, faculty, and nationally prominent guest directors, students also work on new plays by graduate or guest playwrights, as well as faculty and student choreographed dance concerts.

Research Opportunities
Students are encouraged to work or research in the field when time permits. Past projects have included stage managing at the National Playwrights Conference at the O'Neill Center in Connecticut, interning at Warner Brothers Feature Animation, working as production assistant for the Broadway production of Play On, stage managing Andrei Serban’s production of Our Country’s Good at the Romanian National Theatre, and researching stage combat and weaponry at the Royal Shakespeare Company.

Externship
Each student is guaranteed at least one production opportunity at the La Jolla Playhouse, or a comparable professional residency experience.

PH.D. IN THEATRE AND DRAMA
The UCSD Department of Theatre and Dance and the Department of Drama at UC Irvine began to recruit students for the new Joint Doctoral Program in Theatre and Drama in fall 1999 for admission in fall 2000. Within the context of the program’s twin focus on theory and history, an innovative structure permits each student to pursue a custom designed curriculum that draws from a rich variety of seminars in faculty research areas that include Greek classical theatre; Shakespeare and his contemporaries; Italian, French, and German theatre; U.S.-Latino, African-American, and Asian-American theatre; and critical, historical, and performance theories.

Interested students are encouraged to request detailed information about the program and application materials, which will be available from either department each September.

Preparation
Students with a B.A. (minimum GPA: 3.5), M.A., or M.F.A. degrees in drama and theatre are eligible for admission to the doctoral program. Students with training in literature (or another area in the humanities) will also be considered, provided they can demonstrate a background in drama or theatre. Experience in one of the creative activities of theatre (acting, directing, playwriting, design, dramaturgy) will enhance chances of admission.

All applicants are required to take the Graduate Record Examination and to submit samples of their critical writing. While not required for admission, a working knowledge of a second language is highly desirable (see “Language Requirement”).

Course of Study
Students are required to take a minimum of 144 units, which is equivalent to four years of full-time study (full-time students must enroll for a minimum of twelve units each quarter). Forty of these units will be taken in required seminars; the balance will be made up of elective seminars, independent study, and research projects (including preparing the three qualifying papers), and dissertation research. Students must take a minimum of one seminar per year in the Department of Drama at UC Irvine. The program of study makes it possible for students to take a significant number of elective courses and
independent studies both with faculty in drama and theatre and in other departments.

**Required Seminars**

1. A minimum of twelve units of TDGR 290 (Dramatic Literature and Theatre History to 1900).
2. A minimum of twelve units of TDGR 291 (Dramatic Literature and Theatre History 1900 to the Present).
3. A minimum of sixteen units of TDGR 292 (Cultural and Critical Theory).

These required seminars must be completed before the end of the student's third year. In addition to the ten required seminars, students must pass comprehensive examinations at the end of the first and second years (see “Comprehensive Examinations”).

**Comprehensive Examinations**

In the first year, students prepare for the written comprehensive examination, which is based on a reading list of approximately 150 titles ranging from the ancient Greeks to the present. Students take the written comprehensive at the beginning of the fall quarter of the second year. (Comprehensive examinations are scheduled at the beginning of fall quarter in order to allow the students the summer to prepare.) Students who fail the written comprehensive may retake it no later than the first week of winter quarter of the second year. Students who fail the written comprehensive for a second time are dismissed from the program.

In the second year, students prepare for oral comprehensive examination. The reading list for this examination is designed to permit the student to acquire a knowledge of his or her dissertation subject area, broadly conceived. The reading list is compiled by the student and his or her dissertation advisor, in consultation with other members of the faculty, as appropriate; the reading list must be established by the end of winter quarter of the second year. Students take the oral comprehensive at the beginning of the fall quarter of the third year. Students also submit a dissertation prospectus (approximately five pages) at the time of the oral comprehensive. Students who fail the oral comprehensive may retake it no later than the first week of winter quarter of the third year. Students who fail the oral comprehensive for a second time are dismissed from the program.

**Advancement to Candidacy: Three Qualifying Papers**

Students normally select a dissertation advisor during the second year and must do so before the end of spring quarter of that year. In consultation with the dissertation advisor and other faculty members, students develop topics for three qualifying papers, which are written during the third year. The three qualifying papers—one long (approximately fifty pages) and two short (approximately thirty pages each)—must be completed by the end of the third year; when completed, the qualifying papers provide the basis for the oral qualifying examination. Students write the long paper under the direction of the dissertation advisor; it is understood that the long paper is preparatory to the dissertation. The short papers deal with other related topics, subject to the approval of the student's advisors; the two short papers are understood as engaging in exploring the larger contexts of the dissertation. Students normally pass the qualifying examination and advance to candidacy at the end of the third year; students must advance to candidacy no later than the end of fall quarter of the fourth year. Once admitted to candidacy, students write the dissertation that, upon completion, is defended in a final oral examination. Students may select a dissertation advisor from either UCSD's Department of Theatre and Dance or UC Irvine's Department of Drama. All UCSD doctoral dissertation committees must include at least one faculty member from UC Irvine.

**Language Requirement**

Students are required to complete an advanced research project using primary and secondary material in a second language (“materials” should be understood as including live and/or recorded performances; interviews with artists, critics, and scholars; and other non-documentary sources, as well as more conventional textual sources). This requirement may be satisfied by writing a seminar paper or a qualifying paper (see “Advancement to Candidacy”) that makes extensive use of materials in a second language. The second language requirement must be satisfied before the end of the third year. This requirement will not be waived for students who are bi- or multilingual; all students are required to do research level work in more than one language.

It is assumed that students will have acquired a second language before entering the doctoral program, although second-language proficiency is not a requirement for admission. While students may study one or more second languages while at UC Irvine or UCSD, language classes may not be counted toward program requirements.

**Teaching**

Students are required to teach a minimum of four quarters. No more than eight units of apprentice teaching (TDGR 500) may be counted toward the required 144 units.

**Departmental Ph.D. Time Limit Policies**

Students must advance to candidacy by the end of the fall quarter of their fourth year. Departmental normative time for completion of the degree is five years; total registered time in the Ph.D. program at UCSD or UC Irvine cannot exceed seven years. While students with an M.A. or M.F.A. degree may be admitted to the Ph.D. program, they will be required to take all required doctoral seminars.

**Financial Support**

Students entering the Ph.D. program may be supported (by either employment or fellowships) for four years. Support depends on the funds available and on the student's rate of progress toward the degree.
THAC 102 or TDAC 102, interview/audition, and consent of instructor.

TDAC 107. Improvisation for the Theatre (4)
Improvisation for the Theatre explores improvisation techniques as an alternative and unique approach to acting. Students should have a performance background. **Prerequisite:** THAC or TDAC 1.

TDAC 108. Advanced Topics (4)
Advanced topics in acting, such as avant garde drama, commedia, or Beckett, for students who possess basic acting techniques. **Prerequisites:** THAC or TDAC 102, admission by audition, and department stamp.

TDAC 109. Singing for Actors (4)
This course introduces basic skills of breathing, placement, diction, musicianship, harmony, interpretation, and presentation needed by actors for roles requiring singing. Through a combination of group and individual coaching in class, students will prepare a program of short solo and ensemble pieces for a finals-week presentation. **Prerequisites:** THAC or TDAC 1 and audition; department stamp.

TDAC 111. Freeing the Voice (4)
Intensive workshop for actors and directors designed to “free the voice,” with special emphasis on characteristics and vocal flexibility in a wide range of dramatic texts. This proven method combines experimental and didactic learning with selected exercises, texts, tapes, films, and total time commitment. **Prerequisite:** Concurrent enrollment in THAC or TDAC 101.

TDAC 112. Major Seminar in Acting (4)
An in-depth study seminar focused on special issues in acting as they relate to contemporary theatre. Of particular interest to students who plan to pursue a career in this area of theatre. **Prerequisites:** department stamp; theatre majors only; upper-division only.

TDAC 115. Movement for Actors (4)
An exploration of the wide array of physical skills necessary for the actor. Using techniques derived from mime, clowning, sports, acrobatics, and improvisation, students will investigate their individual physical potential as well as their sense of creativity and imagination. **Prerequisite:** THAC or TDAC 1.

TDAC 120. Ensemble (4)
An intensive theatre practicum designed to generate theatre created by an ensemble with particular emphasis upon the analysis of text. Students will explore and analyze the script and its author. Ensemble segments include black theatre, Chicano theatre, feminist theatre, and commedia dell’arte. Audition may be required. A maximum of four units may be used for major credit. (Cross-listed with ETHN 146A.) **Prerequisite:** department stamp.

TDAC 122. Ensemble: Undergraduate Production (4)
Participation in a fully staged theatre production directed by an assistant for the Department of Theatre and Dance. Admission by audition only. A maximum of four units may be used for major credit. **Prerequisites:** consent of the instructor; department stamp.

TDAC 123. Advanced Studies in Performance (4)
Participation in a fully staged season production that is directed by a faculty member or guest for the Department of Theatre and Dance. Admission by audition only. A maximum of four units may be used for major credit. **Prerequisites:** consent of the instructor; department stamp.

TDAC 126. Acting-Directing Process (4)
A studio class that investigates the relationship between the actor and the director. Working alongside directors, students learn how to animate the writer’s and director’s vision onstage through status exercises and scene work while expanding their skills in the acting process. **Prerequisites:** THAC or TDAC 1 and THAC or TDAC 101, or consent of instructor.

**TDCH—DANCE CHOREOGRAPHY**

**TDCH 40. Principles of Choreography (4)**
Presented the fundamentals of the concepts, elements, aesthetics, and process of choreographic creation through practical studies, discussions, and examinations of theories and major choreographic works. **Prerequisite:** TDTR 10.

**TDCH 140. Improvisation/Composition (4)**
The study of compositional and improvisation methods concerning the aesthetic awareness of movement, and organization of choreography in time, space, and energy. Both structured and unstructured tasks facilitate development of movement vocabulary, imagination, timing, spontaneity, contact skills, and compositional choices. **Prerequisite:** TDTR 10.

**TDCH 142. Choreographic Workshop (4)**
Advanced problem solving through practical and conceptual studies, laboratory practice. Students create short works for solo, duet, and small group situations, with options of focus on cross-media collaboration, site specific work, dramatic text, and advanced partner work. **Prerequisites:** TDTR 10, TDCH 40.

**TDCH 143. Choreography and Dramatic Text (4)**
Choreographic problems in movement style and purpose will be explored through analysis of both historical and contemporary dramatic text. Emphasis will be places on dance as a complement to verbal communication and a medium for nonverbal communication. **Prerequisites:** TDTR 10, TDCH 40.

**TDCH 146. Advanced Improvisation: Partnering (4)**
Advanced problem solving through practical and conceptual studies pertaining to improvisation and partnering. **Prerequisites:** TDTR 10, TDCH 40, or consent of instructor.

**TDCH 145. Music for Dance Composition (4)**
A course that will guide a student in a design assignment that will be a lighting design suitable for a design portfolio. **Prerequisite:** THDE or TDDE 1 or THPR or TDPR 3 or consent of instructor.

**TDCH 169A. Senior Honors Focus Choreography (4)**
Selected seniors create a significant choreographic work or media project under faculty mentorship for presentation in the studio theatre, spring dance production, or site-specific alternative location. All courses in the choreography series must be completed or concurrent with the senior honors focus. Individual honors contract for selected senior dance majors. Honors content noted on transcript. Requirements: 3.5 overall GPA, 3.7 major GPA, 90 units completed, and 2 quarter commitment. **Prerequisites:** TDCH 40, TDCH 140, TDCH 142, TDCH 145, consent of instructor, and department stamp. May be taken two times for credit.

**TDCH 169B. Senior Honors Focus Choreography (4)**
Continuation of TDCH 169A. Selected seniors present a significant choreographic work or media project under faculty mentorship in the studio theatre, spring dance production, or site-specific alternative location. All courses in the choreography series must be completed or concurrent with the senior honors focus. Individual honors contract for selected senior dance majors. Honors content noted on transcript. Requirements: 3.5 overall GPA, 3.7 major GPA, 90 units completed, and 2 quarter commitment. **Prerequisites:** TDCH 40, TDCH 140, TDCH 142, TDCH 145, TDCH 169A, consent of instructor, and department stamp. May be taken two times for credit.

**TDDE—THEATRE DESIGN**

**TDDE 1. Introduction to Design for the Theatre (4)**
A survey of contemporary and historical concepts and practices in the visual arts of the theatre; studies in text analysis, studio processes and technical production; element work in design criticism, scale model making, and costume design. A course serving as an introduction to theatre design and production. **Prerequisite:** THDE or TDDE 1, TDDE 101, or TDDE 111, or consent of instructor.

**TDDE 101. Theatre Process—Scenery (4)**
A hands-on course develops craft skills and solution-finding process in design including script analysis, concept sketches, research, and scale model making. An exploration of fundamental ways of seeing and understanding visual design. **Prerequisite:** THDE or TDDE 1 or THPR 1.

**TDDE 102. Advanced Scenic Design (4)**
An advanced course based on the “practice” of scenic design, dealing with the solution finding process, from text to idea to realized work. **Prerequisites:** THDE or TDDE 1, THDE or TDDE 101, or consent of instructor.

**TDDE 111. Theatre Process—Costume Design (4)**
The process of the costume designer from script analysis and research visualization of ideas, through the process of costume design. Lecture and demonstration labs parallel lecture material. This course is intended for those interested in a basic understanding of the costume’s process. No previous drawing or painting skills required. **Prerequisite:** THDE or TDDE 1.

**TDDE 112. Advanced Costume Design (4)**
An advanced course based on the “practice” of costume design, dealing with the design finding process, from text to idea to realized work. **Prerequisites:** THDE or TDDE 1, THDE or TDDE 111, or consent of instructor.

**TDDE 113. Costume Design for Dance (4)**
This course covers the basics of costume design specific to the needs of choreographers and dance productions. Topics include principles of design, rendering techniques, fabrics, and construction. The course also explores the collaborative process of design for dance. **Prerequisite:** TDDE 1 or consent of instructor.

**TDDE 121. Theatre Process—Lighting Design (4)**
One of three classes in theatre process. The course aims to develop basic skills in lighting design through practical project work and laboratory/experimental exercises that include planning, manipulating light and color, and developing craft skills. **Prerequisite:** THDE or TDDE 1 or THPR or TDPR 3 or consent of instructor.

**TDDE 122. Advanced Lighting Design (4)**
Creative projects and topics in lighting design. Work to include studies and design research, concepts, collaboration, professional processes and systems, paperwork, and organization. Varies scales of theoretical and practical projects in the light lab and classroom will be addressed by the student for presentation and critique. Final project will be a lighting design suitable for a design portfolio. **Prerequisite:** THDE or TDDE 1, THDE or TDDE 121, or consent of instructor.

**TDDE 130. Assistant Designer (2-4)**
A production-oriented course that continues to introduce students to the fundamentals of design assisting. Laboratory format allows the student to work with faculty, graduate, or advanced undergraduate theatre designers, doing research, developing design concepts, and supporting the designer in a number of professional ways. **Prerequisites:** THDE or TDDE 1, any upper-division undergraduate theatre design class, THPR or TDPR 1, 2, 3, 5, or 7, and consent of instructor; department stamp. May be taken twice for credit.

**TDDE 131. Special Topics in Theatre Design (4)**
A course designed to expose the theatre design students to a variety of specialized topics that will vary from quarter to quarter. **Prerequisite:** THDE or TDDE 1 or consent of instructor. May be taken three times for credit.

**TDDE 132. Undergraduate Mainstage Production: Design (4)**
A course that will guide a student in a design assignment on the undergraduate mainstage production. Specialized topics dependent on the design requirements of the production. **Prerequisites:** THDE or TDDE 1 and THDE or TDDE 101 or THDE or TDDE 121, or THDE or TDDE 131, or consent of instructor. May be taken three times for credit.

**TDDE 141. Theatre Process—Sound Design (4)**
A hands-on course on the process of sound design from conception to planning and implementation. The course will concentrate equally on the technical and artistic aspects of the sound design process and will include a survey of modern audio technologies. **Prerequisites:** TDPR 5 or MUS 173 or consent of instructor.

**TDDE 142. Advance Sound Design (4)**
This course focuses on advancing students in their artistic and technical skills in sound design. A large-scale project will be identified with special attention given to text analysis and technical specification of the sound design. **Prerequisites:** THDE 1 and TDDE 141 or equivalent, or consent of instructor.
TDDE 190. Major Project in Design/Theatre Production (4)
For the advanced design production student. Concentration on a one- or two-quarter investigation of design or theatre production assignment, including such areas as assistant designer (scenery, lighting, or costumes), technical director, master cutter, or master electrician. May be repeated one time for credit. A minimum of eight units of major project study, regardless of area (design, directing, or stage management) may be used to fulfill major requirements. **PREREQ:** admission by consent of instructor only. See department for application form. May be taken twice for credit.

TDDR—THEATRE DIRECTING/STAGE MANAGEMENT

TDDR 101. Stage Management (4)
Discussion and research into the duties, responsibilities, and roles of a stage manager. Work to include studies in script analysis, communication, rehearsal procedures, performance skills, and style and conceptual approach to theatre. THGE or TDGE 1, THAC or TDAC 1, and THDE or TDDE 1 recommended.

TDDR 108. Text Analysis for Actors and Directors (4)
This is an introductory class in the process of understanding the play script. The class will focus on analyzing the story and the underlying dramatic structure in terms of dramatic action. Objectives, actions, choices, given circumstances, and character will be examined. **PREREQ:** upper-division standing or consent of instructor.

TDDR 111. Directing-Acting Process (4)
A studio class that investigates the fundamental skills a director needs to work with actors. Working with actors, students learn how to animate the text onstage through status exercises and scene work as they develop their skill in text work, staging, and dramatic storytelling.

TDDE 191. Major Project in Stage Management (4)
For the advanced student in stage management. Intensive concentration on the full realization of a dramatic text from research and analysis through rehearsal and into performance. A maximum of eight units of major project study, regardless of area (design, directing, or stage management) may be used to fulfill major requirements. See department for application. **PREREQ:** THDR or TDDE 108, THDR or TDDE 111, consent of instructor, and department stamp. May be taken twice for credit.

TDDE 192. Senior Seminar in Theatre and Dance (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in theatre and dance (at the upper-division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. The department is limited to twenty students, with preference given to seniors. **PREREQ:** senior standing; department stamp and/or consent of instructor.

TDGE 195. Instructional Assistance (2 or 4)
Assist with instruction in undergraduate theatre courses. Full description of duties will appear on the “Application for Instructional Assistance” form. **PREREQ:** upper-division standing; 3.0 GPA; department stamp. May be repeated for a total of 8 units.

TDGE 196A. Honors Study in Theatre (4)
Theatre honors students undertake research for a scholarly thesis or a creative project in playwriting or in directing under the guidance of a faculty mentor. Creative projects will culminate in a written thesis that is either a full-length play or a dramaturgical discussion of the directing project. **PREREQ:** upper-division course work in the area of thesis, department stamp, 3.5 GPA in major, approval of faculty member.

TDGE 196B. Honors Study in Theatre (4)
Theatre honors students conduct research, play, or dramaturgical analysis of a directing project under the close supervision of a faculty mentor. **PREREQ:** upper-division course work in the area of thesis, TDGE 196A, 3.5 GPA in major, approval of faculty member.

TDGE 197. Field Studies (1-12)
Designed for advanced students, this course significantly extends their knowledge of the theatre through intensive participation in the creative work of a major professional theatre, television, or film company under the guidance of artists resident in those theatres or companies. Students will submit regular written evaluations each week of their ongoing field study. **PREREQ:** consent of instructor, upper-division standing, and department stamp. May be taken twice for credit.

TDGE 198. Directed Group Studies (0-2-4)
Group studies, readings, projects, and discussions in theatre history, problems of production and performance, and similarly appropriate subjects. **PREREQ:** upper-division standing, 2.5 GPA, consent of instructor, and department stamp.

TDH—DANCE HISTORY

TDH 171. Dance History I (Ancient to 1900) (4)
The study of the history of dance from antiquity to the early twentieth century. An analysis of dance history and cultural aspects of the social, political, and cultural forces on the development of early dance theories and practices. **PREREQ:** TDTR 10. Not equivalent to THDA 151, Dance History—Ballet.

TDH 172. Dance History II (1900 to 1960) (4)
The study of dance history from the early twentieth century to the 1960s. An analysis and understanding of the social, political, and cultural forces on the development of dance theories and practices. **PREREQ:** TDTR 10. Not equivalent to THDA 152, Dance History—Modern.

TDH 173. Dance History III (1960 to Present) (4)
The study of the history of dance from the 1960s to the present. An analysis and understanding of social, political, and cultural forces on the development of contemporary dance theories and practices. **PREREQ:** TDTR 10. Not equivalent to THDA 151, Dance History—Jazz Dance and Related Ethnic Studies.

TDH 174. Dance Aesthetics and Criticism (4)
An historical overview of the aesthetic concepts that form the foundation for the creation, performance, and critical analysis of dance. Critical and aesthetic theory in related arts will be discussed and contrasted. **PREREQ:** TDTR 10 or consent of instructor.

TDH 175. Cultural Perspectives on World Dance (4)
The study of world dance forms from a global perspective. An analysis and understanding of ethnic dance traditions and their connections to religion, ritual, folklore, custom, festive celebration, popular culture, and political movements. **PREREQ:** TDTR 10 or consent of instructor.
TDH 176. Dance History—Special Topics (4)
An in-depth exposure to an important topic in dance history, theory, aesthetics, and criticism. Topics vary from quarter to quarter. Prerequisites: TDTR 10, upper-division standing.

TDHA 169A. Senior Honors Focus Scholarly (4)
Selected seniors will complete a scholarly research project on a dance topic of their choice under faculty mentorship that will be reviewed by the faculty and archived. All courses in the history series must be completed or concurrent with the senior honors focus. Individual honors contract for selected senior dance majors. Honors content noted on transcript. Requirements: 3.5 overall GPA, 3.7 major GPA, 90 units completed, and 2 quarter commitment. Prerequisites: TDTH 172, TDTH 173, TDTH 174, TDTH 175, consent of instructor, and department stamp.

TDHA 169B. Senior Honors Focus Scholarly (4)
Continuation of TDHA 169A. Selected seniors will present a scholarly research project on a dance topic of their choice under faculty mentorship that will be reviewed by the faculty and archived. All courses in the history series must be completed or concurrent with the senior honors focus. Individual honors contract for selected senior dance majors. Requirements: 3.5 overall GPA, 3.7 major GPA, 90 units completed, and 2 quarter commitment. Prerequisites: TDTH 172, TDTH 173, TDTH 174, TDTH 175, TDTH 196A, consent of instructor, and department stamp.

TDH—THEATRE HISTORY

TDTH 10. Introduction to Play Analysis (4)
An introduction to the fundamental techniques of analyzing dramatic texts. Focus is on the student’s ability to describe textual elements and their relationships to each other as well as on strategies for writing critically about drama. Prerequisites: none.

TDTH 21. Performance Dynamics: Spaces, Performers, and Audiences (4)
This course introduces the basic parameters of performance spaces, exploring varieties of performance space, acting methods, and actor-audience relations, comparing examples drawn from different historical periods and world cultures. Prerequisites: none.

TDTH 22. Plays: Greek to Modern (4)
This course explores plays in chronological order, comparing examples from different historical periods. Prerequisites: none.

TDTH 23. Social Contexts of Performance (4)
The functions and meaning of theatre depend in part on the social contexts of performance. This quarter looks at performance modes associated with court spectacles, commercial venues, and popular theatre, comparing examples and comparing cultures and historical periods. Prerequisites: none.

TDTH 101. Topics in Dramatic Literature and Theatre History (4)
An in-depth exposure to an important individual writer or subject in dramatic literature and/or theatre history. Topics vary from quarter to quarter. Recent courses have included Modern French Drama, and the History of Russian Theatre. Prerequisites: THHS or TDTH 10 or either THHS or TDTH 10 or consent of instructor. May be taken three times for credit.

TDTH 101XL. Topics in Dramatic Literature and Theatre History: Foreign Language Discussion Section (1)
Foreign-language discussion of materials in the English-language course with corresponding number. This section is taught by the course professor, has no final exam, and does not affect the grade in the parent course. Prerequisites: any language course with corresponding number.

TDTH 102. Masters of Theatre (4)
Focus on the artists of seminal importance in the theatre. Consideration will be given to theory and practice of the artist, with emphasis on theatrical realizations that can be reconstructed by integrated research. Examples of recent courses include Molière, Fugard, and Strindberg. Prerequisites: THHS or TDTH 10 or consent of instructor. May be taken three times for credit.

TDTH 103. Asian American Theatre (4)
This course examines pivotal dramatic works in the history of professional Asian American theatre in the U.S. (1960s to the present), including interculturalism, cross-race interaction between minority theatres and mainstream venues, and the performance of identity. Prerequisites: THHS or TDTH 10 or consent of instructor.

TDTH 104. Italian Comedy (4)
Continuities and changes in Italian comedy from the Romans through the Renaissance and commedia dell’arte to modern comedy. Prerequisites: THHS or TDTH 10 or consent of instructor.

TDTH 105. French Comedy (4)
Masterpieces of French farce and comedy from the seventeenth century to the twentieth century studied their theatrical and cultural contexts. Readings include plays by Molière, Marivaux, Beaumarchais, and Feydeau. Prerequisites: THHS or TDTH 10 or consent of instructor.

TDTH 106. Brecht and Beyond (4)
Examination of the German playwright and director, Bertolt Brecht and of recent representative plays and performances from world theatre that reveal a creative assimilation of Brecht’s influence on artists including Peter Weiss, Heiner Muller, Augusto Boal, and Tony Kushner. Prerequisites: THHS or TDTH 10 or TDTH 21 or consent of instructor.

TDTH 106XL. Brecht and Beyond: Foreign Language Discussion Section (1)
Foreign language discussion of materials in the English-language course with corresponding number. This section is taught by the course professor, has no final exam, and does not affect the grade in the parent course. Prerequisites: concurrent enrollment in TDTH 106.

TDTH 107. American Theatre (4)
In this course we will examine representative plays and playwrights who write about the American experience from a variety of historical periods and diverse cultural communities. Plays will include O’Neill, Glaspell, Miller, Williams, Hellman, Wasserstein, Wang, and Parks. Prerequisites: THHS or TDTH 10 or consent of instructor.

TDTH 108. Luis Valdez (4)
In this course we examine the works of Luis Valdez, playwright, director, screenwriter, film director, and founder of the Teatro Campesino. Readings include plays and essays by Valdez and critical books and articles about this important American theatre artist. Prerequisites: THHS or TDTH 10 or consent of instructor.

TDTH 110. Chicano Dramatic Literature (4)
Focusing on the contemporary evolution of Chicano dramatic literature, this course will analyze playwrights and theatre groups that express the Chicano experience in the United States. Emphasis on relevant “actors,” plays, and documentaries for their contributions to the development of Chicano theatre movement. (Cross-listed with Ethnic Studies 132.) Prerequisites: THHS or TDTH 11 or 12 or 13 or consent of instructor.

TDTH 111. Hispanic-American Dramatic Literature (4)
Course examines the plays of leading Cuban-American, Puerto-Rican, and Chicano playwrights in an effort to understand the experience of these Hispanic-American groups in the United States. (Cross-listed with Ethnic Studies 133.) Prerequisites: THHS or TDTH 11 or 12 or 13 or consent of instructor.

TDTH 112. Gay and Lesbian Themes in U.S. Latino Theatre (4)
This course examines plays by Latino and Latina playwrights that include characters who are gay, lesbian, bisexual, or transgendered. Readings include the plays as well as articles and essays about the plays, playwrights, and queer theory. Prerequisite: any language course with corresponding number or consent of instructor. Prerequisites: THHS or TDTH 10 or consent of instructor.

TDTH 113. Avant-Garde Theatre (4)
Innovations in theatre production and performance since the late nineteenth century. Artists and movements studied include Jarry, Appia, Constructivism, Expressionism, Dada cabaret, performance art, and dance theatre. Prerequisites: TDTH 135 or consent of instructor. Prerequisites: THHS or TDTH 10 or consent of instructor.

TDTH 114. American Musical Theatre (4)
The class will explore this vital and unique theatre form by examining its origins, evolution components, and innovators. Special emphasis will be placed on the process of adaptation and the roles of the director and choreographer. Prerequisites: upper-division standing; THHS or TDTH 10; or consent of instructor.

TDTH 115. History and Theory of Directing (4)
Evolution of directing theory from 1850 to the present with reference to the work of internationally influential directors such as Stanislavski, Brecht, and Brook. Prerequisites: THHS or TDTH 10, TDTH 21 and THAC 101 or TDAC 101 or consent of instructor.

TDTH 116. Old Myths in New Films (4)
The course will address the work of different writers each quarter, showing how their films derive from classic myths, legends, and traditions of a specific ethnic group. Authors discussed may include Kurosawa (Japanese), Herzog (German), Neel Jordan (Irish), and others. Prerequisites: upper-division standing or consent of instructor. May be taken three times for credit.

TDTH 117. Senior Seminar: Dramaturgy (4)
Introduces the theories. May be taken three times for credit.

TDTH 118. Dramaturgy in Practice (4)
Provides opportunities for students to undertake dramaturgical assignments for productions or as projects. Class meetings will create a mentoring atmosphere focused on the concrete, day-to-day process of dramaturging a production. Prerequisites: Theatre major, THHS or TDTH 11, 12, 13, and TDTH 118; at least two UD History courses; consent of instructor.

TDMV—DANCE MOVEMENT

TDMV 1. Beginning Ballet (2)
An introduction to classical ballet principles, technique, and terminology. Develops the body for strength, flexibility, and artistic interpretation. Emphasis on developing a foundation in classical movement for continuation of ballet training. Historical origin of ballet will be discussed. Prerequisite: none.

TDMV 2. Beginning Contemporary Dance (2)
Introduction to contemporary dance as an expressive medium, building technical skills at the beginning level. Pattern variations analyzed in time, space, design, and kinetic sense. Movement exploration includes improvisation and composition. Prerequisite: none. May be taken six times for credit.

TDMV 3. Beginning Jazz (2)
Introduction to the technique of jazz dance, while placing the art form in its historical context as an American vernacular form. Builds a beginning technical jazz vocabulary with a focus on rhythmical exercises, isolations, turns, and locomotor combinations. Prerequisite: none. May be taken six times for credit.

TDMV 11. Theatrical Tap (2)
The study of theatrical tap dance. Various styles of tap—such as classical, rhythm, and musical theatre—will be introduced. Emphasis on rhythm, coordination, timing, and theatrical style. Includes basic through intermediate tap movement. Prerequisite: none.

TDMV 110. Intermediate Ballet (4)
Continued studio work in ballet technique at the intermediate level and terminology. Emphasis on increasing strength, flexibility, and balance, and the interpretation of classical musical phrasing. Includes proper alignment training and artistic philosophy of classical ballet. Prerequisite: six units of THDA or TDMV 1 or consent of instructor. May be taken six times for credit.

TDMV 111. Advanced Ballet (4)
Further emphasis on advanced ballet technique, performance, terminology, and an introduction to point work.
Introduces historical ballet choreographic variations. Individual and group composition will be examined and aesthetic criticism applied. Prerequisite: Twelve units of THDA 101A-B-C or consent of instructor. May be taken six times for credit.

TDMV 112. Advanced Ballet for Contemporary Dance (4)

Prerequisite: Six units of THDA 2 or TDMV 2 or consent of instructor. May be taken six times for credit.

TDMV 120. Intermediate Contemporary Dance (4)

The development of contemporary dance as an expressive medium, with emphasis on technical skills at the intermediate level. Includes the principles, elements, and historical context of contemporary modern postmodern dance. Prerequisite: Six units of THDA 2 or TDMV 2 or consent of instructor. May be taken six times for credit.

TDMV 122. Advanced Contemporary Dance (4)

The development of contemporary dance as an expressive medium, with emphasis on technical skills at the advanced level. Includes the principles, elements, and historical context of contemporary modern postmodern dance. Prerequisite: Six units of THDA 2 or TDMV 2 or consent of instructor. May be taken six times for credit.

TDMV 130. Intermediate Jazz (2)

Designed to provide training in the technique of jazz dance, while placing the art form in its historical context as an American vernacular form. Builds an intermediate technical jazz level with a focus on style, musicality, dynamics, and performance. Prerequisite: Twelve units of THDA 101A-B-C or TDMV 111A-B-C, or TDMV 112, or TDMV 120 or consent of instructor. May be taken six times for credit.

TDMV 132. Advanced Jazz (4)

Further development in the technique of jazz dance, while placing the art form in its historical context as an American vernacular form. Builds an advanced technical jazz level with a focus on style, musicality, dynamics, and performance. Prerequisite: Six units of THDA 3 or TDMV 3 or consent of instructor. May be taken six times for credit.

TDMV 138. Hip Hop (2)

An introduction to the basic technique of hip-hop, studied to enhance an understanding of the historical cultural context, the physicality of the hip-hop and street streets and in current choreography. Prerequisite: THDA 3 or TDT 10 or consent of instructor. May be taken twice for credit.

TDMV 139. Pilates Dance Conditioning (2)

A conditioning program based on the teachings of Joseph Pilates, designed to correct muscular imbalances, and body alignment by incorporating strength, flexibility, and relaxation techniques. Prerequisite: THDA 1 or THDA 2 or TDT 3 or TDMV 1 or TDMV 2 TDMV 3 or consent of instructor. May be taken three times for credit.

TDMV 140. Beginning Dances of the World (2)

Courses designed for the in-depth study of the dances and historical context of a particular culture or ethnic form: Afro-Cuban, Spanish, Balinese, Japanese, Latin, etc. Specific topic will vary from quarter to quarter. Prerequisite: Upper-division standing.

TDMV 141. Advanced Dances of the World (4)

Courses designed for the advanced continuing study of the dances and historical context of a particular culture or ethnic form: Afro-Cuban, Spanish, Balinese, Japanese, Latin, etc. Specific topic will vary from quarter to quarter. Prerequisite: THDA 132 or TDMV 136 or TDMV 142 or TDMV 143 or TDMV 144, or consent of instructor.

TDMV 142. Latin Dance of the World (4)

To develop an appreciation and understanding of the various Latin dances. Emphasis on learning basic social dance movements, history of Latin cultures, and use of each dance as a means of social and economic expression.

TDMV 143. West African Dance (4)

An introductory course that explores the history of West African cultures and diasporas through student research, oral presentation, dance movement, and performance. Contemporary African dances influenced by drum masters and performing artists from around the world are also covered. Prerequisite: Upper-division standing.

TDMV 144. Asian Dance (4)

To develop an appreciation and understanding of the dances from various Asian cultures. Emphasis on learning the basic forms and movement vocabularies, their historical context, and the use of each dance as a means of cultural and artistic expression. Prerequisite: Upper-division standing.

TDPF—DANCE PERFORMANCE

TDPF 160. Studies in Performance—Fall Production (2-4)

The in-depth study of a major dance production in a fall dance cabaret led by faculty. Admission by audition only. Prerequisites: Audition; department stamp; concurrent enrollment in TDMV 110, 111, 112, 120, 122, 130, or 133.

TDPF 161. Studies in Performance—Winter Production (2-4)

The in-depth study for a fully staged dance production in various venues, including a fall dance cabaret led by faculty, a winter faculty concert with guest choreographers, and a spring student choreographed concert directed by faculty. Admission by audition only. Prerequisites: Audition, department stamp, concurrent enrollment in TDMV 163, TDMV 110 or TDMV 111 or TDMV 112 or TDMV 120 or TDMV 122 or TDMV 130 or TDMV 133. May be taken four times for credit.

TDPF 162. Studies in Performance Winter Production (2-4)

The in-depth study for a fully staged dance production in various venues, including a fall dance cabaret led by faculty, a winter faculty concert with guest choreographers, and a spring student choreographed concert directed by faculty. Admission by audition only. Prerequisites: Audition, department stamp, concurrent enrollment in TDMV 163, TDMV 110 or TDMV 111 or TDMV 112 or TDMV 120 or TDMV 122 or TDMV 130 or TDMV 133. May be taken four times for credit.

TDPF 163. Dance Repertory (1-4)

The study and aesthetic examination of major choreographic works by dance faculty or distinguished guest artists. Students will experience the creative process, staging, production, and performance of a complete dance work in conjunction with a conceptual study of its form and content. Audition is required. Prerequisite: Concurrent enrollment in TDPF 160 or TDPF 161 or TDPF 162. May be taken four times for credit.

TDPF 164. Performance Laboratory (2-4)

A faculty directed dance theatre project culminating in a public performance. Both purely choreographic approaches to creating dance and collaborations with visual design, musical composition, texts, film, and video will be explored, as well as participation in production elements. Prerequisites: Audition and department stamp.

TDPR—THEATRE/DANCE PRACTICUM

TDPR 1. Practicum—Scenery (4-6)

A production performance oriented course that introduces fundamentals of scenery construction and its theatrical operation. Laboratory format allows students to work through the scenery production process culminating in a crew assignment for a fully mounted theatrical production. Prerequisite: Department stamp required.

TDPR 2. Practicum—Costume (4-6)

A production performance oriented course that introduces fundamentals of costume construction and its integration into theatre operations. Laboratory format allows students to work through the costume production process culminating in a crew assignment for a fully mounted theatrical production. Prerequisite: Department stamp required.

TDPR 3. Practicum—Lighting (4-6)

A production performance oriented course that introduces fundamentals of stage lighting or sound and its technical operation. Laboratory format allows a student to work through the lighting or sound production process culminating in a crew assignment for a fully mounted theatrical production. Prerequisite: Department stamp.

TDPR 5. Practicum—Sound (4-6)

A production performance-oriented course that introduces fundamentals of theatre sound and its technical operation. Laboratory format allows a student to work through the sound production process culminating in a crew assignment for a fully mounted theatrical production. Prerequisite: Department stamp.

TDPR 102. Advanced Theatre Practicum (4-6)

A production performance-oriented course that continues the development of costume, lighting, scenery, or sound production and introduces greater responsibilities in the laboratory format. Students serve as crew heads on major departmental productions or creative projects. Prerequisites: THPR or TDPF 1, 2, 3, 5, or 5; permission of instructor; department stamp required. May be taken for credit two times.

TDPR 104. Advanced Practicum in Stage Management (4-6)

A production performance oriented course that continues the development of stage management skills and introduces greater responsibilities in the laboratory format. Students serve as either assistant stage managers on mainstage productions or stage managers on studio projects. Prerequisites: THPR or TDPR 1 and consent of instructor. May be taken two times for credit.

TPW—THEATRE PLAYWRITING

TPW 1. Introduction to Playwriting (4)

Beginning workshop in the fundamentals of playwriting. Students discuss material from a workbook that elucidates the basic principles of playwriting, do exercises designed to help them put these principles into creative practice, and are guided through the various stages of the playwriting process that culminate in a final reading produced in a studio setting. Prerequisite: THPW or TDPR 1 and consent of instructor. May be taken twice for credit.

TPW 101. Playwriting Workshop I (4)

A workshop where students present their plays at various stages of development for group analysis and discussion. Students write a thirty-minute play that culminates in a reading. Also includes writing exercises designed to stimulate imagination and develop writing techniques. Prerequisite: THPW or TDPR 1 and consent of instructor. May be taken twice for credit.

TPW 102. Playwriting Workshop II (4)

Advanced workshop where students study the full-length play structure and begin work on a long play. Students present their work at various stages of development for group discussion and analysis. Students write a thirty-minute play that culminates in a reading. Also includes writing exercises designed to stimulate imagination and develop writing techniques. Prerequisite: THPW or TDPR 1 and consent of instructor. May be taken twice for credit.

TPW 104. Screenwriting (4)

Basic principles of screenwriting using scenario composition, plot points, character study, story conflict, with emphasis on visual action and strong dramatic movement. Prerequisites: THPW or TDPR 1. May be taken twice for credit.
TDPW 105. Writing for Television: Situation Comedy (4)
Basic principles of writing comedy for television. Course incorporates study of sample episodic scripts. Analysis focuses on structure and character development. Prerequisite: THPW or TDPW 1. May be taken twice for credit.

TDPW 106. Writing for Television: Hour-Long Drama (4)
Basic principles of writing in the hour-long format for television. Course incorporates study of sample programs. Analysis of structure and character development. Students create concepts, structure, pitch, and write treatments and partial scripts. Prerequisite: THPW or TDPW 1. May be taken twice for credit.

TDPW 108. Topics (4)
Topics in playwriting, such as documentary theatre, adaptation and writing for media, for students who possess basic knowledge of playwriting. Admission by interview with instructor. Prerequisites: THPW or TDPW 1 and department stamp.

TDPW 190. Major Project in Playwriting/Screenwriting (4)
For the advanced student in playwriting/screenwriting. This intensive concentration in the study of playwriting and/or screenwriting will culminate in the creation of a substantial length play. A maximum of eight units of major project study, regardless of area (design, directing, stage description or playwriting), may be used to fulfill major requirements. Applicants must have completed the playwriting sequence, THPW or TDPW 1, 101, and/or consent of instructor. See department for application form. Prerequisites: THPW or TDPW 1 and THPW or TDPW 101.

TDTR—DANCE THEORY

TDTR 10. Introduction to Dance (4)
An overview of dance, examining its social and cultural history and its evolution as an art form. Focus is on dance and its many genres as an expressive medium and form of communication. Prerequisite: none.

TDTR 101. Dance Movement Analysis (4)
An overview and analysis of movement theory systems that offer approaches to improve movement quality, prevent injuries, aid in rehabilitation, develop mental focus and kinesthetic control, establish a positive body language, and develop vocabulary for creative research. Prerequisite: TDTR 10.

TDTR 102. Movement Research (4)
Students will study images of anatomical alignment and use their bodies to translate those images into physical action. They will expand their movement potential, deepen their awareness of body language and alignment and develop their own dance coordination and technique. Prerequisites: TDTR 10, TDTR 101, or THDA 101B-C or THDA 110A-B-C, or consent of instructor; department stamp.

TDTR 103. Dance and Technology (4)
This course introduces the theoretical and practical understanding of both available and developing computer-assisted media for the design and production of choreography. Prerequisites: TDTR 10, TDCH 40, or consent of instructor.

TDTR 104. Dance Theory and Pedagogy (4)
The study of the theoretical aspects of dance education, including an analysis of movement concepts for all ages. Development of basic technique training in all forms, curriculum planning, social awareness, and problem solving. Fundamental elements of cognitive and kinetic learning skills. Prerequisites: TDTR 10, TDMV 110, 120, 130 or THDA 101A-B-C, or THDA 110A-B-C, or THDA 120A-B-C; consent of instructor; department stamp.

TDTR 195. Instructional Assistance (2-4)
Assist with instruction in undergraduate dance courses. Full description of duties will appear on the Application for Instructional Assistance. Prerequisite: upper-division standing. 3.0 GPA, etc. (per CEP guidelines).

TDTR 197. Field Studies in Dance (1-12)
Designed for advanced students, this course significantly extends their knowledge of the theatre and dance through intensive participation in the creative work of a major professional theatre or dance company, under the guidance of artists resident in those theatres or companies. Students will submit regular written evaluations each week of their ongoing field study. Prerequisites: upper-division standing and consent of instructor required, 3.0 overall GPA, 90 units completed.

TDGR—THEATRE GRADUATE

TDGR 200. Dynamics (1)
A daily program of physical, vocal, and speech exercises designed to prepare the student to move in a focused way through specific class areas with minimum amount of warm-up time. The exercises work on development of flexibility, strength, and coordination throughout the body. Strong emphasis is placed on physical and mental centering within a structured and disciplined approach to preparation. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 201. Stage Combat (2)
A study of the dramatic elements of stage violence, and practical work in developing the physical skills necessary to fully realize violent moments on the stage. At the core of the study is the process from text to convincing theatrical action. Physical work revolves around basic principles of energy, focus, and center inherent in armed and weapons combat. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 203. Seminar and Supervision for ArtsBridge Scholars (1)
A workshop to address the specific pedagogical requirements and techniques to be employed by students as ArtsBridge (outreach) Scholars and Mentors of ArtsBridge Scholars. Instructor will mentor the students on-site as well as in seminars. Prerequisites: graduate standing and consent of instructor.

TDGR 204A. Text Analysis (4)
Topics to be covered will include (1) concept of poetic language; lexical and syntactic analysis of dialogue; (2) the semantic context of dialogue; (3) thematic structure, from motive to themes; (4) the concept of dramatic character or hero; (5) dramatic narrative; (6) the material of drama; the relationship of myth and ritual to drama; (7) analysis versus interpretation; (8) practical applications. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 204B. Contemporary Theories of Theatre (4)
An investigation of contemporary theories of theatre with an emphasis on structural and poststructural perspectives on text and textuality. The seminar will focus on adapting contemporary theories of close reading to the interpretive lives and creative work. Prerequisite: TDGR 204A; admission to M.F.A. Theatre program or consent of instructor.

TDGR 204C. Collective Creation (4)
The culmination of the TDGR 204 sequence, in which all students in disciplines create and perform publicly presented original theatre pieces. Prerequisites: TDGR 204B; admission to M.F.A. Theatre program or consent of instructor.

TDGR 206. Faculty Directed Production (4)
Faculty directed production, from the rehearsal process through public performance. All participants will enroll in the same section, the number of units depending upon degree of involvement. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 207. Production (4)
The collaborative process from the rehearsal process through public performance. All participants will enroll in the same section, the same number of units. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 209. Commedia and Comic Techniques (3)
A course designed to provide actors with tools, both physical and verbal, to play comedy. Included will be commedia dell’arte techniques, clown work, masks, circus techniques, mime, and scene work from comic scripts. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 210A. Process I (4)
The actors focus on the nature of the acting process, using various exercises to stimulate imagination and to inspire individual creative choices. Later in the course, improvisational and imaginative experiences to explore character and text. The class culminates in intensive scene work chosen for the particular actor to model the improvisational approach with script material. The class is a combination of both actors and directors so that a common language is developed. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 210B. Process II (4)
Intensive studio examination of realistic texts using improvisational and imaginative techniques to realistically based texts commonly from American theatre. Prerequisites: THGR or TDGR 210A and admission to the M.F.A. Theatre program.

TDGR 210C. Process I (4)
The intensive study of the dramatic and fictional work of Anton Chekhov and an actor’s approach to that work. This course includes many of the techniques begun in earlier classes and applies them to this material. Also included is a study of Chekhov’s short stories and plays, and involves adapting and staging these works. Prerequisites: THGR or TDGR 210B and admission to the M.F.A. Theatre program.

TDGR 211. Choreography Seminar (4)
The study and practice of aesthetic concepts, history, and methodology for choreographic creation of dance theatre; the study and practice of choreographer ability to establish innovative creative processes with performers and craft their material, both independently and in conjunction with other theatrical and technological elements. Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 211A—B—C. Speech for the Actor I—II—III (3-2-2)
Introduction of the principles of phonetics and articulation. Constant study and drill to prepare the actor for standard speech and flexibility. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 212. Acting Practicum (2)
One-on-one laboratory workshop that examines practical applications of accents, speech and voice work, dialect, movement and combat work specific and ancillary to the productions in which the students have been cast. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 213A—B—C. Movement for Theatre I—II—III (2-2-2)
An intensive studio course in the art of movement as a basis for theatre performance. Theory and practice of energy flow, weight, spatial focus, time consumption, and the shaping of character (S/U grades only). Prerequisites: THGR or TDGR 213A for B, THGR or TDGR 213B for C; admission to the M.F.A. Theatre program.

TDGR 214A—B—C. Voice for Theatre I—II—III (2-2-2)
Voice exercises designed to “free the voice” with emphasis on diaphragmatic breathing, articulation exercises, and singing exercises. Course designed to broaden pitch range, projection, and to expand the full range of potential characterizations. (S/U grades only.) Prerequisites: THGR or TDGR 214A for B; THGR or TDGR 214B for C; admission to the M.F.A. Theatre program.

TDGR 215. Dance Theatre Seminar (2)
This seminar focuses on the aesthetic concepts that form the foundation for the creation, performance, research, and critical analysis of dance theatre. Students will discuss critical theory in related arts and develop individualized projects that advance their creative and intellectual goals. Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 216. Principles of Curriculum Theory (2)
This comprehensive seminar provides an assessment of the field of curriculum theory as preparation for teaching general dance education courses. Conceptual thinking, problem solving, current publications, methods of inquiry, assessment, and a range of practical teaching issues will be discussed. Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 217. New Media and Technology (2)
This seminar explores the interaction of new media and technologies for collaboration, research, and creation in...
performance. Students will pursue diverse and innovative research in technology as a medium for new forms of expression in dance theatre. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 218. Dance Theatre: Professional Practice (2)** This seminar focuses on the skills and tools needed for the professional practice of self-production in performance. Areas introduced include grant writing, press kits, media relations, marketing, Web sites, documentation, budgets, artistic management, and nonprofit organization administration. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 219. Directing Process Studio (4)** Preparation, presentation, and discussion of representative scenes from various periods of dramatic literature. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 220. Advanced Contemporary Dance (2)** Designed for graduates with advanced training in contemporary modern dance and intermediate to advanced training in ballet. Emphasis is on increasing composition and performance skills in ballet through contemporary modern dance aesthetics. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 220A-B-C. Process II: Classical Text (4-4-4)** An intensive studio examination of problems and potential associated with the theatrical realization of the classical text. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 221A-B. Speech for the Actor II (3-3)** Advanced work in phonetics and articulation. Intensive study of stage dialects to prepare actor for variety of roles. **PREREQUISITE:** graduate standing; THGR or TDGR 221A. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 222. Topics in World Dance (2)** Course designed for study of specific world dances. Historical and contemporary context of a particular culture or ethnic form: Afro-Cuban, West African, Asian, Spanish, Balinese, Japanese, Latin, American jazz, hip-hop, etc. Specific topics will vary from quarter to quarter. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 222A-B-C. Theatre Production II (1-4)** Ranging from staged reading of new plays, documentary drama, or synthetically created dramatic text to totally integrated production of full-length plays (faculty or student directed), and incorporating the creative contribution of actors, directors, playwrights, and critics, this intensive involvement of multiple forms of theatre will serve as the necessary creative laboratory for the M.F.A. program. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 223A-B. Movement for Theatre II (3-3)** An advanced course in the art of movement for theatre, building on the knowledge gained in Theatre 213. (S/U grades only.) **PREREQUISITE:** THGR or TDGR 223A for B; admission to the M.F.A. Theatre program.

**TDGR 224A-B. Voice for Theatre II (3-3)** Advanced voice training designed to help the actor fuse voice, emotion, and body into a fully realized reflection of the text. (S/U grades only.) **PREREQUISITE:** THGR or TDGR 224A for B; admission to the M.F.A. Theatre program.

**TDGR 225A-B. Singing for the Actor II (1-1)** Continuing vocal technique for the musical theatre. More complicated musical material investigated and prepared. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 227. Directing Assistantship (6-12)** Assisting faculty or off-campus. Perform research necessary for project. Assist with casting. Participate in design meetings. Observe and participate in rehearsal. Direct, if delegated to do so. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 228. Designing Assistantship (6-12)** Assisting faculty with productions off-campus. To draft some or all of the design. To perform research, either visual, historical or technical. To create and maintain all production plans and paperwork from pre-production through opening night. To organize the staff for focus and work calls. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 229. Theatre Externship (6-12)** Selected professional opportunities in repertory and commercial theatre, designed to engage the student in particular creative responsibilities under the guidance of master artist-teachers. Student is expected to give biweekly reports detailing his/her experience with the professional company. **PREREQUISITE:** admission to the M.F.A. Theatre program, or consent of instructor.

**TDGR 230. Acting Process III: Actors’ Studio (4)** An advanced studio for graduate actors and directors, this work will explore a single text from the modern theatre under the direction of a master teacher-artist. Concentration will be on multiple possible modes of encountering a text, varieties of interpretation and performance realization, and the development of a theatre ensemble. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 231A. Professional Preparation for the Actor (4)** A twice-weekly seminar focusing on the actor’s confrontation with the industry, including in-depth preparation for auditions and interviews, the development of a personal and physical style, and the physical characteristics and the acting style needed for work in film and television. Students will rehearse and perform in simulated studio settings. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 233. Acting for the Camera (1)** This course is designed to aid the actor in the transition to the motion picture. The student will study the function of the actor in the film industry and the technical differences between theatre and film. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 235. Singing for the Actor III (1)** Continuing vocal technique for the musical theatre. More complicated musical material investigated and prepared. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 239. Skills (4)** A unifying approach to acting skills (voice, movement, and speech) designed to result in providing the graduating actor with a daily regimen appropriate for professional work. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 240. Directing Seminar (1-6)** A seminar for directing projects of all graduate directing students. Depending upon individual student needs, the work may include play selection, historical or sociological research, and discussion of emerging directorial concepts, the rehearsal process, and post-production evaluation. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 242. Director/Designer Collaboration Seminar (4)** A seminar focusing on the creative application of design solutions to problems presented by specific texts, and how they function in directorial and design production concepts. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 243. Director/Playwright Lab (4)** Collaborative process between directing and playwrighting students providing a focused exploration of a broad range of directing and writing methodologies. Students work in teams to develop and create pieces based on the methodology of guest directors. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 245. Directing Practicum (4)** Students enrolled in this course will work on productions in the function of a director. This will include staging, creative interpretation, blocking, etc. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 249A. Music Theatre Workshop (4)** A workshop in which students from music and theatre departments study examples of various forms of music theatre and collaboratively develop creative projects that are presented at the end of the two-quarter sequence. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 249B. Music Theatre Workshop (4)** Continuation of workshop in which students from music and theatre departments study examples of various forms of music theatre and collaboratively develop creative projects that are presented at the end of the two-quarter sequence. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 250. Playwriting Seminar (4)** A seminar focusing on the current playwriting project of all graduate playwriting students. Work for each quarter is individually determined according to student needs, but may include exploration of an inventive idea, development of a scenario or other structural work, and writing dialogue. Students present work to be discussed in class. May include group or individual playwriting projects. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 251. Playwriting Practicum (2)** Creative writing project developing original scripts from outline to the final play. Plays may vary depending on the quarter, but will include writing of a realistic one-act, a nonrealistic one-act, a one-act documentary or dramatization of fiction, a full-length play. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 252. Dramaturgy Seminar (4)** The seminar will deal with all dramaturgical issues pertaining to departmental productions: production research, textual and analysis, translation, adaptation, rehearsal process, and critique. Concurrently with the dramaturgy issues of the current season, the seminar will offer the possible choices of plays for future production seasons. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 253. Dramaturgy Practicum (1-6)** Students enrolled in this course will work on productions in the function of a dramaturg. This will entail preparation of text research, participation at rehearsals, etc. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 254. Television Writing (4)** A one-quarter course covering the hourlong format (five weeks) and situation comedies (five weeks). Includes study and discussion of television script format and structure. Students will create the concept and structure for specific scripts in each genre. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 256. Contemporary Plays (1-4)** A guided reading course focusing exclusively on very recent plays in an attempt to become aware of what is being written now. Course may be repeated for credit. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 257. Screenwriting (4)** Students will develop the concept for an original piece for television or film and will write the screenplay. Students will present work in seminar at each phase of the development. **PREREQUISITE:** admission to the M.F.A. Theatre program and THGR or TDGR 250.

**TDGR 258. Dramatization and Adaptation (4)** Seminar will deal with dramatization and adaptation of literary texts for the purpose of theatrical production. This year, study some significant examples of such practice from the past, and subsequently, students will develop their own projects of dramatization, adaptation, or modernization of texts. **PREREQUISITE:** admission to the M.F.A. Theatre program.

**TDGR 260. New-Play Festival (4)** The collaborative process of new-play development through readings, rehearsals, and public performance. M.F.A. actors, designers, directors, playwrights, and stage managers enroll in one section and collaborate in creating the annual festival of full-length and one-act plays. **PREREQUISITE:** admission to the M.F.A. Theatre program or consent of instructor.

**TDGR 262. Crossing Boundaries: Design Improvisations (4)** Conceiving interactive designs. A project/performance-based course, concentrating on the conception of designs adaptable to improvisatory contexts, in which
special topics in design taught in an intensive workshop and scenic design. Work on individual projects in sound, lighting, costume, and scenic design. Including text analysis, research, conceptualization, and collaboration, professional procedures and systems, paperwork, and organization. Various scales of production projects will be addressed by the student for presentation and critique, and may be theoretical or productions in the departmental calendar. PREREQUISITE: second- or third-year design students only; admission to the M.F.A. Theatre program.

TDR 276. Advanced Costume Design (4) Projects in costume design, emphasizing script analysis, research, conceptualization, and visual expression. Studio work includes costume rendering in various media for specific plays. PREREQUISITE: admission to the M.F.A. Theatre program.

TDR 278. Special Topics in Theatre Design (1-6) This course designed to expose the theatre design student to a variety of specialized topics, including millinery, pattern drafting and draping, scenic painting, model making, figure drawing, drafting, fitting, rendering. Topics will vary from quarter to quarter. PREREQUISITE: admission to the M.F.A. Theatre program.

TDR 279. Design Practicum (4) This course covers the artistic, aesthetic, and practical aspects of the actors’ work as they develop and execute the design toward a fully realized production. PREREQUISITE: admission to the M.F.A. Theatre program.

TDR 280A. Stage Management 1 (4) Discussion and research into the duties, responsibilities, and roles of a stage manager. Work to include studies in script analysis, communication, conflict resolution, rehearsal procedures, performance styles, skill, and conceptual approach to stage management. PREREQUISITE: admission to M.F.A. Theatre program or consent of instructor.

TDR 280B. Stage Management 2 (4) The second of the three-part introductory stage management series, this course further explores the stage manager’s process, focusing on the technical rehearsal period through the opening of a production. PREREQUISITES: TDR 280A; admission to M.F.A. Theatre program or consent of instructor.

TDR 280C. Stage Management 3 (4) The final course in the three-part introductory stage management series focuses on the stage manager’s role once a production has opened. The course will also address topics such as new plays, touring, dance, multimedia productions, and music. PREREQUISITES: TDR 280A and TDR 280B; admission to M.F.A. Theatre program or consent of instructor.

TDR 286. Special Topics in Stage Management (1-6) A course for M.F.A. students in stage management. Topics will focus on aspects of theatre administration, and advanced stage management, including nonprofit theatre, commercial theatre, advanced productions, venues, musicals/dance, production management, theatre development, business problems, and theatre marketing. PREREQUISITE: admission to the M.F.A. Theatre program.

TDR 288. Stage Management Seminar (4) A weekly seminar in which all graduate stage managers participate. Includes discussions of problems encountered on current productions, paperwork, methodology, and production approaches. PREREQUISITE: admission to the M.F.A. Theatre program.

TDR 289. Introduction to Doctoral Studies (4) Seminar acquaints doctoral students of all levels with research methods, theoretical models, publishing protocol, professional preparation, and pedagogical approaches particular to theatre and performance studies. Course assignments are tailored to students’ scholarly interests and progress toward degree. PREREQUISITE: admission to Ph.D. program in theatre or consent of instructor.

TDR 290. Dramatic Literature and Theatre History Prior to 1900 (4) Selected material from following topics: Classical Drama, Asian Drama, Medieval and Early Modern Drama, Shakespeare, European Drama 1600–1900. May be taken eight times as content varies. PREREQUISITE: admission to Ph.D. program in Theatre.

TDR 291. Dramatic Literature and Theatre History 1900 to the Present (4) Selected material from following topics: European Theatre 1900–Present, American Theatre 1900–Present, Contemporary Theatre and Performance. May be taken eight times as content varies. PREREQUISITE: admission to Ph.D. program in Theatre.

TDR 292. Cultural and Critical Theory (4) Selected material from following topics: Performance Theory, Dramatic Theory, Critical Theory, Cultural Studies. May be taken eight times as content varies. PREREQUISITE: admission to Ph.D. program in Theatre.

TDR 293. Directed Studies (4-12) Individual or small group directed study.

TDR 295. Acting Practicum (2) This course covers the artistic, aesthetic, and practical aspects of the actors’ work as they develop and execute the character/role toward a fully realized production. PREREQUISITE: admission to the M.F.A. Theatre program.

TDR 296. Stage Management Practicum (4) Taken each term by all graduate stage management students. The class focuses on the development of knowledge and skills necessary for the contemporary stage manager. Seminar format is augmented by lab work that may include departmental productions. PREREQUISITE: admission to the M.F.A. Theatre program.

TDR 298. Special Projects (0-4) Advanced seminar and research projects in theatre. (S/U grades only.) PREREQUISITE: admission to the M.F.A. Theatre program.

TDR 299. Thesis Project (2-12) Specific projects in theatre individually determined to meet the developing needs, interests, and abilities of M.F.A. candidates. (S/U grades only.) PREREQUISITE: admission to the M.F.A. Theatre program.

TDR 500. Introduction to Apprentice Teaching (4) This course, designed to meet the needs of the graduate students who serve as teaching assistants, includes analysis of texts and materials, discussion of teaching techniques, conducting discussion sections, formulation of topics and questions for papers, and examinations and grading. 2 units=25% TAship. 4 units=50% TAship. PREREQUISITE: graduate standing and consent of the instructor.

TDR 501. Teaching—Non Departmental (4) Consideration of pedagogical applications in the teaching of literacy, historical and philosophical text at the undergraduate level. Pedagogical aids for the teaching of composition and supervised teaching in sections of undergraduate courses such as the Revelle Humanities sequence and in the CAF programs of Sixth College. PREREQUISITE: admission to the M.F.A. Theatre program.

PROFESSORS
Carlos Blanco-Aguinaga, Ph.D., Spanish and Latin American Literature, Emeritus
Jaime Concha, Ph.D., Spanish and Latin American Literature
Michael P. Montéon, Ph.D., Latin American History
Rosaura Sanchez, Ph.D., Spanish and Latin American Literature, Linguistics
Yingin Zhang, Ph.D., Chinese and Comparative Literature
Oumelbanine Zhiri, Ph.D., Literature

ASSOCIATE PROFessORS
John D. Blanco, Ph.D., Literatures of the Americas
Robert Canel, Ph.D., African and Caribbean Literature, Coordinator of Third World Studies
Ann L. Craig, Ph.D., Political Science
Rosemary George, Ph.D., Literature
Milos Kokotovic, Ph.D., Literature
Max Parra, Ph.D., Mexican Literature
Winnie Woodhall, Ph.D., Literature

The Third World Studies Program has three main objectives:

1. To provide an understanding of the Third World and its relationships to the West. In order to understand these relationships, it is necessary to study the historical context out of which the present relationships developed. For example, besides trying to understand what kind of society existed in Meso-America when the Spaniards arrived in 1520, the student must also have an understanding of the historical development in Europe which resulted in Spain's decision to seek wider trade abroad. There is insistence on both the similarities and differences which Third World societies have among themselves and the similarities and differences with Western societies.

2. To provide an interdisciplinary approach to the study of the Third World. The program is not conceived as being exclusively historically oriented nor as being predominantly a social science program, but rather one that integrates both the social sciences and the humanities.

3. To provide an understanding of the shifting economic and political nature of the countries designated as belonging to the "Third World," especially in light of the dramatic political and economic changes worldwide in the late 1980s and 1990s. To this end, our Third World studies courses will, where appropriate, address and contextualize the history of the term "Third World" and its current applications in scholarship and the broader international media.

THE MAJOR PROGRAM

Students interested in Third World studies may focus on a theme, problem, or geohistorical area. A Third World studies program of study must be interdisciplinary. Students must choose course offerings from at least three disciplines (anthropology, economics, history, literature, political science, sociology, etc.).

A Third World studies major requires a minimum of twelve upper-division courses plus three lower-division courses from the Third World studies sequence (TWS 21, 22, 23, 24, 25, or 26). Students at Eleanor Roosevelt College may substitute up to two courses, Making of the Modern World 4 and 5, for two of the three-course lower-division sequence, but must take at least one course in the TWS 21–26 sequence. Selection of a specific concentration, discipline, or department should be determined in consultation with a Third World studies faculty member or program advisor.

Students majoring and minoring in Third World studies are encouraged to experience their areas first-hand by studying abroad in any number of ways. Most convenient, depending on the area, is the University of California's Education Abroad Program, whereby students can gain UC credit for study at foreign universities. This is especially convenient for students who cannot find sufficient courses at UC San Diego pertaining to such regions as the Caribbean and the Indian subcontinent. Moreover, Latin America, Asia, and Africa course work is available in these regions through the Education Abroad Program and various programs available through other U.S. universities.

DOUBLE MAJOR

Students interested in Third World studies as a double major must have at least ten upper-division courses that are unique to each departmental major. The courses required for Third World studies may cover one or more disciplines. Courses may focus on a theme or problem or on a geo-historical area. The remaining two courses may overlap with the other major requirements. Approval from both departments is required for overlaps. Students should consult a Third World studies faculty member or program advisor for approval of a major program.

MINOR

A student may minor in Third World studies by selecting two courses from the lower-division Third World studies sequence (TWS 21, 22, 23, 24, 25, or 26) and five upper-division courses in disciplines dealing with the Third World.

Third World studies faculty members offer courses in the Departments of Anthropology, Communication, Literature, Political Science, Sociology, History, and in the Third World Studies Program. Appropriate courses in other departments may also be considered. Students should consult departmental and program listings for Third World area offerings.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

See listings also under the Departments of Anthropology, Communication, History, Literature, Political Science, and Sociology for other Third World area offerings.

LOWER-DIVISION

21-22-23-24-25-26. Third World Literatures (4-4-4-4-4-4)
An introduction to the cultures of various Third World countries through close reading of selected literary texts. TWS 21 focuses on African literature, TWS 22 deals with Latin American literature, TWS 23 examines Chinese literature, TWS 24 examines Caribbean literature, TWS 25 examines Middle Eastern literature, and TWS 26 examines literature of the Indian Subcontinent. Topics will vary each quarter. (F, W, S)

UPPER-DIVISION

132. Literature and Third World Societies (4)
This course will investigate novelistic and dramatic treatments of European society in the era of nineteenth-century imperialism, Third World societies under the impact of colonialism, and the position of national minorities inside the United States to the present day. Attention will center on the interplay between the aesthetic merits and social-historical-philosophical content of the works read.

135. Bilingualism: Research and Field Studies (4)
A study of sociolinguistic findings on bilingualism throughout the world and an evaluation of bilingual education theories. The students will also engage in surveys of local communities to assess bilingualism and educational needs of bilingual communities. PREREQUISITE: upper-division standing.

190. Undergraduate Seminars (4)
Seminars will be organized on the basis of topics with readings, discussions, and papers. Specific subjects to be covered will change each quarter depending on particular interest of instructors or students. May be repeated for credit.

197. Field Work (4)
In an attempt to explore and study some unique processes and aspects of community life, students will engage in research in field settings. Topics to be researched may vary, but in each case the course will provide skills for carrying out these studies.

198. Directed Group Studies (2 or 4)
Directed group study on a topic or in a field not included in the regular department curriculum, by special arrangement with a faculty member. PREREQUISITE: upper-division standing.

199. Independent Study (2 or 4)
Tutorial, individual guided reading and research projects (to be arranged between student and instructor) in an area not normally covered in courses currently being offered in the department. (P/NP grades only.) PREREQUISITES: upper-division standing and consent of instructor. (F, W, S)

Thurgood Marshall College

OFFICE: Provost, Thurgood Marshall College Administration Building

HONORS PROGRAM

The Thurgood Marshall College Honors Program is designed to address one of the greatest responsibilities and challenges of public higher education: the education of students of exceptionally high academic achievement. The program provides the organization and the environment within which students are encouraged to pursue individual excellence.

Honors activities and events are designed to introduce Thurgood Marshall students to the excitement of pioneering research and innovative scholarship in all disciplines at UC San Diego and to create opportunities for discussion on public issues with locally and nationally known figures. This happens primarily through the honors seminar, offered every quarter, and open to all class levels of honors students.

To qualify for the honors program, incoming transfer and freshmen students must check the Marshall College Honors eligibility criteria on the Marshall Web site: http://marshall.ucsd.edu. Continuing UCSD students are eligible upon successful completion of at least twelve graded units with a 3.8 or better cumulative GPA. All honors students must maintain a 3.50 or better cumulative GPA.

Thurgood Marshall College annually recognizes superior achievement. The Provost Award is presented at commencement to a graduating senior who is recognized for outstanding academic achievement and breadth of scholarship. In addition, students may be eligible for universitywide and departmental honors, Provost Honors, Thurgood Marshall College Honors, Phi Beta Kappa membership, and participation in small honors classes in science.

PUBLIC SERVICE MINOR

Thurgood Marshall College sponsors the Public Service Minor at UCSD, which encourages students to understand the history and practices of public
service and to participate in the development of civic skills. This minor is open to all UCSD students in good standing. Please see “Public Service Minor” in the departmental listings or visit the Web site at http://publicsvcminor.ucsd.edu.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

10. Thurgood Marshall College Methods of Inquiry (2)
In this course, students learn analytical thinking strategies routinely used by professional scholars, historians, and social planners. Each student applies methodologies from the materials presented in lectures, films, and readings relevant to the current course work. **PREREQUISITE:** department stamp. (P/NP only.)

15. Introduction to Public Service in America (4)
This course is designed to study, discuss, and analyze the history and current role of public service in the United States. Students will be introduced to the different roles held by the three sectors of the American economic structure (government, business, and nonprofit/public service) with opportunity to provide a critical analysis of those roles within American society.

20. Thurgood Marshall College Honors Seminar (1)
Weekly seminar conducted by UCSD faculty and distinguished guest lecturers on topics related to the core curriculum: diversity, justice, and imagination. (P/NP only.)

90. Undergraduate Seminar (1)
These seminars are designed to expose undergraduate students, especially freshmen and sophomores, to exciting research conducted by UCSD faculty. **PREREQUISITE:** none. (P/NP only.)

198. Thurgood Marshall College Directed Group Studies (4)
Directed group studies of a creative project. Designated for TMC students to work as a group on a project supervised by faculty; not included in regular curriculum, where group emphasis would be more beneficial and constructive than individual special studies. **PREREQUISITE:** upper-division standing (ninety units) including lower-division writing requirement (DOC 2 and DOC 3), minimum overall GPA of 2.5 and consent of instructor.

199. Marshall College Special Project (1-4)
Individual, independent research, or creative work intended to satisfy Marshall College graduation requirement. Designated for Marshall College students, topics are supervised by Marshall faculty in association with the honors seminar and honors projects. A written application describing the project is required. See Office of the Provost. **PREREQUISITE:** upper-division students with 2.5 GPA and 90 units and approval of the provost or faculty designee. Honors standing required for honors projects. (P/NP only)

Since 1997, the UC San Diego Washington Center has provided students an opportunity to intern in the nation's capital while continuing their academic course work. The program is open to all students who have completed ninety units toward graduation with a 2.5 grade-point average. Students earn fourteen units of academic credit, continue to be registered full-time, and fulfill university residency requirements.

Students maintain financial aid eligibility; the amount can be adjusted to reflect the additional costs of the program. In addition, eligible students are considered for the University of California President's Washington Scholarship Program. Students live in the University of California Washington Center, located in the heart of Washington, D.C.

**Internship**—Students work twenty-four hours per week as interns in federal agencies, interest groups, trade associations, the national news media, museums, research institutions, or in other organizations related to policy, politics, science, and culture and geared to the interests and objectives of individual students. **Political Science 197I:** six or eight units of academic credit.

**Research Seminar**—Drawing on the internship experience, each student participates in a seminar and undertakes an independent research project. **Political Science 194** (or depending on the student's major, one of the cross-listed equivalents): four units of academic credit.

**Elective Course**—Each student also enrolls in one upper-division seminar course at the Washington Center. These courses are taught by the different campuses' resident faculty and change each quarter. Typically they include a mix of political science, international relations, other social sciences, history, and the arts and humanities. In addition to regular instruction, these seminars may take advantage of the Washington locale and often include guest speakers and fieldwork activities.

THE URBAN STUDIES AND PLANNING PROGRAM

The great majority of U.S. citizens, and a growing proportion of people throughout the world, live in cities. Cities provide the environment in which people work, learn, play, and make decisions together. Local governments make critical interventions in the quality of life. At the same time, the cities of the world are increasingly linked in a global economic system, making diverse contributions to the international division of labor.

Urban studies and planning (USP) is an interdisciplinary program providing students with a variety of perspectives for understanding the development, growth, and culture of cities and the communities within them. Course work introduces students to the ways different disciplines understand cities and the societies of which they are a part. Upper-division requirements educate students about the parameters within which urban choices are made.

One of the outstanding features of the Urban Studies and Planning Program is the upper-division research requirement. During a two-quarter sequence designed to be taken in the fall and winter of the senior year, all USP majors are guided through a research internship and writing process. The upper-division field studies sequence allows students to work on specific policy projects in the San Diego region. Eligible students may choose to enroll in USP 190 in the spring to write an honors thesis. The honors option is an opportunity to do advanced research and writing that builds on work already completed in the senior sequence.

Urban studies and planning is an undergraduate community of students with diverse interests and goals. After graduation some majors pursue graduate work in social science disciplines. Others pursue graduate study in public policy, law, planning, or architecture. Urban studies has always also attracted
students interested in medicine and public-health issues, who continue to study in these areas at schools of medicine or public health. Urban studies and planning provides students with a solid liberal arts background for graduate study or for professional work in a number of fields. Many students find employment opportunities through their internship placement. More generally, graduates of urban studies and planning will have the analytic skills to think clearly and act creatively about the problems and prospects of the urban environment.

THE URBAN STUDIES AND PLANNING MAJOR

A bachelor of arts degree in urban studies and planning will be given to students who satisfactorily complete the general-education requirements of Muir, Revelle, Marshall, Warren, Roosevelt, or Sixth College in addition to the urban studies and planning courses described below. The undergraduate program in urban studies and planning requires a three-quarter lower-division sequence in urban studies (USP 1-2-3), Political Science 30, and twelve courses in upper-division urban studies and planning. Students are encouraged to complete the lower-division prerequisites before they enroll in the upper-division courses.

In accordance with campus academic regulations, courses used to satisfy the major cannot be applied toward a minor, although some overlap is allowed for double majors. All lower-division and upper-division requirements must be taken for a letter grade. A 2.0 grade point average is required in the major, and students must earn at least C– in each course used for the major. Transfer students should see the USP major advisor to determine whether courses taken elsewhere satisfy USP major requirements. No more than one special studies course, USP 198 or USP 199, will be accepted to count toward the major.

LOWER-DIVISION REQUIREMENTS

Students majoring in urban studies and planning must complete the introductory sequence:
USP 1. History of U.S. Urban Communities (4)
USP 2. Urban World System (4)
USP 3. The City and Social Theory (4)
Political Science 30. Political Inquiry (4)
(Psychology 60, Introduction to Statistics or Sociology 60, The Practice of Social Research may be substituted for Political Science 30.)

UPPER-DIVISION REQUIREMENTS

The upper-division requirements in urban studies and planning are:
1. three foundation courses
2. one research methods course to be taken junior year
3. two senior sequence courses
4. six upper-division elective courses

Foundation Courses

Foundation courses provide the conceptual tools for the major. Students are to choose three of
USP 102. Urban Economics (Economics 135) (4)
USP 103. U.S. Cities in the Twentieth Century (HIUS 148) (4)
(USP 165/HIUS 147, History of the American Suburb may be substituted for USP 103.)
USP 104. Ethnic Diversity and the City (Ethnic Studies 105) (4)
USP 105. Urban Sociology (Sociology C/153) (4)
USP 107. Urban Politics (Political Science 102E) (4)
USP 124. Land Use Planning (4)
(USP 173, History of Urban Planning and Design may be substituted for USP 124.)

Research Methods Courses

Students are to choose one course of
USP 125. The Design of Social Research (4)
USP 129. Research Methods: Studying Racial and Ethnic Communities (Ethnic Studies 190) (4)
USP 130. Field Work in Racial and Ethnic Communities (Ethnic Studies 107) (4)
USP 191. GIS for Urban Community Planning (4)
USP 193. San Diego Community Research (4)

Senior Sequence Requirement

In their senior year, all students must complete the senior sequence: USP 186 in the fall, and USP 187 in the winter. These courses must be taken in order. The sequence develops each student's ability to (1) critically review literature research; (2) formulate interesting research questions of their own; (3) design an original research project and investigate strategy; (4) conduct research; and (5) analyze, interpret, and write up findings. The final requirement of USP 186 is a research proposal. By the end of USP 187, each student must complete a Senior Research Project.
Because the senior sequence includes an internship, no other internship or field placement will be counted toward the major.

Honors in Urban Studies and Planning

Candidates for Honors in Urban Studies and Planning are required to take USP 190 Senior Honors Seminar, in which students write a senior thesis. Prerequisites for enrolling in USP 190 are a minimum 3.5 GPA in the major, senior standing, USP 186 and USP 187, and consent of instructor. Majors who plan to enroll in USP 190 must declare their intent fall quarter in USP 186.
USP 190. Senior Honors Seminar (4)

Upper-Division Elective Courses

Students are encouraged to pick an area of concentration, and choose upper-division electives listed under that cluster. Students may also define their own area of concentration and design an appropriate curriculum drawn from courses offered by USP and other related departments. USP 199, Independent Study taken for Pass/Not Pass counts for one USP upper-division elective course.

Urban/Regional Policy and Planning
USP 100. Introduction to Urban Planning

USP 101/Political Science 160AA. Introduction to Policy Analysis
USP 102/Economics 135. Urban Economics
USP 107/Political Science 102E. Urban Politics
USP 109/Political Science 103A. California Government and Politics

THE MINOR PROGRAM

The urban studies and planning minor consists of seven courses in urban studies and planning, selected with the prior approval of the USP student affairs advisor. Students who wish to minor in urban studies may do so by taking any two courses from among the lower-division sequence and the upper-division foundation courses, and five upper-division courses from among those that serve the USP major. All courses must be taken for a letter grade not lower than a C–. Courses selected need approval from the USP program advisor. Students can declare the minor online.

EDUCATION ABROAD PROGRAM

Students are encouraged to participate in the UC Education Abroad Program (EAP) or Opportunities Abroad Program (OAP) while still making progress toward completing their USP major. For more information on EAP, see the section of this catalog on the Education Abroad Program or visit http://programsabroad.ucsd.edu. Students considering this option are advised to discuss their plans with the USP student affairs advisor before going abroad.
UNIVERSITY OF CALIFORNIA CENTER SACRAMENTO

Students are also encouraged to participate in University of California Center Sacramento. UCCS academic program gives undergraduate students a rare opportunity to learn about California’s public policy and journalistic processes firsthand. The program includes rigorous course work as well as professional experiences built while living, interning, and conducting research in the state capitol. Visit uccs.universityofcalifornia.edu.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

LOWER-DIVISION

1. History of US Urban Communities (4)
   This course charts the development of urban communities across the United States with temporally and geographically, it examines the patterns of cleavage, conflict, convergence of interest, and consensus that have structured urban life. Social, cultural, and economic forces will be analyzed for the roles they have played in shaping the diverse communities of America’s cities.

2. Urban World System (4)
   Examines cities and the environment in a global context. Emphasizes how the world’s economy and the earth’s ecology are increasingly interdependent. Focuses on biophysical and ethnosocial concerns rooted in the contemporary division of labor among cities, Third World industrialization, and the post-industrial transformation of U.S. cities.

3. The City and Social Theory (4)
   An introduction to the sociological study of cities, focusing on urban society in the United States. Students in the course will examine theoretical approaches to the study of urban life; social stratification in the city; urban social and cultural systems—ethnic communities, suburban family life in the city, religion, art, and leisure.

87. Freshman Seminar (1)
   The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

UPPER-DIVISION

100. Introduction to Urban Planning (4)
   This course is designed to provide an introduction to the fundamentals of urban planning. It surveys important topics in urban planning, including economic development, urban design, transportation, environmental planning, housing, and the history of urban planning. PREREQUISITE: upper-division standing or consent of instructor.

101. Introduction to Policy Analysis (4)
   (Same as Political Science 160AA.) This course will explore the process by which the preferences of individuals are converted into public policy. Also included will be an examination of the complexity of policy problems, methods for designing better policies, and a review of tools used by analysts and policy makers. PREREQUISITE: upper-division standing or consent of instructor.

102. Urban Economics (4)
   (Same as Economics 135.) Economic analysis of why and where cities develop, problems they cause, and public policies to deal with these problems. Determination of urban land rent/use, reasons for suburbanization, Transportation and congestion in cities, zoning, poverty and housing, urban local government. PREREQUISITE: Economics 1A-8 or 1-2 and Mathematics 10A or 20A.

103. American Cities in the Twentieth Century (4)
   (Same as HUS 140.) This course surveys changes in U.S. cities since about 1900. Case studies of individual cities illustrate the social, political, and environmental consequences of rapid urban expansion, as well as the ways in which “urban problems” have been understood historically.
   PREREQUISITE: upper-division standing or consent of instructor.

104. Ethnic Diversity and the City (4)
   (Same as Ethnic Studies 105.) This course will examine the city as a crucible of ethnic diversity exploring both the racial and ethnic dimensions of urban life in the U.S. from the Civil War to the present.
   PREREQUISITE: upper-division standing.

105. Urban Sociology (4)
   (Same as Sociology C/153.) Introduces students to the major approaches in the sociological study of cities and to what a sociological analysis can add to our understanding of urban processes.
   PREREQUISITE: upper-division standing or consent of instructor.

107. Urban Politics (4)
   (Same as Political Science 102E.) This survey course focuses upon the following six topics: the evolution of urban politics since the mid-nineteenth century; the urban fiscal crisis; federal/urban politics; urban power structure and leadership; and selected contemporary policy issues such as downtown redevelopment, poverty, and race.

109. California Government and Politics (4)
   (Same as Political Science 103A.) This survey course explores six topics: 1) the state’s political history; 2) campaigning, the mass media, and elections; 3) actors and institutions in the making of state policy; 4) local government; 5) contemporary policy issues; e.g., Proposition 13, school desegregation, crime, housing and land use, transportation, water; 6) California’s role in national politics.
   PREREQUISITE: upper-division standing.

110. Advanced Topics in Urban Politics (4)
   (Same as Political Science 102J.) Building upon the introductory urban politics course, the advanced topics course explores issues such as community power, minority empowerment, and the politics of growth. A research paper is required. Students wishing to fulfill the paper requirement with field research should enroll in the subsequent Political Science 102JJ course offered Summer Session II.
   PREREQUISITE: upper-division standing, consent of instructor.

111. Urban Planning (4)
   (Same as Political Science 102J.) To be taken with the approval of the Political Science 102J instructor; this course allows students to do original field research on topics in urban politics. This course is offered in Summer Session II subsequent to a spring 102J course. May not be used to fulfill any major requirements in politics, urban and environmental studies, or planning.
   PREREQUISITE: USP 110/Political Science 102J and consent of instructor.

113. Politics and Policymaking in Los Angeles (4)
   (Same as Political Science 103B.) This course examines politics and policymaking in the five-county Los Angeles region. It explores the historical development of the city, suburbanization, and policy implementation, and major policy challenges facing the city and metropolitan area.
   PREREQUISITE: upper-division standing.

115. Politics and Policymaking in San Diego (4)
   (Same as Political Science 103C.) This course examines how major policy decisions are made in San Diego. In analyses the region’s power structure (including the roles of non-governmental organizations and the media), governance systems and reform efforts, and the politics of major infrastructure projects.
   PREREQUISITE: upper-division standing or consent of instructor.

116. California Local Government: Finance and Administration (4)
   This course surveys public finance and administration. It focuses upon California local governments—cities, counties, and special districts—and also examines state and federal relationships. Topics explored include revenue, expenditure, indebtedness, policy responsibilities, and administrative organization and processes.
   PREREQUISITE: upper-division standing.

124. Land Use Planning (4)
   Introduction to land use planning in the United States: zoning and subdivision, regulation, growth management, farmland preservation, environmental protection, and comprehensive planning.
   PREREQUISITE: upper-division standing or consent of instructor.

125. The Design of Social Research (4)
   Research methods are tools for improving knowledge. Beginning with a research question, students will learn to organize and implement appropriate methods for data collecting, and analyzing data to improve their research activities and research results.
   PREREQUISITE: upper-division standing or consent of instructor.

129. Research Methods: Studying Racial and Ethnic Communities (4)
   (Same as ETHN 190.) This course offers students the basic research methods with which to study ethnic and racial communities. The various topics to be explored include human and physical geography, transportation, employment, economic structure, cultural values, housing, health, education, and intergroup relations.
   PREREQUISITE: upper-division standing or consent of instructor.

130. Field Work in Racial and Ethnic Communities (4)
   (Same as ETHN 107.) This is a research course examining social, economic, and political issues in ethnic and racial communities through field work. Topics are examined through a variety of research methods which may include interviews and archival, oral history, and historical research.
   PREREQUISITE: upper-division standing.

132. African Americans, Religion, and the City (4)
   (Same as Ethnic Studies 188B.) This course details the history of African-American migration to urban areas after World War I and World War II and explores the role of religion in their lives as well as the impact that their religious practices have had upon which they lived.
   PREREQUISITE: upper-division standing.

133. Social Inequality and Public Policy (4)
   (Same as SOC C/152.) Primary focus on understanding and analyzing poverty and public policy. Analysis of how current debates and public policy initiatives mesh with alternative social scientific explanations of poverty.
   PREREQUISITE: upper-division standing.

135. Asian and Latina Immigrant Workers in the Global Economy (4)
   (Same as ETHN 129.) This course will explore the social, political, and economic implications of global economic restructuring, immigration policies, and welfare reform on Asian and Latina immigrant women in the United States. We will critically examine these larger social forces from the perspectives of Latinas and Asian immigrant women workers, incorporating theories of race, class, and gender to provide a careful reading of the experiences of immigrant women on the global assembly line.
   PREREQUISITE: upper-division standing.

137. Housing and Community Development Policy and Practice (4)
   History, theory, and practice of U.S. housing and community development. Public, private, and nonprofit sectors shape and implement planning and policy decisions at the federal, state, local and neighborhood levels.
   PREREQUISITE: upper-division standing.

143. The U.S. Health Care System (4)
   This course will provide an overview of the organization of health care within the context of the community with emphasis on the political, social, and cultural influences. It is concerned with the structure, objectives, and trends of major health and health-related programs in the United States to include sponsorship, financing, training and utilization of health personnel.
   PREREQUISITE: upper-division standing or consent of instructor. (Offered winter quarter.)

144. Environmental and Preventive Health Issues (4)
   This course will analyze needs of populations, highlighting current major public health problems such as chronic and communicable diseases, environmental hazards of diseases, psychiatric problems and additional diseases,
new social mores affecting health maintenance, consumer health awareness and health practices, special needs of economically and socially disadvantaged populations. The focus is on the effects of public and environmental health, namely: epidemiology, preventive services in family health, communicable and chronic disease control, and occupational health. **PREREQUISITE:** upper-division standing or consent of instructor. (Offered fall quarter.)

145. Aging—Social and Health Policy Issues (4)
This course will provide a brief introduction to the nature and problems of aging, with emphasis on socioeconomic and health status; determinants of priorities of social and health policies will be examined through analysis of the structure and organization of selected programs for the elderly. Field visits will constitute part of the course. **PREREQUISITE:** upper-division standing. (Offered spring quarter.)

147. Case Studies in Health Care Programs/Poor and Underserved Population (4)
The purpose of this course is to identify the special health needs of low income and underserved populations and to review their status of care, factors influencing the incidence of disease and health problems, and political and legislative measures related to access and the provision of care. Selected current programs and policies that address the health-care needs of selected underserved populations such as working poor, inner city populations, recent immigrants, and persons with severe disabling mental illnesses will be studied. Offered in alternate years. **PREREQUISITE:** upper-division standing or consent of instructor.

165. History of the American Suburb (4)
(Same as HUS 147.) This lecture course explores the development of suburbs in America, from the early nineteenth century to the contemporary era. Topics include suburban formation, class, ethnic and racial dimensions, government influences, social life, and cultural responses to suburbia. The class will explore competing theories of suburbanization as it surveys the major literature. **PREREQUISITE:** upper-division standing.

166. History of San Diego (4)
Course surveys the social, political, economic, cultural and environmental history of the San Diego region from pre-colonial times to the present, with an emphasis on the urban development that has occurred since 1900. **PREREQUISITE:** upper-division standing.

170. Sustainable Planning (4)
This course will explore the different factors and processes that shape a sustainable city. Contemporary green planning techniques and values will be evaluated. The course will also discuss planning, designing, and implementation of sustainable strategies that will reduce sprawl. **PREREQUISITE:** upper-division standing or consent of instructor.

171. Sustainable Development (4)
Sustainable development is a concept invoked by an increasingly wide range of scholars, activists, and organizations dedicated to promoting environmentally sound approaches to economic development. This course critically examines the diverse, often contradictory, interests in sustainability. It provides a transdisciplinary overview of emergent theories and practices. **PREREQUISITE:** upper-division standing.

173. History of Urban Planning and Design (4)
The analysis of the evolution of city design over time; study of the forces that influence the form and content of a city: why cities change; comparison of urban planning and architecture in Europe and the United States. **PREREQUISITE:** upper-division standing.

174. Regional Governance and Planning Reconsidered (4)
Regional planning and local governance in California, focusing on the San Diego region. Current systems, the state-local relationship, and the incentives and disincentives for restructuring regional and local governance and planning. **PREREQUISITE:** upper-division standing.

177. Urban Design Practicum (4)
This course is designed to introduce the student to the theory and practice of urban design, the form of the built environment, and how it is created. There is an emphasis on the development within a larger urban context.

**PREREQUISITE:** upper-division standing or consent of instructor.

178. Urban Design for Redevelopment (4)
This course addresses inner-city and suburban redevelopment focusing on urban design, ecological, and ethnic issues using advanced physical planning and urban design methods. Also included will be the environmental-impact assessments of redevelopment projects. **PREREQUISITE:** upper-division standing.

179. Urban Design, Theory, and Practice (4)
Roles of the urban designer, preparing schematic proposals and performance statements, identifying opportunities for and constraints on designers. Each student will prepare a practical exercise in urban design using various urban design methods. **PREREQUISITE:** upper-division standing.

180. Transportation Planning (4)
Introduction to the history and current state of urban transportation planning, including the relationship between transportation and urban form; role of automotive, mass transit, and alternative modes; methods for transportation systems analysis; decision-making, regulatory, and financing mechanisms; and public attitudes. **PREREQUISITE:** upper-division standing.

181. Public Transportation (4)
Livable cities rely on balanced transportation systems that can mitigate the negative impacts of a car-oriented environment and society. This course will explore the role of public transit in creating a balanced transportation system. A variety of public transportation systems will be analyzed. **PREREQUISITE:** upper-division standing or consent of instructor.

186. Senior Sequence Research Proposal (6)
Introduces students to the theory and practice of social research including the challenges of writing a scholarly essay. Students are required to complete 100 hours of an internship experience while critically examining the relation between social science and society. **PREREQUISITES:** upper-division standing, USP major.

187. Senior Sequence Research Project (6)
An intensive research, internship, and writing experience that culminates in an original senior research project. Students learn about the theoretical, ethical, and technical challenges of scholarly research and publication. **PREREQUISITE:** USP 186.

190. Senior Honors Seminar (4)
Each student enrolled will be required to write an honors essay, a substantial research paper on a current urban policy issue, under the supervision of a member of the faculty. Most often the essay will be based on their previous fieldwork courses and internships. This essay and other written exercises, as well as class participation, will be the basis of the final grade for the course. The seminar will rotate from year to year among the faculty in urban studies and planning. **PREREQUISITES:** USP 186, USP 187, major GPA 3.5, and permission of instructor.

191. GIS for Urban and Community Planning (4)
Introduction to Geographic Information Systems and using GIS to make decisions: acquiring data and organizing data in useful formats, demographic mapping, geocoding. Selected exercises examine crime data, political campaigns, banking and environmental planning, patterns of bank lending and finance. **PREREQUISITES:** upper-division standing, USP major.

193. San Diego Community Research (4)
Using the San Diego region as a case study, students will be introduced to the process of collecting, evaluating, and presenting urban and regional data using a variety of methods, including aggregate data analysis, historical research, and ethnography. **PREREQUISITE:** upper-division standing.

(Sheldon Brown, M.F.A.)

195. Teaching Apprentice–Undergraduate (2–4)
Introduction to teaching activities associated with course. Responsibilities include preparing reading materials assigned by the instructor, attending course lectures, meeting at least one hour per week with the instructor, assisting instructor in grading, and preparing a summary report to the instructor. **PREREQUISITES:** consent of instructor and an A in the course in which the student plans to assist.

198. Directed Group Study (2–4)
Directed group study on a topic or in a field not included in the regular departmental curriculum by special arrangement with a faculty member. **PREREQUISITES:** upper-division standing and consent of instructor.

199. Independent Study (2–4)
Reading and research programs and field-study projects to be arranged between student and instructor, depending on the student's needs and the instructor's advice in terms of these needs. **PREREQUISITES:** upper-division standing and consent of instructor.

**Visual Arts**

OFFICE: 216 Mandeville Center for the Arts

Stanish D. Lawler, Ph.D., Emeritus
Elizabeth Newsome, Ph.D.
Kyong Park, B.S.
Jennifer Pastor, M.F.A.
Cauleen Smith, M.F.A., Acting
The Department of Visual Arts offers courses in painting, drawing, sculpture, performance, computing in the arts, film, video, photography, and art history/criticism (including that of film and video). A bachelor’s degree from this department provides students with a solid liberal arts background and is preparatory training for careers as artists, art historians, filmmakers, video artists, photographers, digital media artists, and art critics. It also provides students the initial skills required for teaching and work in museums, television, and the commercial film, photography, and internet industries.

By its composition, the Department of Visual Arts is biased in the direction of actively producing artists and critics whose presence at the center of the contemporary art world necessitates reconsideration and reevaluation of artistic productions, their information structure, and significance. Consequently, a flexible introductory program of historically based courses has been devised mainly to provide the student an opportunity to concentrate on areas involving significantly different aesthetic and communication structures. A series of studio courses, in which painting and sculpture are included, is presented to bring the student into direct contact with the real contingencies compelling redistribution of aesthetic attitudes and reinterpretation of genres. Because of the exploratory nature of our program, the department is prepared to emphasize new media that would traditionally be considered to have scant relation to the visual arts. Thus, courses in theatrical events, linguistic structures, etc., are provided. In this context, theoretical courses with a media orientation, as in film, video, photography, or computing, are also offered.

The Department of Visual Arts is located in the Mandeville Center for the Arts. In addition, the master of fine arts program office, as well as faculty and graduate students’ studios/research spaces are located in the Visual Arts Facility sited in Sixth College. Ph.D. student offices are located in the Literature Building. Facilities and equipment are available to undergraduates in both the Mandeville Center and at the campus-wide Media Center, providing the opportunity to study painting, drawing, photography, computing in the arts, 16mm film, performance, sculpture, and video. Facilities at the Media Center include portable video recording equipment, video and audio editing suites, non-linear editing, and production studios. Additional film equipment available includes an animation stand, optical printer, two sound-mixing studios, and numerous film editing suites. Courses in computing in the arts take place in the Silicon Graphics/Mac/NT lab located at the Visual Arts Facility, the INTEL-shared lab in the Applied Physics and Mathematics building, and a dedicated ICAM lab in building 201 University Center.

The University Art Gallery displays a continually changing series of exhibitions, and the Mandeville Annex Gallery, located on the lower level, is directed by visual arts undergraduate students. A gallery and performance space, located in the Visual Arts Facility, are directed by graduate students.

## THE UNDERGRADUATE PROGRAM

### COLLEGE REQUIREMENTS

The Department of Visual Arts teaches courses applicable toward the Muir, Sixth, and Warren general-education requirements, the Marshall humanities requirement, the Eleanor Roosevelt and Reveille fine arts requirements. Optional minors may be taken within any college.

### MINOR IN VISUAL ARTS

The Department of Visual Arts offers minors in seven areas of study: studio painting/drawing/sculpture, photography, computing in the arts, film, video, and ICAM. A minor consists of seven specific courses, of which at least five must be upper-division. Because the requirements differ for each minor, prospective visual arts minors should consult with the departmental advisor for a complete list of appropriate classes acceptable for the minor.

Students are advised to begin their program in the second year; otherwise, they cannot be guaranteed enough time to complete the classes required for a minor.

### EDUCATION ABROAD PROGRAM

Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP) while still making progress toward completing their major. Financial aid is applicable to study abroad and special study abroad scholarships are readily available. Students considering this option should discuss their plans with an Education Abroad advisor before going abroad, and courses taken abroad must be approved by the departmental faculty advisor. Additional information on EAP/OAP is detailed in the Education Abroad Program of the UC San Diego General Catalog or on their Web site http://ucsd.edu/icenter/pao. Interested students should contact the Programs Abroad Office in the International Center.

### RESIDENCY REQUIREMENTS

A minimum of two-thirds of the course work completed for the major must be taken at UCSD. Students who transfer to UCSD in their second or third year may petition to substitute courses taken at other colleges and universities for major requirements.

Visual Arts 111, Structure of Art, must be taken at UCSD by all students, including transfer students, in the art history, media, and studio majors.

### HONORS PROGRAMS

The department offers honors programs in art history, in media, and in studio for outstanding students.

The art history honors program will provide outstanding students with pre-professional experience. It consists of an issue-oriented seminar followed by a directed group study and will result in an exhibition with catalogue, a scholarly conference with a mock publication and/or series of research papers. Students who meet the criteria may, with permission of the art history faculty advisor or the art history honors seminar instructor, enroll in the art history honors program during the last quarter of their junior year or as a senior. This program is open to juniors and seniors who meet eligibility requirements: minimum major GPA of 3.5 (3.3 overall), completion of all lower-division art history requirements, completion of all upper-division art history distribution requirements, and completion of Art Historical Methods (VIS 112) and at least one additional art history seminar. The level of distinction will be determined by the faculty committee on the basis of work in the honors seminar and on the research project.

The media honors program will help students develop high-quality professional portfolios. The honors thesis project is a sequence of individual studies that runs the length of an academic year to provide sufficient time for ideas to develop and critically aware work to be produced. Students may arrange to work with different faculty advisors each term or may engage a single advisor for the year. To be eligible for the honors thesis sequence, students must have at least a 3.5 GPA in the major and have approval of all the advisors with whom they will work. Qualified students may begin their sequence the last quarter of their junior year or during their senior year. At the end of the third quarter, all involved media faculty will meet to critique the overall quality of the final thesis work to determine level of distinction.

Through exhibition, verbal and written presentations and course work, the studio honors program is intended to give the student as strong a technical, critical, and theoretical base as possible. The program is open to juniors and seniors with a minimum 3.5 GPA in the major (3.0 overall), who have completed all lower-division studio requirements and all upper-division groups I, II, III, and IV (subgroup A) requirements.

Students interested in participating in an honors programs should consult with the departmental advisor.

### DOUBLE MAJOR WITHIN THE DEPARTMENT

There are three double majors within the Visual Arts department: Art History/Theory/Criticism paired with either studio, media, or ICAM. Students interested in a double major within the department must have at least ten upper-division courses that are unique to each departmental major and the remaining courses may overlap with other major requirements. Students should consult with the departmental advisor for additional information.
MAJOR REQUIREMENTS

Twenty courses are required in studio, media, and ICAM and eighteen courses in art history for the attainment of the bachelor of arts degree. A minimum of twelve of these courses must be upper-division, however, some majors may require more upper-division courses.

All courses taken to satisfy major requirements must be taken for a letter grade, and only grades of C– or better will be accepted in the visual arts major.

STUDIO MAJOR

The studio major is aimed at producing a theoretically based, highly productive group of artists. Lower-division courses are structured to expose students to a variety of ideas in and about the visual arts. Introductory skills are taught, but their development will occur at the upper-division level in conjunction with the student’s increasing awareness of the range of theoretical possibilities in the field. The curriculum includes courses in drawing, painting, sculpture, performance, photography, video, 16mm film, many offerings in art history/criticism, as well as new courses in digital imaging and electronics.

Group I: Lower-Division

Foundation Level

Five courses required

1. Introduction to Art Making: Two-Dimensional Practices
2. Introduction to Art Making: Motion and Time Based Art
3. Introduction to Art Making: Three-Dimensional Practices
4. Formations of Modern Art
5. Introduction to Art History

Groups: 20. Introduction to the Arts of the Americas or Africa and Oceania
21A. Introduction to the Arts of the Americas or Africa and Oceania
84. History of Film

Group II: Upper-Division

Entry Level

Five courses required

111. Structure of Art

Note: Required for Visual Arts studio, media, and art history majors. VIS 40, 60, or 70N can be taken to fulfill Group II entry level studio courses, but will not count toward the fifteen upper-division courses needed to fulfill the major requirements.

Choose four from:

40/ICAM 40*. Introduction to Computing in the Arts
60*. Introduction to Digital Photography
70N*. Introduction to Media
104A. Performing the Self
105A. Drawing: Representing the Subject
106A. Painting: Image Making
107A. Sculpture: Making the Object

Group III: Upper-Division

Intermediate Level

Two courses required

104BN. Verbal Performance
105B. Drawing: Practices and Genre
105D. The Aesthetics of Chinese Calligraphy
105B. Painting: Practices and Genre
107B. Sculpture: Practices and Genre
140/ICAM 101. Digital Imaging: Image and Interactivity
147A. Electronic Technologies for Art

Group IV: Upper-Division

Advanced Level

Five courses required

Group A:

Choose two from:

104CN. Personal Narrative
105C. Drawing: Portfolio Projects
105E. Chinese Calligraphy as Installation
106C. Painting: Portfolio Projects
107CN. Sculpture: Portfolio Projects
147B. Electronic Technologies for the Art II

Group B:

Group A must be completed before Group B can be taken.

Choose three from:

108. Advanced Projects in Art
110A. Contemporary Issues and Practices
110B. New Genres/New and Old Technologies
110C. Proposals, Plans, Presentations
110D. Visual Narrative/Tableau
110E. Art in Public Places/Site Specific Art
110F. Installation: Cross-Disciplinary Projects
110G. The Natural and Altered Environment
110H. Image and Text Art
110I. Performing for the Camera
110J. Ritual Performance
110K. Installation Performance
130. Special Projects in Visual Arts
132. Installation Production and Studio

Group V: Upper-Division

Non-Studio

Three courses required

Upper-division art history, film history, and theory/criticism courses such as:

113CN*. History of Criticism II: Contemporary (1950–present)
117B*. Theories of Representation
117I*. Western and Non-Western Rituals and Ceremonies
124CN. Nineteenth-Century Art
125A. Twentieth-Century Art
125BN. Contemporary Art
152. Film in Social Context
154. Hard Look at the Movies
157. Video History and Criticism
158. Histories of Photography
159/ICAM 150. History of Art and Technology
1945. Fantasy in Film

Group II—Required Courses

Two courses

These two courses are required for all art history and criticism majors:

111. Structure of Art
112. Art Historical Methods

Honors Program in Studio

110M. Studio Honors I
110N. Studio Honors II

The Studio Honors I and the attached Studio Honors II count as one course towards the fulfillment of a Group IV requirement.

ART HISTORY/THEORY/CRITICISM MAJOR

The major in art history, theory, and criticism is designed both for students who desire a broadly based education in the humanities and for those who plan to pursue a career in an art-related profession. In both cases, the foundation for study is proficiency in the languages of artistic expression. Through the study of art history, students learn to treat works of art as manifestations of human belief, thought, and experience in Western and non-Western societies from prehistory to the present day. Courses in criticism review the theoretical approaches that are used to understand artistic achievement. By combining art historical and critical study, the program promotes in the student an awareness of the cultural traditions that have shaped his or her intellectual outlook and provides a framework for informed judgment on the crucial issues of meaning and expression in contemporary society.

Majors are encouraged to take relevant courses in allied disciplines such as history, communication, anthropology, and literature, and in such area programs as classics and Italian studies. In addition, students who plan to apply to graduate schools are strongly advised to develop proficiency in one or more foreign languages, as is dictated by their area of specialization.

FOUNDATION LEVEL—Lower-Division

Five courses required

20. Introduction to Art History
22. Formations of Modern Art
23. Information Technologies in Art History

Choose one from:

21A. Introduction to the Arts of the Americas or Africa and Oceania
84. History of Film

Group II—Required Courses

Two courses

1, 2, 3. Introduction to Art-Making
60. Introduction to Digital Photography
70N. Introduction to Media

Note: VIS 23 should be completed by the end of the sophomore year or taken the first time it is offered after a junior declares an art history major or transfers into the program. VIS 23 is a prerequisite for VIS 112.

ADVANCED LEVEL—Upper-Division

Thirteen courses required

GROUP I—Required Courses

Two courses

These two courses are required for all art history and criticism majors:

111. Structure of Art
112. Art Historical Methods
NOTE: Majors must complete VIS 112 by the end of their junior year and are strongly advised to do so earlier.
* Required of Visual Arts art history, media, and studio majors.

GROUP II—Distributional Requirement
Six courses
Choose one course from each of the following areas:

A. EUROPEAN PRE-MODERN: ANCIENT AND MEDIEVAL
120A. Greek Art
120B. Roman Art
120C. Late Antique Art
120D. Prehistoric Art
121A. The Idea of Medieval Art
121B. Castles, Cathedrals, and Cities
121D*. The Illuminated Manuscript in the Middle Ages
128A. Topics in Pre-Modern Art History
129A*. Seminar in Pre-Modern Art History

B. EUROPEAN EARLY MODERN: RENAISSANCE AND BAROQUE
122AN. Renaissance Art
122CN. Defining High Renaissance Art
122D. Michelangelo
122GS. The City in Italy
122F*. Leonardo's La Gioconda
123AN. Between Spirit and Flesh: Northern Art of the Early Renaissance
123BN*. Jan van Eyck
124AN. Baroque Art
128B. Topics in Early Modern Art History
129B*. Seminar in Early Modern Art History

C. MODERN AND CONTEMPORARY
124BN. Art and the Enlightenment
124CN. Nineteenth Century Art
125A. Twentieth Century Art
125BN*. Contemporary Art
125DN*. Marcel Duchamp
125F. Latin American Film
128C. Topics in Modern Art History
129C*. Seminar in Modern Art History
158. Histories of Photography
159/ICAM 150. History of Art and Technology

D. ARTS OF THE AMERICAS
126AN. Pre-Columbian Art of Ancient Mexico and Central America
126BN. The Art and Civilization of the Ancient Maya
126C*. Problems in Mesoamerican Art History
126D*. Problems in Ancient Maya Iconography and Inscriptions
126HN. Pacific Coast American Indian Art
126L. Southwest American Indian Art
126J. African and Afro-American Art
126K. Oceanic Art
126P. Latin American Art, 1890-1950
126Q. Latin American Art, 1950-Present
126R. Latin American Photography
128D. Topics in Art History of the Americas
129D* Seminar in Art History of the Americas

E. ARTS OF ASIA
127B. Arts of China
127C. Arts of Modern China
127D*. Early Chinese Painting
127E*. Later Chinese Painting
127F*. Japanese Buddhist Art
127G*. Twentieth-Century Chinese Art
127N. Twentieth-Century Art in China and Japan
127P. Arts of Japan
127Q*. Japanese Paintings and Prints
128E. Topics in Art History of Asia
129E*. Seminar in Art History of Asia

F. THEORY
113BN*. History of Criticism II: Early Twentieth Century (1900–1950)
113CN*. History of Criticism III: Contemporary (1950–Present)
117A*. Narrative Structures
117B*. Theories of Representation
117E*. Problems in Ethnoaesthetics
117F. Theorizing the Americas
117G. Critical Visual Theory and Practice since 1980
117H. Constructing Gender in Fifth-Century BC Athens and Eighteenth-Century France
117I*. Western and Non-Western Rituals and Ceremonies
118F. Topics in Art Theory and Criticism
119P*. Seminar in Art Theory and Criticism
* Seminar
Students must take at least three upper-division seminars in addition to VIS 112. These three additional seminars may come from any area and be taken in fulfillment of the distribution requirements or as open electives.

In accordance with standard university policy, the department requires that students take two-thirds of the upper-division courses in their major at UCSD. The distribution requirement must be fulfilled with courses taken at UCSD. Courses taken abroad or at other U.S. institutions do not count towards, and will not be substituted for, the six-course distribution requirement.

GROUP III—Electives
Five courses
Students are required to take five upper-division courses in addition to VIS 111, VIS 112, and those used to fulfill the distribution requirements. At least three of these must be courses in art history or theory. For the remaining two, choose from the following:
- Any upper-division art history course(s) in history or theory
- any upper-division course(s) in media history and criticism (e.g., VIS 150, 151, 152, 153, 154, 155, 156N, 157);
- up to two upper-division courses in studio or media production; or
- with permission of art history faculty advisor, one upper-division course in a related department or program such as anthropology, history, literature, or critical gender studies.
- two-unit curatorial practices workshop courses (VIS 128P) count as one course towards the fulfillment of an elective.

Honors Program in Art History
129G*. Art History Honors Seminar
129H*. Art History Honors Directed Group Study
* Seminar
The completion of both the Art History Honors Seminar and the Art History Honors Directed Group Study counts as one course towards the fulfillment of the Group III requirement.

Students who meet the criteria may, with permission of the art history faculty advisor or the Art History Honors Seminar instructor, enroll in the Art History Honors Program during the last quarter of their junior year or as a senior. This program is open to juniors and seniors who meet eligibility requirements. Please consult with the departmental advisor for these requirements.

MEDIA MAJOR
With a visual arts foundation, the program is designed for students who want to become creative videomakers, filmmakers, photographers, and computer artists, encouraging the hybridity of media. The curriculum combines hands-on experience of making with practical and theoretical criticism, provides historical, social, and aesthetic backgrounds for the understanding of modern media, and emphasizes creativity, versatility, and intelligence over technical specializations. It should allow students to go on to more specialized graduate programs in the media arts, to seek careers in film, television, computing, or photography, or to develop as independent artists. All media majors should see the Visual Arts Undergraduate advisor upon entrance into UCSD.

FOUNDATION LEVEL—Lower-Division
Six courses required

Group A
1 or 2 or 3. Introduction to Art Making
22. Formations of Modern Art
84. History of Film

Group B
40/ICAM 40. Introduction to Computing in the Arts
670. Introduction to Digital Photography
70N. Introduction to Media
All six courses listed under Groups A and B above are required. VIS 70N is prerequisite for use of the Media Center facilities; no further production courses may be taken until VIS 70N is completed.

INTERMEDIATE LEVEL—Upper-Division
Nine courses required: six from Group A and three from Group B

Group A
Two courses required. Required courses for all emphases
111. Structure of Art
174. Media Sketchbook
Choose One Emphasis
Four courses required
Computing Emphasis
Three courses plus one from photography or video and digital cinema
140/ICAM 101. Digital Imaging: Image and Interactivity
145A/ICAM 102. Time- and Process-Based Digital Media I
147A. Electronic Technologies for Art I

Photography Emphasis
Two courses plus two from computing or video and digital cinema
164. Photographic Strategies
165. Camera Techniques

Video and Digital Cinema Emphasis
Three courses plus one from computing or photography
171. Digital Cinema—Theory and Production
175. Editing—Theory and Production
176. 16mm Filmmaking
177. Scripting Strategies
178. Sound—Theory and Production

GROUP B—History, Criticism, and Theory
Three courses required
113BN. History of Criticism II: Early Twentieth Century (1900–1950)
113CN. History of Criticism III: Contemporary (1950–Present)
117B. Theories of Representation
150. History of Silent Cinema
151. History of Experimental Film
152. Film in Social Context
153. The Genre Series
154. Hard Look at the Movies
155. The Director Series
156N. Special Problems in Film History and Theory
157. Video History and Criticism
158. Histories of Photography
159/ICAM 150. History of Art and Technology

NOTE: Any courses in the art history distributional requirement may be taken to fulfill the Group B requirement.

VIS 158 is required for all students with a photography emphasis.
VIS 159/ICAM150 is required for all students with a computing emphasis.

ADVANCED LEVEL—Upper Division
Five courses required
180A. Documentary Evidence and the Construction of Authenticity in Current Media Practices
180B. Fiction and Allegory in Current Media Practices
183A. Strategies of Self
183B. Strategies of Alterity
Three of the above are required for the photography and video and digital cinema emphases and two are required for the computing emphasis. The A and B portion of VIS 180 and VIS 183 courses cannot be taken concurrently.

Electives
Three courses required

Computing Emphasis
Three courses required.
145B. Time- and Process-Based Digital Media II
147B. Electronic Technologies for Art II
149/ICAM 130. Seminar in Contemporary Computer Topics

Photography Electives
Two courses required
166. Advanced Camera Techniques
167. Social Engagement in Photography
168. Color Techniques in Photography

Video and Digital Cinema Electives
Two of the courses below required
181. Sound and Lighting
182. Advanced Editing
184. Advanced Scripting

Lower-Division
Eight courses required

Arts
Four courses required
MUS 4. Introduction to Western Music
VIS 1. Introduction to Art-Making: Two-dimensional Practices
VIS 22F. Formations of Modern Art
VIS 77N. Introduction to Media

Computer Science
One course required
CSE 11. Introduction to Computer Science: JAVA

NOTE: CSE 11 is an accelerated course in the JAVA programming language. CSE 8A/BL and 88, which cover the same material in a non-accelerated format, may be substituted.

Mathematics
Two courses required
Math. 20A. Calculus for Science and Engineering
Math. 20B. Calculus for Science and Engineering

NOTE: Math 20A and 20B are accelerated calculus courses for Science and Engineering. MATH 10A, 10B, and 10C, which cover similar material in a non-accelerated format, may be substituted.

Computing and the Arts
One course required
ICAM 40/VIS 40. Introduction to Computing in the Arts

Upper-Division
Twelve courses required

Survey
One course required
ICAM 110. Computing in the Arts: Current Practice

Foundation
Three courses required
ICAM 101/VIS 140. Digital Imaging: Image and Interactivity
ICAM 102/VIS 145A. Time-and Process-Based Digital Media I
ICAM 103/MUS 170. Musical Acoustics

Advanced
Four courses required
Choose three from:
ICAM 120. Virtual Environments
ICAM 130/VIS 149. Seminar in Contemporary Computer Topics
VIS 109. Advanced Projects in Media
VIS 131. Special Projects in Media
VIS 132. Installation Production and Studio VIS 141A. Computer Programming for the Arts I
VIS 147A. Electronic Technologies for Art I
VIS 174. Media Sketchbook
MUS 171. Computer Music I
MUS 173. Audio Production: Mixing and Editing
MUS 174A-B-C. Recording/MIDI Studio Techniques
MUS 175. Musical Psychoacoustics
MUS 176. Music Technology Seminar

Choose one from:
VIS 141B. Computer Programming for the Arts II
VIS 145B. Time- and Process-Based Digital Media II
VIS 147B. Electronic Technologies for Art II
MUS 172. Computer Music II

Theory and History
Two courses required
ICAM 150/VIS 159. History of Art and Technology and one of:
VIS 150. History of Silent Cinema
VIS 151. History of the Experimental Film
VIS 152. Film in Social Context
VIS 153. The Genre Series
VIS 154. Hard Look at the Movies
VIS 155. The Director Series
VIS 156N. Special Problems in Film History and Theory
VIS 157. Video History and Criticism
VIS 158. Histories of Photography
VIS 194. Fantasy in Film
MUS 111. Topics/World Music Traditions
MUS 114. Music of the Twentieth Century

Senior Project
Two courses required
ICAM 160A. Senior Project in Computer Arts I
ICAM 160B. Senior Project in Computer Arts II

NOTE: Enrollment in production courses is limited to two per quarter. Production courses are numbered VIS 109, 131, 132, 140/ICAM 101, 141A-B, 145A/ICAM 102, 145B, 147A-B, 174. ICAM 120, 160A-B.

MASTER OF FINE ARTS PROGRAM
The program is designed to provide intensive professional training for the student who proposes to pursue a career within the field of art—including art making, criticism, and theory. The scope of the UCSD program includes painting, sculpture, performance, installation art, public art, photography, film, video, and digital media. The program is unique in that the course of study provides for and encourages student mobility within this range of traditional and media-based components. It also offers opportunities for collaborative work.

The educational path of students is focused around their particular interests in art. The department seeks to provide an integrated and comprehensive introduction to the possibilities of contemporary art production, the intellectual structures which underlie them, and the “world view” which they entail. All art-making activities are considered serious intellectual endeavors, and all students in the program find themselves confronted by the need to develop their intellectual and critical abilities in working out their artistic positions. A body of theory-oriented courses is required. Therefore, we have no craft-oriented programs or facilities; nor do we have any courses in art education or art therapy.

The courses are worked out by students in collaboration with their faculty member from another department. Work—Students are asked to submit documentaton of their best work in a suitable format such as slides, videotape, film, diskettes, CD, DVD, photographs, etc. These will be returned upon review of the application. It is necessary to include a self-addressed, stamped envelope for return of work.

REGULAR UNIVERSITY ADMISSION POLICIES
Please note that no application will be processed until all required information has been received. Students should submit applications with the application fee to the graduate admissions office using the UCSD online application. All application materials need to be submitted on or before Tuesday, January 19, 2010. Portfolio and official transcripts should be sent directly to the department and postmarked no later than January 19, 2010. The statement of purpose and letters of recommendation may be sent electronically, or can be sent directly to the department.

REQUIREMENTS FOR THE DEGREE
The M.F.A. is considered a terminal degree in studio work, and is a two- to three-year program. The following requirements must be completed in order to receive the M.F.A.:

First Year Review—This review takes place in the third quarter in residence. Students may take a formal presentation of their work to a faculty committee; this includes a position paper and an oral examination. This presentation is considered a departmental examination, and if at its conclusion the student’s work is judged to be inadequate, the student may be dismissed regardless of GPA, or may be reviewed again in the fourth quarter.

Seventy-two units of course work, including a four-unit apprentice teaching course, are required. Students may select sixteen of these units (four courses) from upper-division undergraduate course offerings. (See listings in this catalog.) There are six required Visual Arts core seminars:
- Contemporary Critical Issues (VIS 201)
- Art Practice Seminar (VIS 202)
- Working Critique Seminar (VIS 203)
- Introduction to Graduate Studies in Art Practice (VIS 205)
- one course in either Art Practice/Theory group or the Art History/Theory/Criticism group
- one additional seminar in Art Practice/Theory group (VIS 210-219)

Specific information on other course distribution requirements can be obtained from the department. One additional graduate course is required and must be taken in another department.

Students who remain registered in the third (optional) year must average one graduate course per quarter.

THE M.F.A. FINAL PRESENTATION
Presentation of Work—During the last quarter in residence, each student is required to present to the public a coherent exhibition or screening of his or her work.

Oral Examination—A committee of three Department of Visual Arts faculty members and one faculty member from another department will administer an oral examination to each student covering the student’s work and its relationship to the field of art.

Thesis—Students are required to submit some form of written work for the M.F.A. degree. Four options are available:
1. Catalog—The student would design and have printed an actual catalog. This would include a critical essay of approximately 1,500 words.
2. Critical paper—The student would write a critical paper of 3,000 words analyzing his or her process and the relationship of his or her work to recent art history, with references to contemporary styles and specific artists.
3. Analytical essay on some phase of art—Students who have focused on both art production and art criticism would write a 3,000 word critical essay on any current art position. A brief discussion (750 words) of the student’s work would also be included.

4. Critical thesis—Students whose emphasis is essentially criticism and who do not present an M.F.A. exhibition would write a forty- to fifty-page thesis—the topic to be decided by the student and his or her advisor.

Additional information can be obtained from the graduate office of the Department of Visual Arts.

**PH.D. PROGRAM**

The Department of Visual Arts offers the Ph.D. degree in art history, theory, and criticism with concentrations in any of the areas in which faculty do research (see below). Offering a distinct alternative to existing Ph.D. programs in art history, the program centers on a unique curriculum that places art objects and practice at the center of inquiry, both past and present, and encompassing fine art, media, and mass culture, even as it encourages examination of the larger frameworks—historical, cultural, social, intellectual, and theoretical—within which the category “art” has been contextualized in the most recent developments in the discipline.

This program is also distinctive in that it is housed within a department that has been for many years one of the nation’s leading centers of art practice and graduate education in studio, media, and—most recently—digital media. The offering of the Ph.D. and M.F.A. degrees is based on the department’s foundational premise that the production of art and the critical, theoretical, and historical reflection upon it inherently and necessarily participate in a single discursive community. This close integration of art history and art practice is reflected in the inclusion of a concentration in art practice within the Ph.D. in art history, theory, and criticism.

The innovative character of this program is most evident in a unique curricular structure that is broadly organized into three groups of seminars. The importance of critical theory to the field today is reflected in the seminars under the Theories/New Visions group, while the study of art in its concrete historical, social, and cultural contexts, across different cultures and media, is emphasized in time, place, and media specific seminars listed under Times/Terrains.

The program builds most distinctively on recent developments in the field in the seminars under the heading Categories/Constructs. These seminars address the core questions about artworks and practices that the department believes every doctoral student in art and media history, whatever his or her area of specialization, should engage. How is the category “art” itself produced, now and in the past, in the urbanized West and in other cultures, in the context of ever-changing technologies? How are artistic identities constructed across distinct epochs and societies, and with reference to categories such as gender and ethnicity? What are the circumstances and contexts (social, intellectual, institutional, and the like) within which art is both produced and disseminated? What are the alternative modes of engaging art objects and practices and what are the histories and theoretical assumptions of the specialized discourses used to describe and analyze them?

Seminars in the Categories/Constructs group are unique in the degree to which they foreground the self-critical turn in recent art and media history by making reflection upon the central concepts, constructs, categories, and languages of art historical inquiry a key programmatic concern. They are also distinctive in that they are designed to cut across traditional categories of history and contemporaneity, art and media (film, video, photography, digital media), history and theory, and to promote cross-cultural inquiry as they center on questions crucial to the study of art of diverse cultures as well as diverse art forms and historical epochs.

**ADMISSION**

Applicants may apply to the Ph.D. program only. The policy of UCSD is to admit in the fall quarter only. Applications for admission must be postmarked by April 1. For circumstances under which the M.A. is granted, see below. Prior to matriculation, students must have obtained a bachelor’s or master’s degree in art history, art practice, or another field approved by the departmental committee on graduate studies, such as (but not limited to) history, literature, anthropology, or philosophy.

Applicants must submit their academic transcripts, scores on the Graduate Record Examination, three letters of recommendation, a statement of purpose (no more than 750 words), and a sample of written work (e.g., senior honors thesis, M.A. thesis, or other research or critical paper, preferably in art or media history). An overall GPA of 3.00 and a 3.50 in a student’s undergraduate major are required. The Test of English as a Foreign Language (TOEFL) is required for international applicants. Applicants must have a good reading knowledge of at least one foreign language at the time they enter the program.

Please note that no application will be processed until all required information has been received. Students should submit applications with the application fee to the graduate admissions office on or before Monday, January 4, 2010. The Statement of Purpose and letters of recommendation may be submitted online along with the application. If submitting hard copies they are to be sent directly to the department graduate coordinator.

Please ensure that students attain a reasonable measure of historical and cultural breadth, all students are required to take one seminar from at least four of the following areas: 1) ancient or medieval art; 2) Renaissance or early modern art; 3) modern or contemporary art; 4) media studies; 5) non-Western art.

If a student has completed some graduate work in art history, theory, and criticism before entering UCSD, there may be some appropriate adjustments in course work as approved by petition to the Ph.D. Graduate advisor and the department chair.

**FOREIGN LANGUAGE REQUIREMENTS**

Students will be required to demonstrate reading knowledge of at least two of the foreign languages required for advanced study in art history, theory, and criticism. One should be the language most directly relevant to the student’s area of specialization. The student and his or her individual advisor will jointly determine the examination languages.

Foreign language requirements will normally be satisfied by passing examinations requiring sight translation of texts in art history, theory, and criticism. Students are required to pass their entering language examination in order to be advanced to their second year in the program. The first-year language examination will be offered during the fall quarter of the entering year. The second required language examination will be offered during the fall quarter of the second year in the program. Students must pass both language examinations by the end of their second year to continue in the program.

**COURSE WORK**

A normal full-time program consists of twelve units per quarter. Prior to the qualifying examination, students will be expected to complete eighty-four units, equivalent to twenty-one four-unit courses (normally accomplished in seven to nine quarters). This twenty-one-course requirement will normally be satisfied by a combination of graduate seminars, reading courses, independent studies, and apprenticeship teaching. No more than three may be apprentice teaching; no more than two may be reading courses; and no more than two may be graduate seminars in art practice or art practice/theory. By reading course, we mean an upper-division undergraduate course which a student takes with additional reading and writing requirements. Full-time study is expected. Graduate seminars in art history, theory, and criticism should comprise the bulk of the student’s twenty-one-course requirement.

All students are required to take VIS 204, Re-thinking Art History, in their first year of study. For students in the art practice concentration, VIS 206, Seminar in Art Practice Research, must also be taken in their first year of study. Students must also take, at some point, two seminars from the Art Practice/Theory group, VIS 210-VIS 219. One-four-unit apprentice teaching course, VIS 500, is also required. In order to ensure that students attain a reasonable measure of historical and cultural breadth, all students are required to take one seminar from at least four of the following areas: 1) ancient or medieval art; 2) Renaissance or early modern art; 3) modern or contemporary art; 4) media studies; 5) non-Western art.

The policy of UCSD is to admit in the fall quarter only. Applications for admission must be postmarked by April 1. For circumstances under which the M.A. is granted, see below. Prior to matriculation, students must have obtained a bachelor’s or master’s degree in art history, art practice, or another field approved by the departmental committee on graduate studies, such as (but not limited to) history, literature, anthropology, or philosophy.

Applicants must submit their academic transcripts, scores on the Graduate Record Examination, three letters of recommendation, a statement of purpose (no more than 750 words), and a sample of written work (e.g., senior honors thesis, M.A. thesis, or other research or critical paper, preferably in art or media history). An overall GPA of 3.00 and a 3.50 in a student’s undergraduate major are required. The Test of English as a Foreign Language (TOEFL) is required for international applicants. Applicants must have a good reading knowledge of at least one foreign language at the time they enter the program.

Please note that no application will be processed until all required information has been received. Students should submit applications with the application fee to the graduate admissions office on or before Monday, January 4, 2010. The Statement of Purpose and letters of recommendation may be submitted online along with the application. If submitting hard copies they are to be sent directly to the department graduate coordinator.

**AREAS OF CONCENTRATION**

During the first year of study, each student must declare an area of major concentration in consultation with his or her individual faculty advisor and with the approval of the Ph.D. graduate advisor. The major concentration may be selected from the following: ancient art; medieval art; Renaissance art; early modern art; modern art (nineteenth and twentieth centuries); contemporary art; media studies (film, video, photograph, digital media); Meso-American art; and art practice. A student may also choose, in consultation with his or her advisor and the Ph.D. Graduate advisor, a field of emphasis that cuts across the areas within the department (e.g., art or media theory and criticism) or, with appropriate approvals, one that involves another department (e.g., early modern art history and history). Once the field of emphasis is established, it will be the responsibility of the student and his or her advisor to devise a program of courses, independent study and outside reading, over and above the required program, that will ensure that the student will attain command of the major field of emphasis.
EXAMINATIONS
No later than the first quarter of the third year, the student, in consultation with his or her individual ad-
visor, will form a qualifying examination committee that will consist of four members drawn from the vi-
sual arts department faculty and one tenured faculty member outside the department. The composition of the qualifying examination committee and the dissertation defense for students in the Art Practice degree program is: four department faculty (two art history, theory, and criticism faculty, and at least one tenured studio faculty) and one tenured faculty member outside the department. This committee will conduct the qualifying examination required by university policy and oversee completion of the dissertation. The membership of the committee must be approved by the Ph.D. Graduate advisor and ultimately the dean of Graduate Studies. The qualifying ex-
amination will consist of a three-hour written examination, followed within the next two days by a two-hour oral examination, in the student’s major field. A student must have completed all required course work and passed all language examinations before taking the qualifying examination, which will be held no later than the end of the third year. Upon successful completion of the qualifying examination, the student will be advanced to candidacy.

A student who fails either the written or the oral examination may petition the committee and Ph.D. Graduate advisor to repeat the examination. Any student who fails a second time will not be advanced to candidacy. In some cases, the committee and graduate program director may judge such student eligible to receive a terminal M.A. (see below).

DISSERTATION
Following successful completion of the qualifying examinations, the student will complete a doctoral dissertation in his or her field of emphasis. Upon se-
lection of the dissertation topic, a colloquium will be held at which the student will present a prospectus that outlines the topic and program of research for discussion by the graduate group and for approval by his or her committee. After the committee has reviewed the finished dissertation, the student will defend his or her thesis orally. Students in the Art Practice concentration will submit a written dissertation that observes the same regulations and conventions, except that its length may be reduced in some cases, the committee and graduate program director may judge such student eligible to receive a terminal M.A. (see below).

NORMATIVE TIME FROM MATRICULATION TO DEGREE
The student will normally advance to candidacy in two and one-half to three years and must be advanced to candidacy by the end of four years. He or she will normally complete the research for and writing of the dissertation by the end of his or her sixth year of study. Total university support may not exceed seven years, and total registered time at UCSD may not exceed eight years.

M.A. DEGREE
All students will apply for and be admitted to the Ph.D. Program. An M.A. degree may be awarded to continuing Ph.D. students upon successful comple-
tion of the following: (1) at least twelve four-unit courses, including VIS 204, Re-Thinking Art History, and two seminars from the group VIS 210–219; (2) a three-hour written examination in a designated field of emphasis (see “Examinations” above); (3) one language examination; and (4) an M.A. thesis. The M.A. is not automatically awarded; students must apply in advance to the Ph.D. Graduate advisor and in accordance with university procedures, no later than the first two weeks of the quarter in which they expect to receive the degree.

Students interested in an M.A. only are not admit-
ted to our program.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

NOTE: The following list of courses represents all visual arts offerings; not all courses are offered each year.

LOWER-DIVISION
1. Introduction to Art-Making: Two-Dimensional Practices (4)
An introduction to the concepts and techniques of art making with specific reference to the artists and issues of the twentieth century. Lectures and studio exercises will examine the nature of images in relation to various themes. Drawing, painting, found objects, and texts will be employed. PREREQUISITES: none. This course is offered only one time each year.

2. Introduction to Art-Making: Motion and Time Based Art (4)
An introduction to the process of art making utilizing the transaction between people, objects, and situations. Includes both critical reflection on relevant aspects of avant-garde art of the last two decades (Duchamp, Cage, Rauschenberg, Gertrude Stein, conceptual art, happen-
ings, etc.) and practical experience in a variety of artistic exercises. PREREQUISITES: none. This course is offered only one time each year.

3. Introduction to Art-Making: Three-Dimensional Practices (4)
An introduction to art making that uses as its base the idea of the “conceptual.” The lecture exists as a bank of knowledge about various art world and non-art world conceptual plays. The studio section attempts to incorpo-
rate these ideas into individual and group projects using any “material.” PREREQUISITES: none. This course is offered only one time each year.

20. Introduction to Art History (4)
This course examines history of Western art and archi-
tecture through such defining issues as the respective roles of tradition and innovation in the production and appreciation of art; the relation of art to its broader intel-
lectual and historical contexts; and the changing concepts of the monument, the artist, meaning, style, and “art” itself. Representative examples will be selected from different periods, ranging from Antiquity to Modern. Content will vary with the instructor. PREREQUISITES: none.

21A. Introduction to the Art of the Americas or Africa and Oceania (4)
Course offers a comparative and thematic approach to the artistic achievements of societies with widely divergent structures and political organizations from the ancient Americas to Africa and the Pacific Islands. Topics vary with the interests and expertise of instructor. PREREQUISITES: none. Student may not receive credit for VIS 21 and VIS 21A.

21B. Introduction to Asian Art (4)
Survey of the major artistic trends of India, China, and Japan, taking a topical approach to important develop-
ments in artistic style and subject matter to highlight the art of specific cultures and religions. PREREQUISITES: none. Student may not receive credit for VIS 21 and VIS 21B.

22. Formations of Modern Art (4)
Wide-ranging survey introducing the key aspects of modern art and criticism in the nineteenth and twentieth centuries, including Neo-Classicism, Romanticism, Realism, Impressionism, Post-Impressionism, Symbolism, Fauvism, Cubism, Dada and Surrealism, Abstract Expressionism, Minimalism, Earth Art, and Conceptual Art. PREREQUISITE: none.

23. Information Technologies in Art History (4)
This seminar introduces fundamentals of art historical practice such as descriptive and analytical writing, compil-
ing annotated bibliographies with traditional and online resources, defining research topics, and writing project proposals. PREREQUISITE: none. Art history majors only. Note: Prerequisite for VIS 112 and highly recommended for all other seminars. Must be taken within a year of declaring major or transferring into the art history program.

40. Introduction to Computing in the Arts (4)
(Cross-listed with ICAM 40). An introduction to the concept-
ual uses and historical precursor to the use of computers in art making. Preparation for further study in the computer arts area by providing overview of theoretical issues related to the use of computers by artists. Introduces the students to the program’s computer facilities and teaches them basic computer skills. PREREQUISITE: none. Materials fee required.

60. Introduction to Digital Photography (4)
An in-depth exploration of the camera and image utiliz-
ing photographic digital technology. Emphasis is placed on developing fundamental control of the processes and materials through lectures, field, and lab experience. Basic discussion of image making included. PREREQUISITE: none. Materials fee required.

70N. Introduction to Media (6)
Operating as both a lecture and production course, this introductory class provides a technical foundation and theoretical context for all subsequent production-oriented film and video studies. In the laboratory, the student will learn the basic skills necessary to initiate video production. Completion of Visual Arts 70N is necessary to obtain a media card. PREREQUISITE: none. Materials fee required.

84. History of Film (4)
A survey of the history and the art of the cinema. The course will stress the origins of cinema and the contributions of the earliest filmmakers, including those of Europe, Russia, and the United States. PREREQUISITE: none. Materials fee required. This course is offered only one time each year.

87. Freshman Seminar (1)
The Freshman Seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quar-
ter to quarter. Enrollment is limited to fifteen to twenty students with preference given to entering freshmen. PREREQUISITE: none.

UPPER-DIVISION
104A. Performing the Self (4)
Using autobiography, dream, confession, fantasy, or other means to invent one’s self in a new way, or to evoke the variety of selves in our imagination, the course experiments with and explores the rich possibilities available to the con-
temporary artist in his or her own persona. PREREQUISITES: two from VIS 1, 2, 3 and 111.

104BN. Verbal Performance (4)
The course is designed to introduce the student to the part played by language in contemporary performance art.
Monologues, musically derived sound poetry, vocalizations, verbally inscribed installations, and the uses of language and voice in film and video are some of the areas explored. **Prerequisite:** VIS 104A.

104CN. Personal Narrative (4)  
The course will explore primary experimental materials to more fully understand the relationship of voice, style, language, and personality, to issues of memory, identity, self-awareness, and desire. Instructor and student will discuss student work as well as published personal narrative. **Prerequisite:** VIS 104A.

105A. Drawing: Representing the Subject (4)  
A studio course in beginning drawing covering basic drawing and composition. These concepts will be introduced by the use of models, still life, landscapes, and conceptual projects. **Prerequisites:** two from VIS 1, 2, 3 and 111.

105B. Drawing: Practices and Genre (4)  
A continuation of VIS 105A. A studio course in which the student will investigate a wider variety of technical and conceptual issues involved in contemporary art practice related to drawing. **Prerequisite:** VIS 105A.

105C. Drawing: Portfolio Projects (4)  
A studio course in drawing, emphasizing individual creative projects. Class projects, discussions, and critiques will focus on issues related to intention, subject matter, and context. **Prerequisite:** VIS 105B.

105D. The Aesthetics of Chinese Calligraphy (4)  
This course examines Chinese calligraphy as an art form. This conceptually based introductory course combines fundamental studio exercises with creative explorations. Students are exposed to traditional and contemporary forms of Chinese calligraphy while encouraged to experiment with basic aesthetic grammars. **Prerequisite:** VIS 105A.

105E. Chinese Calligraphy as Installation (4)  
This course concerns East–West aesthetic interactions. What are the conceptual possibilities when calligraphy, an ancient form of Chinese art, is combined with installation, a contemporary artistic Western practice? Emphasis is placed on such issues as cultural hybridity, globalization, multiculturalism, and commercialization. **Prerequisite:** VIS 105D.

106A. Painting: Image Making (4)  
A studio course focusing on problems inherent in painting—transferring information and ideas onto a two-dimensional surface, color, composition, as well as manual and technical procedures. These concepts will be explored through the use of models, still life, and landscapes. **Prerequisites:** two from VIS 1, 2, 3 and 111.

106B. Painting: Practices and Genre (4)  
A continuation of VIS 106A. A studio course in which the student will investigate a wider variety of technical and conceptual issues involved in contemporary art practice related to painting. **Prerequisite:** VIS 106A.

106C. Painting: Portfolio Projects (4)  
A studio course in painting emphasizing individual creative problems. Class projects, discussions, and critiques will focus on issues related to intention, subject matter, and context. **Prerequisite:** VIS 106B.

107A. Sculpture: Making the Object (4)  
A studio course focusing on the problems involved in transferring ideas and information into three-dimensions. Course will cover techniques and construction as dictated by the intended object. Specific problems to be investigated will be determined by the individual instructor. **Prerequisites:** two from VIS 1, 2, 3 and 111.

107B. Sculpture: Practices and Genre (4)  
A studio course in which the student will investigate a wider variety of technical and conceptual issues as well as materials involved in contemporary art practice related to sculpture. **Prerequisite:** VIS 107A.

107CN. Sculpture: Portfolio Projects (4)  
A studio course in sculpture emphasizing individual creative problems. Class projects, discussions, and critiques will focus on issues related to intention, subject matter, and context. **Prerequisite:** VIS 107B.

108. Advanced Projects in Art (4)  
A studio course for serious art students at the advanced level. Stress will be placed on individual creative problems. Specific objectives of this course will be determined by the instructor. Topics may include film, video, photography, painting, performance, etc. May be repeated twice for credit. **Prerequisite:** consent of instructor, department stamp required.

109. Advanced Projects in Media (4)  
Individual or group projects over one or two quarters. Specific project organized by the student(s) will be realized during this course with instructor acting as a close advisor. Concept papers/scripts must be completed by the instructor prior to enrollment. **Prerequisites:** VIS 180A and VIS 180B for more performance; consent of instructor for IACM majors. Open to media and IACM majors only. Two production course limitation.

110A. Contemporary Issues and Practices (4)  
An examination of contemporary studio art practice. The course is divided among research, discussion, and projects. Field trips to galleries and discussions with artists will combine with the students' work into a dialogue with the issues raised. **Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110B. New Genre/New and Old Technologies (4)  
Advances the idea of different materials, methods, and practices raised at the intermediate level in drawing, painting, sculpture, and explores and utilizes new and traditional media in studio production of work. Emphasis on multiple media, combining traditional and electronic media, as well as different genres, in an attempt to create new directions for the student's ideas. **Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110C. Proposals, Plans, Presentations (4)  
Explores the use of the maquette, or sketch, in the process of developing, proposing and planning visual works in various media for public projects, site specific works, grants, exhibition proposals, etc. The student will work on synthesizing ideas and representing them in alternate forms that deal with the various atmospheres and presentation. **Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110D. Visual Narrative/Tableau (4)  
Examination and use of multimedia in exploring narrative issues in art making. The identification of subject leads to the determination of choice or mix of media and construction of narrative. Traditional studio practice surrounding narrative painting and sculpture, forms such as comic drawing or story boards, and the use of photo, video, and computing. **Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN, or 147B, or consent of instructor.

110E. Art in Public Space/Site-Specific Art (4)  
A course takes painting, sculpture, and related media out of the studio/gallery and into the public sphere by examining the contemporary history of public artworks with traditional and nontraditional site-specific work. Focusing on production, critical discussion, and writing. **Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN, or 147B, or consent of instructor.

110F. Installation: Cross-Disciplinary Projects (4)  
Attempts to expand the idea contained in a singular work or object, into the use of multiple objects, images, and media that redefines the idea as well as the space for which it is intended. Historical repositories for monumental, and contemporary works would be brought into discussion of project development and execution. **Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110G. The Natural and Altered Environment (4)  
Explores the natural and altered environment as a basis for subject as well as placement of work pertaining to the environment. **Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110H. Image and Text Art (4)  
Devoted to the study and practice of the multiple ways in which writing and other forms of visible language have been incorporated into contemporary and traditional artworks, including artists' books, collageing and poster art, visual and concrete poetry, typographical experiments, and calligraphy. **Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110I. Performing for the Camera (4)  
The dematerialization of the performer into a media based image—video, film, slides, still photographs, using the camera as a store, a co-conspirator, a friend or a foe—employing time lags, spatial deconstruction, image reconstruction, along with narrative, text, history, to invent time based pieces that break new ground while being firmly rooted in an understanding of the rich body of work done in this area over the last three decades. **Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110J. Ritual Performance (4)  
The course will explore forms of art making that use dream and myth, body art, dance, social drama, happenings, story telling, and enactments of contemporary and traditional forms of performance art that are crossing the lines between different arts and genres. **Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110K. Installation Performance (4)  
The artist as performer working with materials, objects, props, technology, to create multi-layered, experimental, interesting three-dimensional art spaces in which the artist's body, voice, actions, or memory, moves through, enlivens, or haunts the physical space. **Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110M. Studio Honors I (4)  
An advanced studio course intended for the productive, motivated, and self-disciplined student with a clear and unified body of work. The intent is to help refine and expand the student's work and ideas towards an exhibition and verbal written position. **Prerequisite:** consent of the instructor, department stamp required. Note: The Studio Honors I and the attached Studio Honors II count as one course toward the fulfillment of a Group IV requirement.

110N. Studio Honors II (4)  
The second advanced studio course in the Honors Program in Studio, the successful completion of which will lead towards an honors degree in the studio major. The course builds on the critical and technical issues raised in Studio Honors I. **Prerequisite:** VIS 110M.

111. The Structure of Art (4)  
This course will address the structure of signification in art. We will consider the modes of signification in a wide range of representational and nonrepresentational artworks from architecture through drawing, painting, sculpture, photography, video, and film to performance. Examples will be selected from various places and epochs. This course is required for transfer students. This course is offered during winter quarter only.

112. Art Historical Methods (4)  
A critical review of the principal strategies of investigation in past and present art-historical practice, a scrutiny of their contexts and underlying assumptions, and a look at alternative possibilities. The various traditions for formal and iconographic analysis as well as the categories of historical description will be studied. Required for all art history and criticism majors. **Prerequisites:** VIS 23 and one upper-division art history course; two recommended.

113AN. History of Criticism I: Early Modern (4)  
Introducing Classical, Medieval, and Renaissance theories of the image, we will concentrate on developments in the eighteenth and nineteenth centuries: Neo-Classicism, Romanticism, Realism, and Symbolism. **Prerequisite:** one from VIS 20, VIS 21A, VIS 21B, VIS 22 or upper-division standing.

113BN. History of Criticism II: Early Twentieth Century (1900–1950) (4)  
The principal theories of art and criticism from Symbolism until 1945: formalism and modernism, abstraction, Surrealism, Marxism, and social art histories, phenomenology, existentialism. **Prerequisite:** none; VIS 112 or two upper-division courses in art history strongly recommended.

113CN. History of Criticism III: Contemporary (1950–Present) (4)  
Recent approaches to the image in art history and visual culture: structuralism, semiotics, psychoanalysis,
post-structuralism, post-modernism, feminism, post-colonialism, cultural studies. PREREQUISITE: none; VIS 112 or two upper-division courses in art history strongly recommended.

117A. Narrative Structures (4)
How can a fixed image represent events in time? The strategies of storytelling and their consequences for the meaning of works of art will be investigated. Content of the course will vary. May be repeated twice for credit with permission of the instructor. PREREQUISITE: none; VIS 112 or two upper-division courses in art history strongly recommended.

117B. Theories of Representation (4)
A discussion of major Western theories of representation with a critique of their applicability to art. Material is drawn from a wide variety of historical periods from Antiquity to Modernism. Some theories are given to theories special significance for art history, but some attention is given to representation theories in other contexts. Readings may include selections from such modern theorists as Peirce, Panofsky, Gombrich, Bennheimer, Barfield, Barthes, Goodman, Foucault, Bryson, Summers, and Mitchell and from classic texts by Plato, Aristotle, John of Damascus, Alberit, and Leonardo. PREREQUISITE: none; one or more upper-division courses in art history strongly recommended. Note: Majors must have taken VIS 23.

117E. Problems in Ethnoaesthetics (4)
This seminar will explore the different and controversial approaches to studying the art of non-Western societies with respect to their own aesthetic and cultural systems. Students are encouraged to explore comparative philosophies of art and test paradigms of Western aesthetic scholarship. PREREQUISITE: 21A or 21B or 112 or two upper-division courses in art history strongly recommended.

117F. Theorizing the Americas (4)
Examines the philosophical debates that locate the Americas in relation to the modern world. PREREQUISITE: upper-division standing.

117G. Critical Theory and Visual Practice since 1980 (4)
This seminar will examine key moments in the interaction between the world of art and the world of ideas: the goal is to get you thinking about the whole theory/practice relation, as it connects with your own projects and research. PREREQUISITE: upper-division standing.

117H. Constructing Gender in Fifth-Century BC Athens and Eighteenth-Century France (4)
Ideas concerning gender and sexuality are crucial in every human society, but there are enormous shifts between cultures and historical periods. This course examines the changing cultural constructions of sexuality by examining in detail two very different epochs. PREREQUISITE: upper-division standing.

117I. Western and Non-Western Rituals and Ceremonies (4)
This course will examine the process of image-making within specific ceremonies and/or rituals. Selected ceremonies from West Africa, Melanesia, Nepal, and the United States, including both Christian and non-Christian imagery, will be considered. Performance art and masquerade will be analyzed within a non-Western framework. PREREQUISITE: upper-division standing. VIS 21A recommended. Students may not receive credit for VIS 126F and VIS 117I.

120A. Greek Art (4)
Greek classical civilization was a turning point in the history of humanity. Within a new kind of society, the idea of the individual as free and responsible was forged, and with it the inscriptions of philosophy, tragedy, and science. The arts which expressed this cultural explosion were no less revolutionary. The achievements of Greek art in architecture, sculpture, and painting will be examined from their beginnings in the archaic period, to their epoch-making fulfillment in the classical decades of the fifth century B.C., to their diffusion over the entire ancient world in the age of Alexander and his successors. PREREQUISITE: none; VIS 20 recommended.

120B. Roman Art (4)
Roman art was the "modern art" of antiquity. Out of their Italic tradition and the great inheritance of Greek classic and Hellenistic art, the Romans forged a new language of form to meet the needs of a vast empire, a complex and tumultuous society, and a sophisticated, intellectually diverse culture. An unprecedented architecture of shaped space emerged. The new city was engendered by ad-vancing techniques in boldly fundamental ways for purposes of psychological control and symbolic assertion. Sculpture in the round and in relief was pictorialized to gain spatial effects and immediacy of presence, and an extraordinary art of portraiture as psychological as it was in asserting the status claims of the individual. Extreme shifts of style, from the classicism of the age of Augustus to the expressionism of the third century A.D., are characteristic of this period. The new modes of architecture, sculpture, and painting, whether in the service of the rhetoric of state power or of the individual quest for meaning, were passed on to the medieval and ultimately to the modern West. PREREQUISITE: none; VIS 20 recommended.

120C. Late Antique Art (4)
During the later centuries of the Roman Empire, the ancient world underwent a profound crisis. Beset by barbarian invasions, torn by internal conflict and drastic social change, inflamed with religious passion which was to lead to a transformed vision of the individual, the world, and the divine, this momentous age saw the conversion of the Roman world to Christianity, the transfer of power from Rome to Constantinople, and the creation of a new society and culture. Out of this ferment, during the centuries from Constantine to Justinian, there emerged new art forms fit to represent the changing notion of an otherworldly, Vaunted architecture of diaphanous space, a new art of mosaic which dissolved surfaces in light, a figural language both abstractly symbolic and urgently expressive. The great creative energy of Classical and Greco-Roman art and laid the foundations of the art of the Christian West and Moslem East for the next thousand years. PREREQUISITE: none; VIS 20 or 120B recommended.

120D. Prehistoric Art (4)
Tens of thousands of years before the dawn of history, the hunting peoples of Ice Age Europe invented the first language of visual images. Their painted cave sanctuaries, such as Lascaux and Altamira, are dazzling in their expressive vitality and mystifying in meaning. This course link-cave art with what is known about contemporary conditions of nature, society, and human life. PREREQUISITE: none; VIS 20 recommended.

121A. The Idea of Medieval Art (4)
This course introduces the art and architecture of Western Europe from the fourth through the thirteenth centuries. A leading theme is the changing idea of what “medieval” has come to mean, from the conjoining of the terms “Middle Ages” and “Dark Ages” to the term “Romanesque”, to the Romantic fascination with Gothic ruins, and finally to the fantasy medievalisms of twentieth century popular culture and current approaches to medieval art in art historical scholarship. PREREQUISITE: none; VIS 20 recommended.

121B. Castles, Cathedrals, and Cities (4)
This course explores European art and architecture of the twelfth through the fourteenth centuries against the background of the rituals of chivalry, church, and civic life that made a dazzling spectacle of art and life in the High Middle Ages. PREREQUISITE: upper-division standing; VIS 20 recommended.

121D. The Illuminated Manuscript in the Middle Ages (4)
This seminar charts the changing pictorial possibilities presented by the illuminated manuscript from its origins in late antiquity to the disintegration of the manuscript tradition under the impact of the first printed books. Works such as the Book of Kells and the Trez Riches Heures of the Duke of Berry, among the most brilliant achievements of Western painting, are among those considered. PREREQUISITE: none; VIS 112 or two upper-division courses in art history strongly recommended.

122A. Renaissance Art (4)
Italian artists and critics of the fourteenth through sixteenth centuries were among those who were participating in a revival of the arts unparalleled since Antiquity. Focusing primarily on Italy, this course traces the emergence in painting, sculpture and architecture, of an art based on natural philosophy, optical principles, and humanist values, which embodied the highest intellectual achievement and deepest spiritual beliefs of the age. Artists treated include Giotto, Donatello, Masaccio, Brunelleschi, Jan van Eyck, Mantegna, Leonardo da Vinci, Michelangelo, Raphael, Bramante, Durer, and Titian. PREREQUISITE: none; VIS 20 recommended.

122CN. Defining High Renaissance Art (4)
Since the sixteenth century, the names of Leonardo da Vinci, Raphael, and Bramante have conjured up images of the highest artistic achievement. This course shows the intellectual concerns common to the artist and scientific productions of Leonardo help illuminate the distinctive character of the art of two of his greatest contemporaries. PREREQUISITE: none; VIS 20, 122AN, or 122BN recommended.

122D. Michelangelo (4)
This course offers new approaches to understanding Michelangelo's greatest creations. By considering how each work relates to the setting for which it was intended, by regarding critical literature and artistic borrowings as evidence about the works, and by studying the thought of the spiritual reformers who counseled Michelangelo, new interpretations emerge which show the artist to be a deeply religious man who invested his works with both public and private meanings. PREREQUISITE: upper-division standing; or one of the following courses: VIS 20, 21, 22 or 23; or any upper-division course in art history and criticism or in European history.

122F. Leonardo's La Gioconda (4)
A critical, art historical look at the world’s most famous painting and its interpretations. PREREQUISITE: VIS 23. One upper-division course in art history (113AN-119F) is recommended.

123AN. Between Spirit and Flesh: Northern Art of the Early Renaissance (4)
The art of the Early Renaissance in Northern Europe is marked by what appears to be striking conflict: on the one hand, a new love of nature and of the pleasures of court society; and on the other, an intensified spirituality and focus on personal devotion. This course explores these provocative cross-currents in works by master painters like Jan van Eyck and Hieronymus Bosch as well as in lesser known mass-produced objects of everyday use. PREREQUISITE: none; VIS 20, 121AN, and/or 122AN recommended.

123BN. Jan van Eyck (4)
Intensive study of the career of Jan van Eyck, whose magical paintings have always fascinated viewers with their microscopically detailed naturalism and subtly disguised spiritual meanings. Masterpieces such as the "Amorfini Wedding" are emphasized. PREREQUISITE: none; VIS 112 or two upper-division courses in art history recommended.

124AN. Baroque Art (4)
This course discusses the achievement of such major artists as Caravaggio, Gentilechi, Bernini, Borromini, Rubens, Rembrandt, Velasquez, and Vermeer within a culture marked by increasing intellectual specialization, the entrenchment of modern national boundaries, the co-existence of rival religious organizations, the formations of artistic academies, and the rise of an art market serving the flourishing middle class. PREREQUISITE: none; VIS 20 recommended.

124BN. Art and the Enlightenment (4)
Eighteenth century artists and critics were convinced that art could be a force to improve society. This course places Roccoco and Neo-Classical artists such as Watteau, Fragonard, Tiepolo, Hogarth, Reynolds, Vigee Lebrun, Blake, and David, within the context of art academies, colonialism, the Grand Tour, Enlightenment conceptualizations of history, nature, and the American and French Revolutions. PREREQUISITE: none; VIS 20 or 22 recommended.

124CN. Nineteenth-Century Art (4)
A critical survey discussing the crisis of the Enlightenment, Romanticism, Realism and Naturalism, Academic Art and History Painting, representations of the New World, the Pre-Raphaelites, Impressionism, international Symbolism, Post-Impressionism, and the beginnings of Modernism. PREREQUISITE: none; VIS 20 or 22 recommended.
125A. Twentieth-Century Art (4)
A critical survey outlining the major avant-gardes after 1900: Fauvism, Cubism, Metaphysical Painting, Futurism, Dada, Surrealism, Purism, the Soviet avant-garde, Socialist Realism, and American art before Abstract Expressionism. PREREQUISITE: none; VIS 20 or 22 recommended.

125B. Contemporary Art (4)
Art after Abstract Expressionism: Happenings, Post-painterly Abstraction, Minimalism, Performance, Earth Art, Conceptual Art, Neo-Expressionism, Post-Conceptualism, and the development in the 1990s, including non-Western contexts. We also explore the relation of these tendencies to Postmodernism, Feminism, and ideas of Postcoloniality. PREREQUISITE: none; VIS 20 or 22 recommended.

125D. Marcel Duchamp (4)
A critical examination of the work of one of the most radical twentieth century artists. In Duchamp's four-dimensional perspective, the idea of art-object, artist, and art itself are deconstructed. The Large Glass and Etant Données... are the twin foci of an oeuvre without boundaries in which many twentieth-century avant-garde devices such as chance techniques, conceptual art, and the fashioning of fictive identities, are invented. PREREQUISITE: none.

125F. Latin American Film (4)
An overview of film and filmmaking in Latin America and its reception in a national context and beyond. PREREQUISITE: upper-division standing.

126AN. Pre-Columbian Art of Ancient Mexico and Central America (4)
An introduction to the cities and monuments of the ancient civilizations which flourished in Mexico and Central America before the Spanish Conquest. This course will cover the major cultures of Mesoamerica, including the Olmec, Aztec, and neighboring groups. PREREQUISITE: none; VIS 21 recommended.

126BN. The Art and Civilization of the Ancient Maya (4)
This course offers a history of Maya society from its formative stages to the eve of the Spanish Conquest through an investigation of its art and archeology. Special attention is given to its unique calendar and writing systems. PREREQUISITE: none; VIS 21 recommended.

126C. Problems in Mesoamerican Art History (4)
Topics of this seminar will address special problems or areas of research related to the major civilizations of ancient Mexico and Central America. Course offerings will vary to focus upon particular themes, subjects, or interpretive problems. PREREQUISITE: upper-division standing. VIS 21 recommended. Student may not receive credit for VIS 126B and VIS 126C.

126D. Problems in Ancient Maya Iconography and Inscriptions (4)
This seminar focuses upon the art, architecture, and inscriptions of the Maya. The course will vary within a range of problems that concern hieroglyphic writing, architecture, and visual symbols the Maya elite used to mediate their social, political, and spiritual words. PREREQUISITE: upper-division standing. VIS 21A recommended.

126HN. Pacific Coast American Indian Art (4)
Explores the art and expressive culture of American Indians of far western United States, including California and Pacific Northwest. Social and cultural contexts of artistic traditions and their relations to the lifeways, ceremonialism, beliefs, and creative visions of their makers. PREREQUISITE: upper-division standing. VIS 21A recommended. Student may not receive credit for VIS 126CN and VIS 126HN.

126L. Southwest American Indian Art (4)
Examines the history, art, and architecture of Navajo, Hopi, Zuni, and other Native American communities of New Mexico and Arizona; the origins of their civilization; and how their arts survived, adapted, and changed in response to Euro-American influences. PREREQUISITE: upper-division standing. VIS 21A recommended. Student may not receive credit for VIS 126D and VIS 126L.

126B. African and Afro-American Art (4)
The dynamic, expressive arts of selected West African societies and their subsequent survival and transformation in the New World will be studied. Emphasis will be placed on Afro-American modes of art and ceremony in the United States, Haiti, Brazil, and Suriname. PREREQUISITE: upper-division standing and consent of instructor. Student may not receive credit for VIS 126DN and VIS 126J.

126K. Oceanic Art (4)
An examination of the relation of art to ritual life, mythology, and social organization in the native Polynesian and Melanesian cultures of Hawaii, New Guinea, the Solomon Islands, and Australia. PREREQUISITE: upper-division standing. VIS 21A recommended. Student may not receive credit for VIS 126E and VIS 126K.

126P. Latin American Art: Modern to Postmodern, 1890–1950 (4)
A survey of major figures and movements in Latin American art from the late-nineteenth century to the mid-twentieth century. PREREQUISITE: upper-division standing.

126Q. Latin American Art: Modern to Postmodern, 1950–Present (4)
A survey of major figures and movements in Latin American art from the mid-twentieth century to the present. PREREQUISITE: upper-division standing.

126R. Latin American Photography (4)
An overview of the history of photography, concentrating on developments in Latin America. PREREQUISITE: upper-division standing.

127B. Arts of China (4)
Course will survey trends in the arts of China from a thematic point of view, explore factors behind the making of works of art, including political and religious meanings, and examine contexts for art in contemporary cultural phenomena. PREREQUISITE: upper-division standing. VIS 21B recommended.

127C. Arts of Modern China (4)
Course will explore Chinese art of the twentieth century. By examining artworks in different media, we will investigate the most compelling of the multiple realities that Chinese artists have constructed for themselves. PREREQUISITE: upper-division standing. VIS 21B recommended.

127D. Early Chinese Painting (4)
Explore representations of figures and landscapes from the dawn of Chinese painting through the Yuan dynasty, with stress on developments in style and subject matter and relationships to contemporary issues in philosophy, religion, government, society, and culture. PREREQUISITE: upper-division standing. VIS 21B recommended.

127E. Later Chinese Painting (4)
Explores major schools and artists of the Ming and Qing periods, including issues surrounding court patronage of professional painters, revitalization of art through reviving ancient styles, commercialization's challenges to scholar-artist, and the influences of the West. PREREQUISITE: upper-division standing. VIS 21B recommended.

127F. Japanese Buddhist Art (4)
Explores the development of Buddhist art and architecture in Japan. Focus on the role of art in Buddhist practice and philosophy and the function of syncretic elements in Japanese Buddhist art. PREREQUISITE: upper-division standing. VIS 21B recommended.

127G. Twentieth-Century Chinese Art (4)
Through examining artworks in different media, theoretical writings and documenting the ways in which Chinese artists of the twentieth century have defined modernity and their own tradition against the complex background of China's history. PREREQUISITE: upper-division standing. VIS 21B recommended.

127H. Twentieth-Century Art in China and Japan (4)
Surveys the key works and developments in the modern art and visual culture of Japan from Edo and Meiji to the present and of China from the early twentieth century to contemporary video, performance, and installation art. PREREQUISITE: upper-division standing. VIS 21B recommended.

127J. Japanese Painting and Prints (4)
Explore major trends in Japanese pictorial art from the seventh century to the nineteenth century, with focus on art and style and subject matter, with particular emphasis on the relationship between Japanese art and that of continental Asia. PREREQUISITE: upper-division standing. VIS 21B recommended.

128A. Topics in Art History and Theory (4)
These lecture courses are on topics of special interest to vis-iting and permanent faculty. Topics vary from term to term and with instructor and may not be repeated. These courses fulfill upper-division distribution requirements. As the courses under this heading will be offered less frequently than those of the regular curriculum, students are urged to check for availability and descriptions of these supplementary courses in the annual catalogue listings. Like the courses listed under VIS 129, below, the letters following the course number designate the general area in which the courses fall. Students may take courses with the same number but of different content, with consent of instructor and/or program advisor. May be taken three times for credit. PREREQUISITE: none; courses in art history recommended.

128A. Topics in Pre-Modern Art History (4)
A lecture course on a topic of special interest in ancient or medieval art. PREREQUISITE: upper-division standing; courses in art history (VIS 113AN-129F) are recommended.

128B. Topics in Early Modern Art History (4)
A lecture course on a topic of special interest in Renaissance or Baroque art. May be taken three times for credit. PREREQUISITES: upper-division standing; courses in art history (VIS 113AN-129F) are recommended.

128C. Topics in Modern Art History (4)
A lecture course on a topic of special interest on Modern or Contemporary art. May be taken three times for credit. PREREQUISITES: upper-division standing; courses in art history (VIS 113AN-129F) are recommended.

128D. Topics in Art History of the Americas (4)
A lecture course on the topic of special interest in the Ancient Americas or Africa and the Pacific Islands. PREREQUISITE: upper-division standing. Courses in art history (VIS 113AN-129F) are recommended.

128E. Topics in Art History of Asia (4)
A lecture course on a topic of special interest in India, China, and Japan. PREREQUISITES: upper-division standing. Courses in art history (VIS 113AN-129F) are recommended.

128F. Topics in Art History and Theory (4)
A lecture course on a topic of special interest in art theory, art criticism, or the history of literature on art. May be taken three times for credit. PREREQUISITES: upper-division standing. Courses in art history (VIS 113AN-129F) are recommended.

128P. Curatorial Practices Workshop (2)
Students will be exposed to the professional context of institutional art research, preparation, exhibition and publication. The content of the course will revolve around the curatorial experience of the particular faculty member. May be repeated once for credit. Two two-unit curatorial practices workshop courses count as one course towards the fulfillment of a Group III Elective requirement in the major. PREREQUISITES: VIS 112 or two upper-division courses in art history (VIS 113AN-129F).

129A-F. Seminar in Art Criticism and Theory (4)
These seminar courses provide the opportunity for in-depth study of a particular work, artist, subject, period, or issue. Courses offered under this heading may reflect the current research interests of the instructor or treat a controversial theme in the field of art history and criticism. Active student research and classroom participation are expected. Enrollment is limited and permission will be given to majors. The letters following 129 in the course number designate the particular area of art history or theory concerned. Students may take courses with the same number but of different content more than once for credit, with consent of the instructor and/or the program advisor. May

VISUAL ARTS 559
be taken three times for credit. **Prerequisite:** VIS 112 or two upper-division courses in art history.

129A. Seminar in Pre-Modern Art History (4)
A seminar on an advanced topic of special interest in ancient or medieval art. **Prerequisites:** VIS 112 or two upper-division courses in art history (VIS 113AN-129F).

129B. Seminar in Early Modern Art History (4)
A seminar topic of special interest in Renaissance or Baroque art. **Prerequisites:** VIS 112 or two upper-division courses in art history (VIS 113AN-129F).

129C. Seminar in Modern Art History (4)
A seminar on an advanced topic of special interest in the Ancient Americas to Africa and the Pacific Islands. **Prerequisites:** VIS 112 or two upper-division courses in art history (VIS 113AN-129F).

129D. Seminar in Art History of the Americas (4)
A seminar on an advanced topic of special interest in the Americas. May be repeated twice for credit. **Prerequisites:** VIS 112 or two upper-division courses in art history (VIS 113AN-129F).

129E. Seminar in Art History of Asia (4)
A seminar on an advanced topic of special interest in China, India, and Japan. **Prerequisites:** VIS 112 or two upper-division courses in art history (VIS 113AN-129F).

129F. Seminar in Art Theory and Criticism (4)
A seminar on an advanced topic of special interest in art theory and criticism. **Prerequisites:** VIS 112 or two upper-division courses in art history (VIS 113AN-129F).

129G. Art History Honors Seminar (4)
This research seminar, centered on a series of critical, thematic, theoretical, and/or historical issues that cut across disciplinary specializations, provides outstanding advanced students with the opportunity to undertake graduate-level research. The first part of a two-part sequence completed by Art History Honors Directed Group Study (VIS 129H). **Prerequisite:** consent of instructor or art history faculty advisor; department stamp required. Note: The Art History Honors Seminar and the attached Art History Honors Directed Group Study counts as one course towards the fulfillment of the Group III requirement.

129H. Art History Honors Directed Group Study (4)
The second part of the honors program sequence, this course provides a forum for students engaged in research and writing to develop their ideas with the help of a faculty advisor and in conjunction with similarly engaged students. **Prerequisite:** consent of instructor or art history faculty advisor, department stamp required.

130. Special Projects in Visual Arts (4)
Specific content will vary each quarter. Areas will cover expertise of visiting faculty. May be repeated twice for credit. **Prerequisites:** two from (VIS 104CN, 105C, 106C, 107CN, and 147B) or one from (VIS 180A, 180B, 183A, and 183B) or consent of instructor; department stamp required.

131. Special Projects in Media (4)
Specific content will vary each quarter. Areas will cover expertise of visiting faculty. May be repeated twice for credit. **Prerequisites:** two from (VIS 104CN, 105C, 106C, 107CN, or 147B) or one from (VIS 180A, 180B, 183A, and 183B) or consent of instructor. Open to studio, visual arts/ media, and ICAM majors only.

132. Installation Production and Studio (4)
Through discussions and readings, the class will examine the issues and practices of installation art-making. Using media familiar to them, students will produce several projects. May be repeated once for credit. Studio and visual arts/media majors only. **Prerequisites:** two from (VIS 104CN, 105C, 106C, 107CN, or 147B) or one from (VIS 180A, 180B, 183A, and 183B) or consent of instructor. Open to studio, visual media majors only.

140. Digital Imaging: Image and Interactivity (4)
(Cross-listed with ICAM 110.) Introduction to digital image involving images, texts, and interactive display and operates both within computer-mediated space (i.e., Web site) and interactive narrative (i.e., book). Interaction narrative and computer programming are explored. Materials fee required. **Prerequisite:** VIS 40 or ICAM 40. Open to media, ICAM, and studio majors; computing and ICAM minors only. Two production course limitation.

141A. Computer Programming for the Arts I (4)
Introduces external APIs currently in interest of the arts (example: OpenGL, JS, Servlets/JS, Java3D) extending a common programming language such as C or Java. Students gain API fluency through planning and coding software or software mediated art projects. CSE 11 or equivalent recommended. Materials fee required. **Prerequisites:** (VIS 40 or ICAM 40) and (VIS 140 or ICAM 101). Open to ICAM majors and minors only. Two production-course limitation.

141B. Computer Programming for the Arts II (4)
Students extend their programming capabilities to include the creation of reusable software libraries, packages, databases, APIs, tools, utilities, and applications intended to be publishable and usable to produce practical tests, or as preparatory work for the student’s senior thesis sequence. Materials fee required. **Prerequisite:** VIS 141A. Open to ICAM majors and minors only. Two production-course limitation.

145A. Time- and Process-Based Digital Media I (4)
(Cross-listed with ICAM 102.) Introduces time- and process-based digital media artmaking. Contemporary and historical works across time- and process-based media will be studied and projects produced. Topics may include software art, soft-ware and hardware interfacing, interaction, software and hardware, computer-mediated communication, media and installation, interactive environments, data visualization and sonification will be produced as advanced study and portfolio project. Materials fee required. **Prerequisite:** Open to ICAM majors; ICAM minors only. Two production course limitation.

145B. Time- and Process-Based Digital Media II (4)
Students will implement time- and process-based projects under direction of faculty. Projects such as software and hardware interfacing, computer mediated performance, software art, installation, interaction environments, data visualization and sonification will be produced as advanced study and portfolio project. Materials fee required. **Prerequisite:** Open to ICAM majors; ICAM minors only. Two production course limitation.

147A. Electronic Technologies for Art I (4)
Develop artworks and installations that utilize digital electronics. Techniques in digital electronic construction and computer interfacing for interactive control of sound, lighting, and electromechanics. Construction of devices which responsively adapt artworks to conditions involving viewer participation, space activation, machine intelligence. Purchase of components kit required. **Prerequisite:** VIS 1. Open to media, Studio, and ICAM majors; ICAM minors only. Two production course limitation.

147B. Electronic Technologies for Art II (4)
Continuation of the electronics curriculum. Design of programmable microcontroller systems for creating artworks that are able to respond to complex sets of input conditions, perform algorithmic and procedural processing, and generate real time output. Purchase of components kit required. **Prerequisite:** VIS 147A. Open to media, Studio, and ICAM majors; computing and ICAM minors only. Two production course limitation.

149. Seminar in Contemporary Computer Topics (4)
(Cross-listed with ICAM 130.) Topics relevant to computer-based art and music-making, such as computer methods for making art/music, design of interactive systems, spatialization of visual/musical elements, critical studies. Topics will vary. May be repeated twice. Materials fee required. **Prerequisite:** VIS 140 or ICAM 101, VIS 145A or ICAM 102, and VIS 170 or ICAM 103 recommended. Open to art and ICAM majors; ICAM minors only. Two production course limitation.

150. History of Silent Cinema (4)
An investigation of silent films from early cinema to the development of a classical style in the twenties, exploring issues of spectatorship, analyzing differences between American and European theories of cinema, and highlighting the interaction between film and other arts. Materials fee required. **Prerequisite:** VIS 84 or consent of instructor.
VI S 60 and consent of instructor. Open to media majors and photography minors only. Two production-course limitation.

165. Camera Techniques (4)  
An intermediate course designed to teach students to develop fiber-based black and white printing skills, to introduce the fundamentals of digital photography, and to address the issues of text in relation to image in art practice. Materials fee required. Prerequisites: VIS 60 and consent of instructor. Open to media majors and photography minors only. Two production-course limitation.

166. Advanced Camera Techniques (4)  
Advanced-level course working with refined techniques in traditional and digital photographic art practices. The student will also be instructed in the development of a portfolio for use in post-graduation career development. Materials fee required. Prerequisites: VIS 164, 165, and consent of instructor. Open to media majors only. Two production-course limitation.

167. Social Engagement in Photography (4)  
This course will explore the use of photography to examine social issues. Working in both the documentary and fictional modes, students will produce projects on social concerns to present for critical feedback in class. Prerequisites: VIS 158, VIS 164, VIS 165.

168. Color Techniques in Photography (4)  
Instruction in color photography and printing. Lectures on theory and demonstration in shooting and printing color negatives. Materials fee required. Prerequisites: VIS 60, 164, 165. Open to media majors only. Note: Portfolio required for admission. Two production-course limitation.

171. Digital Cinema—Theory and Production (4)  
A digital image is not a film image, and this reality and its technological and conceptual implications are what this course will attempt to map out, exploring its possibilities and the massive overhaul of media aesthetics it implies. Prerequisites: VIS 40/ICAM 40, VIS 60, VIS 70N and VIS 174, plus one from VIS 1, VIS 2, VIS 3, VIS 22 or VIS 84. Open to media majors only. Two production-course limitation.

174. Media Sketchbook (4)  
Video medium used both as production technology and as device to explore the fundamental character of film-making and time-based computer art practices. Students perform all aspects of production with attention to developing ideas and building analytical/critical skills. Prerequisites: VIS 70N. Open to media and ICAM majors only. Two production-course limitation.

175. Editing—Theory and Production (4)  
The evolving aims and grammars of editing practice in film and digital media will be examined. These histories will create a foundation for exploring contemporary editing strategies. The production projects will be centered on digital editing practice. Prerequisites: VIS 40/ICAM 40, VIS 60, VIS 70N, and VIS 174 plus one from VIS 1, VIS 2, VIS 3, VIS 22 or VIS 84. Open to media majors only. Two production-course limitation.

176. 16mm Filmmaking (4)  
A technical foundation and creative theoretical context for film production will be provided. Students will produce a short film with post-synchronized sounds and final mixed-track. Prerequisites: VIS 40/ICAM 40, 60, 70N and 174, plus one from VIS 1, VIS 2, VIS 3, VIS 22 or VIS 84. Open to media majors only. Two production-course limitation.

177. Scripting Strategies (4)  
Script writing, reading, and analysis of traditional and experimental media productions. The emphasis will be on the structural character of the scripting process and its language. Students will write several short scripts along with analysis of major, prior chapter, and one of their own. Prerequisites: VIS 70N and VIS 174. Open to media majors only. Two production-course limitation.

178. Sound—Theory and Production (4)  
Sound design plays an increasing role in media production and has opened up new structural possibilities for narrative strategies. This course will review the fundamentals of design and a production methodology component. Critical papers and soundtracks for short film projects will be required. Prerequisites: VIS 70N and VIS 174. Open to media majors only. Two production-course limitation.

180A. Documentary Evidence and the Construction of Authenticity in Current Media Practices (4)  
Exploration of concepts in representational artworks by critically examining “found” vs. “made” recorded material. Advanced film/video, photography, computing work, issues of narrative and structure; attention to formal aspects of media work emphasized. Cannot be taken same quarter as VIS 180B. Prerequisites: VIS 174 and one from VIS 140/ICAM 101, 145A/ICAM 102, 145B, 164, 165, 172, 175, 176, 177; VIS 177 strongly recommended. Open to media majors only. Two production-course limitation.

180B. Fiction and Allegory in Current Media Practices (4)  
Exploration of choices in invention, emphasizing “made” over “found.” Advanced film/video, photography, and computing. Issues of narrative and structure, and formal aspects of media work emphasized. Cannot be taken same quarter as VIS 180A. Prerequisites: VIS 174 and one from VIS 140/ICAM 101, 145A/ICAM 102, 145B, 164, 165, 172, 175, 176, 177; VIS 177 strongly recommended. Open to media majors only. Two production-course limitation.

181. Sound and Lighting (4)  
Advanced course to gain sophisticated control of lighting and sound recording techniques with understanding of theoretical implications and interrelation between production values and thematic matters. Interaction between sound and image in various works in film, video, or installation. Prerequisites: VIS 174, and three of the following courses depending on emphasis: VIS 164, 165, 172, 175, 176, 177. Open to media majors only. Two production-course limitation.

182. Advanced Editing (4)  
Film/video editing and problems of editing from theoretical and practical points-of-view. Films and tapes analyzed on a frame-by-frame, shot-by-shot basis. Edit stock material and generate own materials for editing final project. Aesthetic and technical similarities/differences of film/video. Prerequisites: VIS 175 and two courses from the 180 and 183 series. Open to media majors only. Two production-course limitation.

183A. Strategies of Self (4)  
Looks at the way that self-identity is reflected and produced through various media practices. Focus is on rhetorical strategies of biography and autobiography in media, comparing and contrasting these strategies with those drawn from related cultural forms. Cannot be taken the same quarter as VIS 183B. Prerequisites: VIS 174 and one from VIS 140/ICAM 101, VIS 145A/ICAM 102, VIS 147A, VIS 172, VIS 175, VIS 176, VIS 177, VIS 178 strongly recommended. Open to media majors only. Two production-course limitation.

183B. Strategies of Alterity (4)  
Looks at difference as it is reflected and constructed in various media practices. Course will examine a wide range of forms and genres such as ethnography, science fiction, crime narratives, documentary film, political drama, and animated shorts. Cannot be taken the same quarter as VIS 183A. Prerequisites: VIS 174 and one from VIS 140/ICAM 101, VIS 145A/ICAM 102, VIS 147A, VIS 164, VIS 165, VIS 175, VIS 176, VIS 177, VIS 178 strongly recommended. Open to media majors only. Two production-course limitation.

184. Advanced Scripting (4)  
Film/video production will be framed through the script writing process, focusing on the problems of longer duration, density, and adaptation from other media. Students will both read and analyze both historical and contemporary scripts and produce a thirty- to sixty-minute script. Prerequisites: VIS 177 and two courses from VIS 180A, VIS 180B, VIS 183A, VIS 183B. Open to media majors only. Two production-course limitation.

194. Fantasy in Film (4)  
This course will explore the path of the deliberately "un-real" in movies. Fantasy in film will be considered both in terms of its psychological manifestations and also in terms of imaginary worlds created in such willfully anti-realist genres as science-fiction, horror, and musical films. Materials fee required. Prerequisite: upper-division standing. Offered in summer session only.

197. Media Honors Thesis (4)  
This advanced-level sequence coordinates three consecutive independent research courses to culminate in a completed thesis project in the third quarter of study. After the project’s public presentation, the faculty involved in the project will determine whether the student will graduate with departmental honors. Prerequisite: consent of instructor. Note: Requires a written proposal, 3.5 GPA in the major, prior consent from all involved, and approvals by the department chair and provost.

198. Directed Group Study (2-4)  
Directed group study on a topic or in a group field not included in regular department curriculum, by special arrangement with a faculty member. Prerequisite: consent of instructor. Note: Open only to upper-division students. Requires instructor’s, department chair’s, and provost’s approval. Pass/Not Pass grades only.

199. Special Studies in the Visual Arts (4)  
Independent reading, research, or creative work under direction of a faculty member. Prerequisite: consent of instructor. Note: Open only to upper-division students. Requires instructor’s, department chair’s, and provost’s approval. Pass/Not Pass grades only.

ICAM 103. Musical Acoustics (4)  
(Cross-listed with MUS 170.) An introduction to the acoustics of music with particular emphasis on contemporary digital techniques for understanding and manipulating sound. Prerequisites: MUS 1A, 2A, or 4.

ICAM 110. Computing in the Arts: Current Practice (4)  
Designed around the presentations by visiting artists, critics, and scientists involved with contemporary issues related to computer arts. Lectures by the instructor and contextual readings provide background material for the visitor presentations. Prerequisite: none. Note: Materials fee required.

ICAM 120. Virtual Environments (4)  
Students create virtual reality artworks. Projects may be done individually or in groups. Exploration of theoretical issues involved will underlie acquisition of techniques utilized in the construction of virtual realities. Materials fee required. Prerequisites: VIS 145A or ICAM 102; CSE 11 recommended. Open to ICAM majors and minors only. Two production course limitation.

ICAM 160A. Senior Project in Computer Arts I (4)  
Students pursue projects of their own design over two quarters with support from faculty in a seminar environment. Project proposals are developed, informed by project development guidelines from real-world examples. Collaborations are possible. Portfolio required for admission. Prerequisite: VIS 1418 or VIS 1458 or VIS 1478 or MUS 172. Open to ICAM majors only. Department stamp required.

ICAM 160B. Senior Project in Computer Arts II (4)  
Continuation of ICAM 160A. Completion and presentation of independent projects along with documentation. Prerequisite: ICAM 160A. Open to ICAM majors only. Department stamp required.

ICAM 198. Directed Group Study (2-4)  
Directed group study on a topic or in a group field not included in regular department curriculum by special arrangement with a faculty member. May be repeated twice for credit. Prerequisite: consent of instructor. Note: Only open to upper-division students. Requires instructor approval. Pass/Not Pass grades only.

ICAM 199. Special Studies (2/4)  
Independent reading, research or creative work under direction of faculty member. Prerequisite: department stamp and upper-division standing and consent of instructor required.
GRADUATE

CORE SEMINARS

201. Contemporary Critical Issues (4)
An exploration of a range of issues important on the contemporary critical scene through readings and writing assignments. Topics will vary from year to year. Offered every fall. (Required, M.F.A.)

202. Art Practice (4)
A workshop/seminar devoted to a particular materials practice (e.g., media, painting, digital media, etc.) that engages with critical questions arising within that discipline. Content will vary from quarter to quarter. May be repeated once for credit. (Required, M.F.A.)

203. Working Critique (4)
Workshop in which students engage in an extensive evaluation of each other's ongoing work in preparation for either the First Year Review or MFA Review. Offered every winter. May be repeated once for credit. (Required, M.F.A.)

204. Re-Thinking Art History (4)
Critical evaluation of the methods, practices, and disciplinary commitments of art history, encompassing both revisionist interventions of the late twentieth century and earlier paradigms, in order to envision new discipline-specific and interdisciplinary directions for the future of art history and visual culture. (Required, Ph.D.)

205. Introduction to Graduate Studies in Art Practice (4)
This seminar introduces art practice students to the graduate program in a workshop environment. Emphasis is on the production of new work and on situating that work in relation to a larger art context. (Required, M.F.A.) Offered every fall and required of all first-year M.F.A. students.

206. Seminar in Art Practice Research (4)
Seminar examines the interrelationship between theory and practice and the nature of artistic production as a form of research. PREREQUISITES: none. (Required for Ph.D. in art practice concentration.)

ART PRACTICE/THEORY

210. Narrative (4)
Examination of narrative issues in contemporary art-making. Traditional and experimental narrative practices in painting, drawing, sculpture, and performance are explored alongside narrative strategies in media and digital media.

211. Fact and Fiction (4)
This seminar addresses the space between narrative work generated from a factual base and that generated from a fictional one. Special attention will be given to discussing work that confounds the assumed gap between the two.

212. History and Memory (4)
This seminar will engage the space between personal and larger histories. How is one's own past both intertwined with and determined by larger social histories?

213. Public Space (4)
An exploration of what public space is and how it operates, with a view toward an expanded context for considering how public artwork can operate within it. Included are areas such as mass media, activism, community action, computer networks, ecology, and alternative forums.

215. Human Interface (4)
Examines human interface as it informs or transforms how we read and participate in culture at large. Concepts such as subject/author/object relationships, abstraction, metaphor, analogy, visualization, and complexity are discussed to establish context.

216. The Object (4)
An investigation of the world of artifacts ("works of art" and others) and how they function as agents of communication and modders of consciousness. Contemporary perspectives drawn from the fields of art history, anthropology, contemporary art, and semiotics will be utilized.

217. Communities and Subcultures (4)
A critical examination of the practices of self-defined communities (e.g., Bauhaus, Shaker, Surrealists), which have attempted to change the social and spiritual quality of life by aesthetic means and of communities and subcultures defined by other means.

218N. Imaging Selves and Others (4)
Explores various strategies exhibited in a wide range of contemporary art practices engaging in the representation of personality, spirituality, and the physical self.

219. Special Topics in Art Practice/Theory (4)
Examines a topic of special interest to permanent and visiting faculty that is not addressed in the regular curriculum. As in other Art Practice/Theory seminars, students will both produce work and read and write critically about the topic. Topics will vary.

HISTORY/THEORY/CRITICISM

Categories/Constructs

230. "Art" as Category (4)
Explores the complex and changing criteria by which certain categories of objects and practices are designated as "art" in culturally and historically diverse societies.

231N. Confronting the Object (4)
Investigates the nature and status of art objects and practices and the forms of engagement with them through topics such as the practice and metaphysics of description; phenomenological analysis; film analysis; and ekphrasis and visual analysis.

232. Artistic Identities (4)
Explores the historical, theoretical, and cross-cultural concepts of the artist/author and his/her varied and shifting identities as inscribed in works of art, recorded in biography and critical literature, and enacted through social roles.

234N. Frames of View (4)
Critical and historical analysis of the institutions, social networks, and communicative media through which art is presented to its audiences. May also address theories of vision and visuality, spectatorship, public space, originality and reproduction, and public space.

235N. Frames of Analysis (4)
Historical critique and philosophical analysis of the central terminology and constructs of art history, theory, and criticism. May address such key terms as style, genre, and periodization or a topic such as theories of representation and narrative. PREREQUISITE: graduate standing or consent of instructor.

Theories/New Visions

240. Histories of Theory and Criticism: Plato to Post-Modernism (4)
Historical and cross-cultural investigations of art theory and criticism, antiquity to the present. May be taught as an historical overview or focus on a particular topic, e.g., Critical Currents Since World War II, Renaissance Foundations, From Culture to Popular Culture.

241. Topics in Contemporary Critical Theory (4)
Focused studies, changing from year to year, in contemporary theoretical positions and perspectives (e.g., New Social Theory, Post-Colonialism, Gender Theory) and one or more leading theorists (e.g., Deleuze, C. S. Peirce, Steinberg).

242. Theories of Media and New Media (4)
Critical study of the ways in which media (film, video, photography) and new media have been theorized. May be taught from an historical or comparative perspective or focus on a single topic or theorist.

243. Aesthetic Theory (4)
Study of the philosophical concepts of the function of art and visual culture and the criteria for its evaluation in diverse epochs and cultures. May be taught as an historical overview or comparative study or focus on a single topic or theorist.

244. Studies in the Relationship of Theory and Practice (4)
Investigations of one or more artist-theorists or movements, contemporary or historical, that put in issue the interface between theory and practice. May also focus on a topic such as perspective, color, or narrative, or genre such as film or new media.

Times/Terrains

250N. Seminar in Ancient Art (4)
The arts of Greece, Rome, and allied cultures in the ancient world. Topics will vary. e.g., Roman Portraiture; Self and Social Mask; The Invention of Perspective and Revolution in Two-Dimensional Representation; The "Modern" Art of Antiquity (late third to early fourth century A.D.). May be taken three times for credit. PREREQUISITE: graduate standing or consent of instructor.

251. Seminar in Medieval Art (4)
European art from late antiquity through the fourteenth century and the historical processes by which "medieval" art has been constructed as a category. Topics may include Devotional Vision and the Sacred Image; Medieval Comic Genres; Neo-Medievalism; Fifteenth Century to Today. May be taken three times for credit. PREREQUISITE: graduate standing or consent of instructor.

252. Seminar in Renaissance Art (4)
Concentrates on the art of the Renaissance in Italy and the North through a changing series of topics, e.g., Vision and Composition in Perspective; The Sistine Chapel; Envisioning Van Eyck; Renaissance Print-Making; Leonardo da Vinci's La Gioconda. May be taken three times for credit. PREREQUISITE: graduate standing or consent of instructor.

253. Seminar in Early Modern Art (4)
European and American art, 1580s to 1850. Topics might include Deconstructing the Enlightenment: Images of Disorder; Escaping History: Genre Painting, Rococo to Impressionism; Politics and Expressionism; Politics and the Art of Jacques-Louis David; Art and Urbanism in Baroque Rome. May be taken three times for credit. PREREQUISITE: graduate standing or consent of instructor.

255. Seminar in Contemporary Art (4)
Thematic and critical discussions of recent U.S. and international art, 1960s to the present. ArtText; Mixed Media Practices; Conceptual Art; Art After Appropriation; Global Art at the Millennium; New Genres of Public Art; Mike Kelly and the Conceptual Vernacular: Art and Activism. May be taken three times for credit. PREREQUISITE: graduate standing or consent of instructor.

257. Seminar in Meso-American Art (4)
Topics relating to the art and civilizations of Pre-Columbian Mexico and Central America, either specifically art historical (such as iconographic, formal, and stylistic analysis) or encompassing a spectrum of interdisciplinary and cultural/historical problems. May be taken three times for credit. PREREQUISITE: graduate standing or consent of instructor.

258. Seminar in Chinese Art (4)
Advanced studies in the secular and religious art traditions of China. From year to year, the seminar may focus on early China (Neolithic to the end of the T’ang dynasty), on later dynasties (Sung, Yuan, Ming) or on art of the People’s Republic. May be taken three times for credit. PREREQUISITE: graduate standing or consent of instructor.

259. Seminar in Latin American Art (4)
Historical and theoretical problems in the art of Mexico, Central, and South America art from the colonial period to today, as well as from the Hispanic traditions of the American Southwest. May be taken three times for credit. PREREQUISITE: graduate standing or consent of instructor.

260. Seminar in North American Indian Art (4)
Topics for this seminar concern Native American art history from ancient to contemporary times. Seminars may focus on archaeological and art historical approaches, philosophy and aesthetics, archaeoastronomy, and cultural contexts. Issues of globalization and transculturation may be examined as well.

269. Contextual Studies: Special Topics (4)
Studies in the art of cultures and time periods not covered in the currently published curriculum (e.g., African Art, Japanese Art, Byzantine Art, Islamic Art) or of issues and genres crossing epochal, cultural, and media boundaries.
OTHER

280. Workshop in Critical Writing (4)
Practice in writing about art (both one’s own and others) accompanied by analysis of selected contemporary critical writings.

281. Curatorial Practice (4)
Methodological investigation of and training in the practices of art museums, galleries, film and digital environments, public arts organizations, and the like. Instruction by museum and gallery curators and opportunities for participation in ongoing programs at local art institutions.

282. Special Projects in Art Practice (4)
Advanced workshop in specialized areas of art practice (e.g., Sound and Lighting, Editing).

295. Individual Studies for Graduate Students (1-12)
Individual research with the student’s individual faculty advisor in preparation for their comprehensive exhibitions for the M.F.A. degree or qualifying exam for the Ph.D. These units are intended to be with the chair of the student’s review committee. For the M.F.A. degree, these units can only be taken after completing the First Year Review. (Required, M.F.A., Ph.D.)

298. Directed Group Study (1-12)
Directed group study on specific topics not covered at present in the normal curriculum. Used as an experimental testing of courses that may be given regular course numbers if proved successful. Special arrangement with faculty member. PREREQUISITE: consent of department.

299. Graduate Research (1-4)
Graduate-level research under the direct guidance of a faculty member. PREREQUISITE: consent of instructor.

500. Apprentice Teaching (1-4)
Apprentice teaching in undergraduate courses given by the Department of Visual Arts. Graduate students are required to teach a minimum of one quarter (four units) within the department to fulfill degree requirements.

501. Apprentice Teaching in Culture, Art, and Technology (CAT) (4)
Consideration and development of pedagogical methods appropriate to undergraduate teaching in the interdisciplinary Sixth College Core Sequence, Culture, Art, and Technology. Supervised by the Core Program faculty, director, and associate directors for the Writing and Thematic Programs. PREREQUISITES: graduate student and consent of instructor.

THE WRITING CENTER

OFFICE: EBU 3B, Computer Science and Engineering Building, Room 1109
The Writing Center, staffed by trained undergraduate mentors, provides academic support for all Warren student writers. The center offers individual peer mentoring sessions on a one-time or ongoing basis. The center director also provides group workshops addressing specific writing tasks, such as application essays and timed essay exams. Writing mentors enroll in Warren 189 to receive training and supervision.

WARREN HONORS PROGRAM

OFFICE: EBU 3B, Computer Science and Engineering Building, Room 1108
The Warren Honors Program offers students educational, cultural, and social experiences designed to broaden their intellectual interests. The activities vary each quarter and are planned to foster student interaction and promote a sense of community.

Entering freshmen with a high school GPA of 3.8 or above and SAT scores of 700 reading/700 math/700 writing are eligible to participate in the Honors Program. Students remain in the program until thirty-six units of UC San Diego credit are completed. After that, students must maintain a cumulative GPA of 3.7 on all units completed at UC San Diego to remain in the program.

Students who do not qualify for the Honors Program at the time of admission and all transfer students may join as soon as a cumulative GPA of 3.7 is attained on twelve or more units completed at UC San Diego. In all subsequent quarters, students must maintain a cumulative GPA of 3.7 on all units completed at UC San Diego to remain in the program. Students in the Warren Honors Program are not required to apply to the program or produce research projects in order to continue in the program.

Any Warren Honors student who writes a research paper for a departmental honors course may submit his or her paper to the Warren College Provost’s Office for consideration for the Michael Addison Award. The award is presented annually at commencement to the Warren Honors student who is judged to have written the most distinguished research paper. The submission must be accompanied by a letter of support from the faculty departmental honors advisor.

For more information, please contact the program coordinator at (858) 534-1704 or warren-honors@ucsd.edu.

WARREN SCHOLARS SEMINAR

The Warren Scholars Seminar offers an interdisciplinary curriculum that is designed to help students broaden their intellectual interests and prepare them for rigorous academic inquiry. Students enroll in two seminars, Warren 11A-B, which fulfill the college writing requirement. The seminars are taught by a Warren College lecturer and feature distinguished guest speakers from a variety of disciplines.

Entering first-year Honors Program students are admitted to the Warren Scholars Seminar by application and invitation.

Students in the Honors Program may serve as undergraduate assistants in Warren 11A-B (Warren 195, Apprentice Teaching). Undergraduate assistants participate in planning class meetings, introduce guest speakers, facilitate small-group discussions, and support students in the paper-writing process.

ETHICS AND SOCIETY

All Warren students must take two core courses in Ethics and Society. The courses are cross-listed as Political Science 27 and 28 and Philosophy 27 and 28 (see departmental listings). A student may enroll in these courses through either department. The courses are to be taken immediately following completion of Warren Writing 10A-B (or Scholars Seminar 11A-B). Poli/Phil 27 must be taken before Poli/Phil 28. This requirement is waived for certain upper-division transfer students (please see the Warren College Student Handbook under the heading “Academic Requests for Transfer Students”).

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2009–10, please contact the department for more information.

10A. The Writing Course A (4)
A workshop course in reading and writing required of all Warren College students. The course emphasizes argumentation and critical writing based on sources. (Letter grade only.) PREREQUISITES: satisfaction of the university entry level writing requirement and must be a Warren College student.

10B. The Writing Course B (4)
A workshop course in reading and writing required of all Warren College students who have completed 10A. The course continues the emphasis on argumentation and critical writing based on sources. (Letter grade only.) PREREQUISITES: completion of WWC 10A and must be a Warren College student.

11A. Warren Scholars Seminar A (4)
The Warren College Scholars Seminar A allows students to develop and refine their expressive and analytical skills. The seminar offers an interdisciplinary approach to topics on the relationship of individuals and society, and the function of evidence and observation in the formation of theories. The course emphasizes argumentation and critical thinking. (Letter grade only.) PREREQUISITES: limited to freshman Warren College Honors Program students upon approval of a submitted writing sample.
11B. Warren Scholars Seminar B (4)
The Warren Scholars Seminar B allows students to develop and refine their expressive and analytical skills by exploring a topic that offers viewpoints from a wide range of disciplines. The seminar emphasizes argumentation and critical writing. The topic will vary each year. (Letter grade only.)

**Prerequisite:** Warren 11A or by consent of instructor.

189. Academic Mentoring and the Writing Process (2)
Students will gain a fundamental understanding of all stages of the writing process and will develop the necessary skills to serve as productive mentors for their peers.

**Prerequisites:** students must have completed WCWP 10A and 10B (or WARR 11A and 11B) and Phil./Poli. 27 with B grade or higher, have upper-division standing, and a minimum GPA of 3.0. Enrollment is restricted to Warren students only. Submission of a writing portfolio and departmental authorization is required to enroll.

195. Apprentice Teaching (1)
Undergraduate instructional assistance. Responsible both in area of learning and instruction. Student must prepare reading materials assigned by the professors and lead student discussions in Warren 11A or 11B. (P/NP grade only.)

**Prerequisite:** student must be in the Warren College Honors Program.
Nondiscrimination and Affirmative Action Policy Statement for the University of California

It is the policy of the university not to engage in discrimination against or harassment of any person employed by or seeking employment with the University of California on the basis of race, color, national origin, religion, sex, gender identity, pregnancy (includes pregnancy, childbirth, and medical conditions related to pregnancy or childbirth), physical or mental disability, medical condition (cancer-related or genetic characteristics), ancestry, marital status, age, sexual orientation, citizenship, or service in the uniformed services (as defined by the Uniformed Services Employment and Reemployment Rights Act of 1994). This policy applies to admissions, access, and all employment practices, including recruitment, selection, promotion, transfer, merit increase, salary, training and development, demotion, and separation. This policy is intended to be consistent with the provisions of applicable state and federal laws and university policies.

University policy also prohibits retaliation against any employee or person seeking employment for bringing a complaint of discrimination or harassment pursuant to this policy. This policy also prohibits retaliation against a person who assists someone with a complaint of discrimination or harassment, or participates in any manner in an investigation or resolution of a complaint of discrimination or harassment. Retaliation includes threats, intimidation, reprisals, and/or adverse actions related to employment.

In addition, it is the policy of the university to undertake affirmative action, consistent with its obligations as a federal contractor, for minorities and women, for persons with disabilities, and for covered veterans. The university commits itself to apply every good faith effort to achieve prompt and full utilization of minorities and women in all segments of its workforce where deficiencies exist. These efforts conform to all current legal and regulatory requirements, and are consistent with university standards of quality and excellence.

Inquiries regarding the University of California, San Diego’s (UCSD) equal employment opportunity policies and student-related nondiscrimination policies may be directed to:

Appendix

UC San Diego Policies and Procedures Applying to Student Activities

Students enrolling at UC San Diego are required to observe campus regulations, including but not limited to the Standards of Conduct and the Policies and Procedures Applying to Student Activities, which are available to students at http://ugr8.ucsd.edu/judicial/ as well as the following locations:

Student Legal Services
Center for Student Involvement
College Dean Offices
Office of Graduate Studies
Office of the Student Affairs Dean, School of Medicine
Student Policies and Judicial Affairs
SIO, Graduate Student Department

Notice to Students of Their Privacy Rights Under UCSD PPM 160-2 and FERPA

In accordance with the Federal Family Educational Rights and Privacy Act of 1974 and UCSD PPM 160-2, the campus procedures implementing the University of California policies applying to the Disclosure of Information from student records, students at the San Diego campus of the university have the right to:

1. Refuse to permit any or all of the categories of personally identifiable information to be designated as directory information with respect to themselves;
2. Inspect and review the student’s own records;
3. Request correction of the student’s own records;
4. Grieve an alleged violation of privacy rights, as specified in this policy;
5. Have personally identifiable information contained in student records not be disclosed without a signed and dated written consent that specifically identifies:
   a. The records to be disclosed,
   b. The purpose of the disclosure, and
   c. The party or class to whom disclosures are to be made. Consent is not required for those disclosures authorized by sections VIII and IX of PPM 160-2; and
6. File with the United States Department of Education a complaint concerning alleged failures by UCSD to comply with the requirements of FERPA; and
7. Be informed where copies of student records policies are located and obtain a copy.

DIRECTORY OR PUBLIC INFORMATION
The following has been designated by UCSD as “directory information”: a student’s name, address (local and/or permanent), e-mail address, telephone numbers, date and place of birth, major fields of study, dates of attendance, grade level, enrollment status (e.g., paid or unpaid enrollment, undergraduate, full-time, or part-time), number of course units in which enrolled, degrees and honors received, the most recent previous educational institution attended, participation in officially recognized activities, including intercollegiate athletics, and the name, weight, and height of participants on intercollegiate UCSD athletic teams.

Notification of Rights Under FERPA for Postsecondary Institutions
The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. They are:
1. The right to inspect and review the student’s education records within forty-five days of the day UCSD receives the student’s written request.
   Students should submit written requests that identify the record(s) that the student wishes to inspect. The UCSD official to whom the request was submitted will notify the student of the time and place where the records may be inspected.
2. The right to request amendments of the student’s education records that the student believes are inaccurate or misleading. The request may be submitted in writing to the UCSD official responsible for the record, clearly identify the part of the record they want changed, and specify why it is inaccurate or misleading. If the UCSD official decides not to amend the record as requested by the student, that official will notify the student of the decision and advise the student of the procedures to appeal the denial.
3. The right to consent to disclosures of personally identifiable information contained in the student’s education records, except to the extent that FERPA authorizes disclosure without consent. One exception which permits disclosure without consent is disclosures to UCSD or UC officials with legitimate educational interests. A UCSD or UC official is a person employed by UCSD or UC in an administrative, supervisory, academic, research, or support staff position: a person or company with whom UCSD or UC has contracted (such as attorney, auditor, or collection agent); or a student serving on an official committee, such as a disciplinary or grievance committee. A UCSD or UC official has a legitimate educational interest if the information requested is relevant and necessary for the official to perform a task or determination that it is an employment responsibility or perform a task that is related specifically to the official’s participation in the student’s education or perform a task that is related specifically to the discipline or the student, and provides a service or benefit to the student, or the student’s family.
4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by UCSD to comply with the requirements of FERPA.
   The name and address of the office that administers FERPA is:
   Family Policy Compliance Office
   U.S. Department of Education
   400 Maryland Avenue, SW
   Washington, DC 20202-4605
   Questions about these rights or any other aspect of student records management by UCSD officials may be referred to the director, Student Policies and Judicial Affairs, Student Center, Building 8, or by telephone at (858) 534-6225 or e-mail at judicialaffairs@ucsd.edu. The text of FERPA may be found in the government documents section of the UCSD Geisel Library. Copies of the UCSD student records policy, PPM 160-2, may be accessed electronically at http://adminrecords.ucsd.edu/ppm/docs/160-2.html.

UCSD Sexual Harassment Prevention and Policy
UC San Diego is committed to creating and maintaining a community where all persons who participate in UCSD programs and activities can work and learn together in an atmosphere free of all forms of harassment, exploitation, or intimidation. Every member of the UCSD community should be aware that UCSD is strongly opposed to sexual harassment and that such behavior is prohibited both by law and UCSD policy. Retaliation against a person who brings a complaint of sexual harassment is also strictly prohibited and may result in separate disciplinary action. UCSD will respond promptly and effectively to reports of sexual harassment and will take appropriate action to prevent, correct, and if necessary, discipline behavior that violates this policy.

Laws and University Policies Prohibiting Sexual Harassment
The University of California Policy on Sexual Harassment applies to UCSD, including the medical centers and all auxiliary university locations. The California Fair Employment and Housing Act and Title VII of the Federal Civil Rights Act of 1964, as amended, prohibit sexual harassment in employment. Title IX of the Education Amendments of 1972 prohibits sexual harassment in educational institutions that are recipients of federal funds.

Defining Sexual Harassment
Sexual harassment is defined as unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature when submission to or rejection of this conduct explicitly or implicitly affects a person’s employment or education, unreasonably interferes with a person’s work or educational performance, or creates an intimidating, hostile, or offensive working or learning environment. UCSD will respond to reports of any such conduct.

In determining whether the reported conduct constitutes sexual harassment, consideration shall be given to the record of the conduct as a whole and to the totality of the circumstances, including the context in which the conduct occurred.

Sexual harassment does not typically include verbal expression or written material that is relevant and appropriately related to course subject matter or curriculum. This policy is intended to protect members of the UCSD community from discrimination, not to regulate protected speech.

Sexual harassment may occur between persons of differing power or between peers. In addition, sexual harassment may involve a female harassing a male, or a male or female harassing a
person of the same gender. Harassment that is not sexual in nature but is based on gender, gender identity, sex-stereotyping, or sexual orientation also is prohibited if it is sufficiently severe to deny or limit a person’s ability to participate in or benefit from UCSD educational programs, employment, or services. In determining whether a hostile environment due to sexual harassment exists, UCSD may take into account acts of discrimination based on gender, gender identity, sex-stereotyping, or sexual orientation.

Consensual Relationships

UCSD’s consensual relationship policy addresses potential ethical and legal issues that arise when individuals develop romantic or sexual relationships. In addition, the UC regents have approved a systemwide faculty-student relationship policy that prohibits a faculty member from becoming romantically or sexually involved with students for whom the faculty member has or should expect to have supervisory responsibility.

Prevention and Education

To implement UCSD’s policy regarding sexual harassment, the Office of Sexual Harassment Prevention and Policy (OSHPP) provides assistance in investigating and resolving complaints and provides education to the entire UCSD community. Emphasis is on prevention and early resolution. Copies of UCSD’s policy and procedures may be obtained at OSHPP at 201 University Center or at its campus Web page at http://oshpp.ucsd.edu. Sexual harassment prevention materials, including the university policy, are available in Spanish. Students are encouraged to review the interactive online education program, Preventing Sexual Harassment, available on the OSHPP Web page.

Under California state law, large employers are required to provide their supervisors with two hours of sexual harassment prevention training every two years. At the University of California, for the purpose of sexual harassment prevention training, supervisors include all faculty.

Complaint Resolution

UCSD has established guidelines for resolving sexual harassment complaints. There are several early resolution options, depending on the circumstances, including educational programs for targeted campus units or for particular individuals and mediation between the parties. Where early resolution is unsuccessful or inappropriate, a formal complaint may be filed and a formal investigation undertaken. There is no prescribed sequence, so choosing one option first does not prevent a complainant from choosing a different option for resolution later on.

Because complaints are most effectively resolved at the earliest possible stage, UCSD encourages early reporting of concerns or complaints regarding sexual harassment. If you believe you have been sexually harassed, you are encouraged to discuss your options and learn about UCSD procedures by contacting OSHPP at (858) 534-8298. You may obtain advice without filing a complaint. Unreasonable delay in reporting sexual harassment or failure to utilize UCSD’s complaint resolution procedures may affect your legal rights.

A number of governmental agencies also accept complaints of sexual harassment, including the California Department of Fair Employment and Housing, the U.S. Equal Employment Opportunity Commission, and the Office for Civil Rights, U.S. Department of Education. The time deadlines for filing such complaints vary between 180 and 365 days.

Retaliation

Threats, other forms of intimidation, and retaliation against a faculty member, student, or staff employee for bringing a complaint of sexual harassment or for assisting another in bringing a complaint are prohibited. Retaliation is itself a violation of UCSD policy and applicable law, and is a serious offense. Complaints of retaliation may be brought through the sexual harassment complaint procedures. Acts of retaliation may result in discipline.

Title IX Compliance Coordinator/Sexual Harassment Officer

Persons who wish to bring a complaint alleging a violation of Title IX of the Education Amendments of 1972 may contact the Title IX Coordinator as follows:

Lori Chamberlain, Title IX Compliance Coordinator/Sexual Harassment Officer
University of California, San Diego

**Chair, Academic Senate**  
Daniel J. Donoghue, 2008–09  
William S. Hodgkiss, 2009–10

**Academic Deans**  
Arts and Humanities  
Seth Lerer, Dean  
Biological Sciences  
Steve Kay, Dean  
Extended Studies and Public Programs  
Mary Lindenstein Walshok, Dean  
Graduate School of International Relations and Pacific Studies  
Peter Cowhey, Dean  
Rady School of Management  
Robert S. Sullivan, Dean  
Graduate Studies  
Kim E. Barrett, Dean  
Jacobs School of Engineering  
Frieder Seible, Dean  
Physical Sciences  
Mark Thiemens, Dean  
Skaggs School of Pharmacy and Pharmaceutical Sciences  
Palmer Taylor, Dean  
Social Sciences  
Jeffrey Elman, Dean

**Chief Officers**  
Chair of Staff—Chancellor’s Office  
Clare Kristofco  
Campus Counsel  
Dan Park  
University Librarian  
Brian E. C. Schottlaender  
Chief Diversity Officer  
Sandra Daley

**College Provosts**  
Revelle College  
Don Wayne  
John Muir College  
Susan Smith  
Thurgood Marshall College  
Allan Havis  
Earl Warren College  
Steven Adler  
Eleanor Roosevelt College  
Ann Craig  
Sixth College  
Naomi Oreskes

**Associate Vice Chancellors**  
Armin Afashi, Alumni Affairs  
Doug Bennett, Marine Sciences  
Mae Brown, Admissions and Enrollment Services  
Karen Calfas, Student Wellness  
Linda Dale, Contract and Grant Administration  
Marianne Generales, Research  
Brian Gregory, Strategic Campus Resource Initiatives  
Elazar Harel, Administrative Computing and Telecommunications  
Bonnie Horstmann, Program Planning and Undergraduate Education  
Janice Klippel, Academic Affairs  
Nancy Kossan, Real Estate  
Don Larson, Controller, Business and Financial Services  
Tom Leet, Human Resources  
Sylvia Lepe-Askari, Campus Budget  
Deborah J. McGraw, Academic Affairs Resource Administration  
Jane Moores, Technology Transfer and Intellectual Property  
Kristina Petruzelli, Academic Personnel  
Gary Ratcliff, Student Life  
Marlene Shaver, External Relations Information Technology and Financial Systems  
Shawn Sheffield, Health Sciences Resource Strategy and Planning  
Russ Thackston, Auxiliary and Plant Services  
Loren C. Thompson, Student Educational Advancement  
Dean of International Education  
Lynn C. Anderson
Deans of Student Affairs
Eleanor Roosevelt College
Patricia Scott
John Muir College
Patricia Mahaffey
Revelle College
Renee Barnett-Terry
Sixth College
James Stascavage
Thurgood Marshall College
Mentha Hynes-Wilson
Earl Warren College
Paul DeWine

Deans of Academic Advising
Eleanor Roosevelt College
Sarah Spear-Barrett
John Muir College
Kay Reynolds
Revelle College
Mirasol Espanola
Sixth College
Brigitte Benoist
Thurgood Marshall College
Anne Porter
Earl Warren College
Catherine A. Joseph

Organized Research Units, Institutes, Centers, and Projects

African and African American Studies Project
Bennetta Jules-Rosette, Director

AIDS Research Institute
Douglas Richman, Director

California Institute for Telecommunications and Information Technology (Calit2), San Diego Division
Ramesh Rao, Director

Rebecca and John Moores UCSD Cancer Center
Dennis Carson, Director

Center for Academic Research Training in Anthropogeny
Fred Gage, Margaret Schoeninger, and Ajit Varki, Co-Directors

Center for Astrophysics and Space Sciences
George Fuller, Director

Center for Comparative Immigration Studies
Wayne Cornelius, Director

Center for Energy Research
Farrokh Najmabadi, Director

Center for Human Development
Terry Jernigan, Director

Center for Iberian and Latin American Studies
Christine Hunefeldt, Director

Center for Magnetic Recording Research
Paul Siegel, Director

Center for Marine Biotechnology and Biomedicine
William Fenical, Director

Center for Molecular Agriculture
Maarten Chrispeels, Director

Center for Networked Systems
Amin Vahdat, Director

Center for Research in Biological Systems
Mark Ellisman, Director

Center for Research in Computing and the Arts
Sheldon Brown, Director

Center for Research in Language
Marta Kutas, Director

Clinical Investigation Institute
Gary Firestein, Director

Climate, Atmospheric Science, and Physical Oceanography (CASPO) Research Division
Art Miller, Director

Geosciences Research Division
Steve Cande, Director

Glycobiology Research and Training Center
Ajit Varki and Jeffrey Esko, Co-Directors

Institute of Engineering in Medicine
Shu Chien, Director

Institute of Geophysics and Planetary Physics
Catherine Constable, Director

Institute on Global Conflict and Cooperation
Susan Shirk, Director

Institute of International, Comparative, and Area Studies
Gershon Shafir, Director

Institute for Neural Computation
Terrence Sejnowski and Gert Cauwenberghs, Co-Directors

Institute for Nonlinear Science
Katja Lindenberg, Director (interim)

Institute for Pure and Applied Physical Sciences
M. Brian Maple, Director

Integrative Oceanography Division
Elizabeth Venrick and Robert Guza, Co-Directors

Kavli Institute for Brain and Mind
Nicholas Spitzer and Jeffrey Elman, Co-Directors

Marine Biology Research Division
Ronald Burton, Director

Marine Physical Laboratory
William Kuperman, Director

Physical Oceanography Research Division
Bruce Cornuelle, Director

Project for Explaining the Origin of Humans
Ajit Varki, Director

Project for the Responsible Conduct of Research Education
Michael Kalichman, Director

Project in Econometric Analysis
Graham Elliott, Coordinator

Project in Geometry and Physics
James Bunch, Coordinator

Project on International Affairs
Barbara Walter, Director

Public Policy Research Project
Mathew McCubbins, Director

San Diego Supercomputer Center
Francine Berman, Director

Stein Institute for Research on Aging
Dilip Jeste, Director

White Mountain Research Station
Frank Powell, Director
Tom Jackiewicz, Associate Vice Chancellor/Chief Financial Officer, Health Sciences

Thomas McAfee, Dean for Clinical Affairs, Health Sciences

Richard Liekweg, Associate Vice Chancellor, Health Sciences, Chief Executive Officer, UCSD Medical Center

Scott S. Hofferber, Chief Operating Officer, Medical Group

Edward Babakanian, Chief Information Officer

Lawrence S. Friedman, Medical Director, Ambulatory and Primary Care

Robert W. Hogan, Associate Director, Director of Finance, UCSD Medical Center

James D. Kaufman, Purchasing Manager

Dennis E. Goodrich, Director, Facilities and Safety Management, UCSD Medical Center

Margarita Baggett, Associate Director, Patient Care Services, Chief Nursing Officer, UCSD Medical Center

Dennis Moran, Associate Director, Professional Services, UCSD Medical Center

Angela Scioscia, Chief Medical Officer, UCSD Medical Center

Mona Sonnenschein, Chief Operating Officer, UCSD Medical Center

Sara Steinhoffer, Director, Public Affairs and Community Relations

Ruth Covell, Associate Dean, Program and Policy Analysis

Terence Davidson, Associate Dean, Continuing Medical Education

DeAnn Marshall, Chief Health Sciences Marketing and Communications Officer

Gordon N. Gill, Dean, Scientific Affairs

David Brenner, M.D., Vice Chancellor, Dean, School of Medicine

Pam Bylen, Director, Marketing and Planning

Ronaldo G. Espiritu, Assistant Vice Chancellor, Finance and Administration Health Sciences

Leland M. Giddings, Corporate Compliance/Privacy Officer, Medical Group

Jacqueline Parthemore, Chief of Staff/Medical Director, VA San Diego Healthcare Center

Carolyn Kelly, Associate Dean, Admissions and Student Affairs

Dennis Carson, Director, Cancer Center

Maria Savoia, Vice Dean for Medical Education, Professor of Medicine

Brian Zeglen, Director of Admissions
Endowed Chairs
University of California, San Diego

Akamai Chair of Internet Mathematics
Fan Chung Graham

Victor C. Alderson Chair of Applied Ocean Science
Veerabhadran Ramanathan

Henry E. Allison Endowed Chair in the History of Philosophy
—
Daniel L. Alspach Endowed Chair in Dynamic Systems and Controls
Robert E. Skelton

Amylin Endowed Chair in Lifesciences Education and Research
Therese Ann Markow

Atkinson/Epstein Chair in Management Leadership
Allan Timmermann

Atkinson Family Chair
Keith Rayner

Richard C. Atkinson Endowed Chair
Steve Kay

Rita Atkinson Endowed Chair
Efim Zelmanov

Endowed Chair in Behavioral Genomics
Ming Tsuang

Benedek Chair in Ocean Sensor Science
—
Sanford I. Berman Chair in Language and Human Communication
Michael Cole

J. Robert Beyster Chair in Engineering
Joseph Pasquale

Blasker Chair in Environmental Engineering
Paul Linden

Simon Bolivar Chair in Latin American Studies
Peter H. Smith

Harriett and Louis Bookheim Chair in Biblical Hebrew and Related Languages
William Propp

Arthur Brody Endowed Chair in Management Leadership
—
Dan Broida Chair in Elementary Particle Physics
Kenneth Intriligator

Callaway Golf Chair in Structural Mechanics
John Kosmatka

Endowed Chair in Cardiothoracic Surgery
Stuart W. Jamieson

Center for Magnetic Recording Research Chair IV
Paul Siegel

Center for Magnetic Recording Research Chair V
—
Center for Magnetic Recording Research Chair III
Frank E. Talte

Center for Magnetic Recording Research Chair II
Eric Fullerton

Chancellor’s Associates Chair I (Cognitive Science)
Jeffrey Elman

Chancellor’s Associates Chair II (Economics)
Halbert White

Chancellor’s Associates Chair III (Theatre)
—
Chancellor’s Associates Chair IV (Physics)
Arthur Wolfe

Chancellor’s Associates Chair V
—
Chancellor’s Associates Chair VI
(Chemistry and Biochemistry)
Mark Thiemens

Chancellor’s Associates Chair VII (Biology)
Stephen Hedrick

Chancellor’s Associates Chair VIII (Political Science)
Mathew McCubbins

William S. C. Chang Endowed Chair in Electrical and Computer Engineering
—
Chuan Lyu Endowed Chair in Taiwan Studies
—
Chugai Pharmaceutical Chair in Cancer
Dennis A. Carson

Communications Industry Professorship in Engineering
Lawrence Larson

Francis Crick Chair in Physical Science
Peter G. Wolynes

Cymer Corporation Endowed Chair
Robert Bitmead

CYMER Inc. Endowed Chair in Advanced Optical Technologies
Yehia Fainman

Ericsson Endowed Chair in Wireless Access Networks
Bhaskar Rao

Ericsson Chair in Wireless Communications Access Techniques
Laurence Milstein

Robert F. Engle Endowed Chair in Econometrics
—
Epstein/Atkinson Chair in Management Leadership
—
Stanley and Pauline Foster Endowed Chair
Robert Sullivan

Edward A. Frieman Chair in Global Observation Research
Uwe Send

Y. C. Fung Endowed Chair in Bioengineering
Shu Chien

Pierre M. Galletti Professor of Bioengineering Innovation
Bernhard Palsson

Gildred Chair for United States-Mexican Relations
—
Murray Goodman Endowed Chair in Chemistry and Biochemistry
—
Frank Caylus Grandier Chair in Medieval European History
—
Harry E. Gruber Professor of Computer Science and Information Technologies Chair
Larry Smarr

Chair in Hebrew Biblical Studies
—
Elizabeth Hamman and Morgan Dene Oliver Chair in Marine Biodiversity and Conservation Science
—
Walter F. Heiligenberg Professorship in Neuroethology
Stefan Leutgeb

Ingrid and Joseph W. Hibben Chair in Space Science and Education
—
Rebeca Hickel Chair in Elizabethan Literature
Louis Montrose

Chair in High Performance Computing
—

APPENDIX
Larry L. Hillblom Foundation Endowed Chair in Geriatrics
Laura Dugan
Hwei-Chih and Julia Hsiu Chair in Chinese Studies
Joseph W. Esherick
Institute of the Americas Chair for Inter-American Affairs
Paul W. Drake
John Dove Isaacs Chair in Natural Philosophy
Kazuo Iwama Chair in Materials Science
Sungho Jin
Joan and Irwin Jacobs Endowed Chair in Bioengineering and Systems Biology
Shankar Subramaniam
Irwin Mark and Joan Klein Jacobs Chair of Information and Computer Science
Ronald Graham
Jerri-Ann and Gary E. Jacobs Endowed Chair in Social Sciences
Helen A. Jarrett Chair in Alzheimer’s Disease Research
David Salmon
Chair of Judaic Studies
David Goodblatt
Nancy Kaehr Chair in Pediatric Research
Sanjay Nigam
Jerome Katzin Chair in Corporate Governance
David Schkade
Katzin Chair of Jewish Civilization
Norma Kershaw Chair in the Archaeology of Ancient Israel and Neighboring Lands
Thomas Levy
Tamara and Kevin Kinsella Chair in Neurobiology
Charles Zuker
Lawrence B. and Sallye K. Krause Chair in Korean Studies
Stephan Haggard
Stephen W. Kuffler Chair in Biology
Anirvan Ghosh
Ho Miu Lam Chair in China and Pacific Relations
Susan Shirik
Richard K. Lansche, M.D. and Tatiana A. Lansche Endowed Chair in Ophthalmology
Stuart Brown
George W. and Carol A. Lattimer Campus Professorship
Estelle and Edgar Levi Memorial Chair in Aging
Dilip Jeste
Benard L. Maas Chair in Inherited Metabolic Disease
Bruce Barshop
Mary Gilman Marston Chair in Psychiatry
Lewis Judd
Quinn Martin Chair in Drama
Visiting Professors
Bernd T. Matthias Chair in Physics
M. Brian Maple
Joseph E. Mayer Chair of Theoretical Chemistry
Andrew McCammon
McQuown Chair in Natural Science at SIO
George Sugihara
Endowed Chair in Modern Chinese History
Paul Pickowicz
Hajime Mori Chair in Japanese Language and Literature
Kenneth M. Moser Endowed Chair
Patricia Finn
Professorship in Neuroregeneration
Nicholas Family Endowed Chair in Modern Greek History
Thomas Gallant
Nancy Olmsted Chair in Pediatric Pulmonology
Paul Quinton
M. J. Orloff Family Endowed Chair in Surgery
Mark Talamini
The Marcie and Michael Oxman Professorship in Infectious Diseases
Joshua Fierer
Pacific Economic Cooperation Chair in International Economic Relations
Takeo Hoshi
George E. Palade Endowed Chair
Peter Novick
Stanford S. and Beverly P. Penner Endowed Chair in Engineering or Applied Science
Juan C. Lasheras
Edith and William Perlman Chair in Clinical Cardiology
Kirk L. Peterson
Distinguished Chair in Physical Chemistry
Charles Lee Powell Chair in Mathematics
Charles Lee Powell Chair in Wireless Communication
Bang-Sup Song
Presidental Chair in Energy and Combustion Research
Forman Williams
Presidential Chair in Philosophy
Patricia Churchland
Qualcomm Endowed Chair in Communications and Technology Policy
Peter Cowhey
Qualcomm Endowed Chair in Embedded Microsystems
Rajesh Gupta
Qualcomm Endowed Chair in Information Theory and its Application
Alon Orlitsky
Qualcomm Endowed Chair in Mobile Computing
Yuanyuan Zhou
Qualcomm Endowed Chair in Telecommunications and Information Technologies
Ramesh Rao
Gerry & Jeannie Ranglas Chair in Ancient Greek History
Helen Ranney Endowed Chair in Medicine
Kenneth Kaushansky
Anne Ratner Chair in Pediatric Ophthalmology
David Granet
Eric and Johanna Reissner Chair in the Department of Structural Engineering
Frieder Seible
Roger Revelle Chair in Environmental Science
Stephen O. Rice Chair in Magnetic Recording Research
Jack K. Wolf
Florence Seeley Riford Chair for Acquired Immune Deficiency Syndrome Research
Douglas Richman
Florence Seeley Riford Chair for Alzheimer’s Disease Research
William E. and Mary B. Ritter Memorial Chair
Jeremy Jackson
Rohr Chair in Pacific International Relations
Miles Kahler
Paul D. Saltman Chair in Science Education
Robert Schmidt
San Diego County Heart Association Chair in Cardiovascular Research
Science Applications International Corporation Chair in Engineering
Amin Vahdat
Shiley Endowed Chair in Alzheimer’s Disease Research
Roberto Malinow
Harold Simon Chair in International Health and Cross-Cultural Medicine
Steffanie Strathdee
Skyworks Endowed Chair in High Performance Communications Devices and Circuits
Peter Asbeck
Sokwanlok Chair in Chinese International Affairs
Barry Naughton
Martin Stein Endowed Chair in Developmental and Behavioral Pediatrics
—
Herbert Stern Chair in Biology
William McGinnis
Structural Systems Research Chair
—
Tasch Endowed Chair in Parkinson’s Disease Research
—
Evelyn and Edwin Tasch Chair in Cancer Research
Thomas Kipps
Ronald R. Taylor Chair in Information Technology in Computer Science
Pavel Pevzner

Torrey Mesa Research Institute Chair in Plant Science
Julian Schroeder
Sandra and Monroe Trout Chair in Pharmacology
Palmer Taylor
Monroe E. Trout Chair in Surgery
—
Harold Clayton Urey Chair in Chemistry
Clifford Kubiak
Endowed Chair in Urology
—
Valtz Family Chair in Philosophy
Paul M. Churchland
Alkiviadis Vassiliadis Endowed Chair in Byzantine Greek History
—
Arthur and Molli Wagner Chair in Acting
Kyle Donnelly
Sam M. Walton Chair for Cancer Research
John Pierce
Judith and Jack White Chair in Cardiology
Anthony DeMaria
Sheryl & Harvey White Chair in Management Leadership
Vish Krishnan
Muriel Jeanette Whitehill Chair in Bio-Medical Ethics
Theodore Friedmann
Herman Wouk Chair of Modern Jewish Studies
Deborah Hertz
Daniel Yankloevich Endowed Chair on Social Thought
—
Samuel S. C. Yen Chair in Reproductive Medicine
—
Walter J. Zable Chair in Engineering
Frieder Seible
UC San Diego Foundation

Chancellor
Marye Anne Fox

President
Debra Neuman

Chair
Pauline Foster

Vice Chairs
Dr. John D. Cambon, '74
Julia Brown

Treasurer
Brian Walsh, '89

Chairs Emeriti
William E. Beamer
Dr. J. R. Beyster
Malin Burnham
Jerome S. Katzin
Richard C. Levi
R. Barry McComic
Duane J. Roth
Dr. Monroe E. Trout

Trustees
Dr. Robert P. Akins, ’74, ’77, and ’83
Dr. Richard Atkinson
Mary Ann Beyster
Darcy Bingham
Arthur Brody
Deborah Bronston-Culp, ’80
Carol Littlejohn Chang
Mark Diamond, ’87
Sheldon C. Engelhorn, ’72
Daniel J. Epstein
Elaine Galinson
Augustine Gallego
George Haligowski
Lucy A. Haugh
Darcel L. Huise
Dr. Irwin M. Jacobs
Mel I. Katz
Brian A. Kenner, ’89
Susan Lew
Robert S. Marren, ’86
Judith B. Morgan
James B. Morris
Anne S. Otterton
Paul A. Peterson
Peggy Preuss
Ernest S. Rady
Rudolph J. Rehm
Stephen Schreiner, ’80
Thomas Schwartz, ’80
Claudia Skaggs Luttrell
Kwan So
Leo Spiegel, ’83
William R. Stensrud
Prof. Suresh Subramani
Dr. Jerome Swartz
Ronald R. Taylor
Elizabeth Van Denburgh, ’78
Dr. Daniel Yankelovich

Board of Overseers
UC San Diego

Members are appointed for a three-year term, and terms expire in the year indicated.

Jennifer Adams-Brooks 2009
Ron Baza 2010
Josie Calderon 2009
Linda Canada 2010
Hope Chau 2011
Cecilia Estrada 2011
Etran Chane-McComic 2009
Hugh Davies 2010
Daniel Eaton 2011
Maria Garcia 2010
Ian Gill 2011
Adolfo Gonzales 2010
Ricardo Guthrie 2010
Ann Lipscomb Hill 2011
Gary Jacobs 2010
Reese Jarrett 2010
Lucy Killea 2009
Martha King 2010
Richard Kiy 2009
Jessie Knight 2011
George Lattimer 2010
Linda Legerrette 2010
Arthur Lipper 2009
Paul I. Meyer 2009
Judith Morgan 2010
Luis Osuna 2011
Ray Peet 2009
Paul Peterson 2010
Olivia Puentes-Reynolds 2009
Elsa Saxod 2010
Gary Shaw 2010
Robert Spansjan 2010
Donald Stone 2010
Susan Taylor 2009
Carol Veit 2010
Robert Villareal 2011
Fred Walker, Jr. 2011
Richard Ybarra 2010
On-campus student enrollment
Undergraduate .......................... 22,518
Revelle .......................... 3,753
John Muir .......................... 4,164
Thurgood Marshall .......................... 3,905
Earl Warren .......................... 4,031
Eleanor Roosevelt .......................... 3,564
Sixth .......................... 3,101
Graduate .......................... 3,953
School of Medicine and School of Pharmacy and Pharmaceutical Sciences .......................... 1,729
Total .......................... 28,200

Grade-point averages
Freshman .......................... 2.87
Sophomore .......................... 3.00
Junior .......................... 3.02
Senior .......................... 3.05

Number of undergraduates in most populous departments
Biology .......................... 5,294
Economics .......................... 2,444
Psychology .......................... 1,395
Political Science .......................... 1,179
Mechanical and Aerospace Engineering (MAE) .......................... 1,114
Chemistry .......................... 1,079
International Studies .......................... 888
Bioengineering .......................... 851
Communications .......................... 749
Computer Science and Engineering (CSE) .......................... 636

Based upon the previous year’s experience, 94 percent of all new freshmen enrolled at UCSD in the fall quarter are also enrolled in the subsequent fall quarter. Forty-eight percent of all students who begin their undergraduate studies as freshmen at UCSD complete their degree requirements here within six years. Questions or requests for more detailed information should be directed to the Office of Student Research and Information/Student Affairs.

UCSD Extension enrollment .......................... 22,616
Summer Session enrollment .......................... 18,559
On campus teaching faculty members .......................... 2,138
Bound books in library collection .......................... 3,372,785

Members of Honorary Societies/
Faculty Prizes and Awards
A.B. Wood Medal Prize .......................... 2
Acoustical Society of America .......................... 1
Albert Lasker Award for Basic Medical Research .......................... 1
