Of the three electives intended to allow for the professional diversity, one lower-division biology or chemistry course from BILD 1, 2, Chem. 6B-C may be counted for credit in combination with two upper-division biology or chemistry courses. Furthermore, this will count only if the student can demonstrate to a faculty advisor that they constitute part of a coherent plan for professional/career development.

Upper-division biology and chemistry courses will count toward the three professional electives but not the three math/physics/engineering electives.

Economics

Suitable electives would include Econ. 1 and 3 followed by the courses in one of the following tracks:

- Macroeconomics: Econ. 110A-B.
- Monetary economics: Econ. 111, and another economics upper division elective.

Economics 1 and 2 followed by two courses in one of the following tracks:

- Public and Environmental: Econ. 118, 130, 131, 132, 133, 137, 145.
- Labor and Human Resources: Econ. 137, 139, 140.

Note: Econ. 100A can be substituted for Econ. 2 Econ. 1 and 100A followed by two courses in one of the following tracks:

- Microeconomics: Econ. 100B-C.
- Financial Markets: Econ. 120B and 173A.
- Human Resources: Econ. 100B and 136.

Note: Econ. 120A, and 158A-B will not be allowed as professional electives. If Economics is chosen for professional electives, only three technical electives are required for electrical engineering majors; only one technical elective is required for engineering physics majors.

B.S. COMPUTER ENGINEERING

Students wishing to pursue the computer engineering curriculum may do so in either the ECE or CSE department. The set of required courses and allowed electives is the same in both departments; please note that the curriculum requires twenty upper-division courses. The Computer Engineering Program requires a total of 151 units (not including the general-education requirements).

The Computer Engineering Program offers a strong emphasis on engineering mathematics and other basic engineering science as well as a firm grounding in computer science. Students should have sufficient background in high school mathematics so that they can take freshman calculus in their first quarter. Courses in high school physics and computer programming, although helpful, are not required for admission to the program.

Lower-Division Requirements (total of seventy-five units)

Mathematics (twenty units)
Math. 20A-B-C-D-F.

Physics (sixteen units)
Phys. 2A-B-C-D, or Phys. 4A-B-C-D. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the mathematics placement test permits them to start with Math. 20B or higher may take Phys. 2A in the fall quarter of the freshman year.

Computer Science (twenty-seven units)
CSE 11 or 88*, 12, 15L, CSE 20 or Math. 15A, CSE 21 or Math. 15B, CSE 30, CSE 70, and CSE 91.

*CSE 8A and CSE 8B are not required if a student completes CSE 11. CSE 11 is a faster paced version of CSE 8A and CSE 8B. Students will self-select which course they wish to take. Students without programming experience in a compiled language are advised to take CSE 8A and then CSE 8B instead of CSE 11.

Electrical Engineering (twelve units)
ECE 35, ECE 45, ECE 65.

Upper-Division Requirements (total of seventy-six units)

1. All B.S. computer engineering students are required to take CSE 100 or Math. 176, CSE 101 or Math. 188, CSE 105 or Math. 166, CSE 120, 131, 139, 140, 140L (CSE 140 and 140L must be taken concurrently), 141, 141L (CSE 141 and 141L must be taken concurrently).

2. In addition, all B.S. computer engineering students must fulfill the following upper-division ECE requirements:

- Engineering Probability and Statistics ECE 109. This course can be taken in the sophomore year.
- Electronic Circuits and Systems ECE 102 and 108. The department recommends that these courses be taken in the junior year.
- Linear systems ECE 101.

3. Technical electives: All B.S. computer engineering majors are required to take six technical electives.

- One technical elective must be either ECE 111 or ECE 118.
- Of the remaining five technical electives, four must be ECE or CSE upper-division or graduate courses.
- The remaining course can be any upper-division course listed under the non-CSE/ECE electives. (See the section on electives below.)

Electives

The discipline of computer engineering interacts with a number of other disciplines in a mutually beneficial way. These disciplines include mathematics, computer science, and cognitive science. The following is a list of upper-division courses from these and other disciplines that can be counted as technical electives.

At most four units of 197, 198, or 199 may be used towards technical elective requirements. ECE/ CSE 195 cannot be used towards course requirements. Undergraduate students must get instructor’s permission and departmental stamp to enroll in a graduate course.

Students may not get duplicate credit for equivalent courses. The UC San Diego General Catalog should be consulted for equivalency information and any restrictions placed on the courses. Additional restrictions are noted below. Any deviation from this list must be petitioned.

Mathematics

All upper-division courses except Math. 168A-B, 179A-B, 183, 184A-B, 189A-B, and 195–199. If a student has completed CSE 167, then he or she cannot get elective credit for Math. 155A. Students may receive elective credit for only one of the following courses: CSE 164A, Math. 174, Math. 173, Phys. 105A-B, MAE 107, CENG 100. No credit for any of these courses will be given if Math. 170A-B is taken. Students will receive credit for either Math. 166 or CSE 105 (but not both), either Math. 188 or CSE 101 (but not both), and either Math. 176 or CSE 100 (but not both).

Computer Science and Engineering

All CSE upper-division courses except CSE 195. Students will receive credit for either CSE 123A or CSE 158A (but not both).
Cognitive Science

Students may not get credit for both CSE 150 and Advanced Programming Methods for Cognitive Science 108F or for both CSE 151 and Artificial Intelligence Modeling II 182.

Mechanical and Aerospace Engineering (MAE)

All upper-division MAE courses except MAE 140, and MAE 195-199.

Students may receive elective credit for only one of the following courses: CSE 164A, Math. 174, Math. 173, Phys. 105A-B, CENG 100, MAE 107. Students may only get credit for one of the two courses, CSE 167 or MAE 152.

Economics

- Microeconomics 100A-B, Game Theory 109.

Students cannot take Economics 120A since it duplicates ECE 109.

Linguistics

- Phonetics 110, Phonology I 111, Phonology II 115, Morphology 120, Syntax I 121, Syntax II 125, Semantics 130, Mathematical Analysis of Languages 160, Computers and Language 163, Computational Linguistics 165, Psycholinguistics 170, Language and the Brain 172, and Sociolinguistics 175.

Engineering

- Team Engineering 101 (see course description under the Jacobs School of Engineering section).

Music

- Computer Music II 172, Audio Production: Mixing and Editing 173.

Psychology

- Engineering Psychology 161.

B.A. ELECTRICAL ENGINEERING AND SOCIETY

Students must complete a total of 180 units for graduation, including the general-education requirements (GER). Note that 144 units (excluding GER) are required.

Lower-Division Requirements (total of eighty units)

Mathematics (twenty-four units)

- Math. 20A-B-C-D-E-F.

Physics (sixteen units)

- Phys. 2A-B-C-D or Phys. 4A-B-C-D-E. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the mathematics placement test permits them to start with Math. 20B or higher may take Phys. 2A in the fall quarter of the freshman year.

Chemistry (four units)

- Chem. 6A.

Programming Course (four units)

- ECE 15.

Electrical Engineering (twenty units)

- ECE 25, 30, 35, 45, 65, and 75.

Elective Courses in Social Sciences and Humanities Studies (eight units)

- These can be prerequisite courses for the upper-division depth sequence in social sciences/humanities. For instance, for history studies, this can be two history lower-division courses (HILD 2, 7, 10–12). Historically oriented HUM, MMW, and CAT courses would count as well. At least one lower-division course should have a writing component. For economics studies, this can be two lower-division courses (ECON 1, and ECON 4 for the finance track); or one lower-division course (ECON 1) plus one upper-division course for the data analysis track. For political science, the following courses may be utilized: PS10, PS11, PS12, PS13, PS30. For sociology studies, students will choose two lower-division courses from SOCL 1A, 1B, and 30, of which L30 is highly recommended.

Other courses in social sciences/humanities will be available after an agreement between ECE and the respective departments/programs are established and approved.

Additional Notes

1. Students with AP math credit are strongly advised to take Math. 20B in the fall quarter, leaving room for a GER in the winter quarter.

2. The ECE undergraduate Web site shows several scheduling options. Please refer to the Web site and consult with the staff advisors in the undergraduate offices, rooms 2705 and 2707 in EBU1.

Upper-Division Requirements (total of sixty-four units)

a. Electrical Engineering BREADTH Courses (twenty-four units)

- Courses required of all electrical engineering majors:
  - The six courses—ECE 101, 102, 103, 107, 108, and 109—are required of all electrical engineering majors and they are an assumed prerequisite for senior-level courses, even if they are not explicitly required. Although the courses are largely independent, ECE 102 is a prerequisite for ECE 108. Students who delay some of the BREADTH courses until the spring should be careful to not have delayed their depth sequence.

b. Electrical Engineering DESIGN Course (four units)

   Note: In order to fulfill the design requirement, students must complete one of the following courses with a grade C– or better. When taking this course, the student has the option of having a portion of the project related to his/her social sciences/humanities study. Graduation will not be approved until a written copy of the design project is submitted to the ECE undergraduate office.

The electrical engineering design requirement can be fulfilled in any of the following three ways:

1. Take ECE 191. Engineering Group Design Project

2. Take ECE 190. Engineering Design. This course requires the department stamp. Specifications and enrollment forms are available in the undergraduate office.

3. Take one of the following courses:
   - ECE 111. Advanced Digital Design Project
   - ECE 118. Computer Interfacing
   - ECE 155B or 155C. Digital Recording Projects Students who wish to take one of these courses to satisfy the design requirement must fill out an enrollment form and have departmental approval for the design credit prior to taking the course. The project must meet the same specifications as ECE 190.

c. Electrical Engineering ELECTIVES (twelve units)

Three upper-division engineering, mathematics, or physics courses.

d. Social Sciences/Humanities Studies Depth Requirement (twenty-four units)

Students must complete a “depth requirement” of at least six quarter courses to provide a focus for their studies. Sample depth programs for history and economics students are discussed below. Students may choose this demonstrated sequence or they may propose another with the approval of their faculty co-advisor from the respective social sciences/humanities department.

History Studies (six courses, twenty-four units)

- At least four of these should belong to the specific field the student is pursuing (e.g., History of: East Asia, United States, Europe, Science, etc.).

- At least one course should be in the field of history of science and technology.

- At least one course should be a colloquium (i.e., a small course, with an emphasis on essay writing).

HISC 105. History of Environmentalism

HISC 106. The Scientific Revolution

HISC 107. The Emergence of Modern Science

HISC 108. Science and Technology in the Twentieth Century

HISC 109. Science in Western Civilization

HISC 111. The Atomic Bomb and the Atomic Age

HISC 115. Making Modern Medicine

HISC 131. Science Technology and Law
HISC 173/273. Darwin and Darwinism
HILD 2A. United States History
HILD 7A. Race and Ethnicity
HILD 10. East Asia: The Great Tradition
HILD 11. East Asia and the West
HILD 12. Twentieth-Century East Asia
HIUS 140. Economic History of the United States
HIUS 151. American Legal History 1865 to the Present
HIUS 187. Social Movements in the United States
HIUS 148. American Cities in the Twentieth Century
HIEU 143. European Intellectual History
HIGR 222. European History
HILA 102. Latin America in the Twentieth Century

Economics Studies
- Track A: Finance (six courses, twenty-four units)
  - Intermediate Microeconomic sequence: ECON 100A-B-C
  - Finance sequence: ECON 173A-B
  - One elective course from the following: ECON 104, 105, 109, 113, 119, 120B, 141, 142, 143, 147, 150, 151, 155, 171, 172A
- Track B: Data Analysis (seven courses, twenty-eight units, one of them can be taken during lower-division years)
  - Intermediate Microeconomic sequence: ECON 100A-B-C
  - Data Analysis sequence: ECON 120B-C
  - Two elective courses from the following: ECON 104, 105, 109, 119, 121, 125, 150, 151, 152, 155, 173A, 173B, 174, 176, 178
  - Other upper-division courses for satisfying the depth sequences for other studies in social sciences/humanities will be available after an agreement is established between ECE and the respective department/program in social sciences/humanities.

Political Science Studies (six courses, twenty-four units)
- Policy Analysis
  - At least four courses from
  - PS 160AA. Introduction to Policy Analysis
  - PS 160AB. Introduction to Policy Analysis
  - PS 162. Environmental Policy
  - PS 163. Analyzing Politics
  - PS 165. Special Topic: Policy Analysis
  - PS 168. Policy Assessment
  - PS 170A. Introductory Statistics for Political Science and Public Policy

Sociology Studies (six courses, twenty-four units)
- Students may specialize in one of four departmental concentrations or complete the “general sociology” track.
- Students will choose eight courses, two lower-division and six upper-division courses from their choice of concentrations in Science and Medicine, Law and Society, Economy and Society, International Studies, or General Sociology. Note: SOCL 30 and SOCC 168T are highly recommended for all tracks.

Concentration in Science and Medicine (eight courses, thirty-two units)
- Students will choose two lower division courses from SOCL 1A, 1B, and 30, of which L30 is highly recommended; and six upper division courses from the list below, in which SOCC 168T is highly recommended.

Lower-Division
- L 1A. The Study of Society
- L 1B. The Study of Society
- L 30. Science, Technology, and Society (highly recommended)

Upper-Division
- C 168T. Sociology of Technology (highly recommended)
- B 113. Sociology of the AIDS Epidemic
- C 134A. The Making of Modern Medicine
- C 135. Medical Sociology
- C 136A. Sociology of Mental Illness: An Historical Approach
- C 136B. Sociology of Mental Illness in Contemporary Society
- C 138. Genetics and Society
- C 149. Sociology of the Environment
- C 167. Science and War
- C 168E. Sociology of Science

Concentration in Law and Society (eight courses, thirty-two units)
- Students will choose two lower-division courses from SOCL 1A, 1B, and 30, of which L30 is highly recommended; and six upper-division courses from the list below, in which SOCC 168T is highly recommended.

Lower-Division
- L 1A. The Study of Society
- L 1B. The Study of Society
- L 30. Science, Technology, and Society (highly recommended)

Upper-Division
- C 168T. Sociology of Technology (highly recommended)
- B 111. Human Rights
- B 112. Social Psychology
- B 142. Social Deviance
- B 143. Suicide
- B 146. Law Enforcement in America
- B 160L. Law and Culture
- B 173. Elite Crime
- C 140. Sociology of Law
- C 140F. Law and the Workplace
- C 141. Crime and Society

C 147. Organizations, Society, and Social Justice
C 159. Special Topics in Social Organizations and Institutions
C 163. Migration and the Law

Concentration in Economy and Society (eight courses, thirty-two units)
- Students will choose two lower-division courses from SOCL 1A, 1B, and 30, of which L30 is highly recommended; and six upper-division courses from the list below, in which SOCC 168T is highly recommended.

Lower-Division
- L 1A. The Study of Society
- L 1B. The Study of Society
- L 30. Science, Technology, and Society (highly recommended)

Upper-Division
- C 168T. Sociology of Technology (highly recommended)
- B 125. Sociology of Immigration
- B 137. Sociology of Food
- C 121. Economy and Society
- C 132. Gender and Work
- C 139. Social Inequality: Class, Race, and Gender
- C 140F. Law and the Workplace
- C 148L. Inequality and Jobs
- C 152. Social Inequality and Public Policy
- C 163. Migration and the Law
- C 167. Science and War
- D 185. Globalization and Social Development

Concentration in International Studies (eight courses, thirty-two units)
- Students will choose two lower-division courses from SOCL 1A, 1B, and 30, of which L30 is highly recommended; and six upper-division courses from the list below, in which SOCC 168T is highly recommended.

Lower-Division
- L 1A. The Study of Society
- L 1B. The Study of Society
- L 30. Science, Technology, and Society (highly recommended)

Upper-Division
- C 168T. Sociology of Technology (highly recommended)
- B 111A. Human Rights: Principles and Problems
- B 111B. Human Rights: Practices and Cases
- B 130. Population and Society
- B 145. Violence and Society
- B 151. Comparative Race and Ethnic Relations
- B 162R. Religion and Popular Culture in East Asia
- C 148. Political Sociology
- C 152. Urban Sociology
- C 157. Religion in Contemporary Society
- D 158. Islam in the Modern World
- D 169. Citizenship, Community, and Culture
- D 176. War and Society
- D 177. International Terrorism
- D 178. The Holocaust
- D 179. The Holocaust
- D 180. Social Movements and Social Protest
D 181. Modern Western Society
D 182. Ethnicity and Indigenous Peoples in Latin America
D 183. Minorities and Nation
D 185. Globalization and Social Development
D 187. African Societies Through Film
D 188A. Community and Social Change in Africa
D 188B. Chinese Society
D 188F. Modern Jewish Societies and Israeli Society
D 188D. Latin America: Society and Politics
D 188J. Change in Modern South Africa
D 189. Special Topics in Comparative-Historical Sociology

General Sociology (eight courses, thirty-two units)

Students will choose two lower-division courses from SOCL 1A, 1B, and 30, of which 30 is highly recommended; and six upper-division courses, including one from EACH of the following four concentrations:

Science and Medicine
Law and Society
Economy and Society
International Studies

Note: SOCL 30 and SOCC 168T are highly recommended as two of the eight total courses.

Sample of a four-year program for the B.A. in Engineering Majors

1. Lower-Division Requirements (total of seventy-six units excluding GERs)

**FALL** | **WINTER** | **SPRING**
--- | --- | ---
Math. 20A | Math. 20B | Math. 20C
ECE 15 (Computer Programming) | ECE 25 (Intro to ECE 35) | ECE 35 (Intro to EE, EE, Digital)
Chem. 6A | ECE 25 (Intro to ECE 35) | Analog
GER | GER | GER

**SOPHMORE YEAR**

Math. 20F | Math. 20D | Math. 20E
Phys. 2C | Phys. 2D | GER
ECE 30 (Intro to CE) | ECE 45 (Circuits) | ECE 65 (Circuits and Systems)
GER | S/H Elective | S/H Elective

2. Upper-Division Requirements (total of sixty-eight units excluding GERs)

**FALL** | **WINTER** | **SPRING**
--- | --- | ---
ECE 101 (Linear Systems) | ECE 107 (Electromagnetism) | GER
ECE 102 (Active Circuits) | ECE 108 (Digital Circuits) | Depth #1
ECE 109 (Prob. and Statistics) | ECE 103 (Devices and Materials) | Depth #2
GER | GER | GER

**SENIOR YEAR**

Depth #3 | Depth #5 | Depth #6
Depth #4 | E. Elective | E. Elective
E. Elective | E. Elective | E. Elective
GER | GER | GER

Notes:
- Depth = Depth sequence courses
- S/H Elective = Social sciences/humanities elective courses
- E. Elective = Electrical engineering elective courses, which can be engineering, mathematics, or physics courses. Three of these electives must be upper-division. The fourth may be either lower or upper division.
- GER = General-Education Requirements

**MINOR CURRICULA**

ECE offers three minors in accord with the general university policy that a minor requires five upper-division courses. Students must realize that these upper-division courses have extensive lower-division prerequisites (please consult the ECE undergraduate office). Students should also consult their college provost’s office concerning the rules governing minors and programs of concentration.

Electrical Engineering: Twenty units chosen from the breadth courses ECE 101, 102, 103, 107, 108, 109.

Computer Engineering: Twenty units chosen from the junior year courses ECE 102, 108, CSE 100, 101, 105, 120, 140, 140L, 141, 141L.

The department will consider other mixtures of upper-division ECE, CSE, physics, and mathematics courses by petition.

**UNDERGRADUATE ADMISSIONS, POLICIES, AND PROCEDURES**

**FRESHMAN ELIGIBILITY**

1. **Computer Engineering**
   
   Freshmen students who have declared Computer Engineering on their application will be directly admitted into the major.

2. **Electrical Engineering**
   
   Freshmen students who have declared Electrical Engineering on their application will be directly admitted into the major.

3. **Engineering Physics**
   
   Students are accepted into the pre-major and must complete the following courses in order to be accepted into the engineering physics major: Math. 20A-B-C, Phys. 2A-B, ECE 15, 25, and 33. Students who wish to enter in the engineering physics major must contact the department before the beginning of the fall quarter, submitting course descriptions and transcripts for courses used to satisfy their lower-division requirements. Normally, admission will be for the fall quarter; students entering in the winter or spring quarter should be aware that scheduling difficulties may occur because upper-division sequences normally begin in the fall quarter.

**GRADE REQUIREMENT IN THE MAJOR**

Courses required for the major must be taken for a letter grade. All major courses must be completed with a grade of C– or better.

A GPA of 2.0 is required in all upper-division courses in the major, including technical electives. The grade of D will not be considered an adequate prerequisite for any ECE course and will not be allowed for graduation. The engineering design requirement must be completed with a grade of C– or better.
ADVISING

Students are required to complete an academic planning form and to discuss their curriculum with the appropriate departmental advisor immediately upon entrance to UCSD, and then every year until graduation. This is intended to help students in: a) their choice of depth sequence, b) their choice of electives, c) keeping up with changes in departmental requirements. A faculty advisor will be assigned by the ECE department undergraduate office.

NEW TRANSFER STUDENTS IN ELECTRICAL ENGINEERING AND ENGINEERING PHYSICS

The entire curriculum is predicated on the idea of actively involving students in engineering from the time they enter as freshmen. The freshman courses have been carefully crafted to provide an overview of the engineering mindset with its interrelationships among physics, mathematics, problem solving, and computation. All later courses are specifically designed to build on this foundation. All transfer students should understand that the lower-division curriculum is demanding. Transfer students will be required to take all lower-division requirements or their equivalent. Transfer students are advised to consult the ECE Web site for sample recommended course schedules and for the ECE course requirement guide.

NEW TRANSFER STUDENTS IN COMPUTER ENGINEERING

Transfer students are advised to consult the ECE Web site for sample recommended course schedules and for the ECE course requirement guide.

Students who do not have any programming experience are encouraged to take the CSE 8A-B sequence instead of CSE 11. Experience has shown that most students who are not familiar with programming and take CSE 11 have to retake the class because the accelerated pace makes it difficult to learn the new material.

Note: Transfer students are encouraged to consult with the ECE undergraduate office for academic planning upon entrance to UCSD.

ECE HONORS PROGRAM

The ECE Undergraduate Honors Program is intended to give eligible students the opportunity to work closely with faculty in a project, and to honor the top graduating undergraduate students.

ELIGIBILITY FOR ADMISSION TO THE HONORS PROGRAM

1. Students with a minimum GPA of 3.5 in the major and 3.25 overall will be eligible to apply. Students may apply at the end of the winter quarter of their junior year and no later than the end of the second week of fall quarter of their senior year. No late applications will be accepted.
2. Students must submit a project proposal (sponsored by an ECE faculty member) to the honors program committee at the time of application.
3. The major GPA will include ALL lower-division required for the major and all upper-division required for the major that are completed at the time of application (a minimum of twenty-four units of upper-division course work).

REQUIREMENTS FOR AWARD OF HONORS

1. Completion of all ECE requirements with a minimum GPA of 3.5 in the major based on grades through winter quarter of the senior year.
2. Formal participation (i.e., registration and attendance) in the ECE 290 graduate seminar program in the winter quarter of their senior year.
3. Completion of an eight-unit approved honors project (ECE 193H: Honors Project) and submission of a written report by the first day of spring quarter of the senior year. This project must contain enough design to satisfy the ECE B.S. four-unit design requirement.
4. The ECE honors committee will review each project final report and certify the projects which have been successfully completed at the honors level.

PROCEDURE FOR APPLICATION TO THE HONORS PROGRAM

Between the end of the winter quarter of their junior year and the second week of the fall quarter of their senior year, interested students must advise the department of their intention to participate by submitting a proposal for the honors project sponsored by an ECE faculty member. Admission to the honors program will be formally approved by the ECE honors committee based on GPA and the proposal.

UNIT CONSIDERATIONS

Except for the two-unit graduate seminar, this honors program does not increase a participant’s total unit requirements. The honors project will satisfy the departmental design requirement and students may use four units of their honors project course as a technical elective.

THE GRADUATE PROGRAMS

FIVE-YEAR B.S./MASTER’S PROGRAM

Undergraduates in the ECE department who have maintained a good academic record in both departmental and overall course work are encouraged to participate in the five-year B.S./master’s program offered by the department. Participation in the program will permit students to complete the requirements for the M.S. or M.Eng. degree within one year following receipt of the B.S. degree. Complete details regarding admission to and participation in the program are available from the ECE Undergraduate Affairs office.

ADMISSION TO THE PROGRAM

Students should submit an application for the B.S./master’s program, including three letters of recommendation, by the program deadline during the spring quarter of their junior year. Applications are available from the ECE Undergraduate Affairs office. No GREs are required for application to the B.S./master’s program. A GPA of at least 3.0 both overall and in the major and strong letters of recommendation are required to be considered for program admission. Students should indicate at that time whether they wish to be considered for the M.S. degree program.

In the winter quarter of the senior year, applications of students admitted to the program will be forwarded by the department to the UC San Diego Office of Graduate Studies. Each student must submit the regular graduate application fee prior to the application deadline for their application to be processed. Students who have been accepted into the B.S./master’s program will automatically be admitted for graduate study beginning the following fall provided they maintain an overall GPA through the winter quarter of the senior year of at least 3.0. Upper-division (up to twelve units) or graduate courses taken during the senior year that are not used to satisfy undergraduate course requirements may be counted towards the forty-eight units required for the M.S. degree.

CONTINUATION IN THE PROGRAM

Once admitted to the B.S./master’s program, students must maintain a 3.0 cumulative GPA in all courses through the winter quarter of the senior year and in addition must at all times maintain a 3.0 cumulative GPA in their graduate course work. Students not satisfying these requirements may be re-evaluated for continuation in the program.

Admission for graduate study through the B.S./master’s program will be for the M.S. or M.Eng. degree only. Undergraduate students wishing to continue toward the Ph.D. degree must apply and be evaluated according to the usual procedures and criteria for admission to the Ph.D. program.

CURRICULUM

Students in the five-year B.S./master’s program must complete the same requirements as those in the regular M.S. program. Completion of the M.S. degree requirements within one year following receipt of the B.S. degree will generally require that students begin graduate course work in their senior year. All requirements for the B.S. degree should be completed by the end of the senior (fourth) year, and the B.S. degree awarded prior to the start of the fifth year. Courses taken in the senior year may be counted toward the B.S. degree requirements or the M.S. degree requirements, but not both. Students must have received their B.S. degree before they will be eligible to enroll as graduate students in the department.

The department offers graduate programs leading to the M.Eng., M.S., and Ph.D. degrees in electrical engineering. Students can be admitted into ECE graduate studies through either the M.Eng., M.S., or Ph.D. programs.

The Ph.D. program is strongly research oriented and is for students whose final degree objective is the Ph.D. If a student with a B.S. is admitted to this program, he or she will be expected to complete the requirements for the M.S. degree (outlined below) before beginning doctoral research. The M.S. is a technically intensive, research-oriented degree intended as preparation for advanced technical work in the engineering profession, or subsequent pursuit of a Ph.D. By contrast, the M.Eng. is intended to be a
terminal professional degree, for those not planning to pursue the Ph.D. The M. Eng. has only a course work requirement.

In addition, the department offers M.S. and Ph.D. programs in computer engineering jointly with CSE, and a Ph.D. program in applied ocean science jointly with MAE and Scripps Institution of Oceanography.

Admission to an ECE graduate program is in accordance with the general requirements of the UCSD graduate division, and requires at least a B.S. Degree in engineering, physical sciences, or mathematics with a minimum upper division GPA of 3.0. Applicants must provide three letters of recommendation and recent GRE General Test scores. TOEFL or IELTS scores are required from international applicants whose native language is not English. Applicants should be aware that the University does not permit duplication of degrees.

Support: The department makes every effort to provide financial support for Ph.D. students who are making satisfactory progress. Support may take the form of a fellowship, teaching assistantship, research assistantship, or some combination thereof. International students will not be admitted unless there is reasonable assurance that support can be provided for the duration of their Ph.D. Program

Students in the M.Eng. and M.S. programs may also obtain support through teaching or research assistantships, but this is less certain.

Advising: Students should seek advice on requirements and procedures from the departmental graduate office and/or the departmental Web site http://www.ece.ucsd.edu. All students will be assigned a faculty academic advisor upon admission and are strongly encouraged to discuss their academic program with their advisor immediately upon arrival and subsequently at least once per academic year.

MASTER OF ENGINEERING

The Master of Engineering (M. Eng.) program is intended primarily for engineers who desire master’s-level work but do not intend to continue with Ph.D.-level research. It differs from the M.S. program in that it is a terminal professional degree, whereas the M.S. may serve as an entry to a Ph.D. program. Salient features of the M. Eng. program include the following: It can be completed in four quarters at full-time or eight quarters at half-time; it does not require a thesis, a research project, or a comprehensive exam; and it has an option of three courses in business, management, and finance.

Course Requirements

The total course requirements are forty-eight units (twelve quarter courses). At least thirty-six units must be at the graduate level. The choice of courses is subject to general focus and breadth requirements. Students will be assigned a faculty advisor who will help select courses.

1. The Focus Requirement: (five courses) The M.Eng. program should reflect, among other things, a continuity and focus in one subject area. The course selection must therefore include at least twenty units (five quarter courses) in closely related courses leading to the state of the art in that area. The requirement may be met by selecting five courses from within one of the focus areas listed below. In some cases it may be appropriate to select five closely related courses from two of the areas listed below. Such cases must be approved by a faculty advisor and the ECE Graduate Affairs Committee.

2. The Breadth Requirement: (two courses) A graduate student often cannot be certain of his or her future professional career activities and may benefit from exposure to interesting opportunities in other subject areas. The breadth requirement is intended to provide protection against technical obsolescence, open up new areas of interest, and provide for future self-education and interaction with people from related and sometime disparate disciplines. The minimum breadth requirement is eight units (two quarter courses) of ECE/CSE graduate courses selected from among the courses listed below, in an area distinctly different from that of the focus requirement.

3. Technical Electives: (two courses) Two technical electives may be any graduate courses in ECE, CSE, Physics, or Mathematics. Other technical courses may be selected with the approval of the faculty advisor and the ECE Graduate Affairs Committee. Technical electives may include a maximum of four units of ECE 298 (Independent Study), or ECE 299 (Research).

4. Professional Electives: (three courses) The three professional electives may be used in several ways: for the IP/Core 401, 420, 421 series in business, management, and finance; for upper-division undergraduate technical courses specified as prerequisites for graduate-level focus, breadth, or technical elective courses taken to satisfy the M.Eng. Degree requirements; or for additional graduate technical electives. Use of other courses to satisfy the Professional Elective requirement must be approved by the faculty advisor.

Scholarship Requirement: The forty-eight units of required course work must be taken for a letter grade (A–F), except for ECE 298 or 299, for which only S/U grades are allowed. Courses for which a D or F is received may not be counted. Students must maintain a GPA of 3.0 overall.

MASTER OF ENGINEERING PROGRAM FOCUS COURSES

Please consult the ECE graduate office or the ECE Web site http://www.ece.ucsd.edu for the current list of focus areas and courses.

1. Applied Physics

ECE 222A-B-C. Electromagnetic Theory
ECE 230A-B-C. Solid State Electronics
ECE 236A-B-C-D. Semiconductors
ECE 238A-B. Materials Science
MS 201A-B-C. Materials Science
ECE 240A-B-C. Optics
ECE 241A-B-C. Optics

2. Communications and Signal Analysis

ECE 250. Random Processes
ECE 251AN-BN-CN-DN. Digital Signal Processing
ECE 252A-B. Speech Compression and Recognition
ECE 253A-B. Digital Image Analysis
ECE 254. Detection Theory
ECE 255AN. Information Theory
ECE 255BN-CN. Source Coding
ECE 256A-B. Time Series Analysis
ECE 257A-B. Wireless Communications
ECE 258A-B. Digital Communications
ECE 259AN-BN-CN. Channel Coding
ECE 275A-B. Statistical Parameter Estimation
ECE 285. Special Topic: Computer Vision: Pattern Recognition (offerings vary annually)

3. Electronic Circuits and Systems

Allied Ph.D. research areas: Computer Engineering, Electronic Circuits and Systems.

ECE 222A-B-C. Applied Electromagnetic Theory
ECE 230A-B-C. Solid State Electronics
ECE 236A-B-C. Semiconductor Hetero-structure Materials
ECE 250. Random Processes
ECE 260A-B-C. VLSI Circuits
ECE 264A-B-C-D. Analog IC Design
ECE 265A-B. Wireless Circuit Design
CSE 240A, 240B. Computer Architecture
CSE 242A, 243A. Computer Aided Design
ECE 251AN-BN-CN-DN. Digital Signal Processing

TRANSFER TO THE PH.D. PROGRAM

Although the M. Eng. is intended as a terminal degree, the department recognizes that degree goals can change, including the possibility that a student admitted to the M. Eng. may wish to pursue a Ph.D. To this end, we outline below the procedure that must be followed to effect such a change. At the outset, however, we stress that this option should not be used in an attempt to circumvent the normal Ph.D. admissions process. Students who fail to meet the standards for the Ph.D. program at the time of admission have little chance of being allowed into the Ph.D. program at a later date.

Students in the M.Eng. program wishing to be considered for admission to the Ph.D. program should consult their academic advisor as soon as possible. Transfer from M. Eng. to the Ph.D. program is possible provided that the student

• Satisfy all requirements for initial admission to the Ph.D. program, including submission of GRE General Test Scores, and be approved for consideration for transfer to the Ph.D program by the ECE Graduate Admissions Committee.

• Identify a faculty member who agrees, in writing, to serve as that student’s academic and Ph.D. research advisor.

• In consultation with the academic advisor, design and complete a program of course work that satisfies all course requirements and constraints for a Ph.D. discipline appropriate to their research. All students in the Ph.D. programs are required to
satisfy all Ph.D. degree requirements as described below. Should the student not be admitted to the Ph.D. program, this program of course work will serve, with the approval of the academic advisor and the ECE Graduate Affairs Committee, to satisfy the course work requirements for the M.S. or M.Eng. degree (see below).

- Pass the comprehensive examination at the level required for continuation in the Ph.D. program. A student failing to pass the comprehensive exam at this required level will not be admitted to the Ph.D. program, and will instead continue in the M.S. or M.Eng. degree program (see below).
- Maintain a GPA of at least 3.4 in the appropriate core graduate courses.

A student who has fulfilled all of the above requirements should, after passing the departmental comprehensive exam, submit a petition to change their degree objective from M.Eng. to Ph.D.

MASTER OF SCIENCE

The ECE department offers M.S. programs in electrical and computer engineering. The M.S. program in computer engineering is jointly administered with the Department of Computer Science and Engineering. The M.S. programs are research oriented, are intended to provide the intensive technical preparation necessary for advanced technical work in the engineering profession or subsequent pursuit of a Ph.D. The M.S. degree may be earned either with a thesis (Plan 1) or with a research project followed by a comprehensive examination (Plan 2). However, continuation in the Ph.D. program requires a comprehensive examination so most students opt for Plan 2.

Course Requirements: The total course requirements for the master of science degrees in electrical engineering and in computer engineering are forty-eight units (twelve quarter courses) and forty-nine units, respectively, of which at least thirty-six units must be in graduate courses. Note that this is greater than the minimum requirements of the university. The department maintains a list of core courses for each disciplinary area from which the thirty-six graduate course units must be selected. The current list may be obtained from the department graduate office or the official Web site of the department. Students in interdisciplinary programs may select other core courses with the approval of their academic advisor. The course requirements must be completed within two years of full-time study. Students will be assigned a faculty advisor who will help select courses and approve their overall academic curriculum.

Scholarship Requirement: The forty-eight units of required course work must be taken for a letter grade (AF), except for graduate research (e.g. ECE 298, 299) for which only S/U grades are allowed. Courses for which a D or F is received may not be counted. Students must maintain a GPA of 3.0 overall.

Thesis and Comprehensive Requirements: The department offers both M.S. Plan 1 (thesis) and M.S. Plan 2 (written comprehensive exam). Students in the M.S. program may elect either Plan 1 or Plan 2 any time. Students in the M.S. Plan 1 (thesis) must take twelve units of ECE 299 (Research) and must submit a thesis as described in the general requirements of the university. Students in the M.S. Plan 2 (written comprehensive exam) may count four units of ECE 299 (Research) toward the thirty-six graduate units required and must pass the departmental written comprehensive examination not later than the end of the fall quarter of their second year of study. Students who pass the written examination at the MS level will receive a terminal masters degree, if they do not already have one.

Students in the computer engineering discipline may elect to take examinations in the Department of Computer Science and Engineering, in accordance with the CSE guidelines, in place of the written comprehensive examination in ECE.

Transfer to the Ph.D. Program: Students in the M.S. program wishing to be considered for admission to the Ph.D. program should consult their academic advisor as soon as possible. Transfer from the M.S. to the Ph.D. program is possible provided that the student:

- Satisfy all requirements for initial admission to the Ph.D. program, including submission of GRE general test scores, and be approved for consideration for transfer to the Ph.D. program by the ECE Graduate Admissions Committee.
- Identify a faculty member who agrees, in writing, to serve as that student’s academic and Ph.D. research advisor.
- In consultation with the academic advisor, design and complete a program of course work that satisfies all course requirements and constraints for a Ph.D. discipline appropriate to the student’s research. All students in the Ph.D. program are required to satisfy all Ph.D. degree requirements as described below. Should the student not be admitted to the Ph.D. program, this program of course work will serve, with the approval of the academic advisor and the ECE Graduate Affairs Committee, to satisfy the course work requirements for the M.S. degree.
- Pass the comprehensive examination at the level required for continuation in the Ph.D. program. A student failing to pass the comprehensive exam at this required level will not be admitted to the Ph.D. program, and will instead continue in the M.S. degree program.
- Maintain a GPA of at least 3.4 in the appropriate core graduate courses.

A student who has fulfilled all of the above requirements should, after passing the departmental comprehensive exam, submit a petition to change his or her degree objective from M.S. to Ph.D.

THE DOCTORAL PROGRAMS

The ECE department offers graduate programs leading to the Ph.D. degree in ten disciplines within electrical and computer engineering, as described in detail below. The Ph.D. is a research degree requiring completion of the Ph.D. Program course requirements, satisfactory performance on the comprehensive (Ph.D. Preliminary) examination and university Qualifying Examination, and submission and defense of a doctoral thesis (as described under the “Graduate Studies” section of this catalog). Students in the Ph.D. Program must pass the comprehensive exam (Ph.D. Preliminary) before the beginning of the winter quarter of the second year of graduate study. To ensure timely progress in their research, students are strongly encouraged to identify a faculty member willing to supervise their doctoral research by the end of their first year of study.

Students should define their research interest as soon as they have passed the comprehensive exam (Ph.D. Preliminary). They should plan on taking the university Qualifying Examination about one year later. The university does not permit students to continue in graduate study for more than four years without passing this examination. At the Qualifying Examination the student will give an oral presentation on research accomplishments to date and the thesis proposal to a campus-wide committee. The committee will decide if the work and proposal has adequate content and reasonable chance for success. They may require that the student modify the proposal and may require a further review.

The final Ph.D. requirements are the submission of a dissertation and the dissertation defense (as described under the “Graduate Studies” section of this catalog).

Course Requirements: The total course requirements for the Ph.D. degree in electrical engineering are essentially the same as the M.S. degree and consists of forty-eight units (twelve quarter courses), of which at least thirty-six units must be in graduate courses. Note that this is greater than the minimum requirements of the university. The department maintains a list of core courses for each disciplinary area from which the thirty-six graduate course units must be selected. The current list may be obtained from the ECE department graduate office or the official Web site of the department. Students in the interdisciplinary programs may select other core courses with the approval of their academic advisor. The course requirements must be completed within two years of full-time study.

Students in the Ph.D. programs may count no more than eight units of ECE 299 towards their course requirements.

Students who already hold an M.S. degree in electrical engineering must nevertheless satisfy the requirements for the core courses. However, graduate courses taken elsewhere can be substituted for specific courses with the approval of the academic advisor.

Scholarship Requirement: The forty-eight units of required course work must be taken for a letter grade (AF), except for ECE 299 (Research) for which only S/U grades are allowed. Courses for which a D or F is received may not be counted. Students must maintain a GPA of 3.0 overall. In addition, a GPA of 3.4 in the core graduate courses is generally expected.

Comprehensive Exam (Ph.D. Preliminary): Ph.D. students must find a faculty member who will agree to supervise their thesis research. This should be done before the start of the second year of study. They should then devote at least half their time to research and must pass the Ph.D. Preliminary Examination by the end of their second year of study. This is an oral exam in which the student presents his or her research to a committee of three ECE faculty members, and is examined orally for proficiency in his or her area of specialization. The outcome of the
Specific time limits for the Ph.D. Program, assuming qualifying exams will also be reduced by one year. M.S. work, the time limits for the comprehensive and another institution are expected to complete their enter the Ph.D. Program with an M.S. degree from ECE course on an S/U basis. who are advanced to candidacy may register for any "Graduate Studies" section of this catalog). Students mentions are the submission of a dissertation, and the dissertation defense (as described under the "Graduate Studies" section of this catalog). Students who are advanced to candidacy may register for any ECE course on an S/U basis.

Departmental Time Limits: Students who enter the Ph.D. Program with an M.S. degree from another institution are expected to complete their Ph.D. requirements a year earlier than B.S. entrants. They must discuss their program with an academic advisor in their first quarter of residence. If their Ph.D. Program overlaps significantly with their earlier M.S. work, the time limits for the comprehensive and qualifying exams will also be reduced by one year. Specific time limits for the Ph.D. Program, assuming entry with a B.S. degree, are as follows:

1. **The Comprehensive Exam (Ph.D. Preliminary)** must be completed before the start of the winter quarter of the second year of full-time study.

2. **The University Qualifying Exam** must be completed before the start of the fifth year of full-time study.

3. **Support Limit**: Students may not receive financial support through the university for more than seven years of full-time study (six years with an M.S. degree).

4. **Registered Time Limit**: Students may not register as graduate students for more than eight years of full-time study (seven years with an M.S. degree).

**Half-Time Study**: Time limits are extended by one quarter for every two quarters of approved half-time status. Students on half-time status may not take more than six units each quarter.

**P.H.D. RESEARCH PROGRAMS**

**1. Applied Ocean Sciences**: This program in applied science related to the oceans is interdepartmental with the Graduate Department of the Scripps Institution of Oceanography (SIO) and the Department of Mechanical and Aerospace Engineering (MAE). It is administered by SIO. All aspects of man's purposeful and unusual intervention into the sea are included.

**2. Applied Physics—Applied Optics and Photonics**: These programs encompass a broad range of interdisciplinary activities involving optical science and engineering, optical and optoelectronic materials and device technology, communications, computer engineering, and photonic systems engineering. Specific topics of interest include ultrafast optical processes, nonlinear optics, quantum cryptography and communications, optical image science, multidimensional optoelectronic I/O devices, spatial light modulators and photodetectors, artificial dielectrics, multifunctional diffractive and micro-optics, volume and computer-generated holography, optoelectronic and micromechanical devices and packaging, wave modulators and detectors, semiconductor-based optoelectronics, injection lasers, and photodetectors. Current research projects are focused on applications such as optical interconnects in high-speed digital systems, optical multidimensional signal and image processing, ultrahigh-speed optical networks, 3D optical memories and memory interfaces, 3D imaging and displays, and biophotonic systems. Facilities available for research in these areas include electron-beam and optical lithography, material growth, microfabrication, assembly, and packaging facilities, cw and femtosecond pulse laser systems, detection systems, optical and electro-optic components and devices, and electronic and optical characterization and testing equipment.

**3. Communication Theory and Systems**: Communications theory and systems concerns the transmission, processing, and storage of information. Topics covered by the group include wireless and wireline communications, spread-spectrum communication, multi-user communication, network protocols, error-correcting codes for transmission and magnetic recording, data compression, time-series analysis, and image and voice processing.

**4. Computer Engineering** consists of balanced programs of studies in both hardware and software, the premise being that knowledge and skill in both areas are essential both for the modern-day computer engineer to make the proper unbiased tradeoffs in design, and for researchers to consider all paths towards the solution of research questions and problems. Toward these ends, the programs emphasize studies (course work) and competency (comprehensive examinations, and dissertations or projects) in the areas of VLSI and logic design, and reliable computer and communication systems. Specific research areas include computer systems, signal processing systems, multiprocessing and parallel and distributed computing, computer communications and networks, computer architecture, computer-aided design, fault-tolerance and reliability, and neurocomputing. The faculty is composed of interested members of the Departments of Electrical and Computer Engineering (ECE), Computer Science and Engineering (CSE), and related areas. The specialization is administered by both departments; the requirements are similar in both departments, with students taking the comprehensive exam, if necessary, given by the student's respective department.

**5. Electronic Circuits and Systems**: This program involves the study and design of analog, mixed-signal (combined analog and digital), and digital electronic circuits and systems. Emphasis is on the development, analysis, and implementation of integrated circuits that perform analog and digital signal processing for applications such as wireless and wireline communication systems, test and measurement systems, and interfaces between computers and sensors. Particular areas of study currently include radio frequency (RF) power amplifiers, RF low noise amplifiers, RF mixers, fractional-N phase-locked loops (PLLs) for modulated and continuous-wave frequency synthesis, pipelined analog-to-digital converters (ADCs), delta-sigma ADCs and digital-to-analog converters (DACs), PLLs for clock recovery, adaptive and fixed continuous-time, switched-capacitor, and digital filters, echo cancellation circuits, adaptive equalization circuits, wireless receiver and transmitter linearization circuits, mixed-signal baseband processing circuits for wireless transmitters and receivers, high-speed digital circuits, and high-speed clock distribution circuits.

**6. Applied Physics—Electronic Devices and Materials**: This program addresses the synthesis and characterization of advanced electronic materials, including semiconductors, metals, and dielectrics, and their application in novel electronic, optoelectronic, and photonic devices. Emphasis is placed on exploration of techniques for high-quality epitaxial growth of semiconductors, including both molecular-beam epitaxy (MBE) and metalorganic chemical vapor deposition (MOCVD); fabrication and characterization of materials and devices at the nanoscale; development of novel materials processing and integration techniques; and high-performance electronic devices based on both Group IV (Si/SiGe) and III-V compound semiconductor materials. Areas of current interest include novel materials and high-speed devices for wireless communications; electronic and optoelectronic devices for high-speed optical networks; high-power microwave-frequency devices; nanoscale CMOS devices and circuits; heterogeneous materials integration; novel device structures for biological and chemical sensing; advanced tools for nanoscale characterization and metrology; and novel nanoscale electronic, optoelectronic, and photonic devices. Extensive facilities are available for research in this area, including several MBE and MOCVD systems; a complete microfabrication facility; electron-beam lithography and associated process tools for nanoscale fabrication; a Rutherford backscattering system; x-ray diffractometers; electron microscopy facilities; extensive scanning-probe instrumentation; cryogenic systems; and comprehensive facilities for DC to RF electrical device characterization and optical characterization of materials and devices.
7. Intelligent Systems, Robotics, and Control: This information sciences-based field is concerned with the design of human-interactive intelligent systems that can sense the world (defined as some specified domain of interest); represent or model the world; detect and identify states and events in the world; reason about and make decisions about the world; and/or act on the world, perhaps all in real-time. A sense of the type of systems and applications encountered in this discipline can be gained by viewing the projects shown at the Web site http://www.ece.ucsd.edu/grad/curricula/MS-PhD/ISRC/index.php.

The development of such sophisticated systems is necessarily an interdisciplinary activity. To sense and succinctly represent events in the world requires knowledge of signal processing, computer vision, information theory, coding theory, and data-basing; to detect and reason about states of the world utilizes concepts from statistical detection theory, hypothesis testing, pattern recognition, time series analysis, and artificial intelligence; to make good decisions about highly complex systems requires knowledge of traditional mathematical optimization theory and contemporary near-optimal approaches such as evolutionary computation; and to act upon the world requires familiarity with concepts of control theory and robotics. Very often learning and adaptation are required as either critical aspects of the world are poorly known at the outset, and must be refined online, or the world is non-stationary and our system must constantly adapt to it as it evolves. In addition to the theoretical information and computer science aspects, many important hardware and software issues must be addressed in order to obtain an effective fusion of a complicated suite of sensors, computers, and problem dynamics into one integrated system.

Faculty affiliated with the ISRC subarea are involved in virtually all aspects of the field, including applications to intelligent communications systems; advanced human-computer interfacing; statistical signal- and image-processing; intelligent tracking and guidance systems; biomedical system identification and control; and control of teleoperated and autonomous multiagent robotic systems.

8. Magnetic Recording is an interdisciplinary field involving physics, material science, communications, and mechanical engineering. The physics of magnetic recording involves studying magnetic heads, recording media, and the process of transferring information between the heads and the medium. General areas of investigation include: nonlinear behavior of magnetic heads, very high frequency loss mechanisms in head systems; advanced human-computer interfacing; artificial intelligence; to make good decisions about states of the world utilizes concepts from statistical detection theory, hypothesis testing, pattern recognition, time series analysis, and artificial intelligence; to make good decisions about highly complex systems requires knowledge of traditional mathematical optimization theory and contemporary near-optimal approaches such as evolutionary computation; and to act upon the world requires familiarity with concepts of control theory and robotics.

Micromagnetic analysis of magnetic reversal in individual magnetic particles, theory of recorded transition phase noise and magnetization induced nonlinear bit shift in thin metallic films, and analysis of the thermal-thermal stability of interacting fine particles.

Research laboratories are housed in the Center for Magnetic Recording Research, a national center devoted to multidisciplinary teaching and research in the field.

9. Applied Physics—Radio and Space Science: The Radio Science Program focuses on the study of radio waves propagating through turbulent media. The primary objectives are probing of otherwise inaccessible media such as the solar wind and interstellar plasma. Techniques for removing the effects of the turbulent medium to restore the intrinsic signals are also studied.

The Space Science Program is concerned with the nature of the sun, its ionized and supersonic outer atmosphere (the solar wind), and the interaction of the solar wind with various bodies in the solar system. Theoretical studies include: the interaction of the solar wind with the earth, planets, and comets; cosmic dust-plasma waves in the ionosphere; and the physics of shocks. A major theoretical effort involves the use of supercomputers for modeling and simulation studies of both fluid and kinetic processes in space plasmas.

Students in radio science will take measurements at various radio observatories in the U.S. and elsewhere. This work involves a great deal of digital signal processing and statistical analysis. All students will need to become familiar with electromagnetic theory, plasma physics, and numerical analysis.

10. Signal and Image Processing: This program explores engineering issues related to the modeling of signals starting from the physics of the problem, developing and evaluating algorithms for extracting the necessary information from the signal, and the implementation of these algorithms on electronic and opto-electronic systems. Examples of research areas include filter design, fast transforms, adaptive filters, spectrum estimation and modeling, sensor array processing, image processing, image restoration, video processing, pattern recognition, and the implementation of signal processing algorithms using appropriate technologies. Signal and image processing techniques have found application in a number of areas such as sonar, radar, speech, geophysics, medical imaging, robotic vision, digital communications, and multimedia systems among others.

11. Nanoscale Devices and Systems: This program area will address the science and engineering of materials and device structures at length scales of ~100nm and below, at which phenomena such as quantum confinement and single-electron effects in electronics, near-field behavior in optics and electromagnetics, single-domain effects in magnetics, and a host of other effects in mechanical, fluidic, and biological systems emerge and become dominant. Engineering activities such as scaling of transistors and other circuit elements in microelectronics, design of new, artificial materials with engineered optical properties and of photonic components and systems based on these materials, engineering of high-density magnetic storage media and systems, development of new technologies for renewable energy conversion and storage, advancement of sensor technology, and others now depend upon engineering both solid-state and “soft” materials and device structures at the nanoscale. Furthermore, the integration of such technologies into complex systems, as well as consideration of system drivers and constraints as guides for the development of new materials and devices, is emerging as a critical aspect of nanotechnology.

RESEARCH FACILITIES

Most of the research laboratories of the department are associated with individual faculty members or small informal groups of faculty. Larger instruments and facilities, such as those for electron microscopy and e-beam lithography are operated jointly. In addition the department operates several research centers and participates in various university-wide organized research units.

The department-operated research centers are the Center for Wireless Communications which is a university-industry partnership; the Institute for Neural Computation, and the Center for Information Theory and Application in conjunction with Calit2.

Department research is also associated with the Center for Astronomy and Space Science, the Center for Magnetic Recording Research, the California Space Institute, the Institute for Nonlinear Science, and Calit2 (http://www.calit2.net). Departmental researchers also use various national and international laboratories, such as the National Nanofabrication Facility, the National Radio Astronomy Laboratory, and the Center for Networked Systems (CSE).

The department emphasizes computational capability and maintains numerous computer laboratories for instruction and research. One of the NSF national supercomputer centers is located on the campus. This is particularly useful for those whose work requires high data bandwidths.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

The department will endeavor to offer the courses as outlined below; however, unforeseen circumstances sometimes require a change of scheduled offerings. Students are strongly advised to check the Schedule of Classes or the department before relying on the schedule below. For the names of the instructors who will teach the course, please refer to the quarterly Schedule of Classes. The departmental Web site http://www.ece.ucsd.edu includes the present best estimate of the schedule of classes for the entire academic year.
LOWER-DIVISION

1A–B–C. Mesa Orientation Course (1–1–1)
Students will be given an introduction to the engineering profession and our undergraduate program. Exercises and practicums will develop the problem-solving skills needed to succeed in engineering. Prerequisite: none. (F, W, S)

15. Engineering Computation (4)
Students learn the C programming language with an emphasis on high-performance numerical computation. The commonality across programming languages of control structures, data structures, and I/O is also covered. Techniques for using Matlab to graph the results of C computations are developed. Prerequisites: a familiarity with basic mathematics such as trigonometry functions and graphing is expected but this course assumes no prior programming knowledge. (F, W, S)

25. Introduction to Digital Design (4)
This course emphasizes digital electronics. Principles introduced in lectures are used in laboratory assignments, which also serve to introduce experimental and design methods. Topics include Boolean algebra, combination and sequential logic, gates and their implementation in digital circuits. (Course material and/or program fees may apply.) Prerequisite: none. (F, W, S)

30. Introduction to Computer Engineering (4)
The fundamentals of both the hardware and software in a computer system. Topics include: representation of information, computer organization and design, assembly and microprogramming, and logic design in digital systems. (Students who have taken CSE 30 may not take ECE 30 for credit.) Prerequisites: ECE 15 and 25 with grades of C– or better. (F, S)

35. Introduction to Analog Design (4)
Fundamental circuit theory concepts, Kirchhoff’s voltage and current laws, Thévenin’s and Norton’s theorems, loop and node analysis, time-varying signals, transient first order circuits, steady-state sinusoidal response. (Course material and/or program fees may apply.) Prerequisites: Math. 20A–B; Math. 20C and Physics 28 must be taken concurrently. (F, W, S)

45. Circuits and Systems (4)
Introduction to linear and nonlinear components and circuits. Topics include: basic electronic devices, bipolar and FET transistors, and analog and digital circuits, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen. Prerequisite: none. (F, W, S)

90. Undergraduate Seminar (1)
Students will be given an introduction to the engineering profession and our undergraduate program. Exercises and practicums will develop the problem-solving skills needed to succeed in engineering. Prerequisite: none. (F, W, S)

UPPER-DIVISION

100. Linear Electronic Systems (4)

102. Introduction to Active Circuit Design (4)
Design and stability of linear active circuits. Nonlinear models for diodes, bipolar and field-effect transistors. Design of analog transistor circuits, biasing, and small-signal transistor functions. Design of digital transistor circuits, logic levels, noise margins, and fanout. Circuit designs simulated by computer and tested in the laboratory. Prerequisites: ECE 65 and 101, with grades of C– or better. (F, W)

103. Fundamentals of Devices and Materials (4)
Introduction to semiconductor materials and devices. Semiconductor crystal structure, energy bands, doping, carrier statistics, drift and diffusion, p-n junctions, metal-semiconductor junctions. Bipolar junction transistor: current flow, amplification, switching, non-ideal behavior. Metal-oxide-semiconductor structures, MOSFETs, device scaling. Prerequisites: Phys. 2D or Phys. 4D and 4E with grades of C– or better. (F, W, S)

107. Electromagnetism (4)

108. Digital Circuits (4)
Digital integrated electronic circuits for processing technology. Analytical methods for static and dynamic characteristics. MOS field-effect transistors and bipolar junction transistors, circuit performance, data path, programmable logic arrays, memory elements. (Course material and/or program fees may apply.) Prerequisites: Math. 20A–B, 21C–D, 20F–E; Phys. 2A-D or 4A-E; ECE 25, 35, 45, and 65); ECE 30 or CSE 30; ECE 102 with grades of C– or better. (W, S)

109. Engineering Probability and Statistics (4)
Axioms of probability, conditional probability, theorem of total probability, random variables, density, expected values, characteristics functions, transformation of random variables, central limit theorem. Random number generation, engineering reliability, elements of estimation, random sampling, sampling distributions, tests for hypothesis, . Students who completed Math. 180A–B, Math. 183, Math. 186, Econ. 120A, or Econ. 120AH will not receive credit for ECE 109. Prerequisites: Math. 20A-B or 21C, 20D or 21D, 20F, with grades of C– or better. (ECE 101 recommended.) (W, S)

111. Advanced Digital Design Project (4)
Advanced topics in digital circuits and systems. Use of computers and design automation tools. Hazard elimination, synchronous/asynchronous FSM synthesis, synchronization and arbitration, physical design issues. Project sets and design exercises. A large-scale design project. Simulation and/or rapid prototyping. Prerequisite: ECE 108 or CSE 140 with grades of C– or better. (F, W, S)

118. Computer Interfacing (4)
Interfacing computers and embedded controllers to the real world: busses, interrupts, DMA, memory mapping, concurrency, digital I/O, standards for serial and parallel communications, A/D, D/A, sensors, signal conditioning, video, clock generators, and interprocess communication. (Course material and/or program fees may apply.) Prerequisites: ECE 30 or CSE 30 and ECE 60A-B or ECE 53A-B. (S)

120. Solar System Physics (4)
General introduction to planetary bodies, the overall structure of the solar system, and space plasma physics. Course emphasis will be on the solar atmosphere, how the solar wind is produced, and its interaction with both magnetized and unmagnetized planets (and comets). Prerequisites: Phys. 2A–C or 4A–D, Math. 20A–B, 20C or 21C with grades of C– or better. (S)

123. Antenna Systems Engineering (4)
The electromagnetic and systems engineering of radio antennas for terrestrial wireless and satellite communications. Antenna impedance, beam pattern, gain, and polarization. Dipoles, monopoles, paraboloids, phased arrays. Power and noise budgets for communication links. Atmospheric propagation and multipath. Prerequisite: ECE 107 with a grade of C– or better. (W or S)

134. Electronic Materials Science of Integrated Circuits (4)
Electronic materials science with emphasis on topics pertinent to microelectronics and VLSI technology. Concept of the course is to use components in integrated circuits to discuss structure, thermodynamics, reaction kinetics, and electrical properties of materials. Prerequisites: Phys. 2C–D with grades of C– or better. (S)

135A. Semiconductor Physics (4)
Crystal structure and quantum theory of solids; electronic band structure; review of carrier statistics, drift and diffusion, p-n junctions; nonequilibrium carriers, imfes, traps, recombination, etc; metal-semiconductor junctions and heterojunctions. Prerequisite: ECE 103 with a grade of C– or better. (F)

135B. Electronic Devices (4)
Structure and operation of bipolar junction transistors, junction field-effect transistors, metal-oxide-semiconductor diodes and transistors. Analysis of dc and ac characteristics. Charge control model of dynamic behavior. Prerequisite: ECE 135A with a grade of C– or better. (W)

136. Fundamentals of Semiconductor Device Fabrication (4)
Crystal growth, controlled diffusion, determination of junction position and impurity profiling, structure, oxide, silicon dioxide, oxidation, lithography, chemical vapor deposition, etching, process simulation and robust design for fabrication. Prerequisite: ECE 103 with a grade of C– or better. (S)

136L. Microelectronics Laboratory (4)
Laboratory fabrication of diodes and field effect transistors covering photolithography, oxidation, diffusion, thin film deposition, etching and evaluation of devices. (Course material and/or program fees may apply.) Prerequisite: ECE 103. (F, S)

138L. Microstructuring Processing Technology Laboratory (4)
A laboratory course covering the concept and practice of microstructuring science and technology in fabricating devices relevant to sensors, lab-chips and related devices. (Course material and/or program fees may apply.) Prerequisite: upper-division standing for science and engineering students. (W)

139. Semiconductor Device Design and Modeling (4)
Device physics of modern field effect transistors and bipolar transistors, including behavior of submicron structures. Relationship between structure and circuit models of transistors. CMOS and BiCMOS technologies. Emphasis on computer simulation of transistor operation and application in integrated circuits. Prerequisites: ECE 133A-B with grades of C– or better. (S)
153. Probability and Random Processes for Engineers (4)
Random processes. Stationary processes: correlation, power spectral density. Gaussian processes and linear transformation of Gaussian processes. Point processes. Random walk in continuous time. (F) Prerequisite: ECE 101 with a grade of C– or better. (F, S, W)

154A. Communications Systems I (4)
Study of analog modulation systems including AM, SSB, DSB, VSB, FM, and PM. Performance analysis of both coherent and noncoherent receivers, including threshold effects in FM. Prerequisite: ECE 101 and 153 with a grade of C– or better. (W)

154B. Communications Systems II (4)
Design and performance analysis of digital modulation techniques, including probability of error results for PSK, DPSK, and FSK. Introduction to effects of intersymbol interference and fading. Detection and estimation theory, including both linear and nonlinear methods. (Course material and/or program fees may apply.) Prerequisite: ECE 154A with a grade of C– or better. (W)

155A. Digital Recording Systems (4)
This course is reserved for students with modulation and coding techniques for digital recording channels. Prerequisites: ECE 109 and 153 with grades of C– or better and concurrent registration in ECE 154A required. Department stamp required. (F)

155B. Digital Recording Projects II (4)
Students registered in this course work one-on-one with a researcher on the design and evaluation of a digital recording system based upon material covered in ECE 155A. Prerequisites: ECE 155A with grade of C– or better. Concurrent registration in ECE 154B. Department stamp required. (W, S, W)

155C. Digital Recording Projects III (4)
Students registered in this course work one-on-one with a researcher on a project involving the design and evaluation of a digital recording system based upon material covered in ECE 155A. The project can be a continuation of a project initiated in Digital Recording Projects I or it can be an entirely new project. Prerequisites: ECE 155B with grade of C– or better. Concurrent registration in ECE 154C. Department stamp required. (W, S, W)

156. Sensor Networks (4)
Characteristics of chemical, biological, seismic, and other physical sensors; signal processing techniques supporting distributed detection of salient events; wireless communication and networking protocols supporting formation of robust sensor fabrics; current experience with low power, low cost sensor deployments. Undergraduate students must take a final exam; graduate students must write a term paper on an independent project. Cross-listed with MAE 149 and SIO 238. Prerequisite: upper-division standing and consent of instructor, or graduate student in science and engineering. (S)

157A. Communications Systems Laboratory I (4)
Experiments in the modulation and demodulation of baseband and passband signals. Statistical characterization of signals and impairments. (Course material and/or program fees may apply.) Prerequisite: ECE 154A with a grade of C– or better. (W)

157B. Communications Systems Laboratory II (4)
Advanced Projects in communication systems. Students will plan and implement design projects in the laboratory, updating progress weekly and making plan/design adjustments based upon feedback. (Course material and/or program fees may apply.) Prerequisite: ECE 154A with a grade of C– or better. (W)

158A. Data Networks I (4)
Layered network architectures, data link control protocols and multiple-access systems, performance analysis. Flow control; prevention of deadlock and throughput degradation. Routing, centralized and decentralized schemes, static dynamic algorithms. Shortest path and minimum average delay algorithms. Comparisons. Prerequisite: ECE 109 with a grade of C– or better. ECE 159A recommended. (W)

158B. Data Networks II (4)
Layered network architectures, data link control protocols and multiple-access systems, performance analysis. Flow control; prevention of deadlock and throughput degradation. Routing, centralized and decentralized schemes. Dynamic algorithms. Shortest path and minimum average delay algorithms. Comparisons. Prerequisite: ECE 158A with a grade of C– or better. (S)

159A. Queuing Systems: Fundamentals (4)
Analysis of single and multisever queuing systems; queue size and waiting times. Modeling of telephone systems, interactive computer systems and the machine repair problem. Prerequisite: ECE 109 with a grade of C– or better. (F)

159B. Queuing Systems: Computer Systems and Data Networks (4)
M/G/1 queuing systems. Computer systems applications: priority scheduling, time-sharing scheduling. Open and closed queuing networks; modeling and performance of interactive computer systems. Elements of computer-communication networks: stability and delay analysis, optimal design issues. Prerequisite: ECE 159A with a grade of C– or better. (W)

161A. Introduction to Digital Signal Processing (4)
Review of discrete-time systems and signals, Discrete-Time Fourier Transform and its properties, the Fast Fourier Transform, design of Finite Impulse Response (FIR) and Infinite Impulse Response (IIR) filters, implementation of digital filters. (Course material and/or program fees may apply.) Prerequisite: ECE 101 with grades of C– or better. (F, S, W)

161B. Digital Signal Processing I (4)
Sampling and quantization of baseband signals; A/D and D/A conversion including the design and evaluation of a digital recording system based upon material covered in ECE 155A. Prerequisites: ECE 155A with grade of C– or better. Concurrent registration in ECE 154B. Department stamp required. (W, S, W)

162. Analog Integrated Circuit Design (4)
Design of linear and non-linear analog integrated circuits including operational amplifiers, voltage regulators, drivers, power stages, oscillators, and multipliers. Use of feedback and evaluation of noise performance. Parastic effects of interconnections and circuit components. Techniques of fabrication and testing of circuits. Prerequisite: ECE 102 with a grade of C– or better. ECE 163 recommended. (F)

165. Digital Integrated Circuit Design (4)
VLSI digital systems. Circuit characterization, performance estimation, and optimization. Circuits for alternative logic styles and clocking schemes. Subsystems include ALUs, memory, processor arrays, and PLAs. Techniques of fabrication and testing of circuits. Prerequisite: ECE 108 with a grade of C– or better. (S)

166. Microwave Systems and Circuits (4)
Waves, distributed circuits, and scattering matrix methods. Passive microwave elements. Impedance matching. Detection and frequency conversion using microwave diodes. Design of transistor amplifiers including noise performance. Circuits designs will be simulated by computer and tested in the laboratory. (Course material and/or program fees may apply.) Prerequisites: ECE 102 and 107 with grades of C– or better. (F)

171A. Linear Control System Theory (4)
Stability of continuous- and discrete-time single-input/single-output linear time-invariant control systems emphasizing frequency domain methods. Transient and steady-state behavior. Stability analysis of root locus, Bode, Nyquist, and Nichols plots. Compensator design. Prerequisite: ECE 608 or ECE 533–8 or MAE 140 with a grade of C– or better. (S)

171B. Linear Control System Theory (4)
Time-domain, state-variable formulation of the control problem for both discrete-time and continuous-time linear systems. State-space realizations from transfer function system description. Internal and input-output stability, controllability/observability, minimal realizations, and pole-placement by full-state feedback. Prerequisite: ECE 151A with a grade of C– or better. (F)

172A. Introduction to Intelligent Systems: Robotics and Machine Intelligence (4)
This course will introduce basic concepts in machine perception. Topics covered will include edge detection, segmentation, texture analysis, image registration, and object description. Prerequisite: ECE 101 with grade of C– or better. ECE 109 recommended. (F)

174. Introduction to Linear and Nonlinear Optimization with Applications (4)
The linear least squares problem, including constrained and unconstrained quadratic optimization and the relationship to the geometry of linear transformations. Introduction to nonlinear optimization. Applications to signal processing, system identification, robotics, and circuit design. Prerequisite: Math. 20F with a grade of C– or better. (S)

175. Elements of Machine Intelligence: Pattern Recognition and Machine Learning (4)

181. Physical Optics and Fourier Optics (4)
Ray optics, wave optics, beam optics, Fourier optics, and electromagnetic optics. Ray transfer matrix, matrices of canonical optics, microlens arrays, graded index fibers. Fresnel and Fraunhofer diffractions, interference of waves. Gaussian and Bessel beams, the ABCD law for transmissions through arbitrary optical systems. Spatial frequency, impulsive response and transfer function of optical systems. Fourier transform and imaging properties of lenses, holoogaphy. Wave propagation in various (inhomogeneous, dispersive, anisotropic or non- linear) media. (Course material and/or program fees may
182. Electromagnetic Optics, Guided-Wave, and Fiber Optics (4)
Photonics: optical crystals, birefringence, Guided-wave optics: modes, losses, dispersion, coupling, switching. Fiber optics: step and graded index, single and multimode operation, transmission, dispersion, fiber and acoustooptics, resonator optics. (Course material and/or program fees may apply.) Prerequisites: ECE 103 and 107 with grades of C– or better. (F)

183. Optical Electronics (4)
Quantum electronics, interaction of light and matter in atomic systems, semiconductors, laser amplifiers and laser systems. Prerequisites: Electromagnetics, fiber and acoustooptics, photonic switching. Fiber optic communication systems. Labs: semiconductor lasers, semiconductor photodetectors. (Course material and/or program fees may apply.) Prerequisites: ECE 103 and 107 with grades of C– or better. (W)

184. Optical Information Processing and Holography (4)
(Conjoined with ECE 241AL) Labs: optical holography, photorefractive effect, spatial filtering, computer generated holography. Students enrolled in ECE 184 will receive four units of credit; students enrolled in ECE 241AL will receive two units of credit. (Course material and/or program fees may apply.) Prerequisite: ECE 182 with a grade of C– or better. (W)

185. Lasers and Modulators (4)
(Conjoined with ECE 241BL) Labs: CO2 laser, HeNe laser, electrooptic modulation, acoustooptic modulation, spatial light modulators. Students enrolled in ECE 185 will receive four units of credit; students enrolled in ECE 241BL will receive two units of credit. (Course material and/or program fees may apply.) Prerequisite: ECE 183 with a grade of C– or better. (S)

186L. Optical Information Systems (4)
Lab covers concepts in optical data systems including free-space communications, remote sensing and wavelength-multiplexed optical fiber transmission. (Course material and/or program fees may apply.) Prerequisites: ECE 181 and 182 or 183 with grades of C– or better, or consent of instructor.

187. Introduction to Biomedical Imaging and Sensing (4)
Image processing fundamentals: imaging theory, image processing, pattern recognition; digital radiography, computerized tomography, nuclear medicine imaging, magnetic resonance imaging, ultrasound imaging, microscopy imaging. Prerequisite: Math. 20A-B-F, 20C or 21C, 20D or 21D. Math. 2A-D, ECE 101 may be taken concurrently with grades of C– or better. (F)

190. Engineering Design (4)
Students complete a project comprising at least 50 percent or more engineering design to satisfy the following features: student creativity, open-ended formulation of a problem statement/ specifications, consideration of alternative solutions/realistic constraints. Written final report required. Prerequisites: students enrolling in this course must have completed all of the breadth courses and one depth course. A one-depth course credit equivalent is required to enroll in ECE 190. (Specifications and enrollment forms are available in the undergraduate office.)

191. Engineering Group Design Project (4)
Groups of students work to design, build, demonstrate, and document an engineering project. All students give weekly progress reports of their tasks and contribute a section to the final project report. Prerequisites: completion of all of the breadth courses and one depth course. (F/W/S)

192. Senior Seminar (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small setting to explore an intellectual topic in ECE (at the upper-division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. ECE 192 is no longer valid for ECE design credit, students should take ECE 190 instead. Prerequisites: department stamp and/or consent of instructor.

193H. Honors Project (4–8)
An advanced reading or research project performed under the direction of an ECE faculty member. Must contain enough design to satisfy the ECE program’s four-unit design requirement. Must be taken for a letter grade. May extend over two quarters. A grade assigned at completion for both quarters. Prerequisite: admission to the ECE departmental honors program.

195. Teaching (2 or 4)
Teaching and tutorial activities associated with courses and seminars. Not more than four units of ECE 195 may be used for satisfying graduation requirements. (P/NO grades only.) Prerequisite: consent of the department chair.

197. Field Study in Electrical and Computer Engineering (4, 8, 12, or 16)
Directed study and research at laboratories and observatories away from the campus. (P/NO grades only.) Prerequisites: consent of instructor and approval of the department.

199. Directed Group Study (2 or 4)
Topics in electrical and computer engineering whose study involves reading and discussion by a small group of students under direction of a faculty member. (P/NO grades only.) Prerequisite: consent of instructor.

199. Independent Study for Undergraduates (2 or 4)
Independent reading or research by special arrangement with a faculty member. (P/NO grades only.) Prerequisite: consent of instructor.

GRADUATE

200. Research Conference (2)
Group discussion of research activities and progress of group members. (Consent of instructor is strongly recommended.) (S/odd years) Prerequisite: graduate standing. (F/W/S)

212A. Principles of Nanoscience and Nanotechnology (4)
Introduction to and rigorous treatment of electronic, photonic, magnetic, and mechanical properties of materials at the nanoscale. Concepts from mathematical physics, quantum mechanics, quantum optics, and electromagnetism will be introduced as appropriate. Students may not receive credit for both ECE 212A and ECE 212AN. Prerequisite: graduate standing. (F)

212BN. Nanoelectronics (4)
Quantum states and quantum transport of electrons; nanostructures, carbon nanotubes, quantum dots, and photonic devices. Introduction to molecular and electronic organic. Students may not receive credit for both ECE 212BN and ECE 212CN. Prerequisites: ECE 212AN and graduate standing. (W)

212CN. Nanophotonics (4)
Photonic properties of artificially engineered homogeneous and nanoscale composite materials incorporating dielectrics, semiconductors, and/or metals. Near-field localization effects and applications. Device and component applications. Students may not receive credit for both ECE 212CN and 212B. Prerequisites: ECE 212BN; graduate standing. (W)

222A. Antennas and Their System Applications (4)
Antennas, waves, polarization. Friis transmission and Radar equations, dipole, loops, slots, ground planes, traveling wave antennas, array theory, phased arrays, impedance, frequency independent antennas, microstrip antennas, cellular antenna system, system level implications such as MIMO, multi-beam and phased array systems. (Recommended prerequisite: ECE 107 or equivalent undergraduate course in electromagnetics.) Prerequisite: graduate standing. (F)

222B. Applied Electromagnetic Theory—Electromagnetics (4)
Graduate-level introductory course on electromagnetic theory with applications. Topics covered include Maxwell’s equations, plane waves in free space and in the presence of interfaces, polarization, fields in metallic and dielectric waveguides including surface waves; fields in metallic cavities, Green's functions, electromagnetic field radiation and scattering. Prerequisites: ECE 222A; graduate standing. (W)

222C. Applied Electromagnetic Theory—Computational Methods for Electromagnetics (4)
Computing and numerical techniques, numerical analysis of electromagnetic fields, including the finite difference time domain (FDTD) method, finite difference frequency domain (FDFD) method, method of moments (MOM), and finite element method (FEM). Practice in writing numerical codes. Review of commercial electromagnetic simulators. Prerequisites: ECE 222B; graduate standing. (S/even years)

222D. Advanced Antenna Design (4)
Review of 222A–B. Fourier transform, waveguide antennas. Mutual coupling, active impedance, Floquet modes in arrays. Microstrip antennas, surface waves. Reflector and lens analysis: taper, spillover, aperture and physical optics methods. Impedance surfaces. Advanced concepts: Sub-wavelength propagation, etc. (chosen by instructor). (Recommended prerequisite(s): ECE 222A, ECE 222B, or equivalent.) Prerequisites: ECE 222C; graduate standing. (S/odd years)

230A. Solid State Electronics I (4)
This course is designed to provide a general background in solid state electronic materials and devices. Course content emphasizes the fundamental and current issues of semiconductor physics related to the ECE solid state electronics sequences. (Recommended prerequisite: ECE 139 or equivalent.) Prerequisite: graduate standing. (F)

230B. Solid State Electronics II (4)
Physics of solid-state electronic devices, including p-n diodes, Schottky diodes, field-effect transistors, bipolar transistors, pn junctions. Computer simulation of devices, scaling characteristics, high frequency performance, and circuit models. Prerequisites: ECE 230A; graduate standing. (W)

230C. Solid State Electronics III (4)
This course is designed to provide a treatise on semiconductor devices based on solid state phenomena. Band structures, carrier scattering and recombination processes and their influence on transport properties will be emphasized. (Recommended prerequisite: ECE 230A or equivalent.) Prerequisites: ECE 230B; graduate standing. (S)

235. Nanometer-Scale VLSI Devices (4)
This course covers modern research topics in sub-100 nm scale, state-of-the-art silicon VLSI devices. Starting with the fundamentals of CMOS scaling to nanometer dimensions, various device and circuit concepts, including RF CMOS, low power CMOS, silicon memory, silicon-on-insulator, SiGe bipolar, strained silicon MOSFETs, etc. will be taught. The physics of nearballistic transport in an ultimately scaled 10 nm MOSFET will be discussed in light of the recently developed scattering theory. Prerequisite: graduate standing. (F)

236A. III-V Compound Semiconductor Materials (4)
This course covers the growth, characterization, and heterojunction properties of III-V compound semiconductors and group IV heterostructures for the subsequent courses on electronic and photonic device applications. Topics include epitaxial growth technology, heterojunctions, transport and optical properties of quantum wells and superlattices. (Recommended prerequisite: ECE 230A-B-C) Prerequisite: graduate standing. (W)

236B. Optical Processes in Semiconductors (4)
Absorption and emission of radiation in semiconductors. Radiative transition and nonradiative recombination. Laser, microwave, and photodetector devices will be discussed. (Recommended prerequisite: ECE 230A and ECE 230C or equivalent.) Prerequisites: ECE 236A; graduate standing. (S)

236C. Heterojunction Field Effect Transistors (4)
Device physics and applications of isotope and anisotope heterojunctions and quantum wells, including band-edge discontinuities, band bending and space charge layers at heterojunction interfaces, charge transport normal and parallel to such interfaces, two-dimensional electron
gas structures, modulation doping, heterojunction and insulated gate field effect transistors. Prerequisites: ECE 236B; graduate standing. (S, alternating years)

236D. Heterojunction Bipolar Transistors (4)
Current flow and charge storage in bipolar transistors. Use of heterojunctions to improve bipolar structures. Transient electron velocity overshoot; Simulation of device characteristics. Bipolar models of HBTs. Requirements for high-speed circuit applications. Elements of bipolar process technology, with emphasis on III-V materials. Prerequisites: ECE 236C; graduate standing. (F, alternating years)

238A. Thermodynamics of Solids (4)
The thermodynamics and statistical mechanics of solids. Basic concepts, equilibrium properties of alloy systems, thermodynamic information from phase diagrams, surfaces and interfaces, crystalline defects. Multiple listed with Materials Science 201A. Prerequisite: consent of instructor. (F)

238B. Solid State Diffusion and Reaction Kinetics (4)
Thermally activated processes. Boltzman factor, homogeneous and heterogeneous reactions, solid state diffusion, Fick’s law, diffusion mechanisms, Kirkendall effects, Boltzmann-Manato analysis, high diffusivity paths. Multiple listed with Materials Science 201B. Prerequisite: ECE 238A. (W)

240A. Lasers and Optics (4)
Fresnel and Fraunhofer diffraction theory. Optical resonators, interferometry, Gaussian beam propagation and transformation. Laser oscillation and amplification, Q-switching and mode locking of lasers, some specific laser systems. (Recommended prerequisites: ECE 107 and ECE 182 or equivalent, introductory quantum mechanics or ECE 183.) Prerequisite: graduate standing. (F)

240B. Optical Information Processing (4)
Space-bandwidth product, superresolution, space-variant optical system, partial coherence, image processing with coherent and incoherent light, processing with feedback, real-time light modulators for hybrid processing, nonlinear processing. Optical computing and other applications. (Recommended prerequisite: ECE 182 or equivalent.) Prerequisites: ECE 240A; graduate standing. (W)

240C. Optical Modulation and Detection (4)
Propagation of waves and rays in anisotropic media. Electro-optical switching and modulation. Acoustooptical deflection and modulation. Detection theory. Heterodyne detection, incoherent and coherent detection. (Recommended prerequisites: ECE 181, ECE 183 or equivalent.) Prerequisites: ECE 240B; graduate standing. (S)

241A. Nonlinear Optics (4)
Second harmonic generation (color conversion), parametric amplification and oscillation, photorefractive effects and four-wave mixing, optical bistability; applications. (Recommended prerequisites: ECE 240A-C, C) Prerequisite: graduate standing. (F)

241B. Optical Devices for Computing (4)
Application of electro-optic, magneto-optic, acousto-optic, and electro-absorption effects to the design of photonic devices with emphasis on spatial light modulation and optical storage techniques. (Recommended prerequisites: ECE 240A-C) Prerequisites: ECE 241A; graduate standing. (F)

241C. Holographic Optical Elements (4)
Fresnel, Fraunhofer, and Fourier holography. Analysis of thin and volume holograms, reflection and transmission holograms, color and polarization holograms. Optically recorded and computer-generated holography. Applications to interferometry, optical interconnections, 2-D and 3-D display, pattern recognition, and image processing. (Recommended prerequisite: ECE 182 or equivalent.) Prerequisites: ECE 241B; graduate standing. (W)

243B. Optical Fiber Communication (4)
Optical fibers, waveguides, laser communication system, modulation and demodulation; detection processes and communication systems. (Recommended prerequisites: ECE 240A-B-C or equivalent.) Prerequisites: ECE 243A; graduate standing. (W)

244A. Statistical Optics (4)
Introduction to statistical phenomena in optics including first order properties of light waves generated from various sources. Coherence of optical waves, high-order coherence. Partial coherence and its effects on imaging systems. Imaging in presence of randomly inhomogeneous medium. Limits in photoelectric detection of light. (Recommended prerequisites: ECE 240A–B) Prerequisite: graduate standing. (F)

244B. Quantum Electronics of Femtosecond Optical Pulses (4)

247A. Advanced BioPhotonics (4)
Basic physics and chemistry for the interaction of photons with matter, including both biological and synthetic materials; use of photonic radiation pressure for manipulation of objects and materials; advanced optopolar detection systems, devices and methods, including time resolved fluorescent and chemiluminescent methods, fluorescent energy transfer (FRET) techniques, quantum dots, and near-field optical techniques; underlying mechanisms of the light sensitive systems including chloroplasts for photosynthetic energy conversion and the basis of vision processes. Cross-listed with BEN 247A. Prerequisite: graduate standing. (F)

247B. BioElectronics (4)
Topics to be covered will include photolithographic techniques for high-density DNA microarray production, incorporation of CMOS control into electronic DNA microarrays, direct electronic detection technology used in microarrays and biosensor devices, and focus on problems related to making highly integrated devices (lab-on-a-chip, in-vivo biosensors, etc.) from heterogeneous materials and components. Cross-listed with BEN 247G. Prerequisite: graduate standing. (W)

250. Random Processes (4)

251A. Digital Signal Processing I (4)
Discrete random signals, statistical signal processing (FFT based) spectral estimation. Coherence and transfer function estimation; model-based spectral estimation; linear prediction and AR modeling. Levinson-Durbin algorithm and lattice filters; linear prediction covariance estimate. Cross-listed with SIO 207B. SIO 207A is intended for graduate students who have not had an undergraduate course in DSP. (Recommended prerequisites: ECE 153 in addition to either ECE 161 or SIO 207A or equivalent background.) Prerequisite: graduate standing. (W)

251B. Digital Signal Processing II (4)
Adaptive filters; minimization of innovation errors for recursive least squares and gradient algorithms, convergence and tracking analysis of LMD, RLS, and Kalman filtering algorithms, comparative performance of Weiner and adaptive filters, transversal and lattice filter implementations, performance analysis for equalization, noise cancelling, and linear prediction applications. Cross-listed with SIO 207C. (Recommended prerequisite: ECE 251A or ECE 251AN) Prerequisites: graduate standing; ECE 251A (or ECE 251B); SIO 207B (or SIO 207C). (S)

251C. Filter Banks and Wavelets (4)
Fundamentals of multirate systems (Noile Identities, Polyphase representation, quadrature mirror filters). Bank of filters, QMF filters for 2-channels, M-channel perfect reconstruction systems, Paraurary perfect reconstruction filter banks, the wavelet transform (Multiresolution, discrete wavelet transform, filter banks and wavelet). (Recommended prerequisite: ECE 161 or equivalent.) Prerequisites: ECE 251B; graduate standing.

251D. Array Processing (4)
The coherent processing of data collected from sensors distributed in space for signal enhancement and noise rejection purposes or wavefield directionality estimation. Conventional and adaptive beamforming. Matched field processing. Sparse array design and processing techniques. Applications to acoustics, geophysics, and electromagnetics. Cross-listed with SIO 207D. (Recommended prerequisite: ECE 251A or ECE 251AN) Prerequisites: graduate standing; ECE 251C (for ECE 251D); SIO 207C (for SIO 207D). (F)

252A. Speech Compression (4)
Speech signals, production and perception, compression theory, high rate compression using waveform coding (PCM, DPCM, ADPCM, . . .), DSP tools for low rate coding, LPC vocoders, sinusoidal transform coding, multi-band coding, maximum rate coding using code excited linear prediction (CELP). (Recommended prerequisite: ECE 161A) Prerequisite: graduate standing. (W)

252B. Speech Recognition (4)
Signal analysis methods for recognition, dynamic time warping, isolated word recognition, hidden markov models, connected word, and continuous speech recognition. Prerequisites: ECE 252A; graduate standing. (S)

Image quantization and sampling, image transforms, image enhancement, image compression. (Recommended prerequisites: ECE 109, 153, ECE 161, ECE 161A) (W)

254. Detection Theory (4)
Hypothesis testing, detection of signals in white and colored Gaussian noise; estimation of signal parameters, maximum-likelihood detection; resolution of signals; detection and estimation of stochastic signals; applications to radar, sonar, and communications. (Recommended prerequisite: ECE 153) Prerequisite: graduate standing. (F)

255AN. Information Theory (4)
Introduction to basic concepts, source coding theorems, capacity, noisy-channel coding theorem. Prerequisite: ECE 154A-B-C or consent of instructor. (F)

255BN. Source Coding I (4)
Theory and practice of lossy source coding, vector quantization, predictive and differential encoding, universal coding, source-channel coding, asymptotic theory, speech and image applications. Prerequisites: ECE 250 and 259A or 259AN, or consent of instructor. (W)

256A–B. Time Series Analysis and Applications (4–4) Stationary processes; spectral representation; linear transformation. Recursive and nonrecursive prediction and filtering; Wiener-Hopf and Kalman-Bucy filters. Series expansions and applications. Time series analysis; probability density, covariance and spectral estimation. Inference from sampled data, sampling theorems; equally spaced and non-equally spaced data, applications to detection and estimation problem. Prerequisites: ECE 153. (F, W)

257A. Multilayer Communication Systems (4)
Congestion control, convex programming and dual controller, fair end-end rate allocation, max-min fair vs. proportional fairness. Markov Chains and recurrence, Lyapunov Foster theorem; buffer occupancy, stable (back-pressure) routing versus minimum delay routing versus shortest path routing. Prerequisite: graduate standing. (W)
257B. Principles of Wireless Networks (4)
This course will focus on the principles, architectures, and analytical methodologies for design of multi-user wireless networks. Topics to be covered include cellular approaches, call processing, digital modulation, MIMO technology, stochastic and networked ad-hoc networks, and wireless packet access. (Recommended prerequisites: ECE 159A and 154B, or equivalent.) Prerequisites: ECE 257A; graduate standing. (S)

257C. Stochastic Wireless Networks Models (4)
Elements of spatial point processes. Spatial stochastic models of wireless networks. Topological structure, interference, stochastic dependencies. Elements of network information theory/statistical physics models of information flow. Role of signal propagation/random fading models. Decentralized operation, route discovery, architecture, and design. (Recommended prerequisite: previous exposure to stochastic processes and information theory.) Prerequisites: ECE 257A–B. (S)

258A–B. Digital Communication (4-4)
Digital communication theory including performance of various modulation techniques, effects of inter-symbol interference, adaptive equalization, spread spectrum communication. Prerequisites: ECE 154A–B-C and ECE 254 or consent of instructor. (W,S)

259A. Algebraic Coding (4)
Fundamentals of block codes, introduction to groups, rings and finite fields, nonbinary codes, cyclic codes such as BCH and RS codes, decoding algorithms, applications. Students who have previous dynamic systems may not receive credit for ECE 259A. Prerequisite: graduate standing. (W)

259B. Probabilistic Coding (4)
Convolutional codes, maximum-likelihood (ML) decoding, maximum a-posteriori (MAP) decoding, parallel and serial concatenation architectures, turbo codes, repeat-accumulate (RA) codes, the turbo principle, turbo decoding, graph-based codes, message-passing decoding, low-density parity check codes, threshold analysis, applications. Students who have taken ECE 259BN may not receive credit for ECE 259B. (Recommended prerequisites: ECE 154A–B-C.) Prerequisites: ECE 259A or 259AN; graduate standing. (W)

259C. Advanced Topics in Coding (4)
Advanced topics in coding theory. Course contents vary by instructor. Example course topics: Coded-modulation for bandwidth-efficient data transmission; advanced algebraic and combinatorial coding theory; space-time coding for wireless coding; circuit coding. (Constrained coding for digital recording. Students who have taken ECE 259BN may not receive credit for ECE 259C. Prerequisites: ECE 259A–B or 259AN–B; graduate standing. (S)

260A. VLSI Digital System Algorithms and Architectures (4)
Custom and semi-custom VLSI design from both the circuit and system designers' perspective. Energy limitations/random failures. Elements of VLSI design. Energy considerations, testability, robustness, test circuitry, and performance estimation. MOS logic design will be emphasized. Computer-aided design (CAD) tools for transistor level simulation, layout and verification will be introduced. (Recommended prerequisites: undergraduate-level semiconductor electronics and digital system design, ECE 165 or equivalent.) Prerequisite: graduate standing. (F)

260B. VLSI Integrated Circuits and Systems Design (4)
VLSI implementation methodology across block, circuit, and layout levels of abstraction. Circuit building blocks including embedded memory and clock distribution. Computer-aided design (synthesis, place-and-route, verification) and performance analyses, and small-group block implementation projects spanning RTL to tape-out using leading-edge EDA tools. (Recommended prerequisite: ECE 165.) Prerequisites: ECE 260A; graduate standing. (W)

260C. VLSI Advanced Topics (4)
Advanced computer design practices and methodologies for modern system-on-chip design. Different design alternatives are introduced and analyzed. Advanced design tools are used to design a hardware-software system. Case discussion, participation, and presentations of projects and special topics assignments are emphasized. Prerequisites: ECE 260B; graduate standing. (S)

264A. CMOS Analog Integrated Circuits and Systems I (4)
Frequency response of the basic CMOS gain stage and current mirror configurations. Advanced feedback and stability analysis; compensation techniques. High-Performance CMOS operational amplifiers: feedback, noise, distortion. (Recommended prerequisites: ECE 164 and ECE 153, or equivalent courses.) Prerequisite: graduate standing. (W)

264B. CMOS Analog Integrated Circuits and Systems II (4)
Non-ideal effects and their mitigation in high-performance operational amplifiers. Switched-capacitor circuit techniques: CMOS circuit topologies, analysis and mitigation of non-ideal effects, and filter synthesis. Overview of CMOS samplers, data converters, and PLLs. (Recommended prerequisites: ECE 251A or ECE 251AN.) Prerequisites: ECE 264A; graduate standing. (S)

264C. CMOS Analog Integrated Circuits and Systems III (4)
Integrated CMOS analog/digital systems: Analog to digital and digital to analog converters, Nyquist versus oversampling, linearity, jitter, randomization, calibration, speed versus resolution, pipeline, folding, interpolation, averaging. (Recommended prerequisites: ECE 163 and 164.) Prerequisites: ECE 264B; graduate standing. (W)

264D. CMOS Analog Integrated Circuits and Systems IV (4)
PLL: Phase noise effect, VCO, phase detector, charge pump, integer/fractional-N frequency synthesizer, clock and data recovery, decision feedback, Filter: Continuous-time filter, I–Q complex filter, raised-cosine, Gaussian, delay, zero equalizers. (Recommended prerequisites: ECE 163 and 164.) Prerequisites: ECE 264C; graduate standing (W)

265A. Communication Circuit Design I (4)
Introduction to noise and linearity concepts. System budgeting for optimising tradeoffs. Linear circuits and signal processing. Linear circuit design, linearity analysis techniques. Down-conversion and up-conversion techniques. Modulation and demodulation. Microwave and RF system design communications. Current research topics in the field. Prerequisite: ECE 166 or consent of instructor. (W)

265B. Communication Circuit Design II (4)
Radio frequency integrated circuits: low-noise amplifiers, AGC, mixers, filters, voltage-controlled oscillators, BJT and CMOS technologies for radio frequency and microwave applications. Device modeling for radio frequency applications. Design and device-level circuits for linearity, noise, power dissipation, and dynamic range. Current research topics in the field. Prerequisites: ECE 166 and ECE 265A or consent of instructor. (S)

265C. Power Amplifiers for Wireless Communications (4)
Design of power amplifiers for mobile terminals and base-stations, with emphasis on high linearity and efficiency. After a discussion of classical designs (Class A, AB, B, C, D, E, F, and S), linearization procedures are presented and composite architectures (envelope tracking, EER, and Doherty) are covered. Familiarity with basic microwave design and circuit theory is assumed. (Recommended prerequisite: ECE 166.) Prerequisites: ECE 265A and B; consent of instructor. (F)

267. Wireless Embedded and Networked Systems (4)
Study of wireless networked systems from a system design perspective, covering the protocol stack from physical to network layer with a focus on energy topics. Topics include digital communications, networking, and programming, and a basic knowledge of these is recommended. Prerequisite: graduate standing. (F)

270A–B–C. Neurocomputing (4–4–4)
Neurocomputing is the study of biological information processing from an artificial intelligence engineering perspective. This three-quarter sequence covers neural network structures for arbitrary object (perceptual, motor, thought process, abstraction, etc.) representation, learning of pairwise object attribute descriptor antecedent support relationships, the general mechanism of thought, and situationally responsive generation of movements and thoughts. Experimental homework assignments strongly reinforce the fundamental concepts and provide exercise with myriad associated technical issues. (Recommended prerequisite: previous exposure to stochastic processes and information theory.) Prerequisites: ECE 270A; graduate standing. (W)

271A. Statistical Learning I (4)
Bayesian decision theory; parameter estimation; maximum likelihood; the bias-variance trade-off; Bayesian estimation; the predictive distribution; conjugate and noninformative priors; dimensionality and dimensionality reduction; principal component analysis; Fisher's linear discriminant analysis; density estimation; parametric vs. kernel-based methods; expectation-maximization; applications. (Recommended prerequisite: ECE 109.) Prerequisites: graduate standing. (W)

271B. Statistical Learning II (4)
Linear discriminants; the Perceptron; the margin and large margin classifiers; learning theory; empirical vs. structural risk minimization; the VC dimension; kernel functions; reproducing kernel Hilbert spaces; regularization theory; Lagrangian optimization; duality theory; the support vector machine; boosting; Gaussian processes; applications. (Recommended prerequisite: ECE 109.) Prerequisites: ECE 271A; graduate standing. (W)

272A. Stochastic Processes in Dynamic Systems (4)
Stochastic processes, focusing on detailed discussion of discrete-time Markov chains. Develop the relationship between dynamic systems and uncertainty, introducing ergodicity, diffusion, estimation, and detection. Extend to continuous-time Markov chains and optimization of stochastic dynamic systems. (Recommended prerequisite: ECE 250.) Prerequisites: graduate standing. (W)

273. Convex Optimization and Applications (4)
This course covers some convex optimization theory and algorithms. It will mainly focus on recognizing and formulating convex problems, duality, and applications in a variety of fields (system design, pattern recognition, combinatorial optimization, financial engineering, etc.). (Recommended prerequisite: basic linear algebra.) (F)

275A. Parameter Estimation I (4)
Linear least squares (batch, recursive, total, sparse, pseudo-inverse, QR, SVD); Statistical figures of merit (bias, consistency, Cramer-Rao lower-bound, efficiency); Maximum likelihood estimation (MLE); Sufficient statistics; Algorithms for computing the MLE including the expectation maximization (EM) algorithm. The problem of missing information; the problem of outliers. (Recommended prerequisites: ECE 109 and ECE 153.) Prerequisites: graduate standing. (W)

275B. Parameter Estimation II (4)
The Bayesian statistical framework; Parameter and state estimation of Hidden Markov Models, including Kalman Filtering and the Viterbi and Baum-Welch algorithms. A solid foundation is provided for follow-up courses in Bayesian machine learning theory. (Recommended prerequisite: ECE 153.) Prerequisites: ECE 275A; graduate standing. (W)

280. Special Topics in Electronic Devices and Materials/Applied Physics (4)
A course to be given at the discretion of the faculty at which topics of interest in electronic devices and materials or applied physics will be presented by visiting or resident faculty members. Subject matter will not be repeated, may earn for credit more than once. Prerequisite: graduate standing. (W)

281. Special Topics in Nanoscience/ Nanotechnology (4)
A course to be given at the discretion of the faculty at which topics of interest in nanoscience and nanotechnology will be presented by visiting or resident faculty members. Subject matter will not be repeated, may earn for credit more than once. Prerequisite: graduate standing. (W)

282. Special Topics in Photonics/Appplied Optics (4)
A course to be given at the discretion of the faculty at which topics of interest in photonics, optoelectronic materials, devices, systems, and applications will be presented by
visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. **Prerequisite:** graduate standing.

283. Special Topics in Electronic Circuits and Systems (4)
A course to be given at the discretion of the faculty at which topics of interest in electronic circuits and systems will be presented by visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. **Prerequisite:** graduate standing.

284. Special Topics in Computer Engineering (4)
A course to be given at the discretion of the faculty at which topics of interest in computer engineering will be presented by visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. **Prerequisite:** graduate standing.

A course to be given at the discretion of the faculty at which topics of interest in signal and image processing or robotics and control systems will be presented by visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. **Prerequisite:** graduate standing.

286. State-of-the-Art Topics in Computational Statistics and Machine Learning (4)
Class discusses both fundamental and state-of-the-art research topics in computational statistics and machine learning. Topics vary based upon current research, and have included: non-parametric Bayesian models; sampling methods for inference in graphical models; Markov Chain Monte Carlo (MCMC) methods. **Prerequisite:** graduate standing.

287. Special Topics in Communication Theory and Systems (4)
A course to be given at the discretion of the faculty at which topics of interest in information science will be presented by visiting or resident faculty members. It will not be repeated so it may be taken for credit more than once. **Prerequisite:** graduate standing.

288. Independent Study (1–16)
Open to properly qualified graduate students who wish to pursue a problem through advanced study under the direction of a member of the staff. (S/U grades only.) **Prerequisite:** consent of instructor.

290. Graduate Seminar on Current ECE Research (2)
Weekly discussion of current research conducted in the Department of Electrical and Computer Engineering by the faculty members involved in the research projects. (S/U grade only.) **Prerequisite:** graduate standing.

291. Industry Sponsored Engineering Design Project (4)
Design, build, and demonstrate an engineering project by groups. All students give weekly progress reports on tasks and write final report, with individual exams and presentations. Projects/sponsorships originate from the needs of local industry. May count toward M.Eng. degree. (Recommended prerequisites: ECE 230 or ECE 240 or ECE 251 or ECE 253 or ECE 258 or equivalent.) **Prerequisite:** graduate standing.

292. Graduate Seminar in Electronic Circuits and Systems (2)
Research topics in electronic circuits and systems. **Prerequisite:** graduate standing.

293. Graduate Seminar in Communication Theory and Systems (2)
Weekly discussion of current research literature.

294. Graduate Seminar in Electronic Devices and Materials/Applied Physics (2)
Research topics in electronic devices and materials or applied solid state physics and quantum electronics.

295R. Graduate Seminar in Signal and Image Processing/Robotics and Control Systems (2)
Weekly discussion of research topics in signal and image processing of robotics and control systems. **Prerequisite:** graduate standing.

296. Graduate Seminar in Photonics/ Applied Optics (2)
Research topics of current interest in photonics and applied optics, including imaging, photonic communications, sensing, energy and signal processing. **Prerequisite:** graduate standing.

298. Independent Study (1–16)
Open to properly qualified graduate students who wish to pursue a problem through advanced study under the direction of a member of the staff. (S/U grades only.) **Prerequisite:** consent of instructor.

299. Research (1–16)
(S/U grade only.)

501. Teaching (1–4)
Teaching and tutorial activities associated with courses and seminars. Number of units for credit depends on number of hours devoted to class or section assistance. (S/U grade only.) **Prerequisite:** consent of department chair.
Mechanical and Aerospace Engineering (MAE)

DEPARTMENT FOCUS
The instructional and research programs are grouped into two major areas: mechanical engineering and aerospace engineering. Both the undergraduate and graduate programs are characterized by strong interdisciplinary relationships with the Departments of Physics, Mathematics, Bioengineering, Chemistry, Electrical and Computer Engineering, Computer Science and Engineering, Structural Engineering, the Materials Science Program, and associated campus institutes such as the UCSD Center for Energy Research, the Institute for Nonlinear Science, Institute of Geophysics and Planetary Physics, Institute for Pure and Applied Physical Sciences, Institute for Biomedical Engineering, Center for Magnetic Recording Research, Center of Excellence for Advanced Materials, California Space Institute, and Scripps Institution of Oceanography.

This broad mission is supported by the following specific educational objectives:
• To provide our students with a strong technical education that will enable them to have successful careers as engineers, technology leaders and innovators.
• To prepare our students for rapid technological change with the core knowledge central to assuring that they are able to further their knowledge across a range of disciplines throughout their professional careers and pursue advanced education.
• To prepare our students to communicate effectively and to deal knowledgeably and ethically with the impact of technology in our society and on global issues.

THE UNDERGRADUATE PROGRAM

DEGREE AND PROGRAM OPTIONS

The Department of Mechanical and Aerospace Engineering (MAE) offers traditional ABET accredited engineering programs leading to the B.S. degree in mechanical engineering, and aerospace engineering. MAE also offers traditional nonaccredited engineering programs leading to the B.S. degree in engineering science and environmental engineering. The B.S. programs require a minimum of 196 units. All MAE programs of study have strong components in laboratory experimentation, numerical computation, and engineering design. Design is emphasized throughout the curricula by open-ended homework problems, by laboratory and computer courses that include student-initiated projects, and finally by senior design project courses which often involve teams of students working to solve engineering design problems brought in from industry. The MAE programs are designed to prepare students receiving bachelor’s degrees for professional careers or for graduate education in their area of specialization. In addition, the programs can also be taken by students who intend to use their undergraduate engineering education as preparation for postgraduate professional training in nontechnical fields such as business administration, law, or medicine.

Mechanical engineering is a traditional four-year curriculum in mechanics, vibrations, thermodynamics, fluid flow, heat transfer, materials, control theory, and mechanical design. Graduates find employment in the mechanical and aerospace industries as well as in the electro-mechanical or biomedical industries. Mechanical engineers are involved in material processing, manufacturing, assembling, and maintenance of life-line facilities such as power plants.

Mechanical design includes conceptual design, drafting with 3D CAD programs, stress, dynamics, heat transfer or fluid dynamics analyses, and the optimization of the total system for superior performance and customer satisfaction. In manufacturing, the objective is to enhance efficiency and economy

2010-2011 UC SAN DIEGO GENERAL CATALOG • MECHANICAL AND AEROSPACE ENGINEERING (MAE) 1
by utilizing numerical control (NC) of machine tools, mechatronics, micro-machining, and rapid prototyping. Currently, engineers have available computers, process models, and sensors to improve the quality and productivity of the manufacturing lines. In preparation for this modern era, the mechanical engineering curriculum emphasizes CAD courses, computer courses, laboratory courses, and design courses in addition to providing a strong background in basic science. 

Aerospace engineering is a four-year curriculum that prepares students for a career in the aeronautical and astronautical industries, related technology industries, or for graduate school. 

The curriculum was developed to emphasize engineering fundamentals, aerospace topics, and the integration of these fundamentals and topics within the design of an aerospace system. Courses in engineering fundamentals include materials, solid and fluid mechanics, thermodynamics, computer modeling, computer-aided-design, numerical analysis, and controls. Courses covering the aerospace engineering topics include aerodynamics, aerospace structures, flight mechanics, dynamics and control of aerospace vehicles, and propulsion. Students complete the program by taking a two-quarter capstone design course that integrates all of their aerospace education into the design, development, and testing of an aeronautical or astronautical vehicle or component. Throughout the program, students take laboratory courses that expose them to modern testing techniques and enhance their understanding of complex engineering topics. The program’s main objectives are to provide students with a strong foundation in engineering fundamentals; in-depth knowledge of key topics in aerospace engineering including aerodynamics, propulsion, flight mechanics, orbital mechanics, aerospace structures and materials, and design and control of aerospace systems; and an awareness of the value of life-long learning.

The engineering science program resembles the Mechanical Engineering Program, except the amount of mechanical design is reduced and control theory is not required. In addition to core courses in dynamics, vibrations, structures, fluid mechanics, thermodynamics, heat transfer, and laboratory experimentation, a large number of technical electives are scheduled. This aspect of the curriculum allows flexibility by permitting specialization and in-depth study in one area of the engineering sciences or through a sequence of courses on various emerging technologies. Students must consult their advisors to develop a sound course of study to fulfill the technical elective of this program. Although a sequence in non-sciences may be permitted, the faculty advisors may insist on a substantial number of MAE or other science courses as technical electives.

Environmental engineering is a four-year curriculum with fundamental engineering courses in mechanics, thermodynamics, physics, chemistry, and mathematics. In the third and fourth year, an environmental engineering sequence is offered, as well as further specialization in fluid mechanics, and a wide choice of technical electives, both from within MAE and other departments. The environmental engineering major focuses on conveying an understanding and awareness of the fundamental processes associated with human industrial activity that have environmental implications, and on equipping the next generation of engineers with the tools to develop technologies that enable sustainable economic growth.

OTHER UNDERGRADUATE PROGRAMS OF STUDY IN MAE

The engineering mechanics minor involves successful completion of seven MAE courses, including at least five upper-division courses open to students who meet the course prerequisites: one must be MAE 130A; one must be 101A (or CENG 101A) or 131A (or both may be taken); and the balance must be selected from MAE 3, 9, 20, 110A, 130B, 160, and CENG 102. This set of courses provides a good introduction to engineering analysis and would be useful to non-engineering majors desiring a background that could be used in professional communication with engineers.

DOUBLE MAJORS AND MINORS

It is the policy of the UC San Diego Academic Senate not to approve double majors within engineering departments.

PROGRAM ACCREDITATION

The B.S. Programs in mechanical engineering and aerospace engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET/EAC).

MAJOR REQUIREMENTS

Specific course requirements for each major program are outlined in tables in this section of the catalog. In addition to the required technical courses specifically indicated, a suggested scheduling of humanities and social science courses (HSS) are distributed in the curricula for students to use to meet college general-education requirements. To graduate, students must maintain an overall GPA of at least 2.0, and the department requires at least a C– grade in each course required for the major. Deviations from these programs of study must be approved by the Undergraduate Affairs Committee prior to taking alternative courses. In addition, technical elective (TE) course selections must have departmental approval prior to taking the courses. In the accredited programs, TE courses are restricted to meet ABET standards. Courses such as MAE 195, 197, and 198 are not allowed as a technical elective in meeting the upper-division major requirements. MAE 199 can be used as a technical elective only under restrictive conditions. Policy regarding these conditions may be obtained from the department’s Student Affairs Office.

Students with different academic preparation may vary the scheduling of lower-division courses such as math, physics and chemistry, but should consult the department. Deviations in scheduling MAE upper-division courses are discouraged and require prior approval. Most lower-division courses are offered more than once each year to permit students some flexibility in their program scheduling. However, many MAE upper-division courses are taught only once per year, and courses are scheduled to be consistent with the curricula as shown in the tables. When possible, MAE does offer large enrollment courses more than once each year. A tentative schedule of course offerings is available from the department each spring for the following academic year.

GENERAL-EDUCATION/COLLEGE REQUIREMENTS

For graduation each student must satisfy general-education course requirements determined by the student’s college as well as the major requirements determined by the department. The six colleges at UCSD require widely different general-education courses, and the number of such courses differs from one college to another. Each student should choose his or her college carefully, considering the special nature of the college and the breadth of general education.

Each MAE program allows for humanities and social science (HSS) courses so that students can fulfill their college requirements. In the ABET accredited programs, students must develop a program that includes a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. It should be noted, however, that some colleges require more than the nine or ten HSS courses indicated in the curriculum tables. Accordingly, students in these colleges could take longer to graduate than the indicated four-year schedule. Students must consult with their college to determine which HSS courses to take.

PROFESSIONAL LICENSING

After graduation, all students are encouraged to take the Fundamentals of Engineering (FE) examination as the first step in becoming licensed as a professional engineer (PE). Students graduating from an accredited program can take the PE examination after FE certification and two years of work experience; students graduating from a non-accredited program can take the PE examination after FE certification and four years of work experience.

For further information please contact your local Board of Registration for Professional Engineers and Land Surveyors.

MECHANICAL ENGINEERING

The Mechanical Engineering Program has a traditional ABET accredited four-year curriculum involving mechanics, vibrations, thermodynamics, fluid flow, heat transfer, materials, control theory, and mechanical design. Graduates of this program are expected to have the following skills, knowledge, and abilities:

1. An ability to apply knowledge of mathematics including multivariable calculus, differential equations, linear algebra, science, and engineering to mechanical engineering problems
2. An ability to design and conduct experiments, as well as to analyze and interpret data
3. An ability to design a system, component, or process to meet desired needs
4. An ability to function on multi-disciplinary teams
5. An ability to identify, formulate, and solve engineering problems
6. An understanding of professional and ethical responsibility
7. An ability to communicate effectively
8. The broad education necessary to understand the impact of engineering solutions in a global and societal context
9. A recognition of the need for, and an ability to engage in lifelong learning
10. A knowledge of contemporary issues
11. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice
12. A familiarity with chemistry and calculus-based physics
13. A familiarity with statistics
14. Ability to work professionally in mechanical system areas including the design and realization of such areas
15. Ability to work professionally in thermal systems areas including design and realization of such systems

Senior Year
MAE 101C        MAE 171A       MAE 171B
MAE 156A        MAE 156B       TE
MAE 150         TE              TE
TE              HSS            HSS

Chem. 6AH–6BH sequence may be taken in place of Chem. 6A–B.

- In fulfilling the humanities and social science requirements (HSS), students must take a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Ten HSS courses are listed here; individual college requirements may be higher.
- Technical electives (TE) must be an upper-division or graduate course in the engineering sciences, natural sciences or mathematics.

See the MAE Student Affairs Office for a complete list of technical electives.

ENGINEERING SCIENCE

The engineering science program resembles the mechanical engineering program, except that the course load of mechanical design is reduced, and control theory is not required. In addition to core courses in dynamics, vibrations structures, fluid mechanics, thermodynamics, heat transfer, and laboratory experimentation, a large number of technical electives are scheduled. This aspect of the curriculum allows flexibility, permitting specialization and in-depth study in one area of the engineering sciences or development of a sequence of courses emerging from the current research interests of the faculty of MAE and/or other departments, e.g., sequences in the earth sciences, transportation, or energy-related studies. Students intending to pursue postgraduate professional careers in non-technical fields such as business administration, law, or medicine may develop an appropriate sequence of courses. Although a sequence in the non-sciences may be permitted, the faculty advisor may insist on a substantial number of MAE or other science courses as technical electives. Students must consult their advisors to develop a balanced course of study to fulfill the technical elective requirements of this program. This curriculum also allows the highest number of humanities and social science courses (HSS) to meet college general-education requirements.

Recommended Course Sequence—
Engineering Science

FALL          WINTER          SPRING

Freshman Year
Math. 20A       Math. 20B       Math. 20C
MAE 9           Phys. 2A        Phys. 2B & 2BL
Chem. 6A        Chem. 6B       MAE 3
HSS             HSS            HSS

Sophomore Year
Math. 20D       Math. 20F       Math. 20E
Phys. 2C & 2CL  HSS            MAE 130B or SE 101B
MAE 20          MAE 130A or SE 101A
HSS             HSS            HSS

Junior Year
MAE 110A        MAE 101A       MAE 101B
MAE 105          MAE 143A       MAE 143B
MAE 140          MAE 130C       MAE 170
MAE 107          MAE 160 or MAE 131B

Senior Year
MAE 101C        MAE 171A       MAE 171B
MAE 150         TE              TE
MAE 150         TE              TE
HSS             HSS            HSS

Chem. 6AH–6BH sequence may be taken in place of Chem. 6A–B.

- Humanities and social science (HSS) courses should be selected to meet general-education requirements of the colleges. Individual college requirements may be higher or lower than what is listed here.
- Four technical elective (TE) courses must be upper-division or graduate courses in the engineering sciences, natural sciences or mathematics selected with prior approval of the department. A sequence of non-science courses may also be selected with prior approval (see program description).

See the Student Affairs Office for a complete list of technical electives.

AEROSPACE ENGINEERING

Aerospace engineering is an ABET-accredited four-year curriculum that begins with fundamental engineering courses in mechanics, thermodynamics, materials, solid mechanics, fluid mechanics, and heat transfer. Additional courses are required in aerospace structures, aerodynamics, flight mechanics, propulsion, controls, and aerospace design. Graduates of this program enter graduate school or enter the aerospace industry to develop aircraft and spacecraft, but also they find employment in other areas that use similar technologies, such as mechanical and energy-related fields. Examples include automobile, naval, and sporting equipment manufacturing.

Graduates of this program are expected to have the following skills, knowledge, and abilities:
1. an ability to apply knowledge of mathematics, science, and engineering
2. an ability to design and conduct experiments, as well as to analyze and interpret data
3. an ability to design a system, component, or process to meet desired needs
4. an ability to function on multidisciplinary teams
5. an ability to identify, formulate, and solve engineering problems
6. an understanding of professional and ethical responsibility,
7. an ability to communicate effectively with written, oral, and visual means
8. the broad education necessary to understand the impact of engineering solutions in a global and societal context
9. a recognition of the need for, and an ability to engage in lifelong learning
10. a knowledge of contemporary issues
11. an ability to use modern engineering techniques, skills, and computing tools necessary for engineering practice
12. knowledge of key topics in aeronautical engineering including aerodynamics, aerospace materials, structures, propulsion, flight mechanics, and stability and control
13. knowledge of topics in astronautical engineering including attitude determination and control, space structures, orbital mechanics, and rocket propulsion
14. an ability to integrate knowledge of the fundamental topics in the design of an aerospace system
Recommended Course Sequence—Aerospace Engineering

Chem. 6AH may be taken in place of Chem. 6A.

- In fulfilling the humanities and social science (HSS) requirements, students must take a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Ten HSS courses are listed here; individual college requirements may be higher.

- Technical elective (TE) course must be upper-division or graduate courses in engineering sciences, natural sciences, or mathematics selected with prior approval of the department. See Student Affairs in MAE for a current list of approved TEs.

ENVIRONMENTAL ENGINEERING

The environmental engineering curriculum is a four-year course of fundamental engineering in courses in mechanics, thermodynamics, physics, chemistry, and math. In the third and fourth year, an environmental engineering sequence is offered, as well as further specialization in fluid mechanics, and a wide choice of technical elective (TE) courses, both from within and in other departments.

The environmental engineering curriculum is currently undergoing review for future ABET accreditation. Please see MAE Student Affairs for more information.

Policies and Procedures for MAE Undergraduate Students

Admission to the Major

The B.S. degrees in mechanical and aerospace engineering are impacted. Because of heavy student interest in these two majors, and the limited resources available to accommodate this demand, maintenance of a high-quality program makes it necessary to limit enrollments.

Environmental engineering and engineering science continue to be open majors.

Freshman Students

Freshman students who have excelled in high school and have declared mechanical, aerospace, environmental engineering, or engineering sciences on their UCSD application are eligible for direct admission into those majors. Enrollment is limited in the mechanical and aerospace majors due to its heavy demand and limited resources. Students will be notified by the UC San Diego Office of Admissions whether they have been admitted into their chosen major, based on admissions criteria and their ranking in the applicant pool.

Transfer Students

Applicants seeking admission as transfer students will be considered for admission into the mechanical, aerospace, environmental engineering, and engineering science majors. Enrollment is limited in the mechanical and aerospace majors due to its heavy demand and limited resources. Impacted status will be in effect in 2011. Transfer students who have excelled in their community college courses, especially courses in math, physics, and chemistry, will have the strongest advantage.

- Students who have taken equivalent courses elsewhere may request to have transfer credit apply toward the department’s major requirements. To receive transfer credit, complete a MAE Student Petition form and submit it to MAE Student Affairs. For mathematics, chemistry and physics, transfer equivalencies are determined by the respective departments. An Undergraduate Student Petition must be submitted to each department from which you are requesting transfer credit.

It is strongly recommended that transfers complete the following preparation for all engineering majors.

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Physics 2A, B, and C)
- Chemistry 6A
- Highest level of introductory computer programming language course offerings at the community college

Continuing Students Changing Majors

Continuing students who wish to change into an impacted major (mechanical engineering and aerospace engineering) must submit an application to the department. Applications will be accepted twice a year. Please see the department Web site maeweb.ucsd.edu for details.

Continuing students who wish to be considered must submit an application to the MAE department on or before the date of the application. Students will be allowed into the major based on a ranking system, up to a maximum number.

Students who apply later than the final day of their sixth academic quarter at UCSD will not be considered.

Academic Advising

Upon admission to the major, students should consult the catalog or MAE Web site [http://maeweb.ucsd.edu](http://maeweb.ucsd.edu) for their program of study or their undergraduate advisor if they have questions. The program plan may be revised in subsequent years, but revisions involving curricular requirements require approval by the undergraduate advisor or the Undergraduate Affairs Committee. Because some course and/or curricular changes may be made every year, it is imperative that students consult with the department’s undergraduate advisor on an annual basis.

Some MAE courses are offered only once a year and therefore should be taken in the recommended sequence. If courses are taken out of sequence, it may not always be possible to enroll in courses as desired or needed. If this occurs, students should seek immediate departmental advice. When a student deviates from the sequence of courses specified for each curriculum in this catalog, it may be impossible to complete an MAE major within the normal four-year period.

In addition to the advising available through the Student Affairs Office, programmatic or technical
advice may be obtained from MAE faculty members. A specific MAE faculty mentor is assigned to each MAE student. It is recommended that all MAE students meet with their faculty mentor at least once a quarter.

PROGRAM ALTERATIONS/EXCEPTIONS TO REQUIREMENTS

Variations from or exceptions to any program or course requirements are possible only if a petition is approved by the MAE Undergraduate Affairs Committee before the courses in question are taken. Petition forms may be obtained from the MAE Student Affairs Office and must be processed through this office.

INDEPENDENT STUDY

MAE students may take MAE 199, Independent Study for Undergraduates, under the guidance of an MAE faculty member. This course is taken as an elective on a P/NP basis. Under very restrictive conditions, however, it may be used to satisfy upper-division technical elective course requirements for the major. Students interested in this alternative must identify an MAE faculty member with whom they wish to work and propose a two-quarter research or study topic. After obtaining the faculty member’s concurrence on the topic and scope of the study, the student must submit a Special Studies Course form (each quarter) and an MAE 199 as Technical Elective Contract form to the Undergraduate Affairs Committee. These forms must be completed, approved, and processed prior to the add/drop deadline. Detailed policy in this regard and the requisite forms may be obtained from the Student Affairs Office.

TEACHING

Students interested in participating in the instructional activities of the department may take MAE 195, Undergraduate Teaching. Normally, this course is taken as an elective on a P/NP basis. Under very restrictive conditions, it may be used to satisfy upper-division technical elective course requirements for the major. Policy in this regard and the appropriate forms may be obtained from the Student Affairs Office.

THE GRADUATE PROGRAM

The Department of Mechanical and Aerospace Engineering at UC San Diego offers graduate instruction leading to the M.S. and Ph.D. degrees in engineering sciences with a designated specialization in each of the following areas: aerospace engineering, applied mechanics, applied ocean sciences, engineering physics, and mechanical engineering.

In fall 2007, a new Ph.D. specialization was introduced: computational science. Computational science seeks to gain understanding principally through the analysis of mathematical models on high performance computers. It is a blend of applications, computations, and mathematics. It is a mode of scientific investigation that supplements the traditional lab and theoretical models of acquiring knowledge. This is done by formulating mathematical models whose solutions are approximated by computer simulations.

The computational science specialization leverages the strength of the existing mathematics, science, and engineering departments. Ph.D. students must demonstrate advanced undergraduate-level proficiency in numerical analysis and in computer algorithms and data structures.

For more information, please contact the MAE Graduate Affairs Office at (858) 534-4387.

Admission to the graduate program is in accordance with the general requirements of the graduate division, which requires a B.S. and/or M.S. degree in some branch of engineering, the physical sciences, or mathematics; an overall GPA of 3.0; and three letters of recommendation from individuals who can attest to the applicant’s academic or professional competence and to the depth of their interest in pursuing graduate study. In addition, all applicants are required to submit GRE General Test scores.

A minimum score of 550 on the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. Students who score below 600 on the TOEFL examination are strongly encouraged to enroll in an English as a second language program before beginning graduate work. (UC San Diego Extension offers an excellent English language program during the summer as well as the academic year.)

Applicants are judged competitively. Based on the candidate’s background, qualifications, and goals, admission to the program is in one of three categories: M.S. only, M.S., or Ph.D. Admission to the M.S. only category is reserved for students for whom the M.S. degree is likely to be the terminal graduate degree. The M.S. designation is reserved for students currently interested in obtaining an M.S. degree but who at a later time may wish to continue in the doctoral degree program. Admission to the Ph.D. program is reserved for qualified students whose final aim is a doctoral degree. Policies for possible changes in status are given under “Master’s Degree Program” below.

Non-matriculated students are welcome to seek enrollment in MAE courses via UC San Diego’s Extension’s Concurrent Enrollment program but an extension student’s enrollment in an MAE graduate course must be approved by the instructor.

MASTER’S DEGREE PROGRAM

The M.S. program is intended to extend and broaden an undergraduate background and/or equip practicing engineers with fundamental knowledge in their particular fields. The degree may be terminal, or obtained on the way to the Ph.D. The degree is offered under both the Thesis Plan I and the Comprehensive Examination Plan II (see “Graduate Studies: Master’s Degree”). A strong effort is made to schedule M.S. level course offerings so that students may obtain their M.S. degree in one year of full-time study or two years of part-time study.

M.S. Time Limit Policy: Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

Course requirements are flexible in the applied mechanics and engineering physics programs. Specific departmental requirements for the M.S. degree are as follows:

MASTER’S PLAN I—THESIS DEFENSE

This plan of study involves both course work and research, culminating in the preparation of a thesis. A total of thirty-six units of credit is required: twenty-four units (six courses) must be in course work, and twelve units must be in research. The student’s program is arranged, with prior approval of the faculty advisor, according to the following policies:

1. Course work must include at least sixteen units (four courses) of MAE 200-level courses.
2. Units obtained in MAE 205 or 299 may not be applied toward the course work requirement.
3. No more than a total of eight units of MAE 296 and 298 may be applied toward the course work requirement.
4. No more than twelve units of upper-division 100-level courses (engineering-based or technically serious) may be applied toward the course work requirement.
5. Only four units from the ENG series may be applied to the degree.
6. Twelve units of MAE 299 must be taken to fulfill the research requirement.

The thirty-six units are arranged into three areas of specialization, organized as follows:

• Specialization 1: Three courses (four units each course)
• Specialization 2: Three courses (four units each course)
• Specialization 3: Three courses (four units each course)

At least two of the three areas of specialization must be chosen from the list below of MAE research areas. The third specialization can be one of the listed MAE areas or a math/science area.

Current MAE Research Areas

Applied and Solid Mechanics
• Material Sciences
• Fluid Mechanics
• Thermal Sciences
• Engineering Physics
• Dynamics Systems and Controls
• Environmental Engineering
• Biomechanics
• Design

Students should reference the MAE Graduate Course Structure to see which courses fall into which of the research areas.

Students must maintain at least a B average in the courses taken to fulfill the degree requirements. A thesis based on the research is written and subsequently reviewed by the thesis advisor and two other faculty members appointed by the dean...
of Graduate Studies. The review is normally an oral defense of the thesis.

**COMPREHENSIVE EXAMINATION PLAN II (EFFECTIVE JANUARY 2010)**

This plan of study involves a written report on a topical area of current research. A total of thirty-six units of credit (nine courses) are required. The student’s program is arranged, with prior approval of the faculty advisor, according to the following policies:

1. A written report on a science/technology topic that has relevance today.
2. The topic must be interdisciplinary and cover two different core areas of MAE (for example, energy and dynamics/controls).
3. The report must be between fifteen and thirty pages in length.
4. There must be a minimum of five papers cited in the report. These five papers must be reviewed and approved by the student’s faculty advisor.
5. Two faculty members will read the report and grade it. One of the members must be the student’s faculty advisor. The other member may be chosen by the student.
6. Both faculty members will sign the report as a “pass” or a “no pass.”
7. The final report is due to the committee members during finals week but no later than the last day of finals.

Students must maintain at least a B average in the courses taken to fulfill the degree requirements. Students already in the M.S. program in MAE have the option of joining the new Written Plan II or following the previous MS Plan I or II. Beginning fall 2010, all M.S. students will be required to follow the new Written Plan II or the Thesis Defense Plan I. The thirty-six units of course work must be arranged accordingly:

1. Course work must include sixteen units (four courses) of MAE 200-level courses.
2. Units obtained in MAE 205 or 299 may not be applied toward the course work requirement.
3. No more than a total of eight units of MAE 296 and 298 may be applied toward the course work requirement.
4. No more than twelve units of upper-division 100-level courses (engineering-based or technically serious) may be applied toward the course work requirement.
5. Only four units from the ENG series may be applied to the degree.
6. Twelve units of MAE 299 must be taken to fulfill the research requirement.

The thirty-six units are arranged into three areas of specialization, organized as follows:

- **Specialization 1:** Three courses (four units each course)
- **Specialization 2:** Three courses (four units each course)
- **Specialization 3:** Three courses (four units each course)

At least two of the three areas of specialization must be chosen from the list below of MAE research areas. The third specialization can be one of the listed MAE areas or a math/science area.

**Current MAE Research Areas**

- Applied and Solid Mechanics
- Material Sciences
- Fluid Mechanics
- Thermal Sciences
- Engineering Physics
- Dynamics Systems and Controls
- Environmental Engineering
- Biomechanics
- Design

Students should reference the MAE Graduate Course Structure to see which courses fall into which of the research areas.

**Change of Degree.** Upon completion of the requirements for the M.S. degree, students admitted as M.S. only or M.S. candidates are not automatically eligible for admission to the Ph.D. Program. M.S. candidates who subsequently wish to pursue a doctorate must submit an application for a change in status to their examining committee. If the recommendation is positive and the request approved, the student must submit a general petition for graduate students to effect the change of status. In addition, the examining committee may recommend that the examination satisfy one of the three topics required in the departmental qualifying examination for the doctorate. M.S. candidates who subsequently wish to pursue a doctorate must also submit an application for a change in status to their examining committee. In this case, a special examination is not required. The application, however, must be approved and signed by an MAE faculty member who expects to serve as the student's Ph.D. advisor. When the request is approved, the student must submit a general petition for graduate students to effect the change of status. If the student elects the comprehensive written plan for the M.S. degree, this report may be used not only to fulfill the requirement for the M.S. degree but also to satisfy one of the three topics required in the departmental qualifying examination for the doctorate.

**M.S. PROGRAM**

To complete an M.S. degree with specialization in aerospace engineering, engineering physics, mechanical engineering, applied mechanics, or applied ocean sciences, students must complete a sequence of courses unique to their area. Students should consult with their faculty advisor, as well as the MAE Graduate Student Affairs Office, when choosing their courses.

**DOCTORAL DEGREE PROGRAM**

The MAE Ph.D. Program is intended to prepare students for a variety of careers in research and teaching. Therefore, depending on the student’s background and ability, research is initiated as soon as possible. In general, there are no formal course requirements for the Ph.D. All students, in consultation with their advisors, develop course programs that will prepare them for the MAE Departmental Qualifying Examination and for their dissertation research. However, these programs of study and research must be planned to meet the time limits established to advance to candidacy and to complete the requirements for the degree. Doctoral students who have passed the Departmental Examination may take any course for an S/U grade, with the exception of any course that the student's Departmental or Ph.D. Qualifying Examination Committee stipulates must be taken in order to remove a deficiency. It is strongly recommended that all MAE graduate students take a minimum of two courses (other than research) per academic year after passing the Departmental Qualifying Examination. Specific details in this regard can be obtained from the MAE Student Affairs Office.

**Doctoral Examinations:** An MAE Ph.D. student is required to pass three examinations. The first is a Departmental Qualifying Examination (DQE) that is intended to determine the candidate's ability to successfully pursue a research project level appropriate for the doctorate. This first exam must be taken within the first six quarters of registration as a graduate student. The DQE is an oral examination by a committee of four persons (two of which must be in the MAE department) and is based on material taught over 36 units in three areas of study: a major area (four courses), a minor area (two introductory courses), and a study in mathematics or basic science (three courses). Students must submit a plan of study, approved by their advisor, to the Graduate Affairs Committee for final approval by the end of their second quarter of graduate study.

**Teaching Experience** is required of all MAE Ph.D. students prior to taking the Ph.D. Qualifying Exam. The teaching experience is defined as lecturing one hour per week in either a problem-solving section or regular lecture for one quarter in a course designated by the department. The requirement can be fulfilled by teaching assistant service or taken as a course for academic credit (MAE 501). Students must contact the Student Affairs Office to plan for completion of this requirement.

**Ph.D. Qualifying Examination** is the second examination required of MAE Ph.D. students in preparation for the Ph.D. Qualifying Examination. The students must have completed the Departmental Qualifying Examination and the Departmental Teaching Experience requirement, obtained a faculty research advisor, and have identified a topic for their dissertation research and have made initial progress. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student's graduate program is appointed by the Graduate Council. The committee conducts the Ph.D. Qualifying Examination, during which students must demonstrate the ability to engage in dissertation research. This involves the presentation of a plan for the dissertation research project. The committee may ask questions directly or indirectly related to the project and general questions that it determines to be relevant.
successful completion of this examination, students are advanced to candidacy and are awarded the candidate in philosophy degree (see “Graduate
Studies” section in this catalog). The Dissertation Defense is the final Ph.D. Examination. Upon completion of the dissertation research project, the student writes a dissertation that must be successfully defended in an oral examination and public presentation conducted by the doctoral committee. A complete copy of the student’s dissertation must be submitted to each member of the doctoral committee approximately four weeks before the defense. It is understood that the copy of the dissertation given to committee members will not be the final copy, and that the committee members may suggest changes in the text at the time of the defense. This examination may not be conducted earlier than three quarters after the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and the university librarian represents the final step in completion of all requirements for the Ph.D. There is no formal foreign language requirement for doctoral candidates. Students are expected to master whatever language is needed for the pursuit of their own research.

Ph.D. Time Limit Policy. Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years (engineering physics, seven years). The defense and submission of the doctoral dissertation must be within seven years (engineering physics, eight years).

Evaluations. In the spring of each year, faculty advisors evaluate each doctoral student’s overall performance in course work, research during the past academic year, and prospects for financial support for the next year. A written assessment is given to the student. If a student’s work is found to be inadequate, the faculty advisor may determine that the student cannot continue in the doctoral program and will recommend dismissal to the dean of Graduate Studies.

JOINT DOCTORAL PROGRAM WITH SAN DIEGO STATE UNIVERSITY

The Department of Mechanical and Aerospace Engineering at UC San Diego participates in a joint doctoral program with the Graduate Group in Applied Mechanics at SDSU. The program leads to the degree of doctor of philosophy in engineering sciences (applied mechanics). Participants in the program are required to spend one year enrolled at UCSD; their dissertation research is carried out under the supervision of an SDSU faculty member. Information regarding admission may be obtained from the departmental Student Affairs Office.

THE GRADUATE CURRICULUM IN CHEMICAL ENGINEERING

The chemical engineering (CENG) graduate program is an interdepartmental program and is described more completely under the Chemical Engineering Program in this catalog.

PH.D. IN MECHANICAL AND AEROSPACE ENGINEERING WITH SPECIALIZATION IN MULTI-SCALE BIOLOGY

As of fall 2010, the UCSD campus is offering a new Ph.D. specialization in multi-scale biology that will be available to doctoral candidates in participating programs that span four divisions: Biological Sciences, Physical Sciences, Jacobs School of Engineering, and Health Sciences at UCSD. The Ph.D. specialization is designed to allow students to obtain standard basic training in their chosen field within the biological sciences, physical sciences, engineering, and health sciences with training in integrative and quantitative analysis across multiple scales of biological organization from molecule to organism in health and disease into their graduate studies. It trains a new cadre of Ph.D. scientists and provides a unique interdisciplinary education at the interfaces between the biological, medical, physical and engineering sciences. The specific objectives of this program are

1. Focused Collaboration across nine graduate degree programs at UCSD to train a new generation of cross-disciplinary scientist

2. State-of-the-art interdisciplinary training through a new technology-centered hands-on graduate laboratory course curriculum

3. Novel emphasis on research aimed at integrative and quantitative analysis across multiple scales of biological organization from molecule to organism in health and disease

Students in the specialization are required to take at minimum three laboratory courses and serve as a TA one course. Courses offered are shown in the table at the top right portion of this page. Prospective students must apply and be admitted into the Ph.D. program in mechanical and aerospace engineering described previously. For more information, see the Mechanical and Aerospace Engineering Graduate program and/or the Interfaces Graduate Training Program administered within the Department of Chemistry and Biochemistry, 4010 York Hall, Revelle College.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

All undergraduate students enrolled in MAE courses or admitted to an MAE program are expected to meet prerequisite and performance standards, i.e., students may not enroll in any MAE courses or courses in another department which are required for the major prior to having satisfied prerequisite courses with a C– or better. (The department does not consider D or F grades as adequate preparation for subsequent material.) Additional details are given under the various program outlines, course descriptions, and admission procedures for the Jacobs School of Engineering in this catalog. Furthermore, the majority of MAE courses have enrollment restrictions which give priority to or are open only to students who have been admitted to an MAE major. Where these restrictions apply, the registrar will not enroll other students except by department stamp on class enrollment cards.

The department expects that students will adhere to these policies of their own volition and enroll in courses accordingly. Students are advised that they may be dropped at any time from course rosters if prerequisites have not been met. While most lower-division courses are offered more than once each year, many MAE upper-division courses are taught only once per year, and courses are scheduled to be consistent with the curricula as shown in the tables. When possible, MAE does offer selected large enrollment courses more than once each year.

LOWER-DIVISION

MAE 02. Introduction to Aerospace Engineering (4)
An introduction to topics in aeronautical and astronautical engineering including aerodynamics, propulsion, flight mechanics, structures, materials, orbital mechanics,
design, mission planning, and environments. General topics include historical background, career opportunities, engineering ethics, and professionalism. Must be taken for a letter grade. Prerequisite: none.

MAE 03. Introduction to Engineering Graphics and Design (4)
Introduction to design process through a hands-on design project performed in teams. Topics include problem identification, concept generation, project management, risk reduction. Engineering graphics and communication skills are introduced in the areas of: Computer-Aided Design (CAD), hand sketching, and technical communication. Prerequisite: grade of C- or better in Physics 2A or 2B (or concurrent enrollment); Priority enrollment given to engineering majors.

MAE 05. Quantitative Computer Skills (4)
Introductory course for non-engineering majors. Use of computers in solving problems; applications from life sciences, physical sciences, and engineering. Students run existing computer programs and complete some programming in BASIC. Prerequisite: none.

MAE 09. C/C++ Programming (4)
C/C++ computer programming under the UNIX environment with applications to numerical problems fundamental to computational mechanics. Arithmetic operations, branching, iteration, arrays, data structures, and use of pointers are introduced. Programming ethics are discussed. Priority enrollment given to pre-engineering and engineering majors.

MAE 20. Elements of Materials Science (4)
The structure of materials: metals, ceramics, glasses, semiconductors, superconductors and polymers. Control of internal structure to produce desired properties. Mechanical, rheological, electrical, optical, magnetic, and magnetic properties and classification. Prerequisites: Phys. 2A or 2B, Chem. 6A, Math. 21C or 21D (or concurrent registration).

MAE 87. Freshman Seminar (1)
The Freshman Seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges. Topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. Prerequisite: none.

MAE 92A. Design Competition—Design, Build, and Fly Aircraft (1)
(Cross-listed with SE 101A.) Student teams design, build, and fly unmanned aircraft for a national student competition. Students study aircraft design including aerodynamics, structures, propulsion, and performance. Teams engineer, fabricate the aircraft, submit a design report, and prep aircraft for competition. Prerequisites: consent of instructor.

MAE 93. Design Competition—Design, Build, and Test Race Car (1)
Student teams design, build, and test a formula-style racing car for an international student competition. Students concentrate on vehicle system analysis and design, manufacturability, and performance. Teams engineer, fabricate car, submit a design report, and prep car for competition. Prerequisite: department stamp.

MAE 99R. Independent Study (1)
Independent study under direction of a member of the faculty. Prerequisites: student must be of first-year standing and a Regent’s Scholar; approved Special Studies form.

UPPER-DIVISION

MAE 101A. Introductory Fluid Mechanics (4)
Fluid statics; fluid kinematics; integral and differential forms of the conservation laws for mass, momentum and energy; Bernoulli equation; potential flows; dimensional analysis and similarity. Prerequisites: admission to an engineering major and grades of C- or better in Phys. 2A, Math. 20D, 20E, or consent of instructor.

MAE 101B. Advanced Fluid Mechanics (4)
Laminar and turbulent flow. Pipe flow including friction factor. Boundary layers, separation, drag, and lift. Compressible flow including shock waves. Prerequisites: grade of C- or better in MAE 101A, or CENG 101A or CENG 103A, and MAE 110A or CENG 102 or consent of instructor.

MAE 101C. Heat Transfer (4)
Extension of fluid mechanics in MAE 101-B to viscous, heat-conducting flows. Application of the energy conservation equation to heat transfer in ducts and external boundary layers. Heat conduction and radiation transfer. Heat transfer coefficients in forced and free convection. Designers of thermal systems. Prerequisites: MAE 101A or CENG 101A, MAE 1018, and MAE 105, or consent of instructor.

MAE 102. Fluid Mechanics for Structural Engineers (4)
(Cross-listed with SE 112.) Fluid statics, hydrostatics forces; integral and differential forms of conservation equations for mass, momentum, and energy; Bernoulli equation; dimensional analysis; viscous pipe flow; external flow, boundary layers; open channel flow. Prerequisites: grade of C- or better in Phys. 2A, Math. 20D, and Math. 20E or consent of instructor.

MAE 104. Aerodynamics (4)
Basic relations describing flow field around wings and bodies of modern jet and rocket powered aircraft. Thin-wings theory. Slender-body theory. Formulation of theories for evaluating forces and moments on airplane geometries. Application to the design of high-speed airplanes. Prerequisites: open to MC 25, MC 27, MC 28 and SE 27 only and grade of C- or better in MAE 101-B or consent of instructor.

MAE 105. Introduction to Mathematical Physics (4)
Fourier series; Sturm Liouville theory; elementary partial differential equations, integral transforms with applications; to problems in vibration, wave motion, and heat conduction. Prerequisites: admission to engineering major or grades of C- or better in Phys. 2A-B and Math. 20D or Math. 21D.

MAE 107. Computational Methods in Engineering (4)
Introduction to scientific computing and algorithms; iterative methods, systems of linear equations with applications; nonlinear algebraic equations; function interpolation and differentiation and optimal procedures; data fitting and least-squares; numerical solution of ordinary differential equations. Prerequisites: engineering majors only and grades of C- or better in MAE 9 or MAE 10 and Math. 20F.

MAE 108. Probability and Statistical Methods for Mechanical and Environmental Engineering (4)
Probability theory; conditional probability, Bayes theorem, random variables and distributions; random variables, functions, central limit theorem. Engineering reliability, elements of estimation, random sampling, sampling distributions, hypothesis testing, confidence intervals. Curve fitting and data analysis. Prerequisite: Math. 20F.

MAE 110A. Thermodynamics (4)
Fundamentals of engineering thermodynamics: energy, work, properties of pure substances, first and second laws for closed systems and control volumes, gas mixtures. Application to engineering systems, power and refrigeration cycles, combustion. Prerequisites: grades of C- or better in Phys. 2C and Chem. 6A. Enrollment restricted to engineering majors only.

MAE 110B. Thermodynamic Systems (4)
Thermodynamic analysis of power cycles with application to combustion driven engines: internal combustion, diesel, and gas turbinis. Thermodynamics of mixtures and chemical and phase equilibrium. Computational methods for calculating chemical equilibrium. Prerequisite: grade of C- or better in MAE 110A.

MAE 113. Fundamentals of Propulsion (4)
Compressible flow, thermodynamics, and combustion relevant to aircraft and space vehicle propulsion. Analysis and design of components for gas turbines, including turbines, nozzles, combustion chambers and nozzles. Fundamentals of rocket propulsion. Prerequisites: engineering majors MC 25, MC 27 and MC 28 only and grades of C- or better in MAE 110A or CENG 102 and MAE 101A – B or CENG 101A and 101C (or CENG 103A – B).

MAE 117A. Elementary Plasma Physics (4)
(Cross-listed with Physics 151.) Particle motions, plasmas as fluids, waves, diffusion, equilibrium and stability, nonlinear effects, controlled fusion. Prerequisites: Math. 21D or consent of instructor. Phys. 100B-C or ECE 107 are recommended.

MAE 117B. Industrial Plasma Applications (4)
Chemical and plasma enhanced processes; electro-magnetic; atomic processes in plasmas; ionization, excitation, dissociation, rate constants, electron energy balance electric breakdown of the gases; debye length, plasmas quasi-neutrality, sheath, DC, capacitative, inductive, and wave-heated discharges; etching, deposition, and implantation. Prerequisite: Math. 20D or 21D, or consent of instructor.

MAE 117L. Elements of Experimental Plasma Physics (4)
Measurements of electron density and temperature with the lenguemore probes, emission spectroscopy measurements of neutrals and ions in plasmas; electric breakdown of the gases; plasma etching of materials. Prerequisites: none.

MAE 118A. Introduction to Energy Systems (4)
Overview of present-day primary energy sources and availability: stationary and mobile power plant technologies; air pollution and controls; introduction to climate change; basic physics of photovoltaics, fuel cells, wind power, and other renewable and developing energy technologies. An exploration of the “Hydrogen Economy.” Prerequisites: MAE 101A or CENG 101A, or consent of instructor.

MAE 118B. Twenty-First Century Energy Technologies I (4)
A survey of projected energy demands and resources. Climate change physics and impacts on energy systems. Basic physics of photovoltaics, fuel cells, wind power, and other renewable and developing energy technologies. An exploration of the “Hydrogen Economy.” Prerequisites: MAE 101A or CENG 101A, or consent of instructor.

MAE 118C. Twenty-First Century Energy Technologies II (4)
Overview of basic fission processes and fusion processes. Elementary fission reactor physics and engineering; environmental and waste disposal issues. Introduction to power producing fusion reactor physics. Survey of fusion technology issues, status and prospects for fusion energy. Prerequisite: MAE 101A or CENG 101A, or consent of instructor.

MAE 124. Environmental Challenges: Science and Solutions (4)
(Cross-listed with EYS 103.) This course explores the impacts of human social, economic, and industrial activity on the environment. It highlights the central roles in ensuring sustainable development played by market forces, technological innovation and governmental regulation on local, national, and global scales. Prerequisites: grade of C– or better in Math. 20B or Math. 10A–C, or consent of instructor.

MAE 125A. Flow and Transport in the Environment (4)
Study of river flow and hydraulic control; surface waves; applications to reservoirs and estuaries. Introduction to stratification and buoyancy; applications to atmospheric surface layer and the ocean mixed layer. Ideas behind turbulent dispersion. Turbulent and scaling laws. Gravity currents and katabatic flows. Prerequisites: MAE 101A or CENG 103A or CENG 101A.

MAE 125B. Fluid-Solid Interactions in Environment Engineering (4)
Introduction to groundwater flow. Pollution transport through the water table. Chemical processes in ozone hole. Overview of present-day primary energy sources and availability: stationary and mobile power plant technologies; air pollution and controls; introduction to climate change; basic physics of photovoltaics, fuel cells, wind power, and other renewable and developing energy technologies. An exploration of the “Hydrogen Economy.” Prerequisites: MAE 101A or CENG 101A, or consent of instructor.

MAE 125C. Case Studies in Environmental Engineering (4)
This course is project-oriented. Students will conduct research in small groups, give oral presentations and write
Energy methods and finite element analysis. Prerequisite: grade of C– or better in MAE 131A or SE 110A.

MAE 132. Intermediate Dynamics (4) Kinematics and kinetics of 3-D rigid body motion. Angular momentum and its rate of change. Euler’s and general equations of motion. Rotation about a fixed axis and a fixed point. Gyroscopic motion. Dynamic reactions. Lagrange’s equations of motion. Prerequisite: grade of C– or better in MAE 130B or SE 101B.

MAE 133. Finite Element Methods in Mechanical and Aerospace Engineering (4) Development of stiffness and mass matrices based upon variational principles and application to static, dynamic, and stability design problems in structural and solid mechanics. Architecture of computer codes for linear and nonlinear finite element analysis and basic computer implementation. The use of general purpose finite element structural analysis computer codes. Prerequisites: grade of C– or better in MAE 131A or SE 110A.

MAE 142. Dynamics and Control of Aerospace Vehicles (4) The dynamics of vehicles in space or air are derived for analysis of the stability properties of spacecraft and aircraft. The theory of flight, lift, drag, dutch roll and phugoid modes of aircraft are discussed. Optimal state space control theory for the design of analog and digital controllers. (Autopilot). Prerequisites: admission to the engineering major and grades of C– or better in MAE 104 and MAE 143B or ECE 171A, or consent of instructor.

MAE 143C. Digital Control Systems (4) Discrete time systems: sampling, aliasing, stability, Z-transform, discrete time signals, state space models; state equations, canonical forms, observability, controllability. Pole-placement design, observability, actuator principles, feedback, output feedback, linear quadratic regulator design. Implementation: digital approximation, computational and numerical issues. Prerequisite: grade of C– or better in MAE 143B.

MAE 149. Sensor Networks (4) (Cross-listed with ECE 156 and SOS 238) Characteristics of chemical, biological, and other physical sensors; signal processing techniques supporting distributed detection of salient events; wireless communication and networking protocols supporting formation of robust sensor fabrics; current experience with low power, low-cost sensor deployments. Prerequisites: upper-division standing and consent of instructor, or graduate student in science or engineering.

MAE 150. Computer-Aided Design (4) Computer-Aided Analysis and Design. Design methodology, tolerance analysis, Monte Carlo analysis, kinematics and computer-aided design of mechanisms; finite element analysis, design using Pro-E, Mechanica Motion and Mechanica Structures. Prerequisites: grade of C– or better in MAE 130A or SE 101A or BENG 110, MAE 107 or SE 121, and MAE 3; senior standing in engineering major, or consent of instructor.

MAE 155A. Aerospace Engineering Design I (4) Fundamental principles of aerospace vehicle design including the conceptual, preliminary, and detailed design phases. Aeronautical or astronautical design project that integrates all appropriate engineering disciplines as well as issues associated with optimization, teamwork, manufacturability, reporting, and professionalism. Prerequisites: grades of C– or better in MAE 133, 142, 150, 130C, or SE 2 and SE 160B or consent of instructor. Students may enroll concurrently with MAE 113, 142, and 150.

MAE 155B. Aerospace Engineering Design II (4) Fundamental principles of aerospace vehicle design including the conceptual, preliminary, and detailed design phases. Aeronautical or astronautical design project that integrates all appropriate engineering disciplines as well as issues associated with optimization, teamwork, manufacturability, reporting, and professionalism. Prerequisites: grade of C– or better in MAE 113, 142, 150, 155A or consent of instructor.

MAE 165A. Fundamental Principles of Mechanical Design I (4) Fundamental principles of mechanical design and the design process. Application of engineering science to the design and analysis of mechanical components. Initiation of team design projects that culminate in MAE 165B with a working prototype designed for a real engineering application. Professional ethics discussed. Course material may apply. Prerequisites: grades of C– or better in MAE 3, MAE 130C, MAE 131A, MAE 160, or MAE 131B, and MAE 179 or consent of instructor.

MAE 165B. Fundamental Principles of Mechanical Design II (4) Fundamental principles of mechanical design and the design process. Culmination of a team design project initiated in MAE 165A which results in a working prototype designed for a real engineering application. Prerequisite: grade of C– or better in MAE 165A in the immediately preceding quarter, MAE 101C, MAE 150 or consent of instructor.

MAE 166. Mechanical Behavior of Materials (4) Elasticity and anelasticity, dislocations and plasticity of crystals, creep, and strengthening mechanisms. Mechanical behavior of ceramics, composites, and polymers. Fracture: mechanics and microstructural fatigue. Laboratory demonstrations of selected topics. Prerequisites: grade of C– or better in MAE 20, MAE 130A (or SE 101A) and MAE 131A, or consent of instructor.

MAE 161. Electronic, Magnetic, and Photonic Materials (4) Introduction to the worlds of electronic, magnetic/photonic, materials; the unique properties of advance engineering materials in relation to processing, fabrication, and microstructure. Semiconductors, metals, alloys, ceramics, polymers, and composite materials and their practical applications. Prerequisite: consent of instructor. Not offered every year.

2010-2011 UC SAN DIEGO GENERAL CATALOG • MECHANICAL AND AEROSPACE ENGINEERING (MAE)
MAE 165. Fatigue and Failure Analysis of Engineering Components (4)  

MAE 166. Nanomaterials (4)  
Basic principles of synthesis techniques, processing, microstructural control and unique physical properties of materials in nano-dimensions. Nanowires, quantum dots, thin films, electrical transport, optical behavior, mechanical behavior, and applications of nanomaterials. Prerequisite: consent of instructor. Not offered every year.

MAE 167. Wave Dynamics in Materials (4)  
Pressure and shear waves in infinite solids. Reflection and diffraction. Rayleigh and Love waves in semi-infinite space. Impulse load on a half space. Waveguides and group velocity. Prerequisite: consent of instructor. Not offered every year.

MAE 168. MEMS Materials, Fabrication, and Applications (4)  
The principles of micro-electro-mechanical systems (MEMS) fabrication, materials involved, actuation principles utilized, and the fundamentals of MEMS operation in relation to stresses and deformation. Novel device applications, future trends, applications of applications of micro-electro-mechanical (MEMS) systems. Prerequisite: consent of instructor. Not offered every year.

MAE 170. Experimental Techniques (4)  
Principles and practice of measurement and control and the design and conduct of experiments. Technical report writing. Lectures relate to dimensional analysis, error analysis, signal-to-noise problems, filtering, data acquisition and data reduction, as well as background of experiments and statistical analysis. Experiments relate to the use of electronic devices and sensors. Prerequisite: Grade of C– or better in Phys. 2CL and admission to any engineering major.

MAE 171A. Mechanical Engineering Laboratory I (4)  
Design and analysis of experiments in fluid mechanics, solid mechanics, and control engineering. Experiments in wind tunnel, water tunnel, vibration table and material testing machines, and refined electromechanical systems. Laboratory report writing; error analysis; engineering ethics. Prerequisites: grade of C– or better in MAE 101C or CENG 101B, MAE 130C or SE 101C, MAE 160 or MAE 131B or SE 110B, MAE 140, MAE 143B or CENG 120, MAE 170, and senior standing in engineering major or consent of instructor.

MAE 171B. Mechanical Engineering Laboratory II (4)  
Design and analysis of original experiments in mechanical engineering. Students research projects using experimental facilities in undergraduate laboratories: wind tunnel, water channel, vibration table, and testing machine and control systems. Students propose and design experiments, obtain data, complete engineering analysis and write a major report. Prerequisite: requires a grade of C– or better in MAE 171A.

MAE 175A. Aerospace Engineering Laboratory I (4)  
Analysis of aerospace engineering systems using experimental facilities in undergraduate laboratories: wind tunnel, water channel, vibration table, and testing machine. Students operate experimental facilities, obtain data, complete engineering analysis and write major reports. Prerequisites: grade of C– or better in MAE 101C or CENG 103C or CENG 101C, MAE 143B, and MAE 170.

MAE 180A. Spacecraft Guidance I (4)  
Astronomy, orbital motion, perturbations, coordinate systems and frames of reference. Geosynchronous orbits, satellite navigation, rocket engines, maneuvers, fuel consumption, guidance systems. Observation instrument point, tracking, control. Basic rocket dynamics. Navigation, telemetry, re-entry, and aero-assisted maneuvers. Mission design. Students perform analyses based on mission require-
ments. Prerequisite: upper-division standing in physics, mathematics, or engineering department.

MAE 181. Space Mission Analysis and Design (4)  

MAE 192. Senior Seminar in Aerospace, Environmental or Mechanical Engineering (1)  
The Senior Seminar Program is designed to allow senior undergraduate aerospace engineering major members in a small group setting to explore an intellectual topic in aerospace, environmental or mechanical engineering (at the upper-division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic and permission from the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: department stamp or consent of instructor.

MAE 195. Teaching (2–4)  
Teaching and tutorial assistance in an MAE course under supervision of faculty. More than four units may be used to satisfy graduation requirements. P/NP grades only. Prerequisites: junior status and a B average in major and consent of department chair.

MAE 197. Engineering Internship (1–4)  
Students work in local industry or hospitals under faculty supervision. Units may not be applied toward graduation requirements. Satisfactory or unsatisfactory. Number of units determined by enrollment frequency. First quarter up to four units. Subsequent quarters cannot exceed one unit. Prerequisites: consent of instructor and department stamp, 2.50 overall GPA minimum, at least ninety units.

MAE 198. Directed Group Study (1–4)  
A course to be given at the discretion of the faculty in which a group of students in a major or cross-listed course may meet under faculty supervision. Teaching and tutorial assistance in an MAE course under supervision of faculty. Prerequisites: consent of instructor. Not offered every year. Credit determined by enrollment frequency. First quarter up to four units. Subsequent quarters cannot exceed one unit. Prerequisites: consent of instructor and department stamp, 2.50 overall GPA minimum, at least ninety units.

MAE 199. Independent Study for Undergraduates (4)  
Independent reading or research on a problem by special arrangement with a faculty member. P/NP grades only. Prerequisite: consent of instructor.

GRADUATE COURSES

MAE 205. Graduate Seminar (1)  
Each graduate student in MAE is expected to attend one seminar per quarter, of his or her choice, dealing with current topics in fluid mechanics, solid mechanics, applied physics and fusion, chemical engineering, applied ocean sciences, energy and combustion, environmental engineering, or materials science, and dynamics and controls. Topics will vary. (S/U grades only)

MAE 207. Topics in Engineering Science (4)  
A course to be given at the discretion of the faculty in which topics of current interest in engineering will be presented. Prerequisite: consent of instructor.

MAE 209. Continuum Mechanics Applied to Medicine/Biology (4)  
(Cross-listed with BENG 209.) Introduction to the basic definitions of continuum mechanics and their mathematical formulation at the graduate level with applications to problems in medicine and biology. This course is intended for students with little or no background in mechanics; it is an introduction to the Biomechanics courses BENG 250 A–B in the Department of Bioengineering and to Solid and Fluid Mechanics courses MAE 210A and MAE 231A in the Department of Mechanical and Aerospace Engineering. This course should NOT be taken concurrently with MAE 210A or MAE 231A. Prerequisite: consent of instructor.

MAE 210A. Fluid Mechanics I (4)  
(Cross-listed with CENG 210A.) Basic conservation laws. Flow kinematics. The Navier-Stokes equations and some of its exact solutions. Non-dimensional parameters and different flow regimes, vorticity dynamics. Prerequisites: MAE 101A–B and MAE 110A, or consent of instructor.

MAE 210B. Fluid Mechanics II (4)  
Potential flows, boundary layers, low-Reynolds number flows. Prerequisites: MAE 210A, MAE 101A–B, and MAE 110A, or consent of instructor.

MAE 210C. Fluid Mechanics III (4)  
Flow instabilities, linear stability theory; introduction to turbulent flows. Prerequisites: MAE 210A–B, MAE 101A–B, and MAE 110A, or consent of instructor.

MAE 211. Introduction to Combustion (4)  
Fundamental aspects of flows of reactive gases, with emphasis on processes of combustion, including the relevant thermodynamics, chemical kinetics, fluid mechanics, and transport processes. Topics may include deflagrations, detonations, diffusion flames, ignition, extinction, and propellant combustion. Prerequisites: MAE 101A–B or CENG 101A–B, MAE 110A, or consent of instructor.

MAE 212. Introductory Compressible Flow (4)  
Equations of motion for compressible fluids; one-dimensional gas dynamics and wave motion, waves in supersonic flow, including oblique shock waves; flow in ducts, nozzles, and wind tunnels; methods of characteristics. Prerequisites: MAE 101A–B or CENG 101A–B, MAE 110A, or consent of instructor.

MAE 213. Mechanics of Propulsion (4)  
Fluid mechanics, thermodynamics and combustion processes involved in propulsion of aircraft and rockets by air breathing engines, and solid and liquid propellant rocket engines characteristics and matching of engine components; diffusers, compressors, combustors, turbines, pumps, nozzles. Prerequisites: MAE 101A–B, MAE 110A, MAE 212, or consent of instructor.

MAE 214A. Introduction to Turbulence and Turbulent Mixing (4)  

MAE 216. Ocean Turbulence and Mixing (4)  
(Cross-listed with SIO 213.) Mixing mechanisms, their identification, description and modeling. Introduction to turbulence, semi-empirical theories, importance of coherent structures, effects of stratification and rotation on turbulent structure, entrainment and mixing. S/U grades permitted.

MAE 217A. Introduction to Gas Discharge Plasma Physics (4)  
 Charged particle motion in electromagnetic field, atomic processes in plasmas, electric breakdown of the gases, plasma quasi-neutrality, sheath, probes. Electron kinetics in low-temperature plasma, particle and energy fluxes, DC and RF driven discharges, instabilities of gas discharge plasmas. Prerequisites: Physics 100A–B or consent of instructor.

MAE 217B. Introduction to Non-Magnetized Hot Plasma Physics (4)  
Coulomb collisions, collisionless approximation for hot plasma dynamics, Vlasov equation, waves in non-magnetically coupled plasma, dispersion equation, WKBJ approximation, Landau damping, plasma instabilities, quasi-linear theory. Prerequisite: MAE 217A or consent of instructor.

MAE 217C. Introduction to Magneted Hot Plasma Physics (4)  
Drifts of magnetized charged particles, charged particle motion in different magnetic configurations, toroidal plasma equilibrium, Grad-Shafranov equation, neoclassical plasma transport in tokamaks, waves in homogeneous magnetized plasma, waves in inhomogeneous magnetized plasma, instabilities of magnetized plasma. Prerequisites: MAE 217A–B or consent of instructor.
densification, composite fabrication, superconductor synthesis, electronic and optical materials processing, and techniques to generate amorphous solids. Prerequisite: consent of instructor.

MAE 253. Advanced Ceramics (4)
(Cross-listed with MATS 236.) Topics include phase equilibria and crystallography, defects and thermodynamics (Kim, Kreglewski.) glass, sintering, electrical and ionic transport behavior, Brinnier diagrams, powder synthesis and compaction, sintering theory and grain growth, mechanical optical, magnetic, electrical properties, fuel cells. Prerequisite: consent of instructor or department stamp.

MAE 255. Boundary Layer and Renewable Energy Meteorology (4)
Radiative and convective heat transfer in the atmosphere. Surface energy balance and the urban heat island. Turbulence and dispersion in the atmospheric boundary layer. Atmospheric energy systems, resource assessment, and intermittency. Prerequisite: MAE 210A or consent of instructor.

MAE 261. Cardiovascular Fluid Mechanics (4)
Topics in the mechanics of blood flow including analytical solutions for flow in deformable vessels, one-dimensional equations, cardiovascular anatomy, lumped parameter models, vascular trees, scaling laws, and an introduction to the biomechanics and treatment of adult and congenital cardiovascular diseases. Prerequisite: MAE 210A, 290A, or consent of instructor.

MAE 262. Fluid Mechanics of the Cell (4)
Fluids phenomena relevant to the function, environment, and interaction of biological cells. Topics include: low-Reynolds number flows, cell motility, internal cellular flows, development and morphogenesis, hydrodynamics of suspensions and polymers, rheology, diffusion, hydrodynamics of deformable bodies (vesicles, membranes, filaments), cells under shear flow. Prerequisite: MAE 209, MAE 210A, or consent of instructor.

MAE 263. Experimental Methods in Cell Mechanics (4)
Methods to measure mechanical aspects of cellular nature and behavior such as intracellular rheology, intracellular force distribution and propagation, cell adhesion strength, generation of propulsive forces during locomotion, interaction with the extracellular matrix, and response to external mechanical stimuli. Prerequisites: MAE 209 or MAE 210A, MAE 131A or equivalent, or consent of instructor.

MAE 265A. Electronic and Photonic Properties of Materials (4)
(Cross-listed with MATS 251A.) The electronic and optical properties of metals, semiconductors, and insulators. The concept of the band structure. Electronic and lattice conductivity. Type I and Type II superconductivity. Optical engineering using photonic band gap crystals in one-, two-, and three-dimensional biological cells. Topics include: low-Reynolds number flows, cell motility, internal cellular flows, development and morphogenesis, hydrodynamics of suspensions and polymers, rheology, diffusion, hydrodynamics of deformable bodies (vesicles, membranes, filaments), cells under shear flow. Prerequisite: consent of instructor.

MAE 265B. Magnetic Materials: Principles and Applications (4)
(Cross-listed with MATS 251B.) The basis of magnetism: Classical and quantum mechanical points of view. Different kinds of magnetic materials. Magnetic phenomena including anisotropy, magnetostriiction, domains, and magneto- magnetization dynamics. Current frontiers of nano-magnetics research including thin films and particles. Optical, data storage, and biomedical engineering applications of soft and hard magnetic materials. Prerequisite: consent of instructor.

MAE 266. Biomaterials (4)
(Cross-listed with MATS 252.) This class will cover biomaterials and biomimetic materials. Metal, ceramic, and polymer biomaterials will be discussed. Emphasis will be on the structure-property relationships, biocompatibility/degradation issues and tissue/material interactions. Synthesis and mechanical testing of biomimetic materials will also be discussed. Prerequisite: consent of instructor.

MAE 267. Nanomaterials and Properties (4)
(Cross-listed with MATS 253.) This course discusses synthesis techniques, processing, microstructural control and unique properties of materials in nano-dimensions. Topics include nanowires, quantum dots, thin films, electrical transport, electron emission properties, optical behavior, mechanical behavior, and technical applications of nanomaterials. Prerequisite: consent of instructor.

(Cross-listed with MATS 255.) This course focuses on the unique physical properties of materials in nano-dimensions. Topics include nanowires, quantum dots, thin films, electrical transport, electron emission properties, optical behavior, mechanical behavior, and technical applications of nanomaterials. Prerequisite: consent of instructor.

MAE 269. Presentations, Inventions and Patents (4)
(Cross-listed with MATS 255.) This course covers methodology and skills for oral and written presentations. Topics include research proposal, specification, patent analysis, publication manuscripts, research work proposals, understanding and securing of inventions and intellectual properties, patent applications and licensing. Prerequisite: consent of instructor. Not offered in 2008–09.

MAE 271A. Thermodynamics of Solids (4)
(Cross-listed with MATS 214 and ECE 238B) The thermodynamic and statistical mechanics of solids. Basic concepts: equilibrium properties of alloy systems, thermodynamic information from phase diagrams, surfaces and interfaces, crystalline defects. Prerequisite: consent of instructor.

MAE 271B. Solid State Diffusion and Reaction Kinetics (4)
Thermally activated processes, Boltzmann factor, homogeneous and heterogeneous reactions, solid state diffusion, Fick’s laws, diffusion mechanisms, Kirkendall effect, Boltzmann-Matano analysis, high diffusivity paths. Prerequisite: consent of instructor.

MAE 271C. Phase Transformations (4)

MAE 272. Imperfections in Solids (4)
Point, line, and planar defects in crystallographic solids, including vacancies, self interstitials, solute atoms, dislocations, stacking faults, and grain boundaries; effects of imperfections on mechanical properties; interactions of dislocations with point defects; strain hardening by micro-obstacles, precipitation, and alloying elements.

MAE 273A. Dynamic Behavior of Materials (4)
(Elastic waves in continuum; longitudinal and shear waves. Surface waves. Plastic waves; shock waves, Rankine-Hugoniot relations. Method of characteristic, differential and difference form of conservation equations; dynamic plasticity and dynamic fracture. Shock wave reflection and interaction. Prerequisite: consent of instructor.

MAE 280A. Linear Systems Theory (4)
Linear algebra: inner products, outer products, vector norms, matrix norms, least squares problems, Jordan forms, coordinate transformations, positive definite matrices, etc. Properties of linear dynamic systems as illustrated by ODEs: observability, controllability, detectability, stability, trackability, optimality. Control systems design: state estimation, pole assignment, linear quadratic control. Prerequisite: MAE 143B or consent of instructor.

MAE 280B. Linear Control Design (4)
Parameterization of all stabilizing output feedback controllers, covariance controllers, H-infinity controllers, and L2 to L-infinity controllers. Continuous and discrete-time treatment. Alternating projection algorithms for solving output feedback problems. All control design problems reduced to one critical theorem in linear algebra. Prerequisite: MAE 280A.

MAE 281A. Nonlinear Systems (4)

MAE 281B. Nonlinear Control (4)

MAE 282. Adaptive Control (4)

MAE 283A. Parametric Identification: Theory and Methods (4)

MAE 283B. Approximate Identification and Control (4)

MAE 284. Robust and Multi-Variable Control (4)
Multivariable feedback systems: transfer function matrices, Smith-McMillan form, poles, zeros, principal gains, operator norms, limits on performance. Model uncertainties, stability and performance robustness. Stability robustness, controller design. Prerequisite: MAE 143C or MAE 280A.

MAE 286. Hybrid Systems (4)

MAE 288A. Optimal Control (4)

MAE 288B. Optimal Estimation (4)
Least Squares and Maximum Likelihood Estimation methods, Gauss-Markov models, State Estimation and Kalman Filtering, prediction and smoothing. The extended Kalman filter. Prerequisite: MAE 280A completed or concurrent.

MAE 289. Functional Analysis and Applications (4)

MAE 290A. Efficient Numerical Methods for Simulation, Optimization, and Control (4)
Linear algebra, numerical methods, and numerical analysis. Direct and iterative methods for systems of linear and nonlinear equations, the fundamental matrix decompositions (eigenvector/SVD/Jordan), transform methods (Fourier/Laplace/Z), function approximation, differentiation, integration (quadrature/ODEs), and minimization. Prerequisite: MAE 107 or consent of instructor.

MAE 290B. Numerical Methods for Differential Equations (4)
Numerical solution of differential equations in mathematical physics and engineering, ordinary and partial differential equations. Linear and nonlinear hyperbolic parabolic, and elliptic equations, with emphasis on prototypical cases, the convection-diffusion equation, Laplace's and Poisson equation. Finite difference methods will be considered in depth, and additional topics. Prerequisite: MAE 290A or consent of instructor.

MAE 291. Design and Mechanics in Computer Technology (4)
Design and mechanics problems inherent in computer peripherals such as disk files, tape drives, and printers. Formulation and solution of problems involving mechanics, fluid mechanics, and materials; Reynolds equation, slider bearings; friction and wear; actuator design, impact printing; silicon fluid jets. Prerequisite: consent of instructor. Not offered every year.

MAE 292. Computer-Aided Design and Analysis (4)
Introduction to 2-D and 3-D computer-aided design. Design problems may include: ball bearing kinematics, Weibull statistics, non-repeatable spindle run-out, four bar linkages, beam deflection and vibration, design of magnetic head suspension, hydrodynamic theory of lubrication, air bearings, heat transfer, optical servo, design of ink jet print head. Prerequisite: consent of instructor. Not offered every year.

MAE 293. Advanced Computer Graphics for Engineers and Scientists (4)
Advanced topics used to enhance scientific and engineering visualization. C programming assignments and the use of advanced graphics software. Continuation of topics from MAE 152, including color, computational geometry, 3-D contouring, volume visualization, and hardware architectures. Prerequisite: MAE 152 or consent of instructor.

MAE 294A. Introduction to Applied Mathematics (4)
(Cross-listed with SIO 203A.) Review of exact methods for ordinary differential equations. Expansions about regular and irregular singular points. Introduction to asymptotic expansions. Approximate methods for nonlinear differential equations. Regular and singular perturbation theory. Additional topics depending upon the interests of the instructor. Prerequisites: Math. 110, Math. 120A or consent of instructor.

MAE 294B. Introduction to Applied Mathematics II (4)
(Cross-listed with SIO 203B.) Asymptotic methods: method of steepest descent (if not covered in I), WKBJ method of multiple scales, boundary layer theory. Elements of complex analysis. Prerequisite: MAE 294A or SIO 203A or consent of instructor.

MAE 294C. Introduction to Applied Mathematics III (4)
(Cross-listed with SIO 203C.) Partial differential equations: characteristics, similarity solutions, Green's functions, images, wave equation, diffusion equation, Laplace's equation, Applications to continuum mechanics, potential fields, and transport phenomena such as diffusion, linear and nonlinear waves, Burger's equation and shocks. Other topics according to the interests of the instructor. Prerequisites: MAE 294B or SIO 203B or consent of instructor.

MAE 295. Field Study (1–12)
Provides field study in industry with faculty supervision. Analysis and problem solving using real world applications. Prerequisite: consent of advisor and department; 3.0 GPA.

MAE 296. Independent Study (1–4)
Independent reading or research on a problem as arranged by a designated faculty member. Must be taken for a letter grade only. Prerequisite: consent of instructor.

MAE 298. Directed Group Study (1–4)
Directed group study on a topic or in a field not included in regular department curriculum, by special arrangement with a faculty member. Prerequisite: consent of instructor. (S/U grades permitted.)

MAE 299. Graduate Research (1–12)
Independent work by graduate students engaged in research and writing theses. MAE graduate students only. (S/U grades only.)

MAE 501. Teaching Experience (2)
Provides field study in industry with faculty supervision. Analysis and problem solving using real world applications. Prerequisite: consent of advisor and department; 3.0 GPA.

MAE 290A or consent of instructor.

MAE 294A or SIO 203A or consent of instructor.

Prerequisite: consent of instructor. Not offered every year.

Prerequisite: consent of instructor or consent of advisor and department; 3.0 GPA.

Prerequisite: consent of instructor. Not offered every year.

Prerequisite: consent of instructor. Not offered every year.

Prerequisite: consent of instructor. Not offered every year.

Prerequisite: consent of instructor. Not offered every year.

Prerequisites: Math. 110, Math. 120A or consent of instructor.

Prerequisite: consent of instructor. Not offered every year.

Prerequisite: MAE 152 or consent of instructor.

Prerequisite: MAE 152 or consent of instructor.

Prerequisite: consent of instructor. Not offered every year.

Prerequisite: consent of instructor or consent of advisor and department; 3.0 GPA.

Prerequisite: consent of instructor. Not offered every year.

Prerequisites: Math. 110, Math. 120A or consent of instructor.

DEPARTMENTAL FOCUS

The Department of NanoEngineering focuses on nanoscale science, engineering, and technology that have the potential to make valuable advances in different areas that include, to name a few, new materials, biology and medicine, energy conversion, sensors, and environmental remediation. Nanoengineering is a highly diversified and multidisciplinary field. The graduate research programs cover a broad range of topics, but focus particularly on biomedical nanotechnology, nanotechnologies for energy conversion and storage, computational nanotechnology, and molecular and nanomaterials. Undergraduate degree programs focus on integrating the various science and engineering disciplines necessary for successful careers in the evolving nanotechnology industry.

DEGREE AND PROGRAM OPTIONS

The Department of NanoEngineering offers undergraduate programs leading to the B.S. degrees in NanoEngineering and Chemical Engineering. The Chemical Engineering Program is accredited by the Engineering Accreditation Commission of the Accreditation Board of Engineering and Technology (ABET/EAC). The Nanoengineering Program is newly introduced, but the program is designed using ABET accreditation criteria; the department will apply for accreditation once there are graduates to measure the program outcomes. These two degree programs have very different requirements and are described in separate sections.

NANOENGINEERING PROGRAM (NANO)

PROGRAM MISSION AND OBJECTIVES

The mission of the Nanoeengineering Program is to provide a multidisciplinary education in nanoscale science and technology. The primary goals are

- Prepare students for a career in nanotechnology by providing them with a sound grounding in multidisciplinary areas of nanoscale science and engineering.
- Increase students’ understanding of materials and their properties at the atomic and nanometer scales, including an understanding of the intimate relationship between the scale and the properties of materials. This is referred to as the third dimension in the periodic table, where elements, and combinations thereof, have properties and functions that depend on the material dimension, spanning from the nanoscale to macroscale.
- Prepare graduates who, while skilled in nanoscale science and engineering, will be qualified for jobs in traditional science-based industries and government laboratories and, as nanotechnologies mature, well positioned for jobs in this applied area. This program will be anticipating trends and providing students with integrated, cross-disciplinary scientific knowledge and professional skills.
- Educate a new generation of engineers who can participate in, and indeed seed, new high-technology companies that will be the key to maintaining jobs, wealth, and educational infrastructures as nanotechnology results in a new industrial revolution.
- Enable students to develop a range of professional, scientific, and computational skills that will enhance employment opportunities in a wide range of industrial and governmental institutions.
- Prepare students for the workplace through developing their ability to have effective communication skills, modern science and engineering skills, and contribute constructively
to multidisciplinary teams.

- Form strong multidisciplinary educational links through joint team projects that cross the traditional areas of science and engineering.

THE UNDERGRADUATE PROGRAM

The B.S. program in NanoEngineering is tailored to provide breadth and flexibility by taking advantage of the strength of basic sciences and other engineering disciplines at UC San Diego. The intention is to graduate nanomechanics who are multidisciplinary and can work in a broad spectrum of industries.

All NANO courses are taught only once per year, and courses are scheduled to be consistent with the curriculum as shown in the tables below. Under normal circumstance, students must follow the prescribed curriculum. Unavoidable deviation from the curriculum for unforeseen class scheduling conflicts and to comply with the prerequisites of some Bioengineering courses, students are required to take only four of the six courses in one major, with the other two outside their chosen engineering focus. Preapproved accepted courses of each of the four focuses are shown below. Students must keep in mind that the NANO courses are only offered once a year.

All NANO courses are taught only once per year, and courses are scheduled to be consistent with the curriculum as shown in the tables below. Under normal circumstance, students must follow the prescribed curriculum. Unavoidable deviation from the curriculum for unforeseen class scheduling conflicts and to comply with the prerequisites of some Bioengineering courses, students are required to take only four of the six courses in one major, with the other two outside their chosen engineering focus. Preapproved accepted courses of each of the four focuses are shown below. Students must keep in mind that the NANO courses are only offered once a year.

Humanities and social sciences (forty-eight units): This requirement is intended to fulfill the general-education requirements (GER) from respective colleges.

Basic sciences and mathematics (fifty-nine units): This lower-division requirement includes twenty-four units of mathematics (Math. 20A–F), sixteen units of physics (Phys. 2A–D), fifteen units of chemistry (Chem. 6A–C, 6BL), and four units of biology (BILD 1).

Engineering preparation (sixteen units): This requirement covers basics in computer programming, circuit analysis and circuits lab (ECE 15, 35, 45, 65).

Nanotechnology core (thirty-seven units): This requirement is constituted of a one-unit seminar (NANO 1) and nine core courses (NANO 101 to 104, 110 to 112, and 120A-B).

Nanotechnology electives (eight units): This requirement must be chosen from among the upper-division NANO courses offered by the department.

Engineering focus (twenty-four units): Students are recommended to select all six engineering electives from within one single major to constitute an engineering focus. However, to allow for unforeseen class scheduling conflicts and to comply with the prerequisites of some Bioengineering courses, students are required to take only four of the six courses in one major, with the other two outside their chosen engineering focus. Preapproved accepted courses of each of the four focuses are listed below.

- Bioengineering:
  BENG 100, 101, 103B*, 109, 110, 112A, 112B, 122A*, 130, 186A
  *BENG 103B requires CENG 101A and 122A requires MAE 140. Both prerequisites are accepted as part of the twenty-four-unit bioengineering focus.

- Chemical engineering:
  CENG 100, 101A, 101B, 101C, 102, 113, 120.

- Electrical engineering:

- Mechanical engineering:

- Materials science:
  NANO 108, 140, 148, 150, 156, 158, 161, 164, 168.

All students follow the same basic science preparation and core set of classes in NanoEngineering during the first two years.

Academic Advising

Application for Admission to the Major

Admission to the department as a NANO major or minor, or to fulfill a major in another department that requires NANO courses, is in accordance with the general requirements established by the Jacobs School of Engineering. The admission requirements and procedures are described in detail in the section on “Acceptance to Departmental Majors in the Jacobs School of Engineering” in this catalog. Applicants who have demonstrated excellent academic performance prior to being admitted to UC San Diego will be admitted directly to the engineering major of their choice. These directly admitted students and all students are expected to complete lower- and upper-division courses, as suggested in the curriculum tables, in a timely fashion in the sequences outlined.

Academic Advising

Upon admission to the major, students should consult the catalog or NanoEngineering Web site (http://nanoengineering.ucsd.edu) for their program of study or their undergraduate advisor if they have questions. The program plan may be revised in subsequent years, but revisions involving curricular requirements require approval by the undergraduate advisor or the Undergraduate Affairs Committee. Because some course and/or curricular changes may be made every year, it is imperative that students consult with the department’s undergraduate advisor on an annual basis. As aforementioned, NANO and CENG courses are offered only once a year and therefore should be taken in the recommended sequence. If courses are taken out of sequence, it may not always be possible to enroll in courses as desired or needed. If this occurs, students should seek immediate departmental advice. When a student deviates from the sequence of courses specified for each curriculum in this catalog, it may be impossible to complete the major within the nominal four-year period.

In addition to the advising available through the Student Affairs Office, programmatic or technical advice may be obtained from faculty members. A specific faculty mentor is assigned to each student. All students are required to meet with their faculty mentor at least once a quarter.

Program Alterations/Exceptions to Requirements

Variations from or exceptions to any program or course requirements are possible only if the Undergraduate Affairs Committee approves a petition before the courses in question are taken. Petition forms may be obtained from the Student Affairs Office and must be processed through this office.

Independent Study

Students may take NANO 199, Independent Study for Undergraduates, under the guidance of a Nano faculty member. This course is taken as an elective on a P/NP basis. Under very restrictive conditions, however, it may be used to satisfy upper-division technical elective course requirements for the major. Students interested in this alternative must identify a faculty member with whom they wish to work and propose a two-quarter research or study topic. After obtaining the faculty member’s concurrence on the topic and scope of the study, the student must submit a Special Studies Course form (each quarter) and NANO 199 as Technical Elective Contract form to the Undergraduate Affairs Committee. These forms must be completed, approved, and processed prior to the add/drop deadline. Detailed policy in this regard and the requisite forms may be obtained from the Student Affairs Office.

Transfer Students

The undergraduate engineering curriculum is designed to integrate four years of college educational experience. It is not easy for transfer students to complete the major requirements in only two additional years beyond their junior college work. Students should consult their advisor for a transition program compatible with their junior college preparation.

Requirements for admission as a NANO major or into NANO courses are the same for transfer students as they are for continuing students (see section on “Acceptance to Departmental Majors in the Jacobs School of Engineering” in this catalog). Accordingly, when planning their program, transfer students should be mindful of lower-division prerequisite course requirements, as well as for meeting collegiate requirements. Students who have taken equivalent courses elsewhere may request to have transfer credit apply toward the department’s major requirements. To receive transfer credit, complete a Student Petition form and submit it to Student Affairs. For mathematics, chemistry, and physics, the respective department determines transfer equivalencies. An Undergraduate Student Petition must be submitted to each department from which you are requesting transfer credit.

The following courses are strongly recommended for all engineering transfer students for success in their major:

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Physics 2A-B-C)
- Chemistry 6A (except computer science and computer engineering majors)
- Highest level of introductory computer programming language course offerings at the community college*
- Community college equivalent courses can be found at: http://www.assist.org

*Refer to the UC San Diego General Catalog to select major prerequisite recommendations for computer language courses.

GRADUATE PROGRAM

DEGREE AND PROGRAM OPTIONS

Plans are currently underway to develop graduate curricula leading to the M.S. and Ph.D. degrees in nanoengineering by 2011. Until NanoEngineering graduate programs are in place, students wishing to pursue nanoengineering as a graduate focus are encouraged to apply to related graduate programs in bioengineering, chemical engineering, and mechanical and aerospace engineering. Transfer to NanoEngineering will be considered upon approval of its degree programs.

The Chemical Engineering Program offers graduate instruction leading to the M.S. and Ph.D. degrees in chemical engineering. Effective fall 2009, Chemical Engineering will offer a concentration in nanotechnology within the graduate program, which also will bridge with the future graduate degree program in nanoengineering.

CHEMICAL ENGINEERING PROGRAM (CENG)

Student Affairs: 2802 Atkinson Hall, Warren College

PROGRAM OBJECTIVES

The Chemical Engineering Program has affiliated faculty from the Department of NanoEngineering, Department of Mechanical and Aerospace Engineering, Department of Chemistry and Biochemistry, and the Department of Bioengineering. The curricula at both the undergraduate and graduate levels are designed to support and foster chemical engineering as a profession that interfaces engineering and all aspects of basic sciences (physics, chemistry, and biology). The primary educational objectives of the Chemical Engineering Program are:

- To provide chemical engineering students with a strong technical education and communication skills that will enable them to have successful careers in a wide range of industrial and professional environments.
- To prepare chemical engineering students for rapidly changing technological environments with the core knowledge central to multidisciplinary development and personal improvement throughout their professional careers.
- To instill in chemical engineering students a strong sense of humanistic values and professionalism such that they can conduct ethically and knowledgeably regarding technological
impact in societal issues.

The curriculum is designed to prepare chemical engineering graduates for further education and personal development through their entire professional career. We strive to accomplish these goals by providing a rigorous and demanding curriculum that incorporates lectures, discussions, laboratory and project development experiences in basic sciences, mathematics, engineering sciences, and design as well as the humanities and social sciences.

B.S./M.S. Contiguous Program

A contiguous program leading to a bachelor of science and a master of science degree in chemical engineering is offered to a student with junior standing who has an upper-division GPA of 3.5 or better and a 3.0 overall UCSD GPA. During the last quarter of their junior year (more specifically, the fourth quarter prior to the receipt of the B.S. degree), students interested in obtaining the M.S. degree within one year following receipt of the B.S. degree may apply to the department for admission to the program.

The M.S. program is intended to extend and broaden an undergraduate background and/or equip practicing engineers with fundamental knowledge in their particular fields. The degree is offered under both the Thesis Plan I and the Comprehensive Examination Plan II.

Integrated B.S./M.S. Requirements

An integrated co-terminal program leading to a bachelor of science and a master of science degree in chemical engineering is offered to a student with junior standing who has an upper-division GPA of 3.5 or better and a 3.0 overall UCSD GPA. Details of the program are available from the Student Affairs Office.

Program Accreditation

The B.S. Program in chemical engineering is accredited by the Accreditation Board of Engineering and Technology (ABET/EAC).

GRADUATE PROGRAM

The Chemical Engineering Program offers graduate instruction leading to the M.S. and Ph.D. degrees in chemical engineering. The nanotechnology concentration signifies that four elective courses are chosen from the approved courses in this area.

Admission is in accordance with the general requirements of the graduate division, which requires at least a B.S. in some branch of engineering, sciences, or mathematics; an overall GPA of 3.0, and three letters of recommendation from individuals who can attest to the academic or professional competence and to the depth of their interest in pursuing graduate study.

In addition, all applicants are required to submit GRE General Test Scores. A minimum score of 550 on the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English. Students who score below 600 on the TOEFL are strongly encouraged to enroll in an English as a second language program before beginning graduate work. UC San Diego Extension offers an excellent English language program during the summers as well as the academic year.

Applicants are judged competitively. Based on the candidate's background, qualifications, and goals, admission to the program is in one of three categories: M.S. only, MS, or Ph.D. Admission to the M.S. only category is reserved for students for whom the M.S. degree is likely to be the terminal graduate degree. The M.S. designation is reserved for students currently interested in obtaining an M.S. degree but who at a later time may wish to continue in the doctoral degree program. Admission to the Ph.D. Program is reserved for qualified students whose final aim is a doctoral degree.

Non-matriculated students are welcome to seek enrollment in graduate-level courses via UC Extension's concurrent registration program, but an extension student's enrollment in a graduate course must be approved by the instructor.

MASTER'S DEGREE PROGRAM

The M.S. Program is intended to extend and broaden an undergraduate education with fundamental knowledge in different fields. The degree may be terminal, or obtained on the way to the Ph.D. The degree is offered under both the Thesis Plan I and the Comprehensive Examination Plan II.

M.S. Time Limit Policy: Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there is no written time limit for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

Course requirements: All M.S. students must complete a total of forty-eight units, which include a core of five courses (twenty units) chosen among fluid dynamics (CENG 210A, MAE 210B), heat and mass transfer (CENG 221AB), kinetics (CENG 232), and mathematics. To maintain a certain balance in the core, no more than two mathematics courses should be chosen among the choices of applied mathematics (MAE 294AB or Math. 210AB) and numerical mathematics (MAE 290AB or Math. 270AB).

No more than three courses (twelve units) of upper-division courses may be applied toward the total course work requirement. No more than a total of eight units of CENG 296 and 298 may be applied toward the course work requirement. Units in seminars (CENG 259) may not be applied toward the degree requirement.

Thesis Plan I: Completion of the research thesis (CENG 299) fulfills twelve units toward the total graduation requirement. The balance is made up of the five core courses (twenty units) and additional four elective courses (sixteen units) subject to the restrictions described above. The nanotechnology concentration signifies that four elective courses are chosen from the approved courses in this area.

Comprehensive Examination Plan II: This plan involves course work only and culminates in an oral comprehensive examination based on topics selected from the core courses. In addition to the five core courses (twenty units), one must choose an additional seven electives (twenty-eight units) subject to the restrictions of CENG 259, 296, and 298 described above. Sample electives are listed in the table below. A student should consult his or her academic advisor to choose an appropriate course schedule, including alternatives in bioengineering, electrical and computer engineering, materials science, basic sciences, and mathematics. The nanotechnology concentration signifies that four elective courses are chosen from the approved courses in this area.

Change of Degree: Upon completion of the requirements for the M.S. degree, students admitted as M.S. only or M.S. candidates are not automatically eligible for admission to the Ph.D. Program.

M.S. only and M.S. candidates who subsequently wish to pursue a doctorate must submit an application for a change in status to their examining committee. The application, if approved by the committee, must be signed by a faculty member who expects to serve as the student's Ph.D. advisor. The student must also submit a general petition for graduate students to effect the change of status. If the student elects the comprehensive examination plan for the M.S. degree, the examining committee may recommend that the comprehensive examination may replace the preliminary qualifying examination expected of Ph.D. students.

DOCTORAL DEGREE PROGRAM

The Ph.D. Program is intended to prepare students for a variety of careers in research and teaching. The emphasis is on research. In general, there are no formal course requirements. All students, in consultation with their advisors, develop appropriate course programs that will prepare them for the Preliminary Qualifying Examination and for their dissertation research. These programs must be planned to meet the time limits established to advance to candidacy and to complete the requirements of the degree.

All Ph.D. students are required to pass three examinations. The first is a Preliminary Qualifying Examination, which should be taken within three to four quarters of full-time graduate study. The second is the Ph.D. Qualifying Examination. The last is the Dissertation Defense.

Preliminary Qualifying Examination: The examination is intended to determine a candidate's basic understanding of engineering fundamentals and the candidate's ability to pursue successfully a research project at a level appropriate for the doctorate. The scope of the examination is based on topics selected from the core curriculum as listed under the M.S. degree program. A candidate is expected to demonstrate knowledge equivalent to these courses and formal enrollment record is not a prerequisite. The format is an oral examination administered by a committee of three faculty members in the Chemical
Engineering Program. The candidate should present to the committee, prior to the examination, the five core courses that will constitute the basis of the examination.

Depth Requirement: A candidate must have the ability to perform in-depth analysis in the dissertation topic. A candidate should consult with the thesis advisor to develop a proper course program if it is deemed necessary. Depending on an individual’s background and the nature of the research problem, a candidate should either complete a set of a minimum of four courses or demonstrate to the thesis advisor the equivalent knowledge and ability.

Ph.D. Qualifying Examination: Prior to taking this examination, the candidate must have completed the departmental qualifying examination, obtained a faculty research advisor, and must have made initial progress on a chosen dissertation project. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student’s graduate program is appointed by the Graduate Council under the policy listed in the “Graduate Studies” section of the UC San Diego General Catalog. The committee conducts the Ph.D. Qualifying Examination, during which the student must demonstrate the ability to engage in thesis research. The process involves the presentation of a plan for the thesis research project. The committee may ask questions directly or indirectly related to the project and general questions that it determines to be relevant. Upon successful completion of the examination, subject to the UCSD time limit policy, the student is advanced to candidacy and is awarded the candidate in philosophy degree (see “Graduate Studies” section in this catalog).

Teaching Experience: Prior to the dissertation defense, the candidate must serve at least once as a teaching assistant with the responsibility to hold a problem-solving section one hour a week.

Dissertation Defense: This is the final Ph.D. examination. Upon completion of the dissertation research project, the candidate writes a dissertation that must be successfully defended in an oral examination and public presentation conducted by the doctoral committee. A complete copy of the student’s dissertation must be submitted to each member of the doctoral committee four weeks before the defense. It is understood that this copy of the dissertation given to committee members will not be the final copy, and that the committee members may request changes in the text at the time of the defense. This examination may not be conducted earlier than three quarters after the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and the University Librarian represents the final step in completion of all requirements for the Ph.D. degree.

Ph.D. Time Limit Policy: Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years. The defense and submission of the doctoral dissertation must be within seven years.

Annual Evaluation: In the spring of each year, the faculty advisor evaluates each doctoral student’s overall performance in course work, research, and prospects for financial support for future years. A written assessment is given to the student after the evaluation. If a student’s work is found to be inadequate, the faculty may determine that the student cannot continue in the graduate department.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

COURSES IN CHEMICAL ENGINEERING (CENG)

All undergraduate students enrolled in CENG courses or admitted to the CENG program are expected to meet prerequisite and performance standards, i.e., students may not enroll in any CENG courses or courses in another department which are required for the major prior to having satisfied prerequisite courses with a C– or better. (The program does not consider D or F grades as adequate preparation for subsequent material.) Additional details are given under the program outline, course descriptions, and admission procedures for the Jacobs School of Engineering in this catalog.

LOWER-DIVISION

CENG 1. The Scope of Chemical Engineering (1)
Demonstrations and discussions of basic knowledge and the opportunities in chemical engineering for professional development. Introduction to campus library and computer resources. Use of personal software tools such as spread-sheeting and student edition of MATLAB.
Prerequisites: none. (P/NP grading only.)

UPPER-DIVISION

CENG 100. Process Modeling and Computation in Chemical Engineering (4)
Introduction to elementary numerical methods with applications to chemical engineering problems using a variety of problem solving strategies. Error analysis. Concepts of mathematical modeling, material and energy balances, and probability and statistics with applications to design problems.
Prerequisites: admission to the chemical engineering major only and grades of C– or better in MAE 9 or 10, and Chem. 6C or consent of instructor.

CENG 101A. Introductory Fluid Mechanics (4)
Kinematics and equation of motion; hydrostatics; Bernoulli’s equation; viscous flows; turbulence; pipe flow; boundary layers and drag in external flows; applications to chemical, structural, and bioengineering. Students may not receive credit for both MAE 101A and CENG 101A.
Prerequisites: admission to the major and grades of C– or better in MAE 9 or 10, and Chem. 6C or consent of instructor.

CENG 101B. Heat Transfer (4)
Conduction, convection, radiation heat transfer; design of heat exchangers. Students may not receive credit for both MAE 101C and CENG 101B.
Prerequisites: admission to the major and a grade of C– or better in CENG 101A.

CENG 101C. Mass Transfer (4)
Diffusive and convective mass transfer in solids, liquids, and gases.; steady and unsteady state; mass transfer coefficients; applications to chemical engineering and bioengineering. Students may not receive credit for both MAE 101D and CENG 101C.
Prerequisites: admission to the major and grades of C– or better in CENG 101A.

CENG 102. Chemical Engineering Thermodynamics (4)
Thermodynamic behavior of pure substances and mixtures. Properties of solutions, phase equilibria. Thermodynamic cycles. Chemical equilibria for homogeneous and heterogeneous systems. Prerequisites: CENG 100 and Math. 20D or consent of instructor.
CHEMICAL ENGINEERING GRADUATE COURSES

CENG 205. Graduate Seminar in Chemical Engineering (1)
Each credit applicable for a student of CENG is expected to attend one seminar per quarter, of his or her choice, dealing with current topics in chemical engineering. Topics will vary. Prerequisites: none.

CENG 207. Nanomedicine (4)
Introduction to nanomedicine; diffusion and drug dispersion; diffusion in biological systems; drug permeation through biological barriers; drug transport by fluid motion; pharmacokinetics of drug distribution; drug delivery systems; nanomedicine in practice: cancers, cardiovascular diseases, immune diseases, and skin diseases. Prerequisites: none.

CENG 208. Nanofabrication (4)
Basic engineering principles of nanofabrication. Topics include: photo-, electron beam and nanoinprint lithography, block copolymers and self-assembled monolayers, colloidal assembly, biological nanofabrication. Prerequisites: none.

CENG 210A. Fluid Mechanics I (4)
(Cross-listed with MENG 210A.) Basic conservation laws, flow kinematics. The Navier-Stokes equations and some of its exact solutions. Prerequisites: MENG 113A and ECE 15, or CENG 101A-B-C or consent of instructor.

CENG 211. Introduction to Nanoengineering (4)
Understanding nanotechnology, broad implications; miniaturization: scaling laws; nanoscale physics; types and properties of nanomaterials; nanomechanical oscillators; nanobiotechnology; effects of noise, sensitivity and stability; applications of nanotechnology and nanobiotechnology. Prerequisites: none.

CENG 212. Intermolecular and Surface Forces (4)
Development of quantitative understanding of the different intermolecular forces between atoms and molecules and how these forces give rise to interesting phenomena at the nanoscale, such as flocculation, wetting, and self-assembly in biological (natural) and synthetic systems. Prerequisites: none.

CENG 213. Nanoscale Synthesis and Characterization (4)
Examination of nanoscale synthesis—top-down and bottom-up; physical deposition; chemical vapor deposition; plasma processes; sol-gel processing; soft-lithography; block copolymers and self-assembly; layer-by-layer; molecular synthesis. Nanoscale characterization: microscopy (optical and electron: TEM, SEM); scanning probe microscopes (SEM, AFM, STM); X-ray; X-ray diffraction; spectroscopies (EDX, SIMS, Mass spect, Raman, XPS); particle size analysis; electrical, optical, magnetic, mechanical, thermal. Prerequisites: none.

CENG 214. Nanoscale Physics and Modeling (4)
Expanded mathematical analysis of topics introduced in CENG 212. Introduction of both analytical and numerical methods through application to problems in nanotechnology. Prerequisites: none. This course is offered by the Jacobs School of Engineering in cooperation with the Jacobs School of Management.

CENG 215. Nanosystems Integration (4)
Discussion of scaling issues and how to carry out the effective hierarchical assembly of diverse molecular and nanoscale components into higher order structures that retain the desired electronic, photonic, structural, mechanical, or catalytic properties at the microscopic and macroscopic levels. Novel ways to combine the best aspects of both top-down and bottom-up processes to create a totally unique paradigm change for the integration of heterogeneous molecules and nanocomponents into higher order structures. Prerequisites: none.

CENG 221A Heat Transfer (4)
(Cross-listed with MENG 221A.) Conduction, convection, and radiation heat transfer development of energy conservation equations. Analytical and numerical solutions to heat transport problems. Specific topics and applications vary. Prerequisites: MENG 113A-B-C or CENG 101A-B-C or consent of instructor.

CENG 221B Mass Transfer (4)
(Cross-listed with MENG 221B.) Fundamentals of diffusive and convective mass transfer and mass transfer with chemical reaction. Development of mass conservation equations. Analytical and numerical solutions to mass transport problems. Specific topics and applications vary. Prerequisites: MENG 113A-B-C or CENG 101A-B-C or consent of instructor.

CENG 251. Thermodynamics (4)
Principles of thermodynamics of single and multi-component systems. Phase equilibria, estimation, calculation, and modeling of mixtures of liquids and gases. Prerequisite: consent of instructor.

CENG 252. Chemical Reaction Engineering (4)
Analysis of chemical rate processes; complex kinetic systems. Chemical reactor properties in steady state and transient operations; optimal design policies. The interaction of chemical and physical transport processes in affecting reactor design and operating characteristics. Uniqueness; multiplicity and stability in reactor systems. Applications of the heterogeneous reactor systems. Prerequisite: consent of instructor.

CENG 253. Heterogeneous Catalysis (4)
Physics and chemistry of heterogeneous catalysis. Adsorption/desorption kinetics, chemical bonding, isoenergetic modes of reaction, catalytic cycles, selection of catalysts, poisoning, experimental techniques. Prerequisite: consent of instructor.

CENG 254. Biochemical Engineering Fundamentals (4)
Introduction to microbiology as relevant to the main topic, bacterial reactor analysis. Fermentation and enzyme technology. Prerequisite: consent of instructor.

CENG 255. Electrochemical Engineering (4)
Fundamentals of electrochemistry and electrochemical engineering. Structure of the double layer, cell potential and electrochemical thermodynamics, charge transfer kinetics, electrochemical transport phenomena, and introduction to colloidal chemistry. Applications such as corrosion prevention, electroplating, reactor design, batteries and fuel cells. Prerequisite: consent of instructor.

CENG 259. Seminar in Chemical Engineering (4)
Presentations on research progress by graduate students and by visitors from industrial and academic research laboratories. (May be repeated for credit. 5 U grades only.) Prerequisite: consent of instructor.

CENG 296. Independent Study in Chemical Engineering (1–12)
Independent reading or research on a problem as arranged by a faculty member. Must be taken for a letter grade only. Prerequisite: consent of instructor.

CENG 299. Graduate Research in Chemical Engineering (1–12)
S/U grades only. Prerequisite: consent of instructor.

CENG 301. Teaching Experience (2)
Teaching experience in an appropriate CENG undergradu- rate course under the direction of the faculty member in charge of the course. Lecturing one hour per week in either a problem-solving section or regular lecture. (S/U grades only) Prerequisites: consent of instructor and departmental stamp.

COURSES IN NANOENGINEERING (NANO)
All students enrolled in NANO courses or admitted to the NANO major are expected to meet prerequisite and performance standards, i.e., students may not enroll in any NANO courses or courses in another department that are required for the major prior to having satisfied prerequisite courses with a C– or better. (The department does not consider D grades as adequate preparation for subsequent material.) Additional details are given under the program outline, course descriptions, and admission procedures for the Jacobs School of Engineering in this catalog.

LOWER-DIVISION

NANO 1. Nanoengineering Seminar (1)
Overview of nanotechnology. Presentations and discussions of basic knowledge and career opportunities in nanotechnology for professional development. Introduction to campus library resources. Prerequisites: none. (P/NP grading only)

NANO 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

UPPER-DIVISION

NANO 101. Introduction to Nanoengineering (4)
Introduction to nanotechnology: nanoscale fabrication; nanolithography and self-assembly; characterization tools; nanomaterials and nanostructures; nanotubes, nanowires, nanoparticles, and nanocomposites; nanoscale and molecular electronics; nanotechnology in magnetic systems; nanotechnology in integrative systems; nanoscale optoelectronics; nanobiotechnology; biomimetic systems, nanomotors, nanofluids, and nanomedicine. Prerequisites: grade of C– or better in Chem. 6B, Phys. 2B, Math. 20C.

NANO 102. Foundations in Nanotechnology: Chemical Principles (4)
Chemical principles involved in synthesis, assembly, and performance of nanostructured materials and devices. Chemical interactions, classical and statistical thermodynamics of small systems, diffusion, carbon-based nanomaterials, supramolecular chemistry, liquid crystals, colloidal and polymer chemistry, lipid vesicles, surface modification, surface functionalization, catalysis. Prerequisites: grade of C– or better in Chem. 6C, Math. 20D, NANO 101, or at least concurrent enrollment.

NANO 103. Foundations in Nanotechnology: Biochemical Principles (4)
Principles of biochemistry tailored to nanotechnologies. The structure and function of biomolecules and their specific roles in molecular interactions and signal pathways. Nanoscale detection methods. Prerequisites: grade of C– or better in BILD 1, Chem. 6C, NANO 101, or at least concurrent enrollment.

NANO 104. Foundations in Nanotechnology: Physical Principles (4)
Introduction to quantum mechanics and nanoelectronics. Wave mechanics, the Schroedinger equation, free and confined electrons, band theory of solids. Nanosolids in 0D, 1D, and 2D. Application to nanoelectronic devices. Prerequisites: Grade of C– or better in Phys. 2D or Chem. 133, Math. 20D, NANO 102 or at least concurrent enrollment.

NANO 110. Modeling of Nanotechnology Systems (4)
Engineering computation applied to nanotechnology including linear systems, nonlinear equations, optimization, solution of ordinary and partial differential equations, microfluidics simulation, quantum mechanical methods, Monte Carlo and molecular dynamics methods. Students will write programs and use open-source and commercial software. Prerequisites: grade of C– or better in Math. 20F, ECE 15, NANO 101.
NANO 111. Characterization of Nanoengineering Systems (4)
Fundamentals and practice of methods to image, measure, and analyze materials and devices that are structured at the nanometer scale. Optical and electron microscopy; scanning probe methods; photon-, ion-, and electron-probe methods, spectroscopic, magnetic, electrochemical, and thermal methods. Prerequisites: grade of C– or better in NANO 104.

NANO 112. Synthesis and Fabrication of Nanoengineering Systems (4)
Introduction to methods for fabricating materials and devices in nanoengineering: Nano-particle, -vesicle, -tube, and -wire synthesis. Top-down methods including chemical vapor deposition, conventional and advanced lithography, doping, and etching. Bottom-up methods including self-assembly. Integration of heterogeneous structures into functioning devices. Prerequisites: grade of C– or better in NANO 102 and 103.

NANO 120A. Nanoengineering System Design I (4)
Principles of product design and the design process. Application and integration of technologies in the design and production of nanoscale components. Engineering economics. Initiation of team design projects to be completed in NANO 120B. Prerequisites: grade of C– or better in NANO 110, 111, and 112.

NANO 120B. Nanoengineering System Design II (4)
Principles of product quality assurance in design and production. Professional ethics. Safety and design for the environment. Culmination of team design projects initiated in NANO 120A with a working prototype designed for a real engineering application. Prerequisites: grade of C– or better in NANO 120A.

NANO 140. Introduction to Molecular Simulations (4)
Principles of molecular simulations. The students will gain hands-on experience with development of a molecular dynamics code and Monte Carlo codes, performing simulations, and analyzing simulation results. The students will also learn to apply molecular simulation techniques for solving nanoengineering problems. Prerequisite: NANO 110.

NANO 143. Nanomedicine (4)
History of nanomedicine; length scale; main topics of nanomedicine: drug delivery, drugs and therapy, in vivo imaging, in vitro diagnosis, biomaterials, and active implants; nanomedicine in practice for disease treatment and diagnostics: cancers, cardiovascular diseases, immune diseases, and skin diseases. Prerequisites: NANO 101, 102, 103, 104, or consent of instructor.

NANO 145. Introduction to Nanomachines (4)
Understanding nanoscale motion, scaling laws, motion control at the nanoscale, biological nanomotors, molecular nanomachines, design of artificial nanomotors, propulsion mechanisms of artificial nanomotors, applications, and future opportunities and challenges. Prerequisites: NANO 101, 102, 103, 104, or consent of instructor.

NANO 146. Nanoscale Optical Microscopy and Spectroscopy (4)
Fundamentals in optical imaging and spectroscopy at the nanometer scale. Diffraction-limited techniques, near-field methods, multiphoton imaging and spectroscopy, Raman techniques, plasmon-enhanced methods, scan-probe techniques, novel sub-diffraction-limit imaging techniques, and energy transfer methods. Prerequisite: consent of instructor.

NANO 147. BioNanotechnology (4)
Introduction to biofabrication and bioengineering as applied to nanoscience and nanoengineering. Biological nanostructures, bioelectronics, and biophysics. Basic biochemistry, genetic engineering, and library screening techniques. Bioconjugation and characterization of biological systems on surfaces and nanoscale materials. Biological synthesis of inorganic nanocrystals. Prerequisite: NANO 101, 102, 103, 104, or consent of instructor.

NANO 148. Thermodynamics of Materials (4)
Fundamental laws of thermodynamics for simple substances; application to flow processes and to nonreacting mixtures; statistical thermodynamics of ideal gases and crystalline solids; chemical and materials thermodynamics; multiphase and multicomponent equilibria in reacting systems; electrochemistry. Prerequisite: NANO 20.

NANO 150. Mechanics of Nanomaterials (4)
Continuum, quantum and, statistical mechanics, interatomic forces and intermolecular interactions, nanomechanics of self-assembly, pattern formation, hierarchical ordering, defects, surfaces, and interfaces, plasticity, creep, fracture and fatigue, adhesion, friction and wear, nanorheology, nanotribology, composite materials, carbon nanomaterials, biological materials. Prerequisite: NANO 20.

NANO 156. Principles of Materials (4)
Basic principles of synthesis techniques, processing, microstructural control and unique physical properties of materials in nanodimensions. Nanowires, quantum dots, thin films, electrical transport, optical behavior, functional behavior, and technical applications of nanomaterial. Prerequisite: NANO 20.

NANO 158. Phase Transformations and Kinetics (4)
Materials and microstructures changes. Understanding of diffusion to variable changes in the chemical distribution and microstructure of materials, rates of diffusion. Phase transformations, effects of temperature and driving force on transformations and microstructure. Prerequisite: NANO 20.

NANO 161. Material Selection in Engineering Design (4)
Selection of materials for engineering systems, based on constitutive analyses of functional requirements and material properties. The role and implications of processing on material selection. Optimizing material selection in a quantitative methodology. Prerequisite: NANO 20.

NANO 162. Nanosensors: Principles, Design, and Applications (4)
Why nanosensors? Nanosensors based on different nanomaterials, fabrication of nanosensors, large-scale integration of nanosensor arrays, common recognition elements, surface chemistry and functionalization, signal transduction, practical applications. Prerequisite: consent of instructor.

NANO 164. Advanced Micro- and Nanomaterials for Energy Storage and Conversion (4)
Materials for energy storage and conversion in existing and future power systems, including fuel cells and batteries, photovoltaic cells, thermoelectric cells, and hybrids. Prerequisite: consent of instructor.

Introduction to physical principles of electrical, dielectric, and magnetic properties. Semiconductors, control of defects, thin film, and nanocrystal growth, electronic and optoelectronic devices. Processing-microstructure-property relations of dielectric materials, including piezoelectric, pyroelectric and ferroelectric, and magnetic materials. Prerequisite: NANO 20.

NANO 192. Senior Seminar in NanoEngineering (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in chemical engineering (at the upper-division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students with preference given to seniors. Prerequisite: department stamp or consent of the instructor.

NANO 195. Teaching (2–4)
Teaching and tutorial assistance in a NANO course under supervision of instructor. Not more than four units may be used to satisfy graduation requirements. Prerequisites: junior status with a B average in major and consent of instructor. (P/NP only.)

NANO 197. Engineering Internship (1–4)
Coordinated through the UCSD Academic Internship Program, this course provides work experience through industry, government offices, hospitals, and their practices. Students work in local industry or hospitals under faculty supervision. Units may not be applied toward major graduation requirements. Internship is unsalaried. Prerequisites: completion of ninety units with 2.5 GPA and consent of instructor.

NANO 198. Directed Group Study (1–4)
Directed group study on a topic or in a field not included in the regular department curriculum, by special arrangement with a faculty member. Prerequisite: consent of instructor. (P/NP only.)

NANO 199. Independent Study for Undergraduates (4)
Independent reading or research on a problem by special arrangement with a faculty member. Prerequisite: consent of instructor. (P/NP only.)
DEPARTMENT FOCUS

The instructional and research programs of the department are grouped into four programmatic focus areas: civil structures, aerospace and composite structures, renewal of structures, and earthquake engineering. Both the undergraduate and graduate programs are characterized by strong interdisciplinary relationships with the Departments of Mechanical and Aerospace Engineering, Physics, Mathematics, Bioengineering, Chemistry, Electrical and Computer Engineering, Computer Science and Engineering, the Materials Science Program, and associated campus institutes such as the Institute of Geophysics and Planetary Physics, Institute for Pure and Applied Physical Sciences, Institute for Biomedical Engineering, Center of Excellence for Advanced Materials, California Space Institute, Calit2, and Scripps Institution of Oceanography.

The programs and curricula of the Department of Structural Engineering will educate and train engineers in a holistic approach to structural systems engineering by emphasizing and building on the commonality of engineering structures in materials, mechanics, analysis and design across the engineering disciplines of civil, aerospace, marine and mechanical engineering.

Although structural engineering is traditionally viewed as an activity within civil engineering, in actuality many other engineering disciplines such as aerospace, marine (naval, offshore), and mechanical engineering contain well established discipline-specific structural systems and components. In all of the various engineering disciplines there exists a large commonality in the structural materials used, in the general principles of structural mechanics, in the overall design philosophy and criteria, and in the modeling and analysis tools employed for the numerical quantification and visualization of structural response. Particularly, small disciplinary differences in materials and computational tools are rapidly disappearing with the civil engineering community opening up to new structural materials developed and used to date primarily in the aerospace industry, and with computational developments which are less product specific but more geared towards a holistic structural systems design approach with interactive graphics, object-oriented database management and concurrent visualization and data processing. Developments in overall structural systems design are increasingly cross-disciplinary over many traditional engineering areas.

THE UNDERGRADUATE PROGRAM

DEGREE AND PROGRAM OPTIONS

The Department of Structural Engineering offers an unique engineering program leading to the B.S. degree in structural engineering which is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (EAC/ABET). The Department of Structural Engineering also offers a nonaccredited B.S. degree in engineering sciences. The B.S. programs require a minimum of 148 units, plus college requirements in humanities and social sciences. All Structural Engineering programs of study have strong components in laboratory experimentation, numerical computation, and engineering design. Design is emphasized throughout the curricula by open-ended homework problems, by laboratory and computer courses which include student-initiated projects, and finally, by senior design project courses which involve teams of students working to solve engineering design problems brought in from industry. The Structural Engineering programs are designed to prepare students receiving bachelor's degrees for professional careers or for graduate education in their area of specialization. In addition, the programs can also be taken by students who intend to use their undergraduate engineering education as preparation for postgraduate professional training in non-technical fields such as business administration, law or medicine.

Structural Engineering is concerned with the design and analysis of civil, mechanical, aerospace, marine, naval, and offshore structures. Examples include bridges, dams, buildings, aircraft, spacecraft, ships, oil platforms, automobiles, and other transportation vehicles. This field requires a thorough knowledge of the behavior of solids (concrete, soils, rock, metals, plastics, and composite materials), fluid mechanics as it relates to structural loads, dynamics as it relates to structural response, mathematics for the generation of theoretical structural models and numerical analysis, and computer science for simulation purposes associated with computer-aided design, response analyses, and data acquisition. Basic understanding of materials behavior and structural performance is enhanced by laboratory courses involving static and dynamic stress failure tests of structural models, and response of structural systems. Within this area, students can specialize in (a) civil structures, (b) aerospace structures, (c) renewal of structures, or (d) earthquake engineering.

The engineering sciences program follows the overall Structural Engineering program except that the number of required design courses is reduced. In addition to core courses in dynamics, vibrations, structures, fluid mechanics, thermodynamics, heat transfer, and laboratory experimentation, a large number of technical electives are scheduled. This aspect of the curriculum allows flexibility by permitting specialization and in-depth study in one area of the engineering sciences or through a sequence of courses on various emerging technologies. Students must consult their advisors to develop a sound course of study to fulfill the technical elective requirements of this program.

MAJOR REQUIREMENTS

Specific course requirements for the major are outlined in a table herein. In addition to the required technical courses specifically indicated, a suggested scheduling of humanities and social science courses (HSS) is distributed in the curriculum for students to use to meet college general-education requirements. To graduate, students must maintain an overall GPA of at least 2.0, and the department requires at least a C– grade in each course required for the major.

Deviations from the program of study must be approved by the Undergraduate Affairs Committee prior to taking alternative courses. In cases where a student needs to take a course outside UC San Diego, prior departmental approval is essential. In
addition, technical elective (TE) course selections must have departmental approval prior to taking the courses. In the accredited program, TE courses are restricted to meet ABET standards. Courses such as SE 195, SE 197 and SE 198 are not allowed as technical electives in meeting the upper-division major requirements. SE 199 can be used as a technical elective only under restrictive conditions. Policies regarding these conditions may be obtained from the department’s Student Affairs Office. Graduate level courses may be petitioned for technical elective credit.

Students with different academic preparations may vary the scheduling of lower-division courses such as math, physics and chemistry, but should consult the department prior to doing so. Deviations in scheduling lower-division Structural Engineering courses are discouraged due to scheduling constraints. A tentative schedule of course offerings is available from the department each spring quarter for the following academic year.

**GENERAL-EDUCATION/COLLEGE REQUIREMENT**

For graduation, each student must satisfy general-education course requirements determined by the student's college, as well as the major requirements determined by the department. The six colleges at UCSD require widely different general-education courses, and the number of such courses differs from one college to another. Each student should choose his or her college carefully, considering the special nature of the college and the breadth of general education.

The Structural Engineering program allows for twelve humanities and social science (HSS) courses so that students can fulfill their college requirements. In the ABET accredited programs, students must develop a program that includes a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Twelve HSS courses are listed here; individual college requirements may be higher.

Students must take one full-focus sequence (FS) in: (a) Civil Structures, (b) Aerospace Structures, (c) Renewal of Structures, or (d) Geotechnical Engineering. Students should note that not all focus sequence classes will be offered every year. Students admitted to the university prior to fall 2010 who have completed MAE 9 are not required to take SE 9.

Transfer students admitted to the university prior to fall 2007 who have completed MAE 9 are not required to take SE 9.

*Students must take one full-focus sequence (FS) in: (a) Civil Structures, (b) Aerospace Structures, (c) Renewal of Structures, or (d) Geotechnical Engineering. Students should note that not all focus sequence classes will be offered every year. Students admitted to the university prior to fall 2010 will be allowed to use the courses outlined in past focus sequences from the catalog year in which they entered the university.

1. In fulfilling the humanities and social science requirements (HSS), students must take a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Twelve HSS courses are listed here; individual college requirements may be higher.

2. Students admitted to the university prior to fall 2010 who have completed MAE 9 are not required to take SE 9.

3. Students must take one full-focus sequence (FS) in: (a) Civil Structures, (b) Aerospace Structures, (c) Renewal of Structures, or (d) Geotechnical Engineering. Students should note that not all focus sequence classes will be offered every year. Students admitted to the university prior to fall 2010 will be allowed to use the courses outlined in past focus sequences from the catalog year in which they entered the university.

**STRUCTURAL ENGINEERING (ABET ACCREDITED PROGRAM)**

**Program Mission and Objectives**

The B.S. Structural Engineering program is accredited by the ABET Inc. Engineering Accreditation Commission (Accreditation Board for Engineering and Technology). Accreditation is an assurance that the program meets established quality standards.

**B.S. Structural Engineering Mission**

To provide a comprehensive education and training to engineers using a holistic approach to structural systems engineering by emphasizing and building on the commonality of engineering structures at the levels of materials, mechanics, analysis, and design.

**B.S. Structural Engineering Objectives**

Program objectives represent graduates' performance three to five years after completing the B.S. program:

1. To provide our students receiving bachelor’s degrees with a strong technical education that will prepare them for successful professional careers in industry, or for continued graduate education in their area of specialization

2. To provide our students with fundamental structural engineering principles that can be applied across multiple engineering applications (such as aerospace, civil, marine, and mechanical).

3. To provide our students with broad multidisciplinary skills necessary to accomplish professional objectives in a rapidly changing technological world.

4. To provide our students with the ethical standards, communication and collaboration skills essential for professional practice and career advancement.

**B.S. Structural Engineering Outcomes**

Program outcomes are the expected knowledge, skills, attitudes, and behaviors of students at the time of completing the B.S. program:

1. An ability to apply knowledge of mathematics, science, and engineering

2. An ability to design and conduct experiments, as well as being able to analyze and interpret data

3. An ability to design a system, component, or process to meet desired needs

4. An ability to function in multidisciplinary teams

5. An ability to identify, formulate, and solve engineering problems

6. An understanding of professional and ethical responsibility

7. An ability to communicate effectively with written, oral, and visual means

8. The broad education necessary to understand the impact of engineering solutions in a global and societal context

9. A recognition of the need for and an ability to engage in lifelong learning

10. A knowledge of contemporary issues

11. An ability to use modern engineering techniques, skills, and computing tools necessary for engineering practice
in this catalog, it may be impossible to complete the Structural Engineering major within the normal four-year period. Students should refer to the four-year plan and course prerequisite map on the department Web site at http://www.structures.ucsd.edu.

In addition to the advising available through the Structural Engineering Student Affairs Office, programmatic or technical advice may be obtained from Structural Engineering faculty members. A specific Structural Engineering faculty advisor is assigned to each Structural Engineering student. All Structural Engineering students are required to meet with their faculty advisor at least once a year, preferably before the beginning of fall quarter.

PROGRAM ALTERATIONS/EXCEPTIONS TO REQUIREMENTS

Variations from, or exceptions to, any program or course requirements are possible only if a petition is approved by the Structural Engineering Undergraduate Affairs Committee before the courses in question are taken. Petition forms may be obtained from the Structural Engineering Student Affairs Office and must be processed through this office.

INDEPENDENT STUDY

Structural Engineering students may take SE 199, Independent Study for Undergraduates, under the guidance of a Structural Engineering faculty member. Normally, this course is taken as an elective on a P/NP basis. Under restrictive conditions, however, it may be used to satisfy upper-division technical elective course requirements for the major. Students interested in taking an SE 199 course must identify a faculty member with whom they wish to work and propose a research or study topic. After obtaining the faculty member's concurrence on the topic and scope of the study, the student must submit a Special Studies Course form to the Structural Engineering Undergraduate Affairs Committee. The forms must be completed, approved, and processed prior to the beginning of the quarter in which the course is to be taken. This should not be done during the add/drop period. Detailed policy in this regard and the requisite forms may be obtained from the Student Affairs Office.

GRADUATE PROGRAM

The Department of Structural Engineering offers instruction leading to the degrees of master of science (M.S.) and doctor of philosophy (Ph.D.) in structural engineering (SE). In addition, an M.S. degree in structural health monitoring, prognosis, and validated simulations has been activated. The graduate program is aimed at training a select number of highly skilled professionals in structural engineering with the academic and engineering credentials to assume leadership roles in industry and academia.

The M.S. degree program is intended to provide students with additional fundamental knowledge as well as specialized advanced knowledge in selected structural engineering aspects over and above the undergraduate degree course work. The doctor of philosophy (Ph.D.) degree program is intended to prepare students for careers in teaching, research, and/or in their chosen professional specialties. The Ph.D. program requires a departmental comprehensive examination, a Ph.D. candidacy examination, a Ph.D. dissertation based on new and unique research, and a dissertation defense.

Both degrees offer opportunities for training in one or more of the four primary research focus areas within the SE department: (1) Earthquake Engineering, (2) Advanced Composites and Aerospace Structural Systems, (3) Renewal Engineering, and (4) Structural Health Monitoring, Prognosis, and Validated Simulations. Admission to the UC San Diego graduate program in Structural Engineering requires at least a B.S. degree in engineering, physical sciences, or mathematics with an overall upper-division GPA of 3.0. Applicants must provide three letters of recommendation and recent GRE general test scores. International applicants whose native language is not English are required to demonstrate proficiency in English by taking the TOEFL test. The minimum TOEFL score required is 550 (paper-based), 213 (computer-based), and 80 (Internet-based test [iBT]). Based on the candidate’s choice, qualifications, and career objectives, admission to the program is in one of two categories: M.S. or Ph.D.

Applicants seeking enrollment in SE courses via UC Extension’s concurrent registration program are advised to refer to the “Graduate Studies Transferring Credit,” section of the UC San Diego General Catalog for clarification.

BACHELOR’S/MASTER’S PROGRAM

The department offers a bachelor’s/master’s degree program to enable students to complete both the B.S. and M.S. degrees in an accelerated timeframe. Undergraduate students in the Department of Structural Engineering who have at least 148 quarter units with a cumulative GPA of 3.5 or higher are eligible to apply. Admission to the bachelor’s/master’s degree program is automatic. Student applications are reviewed and the final decision is made by the Department of Structural Engineering. Acceptance into this program is an honor that carries with it practical benefits—the graduate application process is simplified (no GREs required) and advanced students are given access to graduate level courses. Upon acceptance as an undergraduate into the program, a faculty member will be assigned who will serve as the student’s advisor. Interested students should contact the Structural Engineering Student Affairs Office. Students must fulfill all requirements for the B.S. degree prior to being formally admitted to graduate status.

MASTER’S DEGREE PROGRAM

The M.S. degree program is intended to provide the student with additional fundamental knowledge as well as specialized advanced knowledge in selected structural engineering aspects over and above the undergraduate degree course work. Two plans, the M.S. Thesis Plan and the M.S. Comprehensive Examination Plan, are offered.
The M.S. Thesis Plan is designed for those students with an interest in research prior to entering the structural engineering profession or prior to entering a doctoral degree program. The M.S. Thesis Plan involves course work leading to the completion and defense of a master’s thesis. The M.S. Comprehensive Examination Plan involves course work and requires the completion of a written comprehensive examination covering multiple courses that the student has taken. The M.S. Comprehensive examination will be comprehensive and cover two focus sequences and at least one additional technical elective that the student has taken. The examination must be completed no later than the end of the eighth week of the quarter the student intends to graduate.

Master students will be required to complete three core courses before they can graduate with their master’s degree. The courses are SE 200 Applied Mathematics in Structural Engineering (or one of the following two similar courses: MAE294A and Math. 210A), SE 201 Advanced Structural Analysis, and SE 271 Solid Mechanics for Structural and Aerospace Engineering.

M.S. students must complete forty-eight units of credit for graduation. For the M.S. Comprehensive Examination Plan all forty-eight units of credit must consist of regular courses (twelve courses). For the M.S. Thesis Plan, thirty-six units (nine courses) from regular courses are required, in addition to twelve units of graduate research for the master’s thesis. For both M.S. plans, students are required to complete a minimum of two sequences from the following focus areas:

1. Structural Analysis
2. Structural Design
3. Computational Mechanics
4. Earthquake Engineering
5. Geotechnical Engineering
6. Advanced Composites
7. Solid Mechanics
8. Advanced Structural Behavior

A sequence is composed of three regular courses from the same focus area. The courses comprising the focus sequences are listed in the table in this section. To meet the specific needs of some students, other focus areas may be developed by a student in consultation with his or her advisor, but these must be pre-approved by the SE Graduate Affairs Committee. To allow for greater flexibility in the program, the remaining credits required from courses may be earned by completing additional focus sequences, parts of focus sequences, or other appropriate courses. Students may elect to take other appropriate technical electives (with the approval of their advisor and the SE Graduate Affairs Committee). In general, no undergraduate courses are allowed for the M.S. degree. In special cases where an undergraduate course may be used, the arrangement must be preapproved by both the academic advisor and the Graduate Affairs Committee.

Units obtained in SE 290 and 298 may not be applied towards course work requirements. No more than four units of SE 296 may be applied toward course work requirements and only with prior approval of the SE Graduate Affairs Committee.

The department also offers a seminar course each quarter dealing with current research topics in Structural Engineering (SE 290). Students must take SE 290 every quarter in the first year, and are strongly recommended to take it for at least one quarter in every subsequent year.

**FOCUS SEQUENCES**

**Structural Analysis**
SE 201. Advanced Structural Analysis
SE 202. Structural Stability
SE 203. Structural Dynamics
SE 204. Advanced Structural Dynamics
SE 205. Nonlinear Mechanical Vibrations
SE 206. Random Vibrations

**Structural Design**
SE 211. Advanced RC/PC Design
SE 212. Advanced Structural Steel Design
SE 213. Bridge Design
SE 223. Advanced Seismic Design of Structures
SE 254. FRP Rehabilitation of Civil Structures

**Computational Mechanics**
SE 233. Computational Techniques in Finite Elements
SE 276A. Finite Element Methods in Solid Mechanics I
SE 276B. Finite Element Methods in Solid Mechanics II
SE 277. Error Control in Finite Element Analysis
SE 278A. Finite Element Methods for Computational Fluid Dynamics

**Earthquake Engineering**
SE 203. Structural Dynamics
SE 206. Random Vibrations
SE 221. Earthquake Engineering
SE 222. Geotechnical Earthquake Engineering
SE 223. Advanced Seismic Design of Structures
SE 243. Soil Structure Interaction

**Geotechnical Engineering**
SE 222. Geotechnical Earthquake Engineering
SE 241. Advanced Soil Mechanics
SE 242. Advanced Foundation Engineering
SE 243. Soil Structure Interaction

**Advanced Composites**
SE 253A. Mechanics of Laminated Composite Structures I
SE 253B. Mechanics of Laminated Composite Structures II
SE 253C. Mechanics of Laminated Anisotropy Plates and Shells

**Experimental Mechanics and NDE**
SE 252. Experimental Mechanics and NDE
SE 271. Solid Mechanics for Structural and Aerospace Engineering

**Theory of Elasticity**
SE 272. Theory of Elasticity
SE 273. Anelasticity

**Advanced Structural Behavior**
SE 205. Nonlinear Mechanical Vibrations
SE 224. Structural Reliability and Risk Analysis
SE 206. Random Vibrations
SE 252. Experimental Mechanics and NDE
SE 265. Structural Health Monitoring Principles

Students taking the Solid Mechanics focus sequence are required to take SE 271, SE 272, and one of these courses: SE 273, SE 252 or SE 235.

**M.S. DEGREE IN STRUCTURAL ENGINEERING WITH SPECIALIZATION IN HEALTH MONITORING, PROGNOSIS, AND VALIDATED SIMULATIONS (SHMP&VS)**

The M.S. degree in SHMP&VS provides specialized multidisciplinary knowledge in three technology areas of (1) sensing technology, (2) data interrogation, and (3) predictive modeling. Many courses currently offered within the Jacobs School of Engineering may be grouped into numerous focus sequences within each technology area, as shown in the following list:

**A. SENSING TECHNOLOGY AREA**

Sensing Methodologies
SE 252. Experimental Mechanics and NDE
MAE 261. Sensors and Measurements  
MAE 268. MEMS Materials, Fabrication, and Applications  
Data Acquisition Systems  
ECE 257B. Principles of Wireless Networks  
ECE 258A-B. Digital Communications  
ECE 259CN. Advanced Coding and Modulation for Digital Communications  
MAE 261. Sensors and Measurements  
CSE 237A. Introduction to Embedded Computing  
CSE 237B. Software for Embedded Computing  
CSE 237C. Validation/Testing of Embedded Systems  
CSE 237D. Design Automation and Prototyping for Embedded Systems  
Controls  
MAE 280A. Linear Systems Theory  
MAE 280B. Linear Control Design  
MAE 282. Adaptive Control  
MAE 284. Robust and Multi-Variable Control  
MAE 285. Optimal Control and Estimation  

B. DATA INTERROGATION TECHNOLOGY AREA  
Signal Processing  
ECE 161A/SIO 207A. Introduction to Digital Signal Processing  
ECE 251AN/SIO 207B. Digital Signal Processing I  
ECE 251BN/SIO 207C. Digital Signal Processing II  
ECE 251CN. Filter Banks and Wavelets  
ECE 251DN or SIO 207D. Array Processing  
ECE 253A. Fundamentals of Digital Image Processing  
ECE 253B. Digital Image Analysis  
ECE 254. Detection Theory  
ECE 255AN. Information Theory  
System Identification  
MAE 283A. Parameter Identification: Theory and Methods  
MAE 283B. Approximate Identification and Control  
ECE 256A-B. Time Series Analysis and Applications  
ECE 275A. Parameter Estimation I  
ECE 275B. Parameter Estimation II  
Pattern Recognition  
CSE 250A. Artificial Intelligence: Search and Reasoning  
CSE 250B. Artificial Intelligence: Learning  
CSE 253. Neural Networks for Pattern Recognition  
CSE 254. Statistical Learning  
CSE 255. Data Mining and Artificial Intelligence Applications  
ECE 270A-B-C. Neurocomputing  
Statistical/Probabalistic Methods  
MTH 281A-B-C. Mathematical Statistics  
CSE 254. Statistical Learning  
SE 206. Random Vibrations  
SE 224. Structural Reliability and Risk Analysis  

C. PREDICTIVE MODELING TECHNOLOGY AREA  
Structural Analysis  
SE 201. Advanced Structural Analysis  
SE 202. Structural Stability  
SE 203. Structural Dynamics  
SE 204. Structural Reliability and Risk Analysis  
Finite Element  
MAE 232A. Finite Element Methods in Solid Mechanics I  
MAE 232B. Finite Element Methods in Solid Mechanics II  
MAE 232C. Advances in Materials Computations  
SE 274. Nonlinear Finite Elemental Methods  
Solid Mechanics  
SE 271. Solid Mechanics for Structural and Aerospace Engineering  
SE 272. Theory of Elasticity  
SE 273. Theory of Plasticity and Viscoelasticity  
SE 252. Experimental Mechanics and NDE  
SE 235. Wave Propagation in Elastic Media  
Material Behavior/Modeling  
MAE 233B. Micromechanics  
MAE 233C. Advanced Mechanics of Composite Materials  
MAE 232C. Advances in Materials Computations  
MAE 250. Fatigue, Fracture, and Failure Analysis in Engineering Materials  
MAE 273A. Dynamic Behavior of Materials  
SE 245. Constitutive Modeling and Numerical Implementation  
Advanced Structural Behavior  
SE 205. Nonlinear Mechanical Vibrations  
SE 206. Random Vibrations  
SE 224. Structural Reliability and Risk Analysis  
SE 252. Experimental Mechanics and NDE  
SE 265. Structural Health Monitoring Principles  
Earthquake Engineering  
SE 203. Structural Dynamics  
SE 206. Random Vibrations  
SE 221. Earthquake Engineering  
SE 222. Geotechnical Earthquake Engineering  
SE 223. Advanced Seismic Design of Structures  
Advanced Composites  
SE 142. Design of Composite Structures  
SE 251. Processing Science of Composites  
SE 253. Mechanics of Laminated Composite Structures  
MAE 233C. Advanced Mechanics of Composite Materials  
SE 254. FRP Rehabilitation of Civil Structures  

Two degree plans in SHMP&VS will be offered: M.S. Thesis Plan and M.S. Comprehensive Examination Plan. Students in both plans must complete forty-eight units of credit for graduation. For both plans, students must complete thirty-six units of course work consisting of one focus sequence from each of the three technology areas A, B, and C listed above. Any three of the courses listed under a specific topic area constitute a focus sequence. Courses must be chosen in consultation with the student's advisor. The remaining twelve units must be completed as graduate research SE 299.  

For the M.S. SHMP&VS Thesis Plan, the twelve-unit graduate research SE 299 must be conducted as a mentored research project. This project is intended to provide a mentored practicum whereby students integrate knowledge learned from their technology areas into comprehensively solving a problem from structural health monitoring/prognosis or model validation and uncertainty quantification, at their discretion. This project will emphasize professional practice, with both oral and written communication of technical data, and will include a strong design component. The project will be presented to a committee of two faculty members in Structural Engineering and one from another department within the Jacobs School of Engineering or an adjunct faculty member in an appropriate area of focus.  

For the M.S. SHMP&VS Thesis Plan, the twelve-unit graduate research SE 299 culminates with the preparation of a research thesis. The thesis must be successfully defended in an oral examination and public presentation conducted by a committee composed of three faculty members. The committee will consist of two faculty members in Structural Engineering and one from another department within the Jacobs School of Engineering or an adjunct faculty member in an appropriate area of focus. A complete copy of the student's thesis must be submitted to each member of the M.S. thesis committee at least two weeks prior to the defense.  

Because of the inherent multidisciplinary nature of the M.S. SHMP&VS degree, research within SE 299 can be conducted at outside locations (industry or government facilities). In this case a scientist on location, with an adjunct faculty appointment at UCSD, will be part of the student's committee.  

All students in the M.S. SHMP&VS program are required to take a seminar course (SE 290) each quarter they are registered.  

DOCTORAL DEGREE PROGRAM  

The Ph.D. program is intended to prepare students for a variety of careers in research, teaching and advanced professional practice in the broad sense of structural engineering, encompassing civil and aerospace structures, earthquake and geotechnical engineering, composites, and engineering mechanics. Depending on the student's background and ability, research is initiated as soon as possible. All students, in consultation with their advisors, develop course programs that will prepare them for the Departmental Comprehensive Examination and for their dissertation research. However, these programs of study and research must be planned to meet the time limits established to advance to candidacy and to complete the requirements for the degree. Doctoral students who have passed the Departmental Comprehensive Examination may take any course for a S/U grade, with the exception of any course that the student's Departmental Comprehensive or Ph.D. Candidacy Examination Committee stipulates must be taken in order to remove a deficiency. It is strongly recommended that all Structural Engineering graduate students take a minimum of two courses (other than research) per academic year after passing the Departmental Comprehensive Examination.  

The department also offers a seminar course each quarter dealing with current research topics in Earthquake Engineering (SE 290). Students must take SE 290 every quarter in the first year of graduate study, and it is strongly recommended to take it for at least one quarter in every subsequent year.
All doctoral students will be required to take SE 200, Applied Mathematics in Structural Engineering, prior to taking the departmental comprehensive exam.

Doctoral Examinations: A Structural Engineering Ph.D. student is required to pass three examinations. The first is a Departmental Comprehensive Examination which should be taken within three to six quarters of full-time graduate study and requires a 3.5 GPA. This examination is intended to determine the student’s ability to successfully pursue a research project at a level appropriate for the doctoral degree. It is administered by at least four faculty, three of whom must be in Structural Engineering. The student is responsible for material pertaining to four focus areas. One focus area can be satisfied by course work, provided that all courses in that area have been taken at UCSD, the grade in each course is B or better, and the overall GPA in that area is at least 3.5. In order to insure appropriate breadth, the focus areas should consist of the following: (a) two focus areas within Structural Engineering which are closely related to the student’s research interests, (b) one focus area within Structural Engineering that is not directly related to the student’s area of research, and (c) one minor focus area outside the Department of Structural Engineering. An update list of sample focus areas for Ph.D. students is available in the Structural Engineering Graduate Handbook. Minor areas too closely related to the major areas will not be approved by the SE Graduate Affairs Committee. The Solid Mechanics Focus Sequence, which is jointly taught by the Department of Structural Engineering and the Department of Mechanical and Aerospace Engineering, cannot be used to satisfy the outside Structural Engineering requirement. Students intending to specialize in the emerging areas of structural health monitoring, damage prognosis, and validated simulations are advised to take courses in the focus areas of Advanced Structural Behavior and elective courses MAE 283, MAE 261, ECE 251AN, ECE 251B, ECE 254, and CSE 291 which can be used to satisfy the outside Structural Engineering requirement.

Since the examination areas must be approved by the Structural Engineering Graduate Affairs Committee, students are advised to seek such approval well before their expected examination date, preferably while planning their graduate studies. Although students are not required to take particular courses in preparation for the Departmental Comprehensive Examination, the scope of the examination in each area is associated with a set of three graduate courses, generally in focus areas offered or approved by the department. A list of focus areas is available in the Structural Engineering Graduate Handbook. A candidate can develop a sense of the level of knowledge expected to be demonstrated during the examination by studying the appropriate syllabi and/or discussing the course content with faculty experienced in teaching the courses involved. The Departmental Comprehensive Examination may be a written or an oral examination, at the discretion of the committee.

Teaching experience is required of all Structural Engineering Ph.D. students prior to taking the Ph.D. Candidacy Examination. Teaching experience is defined as lecturing one hour per week in either a problem-solving section or laboratory session, for one quarter in an undergraduate course designated by the department. The requirement can be fulfilled by serving as a teaching assistant or by taking SE 501 for academic credit. Students must contact the Student Affairs Office to plan for completion of this requirement.

The Ph.D. Candidacy Examination is the second examination required of Structural Engineering doctoral students. In preparation for the Ph.D. Candidacy Examination, students must have completed the Departmental Comprehensive Examination and the Departmental Teaching Experience requirement, obtained a faculty research advisor, have identified a topic for their dissertation research, and have made initial progress in that research. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student’s graduate program is appointed by the Graduate Council. In accordance with Academic Senate Regulations 715(D): “A doctoral committee of five or more members shall be appointed by the dean of Graduate Studies under the authority of the Graduate Council. The committee members shall be chosen from at least two departments, and at least two members shall represent academic specialties that differ from the student’s chosen specialty. In all cases, each committee must include one tenured UCSD faculty member from outside the student’s major department.” The committee conducts the Ph.D. Candidacy Examination, during which students must demonstrate the ability to engage in dissertation research. This involves the presentation of a plan for the dissertation research project. A short written document describing the research plan must be submitted to each member of the committee at least two weeks before the Ph.D. Candidacy Examination. The committee may ask questions directly or indirectly related to the research project and general questions that it determines to be relevant. Upon successful completion of this examination, students are advanced to candidacy and are awarded the candidate of philosophy degree. The Ph.D. Candidacy Examination is an oral examination.

The Dissertation Defense is the final Ph.D. examination. Upon completion of the dissertation research project, the student writes a dissertation that must then be successfully defended in an oral examination and public presentation conducted by the doctoral committee. A complete copy of the student’s dissertation must be submitted to each member of the doctoral committee at least four weeks before the defense. While the copy of the dissertation handed to the committee is expected to be complete and in final form, it should be noted that students are expected to make changes in the text per direction of the committee as a result of the defense. This examination cannot be conducted earlier than three quarters after the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and the university librarian represents the final step in completion of all requirements for the Ph.D.

Ph.D. Time Limit Policy. Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years. The defense and submission of the doctoral dissertation must be within seven years.

Evaluations. In the spring of each year, the department faculty members evaluate each doctoral student’s overall performance in course work, research, and prospects for financial support for future years. A written assessment is given to the student after the evaluation. If a student’s work is found to be inadequate, the faculty may determine that the student cannot continue in the graduate program.

Courses

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

All undergraduate students enrolled in Structural Engineering courses or admitted into a Structural Engineering program are expected to meet prerequisite and performance standards, i.e., students may not enroll in any SE courses or courses in another department which are required for the major prior to having satisfied prerequisite courses with a C− or better. (The department does not consider D or F grades as adequate preparation for subsequent material.) Additional details are given under the various program outlines, course descriptions, and admission procedures for the School of Engineering in this catalog. Furthermore, the majority of SE courses have enrollment restrictions which give priority to, or are open only to, structural engineering students. Where these restrictions apply, the registrar will not enroll other students except by department stamp on class enrollment cards. The department expects that students will adhere to these policies on their own volition and enroll in courses accordingly. Students are advised that they may be dropped at any time from course rosters if prerequisites and/or performance standards have not been met.

While some courses may be offered more than once each year, most SE courses are taught only once per year, and courses are scheduled to be consistent with the curricula as shown in the tables. When possible, SE does offer selected large-enrollment courses more than once each year. A tentative schedule of course offerings is available from the department each spring for the following academic year.

Program and or materials fees may apply to those courses with large lab components.

Lower-Division

SE 1. Introduction to Structures and Design (4)
Introduction to structural components, systems from aerospace, civil, mechanical, marine and offshore areas. Structural action, the design process. History of structural engineering. Role and responsibility of structural engineers in society. Engineering economics, costs-benefits analysis. Implications on safety. Professional ethics. Priority enrollment given to structural engineering majors.

SE 2. Structural Materials (4)
2A. Priority enrollment given to structural engineering majors and mechanical and aerospace engineering majors.

Introduction to the Matlab environment. Variables and types, statements, functions, blocks, loops, and branches. Algorithm development. Functions, function handles, input and output arguments. Data encapsulation and object-oriented programming. Toolboxes and libraries. Models from physics (mechanics and thermodynamics) are used in exercises and projects. Prerequisites: grade of C– or better in Math. 20D and Math. 20F (20F may be concurrent).

SE 10A. Design Competition—Design, Build, and Fly Aircraft (1)
Student teams design, test, and fly unmanned aircraft for a national student competition. Students concentrate on vehicle design system including aerodynamics, structures, propulsion, and performance. Teams engineer and fabricate the aircraft, submit a design report, and prepare aircraft for competition. Prerequisites: consent of instructor.

SE 87. Freshman Seminar (1)
The freshman seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Prerequisite: open to freshmen only.

UPPER DIVISION

SE 101A. Mechanics I: Statics (4)
Principles of statics using vectors. Two- and three-dimensional equilibrium of statically determinate structures under discrete and distributed loading including hydrostatics; internal forces and concepts of stress; free body diagrams; moment of moment of inertia; analysis of trusses and beams. Prerequisites: grade of C– or better in Math. 20C and Phys. 2A.

SE 101B. Mechanics II: Dynamics (4)

SE 101C. Structural Mechanics III: Structural Dynamics (4)
Free and forced vibrations of damped 1-DOF systems; vibrations isolation, impact and packaging problems. Analysis of discrete MDOF systems using matrix representation. Normal mode frequencies and modal matrix formulation. Lagrange’s equations. Modal superposition for analysis of continuous vibrating systems. Prerequisites: grade of C– or better in Math. 20F and SE 101B (or MAE 130B).

SE 102. Numerical, Computational, and Graphical Tools for Structural Engineering I (4)

SE 103. Conceptual Structural Design (4)
Introduction to design principles and structural action. Development of design theories, approaches and methodology. Concepts of load and resistance factors, factors of safety, limit and ultimate states, design allowable. Simple design examples from aerospace, civil, marine, offshore and mechanical structural systems. Prerequisites: grade of C– or better in SE 2, SE 9, and SE 101A (or MAE 130A).

SE 110A. Solid Mechanics I (4)

SE 110B. Solid Mechanics II (4)

SE 111A-B. Steel Bridge Design Competition (2-2)
Student teams design, test, and build a steel bridge for regional and national ASCE design competition. Students focus on learning ASCE guidelines, rules, and constraints for adherence to national competition policy. Prerequisites: grade of C– or better in SE 103 and SE 110A (or MAE 131A). SE 111A for SE 111B.

SE 112A-B. Concrete Canoe Design Competition (2-2)
Student teams design, test, and build a concrete canoe for regional and national ASCE design competition. Students focus on learning and applying specific fundamental ASCE competition rules, guidelines, and constraints into design. Prerequisites: grade of C– or better in SE 110A (or MAE 131A). SE 112A for SE 112B.

SE 115. Fluid Mechanics for Structural Engineering (4)
Fluid statics, hydrostatics; integral and differential forms of conservation equations for mass, momentum, and energy; Bernoulli equation; dimensions; analysis; jet, pipe flow; external flow, boundary layers; open channel flow. Prerequisites: grade of C– or better in Phys. 2A, Math. 20D, and Math. 20E.

Engineering graphics, solid modeling, CAD applications including 2-D and 3-D transformations, 3-D viewing, wireframe and solid models. Hidden surface elimination. Prerequisite: grade of C– or better in SE 102 and SE 103, SE majors.

SE 121. Numerical Methods in Engineering (4)
Advanced numerical methods for applications in engineering problems. Solution of systems of linear and nonlinear equations, function interpolation and curve fitting, function approximation, computation of integrals, numerical differentiation, and solution of systems of ordinary differential equations. Prerequisites: grade of C– or better in SE 102, SE majors.

SE 125. Statistics, Probability and Reliability (4)
Probability theory. Mathematical statistics, data analysis and inferential statistics, distributions, confidence intervals. Introduction to structural reliability and random phenomena. Applications to components and systems. Prerequisites: SE majors.

SE 130A-B. Structural Analysis (4)
Classical methods of analysis for statically indeterminate structures. Development of computer codes for the analysis of civil, mechanical, and aerospace structures from the matrix formulation of the classical structural theory, through the direct stiffness formulation, to production-type structural analysis programs. Prerequisites: grade of C– or better in SE 110A or SE 110B. Priority enrollment given to structural engineering majors.

SE 131. Finite Element Analysis (4)
Development of stiffness and mass matrices based upon variational principles. Application to static and dynamic problems in structural and solid mechanics. The use of general purpose finite element structural analysis codes. Prerequisites: grade of C– or better in SE 121, SE 130B, and SE major.

SE 140. Structures and Materials Laboratory (4)
Introduction to instrumentation and testing techniques. Discussion of standard tension and compression tests. Similitude relationships for structural models. Term project in model structure including complete engineering report and design results of the term project. Prerequisites: grade of C– or better in SE 103, SE 130B, MAE 170, and senior standing in the major.

SE 142. Design of Composite Structures (4)
Design and analysis of lightweight structures composed of laminated composite materials. Stiffness, strength, failure mechanisms, micromechanics, and hygrothermal behavior. Fabrication and experimental testing. Design projects that involve computer implementation. Prerequisites: SE 110A (or MAE 131A) and SE 110B.

SE 150. Design of Steel Structures (4)

SE 151A. Design of Reinforced Concrete (4)
Concrete and reinforcement properties. Service and ultimate limit state analysis and design. Design and detailing of structural components. Prerequisites: grade of C– or better in SE 103 and SE 130A.

SE 151B. Design of Prestressed Concrete (4)
Time-dependent and independent properties of concrete and reinforcing material. Concept and application of prestressed concrete. Service and ultimate limit state analysis and design of prestressed structures and components. Detailing of components. Calculation of deflection and prestress losses. Prerequisites: grade of C– or better in SE 151A.

SE 152. Seismic Design of Structures (4)

SE 154. Design of Timber Structures (4)

SE 160A. Aerospace Structural Mechanics I (4)
Aircraft and spacecraft flight load definition and operational envelopes, metallic and composite material selection and comparison, applied elasticity, failure theories, stiffened shell panels, thin-wall open and closed-cell torsion prismatic vessels, unsymmetrical loading, shear centers and bending of plates. Prerequisites: grade of C– or better in SE 2, SE 101B (or MAE 130B), and SE 110A (or MAE 131A). Priority enrollment given to engineering majors.

SE 160B. Aerospace Structural Mechanics II (4)
Work-energy principles, matrix models, bending of plates and shells, structural stability of beams and plates, tension field beams, wing divergence and control reversal, vibration damping and flutter, fasteners and structural joints, structural test methods. Prerequisites: grade of C– or better in SE 160A. Priority enrollment given to engineering majors.

SE 163. Nondestructive Evaluation (4)
Damage detection, materials characterization. Introduction to nondestructive evaluation, impedance-based methods, ultrasonic, acoustic, thermographic, liquid penetrant, proof testing, stress coatings, vibrational techniques. Prerequisites: grade of C– or better in SE 110A and SE 110B or consent of instructor; SE major.

SE 168. Structural System Testing and Model Correlation (4)
Dynamic/model testing of structures: test planning/execution, actuators, sensing, and data acquisition, signal processing, data conditioning, test troubleshooting. Methods of updating finite element structural models to correlate with dynamic test results. Model/test correlation assessment in industrial practice. Knowledge of MATLAB strongly encouraged. Prerequisites: grade of C– or better in SE 101C (or MAE 130C) and SE 131.
SE 170. Civil Structures Rehabilitation (4)
Identification of structural distress, lessons from past history, materials and structural concepts related to rehabilitation, seismic retrofit. Strengthening of beams, slabs and walls, design detailing, safety factors, fabrication/installation methods. Prerequisites: grade of C– or better in SE 103, SE 130A–B, SE 151A.

SE 171. Aerospace Structures Repair (4)
Identification of structural distress, corrosion/stress corrosion cracking, fatigue cracking, damage tolerance, integrity and durability of built-up members, patching, health monitoring. Prerequisites: grade of C– or better in SE 138B or SE 160B.

SE 180. Earthquake Engineering (4)

SE 181. Geotechnical Engineering (4)
General introduction to physical and engineering properties of soils. Soil classification and identification methods. Compaction and construction control. Total and effective stress. Permeability, seepage, and consolidation phenomena. Shear strength of sand and clay. Prerequisites: grade of C– or better in SE 110A or MAE 131A; SE major.

SE 182. Foundation Engineering (4)
Application of soil mechanics to the analysis, design, and construction of foundations for structures. Soil exploration, sampling, and in-situ testing techniques. Stress distribution and settlement of structures. Bearing capacities of shallow foundations. Axial and lateral capacity of deep foundations, earth pressures on retaining walls. Prerequisites: grade of C–or better in SE 181; SE major.

SE 183/246. Engineering Geology (4)
Influence of geology on design of engineering works. Mineral and rock identification and their engineering behavior. Geologic mapping. Rock mechanics, rock slope stability, and tunnel engineering. Local field trips. Prerequisites: senior standing; priority enrollment is given to structural engineering majors; graduate standing required for SE 246.

SE 192. Senior Seminar (1)
The Senior Seminar is designed to allow senior undergraduates to meet with faculty members to explore an intellectual topic in structural engineering. Topics will vary from quarter to quarter. Enrollment is limited to twenty students. Prerequisite: senior standing; permission given to seniors. Prerequisites: SE major. Department stamp and/or consent of instructor.

SE 195. Teaching (2–4)
Teaching and tutorial assistance in a SE course under supervision of instructor. Not more than four units may be used to satisfy graduation requirements. (P/NP grades only.) Prerequisites: B average in major, upper-division standing and consent of department chair. Department stamp required.

SE 197. Engineering Internship (1–4)
An enrichment program, available to a limited number of undergraduate students, which provides work experience with industry, government offices, etc., under the supervision of a faculty member and industrial supervisor. Coordination of the Engineering Internship is conducted through UCSD’s Academic Internship Program. Prerequisites: completion of ninety units with a 2.5 GPA and consent of department chair. Department stamp required.

SE 198. Directed Study Group (4)
Directed group study, on a topic or in a field not included in the regular departmental curriculum, by special arrangement with a faculty member. (P/NP grades only.) Prerequisite: consent of instructor or department stamp.

SE 199. Independent Study (1–4)
Independent reading or research on a problem by special arrangement with a faculty member. (P/NP grades only.) Prerequisite: consent of instructor or department stamp.

GRADUATE
SE 200. Applied Mathematics in Structural Engineering (4)
This course is designed for beginning graduate students the basic preparation in mathematical methods required for graduate Structural Engineering courses. Topics include systems of linear algebraic equations; ordinary differential equations; diffusion and wave propagation problems; and calculus variation. Prerequisite: graduate standing.

SE 201. Advanced Structural Analysis (4)
Applications of advanced analytical concepts to structural engineering problems. Effects of approximations in the discretization and the type of finite elements under consideration. An introduction to the nonlinear behavior of structural systems focusing on basic concepts and computational techniques. Prerequisites: SE 130A-B or equivalent, or consent of instructor.

SE 202. Structural Stability (4)
Static, dynamic, and energy-based techniques and predicting elastic stability. Linear and nonlinear analysis of classical and shear deformable beams and plates. Ritz, Galerkin, and finite element approaches for frames and reinforced shells. Nonconservative aerodynamic (divergence flutter) and follower forces. Prerequisite: SE 110B or consent of instructor.

SE 203. Structural Dynamics (4)

SE 204. Advanced Structural Dynamics (4)

SE 205. Nonlinear Mechanical Vibrations (4)
Advanced analytical techniques to understand nonlinearity in mechanical vibration. Phase plane analysis, instability, and bifurcations. Application in nonlinear structural resistance. Introduction to chaotic dynamics, advanced time series analysis, and using chaotic dynamics in applications such as structural damage assessment. Prerequisite: SE 206 or consent of instructor.

SE 206. Random Vibrations (4)

SE 207. Topics in Structural Engineering (4)
A course to be given at the discretion of the faculty in which topics of current interest in structural engineering will be presented.

SE 211. Advanced Reinforced and Prestressed Concrete Design (4)
Advanced topics in concrete design, including frame and shear wall structures, design of connections, reinforced and prestressed concrete system evaluation for seismic resistance including confinement and ductility requirements. Upper and lower bound theories for slabs. Sign, Prerequisite: SE 151A, or equivalent background in basic RC/PC design, or consent of instructor.

SE 212. Advanced Structural Steel Design (4)
Load and Resistance Factor Design (LRFD) philosophy. Behavior and design of steel elements for global and local buckling. Background of seismic codes. Ductility requirements and capacity design concepts. Seismic design of steel moment frames and braced frames. Prerequisites: SE 201 and SE 150, or equivalent course, or consent of instructor.

SE 213. Bridge Design (4)
Design and analysis of bridge structures, construction methods, load conditions. Special problems in analysis—box girders, curved and skewed bridges, environmental and seismic loads. Bearings and expansion joints. Time-temperature-dependent superstructure deformations. Conceptual/初步bridge design project. Prerequisites: SE 201 and fundamental courses in RC and PC design, or consent of instructor.

SE 214. Masonry Structures (4)
Analysis and design of unreinforced and reinforced masonry structure using advanced analytical techniques and design philosophies. Material properties, stability, and buckling of unreinforced masonry. Flexural strength, shear strength, stiffness, and ductility of reinforced masonry elements. Design for seismic loads. Prerequisites: SE 151A, B, or equivalent basic reinforced concrete course, or consent of instructor; graduate standing.

SE 215. Cable Structures (4)
The course deals with cable structures from a structural mechanics point of view. The theoretical and practical aspects of the application of cables to moorings, guyed structures, suspension bridges, cable-stayed bridges, and suspended membranes are discussed. Prerequisite: graduate standing or consent of instructor.

SE 220. Seismic Isolation and Energy Dissipation (4)
Concepts, advantages and limitations of seismic isolation techniques, fundamentals of dynamic response under seismic excitation; spectral analysis; damping; energy approach; application to buildings and structures. Prerequisite: background in structural dynamics, or consent of instructor.

SE 221. Earthquake Engineering (4)
Introduction to plate tectonics and seismology. Rupture mechanism, measures of magnitude and intensity, earthquake occurrence and relation to geologic, tectonic processes. Probabilistic, dynamic hazard analysis. Strong earthquake ground motion; site effects on ground motion; structural response; soil-structure interaction; design criteria; code requirements.

SE 222. Geotechnical Earthquake Engineering (4)
Influence of soil conditions on ground motion characteristics; dynamic behavior of soils, computation of ground response using wave propagation analysis and finite element analysis; evaluation and mitigation of soil liquefaction; soil-structure interaction; lateral pressures on earth retaining structures; analysis of slope stability.

SE 223. Advanced Seismic Design of Structures (4)

SE 224. Structural Reliability and Risk Analysis (4)
Probability theory and random processes; fundamentals of structural reliability theory. Modern methods of structural reliability analysis including computational aspects; structural component and system reliability. Reliability-based design codes; structural modeling for performance and safety. Risk analysis of structural systems. Prerequisites: basic knowledge of probability theory (e.g., SE 125).

SE 233. Computational Techniques in Finite Elements (4)
Practical application of the finite element method to problems in solid mechanics including basic preprocessing and postprocessing. Topics include element types, mesh refinement, boundary conditions, dynamics, eigenvalue problems, and linear and nonlinear solution methods.

SE 234. Plates and Shells (4)
General mathematical formulation of the theory of thin elastic shells; linear membrane and bending theories; finite strain and rotation theories; shell of revolution; shallow shells; and principles of simple panel theory. Survey of recent advances. Prerequisite: graduate student standing.

8 2010-2011 UC SAN DIEGO GENERAL CATALOG • ENGINEERING: STRUCTURAL ENGINEERING (SE)
SE 235. Wave Propagation in Elastic Media (4)
Wave propagation in elastic media with emphasis on waves in unbounded media and on uniform and layered half-spaces. Fundamental aspects of elastodynamics. Application to strong-motion seismology, earthquake engineering, dynamics of foundations, computational wave propagation, and non-destructive evaluations. Prerequisite: graduate standing or consent of instructor.

SE 236. Wave Propagation in Continuous Structural Elements (4)
Propagation of elastic waves in thin structural elements such as strings, rods, beams, membranes, plates and shells. An approximate strength-of-materials approach is used to consider propagation of elastic waves in these elements and obtain the dynamic response to transient loads. Prerequisite: graduate standing or consent of instructor.

SE 241. Advanced Soil Mechanics (4)
Advanced treatment of topics in soil mechanics, including state of stress, pore pressure, consolidation and settlement analysis, shear strength of cohesionless and cohesive soils, mechanisms of ground improvement, and slope stability analysis. Concepts in course reinforced by laboratory experiments.

SE 242. Advanced Foundation Engineering (4)
Advanced treatment of topics in foundation engineering, including adultin foundations, design of earth retaining structures, bearing capacity, ground improvement for foundation support, analysis and design of shallow and deep foundations, including drilled piers and driven piles.

SE 243. Soil-Structure Interaction (4)
Advanced treatment of soils interaction with structures, including shallow and deep foundations, bridge abutments, retaining walls, and buried structures subjected to static and dynamic loading. Elastic approximation. Linear and nonlinear Winkler models p-y and t-z curves.

SE 245. Constitutive Modeling and Numerical Implementation (4)
Development and numerical implementation of procedures to model the nonlinear behavior of engineering materials, including soil and concrete. Inelastic hyperbolic and elastoplastic modeling of hysteretic response to cyclic loading. Behavior of soil-structure systems under transient loading, such as seismic earthquake excitation.

SE 246. Engineering Geology (4)
Influence of geology on design of engineering works. Mineral and rock identification and their engineering behavior. Geologic mapping. Rock mechanics, rock slope stability, and tunnel engineering. Local field trips. (Graduate students are required to submit a term project based on two extended weekend field trips and self-guided research.)

SE 251A. Processing Science of Composites (4)
Introduction to processing, fabrication methods; process models; materials-process-microstructure interaction; materials selection; form and quality control. Wet layup/sprayup, autoclave cure, SMC, injection molding, RTM; resin infusion; winding and fiber placement; pultrusion. Process induced defects, environmental considerations. Prerequisite: graduate standing.

SE 251B. Mechanical Behaviors of Polymers and Composites (4)
Material science oriented course on polymers and composites. Mechanical properties of polymers; micromechanisms of elastic and plastic behavior; applications to material characterizations; defects and environmental considerations. Prerequisite: graduate standing required.

SE 252. Experimental Mechanics and NDE (4)
Theory of electrical resistance strain gages, full-field coherent optical methods including photoelasticity, moiré and speckle interferometry, ultrasonics, thermography and fiber Bragg grating. Applications to materials characterizations, defect detection and health monitoring of structures with emphasis on fiber-reinforced composites. Prerequisites: SE 101A, SE 110A, and MAE 131B, or consent of instructor.

SE 253A. Mechanics of Laminated Composite Structures I (4)
Graduate-level introductory course on mechanics of composites and anisotropic materials. Overview of composite materials and processes, 3-D properties and stress-strain relationships, micromechanics, classical laminated plate theory, basic failure criteria, thermal/moisture/CTE. Students may not receive credit for both SE 253A and SE 250. Prerequisite: graduate standing.

SE 253B. Mechanics of Laminated Composite Structures II (4)
Advanced topics, with prerequisite being SE 253A, or equivalent. Macro- and micro-material modeling, classical and shear deformable laminated beam and plate theories developed via energy principles, Ritz, Galerkin, and Finite element based solutions, advanced failure theories, fracture, holes/notches and hole-size effect, interlaminar stresses, free-edge problems, impact, damage tolerance, fatigue, elastic tailoring, thermally stable/zero CTE structures, etc. Prerequisites: SE 253A or equivalent, graduate standing.

SE 253C. Mechanics of Laminated Anisotropy Plates and Shells (4)
Static, dynamic, and elastic stability of laminated anisotropic plates and cylindrical shells. Theories covered include thin-plate (classical lamination theory), first- and third-order shear-deformable (Reissner-Mindlin, and Reddy) thick plates, and refined layer theories. Solutions covered include exact, approximate (Ritz, Galerkin) and the finite element method. Additional topics include sandwich construction, elastic couplings, thermal response, shear factor determination, fiber and interlaminar stress recovery, strength, and safety considerations. Prerequisites: graduate student standing required; must have taken SE 253B or equivalent, or consent of instructor.

SE 254. FRPs in Civil Structures (4)

SE 255. Textile Composite Structures (4)
Introduction to textile structure and behavior, mechanics of yarns and fabrics as relevant to structural composites and geotechnical applications. Mechanics of textiles and fabric-based composites. Applications in fiber reinforced composites, coated textile structures, geotextiles.

SE 261. Aerospace Engineering Design (4)
Advanced topics in the design of weight-critical aerospace structures. Topics include: conceptual design, general load definitions; metallics and polymeric composite material selection; semi-monocoque analysis techniques, and bolted/bonded connections. Design procedures for sizing the structural components of aircraft and spacecraft will be reviewed.

SE 262. Aerospace Structures Repair (4)

SE 265. Structural Health Monitoring (4)
A modern paradigm of structural health monitoring as it applies to structural and mechanical systems is presented. Concepts in data acquisition, feature extraction, data normalization, and statistical modeling will be introduced in an integrated context. MATLAB-based exercises. Term project. Prerequisites: undergraduate vibrations or structural dynamics course.

SE 271. Solid Mechanics for Structural and Aerospace Engineering (4)
Application of principles of solid mechanics to structural components and systems, description of stresses, strains, and deformation. Use of conservation equations and principle of minimum potential energy. Development of constitutive equations for metallic cementitious and polymeric materials. Prerequisite: SE 110A or consent of instructor.

SE 272. Theory of Elasticity (4)
Development, formulation, and application of field equations of elasticity and variational principles for structural applications in civil and aerospace area. Use of plane stress and plane strain formulation, solution of typical boundary value problems. Prerequisite: SE 271 or consent of instructor.

SE 273. Anelasticity (4)
Mechanical models of viscoelastic, plastic, and viscoplastic behavior in simple shear or uniaxial strain. Constitutive relations for three-dimensional states of stress and strain application to selected technological problems. Prerequisites: graduate standing and SE 271 and SE 272, or MAE 231A and MAE 231B, or consent of instructor.

SE 275. Hydrodynamics in Marine Engineering (4)
Fluid dynamics equations; potential flow-theory; basic potential-flow solutions; added mass, DOP, hydrodynamic forces/moments on a body; water wave theory; irregular wave field; wave-body interactions; high/low-frequency responses; vortex-induced vibrations; galloping; numerical methods. Prerequisite: graduate standing.

SE 276A. Finite Element Methods in Solid Mechanics I (4)
Finite element methods for linear problems in solid mechanics. Emphasis on the principle of virtual work, finite element stiffness matrices, various finite element formulations and their accuracy and the numerical implementation required to solve problems in small strain, isotropic elasticity in solid mechanics.

SE 276B. Finite Element Methods in Solid Mechanics II (4)
Finite element methods for linear problems in structural dynamics. Beam, plate, and doubly curved shell elements are derived. Strategies for eliminating shear locking problems are introduced. Formulation and numerical solution of the equations of motion for structural dynamics are introduced and the effect of different mass matrix formulations on the solution accuracy is explored.

SE 276C. Finite Element Methods in Solid Mechanics III (4)
Finite element methods for problems with both material and geometrical (large deformations) nonlinearities. The total LaGrangian and the updated LaGrangian formulations are introduced. Basic solution methods for the nonlinear equations are developed and applied to problems in plasticity and hyperelasticity. Prerequisites: graduate standing and SE 276A or MAE 232A and MAE 231A or SE 271.

SE 277. Error Control in Finite Element Analysis (4)
This course will provide an overview of the latest technology for evaluating and improving the accuracy and validity of linear and nonlinear finite element models, solution verification, finite element model validation, sensitivity analysis, uncertainty analysis, and test-analysis correlation. Prerequisite: SE 2328 or MAE 2328.

SE 278A. Finite Element Methods for Computational Fluid Dynamics (4)
Development and application of advanced computational techniques for fluid flow. Stabilized and variational multiscale methods for finite element and related discretizations are stressed. Applications involve advection-diffusion equations and systems, and incompressible and compressible Navier-Stokes equations. Turbulence modeling will also be covered. Prerequisite: MAE 232A or SE 276A or consent of instructor.

2010-2011 UC SAN DIEGO GENERAL CATALOG • ENGINEERING: STRUCTURAL ENGINEERING (SE)
SE 278B. Computational Fluid-Structure Interaction (4)
Conservation laws on general moving domains. Arbitrary Lagrange-Eulerian (ALE) and space-time approaches to fluid-structure interaction are covered. Suitable discretizations, mesh motion, and discrete solution strategies are discussed. Prerequisite: SE 278A.

SE 290. Seminar in Earthquake Engineering (2)
Weekly seminar and discussion by faculty, visitors, postdoctoral research fellows and graduate students concerning research topics in earthquake engineering and related subjects. May be repeated for credit. (S/U grades only.)

SE 296. Independent Study (4)
Prerequisite: consent of instructor.

SE 298. Directed Group Study (1–4)
Directed group study on a topic or in a field not included in regular department curriculum, by special arrangement with a faculty member. Prerequisite: consent of instructor.

SE 299. Graduate Research (1–12)
(S/U grades permitted.)

SE 501. Teaching Experience (2)
Teaching experience in an appropriate SE undergraduate course under direction of the faculty member in charge of the course. Lecturing one hour per week in either a problem-solving section or regular lecture. Prerequisites: consent of instructor and the department. (S/U grades permitted.)
English as a Second Language

OFFICE: 232 Literature Building, Warren College
http://basicwriting.ucsd.edu

The English as a Second Language Program (ESL) offers course work specific to the language needs of students for whom English is a second (or subsequent) language. This course is SDCC 4. SDCC 4 is a required course for all undergraduates who have not satisfied the UC Entry Level Writing requirement and who have been designated as needing the course based on their UC Analytical Writing Placement Examination. A combination of instructor recommendation, Entry Level Writing Exit Exam result, and a possible portfolio review places students in SDCC 4 for another quarter, in SDCC 1, or in a college writing sequence. Like SDCC 1, SDCC 4 is taught through a cooperative agreement with the San Diego Community College District. Under Academic Senate regulations, SDCC 4 cannot be counted toward graduation requirements; however, the course units do count as workload credit toward the Minimum Progress requirement and toward eligibility for financial assistance.

For further information about the UC Entry Level Writing Requirement or the UC Analytical Writing Placement Exam, please visit the Basic Writing office, or call (858) 534-6177.
Entry Level Writing

OFFICE: 232 Literature Building
http://basicwriting.ucsd.edu/

For information about satisfying the University of California Entry Level Writing requirement, especially prior to enrollment, please refer to “UC Entry Level Writing Requirement,” in the catalog section “Academic Regulations.”

Students who have not satisfied the UC Entry Level Writing requirement before enrolling at UC San Diego must satisfy the requirement by achieving a grade of C or better in SDCC 1 (English Composition—Entry Level Writing) and by passing the Entry Level Writing Exit Examination given at the end of SDCC 1. That examination is administered by the Basic Writing Program office. Students must enroll in SDCC 1 or SDCC 4 during the first quarter of residence at UCSD. SDCC 1 and SDCC 4 are Mesa College courses taught at UCSD as part of a cooperative program with the San Diego Community College District.

Under Academic Senate regulations, SDCC 1 and SDCC 4 cannot be counted toward graduation requirements; however, the course units do count as workload credit toward the minimum progress requirement and toward eligibility for financial assistance.

For further information about the UC Entry Level Writing requirement or the UC Analytical Writing Placement Examination, please visit the Basic Writing office, 232 Literature Building, or call (858) 534-6177.

MINOR IN ENVIRONMENTAL STUDIES

The Environmental Studies minor offers students from every major a basic grounding in the scientific, technical, social, and cultural issues presented by the interaction of human beings with their environment and the need to build a more environmentally sustainable future.

The two required courses, ENVR30 and ENVR130, have no prerequisites. Some of the other courses related to the minor, particularly those in Group A, have significant prerequisites; students planning an Environmental Studies minor should check catalog course descriptions carefully. Some credit toward the minor may be gained through independent study, field research, study abroad, the Academic Internship Program, and others (prior approval matters only in particular quarters. Petitionable courses may be approved by petition to the minor during the quarters in which they appear in the ENVR quarterly lists.

QUARTERLY LISTS

Each quarter, when the upcoming quarter's Schedule of Classes is published, the Environmental Studies quarterly list is available in 2113 HSS and at the Web site. It is an important, comprehensive source of information about ENVR course offerings as well as those from departments throughout the campus. It identifies applicable as well as petitionable courses for a given quarter. For reference, the office and the Web site maintain archives of quarterly lists.

The minor is structured as follows:

Required:
- Environmental Studies 30, usually offered in the fall quarter.
- Environmental Studies 130, usually offered in the winter quarter (need not be taken consecutively).

Required:
- Five additional courses, at least four in the upper-division, from the following two groups. At least one course must be taken from Group A and one from Group B.

Group A—Natural Sciences

Biology LD 3. Organismic and Evolutionary Biology
BIEB 121. General Ecology Laboratory
BIEB 131. Marine Invertebrate Ecology Laboratory
BIEB 132. Introduction to Marine Biology
BIEB 134. Introduction to Biological Oceanography
BIEB 140. Biodiversity
BIEB 165. Behavioral Ecology Laboratory
BIEB 166. Animal Behavior and Communication
BIEB 176. Conservation and the Human Predicament (cross-listed with ANBI 132)
Chemistry 15. Chemistry of the Universe
Chemistry 149A. Environmental Chemistry
Chemistry 149B. Environmental Chemistry
Chemistry 173. Atmospheric Chemistry

Environmental Studies 102. Selected Topics in Environmental Studies (when taught from a natural sciences perspective)

Environmental Systems 101. The Living Earth
Environmental Systems 103. The Human Earth
Environmental Systems 120. Science and Environmental Writing
MAE 118A. Energy: Non-Nuclear Energy Technologies
SIO 10. The Earth
SIO 12. History of Earth and Evolution
SIO 15. Natural Disasters
SIO 16. Geology of National Parks
SIO 20. The Atmosphere
SIO 30. The Oceans
SIO 35. Water
SIO 110. Introduction to GIS and GPS for Scientists

Environmental Studies 102. Selected Topics in Environmental Studies

Environmental Studies 140. Wilderness and Human Values

Group B—Social Sciences/Humanities

ANAR 108. Archaeology of the UCSD Campus
ANAR 182. Origins of Agriculture and Sedentism
ANBI 132. Conservation and the Human Predicament (cross-listed with BIEB 176)
ANSC 160. Nature, Culture and Environmentalism Communication

Environmental Studies 102. Selected Topics in Environmental Studies (when taught from a humanities/social sciences perspective)

Environmental Studies 110. Environmental Law

Environmental Studies 140. Wilderness and Human Values

Ethnic Studies 103. Environmental Racism
History US 154. Western Environmental History
IRPS GN 458. International Environmental Policy and Politics
IRPS GN 459. Conflict Resolution of Environmental Issues

Philosophy 148. Philosophy and the Environment

Political Science 162. Environmental Policy
Soc/C 149. Sociology of the Environment
Urban Studies & Planning 2. Urban World System
Urban Studies & Planning 124. Land Use Planning
Urban Studies & Planning 144. Environmental and Preventive Health Issues

Urban Studies & Planning 171. Sustainable Development

APPLICABLE AND PETITIONABLE COURSES

Environmentally-based courses offered by UC San Diego departments fall into two categories: applicable and petitionable. Applicable courses are those which have been approved as always applying to the ENVR minor. Petitionable courses are either new and therefore not yet approved as applicable or are "topics" courses which focus on environmental matters only in particular quarters. Petitionable courses may be approved by petition to the minor during the quarters in which they appear in the ENVR quarterly lists.

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

30. Environmental Issues: Natural Sciences

Examine global and regional environmental issues. The approach is to consider the scientific basis for policy options. Simple principles of chemistry and biology are introduced. The scope of problems include: air and water pollution, climate modification, solid-waste disposal, hazardous-waste treatment, and environmental impact assessment. Prerequisite: none.

87. Environmental Studies Freshman Seminar

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

102. Selected Topics in Environmental Studies

An interdisciplinary course focusing on one of a variety of topics related to environmental studies such as environmental policy and politics, foreign study in environmental problems, environmental history, nature writers, ethics and the environment. May be repeated for credit as topics vary. Prerequisite: upper-division standing or consent of instructor.

110. Environmental Law

Explores environmental policy in the United States and the ways in which it is reflected in law. The social and political issues addressed include environmental justice and environmental racism, as well as the role of government in implementing environmental law. Prerequisite: upper-division standing or consent of instructor.
120. Coastal Ecology (4)
Explores the diverse ecosystems of coastal San Diego County (salt marsh, rocky intertidal, sandy beach, etc.) in the classroom and in the field with attention to basic principles of field ecology, natural history, and techniques for collecting ecological data. Course and/or materials fee may apply. Prerequisite: upper-division standing or consent of instructor.

130. Environmental Issues: Social Sciences (4)
Explores contemporary environmental issues from the perspective of the social sciences. It includes the cultural framing of environmental issues and appropriate social action, the analysis of economic incentives and constraints, and a comparison of policy approaches. Prerequisite: upper-division standing or consent of instructor.

140. Wilderness and Human Values (4)
"Wilderness" plays a central role in the consciousness of American environmentalists and serves as focal point for public policies, recreation, and political activism. This course explores its evolving historical, philosophical, ecological, and aesthetic meanings and includes guest speakers and a field component. Prerequisite: upper-division standing or consent of instructor.

141. Wilderness and Human Values Workshop (2)
A course to prepare students to serve as discussion leaders for ENVR 140, Wilderness and Human Values. Includes reading, discussion, library and on-line research, and field trips. Prerequisites: consent of instructor and department stamp.

192. Senior Seminar in Environmental Studies (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in Environmental Studies (at the upper-division level). Topics will vary from quarter to quarter. Senior Seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: upper-division standing, department stamp and/or consent of instructor. (Not offered in 2009–10.)

195. Apprentice Teaching (0-4)
Instructor will define assistant's responsibilities in preparing class presentations, leading students' discussions, and evaluating students' work.

198. Directed Group Study (4)
Directed group research and study, normally with a focus on areas not otherwise covered in the curriculum. Prerequisites: upper-division standing or consent of instructor. Department stamp required.

199. Independent Study (4)
Independent study in a topic not generally covered in the regular curriculum.

500. Apprentice Teaching in Environmental Studies (4)
A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation and grading of examinations and other written exercises, and student relations. Prerequisite: graduate standing.
Environmental Systems

PROGRAM FACULTY
Mark H. Thiemen, Professor, Chemistry and Biochemistry, Program Director
Jane Teneras, Lecturer, Associate Director
Eric E. Allen, Assistant Professor, Marine Biology, SIO
Donna Blackman, Research Geophysicist, SIO
Ronald S. Burton, Professor, Marine Biology, SIO
Richard T. Carson, Professor, Economics
Christopher D. Charles, Professor, Oceanography, SIO
Elsa E. Cleland, Assistant Professor, Biology
Clark Gibson, Professor, Political Science
Sarah T. Gille, Associate Professor, MAE, SIO
Joshua S. Graff Zivin, Associate Professor, International Relations and Pacific Studies
Kim Griest, Professor, Physics
Amro M. Hamdoun, Assistant Professor, Marine Biology, SIO
Philip Hastings, Professor, Marine Biology, SIO
Myrl C. Hendershott, Professor, Oceanography, SIO
David R. Hilton, Professor, Geochemistry
William S. Hodgkiis, Professor, Electrical Engineering, SIO
David A. Holway, Associate Professor, Biology
Miriam Kastner, Professor, Geosciences, SIO
Lisa Levin, Professor, Integrative Oceanography, SIO
Paul Linden, Professor, MAE
Kim McDonald, Lecturer, Director of Science Communication
Joel Norris, Associate Professor, Climate Sciences, SIO
Brian Palenik, Professor, Marine Biology, SIO
Keith Pezzoli, Lecturer, Urban Studies and Planning
Frank L. Powell, Professor, Medicine/Director, White Mountain Research Station
Jeffrey B. Remmel, Professor, Mathematics
Lisa Shaffer, Executive Director, Environmental Sustainability Initiative
John Sclater, Professor, Marine Geophysics, SIO
Richard C. J. Somerville, Professor Emeritus, Climate Sciences, SIO
Hubert Staupidel, Research Geophysicist, SIO
Lynne Tauley, Professor, Physical Oceanography, SIO
Lisa Tauxe, Professor, Geosciences, SIO
David Woodruff, Professor, Biology
Junjie Zhang, Assistant Professor, International Relations and Pacific Studies
OFFICE: 188 Galbraith Hall, Revelle College

This interdisciplinary program recognizes that local, national, regional, international, and global environmental problems do not fit neatly into traditional academic departments. A measurable part of society’s inability to effectively manage complex environmental problems stems from the lack of specialists who can apply analytical tools that cross disciplinary boundaries. Many environmental specialists possess little training in the natural sciences including both the fundamental ideas and methodologies of the earth and environmental sciences. The environmental systems major was created to address both of these shortcomings.

To encourage and foster an interdisciplinary focus in the major, the Environmental Systems Program is supported by a wide range of UC San Diego faculty representing the natural sciences, the social sciences, the humanities, engineering, and medicine. The program includes a required lower-division core, an upper-division “integrating course sequence,” two other upper-division courses and statistics, an advanced track, and a senior integrative project and seminar. There is a strong emphasis on a rigorous natural science foundation as well as an introduction to the policy sciences for all students enrolled in the major. The Environmental Systems Program places a significant value on interdisciplinary problem solving and all majors are expected to complete an integrative Senior Project in their final year. The Senior Project is designed by the student to focus on an interdisciplinary environmental problem or research topic. Appropriate topics for the Senior Project could conceivably include biodiversity conservation, coastal zone management, environmental health, climate change, environmental justice, and/or urban air quality. An important component of the Senior Project is an off-campus or laboratory internship where students might work on, for example, the development of a comprehensive management plan for a threatened ecosystem. The Senior Seminar provides a venue for the presentation and group evaluation of the ESYS Senior Projects.

THE ENVIRONMENTAL SYSTEMS MAJOR

The requirements for completion of the environmental systems major include a lower-division core, two upper-division courses, a three course upper-division integrating sequence (ESYS 101, ESYS 102, ESYS 103), an upper-division statistics course, advanced courses in one of four tracks, and the Senior Project (ESYS 190A) and Senior Seminar (ESYS 190B). It is suggested that the integrating sequence ESYS 101, 102, and 103 should be completed by sophomore year, if possible. Any questions concerning the requirements should be directed to the associate director or the program advisor. Students completing the advanced tracks in Earth Sciences, Ecology, Behavior, and Evolution, and Environmental Chemistry will be awarded a B.S. in environmental systems. The B.A. in environmental systems will be granted to students completing the Environmental Policy track within the major.

A grade-point average of 2.0 or higher in the upper-division major program is required for graduation. Students must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. In exceptional cases, students with a grade-point average in the major of 2.5 or greater may petition to have one grade of D accepted.

All courses (lower- and upper-division) required for the major must be taken for a letter grade.

Lower-Division Core Requirements
(Should be completed early in student’s degree program.)

Biology 3—BILD 3
Chemistry 6A-B, 6BL, 6C
Physics 1A, 1AL, 1B, 1BL, 1C, 1CL (Physics 2A-B-C recommended for Earth Sciences track.)
Mathematics 10A-B-C (Math. 20A-B-C recommended for Earth Sciences track.)

Economics 1
SIO 50—for Earth Sciences track only

Upper-Division Core Requirements
Economics 131. Economics of the Environment
Political Science 160AA. Introduction to Policy Analysis

Integrating Course Sequence
It is suggested that the Integrating Course Sequence of Esys 101, 102 and 103 be completed by the sophomore year, if possible.

Environmental Systems 101. Environmental Biology
Environmental Systems 102. The Solid and Fluid Earth
Environmental Systems 103. Environmental Challenges: Science and Solutions
Environmental Systems 190A. Senior Project (two quarters)
Environmental Systems 190B. Senior Seminar

ENVIRONMENTAL SYSTEMS MAJOR TRACKS

There are four advanced tracks in which students must complete a minimum of seven upper-division courses. Students will select courses following the requirements below in consultation with a faculty advisor.

Earth Sciences
Ecology, Behavior, and Evolution
Environmental Chemistry
Environmental Policy

It is possible to complete the requirements for any of the Environmental Systems tracks with five upper-division electives and a specialization that consists of two additional upper-division electives from any other track. For example, a student interested in the policy and scientific dimensions of habitat conservation planning for endangered species might plan a course of study to include five advanced courses from the Ecology, Behavior, and Evolution track and two advanced courses from the Environmental Policy track.

EARTH SCIENCES TRACK

Required lower-division course:
SIO 50. Introduction to Earth and Environmental Sciences

Required upper-division courses:
**ENVIRONMENTAL CHEMISTRY TRACK**

Students must complete two of the following courses:

- Chemistry 149A. Environmental Chemistry
- Chemistry 149B. Environmental Chemistry
- Chemistry 173/273. Atmospheric Chemistry
- SIO 141/Chem 174. Chemical Principles of Marine Chemistry

Students must complete:

- Math 183. Statistical Methods OR
- Math 186. Probability Statistics for Bioinformatics
- Chemistry 100A. Analytical Chemistry Laboratory
- Chemistry 140A and B. Organic Chemistry I and II

One upper-division lab from either:
- Chemistry 100B. Instrument Analysis Laboratory
- Chemistry 143A. Organic Chemistry Laboratory

Two upper-division restricted electives from:
- Chemistry 124. Bioorganic Chemistry
- Chemistry 126. Physical Chemistry or Chem. 133
- (Note: Chem. 126 and Chem. 133 both require Physics 2D and Math 20D as prerequisites.)
- Chemistry 127. Physical Chemistry or Chem. 131, Chem. 132
- Chemistry 140C. Organic Chemistry III
- ESYS 199. Independent Study

Other courses may be substituted by petition.

**Curriculum Guide Planning**

**ENVIRONMENTAL POLICY TRACK**

Required upper-division course

One upper-division Statistics course—Math 183

Statistical Methods or Economics 120A Econometrics

Upper-division electives

- Students complete a minimum of seven courses selected from the following:
- Economics 116. Economic Development
- Economics 125. Economics of Population Growth
- Economics 130. Public Policy
- Economics 132. Energy Economics
- Environmental Systems 120. Science and Environmental Writing

</table>
| ENVIRONMENTAL SYSTEMS MINOR

A minor in Environmental Systems will expose students to the interdisciplinary approach necessary to address environmental problems. The program places a strong emphasis on a rigorous natural science foundation. Thus, most of the courses related to the minor have significant prerequisites; students planning an Environmental Systems minor should check catalog course description carefully.

The minor consists of twenty-eight units, at least twenty of which must be upper-division. Any upper division course used to satisfy major requirements may not be applied toward a minor. Up to two courses for the minor may be taken on a Pass/Not Pass basis, (upper or lower division). Students must earn at least a letter grade of C– in the remaining five or more courses used for the minor. Students considering the Environmental Systems minor are strongly advised to meet with the associate director or the program advisor.

The minor is structured as followed:

**LOWER-DIVISION Courses**

Any two of the following lower-division courses, if they are not lower-division requirements for the student's major, may be applied to satisfy eight of the total units necessary for the minor:

- Biology 3
- Math. 10A-B-C
- Chemistry 6A-B-6BL-C
- Physics 1A-AL,1B-1BL,1C-CL
- Economics 1
- Scripps Undergraduate Education (SIO); any lower-division course
- Environmental Systems 10
- Environmental Studies 30

**Required Core Courses**

- Environmental Systems 101, offered every fall quarter
- Environmental Systems 102, offered every winter quarter
- Environmental Systems 103, offered every spring quarter

Note: ESYS 102 and ESYS 103 all have significant prerequisites; students planning an Environmental Systems minor should check course descriptions and prerequisites carefully.

**Upper-Division Electives**

At least two additional upper-division courses from the advanced tracks in the Environmental Systems major. The lists of upper-division electives are reviewed and updated each quarter. They are available in the Environmental Systems Office and on the program Web site (http://esys.ucsd.edu). Students are advised to consult with the Environmental Systems program advisors or associate director.

**SPECIAL STUDIES COURSES**

Special Studies in the environmental systems is offered as ESYS 199. This course is subject to consent of the instructor and approval by the Environmental Systems faculty advisor. This course is open to students who have accrued at least ninety quarter-units and have a GPA of 3.0. No more than two quarters of environmental systems special studies may be counted toward the environmental systems major.

Study abroad through the Education Abroad Program or Opportunities Abroad Program can enhance a student's major, particularly as an opportunity for diverse field experiences. However, careful planning is important to meet all major requirements. Please contact the Environmental Systems Office as early as possible if you are planning to study abroad.

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

Many of the courses that are used to fulfill the requirements of the environmental systems major are offered by other departments and programs. Most of these courses are offered on a regular basis. Students should consult the Schedule or contact the Environmental Systems office in order to obtain current information. The courses below are offered directly through the Environmental Systems Program.

**LOWER-DIVISION**

**ESYS 10. Introduction to Environmental Systems (4)**

This course explores the interdisciplinary character of environmental issues through an examination of a particular topic (climate change, for example) from numerous disciplinary perspectives (e.g., biology, chemistry, physics, political science, and economics). Prerequisite: none. (F)

**ESYS 87. Freshman Seminar (1)**

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate college, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students with preference given to entering freshmen. (F)

**ESYS 90. Perspectives on Environmental Issues (1)**

Provides an introduction to environmental systems. Faculty members from departments in the natural sciences, geosciences, and social sciences will offer perspectives in these areas. (F)

**UPPER-DIVISION**

**ESYS 101. Environmental Biology (4)**

This course surveys biochemical and physiological processes governing the relationship between organisms and their environments, such as those involved in element cycling and cellular homeostasis. The course introduces biological perspectives on human activities ranging from antibiotic use to genetic engineering. Prerequisite: BILD 1 or 2 or equivalent, or consent of instructor. (F)

**ESYS 102. The Solid and Fluid Earth (4)**

Earth's dynamic physical systems interact in complex ways with profound impact on our environment. Processes such as volcanism and weathering enable geochmical exchange between solid and fluid (ocean and atmosphere) systems. Sea-level and climate changes interface with tectonic processes. Prerequisites: Math. 10A, Chem. 6A, Physics 1A or consent of instructor. (W)

**ESYS 103/MAE 124. Environmental Challenges: Science and Solutions (4)**

This course explores the impacts of human, social, economic, and industrial activity on the environment. It highlights the central roles in ensuring sustainable development played by market forces, technological innovation, and government regulation on local, national, and global scales. Prerequisite: Math 10A-C or Math 20B or consent of instructor. (S)

**ESYS 120. Science and Environmental Writing (4)**

Course designed to improve the written communication scales.

Prerequisite: upper-division standing in
science or mathematics major and completion of college composition requirement (or consent of instructor). (W)

**ESYS 150. Environmental Perils (4)**
An advanced field-oriented course for engineering and science students stressing the geologic basis for environmental perils such as earthquakes, erosion, flooding, and waste disposal. Two one-hour lectures, and a two-hour lab/field trip each week. **Prerequisites:** Math. 10 A-B-C sequence and Physics 1A,AL; 1B,BL; 1C,1CL sequence or equivalent. (S)

**ESYS 190A. Senior Project (8)**
All majors are required to complete an integrative Senior Project in their senior year. The Senior Project is designed by the student to focus on an interdisciplinary environmental problem or research topic and is developed either individually or as part of a team over two quarters. Appropriate topics could include biodiversity conservation, environmental health, and/or global change. An important component of the Senior Project is an off-campus or laboratory internship. **Prerequisites:** ESYS 103 and upper-division standing, departmental approval, majors only. (F,W)

**ESYS 190B. Environmental Systems Senior Seminar (4)**
The seminar provides a venue for the development, presentation, and evaluation of the Environmental Systems Integrative Project. The seminar will include work on research methods as well as paper presentation skills. **Prerequisites:** Completion of ESYS 190A or ESYS 190A(W) sequence, senior standing and majors only. (S)

**ESYS 199. Independent Study (2-4)**
Individually guided readings or projects in the area of environmental systems.
Ethnic Studies

Michael Meeker, Professor Emeritus, Anthropology
Masao Miyoshi, Professor Emeritus, Literature

**JOHN C. MOORE, PROFESSOR, LINGUISTICS**

Elizabeth Newspaper, Associate Professor, Visual Arts
Edward Reynolds, Professor Emeritus, History
Emily Roxworthy, Assistant Professor, Theatre and Dance
Ramón Eduardo Ruiz, Professor Emeritus, History
Marta Sánchez, Professor Emerita, Literature
Rosaura Sánchez, Professor, Literature
Gershon Shafir, Professor, Sociology
Fausanna Solis, Professor Emerita, Urban Studies/Family and Preventive Medicine
Roberto Tejada, Associate Professor, Visual Arts
Olga Vásquez, Associate Professor, Communication
Daniel Widener, Associate Professor, History
Lisa Yoneyama, Associate Professor, Literature
Elana Zilberg, Associate Professor, Communication

**OFFICE:** Social Science Building, Room 201
http://www.ethnicstudies.ucsd.edu

Ethnic studies is the study of the social, cultural, and historical forces that have shaped the development of America’s diverse ethnic peoples over the last 500 years and which continue to shape our future. Focusing on immigration, slavery, and confinement, those three social processes that combined to create in the United States a nation of nations, ethnic studies intensively examines the histories, languages, and cultures of America’s racial and ethnic minority groups in and of themselves, in their relationships to one another, and particularly, in structural contexts of power.

The curriculum of the Department of Ethnic Studies is designed (1) to study intensively the particular histories of different ethnic and racial groups in the United States, especially intragroup stratification; (2) to draw larger theoretical lessons from comparisons among these groups; (3) to articulate general principles that shape racial and ethnic relations both currently and historically; and (4) to explore how ethnic identity is constructed and reconstructed over time both internally and externally.

A degree in ethnic studies offers training of special interest to those considering admission to graduate or professional schools and careers in education, law, medicine, public health, social work, journalism, business, city planning, politics, psychology, international relations, or creative writing. A major in ethnic studies is designed to impart fundamental skills in critical thinking, comparative analysis, social theory and research analysis, and written expression. These skills will give students the opportunity to satisfy the increasingly rigorous expectations of graduate admissions committees and prospective employers for a broad liberal arts perspective.

**THE MAJOR**

to Ethnic Studies, will consist of the following three courses: Population Histories of the United States, Immigration and the Transformation of American Life, Race and Ethnic Relations in the United States.

2. A minimum of twelve four-unit upper-division courses in the Department of Ethnic Studies must be completed from the following five categories:

- One four-unit upper-division course that intensively explores the theory and comparative methods of ethnic studies (Ethnic Studies 100, Theories and Methods of Ethnic Studies). All ethnic studies majors should complete this course before proceeding with the other requirements listed below.
- Four upper-division ethnic studies history and social science courses from those listed below:
  
  ETHN 103. Environmental Racism
  ETHN 104. Race, Space, and Segregation
  ETHN 105. Ethnic Diversity and the City
  ETHN 107. Field Work in Racial and Ethnic Communities
  ETHN 108. Race, Culture, and Social Change
  ETHN 109. Race and Social Movements
  ETHN 112A. History of Native Americans in the United States I
  ETHN 112B. History of Native Americans in the United States II
  ETHN 116. The United States-Mexico Border in Comparative Perspective
  ETHN 117. Organic Social Movements
  ETHN 118. Contemporary Immigration Issues
  ETHN 119. Race in the Americas
  ETHN 120. Race and Performance: The Politics of Popular Culture
  ETHN 121. Contemporary Asian-American History
  ETHN 123. Asian-American Politics
  ETHN 125. Asian-American History
  ETHN 126. Comparative Filipino- and Vietnamese-American Identities and Communities
  ETHN 127. Sexuality and Nation
  ETHN 129. Asian and Latina Immigrant Workers in the Global Economy
  ETHN 130. Social and Economic History of the Southwest I
  ETHN 131. Social and Economic History of the Southwest II
  ETHN 134. Immigration and Ethnicity in Modern American Society
  ETHN 149. African American History in the Twentieth Century
  ETHN 151. Ethnic Politics in America
  ETHN 152. Law and Civil Rights
  ETHN 159. Topics in African American History
  ETHN 161. Black Politics and Protest Since 1941
  ETHN 165. Sex and Gender in African American Communities
  ETHN 167. African-American History in War and Peace: 1917 to the Present
  ETHN 170A. Origins of the Atlantic World, c. 1450–1650
  ETHN 170B. Slavery and the Atlantic World
  ETHN 183. Gender, Race, Ethnicity, and Class

2010-2011 UC SAN DIEGO GENERAL CATALOG • ETHNIC STUDIES 1
c. At least three upper-division ethnic studies courses that focus on language, ethnicity, and institutional discourses:

ETHN 120. Race and Performance: The Politics of Popular Culture  
ETHN 140. Language and American Ethnicity  
ETHN 141. Language, Culture, and Inequality  
ETHN 142. Medicine, Race, and the Global Politics of Inequality  
ETHN 144. Bilingual Communities in the U.S.A.  
ETHN 145. Spanish Language in the United States  
ETHN 164. African Americans and the Mass Media  
ETHN 185. Discourse, Power, and Inequality  
ETHN 186. The Ethnic Press in the United States  

Students may petition to count one course on language, ethnicity, and institutional discourses offered by other departments. In addition, one course in foreign language at the upper-division level may be counted in partial fulfillment of this requirement, with the consent of the department. Students must seek faculty advice on which courses would best satisfy the requirement and yield the most rigorous training.

d. At least three upper-division ethnic studies courses on the literature and cultural expressions of American racial and ethnic minorities.

ETHN 101. Ethnic Images in Film  
ETHN 110. Cultural World Views of Native Americans  
ETHN 111. Native American Literature  
ETHN 120. Race and Performance: The Politics of Popular Culture  
ETHN 122. Asian-American Culture and Identity  
ETHN 123. Asian-American Politics  
ETHN 124. Asian-American Literature  
ETHN 126. Comparative Filipino- and Vietnamese-American Identities and Communities  
ETHN 128. Hip Hop: The Politics of Culture  
ETHN 132. Chicano Dramatic Literature  
ETHN 133. Hispanic-American Dramatic Literature  
ETHN 135A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960  
ETHN 135B. Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present  
ETHN 136. Topics in Chicano/a-Latino/a Cultures  
ETHN 138. Chicano/a-Latino/a Poetry  
ETHN 139. Chicano Literature in English  
ETHN 140A. Theatrical Ensemble  
ETHN 141A and ETHN 141B. Comparative African American Literature  
ETHN 142. Afro-American Prose  
ETHN 143. Themes in Afro-American Literature  
ETHN 175. Literature of the Harlem Renaissance  
ETHN 176. Black Music/Black Texts: Communication and Cultural Expression  
ETHN 178. Blues: An Oral Tradition  
ETHN 179A. Jazz Roots and Early Development (1900–1943)  
ETHN 179B. Jazz Since 1946: Freedom and Form  
e. One four-unit field methods course (Ethnic Studies 190, Research Methods: Studying Ethnic and Racial Communities).  

3. Since the goal of the Department of Ethnic Studies is to intensively study both the particular histories of various ethnic and racial groups in the United States and to draw larger theoretical lessons from comparisons among and between groups, students may not fulfill requirements 28 and 29 by focusing all of the seven required courses on only one ethnic or racial group.

4. Ethnic studies majors, including students who are double majors, may petition up to four upper-division courses to fulfill major requirements as long as each of the following three conditions is met for each course: (1) the course is taken from another UC San Diego department, taken from a UCSD approved study abroad program, or taken at another UC campus; (2) the course work is appropriate to the ethnic studies major; and (3) the student completes at least one course offered by the UCSD ethnic studies department in each of the five upper-division categories.

5. To satisfy the requirements for the major, lower- and upper-division courses must be completed with a P, C–, or better grade.

6. Except for independent study course electives (ETHN 197, 198, or 199) which are always taken with a Pass/Not Pass grade option, students majoring in ethnic studies may take up to two courses, either lower- or upper-division, with a Pass/Not Pass option.

THE HONORS PROGRAM

Consistent with other research opportunities offered to undergraduates on the UCSD campus, the department offers the Honors Program to ethnic studies majors in their senior or junior year the opportunity to conduct original research using interdisciplinary methodologies in the comparative study of race and ethnicity. To enroll in the Honors Program, an undergraduate must have a minimum grade-point average of 3.5 in ethnic studies classes counted toward the major. Students with a GPA lower than 3.5 in the major may be admitted by exception if they show promise of success in research.

The Honors Program will be an extension of current departmental offerings using existing faculty resources. Ethnic studies and affiliated faculty will choose to advise students who successfully complete ETHN 191A and continue in the Honors Program based on related research interests. The student will enroll in ETHN 191B and ETHN 191C and work with the appropriate faculty advisor. Students will present their research projects at the annual Ethnic Studies Honors Symposium in June. Students who complete the sequence ETHN 191A, ETHN 191B, and ETHN 191C will receive one credit toward the B (Social Studies/Humanities) requirements for the ethnic studies major. Students who complete their research project with a grade of B or better and maintain a minimum 3.25 GPA in the ethnic studies major will receive Distinction in the major upon graduation from UCSD.

ETHN 191. Undergraduate Research in Ethnic Studies (4)

This course is designed to help students conduct their own research rather than merely read the research of others. The course will introduce students to research paradigms in ethnic studies, familiarize them with finding aids and other library resources, and involve them in the design of research plans.

ETHN 191B. Honors Research in Ethnic Studies (4)

This course is a continuation of Ethnic Studies 191A, Undergraduate Research in Ethnic Studies. Students who have completed ETHN 191A and selected a faculty research advisor may enroll in this course. During the quarter the research for the honors project will be completed under the faculty advisor’s supervision. Faculty advisors will meet weekly with their honors students to oversee the progress made in carrying out the plan of research. Formerly ETHN 192. Prerequisites: upper-division standing, consent of instructor, and completion of 191A.

ETHN 191C. Honors Research in Ethnic Studies (4)

This course is a continuation of Ethnic Studies 191B Honors Research in Ethnic Studies. Students who have completed ETHN 191A and selected a faculty research advisor may enroll in this course. During the quarter the written drafts and final honors paper will be completed under the faculty advisor’s supervision. The student will meet weekly with the faculty advisor in order to prepare drafts and the final version of the honors paper. Formerly ETHN 193. Prerequisites: ETHN 191A and ETHN 191B.

EDUCATION ABROAD PROGRAM

Students are able to participate in the UC Education Abroad Program (EAP) or UCSD’s Opportunities Abroad Program (OAP) while still making progress toward completing their major. Students considering this option should discuss their plans with the undergraduate advisor prior to going abroad, and courses taken abroad must be approved by the department. Interested students should contact the Programs Abroad Office in the International Center.

THE MINOR

Students may minor in ethnic studies. Consistent with the provision for a minor curriculum for students entering after January 1, 1998, students...
wishing to minor in ethnic studies must satisfy the following requirements:

1. Students must take two four-unit courses in the history and theoretical dimensions of ethnic diversity in the United States from the lower-division sequence (Ethnic Studies 1A-B-C); or students must take two four-unit upper-division courses in analytic and comparative study of ethnicity. Theories and Methods of Ethnic Studies (ETHN 100); and Research Methods, Studying Ethnic and Racial Communities (ETHN 190).

2. Students must take five four-unit upper-division ethnic studies elective courses; at least two, but no more than three of the five elective courses must be selected from either the ethnic studies history and social studies courses (listed above in section 2B) or the ethnic studies literature and cultural expressions courses (listed above in section 2D). While language and ethnicity courses offered by the department (listed above in section 2C) may also be used to satisfy this requirement, foreign language and area studies courses from other departments may not. No more than two independent study courses (ETHN 197, 198, or 199) may be used to satisfy this requirement.

3. To satisfy the requirements for the minor, lower- and upper-division courses must be completed with a P, C–, or better grade.

4. Except for independent study course electives (ETHN 197, 198, or 199) that are always taken with a Pass/Not Pass grade option, students minoring in ethnic studies may take one course, either lower- or upper-division, with a Pass/Not Pass grade option.

Students interested in the African-American experience should consider the following courses:

ETHN 149. African American History in the Twentieth Century
ETHN 159. Topics in African American History
ETHN 161. Black Politics and Protest since 1941
ETHN 164. African Americans and the Mass Media
ETHN 165. Sex and Gender in African American Communities
ETHN 167. African-American History in War and Peace, 1917 to the Present
ETHN 170A. Origins of the Atlantic World, c. 1450–1650
ETHN 170B. Slavery and the Atlantic World
ETHN 172. Afro-American Prose
ETHN 174. Themes in Afro-American Literature
ETHN 175. Literature of the Harlem Renaissance
ETHN 176. Black Music/Black Texts. Communication and Cultural Expression
ETHN 178. Blues: An Oral Tradition
ETHN 179A. Jazz Roots and Early Development (1900–1943)
ETHN 179B. Jazz Since 1946: Freedom and Form
ETHN 181. Topics in the Comparative History of Modern Slavery
ETHN 184. Black Intellectuals in the Twentieth Century
ETHN 187. Black Nationalism
ETHN 188. African Americans, Religion, and the City

Students interested in the Chicano experience should consider the following courses:

ETHN 116. The United States-Mexico Border in Comparative Perspective
ETHN 130. Social and Economic History of the Southwest I
ETHN 131. Social and Economic History of the Southwest II
ETHN 132. Chicano Dramatic Literature
ETHN 133. Hispanic-American Dramatic Literature
ETHN 135A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960
ETHN 135B. Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present
ETHN 136. Topics in Chicano/a-Latino/a Cultures
ETHN 138. Chicano/a-Latino/a Poetry
ETHN 139. Chicano Literature in English
ETHN 145. Spanish Language in the United States
ETHN 148. Latino/a and Chicano/a Literature
ETHN 180. Topics in Mexican American History

Students interested in the Asian-American experience should consider the following courses:

ETHN 20. Introduction to Asian American History
ETHN 120. Race and Performance: The Politics of Popular Culture
ETHN 121. Contemporary Asian-American History
ETHN 122. Asian-American Culture and Identity
ETHN 123. Asian-American Politics
ETHN 124. Asian-American Literature
ETHN 125. Asian-American History
ETHN 126. Comparative Filipino- and Vietnamese-American Identities and Communities

Students interested in the Native American experience should consider the following courses:

ETHN 110. Cultural World Views of Native Americans
ETHN 111. Native American Literature
ETHN 112A. History of Native Americans in the United States I

ETHN 112B. HISTORY OF NATIVE AMERICANS IN THE UNITED STATES II

The UC San Diego Department of Ethnic Studies emphasizes comparative, analytic, and relational study of ethnicity and race in the United States. Our fields of emphasis include intercultural communication and conflict, population histories of the Americas, ethnicity and identity, immigration and assimilation, ethnic politics and social movements, race and racism, urban ethnicity, gender and sexuality, intellectual and cultural histories of ethnic groups, cultural pluralism, national integration, language and ethnic life, and mass media representations of ethnic identity.

ADMISSION

New students are admitted in the fall quarter of each academic year. Prospective applicants should submit the official application for admission and awards (same form), one set of official transcripts from each institution attended after high school, official scores from the Graduate Record Examination, application fee, at least three letters of recommendation, and one or more samples of the applicant’s own writing, such as term papers. Additionally, foreign applicants must submit official scores from the Test of English as a Foreign Language (TOEFL). Applicants are encouraged to visit the department to talk with faculty and graduate students. The application deadline is January 15.

PROGRAM OF STUDY

Students are required to enroll as full-time graduate students, to carry a minimum enrollment of twelve units of graduate-level courses each quarter, and to maintain a grade-point average of 3.2 or better. To obtain an M.A. degree students must take fifty-four units of course work and write a master’s thesis.

CORE CURRICULUM SEQUENCE REQUIREMENTS

1. Ethnic Studies 200A-B-C, Core Seminar
   All graduate students will be required to take the introductory three-quarter core seminar (four units each, twelve units total) during their first year in the program. This course covers the genealogy of critical racial and ethnic studies (its antecedents and development as a distinct and interdisciplinary method of inquiry), interdisciplinarity and knowledge production in ethnic studies, and research in ethnic studies (Pro Seminar).

2. Ethnic Studies 230, Department Colloquium
   During the first two years of graduate study, all students will be required to enroll in six one-quarter colloquia required by the department. In Ethnic Studies 230, department faculty and visiting lecturers will make presentations about research in progress in our field. This colloquium is a one-unit course and must be taken for a total of six quarters.

   All graduate students will be required to take the three-quarter core research methods course (four units each, twelve units total) during their first year in the program. ETHN 240A, Historical Methods and Archives; ETHN 240B, Cultural Studies and Cultural Production; and ETHN 240C Qualitative Methods/Ethnography.

4. Ethnic Studies 290A-B, Master’s Thesis Preparation
   Students are required to write a master’s thesis as part of the requirements for the master of arts in ethnic studies. Students should enroll in thesis preparation courses in the fall and spring quarters of the second year of graduate studies.

FOREIGN LANGUAGE REQUIREMENT

Competence in one or more foreign languages is encouraged but not required at the M.A. level. All doctoral candidates must satisfy the department’s graduate committee that they have adequate linguistic competence in one foreign language relevant to their area of research by translating three pages of scholarly text written in the designated foreign language. The graduate committee may waive the language requirement and test the candidate on other specialized skills in instances where knowledge of a foreign language is not relevant to the candidate’s areas of research.

INSTRUCTION IN QUANTIFICATION

The department encourages graduate students to employ quantitative methods where appropriate. Instruction in quantitative methods can fulfill elective requirements; recommended courses include Sociology 205 and 206, Survey and Demographic
Methods: Political Science 270, Quantitative Methods in Political Science. In cases where a reading knowledge of evidence assembled through quantitative methods would be useful, students who obtain the permission of the director of Graduate Studies may fulfill elective requirements by taking no more than two selected undergraduate courses including Sociology 103, Computer Applications to Data Management in Sociology; Sociology 107, Demographic Methods; Sociology 108, Quantitative Analysis of Survey Data; Sociology 109, Quantitative Analysis of Sociological Data; and Political Science 170, Quantitative Political Science, among others.

**THE MASTER’S DEGREE**

Students entering the ethnic studies doctoral program must first complete a master’s degree before continuing toward the doctorate. University regulations prohibit entering students who already have a master’s degree in ethnic studies from receiving a second master’s degree. Nonetheless, students who are admitted to the ethnic studies doctoral program with a master’s degree must complete all the requirements for the ethnic studies master of arts degree. The M.A. will also be a terminal degree for those students denied admission to candidacy.

To obtain the M.A. degree, students must complete the department’s course requirements satisfactorily. At the end of the second year in the graduate program, students must submit a written thesis to their Master’s Thesis Committee (MTC). The committee will assess the quality of the work and determine whether it demonstrates the likelihood of success in conducting doctoral research.

The final decision regarding the M.A. degree is based on grades, the master’s thesis, and yearly faculty evaluations. The Graduate Program Committee awards three possible grades: Pass, M.A. Only, and Not Pass. All passing students (with the exception of those who already have a master’s degree in ethnic studies from another institution) receive the master of arts degree and proceed in their course of studies for the doctorate. Students who receive M.A. Only evaluations gain the master’s degree but may not continue in the department’s Ph.D. program. Students who receive a Not Pass evaluation must withdraw from the program without a graduate degree. The master’s degree is earned as one of the requirements for the Ph.D. and is based on the quality of the student’s work during the first two years in the graduate program. At the end of the second year, students are evaluated by the Graduate Program Committee for the master’s degree. At that time, the committee (GPC) ascertains the student’s suitability for doctoral work and recommends either advancement to Ph.D. work or termination.

**REQUIREMENTS FOR THE QUALIFYING EXAMINATIONS**

When students complete all the core curriculum requirements and have taken five four-unit elective courses in appropriate areas or disciplines, they are eligible to take the qualifying examination for the Ph.D. degree. Students will be encouraged to take the exam by the end of their third year in the program, but this examination must be completed by the end of the student’s fourth year in the program. The qualifying exam is both written and oral; it consists of two parts. Part one tests the student’s basic competence and knowledge of ethnic studies scholarship as spelled out in the Department of Ethnic Studies required graduate reading list. The reading list will be distributed to every student entering the graduate program. Over the next three years, students are required to read all of these books and articles, and to have their mastery of these readings tested during the qualifying examination. Part two of the examination requires the submission of a dissertation prospectus. The dissertation prospectus is a written document that (1) specifies the dissertation research topic; (2) places the dissertation research in the context of the relevant literature in the field; (3) identifies the significance of the project as original discovery scholarship; (4) explains and justifies the research methods to be employed; (5) establishes the feasibility of the research and identifies the primary sources or data bases to be used; (6) indicates the anticipated steps leading to completion of the project; and (7) provides a timetable for the research and writing phases of the project.

The Doctoral Committee consists of five persons proposed by the student and accepted by the department chair and the office of Graduate Studies according to graduate council regulations. A sixth member of the committee may be added with the approval of the department chair. Students are expected to select the chair of their examination committee by the winter quarter of the third year of study. The chair of the Ph.D. Examination Committee serves as the student’s advisor for the remainder of the student’s graduate program. Three of the Examination Committee members must be Department of Ethnic Studies faculty; the other two must be from other departments.

Fourteen days before the scheduled qualifying examination, the student must submit the written dissertation prospectus to the examination committee. On this same day, the student will receive from the chair of the examination committee a three-question written exam testing knowledge of the required graduate reading list. Seven days before the scheduled qualifying examination, the student must submit written answers to the questions that have been posed, distributing copies of these essays to all examination committee members. A two-hour oral examination will occur on the appointed date. At the two-hour oral exam, the student will answer questions posed by the committee about the student’s dissertation prospectus, mastery of the required graduate reading list, answers to the written part of the exam, and comprehensive knowledge of ethnic studies scholarship. Based on written papers and oral performance, three possible grades will be selected by the examination committee: Not Pass, Pass, and High Pass. Students who receive a Not Pass must retake the qualifying examination within one year and obtain a Pass grade to remain in the doctoral program.

**THE DOCTORAL DISSERTATION**

Once students pass the qualifying exam, they may begin dissertation research. Students are expected to consult with their committee members on a regular basis during the research process. All doctoral students will be evaluated annually by the doctoral committee and given a written report signed by the thesis advisor according to campus policy.

When the dissertation has been substantially completed and once committee members have had the opportunity to review drafts of the written work, the committee meets (with or without the student present at the discretion of the committee chair) to consider the progress made and to identify concerns, changes to be made, or further research to be done. Once the committee members are substantially satisfied with the written work, the student, in consultation with the committee, schedules the oral defense of the dissertation. By university regulation, the defense is open to the public.

The final version of the dissertation must be approved by each member of the doctoral committee. Having successfully defended the dissertation in oral examination, the student is eligible to receive the Ph.D. degree. The final version of the dissertation is then filed with the university librarian via the office of Graduate Studies. Acceptance of the dissertation by the university librarian is the final step in completing all requirements for the Ph.D.

**DEPARTMENTAL PH.D. TIME LIMITS POLICY**

Pre-candidacy status, that is, the registered time before a student passes the qualifying examination and thereby advances to Ph.D. candidacy, may not exceed four years. Normative time for a Ph.D. in ethnic studies is six years. Normative time is defined as that period of time in which students under normal circumstances are expected to complete their doctoral program. To provide an incentive for students to complete the Ph.D. within normative time, students will only be eligible for departmental financial support for six years (eighteen quarters). By university policies, the doctoral dissertation must be submitted and defended within eight years. To meet this normative time limit, and to meet departmental requirements, students must complete the Qualifying Examination by the end of the fourth year.

In the spring quarter each year, the Graduate Program Committee will assess the progress of each pre-candidacy student on the basis of evaluations submitted by three faculty members chosen by the student. The committee will establish that the student is in good standing, recommend additional course work, or recommend dismissal. The committee may wish to meet with some students in person to discuss the student’s evaluation and progress toward the degree.

**COURSES**

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

**LOWER-DIVISION**

1A. Introduction to Ethnic Studies: Population Histories of the United States (4)

This course examines the comparative historical demography of what is today the United States, focusing on the arrival, growth, distribution, and redistribution of immigrants from Asia, Europe, Africa, and Latin America.
18. Introduction to Ethnic Studies: Immigration and the Transformation of American Life (4)

A history of immigration to the United States from colonial times to the present, with an emphasis on the roles of ethnic and racial groups in economics, power relations between dominant and subordinate groups, and contemporary ethnic and racial consciousness.

19. Race, Space, and Segregation (4)

Through in-depth studies of housing segregation, urban renewal and displacement, neighborhood race effects, and the location of hazards and amenities, this course examines how space becomes racialized and how race becomes spatialized in the contemporary United States.

20. Introduction to Asian-American History (4)

This course introduces students to key issues in Asian-American lives, with emphasis on the global historical context of migration; changing ethnic and racial consciousness; economic, social, and political status; cultural production; and family and gender relations.

21. Comparative Ethnic Studies (1–4)

An introduction to research in ethnic studies with special standing. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

22. Field Studies in Racial and Ethnic Communities (1–4)

Supervised community fieldwork on topics of importance to racial and ethnic communities in the San Diego County region. Regular individual meetings with faculty sponsor and final project and/or written report are required. Prerequisites: upper-division standing, completion of at least thirty units of undergraduate study at UCSD, minimum 3.0 GPA at UCSD, consent of instructor, and approved and completed Special Studies Form.

23. Directed Group Studies (1–4)

Directed group study on a topic in a field not included in the regular department curriculum by special arrangement with a faculty member. Prerequisites: lower-division standing, completion of at least thirty units of undergraduate study at UCSD, minimum 3.0 GPA at UCSD, consent of instructor, and completed and approved Special Studies Form.

24. Independent Study (1–4)

Directed study on a topic or in a field not included in the regular department curriculum by special arrangement with a faculty member. Prerequisites: lower-division standing, completion of at least thirty units of undergraduate study at UCSD, minimum 3.0 GPA at UCSD, consent of instructor, and completed and approved Special Studies Form.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor.

100. Theories and Methods in Ethnic Studies (4)

An introduction to research in ethnic studies with special emphasis on theories, concepts, and methods. Students will explore how racial and ethnic categories are shaped by gender, class, and regional experiences and will study ethnicity and race in comparative perspective.

101. Ethnic Images in Film (4)

An upper-division lecture course studying representations of ethnicity in the American cinema. Topics include ethnic images as narrative devices, the social implications of ethnic images, and the role of film in shaping and reflecting societal power relations.

102. Environmental Racism (4)

This course will examine the concept of environmental racism, the history of its widespread existence, and the efforts by government, residents, workers, and activists to combat it. We will examine those forces that create environmental injustices in order to understand its causes as well as its consequences. Students are expected to learn and apply several concepts and social scientific theories to the course material.

103. Race, Space, and Segregation (4)

Through in-depth studies of housing segregation, urban renewal and displacement, neighborhood race effects, and the location of hazards and amenities, this course examines how space becomes racialized and how race becomes spatialized in the contemporary United States.

105. Ethnic Diversity and the City (4)

This course will examine the city as a crucible of ethnic identity, exploring both the racial and ethnic dimensions of urban life in the U.S. from the Civil War to the present. (Cross-listed with USP 104.)

107. Fieldwork in Racial and Ethnic Communities (4)

This is a research course examining social, economic, and political issues in ethnic and racial communities through a variety of research methods that may include interviews and archival, library, and historical research. (Cross-listed with USP 130.)

108. Race, Culture, and Social Change (4)

Aggregated groups often generate distinctive forms of cultural expression by turning negative ascription into positive affirmation and by transforming segregation into congregation. This course examines the role of cultural expressions in struggles for social change by these communities inside and outside the U.S. (Cross-listed with MUS 151.)

109. Race and Social Movements (4)

This course explores collective mobilizations for resources, recognition, and power by members of aggregated racial and ethnic groups, past and present. Emphasis will be placed on the conditions that generate collective movements, the strategies and ideologies that these movements have developed, and on the prospect for collective mobilization for change within aggregated communities in the present and future.

110. Cultural World Views of Native Americans (4)

Using interdisciplinary methods, this course examines the cultural world views of various Native American societies in the United States through an exploration of written literary texts and other expressive cultural forms such as dance, art, song, religious and medicinal rituals.

111. Native American Literature (4)

This course analyzes Native American written and oral traditions. Students will read chronicles and commentaries on published texts, historic speeches, trickster narratives, oratorical and prophetic tribal epics, and will delve into the methodological problems posed by tribal literature in translation.

112A. History of Native Americans in the United States I (4)

This course examines the history of Native Americans in the United States, with emphasis on the lifeways, mores, warfare, cultural adaptation, and relations with the European colonial powers and the emerging United States until 1870. (Cross-listed with HUUS 108A.)

112B. History of Native Americans in the United States II (4)

This course examines the history of Native Americans in the United States, with emphasis on the lifeways, mores, warfare, cultural adaptation, and relations with the United States from 1870 to the present. (Cross-listed with HUUS 108B.)

116. The United States—Mexico Border in Comparative Perspective (4)

This course critically explores the U.S.—Mexico frontier and the social-cultural issues on both sides of the international demarcation. Social-historical and political-economic patterns illuminating border life, ethnic identity, social diversity, and cultural expression. Border ethnography is complemented by film and music.

117. Organic Social Movements (4)

Examination of local responses to global change and social disruption through the examination of organic movements in indigenous societies. In-depth analysis of the Kuna Indians of San Blas, Mexican Zapotitlans of Chiapas, Mexico; and Micronesians of the western Pacific.

118. Contemporary Immigration Issues (4)

This course examines the diversity of today's immigrants— their social origins and contexts of exit and their adaptation experiences and contexts of incorporation.

119. Race in the Americas (4)

This course explores the genesis, evolution, and contradictions of racially heterogeneous societies in the Americas, focusing on how space becomes racialized and how race becomes spatialized in the contemporary United States.

120. Race and Performance: The Politics of Popular Culture (4)

This course explores how racial categories and ideologies have been constructed through performance and displays of the body in the United States and other sites. Racialized performances, whether self-displays or coerced displays, such as world's fairs, museums, minstrelsy, film, ethnography, and tourist performances are considered. Prerequisite: upper-division standing or consent of instructor.

121. Contemporary Asian-American History (4)

This course will study changes in Asian-American communities as a result of renewed immigration since 1965; the influx of refugees from Vietnam, Kampuchea, and Laos; the impact of contemporary social movements on Asian-Americans' current economic, social, and political status.

122. Asian-American Culture and Identity (4)

A survey of Asian-American cultural expressions in literature, art, and music to understand the social experiences that helped forge Asian-American identity. Topics: culture conflict, media portrayals, assimilation pressures, the model minority myth, and interethnic relations.

123. Asian-American Politics (4)

This course will examine the development of Asian-American politics by studying the historical and contemporary factors, such as political and economic exclusion, that have contributed to the importance and complexity of ethnicity as a mobilizing force in politics. Prerequisite: upper-division standing or instructor approval.

124. Asian-American Literature (4)

Selected topics in the literature by men and women of Asian descent who live and write in the United States. May be repeated for credit when topics vary. (Cross-listed with LTEN 181.)

125. Asian-American History (4)

Explore how Asian Americans were involved in the political, economic and cultural formation of United States society. Topics include migration; labor systems; gender, sexuality and social organization; racial ideologies and anti-Asian movements; and nationalism and debates over citizenship. (Cross-listed with HUUS 124.)

126. Comparative Filipino and Vietnamese-American Identities and Communities (4)

This course compares the historical and contemporary social, political, and economic experiences of Filipino and Vietnamese-Americans, paying particular attention to the impact of U.S. wars in the Philippines and in Vietnam on their respective lives. Prerequisite: upper-division standing.

127. Sexuality and Nation (4)

This course explores the nexus of sex, race, ethnicity, gender, and nation and considers their influence on identity, sexuality, migration, movement, and borders and other social, and cultural, and political issues that these constructs affect. (Cross-listed with GGS 112.)

128. Hip Hop: The Politics of Culture (4)

Examination of hip hop's technology, lyrics, and dance and its influences in graffiti, film, music video, fiction, advertising, gender, corporate investment, government, and censorship with a critical focus on race, gender, and popular culture and the politics of creative expression. (Cross-listed with MUS 152.)
129. Asian and Latina Immigrant Workers in the Global Economy (4)
This course will explore the social, political, and economic implications of global economic restructuring, immigration policies, and welfare reform on Asian and Latina immigrant women in the United States. We will critically examine these larger social forces from the perspectives of Latina and Asian immigrant women, incorporating theories of race, class, and gender to provide a careful reading of the experiences of immigrant women on the global assembly line. (Cross-listed with USP 135.)

130. Social and Economic History of the Southwest I (4)
This course examines the history of the Spanish and Mexican Borderlands (what became the U.S. Southwest) from roughly 1400 to the end of the U.S.-Mexican War in 1848, focusing specifically on the area’s social, cultural, and political development. (Cross-listed with HIUS 158.)

131. Social and Economic History of the Southwest II (4)
This course examines the history of the American Southwest from the U.S.-Mexican War in 1846–48 to the present, focusing on immigration, racial and ethnic conflict, and the growth of Chicanio nationalism. (Cross-listed with HIUS 159.)

132. Chicano Dramatic Literature (4)
Focusing on the contemporary evolution of Chicana dramatic literature, the course will analyze playwrights and theatre groups that express the Chicano experience in the United States, examining relevant acts, plays, and documentaries for their contributions to the developing Chicano theatre movement. (Cross-listed with THHS 110.)

133. Hispanic-American Dramatic Literature (4)
This course examines the plays of leading Cuban-American, Puerto Rican, and Chicano playwrights in an effort to understand the experiences of these Hispanic-American groups in the United States. (Cross-listed with THHS 111.)

134. Immigration and Ethnicity in Modern America (4)
Comparative study of immigration and ethnic-group formation in the United States from 1880 to the present. Topics include immigrant adaptation, competing theories about the experiences of different ethnic groups, and the persistence of ethnic attachments in modern American society. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students may be required to submit a more substantial piece of work. (Cross-listed with HIUS 180 and HIUS 280.) Prerequisites: upper-division standing and departmental stamp.

135A. Early Latino/a-Chicana/o Cultural Production: 1848 to 1960 (4)
Cross-disciplinary study of nineteenth- and early twentieth-century Latino/a-Chicana/o literature, folklore, music, test monia, or other cultural practices. Specific periods covered will fall between the immediate aftermath of the Treaty of Guadalupe Hidalgo to the Cuban revolution. Repeatable for credit when topics vary. (Cross-listed with LTSP 150A.) Prerequisite: LTSP 50B or consent of instructor.

135B. Contemporary Latino/a-Chicana/o Cultural Production: 1960 to Present (4)
Cross-disciplinary study of late twentieth-century Latino/a-Chicana/o literature, the visual and performing arts, film, or other cultural practices. Specific periods covered will fall between the Kennedy years to the era of neoliberalism and the creation of “Hispanic” or Latino/a identities. Repeatable for credit when topics vary. (Cross-listed with LTSP 150B.) Prerequisite: LTSP 50B or consent of instructor.

136. Topics in Chicano/a-Latina/o Cultures (4)
Cross-disciplinary study of late twentieth-century Latino/a-Chicana/o literature, the visual and performing arts, film, or other cultural practices. Representative areas of study are social movements, revolution, immigration, globalization, gender, sexuality, and the visual practices of the U.S.-Mexican border, and Chicana/o-Mexicana/o literary relations. Repeatable for credit when topics vary. (Cross-listed with LTSP 151.) Prerequisite: LTSP 50B or consent of instructor.

137. Chicano/a and Latina/o Poetry (4)
A study of themes and issues in the poetic production of Latino communities in the United States. Every effort will be made to select text in Spanish but some will be bilingual. Repeatable for credits when topics vary. (Cross-listed with LTSP 153.) Prerequisite: LTSP 50B or consent of instructor.

140. Language and American Ethnicity (4)
This quarter explores the intersection of language and ethnicity in the United States, focusing on the social and political impact of bilingualism, ethnically based English dialects, and standard and nonstandard English.

141. Language, Culture, and Inequality (4)
A critical review of conceptions of language and how they have been deployed in constructing images of culture, race, ethnicity, and gender. May be taken for credit three times. (Cross-listed with THHS 210.)

142. Medicine, Race, and the Global Politics of Inequality (4)
Globalization fosters both the transmission of AIDS, cholera, tuberculosis, and other infectious diseases and gross inequalities in the resources available to prevent and cure them. This course focuses on how race, ethnicity, gender, sexuality, class, and nation both shape and are shaped by the social construction of health and disease worldwide.

144. Bilingual Communities in the U.S. (4)
This course examines the ways of doing being bilingual” that exist among communities of speakers of varied national origins, generations, networks, localities, races, classes, and genders. Of particular interest are the varied types of bilingual individuals and linguistic repertoires that exist in communities of Native American, Chicano/Latino, and Asian origin, and the implications of shifting and hybrid linguistic identities for the drawing of community boundaries and the shaping of national language policy. Specific topics include the intersection of language loss or maintenance in families, the linguistic and cultural repercussions of code switching and word borrowing, bilingual education, linguistic profiling, and language ideologies.

145. Spanish Language in the United States (4)
A sociolinguistic study of the popular dialects in the United States and their relation to other Latin American dialects. The course will cover phonological and syntactic differences between the dialects as well as the influence of English on the Southwest dialects. (Cross-listed with LTSP 162.)

146A. Theatrical Ensemble (4)
An intensive theatre practicum designed to generate theatre created by an ensemble, with particular emphasis upon the analysis of text. Students will explore and analyze scripts and authors. Ensemble segments include black theatre, Chicano theatre, feminist theatre, and the Latinx theater. (Cross-listed with TEDC 120.)

148. Latino/a and Chicana/o Literature (4)
This course will study the representation of a variety of social issues (immigration, racism, class differences, violence, inter/intra-ethnic relations, etc.) in works written in Spanish by Latino/a and Chicanas/a writers. May be repeated for credit as topics, texts, and historical periods vary. (Cross-listed with LTSP 154.) Prerequisite: LTSP 50B or consent of instructor.

149. African American History in the Twentieth Century (4)
This course examines the transformation of African America across the expanse of the long twentieth century: imperialism, migration, urbanization, desegregation, and deindustrialization. Special emphasis will be placed on issues of culture, international relations, and urban politics.

151. Ethnic Politics in America (4)
This course will survey the political effects of immigration, ethnic mobilization, and community building in America, and the contemporary role of ethnicity in politics and intergroup relations.

152. Law and Civil Rights (4)
This course students explore the relationship between race, class, and law as it applies to civil rights both in a historical and a contemporary context. Topics include racism and the law, history of the Fourteenth Amendment, equal protection, school desegregation, and affirmative action.

159. Topics in African American History (4)
A colloquium dealing with special topics in the history of people of African descent in the United States. Themes vary from quarter to quarter. Students will vary. (Cross-listed with HIUS 183 and HIUS 283.)

161. Black Politics and Protest Since 1941 (4)
Discussion of black social, political, and intellectual experiences since the publication of Malcolm X’s Autobiography. Close examination of blacks’ involvement in and relationships to World War II, cold war, civil rights movements, black power movement, Reagan revolution, and underclass debate.

164. African Americans and the Mass Media (4)
Examination of the media representations of African Americans from slavery to the present focusing on emerging and transmission of enduring stereotypes; their relationship to changing social, political, and economic frameworks; and African Americans’ responses to and interpretations of these mediated images. (Cross-listed with MUS 153.)

165. Sex and Gender in African American Communities (4)
This course will investigate the changing constructions of sex, gender, and sexuality in African American communities defined by historical period, region, and class. Topics will include the sexual division of labor, myths of black sexuality, the rise of black feminism, black masculinity, and queer politics.

167. African-American History in War and Peace: 1917 to the Present (4)
The social, political, economic, and ideological pressures generated during the international conflicts of the twentieth century have had an enormous impact on American life. This course examines how the pressures of “total war” and “cold war” shaped the African-American experience in both war and peacetime. (Cross-listed with HIUS 138)

168. Comparative Ethnic Literature (4)
A lecture-discussion course that juxtaposes the experience of two or more U.S. ethnic groups and examines their relationship with the dominant culture. Students will analyze a variety of texts representing the history of ethnicity in this country. Topics will vary. (Cross-listed with LTEN 178.)

170A. Origins of the Atlantic World, c. 1450–1650 (4)
An examination of interactions among the peoples of western Europe, Africa, and the Americas that transformed the Atlantic basin into an interconnected “Atlantic World.” Topics will include maritime technology and the European Age of Discovery, colonization in the Americas, the beginnings of the transatlantic slave trade, and early development of plantation slavery in the New World. (Cross-listed with HIUS 135A.)

170B. Slavery and the Atlantic World (4)
The development of the Atlantic slave trade and the spread of racial slavery in the Americas before 1800. Explores the diversity of slave labor in the Americas and the different slave cultures African Americans produced under the constraints of slavery. (Cross-listed with HIUS 135B.)

172. Afro-American Prose (4)
Students will analyze and discuss the novel, the personal narrative, and other prose genres, with particular emphasis on the developing characters of Afro-American narrative and the cultural and social circumstances that influence their development. (Cross-listed with LTEN 183.)

174. Themes in Afro-American Literature (4)
This course focuses on the influence of slavery upon African American writers. Our concern is not where slavery was but upon what it is within the works and what these texts reveal about themselves, their authors, and their audiences. (Cross-listed with LTEN 185.)
The course will trace the emergence, development, and longevity of ethnic presses, their role in cultivating and maintaining ethnic identity, and their attempts to respond to and resist images in mainstream media.

187. Black Nationalism (4)
This course will investigate the ideologies and practices of black nationalist movements in the United States and/or across the black diaspora, focusing on their political philosophy, political culture, and gender and class structure.

188. African Americans, Religion, and the City (4)
This course details the history of African American migration to urban areas after World War I and World War II and explores the role of religion in their lives as well as the impact that their religious experiences had upon the cities in which they lived. (Cross-listed with USP 132.)

189. Special Topics in Ethnic Studies (4)
A reading and discussion course that explores special topics in ethnic studies. Themes will vary from quarter to quarter; therefore, course may be repeated three times as long as topics vary. SEMINARS AND INDEPENDENT STUDIES

190. Research Methods: Studying Racial and Ethnic Communities (4)
The course offers students the basic research methods with which to study ethnic and racial communities. The various topics to be explored include human and physical geography, transportation, employment, economic structure, cultural values, housing, health, education, and intergroup relations. (Repeats with USP 129.)

191A. Undergraduate Research in Ethnic Studies (4)
This course is designed to help students conduct their own research rather than merely read the research of others. The course will introduce students to research paradigms in ethnic studies, familiarize them with finding aids and other library resources, and involve them in the design of research plans. Prerequisite: instructor approval.

191B. Honors Research in Ethnic Studies (4)
This course is a continuation of Ethnic Studies 191. Undergraduate Research in Ethnic Studies. Students who have completed ETHN 191 and selected a faculty research advisor may enroll in this course. During the quarter the research for the honors project will be completed under the faculty advisor’s supervision. Faculty advisors will meet weekly with their honors students to oversee the progress made in carrying out the plan of research. Prerequisite: completion of 191.

191C. Honors Research in Ethnic Studies (4)
This course is a continuation of Ethnic Studies 192. Honors Research in Ethnic Studies. Students who have completed ETHN 192 and are continuing to work with a faculty research advisor may enroll in this course. During the quarter the written drafts and final honors paper will be completed under the faculty advisor’s supervision. The student will meet weekly with the faculty advisor in order to prepare drafts and the final version of the honors paper. Prerequisite: instructor approval.

197. Fieldwork in Racial and Ethnic Communities (4)
This course comprises supervised community fieldwork on topics of importance to racial and ethnic communities in the greater San Diego area. Regular individual meetings with faculty sponsor and written reports are required. (May be repeated for credit.)

198. Directed Group Studies (4)
Directed group study on a topic or in a field not included in the regular department curriculum by special arrangement with a faculty member. (May be repeated for credit.)

199. Supervised Independent Study and Research (4)
Individual research on a topic that leads to the writing of a major paper. (May be repeated for credit.)

GRADUATE

Introduction to critical racial and ethnic studies and how this perspective departs from traditional constructions of race and culture; examination of relevant studies to identify themes, concepts, and formulations that indicate the critical departures that characterize the field. Prerequisite: graduate standing or consent of instructor.

200B. Formulations: Interdisciplinarity and Knowledge Production in Ethnic Studies (4)
This course uses model studies to explore how comparative and relational problems are posed as research projects, how research questions are constructed, and how they employ theory to frame the project and establish what is at stake in the research. Prerequisite: graduate standing or consent of instructor.

200C. Projects (ProSeminar): Research in Ethnic Studies (4)
Students examine research designs presented by faculty and advanced graduate students to study how to conceive of and pose research questions, integrate theoretical and methodological models, and conceptualize their own research project. Prerequisite: graduate standing or consent of instructor.

230. Departmental Colloquium (1)
This course is a forum for the presentation of recent research by guests, faculty, and students. This course may be taken for credit six times.

240. Western Methods and Archives (4)
This course seeks to develop research skills in historical methods; to understand techniques and tools historians use to create historical narratives using archival and historical sources; and to compare and relate the value of these to ethnic studies research.

241. Cultural Studies and Cultural Production (4)
This course will train students in interdisciplinary research concerned with power and the production of knowledge, with a focus on conducting multimedia field research, applying discourse analysis, and recognizing forms of data across disciplinary divides.

241A. Community Ethnography I: Method and Theory (4)
This course reviews the major tenets of ethnography using case studies of ethnographic work and critical theory pertaining to epistemological concerns in the social sciences. Critical here are the major ethical parameters of conducting ethnography in ethnic communities, the role of researchers, and the practical implications of such research.

241B. Community Ethnography II: Practicum (4)
This course focuses on the practical application of ethnographic concepts and methods in actual field research in a local San Diego community. The purpose here is to provide experience in conducting ethnography through participant observation, interviews, and contributing to communities. This will include a brief overview of ethnographic method, but will focus on hands-on research, analysis, and ethnographic writing.

242. Qualitative Methods/Ethnography (4)
This course focuses on conceptual and methodological frameworks of ethnography and qualitative inquiry, including research design, grounded theory, the field note journal, participant observation, and interviewing; major themes include the role of indigenous/insider researchers, ethics of involvement, and community collaboration.

253. Mass Media and Ethnic Identity (4)
This course examines the ways that ethnic identity influences the practices of mass media, and the ways in which mass media shape and reflect ethnic identity.

254. Race and Racism (4)
This course examines inequality based on race with a focus on the institutions, symbols, and social practices which structure and maintain racism. Particular attention is given to laws and social policy that reinforce racial inequality.
256. Gender, Sexuality, and Race (4)
This course studies the body cross-culturally as the site for the construction of gender, sex, ethnic, and racial identities. **Prerequisite:** graduate standing or consent of instructor.

257A-B. Social Theory (4-4)
An intensive survey of social and cultural theory, focusing on how constructions of science, language, politics, and social inequality shaped early modernity, romantic nationalism, Marxism, cultural relativism, psychoanalysis, and fin de siècle social thought. The second quarter surveys poststructuralist, postmodern, feminist, subaltern studies, globalization, and other critiques. ETHN 257A is not a prerequisite for ETHN 257B.

259. Comparative Conquests, Colonization, and Resistance in the Americas (4)
This course will offer a comparative survey of the impact of European interactions with Native nations and populations in the New World, from Peru to Canada. Readings will emphasize modes of initial interaction, patterns of European colonization, and Native adaptation and resistance, and broader changes in Native culture and cosmology as a result of conquest and colonization.

260. Transnationalism and Borderlands: The Local and Global (4)
This course critically reviews the analytical frameworks of transnationalism and borderlands. The goals are to assess traditional and current social science practice on immigration, identity, and community studies, and to understand how diverse peoples engage and participate in global processes.

261. Race and Law (4)
This seminar advances a critique of law’s innocence—of its claims for universality. The reading of legal and scientific texts will indicate how, by incorporation existing constructions of the meanings of race, the law produces racialized modern subjects.

262. Race, Inequality, and Health (4)
New critical and multidisciplinary perspectives provide tools for examining entrenched and newly emerging diseases and inequalities. This course examines medicine and public health in relationship to race, gender, sexuality, class, and nation and explores how these connections affect the distribution of health and health services locally, nationally, and internationally.

263. Language and Socialization across Cultures (4)
This course will focus on the ways in which children in different ethnic and racial groups are socialized to language and through language. We will explore racial and class and gender ideologies that underpin the ways parents expect children to learn to speak; examine effective and appropriate methods for studying cultural patterns and understanding ideologies; and consider impacts of bilingualism, stigmatized dialects, immigration, religious training, and home-school conflicts in ways of speaking and using language(s). **Prerequisite:** graduate standing or consent of instructor.

264. War, Race, and Violence (4)
This course critically examines theories and research on war, race, and violence, including everyday forms of state violence, war and the making of empire, the politics of war memory, and war refugees. **Prerequisite:** graduate standing or consent of instructor.

265. Critical Immigration and Refugee Studies (4)
This course surveys the field of immigration and refugee studies and introduces students to recent theories and cutting-edge research in the field. Key topics: gender and migration; diaspora and transnationalism; immigration, race, and citizenship; and globalization and immigrant labor. **Prerequisite:** graduate standing or consent of instructor.

266. Popular Culture and Pedagogy (4)
This course examines popular culture as a site of domination and resistance, and pedagogy broadly as (always political) educational projects in a variety of social contexts with a focus on youth popular culture in U.S. urban public schools. **Prerequisite:** graduate standing or consent of instructor.

267. Critical Immigration and Refugee Studies (4)
This course is a research seminar on themes of contemporary and historic importance in ethnic studies. Themes will be determined by instructor. Course may be repeated three times for credit.

290A-B. Master’s Thesis Preparation (4-4)
All graduate students are required to write a master’s thesis as part of the requirements for the master of arts in ethnic studies. Students should enroll in the thesis preparation courses in the fall and spring quarters of the second year of graduate studies.

298. Directed Reading (1–12)
This is an independent research or individual guided tutorial in an area not covered by present course offerings. This course may be repeated for an indefinite number of times due to the independent nature of the content of the course.

299. Thesis Research (1–12)
Open to graduate students conducting doctoral thesis research. This course may be repeated for an indefinite number of times due to the independent nature of thesis research and writing.

500. Apprentice Teaching in Ethnic Studies (4)
A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation and grading of examinations and other written exercises, and student relations.

**THE EUROPEAN STUDIES MINOR**

The European Studies minor is for students with strong European interests or who plan to study in Europe on an Education Abroad Program (EAP) or Opportunities Abroad Program (OAP) but also those who seek to complement their major with the study of Europe as a political, cultural, and economic entity. To receive a minor in European Studies, a student must complete seven four-unit courses (twenty-eight units).

**(A) Language requirement**

All minors must demonstrate basic proficiency in a single European language other than English by completing four quarters of language instruction (or equivalent). Students may also complete this requirement by demonstrating advanced language ability on a proficiency exam. Students completing the language requirement through waiver (700 or better on SAT II language, score of 4 or better on AP language), or proficiency exam will fulfill the language component of the minor by completing one of these requirements but no course credit will be applied toward the (seven) courses required for the minor.

Up to TWO four-unit courses in foreign language can be included in the seven courses required for the minor. These may be lower-division courses.

**(B) Additional course requirements**

1. The remaining five to seven courses (depending on the number of language courses applied to the minor) must include at least three courses on Europe as a whole including one course in each of the two broad tracks.
   a. Economics and Politics
   b. Culture and Society
   (See course listings for each track.)
2. At least one of the track courses should be in the Department of History.
3. No more than three courses in any one department.
4. All courses applied to the minor must receive a letter grade of C– or better.
5. Upper-division courses may include up to two 198 and 199 courses and up to three courses from UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP) with the approval of the minor advisor.

6. Minors in European Studies are encouraged to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP). Students should consult with the faculty director before going abroad to determine which courses will be approved for minor credit.

**TRACKS IN THE EUROPEAN STUDIES MINOR**

Courses preceded by an asterisk are petitionable for credit towards the minor as content warrants.

THE MINOR

In the course of the twentieth century, film in all its applications—as storytelling, as documentary, as propaganda, as popular entertainment—became a powerful social and cultural force on an international scale. The importance of film is reflected in the number of faculty at UC San Diego whose scholarship and teaching involves film and in the number of courses regularly offered that focus on some aspect of film studies and use film as an essential component of the course material. The Film Studies minor is designed to give students a flexible introduction to the full range of courses on film available here. As noted below, the only constraints are that five of the seven courses must be in the upper division and that the seven courses must come from at least two different departments. This latter requirement is designed to insure some level of breadth in the minor. The minor should be of interest to students with a wide range of interests, from those who plan graduate study in film to those who simply wish to understand better this powerful and influential medium.

REQUIREMENTS

Seven courses, at least five of which must be upper-division, from the following list. The seven courses must be drawn from at least two different departments.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

Freshman Seminar Program

Office of the Senior Vice Chancellor—Academic Affairs
Associate Vice Chancellor—Undergraduate Education

OFFICE: University Center, Room 104
(858) 822-5855
http://ugseminars.ucsd.edu

The Freshman Seminar Program debuted in 2003–04 to offer students early intellectual contact with faculty members, spark their interest in a broad range of topics, and enrich the undergraduate experience at UC San Diego. These seminars create a unique classroom environment by providing new students with opportunities to engage in intellectual discussions with faculty and peers in a small supportive class setting, and by fostering the development of critical thinking and analytical skills. Incoming students are highly encouraged to enroll in freshman seminars during their first year at UCSD. Students can select from an interesting and exciting array of seminars each quarter, designated by courses numbered 87 (e.g., PHYS 87).

Faculty from all departments offer approximately 150 seminars each academic year. Seminars offer one unit of credit and are graded Pass/Not Pass. Enrollment is limited to twenty students per seminar, with preference given to entering freshmen, and up to four seminars may be taken for credit.

Please visit the Freshman Seminar Program Web site at http://ugseminars.ucsd.edu for a description of seminars currently offered. This site also contains useful information, such as enrollment procedures for freshmen with advanced standing, and additional program details. Questions about a specific freshman seminar should be directed to the department offering the seminar.

PROGRAM DESCRIPTION
German Studies is an interdisciplinary program that offers both a major and a minor for students with broad academic interests in the German-speaking world.

In consultation with a faculty advisor in the program, students design individual plans of study from the many core courses offered in the Departments of History, Literature, Music, Philosophy, Political Science, Sociology, and Theatre and Dance. Further courses, including some offered by other departments, may be incorporated into the student’s program, if they bear directly on German Studies. Students considering a major or minor should consult a member of the German Studies faculty as early as possible.

Students need to attain competence in German (two years of university-level language courses or the equivalent) before they can take certain required upper-division courses. It is recommended that students attain this level of competence early in the program.

STUDY ABROAD
All German Studies students are strongly encouraged to make overseas study an integral part of their program. The UC Education Abroad Program (EAP) conducts formal programs of study in Berlin, Göttingen, and Bayreuth ranging from one-quarter, intensive beginning language programs to a full year of study at a German university. Students may petition to use up to five courses completed while studying abroad in their major, and three in their minor.

SENIOR HONORS THESIS
At the beginning of his or her senior year, a student major in German Studies may elect to write a Senior Honor’s Thesis. To be eligible, the student must have a GPA of 3.5 in the German Studies major at the beginning of the senior year.

To begin work, the student forms a committee of three appropriate faculty members, including a committee chair, who is chosen from among the German Studies Core Faculty. The chair supervises the student in a two-quarter program of independent study to research and write an Honor’s Thesis of approximately thirty to fifty pages (GMST 196A/B; the two courses count among the required twelve for the major). The student defends the thesis in an hour oral exam with the full committee, which is charged with recommending the degree of honors that will appear on the student’s transcript and diploma.

THE MAJOR
The major in German Studies requires twelve upper-division courses chosen from the core course list, and includes German Studies I and II (LTGM 100 and 101) three courses in German Literature two courses in History five additional core courses, taken in at least two different departments. At least two of these courses must be taken outside the literature department.

Students plan their major in consultation with their German Studies faculty advisor, and submit it to the program director for approval.

THE MINOR
The minor in German Studies consists of seven courses, at least five of which must be upper-division, including German Studies I or II (LTGM 100 or 101) at least six additional core courses, taken in at least two departments.

Students plan their minor in consultation with their German Studies faculty advisor, and submit it to the program director for approval.

CORE COURSES
Courses marked with an asterisk (*) frequently cover topics bearing on German Studies. Students should check the departments’ quarterly course descriptions and yearly course spreads for their applicability to the program, and discuss them in advance with their German Studies advisor.

Kelly O'Sullivan, Academic Integration Officer

UC San Diego Global Seminars are summer study abroad experiences led by a UCSD professor. These programs are five weeks in duration. Students enroll in two courses for a total of eight UCSD units. Class sizes are between fifteen and thirty students, so there are excellent opportunities for interaction with some of the best professors at UCSD. All courses are taught in English, but several programs have some very basic, elementary language instruction to help students navigate the local community. The Programs Abroad Office assists students with advising, application, financial aid, predeparture orientation, and reentry issues. Special study abroad scholarships are available. For more information, consult the UC San Diego Global Seminars section of the Programs Abroad Web site at http://globalseminar.ucsd.edu.

PROGRAM DESCRIPTION
The Master of Advanced Studies (MAS) in the Leadership of Healthcare Organizations provides depth and focus on management for healthcare professionals with an emphasis on clinical process improvement. The goal of the program is to prepare healthcare professionals to participate more effectively in the business decisions that affect the quality of patient care by teaching participants to deal with error prevention, process quality, and systems of care. Students gain the advanced knowledge and skills that are essential to manage escalating challenges in the competitive business environment of health care. The MAS program crosses many fields and clinical and administrative professions in the health industry, including medicine, nursing, mental health, dentistry, insurance, pharmacy, and other related areas. The program is appropriate for nurses, managers, physicians, allied health professionals, healthcare executives, and medical students as they assume more active roles in healthcare leadership and on management teams.

The MAS in the Leadership of Healthcare Organizations is a part-time, self-supporting degree program with a flexible course schedule designed for working professionals. It is the first graduate degree of its kind within the University of California system. The UC San Diego graduate division confers the MAS degree and the Department of Family and Preventive Medicine in the UCSD School of Medicine is responsible for the academic management of the curriculum. UCSD Extension administers the program and provides student advising and career counseling services.

ADMISSION
New students are admitted in the fall, winter, and spring quarter of each academic year. Prospective candidates should submit and complete the official UCSD online graduate application for admission, the application fee, one set of official transcripts from each institution attended after high school, three letters of professional recommendation, and a current résumé or c.v. The GRE/GMAT is not required; however, it is strongly recommended that candidates have a minimum of five years of professional experience in health care. International applicants must submit official scores from the Test of English as a Foreign Language (TOEFL). The application deadlines are July 15 (fall), October 15 (winter), and January 15 (spring).

PROGRAM OF STUDY
The part-time degree program is designed to be completed in one, two, or three years, depending upon a participant’s time to devote to the program. Classes are typically scheduled in the late afternoons, evenings, or weekends to meet the demands of working professionals. Students are required to complete forty-two units of required courses.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

CURRICULUM
LHCO 201A-2B. Topics in Healthcare Management and Innovation (2-2)
Weekly discussions with healthcare entrepreneurs and managers will expose students to real-life experiences. How are solutions brought to the marketplace? How are solutions identified and implemented? How are solutions brought to the marketplace?

LHCO 202. Organizational Dynamics and Change Management (4)
This course examines principles and applications of management and organization theory as applied to healthcare organizations. It covers methods for assessing key features of organizational environments and internal structures and identifying, developing, and implementing strategies for improved performance.

LHCO 203. Using and Managing Information and Information Technologies (4)
Designed to familiarize health administrators and professionals with the principles of information systems design and management for health care. Provides an understanding of current trends in information technologies for healthcare and management issues unique to it. Includes hands-on computer lab.

LHCO 204. Managing People and Teams (2)
This course studies key management concepts and roles of management and how they apply in successful, dynamic organizations. It also examines competencies of effective managers in developing customer focus, planning, selecting and developing individuals and teams, communicating, managing resources, using technology and being adaptable.

LHCO 205. Modern Healthcare Organizations (4)
Describes and analyzes the dynamics responsible for the change in healthcare delivery and effects on development of modern healthcare organizations. Describes actions taken by employers, insurers, consumers, and government, analyzing the effects on physicians and provider organizations. Note: It is recommended that students take this course in their first winter quarter in the program.

LHCO 206. Topics in Financial Management and Decision Making (2)
This course presents real-life applications in healthcare provider organizations of financial management and decision-making. Topics include budgeting, uses of financial reports, development of long-range financial forecasts, benchmarking, business plan development, and actuarial analysis in projecting health care delivery costs.

LHCO 207. Health Law and Medical Liability (4)
This course provides an introduction to the relationship of law to health care, including liability, government regulation, financial and ethical issues, contracting and negotiation and dispute resolution.

LHCO 209. Patient Outcomes and Quality of Care (4)
This course provides a critical overview of the tools used to measure outcomes and quality of care, development and use of practical guidelines, advantages and disadvantages of various methods, and the use of such analysis in administrative decision-making.

LHCO 211. Healthcare Leadership and Political Advocacy (2)
Within the context of healthcare advocacy, the course examines the organizational and individual issues that impact success in promoting and advocating for a healthcare agenda. The course aims to provide clarity to that process and assist students with understanding how to navigate the political landscape. Students learn about the legislative process, lobbying, the impact of political campaigns, the involvement of the media, and how healthcare economics impact politics.

LHCO 212. Statistics and Applied Decision Making (2)
Students will learn statistical methods and their most common applications in healthcare management. Topics covered include data presentation, sampling, the development and use of confidence intervals, hypothesis testing, analysis of variance and simple regression. We will also explore elementary probability theory and decision making under uncertainty. Students who have taken LHCO 208 may not receive credit for LHCO 212. Prerequisite: admission to MAS in LHCO or consent of department.

LHCO 213. Financial Accounting and Analysis (2)
Students will learn the use of financial information within a healthcare organization. Topics covered will include capital structure, working capital and cash management, the time value of money, and capital budgeting. Students who have taken LHCO 208 may not receive credit for LHCO 213. Prerequisite: admission to the MAS in the Leadership of Healthcare Organizations Program or consent of department.

LHCO 214. Practical Business Communication Skills for Healthcare Professionals (2)
This course focuses on developing effective business communication skills for professionals in managerial/senior roles in healthcare. Writing scenarios include: preparing briefings and updates using presentation software and/or briefing packets; organizing data; constructing proposals and reports; soliciting; coordinating projects via email; and drafting and editing group documents. On-the-job examples from the student’s workplace are used throughout the course. Prerequisite: admission to the MAS in
the Leadership of Healthcare Organizations Program or consent of department.

LHCO 296A. Independent Study Project (ISP) Prospectus (2)
As part of preparing for the ISP, each student must prepare a prospectus based on some topic of research interest relevant to leadership of healthcare organizations. The prospectus will consist of an integrative literature review and a proposal for an applied research project based on the chosen topic. Prerequisite: admission to the MAS in the Leadership of Healthcare Organizations Program or consent of department.

LHCO 296B. Independent Study Project in the Management of Healthcare (4)
The Independent Study Project (ISP) is the cornerstone of the MAS Program. Students will be involved in a high-level applied research project that integrates what they have learned in their formal course work. The ISP will be an independent and creative scholarly activity in an area related to one or more of the topics covered in the formal curriculum. Students’ work will be evaluated by a committee consisting of faculty and, when appropriate, industry advisors.
Health Care—Social Issues

One course in Urban Studies and Planning chosen from the following:
143—The U.S. Health Care System
144—Environmental and Preventive Health Issues
145—Aging: Social and Health Policy Issues
147—Case Studies in Health Care Programs/Poor and Underserved Population

(Additional Urban Studies and Planning courses may be taken to fulfill elective requirements in the minor.)

Elective Course Options

Anthropology
ANTH 2—Human Origins
ANBI 100—Special Topics in Biological Anthropology (topic approval required)
ANBI 141—The Evolution of Human Diet
ANSC 100—Special Topics in Socio-Cultural Anthropology (topic approval required)
ANSC 164—The Anthropology of Medicine

Biology
BILD 36—AIDS, Science, and Society
BICC 136—AIDS, Science, and Society

Clinical Science
174—Drugs: Brain, Mind, and Culture

Contemporary Issues
22—Human Sexuality
40—The AIDS Epidemic
136—The Anthropology of Medicine

Economics
140—Economics of Health Producers
141—Economics of Health Consumers

Ethnic Studies
142—Medicine, Race, and the Global Politics of Inequality

History
HISC 115—History of Modern Medicine
HISC 116—History of Bioethics
HISC 174—History of Localization of Brain Function

Philosophy
147—Philosophy of Biology
148—Philosophy and the Environment
151—Philosophy of Neuroscience
162—Contemporary Moral Issues
164—Technology and Human Values

Psychology
2—General Psychology: Biological Foundations
60—Introduction to Statistics
104—Introduction to Social Psychology
124—Introduction to Clinical Psychology
132—Hormones and Behavior
134—Eating Disorders
154—Behavior Modification
155—Social Psychology and Medicine
163—Abnormal Psychology
168—Psychological Disorders of Childhood
169—Brain Damage and Mental Function
172—Psychology of Human Sexuality
179—Drugs, Addiction, and Mental Disorders
181—Drugs and Behavior
188—Impulse Control Disorders

Science, Technology, and Public Affairs
181—Essentials of Global Health

Sociology
120—The Practice of Social Research
120T—Special Topics in Culture, Language, and Social Interaction (topic approval required)
134E—Making of Modern Medicine
135—Medical Sociology
136E—Sociology of Mental Illness: A Historical Approach
136F—Sociology of Mental Illness in Contemporary Society
138—Genetics and Society
143—Suicide

Urban Studies and Planning
143—The U.S. Health Care System
144—Environmental and Preventive Health Issues
145—Aging: Social and Health Policy Issues
147—Case Studies in Health Care Programs/Poor and Underserved Population

Students may petition to substitute courses in the minor that have substantial content related to health care and society. Petitions should be submitted to the Warren College Interdisciplinary Programs Office.

RECOMMENDED INTERNSHIP EXPERIENCE

A health care related internship (AIP 197) is recommended and should be arranged at least one quarter in advance through the Academic Internship Program, Literature Building, Second Floor, http://aip.ucsd.edu/. Clinical and research placements are available.

FACULTY ADVISORY COMMITTEE

Sandra Brown, Professor, Psychology, Program Director
Gerald Doppelt, Professor, Philosophy
John Evans, Associate Professor, Sociology
Leslie Lewis, Lecturer, Urban Studies and Planning
Dana Nelkin, Associate Professor, Philosophy
Vivian Reznik, Professor of Pediatrics, School of Medicine
Andrew Scull, Professor, Sociology
Health Law

PROGRAM CODIRECTORS

Rema Raman, Ph.D., Assistant Adjunct Professor, Biostatistics, UCSD School of Medicine
Michael Willoughby, Ph.D., C.F.A., Lecturer, Department of Economics, UCSD
Deborah L. Wingard, Ph.D., Professor, Department of Family and Preventive Medicine, Division of Epidemiology, UCSD School of Medicine

PROGRAM DESCRIPTION

The Master of Advanced Studies (M.A.S.) in Health Law is a joint-degree offering from UC San Diego and California Western School of Law. The program was developed in response to the increasing need to equip professionals from the health care and legal disciplines with a more complete understanding of the best scientific, ethical, regulatory, and management practices. As medical decisions grow more complicated and far-reaching, the intersection of legal and medical/health care practices will be one of the most critical focal points of society for decades to come. Managed care, advances in medical treatment and biotechnology, issues of access, and bioethics all absorb the attention of our regulatory, legislative, and judicial systems. Health care and legal professionals will need to have the specialized skills and training to be effective and influential in this complex environment.

Led by select faculty from the School of Medicine at UC San Diego and California Western School of Law, the rigorous and timely graduate-level curriculum is designed to orient professionals to the common activities, philosophy of practice, and challenges of the companion discipline in health care or law. The program focuses on acculturating practitioners in both fields to become leaders in providing integrated, sensitive solutions to everyday practice and policy issues.

ADMISSION

New students are admitted in the fall quarter of each academic year. Prospective candidates should submit an official UCSD on-line graduate application for admission, the application fee, one set of official transcripts from each institution attended after high school, three letters of professional letters of recommendation, and a current résumé or c.v. The GRE/GMAT is not required; however, it is strongly recommended that candidates possess, or currently be pursuing, a graduate degree in a scientific or health care related field and also have some level of experience in scientific or clinical research. In some instances candidates without an advanced degree may be admitted to the joint-degree program if they have demonstrated substantial professional experience in the field at increasing levels of responsibility. The application deadline is April 2.

PROGRAM OF STUDY

The part-time master’s degree program is designed to be completed in eighteen months to two or three years, depending upon a participant’s time to devote to the program. Responsibility for course offerings is shared between UC San Diego School of Medicine and California Western School of Law and students will be expected to enroll in courses at both institutions. Courses are typically held in the late afternoons or evenings, to allow flexibility for participants’ home and work life. The forty-five-unit core degree comprises fifteen units of required courses, twelve units of core courses, twelve units of general electives, and six units of a capstone project.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

REQUIRED COURSES (FROM UCSD)

HLAW 201. Introduction to Medical/Health Care Practice (3)
This course examines the non-medical professional perspective on the environment in which the medical practitioner must manage the patient relationship and deal with legal concerns. Topics include patient safety and privacy, medical technology and research, pharmacoeconomics, and economics. Prerequisites: HLAW 201A–C or consent of instructor.

HLAW 207A. Principles in Health Law and Policy A (6)
This course presents a comprehensive view of modern issues at the intersection of healthcare and law, with an emphasis on improving understanding and synergy between the professions. The course stresses foundational understanding of how health law and policy is formulated and the application of health law and policy in current practice. A portion of the class is devoted to group work where students select and study issues in depth to build a framework for resolving enduring challenges in the field. A variety of topics on the health law system and procedures/processes, such as Medicare and MediCal coverage, are introduced to reinforce understanding. Students who have taken HLAW 202A–C, HLAW 203A–C, or HLAW 204A–C may not receive credit for HLAW 207A. Prerequisite: M.A.S. health law student or consent of department.

HLAW 207B. Principles in Health Law and Policy B (6)
This course presents a comprehensive view of modern issues at the intersection of healthcare and law, with an emphasis on improving understanding and synergy between the professions. The course stresses foundational understanding of how health law and policy is formulated and the application of health law and policy in current practice. A portion of the class is devoted to group work where students select and study issues in depth to build a framework for resolving enduring challenges in the field. A variety of topics on the health law system and procedures/processes, such as Medicare and MediCal coverage, are introduced to reinforce understanding. Students who have taken HLAW 202A–C, HLAW 203A–C, or HLAW 204A–C may not receive credit for HLAW 207B. Prerequisite: HLAW 207A, M.A.S. health law student, or consent of department.

HLAW 296A. Independent Study Project Proposal (2)
As part of preparing for the independent study project, each student must prepare a proposal based on a topic of research interest directly relevant to health law. The proposal will consist of an integrative literature review and a proposal for an applied research project based on the chosen topic. Prerequisite: admission to the M.A.S. in Health Law Program or consent of the department.

HLAW 296B. Independent Study Project in Health Law (4)
The independent study project is the cornerstone of the M.A.S. Program. Students will be involved in a high-level applied research project that integrates what they have learned in their formal course work. The project will be an independent and creative endeavor carried out in an area of health law related to one or more of the topics covered in the formal curriculum. Students’ work will be evaluated by a committee of faculty and may also include industry advisors when appropriate. Prerequisites: admission to the M.A.S. in Health Law Program or consent of department; HLAW 296A.

PRESCRIBED ELECTIVES (FROM UCSD)

HLAW 205A. Bioethics Seminar—Clinical Focus A (2)
This seminar examines bioethical concerns and considerations from a clinical perspective. Using medical literature and case law, topics such as bioethics principles, informed consent, technology and reproduction, surrogacy, fetal rights, and the right to die are presented and discussed. Prerequisite: M.A.S. health law student or consent of instructor.
HLAW 205B. Bioethics Seminar—Clinical Focus B (2)
The seminar broadens the focus on the patient/doctor relationship and medical ethical issues in healthcare policy at the national and global levels. Topics include allocation of scarce medical resources; compulsory public health measures; clinical research in the developing world; and cross-cultural medical practice. Prerequisite: M.A.S. health law student or consent of instructor.

LHCO 205. Modern Health Care Organizations (4)
Describes and analyzes the dynamics responsible for the change in health care delivery and effects on development of modern health care organizations. Describes actions taken by employers, insurers, consumers, and government, and analyzes the effects on physicians and provider organizations. Prerequisite: M.A.S. health law student or consent of instructor.

LHCO 206. Topics in Financial Management/Decision-Making in Health Care (2)
Presents real-life applications in health care provider organizations of financial management and decision-making. Topics include budgeting, uses of financial reports, development of long-range forecasts, benchmarking, business plan development, and actuarial analysis in projecting health care delivery costs. Prerequisite: M.A.S. health law student or consent of instructor.

LHCO 213. Financial Accounting and Analysis (2)
Students will learn the use of financial information within a healthcare organization. Topics covered will include capital structure, working capital and cash management, the time value of money, and capital budgeting. Students who have taken LHCO 208 may not receive credit for LHCO 213. Prerequisite: admission to the M.A.S. in the leadership of healthcare organizations program or consent of department.

HLAW 208. Influencing Public Policy (2)
Students will learn the basic policy framework in the U.S. (i.e., the "legal process") and points at which this framework can be influenced to formulate public policy in health care. Prerequisite: M.A.S. health law student or consent of department.

GENERAL ELECTIVES
Varies. Refer to list of elective courses from UCSD and California Western School of Law.
History

PROFESSORS
Robert S. Edelman, Ph.D.
Joseph W. Escherick, Ph.D., Hsui Professor of Chinese Studies, Hwee-Chih and Julia Hsiu, Endowed Chair in Chinese Studies
Takashi Fujitani, Ph.D.
Thomas Gallant, Ph.D., Nicholas Family Endowed Chair, Modern Greek History
David M. Goodblatt, Ph.D., Endowed Chair, Judaic Studies
David G. Gutiérrez, Ph.D.
Deborah Hertz, Ph.D., Herman Wouk Endowed Chair in Modern Jewish Studies
Judith M. Hughes, Ph.D.
Christine F. Hunefeldt, Ph.D., Director, Center for Iberian and Latin American Studies
John A. Marino, Ph.D., Chair
Michael P. Montéon, Ph.D.
Naomi Oreskes, Ph.D., Provost, Sixth College
Michael E. Parrish, Ph.D.
Paul G. Pickowicz, Ph.D., Endowed Chair, Modern Chinese History
William H. Propp, Ph.D., Endowed Chair, Harriet and Louis Bookheim Professor of Biblical and Related Languages
Stefan A. Tanaka, Ph.D.
Eric Van Young, Ph.D.
Robert S. Westman, Ph.D.

ASSOCIATE PROFESSORS
Luis Alvarez, Ph.D.
Frank Biess, Ph.D.
Nancy Caciola, Ph.D.
Tal Golan, Ph.D.
Hasan Kayali, Ph.D.
Rachel Klein, Ph.D.
Weijing Lu, Ph.D.
Rebecca Jo Plant, Ph.D.
Jeremy Preschof, Ph.D.
Michael Provence, Ph.D.
Pamela B. Radcliff, Ph.D.
Sarah Schneewind, Ph.D.
Nayan B. Shah, Ph.D.
Cynthia M. Traunt, Ph.D.
Daniel L. Widner, Ph.D.

ASSISTANT PROFESSORS
Catherina M. Gere, Ph.D.
Mark Hanna, Ph.D.
Mark Hendrickson, Ph.D.
Todd A. Henry, Ph.D. (In Residence), Professorship is supported by a grant from the Korea Foundation.
Nancy H. Kwak, Ph.D.
Everard Meade, Ph.D.
Patrick Patterson, Ph.D.

ADJUNCT FACULTY
Michal Belknap, Ph.D., Earl Warren Professor of Law, California Western School of Law
Amy Bridges-Kronick, Ph.D., Professor, Political Science
Suzanne Cahill, Ph.D., Adjunct Professor

Paul Drake, Ph.D., Professor, Political Science and Institute of the Americas Chair for Inter-American Affairs; Senior Vice Chancellor, Academic Affairs
Steve Erie, Ph.D., Professor, Political Science
Peter H. Smith, Ph.D., Professor, Political Science and Simón Bolívar Chair in Latin American Studies

LECTURER WITH POTENTIAL SECURITY OF EMPLOYMENT
Jane Kuo, Ph.D.

PROFESSORS EMERITI
Guillermo Cepedes, Ph.D.
Stanley A. Chodorow, Ph.D.
Gabriel Jackson, Ph.D.
David Luft, Ph.D.
Thomas A. Metzger, Ph.D.
Allan Mitchell, Ph.D.
Alden A. Mosshammer, Ph.D.
Edward Reynolds, Ph.D.
David R. Ringrose, Ph.D.
Martin J. S. Rudwick, Ph.D.
Ramón Eduardo Ruiz, Ph.D.

EMERITUS LECTURER WITH SECURITY OF EMPLOYMENT
Ping C. Hu

OFFICE: Humanities and Social Sciences Building, Room 5016

THE UNDERGRADUATE PROGRAM

“Whereas other subjects may make us smarter for next time,” said the great historian of the Renaissance, Jakob Burckhardt, “the study of history makes us wiser forever.” History prepares students for careers in law, government, diplomacy, international business, nonprofit administration, and education. But history is also good preparation for any other field that requires assessing evidence and making written and oral arguments, fields including engineering, medicine, and entrepreneurship. Moreover, history opens the mind to the full range of the human experience as it has unfolded over the ages. As an academic discipline at the crossroads of the humanities, the arts, and the social sciences, history is a unique gateway to the richness of the human experience as it has unfolded over the ages. As an academic discipline at the crossroads of the humanities, the arts, and the social sciences, history is a unique gateway to the richness of the American cultural heritage, to the immense variety of world civilizations, and to understanding what has happened in the past and why.

To declare a major in history, consult with the undergraduate student advisor on the fifth floor of H&SS. In selecting your field of emphasis, you may also consult with the director of undergraduate studies or other faculty members. The fields of emphasis are as follows: Africa (HIAF), East Asia (HIEA), Europe (HIEU), Near East (HINE), Latin America (HILA), History of Science (HISC), United States (HIFS); as well as the following three thematic fields: gender and sexuality; race, ethnicity, and migration; and war, revolution, and social change. A list of courses approved for the thematic fields is available in the department office or on its Web site http://history.ucsd.edu. In special cases, upon approval of the director of undergraduate studies, students may devise a different field of emphasis (e.g., economic, legal, or social history).

The department also administers the following special research and instructional units: Chinese Studies; Judaic Studies; and the Committee on Area and Ethnic Studies and Research (CAESAR), which includes Classical Studies, European Studies, German Studies, Italian Studies, Japanese Studies, Middle East Studies, and Russian and Soviet Studies.

The department is fortunate in having the research and professional activities of its faculty supported by the Laura and John Gdalbraith Faculty Development Fund.

Basic requirements for the major are as follows:
1. Three lower-division courses in history.
   Lower-division courses may be selected from the following:
   HILD 2 A-B-C. United States History
   HILD 7 A-B-C. Race and Ethnicity in the U.S.A.
   HILD 10-11-12. East Asia

Majors may also satisfy the lower-division requirement by completing the Revelle College Humanities Sequence or the Eleanor Roosevelt College Sequence “Making of the Modern World.” Majors may petition to fulfill all or part of the lower-division requirement with AP credit in history or courses from another school.

2. Twelve four-unit upper-division courses, distributed as follows:
   a. At least three courses in the field of emphasis.
   b. At least three courses in other fields within the department.
   c. Three of the twelve courses must focus on the period before 1800, indicated by the (+).
   d. At least one of the twelve courses must be a colloquium in which students write a substantial term paper. Colloquia are courses with numbers between 160 and 190, or others approved by the undergraduate advisor. Note: the colloquium need not be in the major field of emphasis.

Students majoring in history will normally take at least eight of their twelve upper-division history courses at UC San Diego. Exceptions may be made for transfer students and for students participating in the EAP/OAP program.

Special independent study courses, such as HITO 198, Directed Group Study, and HITO 199, Independent Study, are available, especially for students interested in the Honors Program and in graduate study.

With the exception of 199 courses, all work in the major must be taken for a letter grade. Of the twelve upper-division courses required in the major, no more than two may be History 199 credits. Exceptions to these rules may be approved by the director of undergraduate studies.

Established in 1983, the Armin Rappaport Memorial Fund endows an annual prize for the best
THE HONORS PROGRAM

The department offers a special program for outstanding students. The Honors Program is especially recommended for those students interested in pursuing graduate study in history or allied fields. It is also a particularly effective preparation for professional careers. Candidates for History Honors are chosen during the spring quarter from among juniors in history who have taken at least four upper-division courses in the department. Juniors with a 3.5 GPA in history (3.0 overall) are eligible to apply. Admission to the program is based on the student’s academic work. Interested candidates should complete the application form (available in the Department of History office) by the second Friday of May.

In addition to regular course work in the department, the Honors Program consists of a colloquium in historiography offered in the fall quarter of the senior year and a program of independent study leading to the completion of an honors essay on a topic of the student’s choice. During the fall quarter of the senior year, candidates select a topic and begin preliminary work on the Honors essay in consultation with a major field advisor (HITO 194). During the winter quarter the student pursues a course of independent study devoted to the completion of the Honors essay (HITO 195). The award of History Honors is based on satisfactory completion of the colloquium in history and the Honors essay. Students are expected to maintain an average of 3.5 or better in all work taken within the department. Honors candidates must include at least three colloquia in their regular course work.

Candidates for history honors should organize their upper-division course work as follows:

1. Six quarter-courses in one of the major fields offered by the department.
2. Three quarter-courses in a field other than the primary one.
3. Three of these nine quarter-courses must be colloquia.
4. HITO 196. Colloquium in History.

MINORS IN HISTORY

The minor consists of at least seven courses, five of which must be upper-division. Although there is no specific distribution requirement, the courses should be selected to constitute a coherent curriculum. No more than two upper-division courses applied to a minor may be taken for Pass/Not Pass. Prospective minors in history should consult with an undergraduate advisor for approval of their program.

EDUCATION ABROAD PROGRAM

History majors are encouraged to participate in the UC Education Abroad Program (EAP) or UCSD’s Opportunities Abroad Program (OAP), while still making progress toward completing their major. Students considering this option should discuss their plans with the departmental Educational Abroad faculty advisor before going abroad, and courses taken abroad must be approved by the department. (For more information on departmental procedures for study abroad see undergraduate program [http://history.ucsd.edu]) EAP is detailed in the Educational Abroad Program of the UC San Diego General Catalog, or visit http://programsabroad.ucsd.edu Financial aid is applicable to study abroad, and study abroad scholarships are available. Interested students should contact the Programs Abroad Office in the International Center.

THE GRADUATE PROGRAM

THE MASTER’S PROGRAM

The M.A. program is designed to introduce students to the basic skills of historical research as well as to the debates about, and the approaches to, historical scholarship in a specific field. Master’s students ordinarily do not receive financial aid from the department or the university except when funds are not utilized for support of Ph.D. candidates.

The department offers M.A.s in European history, United States history, and history of science. In addition, the Department of History administers an interdisciplinary M.A. program in Judaic studies. Students interested in pursuing an M.A. degree in Latin American history are encouraged to apply for admission to the Latin American Studies program. The department also offers the opportunity for students to design special M.A. programs in areas such as African history or medieval European history.

Admissions

Admission is based on the applicant’s undergraduate preparation; previous graduate work, if any; three letters of recommendation; one or two papers (preferably written for history courses); and scores from the Graduate Record Examination (GRE). The GRE subject exam in history is not required. The Test of English as a Foreign Language (TOEFL) is required for foreign applicants. A minimum score of 550 for the paper-based test, a score of 213 for the computer-based test, or a score of 80 on the Internet-based test is required on the TOEFL. The minimum grade-point average for admission is 3.0 with a higher average in history and related subjects. Refer to the online application for filing deadline.

For online application visit [http://oas.ucsd.edu]

General Requirements

The master’s program can be completed in one year of full-time study or two years of half-time study, and includes nine four-unit courses (thirty-six units) in a major field. Required courses vary for each major field (see below), but all courses must be taken for a letter grade. With very few exceptions, students are expected to begin their programs in the fall quarter. In addition to the course requirements, completion of the M.A. degree requires that students pass a one-hour oral examination at the end of their final quarter of enrollment.

Language requirement: While proficiency in a foreign language is only required in European history (see below), prospective applicants are strongly urged to begin study of a foreign language appropriate to the proposed area of concentration as early as possible in their academic career.

Area of Concentration: Judaic Studies

Judaic Studies is an interdisciplinary program that allows students interested in many areas to build a coordinated graduate program leading to an M.A. Courses that count toward the degree may be in a wide array of university programs and departments, including history, literature, anthropology, political sciences, sociology, and philosophy.

1. Admission Requirements

a. B.A. or equivalent.
b. Two years of course work in the language or languages appropriate to the field of Judaic studies.
c. Applicants should apply through the Department of History.

2. Degree Requirements

a. The M.A. degree will be granted for thirty-six credits, ordinarily completed in one or two years.
b. Students may enroll in no more than two undergraduate courses. All courses should be approved by the faculty mentor of the student.

Area of Concentration: Europe

Candidates for the M.A. degree in European history pursue a program concentrating on the history of early modern and modern Europe. Some training in a discipline other than history is also recommended. The requirement of nine courses (thirty-six units) is normally distributed as follows:

1. A two-quarter research seminar, either HIGR 230 or 231.
3. European historiography courses: HIGR 220, 221, and/or 222. Each year one to two of these historiography courses are offered, and the student must take these.
4. Two courses in pre-industrial Europe, 1450–1750: HIGR 220 and 221, or HIGR 230 may be counted for this distribution requirement.
5. Two courses in industrial Europe since 1750: HIGR 221, 222, or HIGR 231 may be counted for this requirement, as well as appropriate graduate level colloquia.

Note: HIGR 221 may NOT be used for both (3) and (4).

6. One course in a discipline other than history, if relevant to the student’s program.
7. The remaining courses may be chosen, in consultation with the graduate advisor in the student’s
field, from among the available undergraduate/graduate colloquia (#2605–2805).

Language requirement: M.A. candidates in European history must demonstrate reading competence in one European language other than English.

Area of Concentration: History of Science

The master's program in history of science provides a broad background in preparation for a variety of careers related to science and technology, business, journalism, education, government, or for more advanced degree work. The nine courses (thirty-six units) required are normally distributed as follows:
1. Two courses in science in early modern Europe.
2. Two courses in science since 1750.
3. A two-quarter research seminar.
4. The remaining courses are chosen in consultation with the faculty in history of science. For students whose previous training has been mainly scientific, these will include courses in historical fields other than the history of science. For students who already have historical training, they may include one or more courses related to the sciences.

Area of Concentration: Latin America

This program offers the student a general preparation in the history of Latin America. Students will have the opportunity to specialize in national or colonial periods and can emphasize work in one country. Advanced work in another discipline related to Latin America may also be included in the program. Thirty-six units normally should be distributed as follows:
1. HILA 267, 268, 269
2. Three graduate courses in Latin American history
3. Three other courses related to Latin America in history or in other disciplines

Area of Concentration: United States

This area of concentration offers the M.A. candidate a broad grounding in the literature of American history from the colonial period to the present. In addition to a shared core of courses, students specialize in a topical field of their own choosing. Training in a related discipline outside of history is encouraged. The requirement of nine courses (thirty-six units) is ordinarily distributed as follows:
1. HIGR 265A-B-C. The Literature of American History. These colloquia are required of all entering graduate students in American history.
2. A two-quarter research seminar.
3. Two courses in a single topical field chosen from African-American history, Asian American history, Atlantic history, history of the borderlands and Southwest, Chicano history, economic history, legal and constitutional history, political history, social and cultural history, history of the South, history of the West, or history of women, gender, and sexuality.
4. Two additional courses chosen in consultation with the student's advisor. These courses may be in a related field outside the department.
5. At least six of the nine courses must be colloquia or graduate-level courses. Students may take conjoined courses, directed readings, research seminars, or the 265 series to meet this requirement.

PH.D. PROGRAM

Admission

The Department of History offers the doctor of philosophy degree in the fields of ancient history, East Asian history, European history, history of science, Latin American history, Middle Eastern history, and United States history. Applicants must indicate to which of these programs they seek admission.

Admission is based on the applicant's undergraduate preparation; previous graduate work, if any; three letters of recommendation; one or two writing samples (preferably written for history courses); and scores from the Graduate Record Examination (GRE). The GRE subject exam in history is not required. The Test of English as a Foreign Language (TOEFL) is required for foreign applicants. A minimum score of 550 for the paper-based test or a score of 213 for the computer-based test is required on the TOEFL. The minimum grade-point average for admission is 3.0 with a higher average in history and related subjects. With very few exceptions, students are expected to begin their programs in the fall quarter.

In most areas of concentration, knowledge of at least two foreign languages will be required during a student's academic career. In general, applicants are expected to have a reading knowledge of the languages most appropriate to their major field at the time of admission. Thus, students in ancient history, East Asian history, European history, history of science, Latin American history, and Middle Eastern history should have a working knowledge of at least one foreign language at the time of admission. Refer to the online application for filing deadline.

For online application visit: http://ogs.ucsd.edu/

Fields of Study

Each student will pursue a major field within one of the PhD programs, and two minor fields. The first minor field can be a supplementary field within their program (e.g., medieval Chinese history for a modern Chinese historian), while the second minor field is usually chosen from outside the geographical area or outside the discipline. During the first two years, the student should identify a special area of interest in the major field to pursue a dissertation project.

I. Ancient History

Students in ancient history will be expected to demonstrate a broad mastery of the entire field, with special concentration as follows:
1. Major Fields
   a. The history of Israel in the biblical period
   b. The history of the Jewish people in antiquity
2. First Minor
   a. One of the fields listed above not chosen as the major field
   b. Greek and Roman history
   c. The Middle East before Islam (western Asia and northeastern Africa from the sixth century B.C.E. to the seventh century C.E.)

3. Second Minor
   a. A field of history outside of ancient history
   b. A related discipline, offered through another department

4. Language Requirements
   a. All students will be expected to demonstrate a reading knowledge of two modern foreign languages, usually French and German. This requirement may be satisfied by any of the means recognized by the department.
   b. All students will be expected to demonstrate a reading knowledge of at least one and usually two of the three following ancient languages: Greek, Hebrew, and Latin. The languages will be chosen as appropriate to the student's particular interests and the requirement will be satisfied by departmental examination.
   c. The second and sometimes third language not elected under (2) may be required if necessary for the student's research. Additional languages, such as Akkadian, Aramaic, Egyptian, Ugaritic, Phoenician, and middle and modern Hebrew, may be required as necessary for the student's research. The required level of competence will be set as appropriate to the student's needs and the requirement will be satisfied by departmental examination.

5. Core Courses
   HIGR 255 Historical Scholarship in Ancient History
   HIGR 260 Research Seminar in Ancient History (two quarters)

II. East Asian History

Students in East Asian history will be expected to demonstrate broad competence in the entire field, with special concentration as follows:

1. Major Fields
   a. Modern China
   b. Modern Japan
   c. Pre-modern China
2. Minor Fields
   Students majoring in modern Chinese history will be expected to pass three minor fields for a broad perspective on East Asian history:
   a. Pre-modern Chinese history
   b. Modern Japanese history
   c. A history field outside of East Asia, or a discipline outside of history
   For students majoring in Japanese history:
   d. A field in history
   e. A related field offered through another department
   Note: One of the minor fields must not focus exclusively on East Asia.
   Students majoring in pre-modern Chinese history will pass three minor fields:
   g. Modern Chinese history
   h. Pre-modern history of another area

i. One of modern Japanese history; a relevant field outside of East Asia; or a discipline outside of history

3. Language Requirements
   For students majoring in Chinese history: students must demonstrate a reading knowledge of Chinese and a reading knowledge of a second foreign language related to the student’s research interests.
   For students majoring in Japanese history: students must demonstrate a reading and speaking knowledge of Japanese. Depending on specialization, reading knowledge of a second foreign language might be necessary.
   Students majoring in pre-modern Chinese history must demonstrate proficiency in classical Chinese, and another relevant Asian or European language.

4. Core Courses
   For Chinese history students:
   - HIGR 210: Historical Scholarship on Modern Chinese History (three quarters)
   - HIGR 211: Historical Scholarship on Modern Japanese History (two quarters)
   - HIGR 212: Historical Scholarship on Modern East Asian History
   - HIGR 213: Sources on Modern Chinese History
   - HIGR 215A-B: Research Seminar in Modern Chinese History
   - HIGR 217A-B-C: Historical Scholarship on Pre-Modern Chinese History
   For Japanese history students:
   - HIGR 211: Historical Scholarship on Modern Japanese History (two quarters)
   - HIGR 212: Historical Scholarship on Modern East Asian History
   - HIGR 214: Readings in Japanese on Modern Japan
   - HIGR 216A-B: Research Seminar in Modern Japanese History

III. European History

   The graduate program in European history aims to achieve a dual objective: to develop a broad mastery of the major themes and scholarship in the field, as well as to encourage a special focus of research within a single nation or region in either the modern or early modern era.

   1. Major Fields
      Within the major field, national specialization is offered in modern Germany, Spain, Russia and Greece, and in early modern Italy and France. Regional specialization is offered in central/eastern Europe and in the Mediterranean.
      a. Modern Europe
      b. Early modern Europe
   2. First Minor Field
      The first minor field should be selected from within the parameters of European history, but in a chronological period outside that of the major field.
      a. Ancient Mediterranean
      b. Medieval Europe
      c. Early modern Europe
      d. Modern Europe
      e. A second national history

3. Second Minor Field
   The second minor field is designed either to develop a non-European teaching expertise or to pursue broader theoretical reading related to the research interests of the student.
   a. A geographical area outside Europe
   b. History of science
   c. A transnational thematic or theoretical concentration, such as gender history, citizenship, nationalism, etc.
   d. A thematic or theoretical concentration rooted in another discipline, such as anthropology, sociology, art history, ethnic studies, or literature.

4. Language Requirement
   All European Ph.D. students must show reading proficiency in two European languages other than English.

5. Core Required Courses
   - HIGR 200: History and Social Theory
   - HIGR 220: Historical Scholarship on European History, 1500–1715
   - HIGR 221: Historical Scholarship on European History, 1715–1850
   - HIGR 222: Historical Scholarship on European History Since 1850
   - HIGR 230A-B: Research Seminar in Early Modern Europe
   - HIGR 231A-B: Research Seminar in Modern Europe

IV. History of Science

   Note: Students should indicate whether they are also applicants for admission to the interdepartmental program in Science Studies (history, philosophy, and sociology of science).

   1. Major Fields
      a. Science in early modern Europe
      b. Science in the eighteenth and nineteenth centuries
      c. Science in the twentieth century
      d. Another field of comparable breadth, defined in consultation with the major field advisor
   2. First and Second Minor Fields (any two of the following may be selected, in consultation with the major field advisor).
      b. Any of the other fields offered by the department, provided that it offers general historical understanding of the same period as the major field.
      c. A field of history of science not chosen as the major field.
      d. A second field of history, provided that it concentrates on a period or region other than that chosen for the first minor field.
      e. A related discipline, offered through another department. Note: This field may be in the physical or life sciences.

3. Language Requirement
   Competency in one or two languages in addition to English before advancement to candidacy is required. The requirement will vary depending on chosen major field.

4. Core Required Courses
   - HIGR 236A-B: Seminar in History of Science
   - HIGR 238: Introduction to Science Studies
   - HIGR 239: Seminar in Science Studies
   - HIGR 240: Colloquium in Science Studies
   - HIGR 241: Advanced Approaches to Science Studies

V. Latin American History

   Doctoral candidates in Latin American history are expected to gain a broad chronological and geographical mastery of the field as a whole. The oral examination in the major field, while concentrating on the student’s special area of interest, will be a comprehensive examination covering the whole field of Latin American history.

   1. Major Fields
      a. The national period of Latin America, with a specialty in the Andean Republics, Brazil, the Caribbean, Mexico, or the Southern Cone countries
      b. Colonial Latin America, with an emphasis on one major region
   2. First Minor
      The student should select either the national period or the colonial period as a chronological supplement to the major.

   3. Second Minor
      a. The history of another geographic area outside Latin America and the Caribbean
      b. An area of discipline, offered through another department, related to the student’s dissertation or preparation for university teaching

4. Language Requirement
   Competency in two languages in addition to English before advancement to candidacy is required. Normally the first of these will be Spanish. The second may be Portuguese or another European or non-European language, including an indigenous language of the Americas.

5. Core Required Classes
   - HIGR 200: History and Social Theory
   - HILA 267/268/269: Seminar in the Literature of Latin American History
   - HIGR 247A-B: Readings and Seminar on Colonial Latin America
   - HIGR 248A-B-C: Readings and Seminar on Latin America, National Period
VI. Middle Eastern History

The objective of the doctoral program in Middle Eastern history is to achieve broad expertise in the modern history of the Middle East and to develop a special focus in the history of the late Ottoman Empire or its successor states.

1. Major Fields
   a. Late Ottoman history (approximately 1780 to 1920)
   b. Colonial and national period of the post-Ottoman Middle East with a specialty in the Arab East, Turkey, Egypt, etc.

2. Minor Fields
   Any two of the following:
   a. The field of Middle Eastern history not chosen as a major field (see above)
   b. The modern history of a geographic area outside of the Middle East (ordinarily in European history)
   c. A related geographical or topical field (e.g., medieval Middle East, Iran, gender studies) offered through another department

3. Language Requirement
   Students must possess a sound foundation in reading Arabic or Turkish (Ottoman Turkish or modern Turkish) as a requirement for admission to the program. Reading competence in two languages in addition to English is required before advancement to candidacy: the regional language Arabic or Turkish (above), and a modern European language (other than English) related to the major field of specialization.

4. Core Required Courses
   HIGR 275A-B: Research Seminar in Middle Eastern History

VII. United States History

1. Major Fields
   a. United States History

2. First Minor
   a. One of the following topical fields:
      - African-American history
      - Asian-American history
      - Atlantic history
      - economic history
      - legal and constitutional history
      - political history
      - social and cultural history
      - history of the South
      - history of the West
      - history of women, gender, and sexuality
      - one designed in consultation with the advisor

3. Second Minor
   a. A geographic area outside the United States in either the premodern or modern period
   b. A related discipline offered through another department

4. Language Requirement
   Competency in one language in addition to English before advancement to candidacy is required.

5. Third-Year Seminar
   U.S. History students are encouraged in their third year of study to complete HIGR 271: New Research Directions in U.S. History.

6. Core Courses
   HIGR 200: History and Social Theory
   HIGR 265A-B-C: The Literature of American History
   HIGR 267A-B: Research Seminar in United States History
   HIGR 271: New Research Directions in U.S. History

VIII. Dual Degree Program

Students who wish to earn both the Ph.D. in history from UC San Diego and the Juris Doctor from California Western School of Law must apply to and be independently accepted into both programs under each of the campus’ standards and procedures.

Students pursuing the dual degree program will normally alternate years at each institution, in a manner agreed on by the student’s advisors and appropriate committees. Thus, for example, a student may spend his or her first year at Cal Western, his or her second year at UCSD, and so on through the program. At least one year at each institution must be completed by the end of three years.

Each institution will accept a small number of course credits from the other institution to satisfy its degree requirements. Cal Western remains on a semester system, while UCSD continues on a quarter system. With the exception of the historiography and research seminars and subject to approval by a faculty advisor and the graduate committee, the Department of History will accept for credit up to two classes from Cal Western.

IX. Other Fields

Students may be admitted to graduate study leading to the Ph.D. in fields other than those listed above upon the recommendation of an appropriate faculty member. In such cases, a special program of study appropriate to the field will be devised by the major field advisor, subject to the approval of the department’s graduate committee.

Note: The department also offers graduate work in African history. When appropriate, students may select a minor field in this area.

Ph.D. Course Work

A normal full-time program consists of twelve units (or three four-unit courses) per quarter. Ph.D. students are expected to complete at least one of the following minimum formal courses of study prior to their qualifying examination: (1) two two-quarter research seminars, three one-quarter historiography courses in their major field, and five other courses (which may be a combination of colloquia, conjoined courses, or directed readings, but which must include one cross-field graduate colloquium like HIGR 200); or (2) three two-quarter research seminars (not necessarily in the same field), three one-quarter historiography courses in their major field, and three other courses (which may be a combination of colloquia, conjoined courses, or directed readings, but which must include one cross-field graduate colloquium like HIGR 200). Students are encouraged to take their first research seminar in their major field during the initial year of graduate study. After the first year, most students' full-time program includes two regular academic courses each quarter (eight units) and employment as a 50 percent teaching assistant (four units).

Cross-Field Thematic Graduate Colloquia

In addition to the graduate courses offered by the field groups, the department will offer at least one and up to three cross-field colloquia each year, which are designed to cross geographical and chronological boundaries. Two of these courses are taught at least every other year under this rubric.

An introductory graduate course for students in all fields. Themes include cross-field historiography and theory, interdisciplinary approaches to history and historical method. (May be taken twice for credit, if the reading list is significantly different.)

HIGR 205: Feminist Historical Studies
An introduction to feminist historical studies. This course will provide students with training in women’s history, in the feminist theories that undergird that scholarship, and in gender analysis. (May be taken twice for credit, if the reading list is significantly different.)

HIGR 207: Nationalism, Colonialism, and Race
A transdisciplinary and comparative course on the interplay of nationalism, colonialism, and race (as well as class and gender/sexuality) in the nineteenth and twentieth centuries.

All Ph.D. students are required to complete at least one cross-field graduate course (typically in the HIGR 200-HIGR 208 series) before advancement to candidacy. Students are strongly encouraged to meet this requirement in their first year, as their field and program of study permits.

Part-time Study

Students who enroll in fewer than twelve graduate or upper-division units per quarter are considered part-time students. Part-time study may be pursued in several master’s programs and a few Ph.D. programs at UCSD. Approval for individual students to enroll on a part-time basis may be given for reasons of occupation, family responsibilities, or health. Individuals who are interested in part-time study and meet the above qualifications should see the department’s graduate coordinator.

Part-time students must satisfy the same admission requirements as full-time students and are eligible, at the discretion of the department, for 25 percent time teaching or research assistantships. Students who are approved by the dean of Graduate Studies for enrollment in a program of half-time study or less (maximum of six units) may be eligible for a reduction in fees. All other students pay the same fees as full-time students.

Ph.D. and M.A. Language Requirements

Ph.D. candidates in Chinese, European, Middle Eastern, and Latin American history must demonstrate competence in two foreign languages.
Ph.D. candidates in history of science, Japanese, and United States history, as well as M.A. candidates in European and Latin American history, must demonstrate competency in one foreign language.

Ph.D. candidates in ancient history must demonstrate competency in two modern foreign languages as well as the relevant ancient languages.

Ph.D. candidates in Middle Eastern history must possess a sound foundation in reading Arabic or Turkish (Ottoman Turkish or modern Turkish) as a requirement for admission to the program. Reading competency in two languages in addition to English is required before advancement to candidacy: the regional language Arabic or Turkish above, and a modern European language (other than English) related to the major field of specialization.

Additional languages appropriate to the special field of study as well as language requirements for a candidate in a field other than those already mentioned may be required by the graduate committee in consultation with the student's major field advisor. Students may satisfy the foreign language requirement in one of the following ways:

1. By completing, with a grade of B- or better in each term, a two-year language sequence from the student's undergraduate institution. Such a sequence must have been completed within two years of the time the request is made to the graduate committee for certification of competency.

2. By completing, while as a graduate student, with a satisfactory (S) grade in each term, a two-year, lower-division sequence in the language approved by the graduate committee.

3. By completing, while as a graduate student, with a satisfactory (S) grade in each term, a one-year, upper-division sequence in the language approved by the graduate committee.

4. By passing a translation examination administered by the department. (This is the only option available for Chinese and Japanese.)

Students are urged to complete at least one foreign language examination by the end of the first year of study and must do so by the beginning of their third year. Failure to meet this requirement is grounds for denial of financial support. No student may take the oral qualifying examination before completing all language requirements.

Ph.D. Examinations

A. Minor Fields

Ph.D. candidates are strongly encouraged to take at least one minor field examination by the end of the first year and to complete the second minor exam by the end of the second year. All minor fields must be completed before the major field exam can be taken. Generally, the department recognizes two types of minor fields. The first is a teaching field. That is, passing a minor field in an area certifies, on a student's record and resume, that the student has mastered the literature and the major issues in another geographical or chronological field such that the student is qualified to teach in that area. (An example would be a minor field in modern Japanese history for an East Asian history student specializing in modern China; or early modern European history for a modern Europeanist.) A second type of minor field is designed to familiarize a student with a range of theoretical, comparative, and/or transnational issues, which will be useful in the formulation of a dissertation topic and future research in the student's major field.

In some cases, this minor field is pursued outside the department (in consultation with the student's advisor); an example might be a minor in the Department of Ethnic Studies for a student working on race and ethnicity in the U.S. In other cases, the student may identify a faculty member or series of faculty members within the department who focus on a particular theme, such as gender, citizenship, or imperialism.

The minor field is defined by a reading list agreed on by the student and the minor field advisor(s).

As a guideline, the reading list should encompass about three-quarters' worth of course work (which may be taken with up to three faculty members), and include about fifty titles, with forty to seventy titles representing a reasonable range, depending on the combination of books and articles. The list is intended to establish what will be expected of the student and to prevent confusion over the material to be covered. The list should be finalized at the beginning of the quarter during which the student plans to complete the minor field.

Completion or evaluation of a minor field takes several forms, depending on the policies of different field groups or individual professors.

1. A one-hour oral examination.

2. A three-hour or twenty-four-hour take-home written exam.

3. An "un-timed" synthetic essay, twenty-five to thirty pages, that organizes the scholarship of the field.

4. Three shorter papers (eight to ten pages) each encompassing a single quarter's worth of reading. This option is especially appropriate in cases where the student is working with more than one faculty member on a minor field.

5. Developing a course syllabus in the field.

B. The Major Field: Oral Qualifying Examination and Candidacy

Students are normally expected to take their qualifying examination no later than the spring of their third year of study (except as otherwise specified by the individual fields), and required to do so within four years. Students must fulfill all course work, minor field, and language requirements before taking the qualifying examination. The qualifying examination is an oral test in the student's major field of study, conducted by at least five examiners. A minimum of three examiners must be members of the Department of History, and usually they will be in the student's major field. The fourth can be either a faculty member from inside the department but outside the major field, or someone from another department. The fifth must be a tenured faculty member in another department. The student's minor field advisor(s), whether inside the department or in another department, often serve in this "outside" capacity on the oral committee, although this is not required. Students should consult with their advisor about the composition of the examining committee before their examination. In addition, the membership of the committee must be approved before the exam by the department chair and the dean of Graduate Studies. The student must meet with the graduate coordinator at least three weeks prior to the oral date to arrange for the submission of this paperwork.

The purpose of the major field oral examination is twofold: 1) to evaluate the student's knowledge of the major research field and 2) to discuss the student's dissertation project (with the exception of the U.S. field, which holds a separate meeting for this purpose, no later than two months after the exam).

The exam lasts between two and three hours, and is structured to give each of the five committee members an opportunity to ask questions of the student, based on the major field reading list. When the prospectus is also under discussion, usually the last half-hour is reserved for this purpose. When the exam is over, the student leaves the room and the committee decides whether the student has passed the exam and advanced to candidacy.

1. The major field book list should be drawn up by the student in consultation with the faculty advisor, and should be finalized at least thirty days before the date of the exam. Each major field list will reflect the unique interests of the student, while also incorporating core themes of the field. Some field groups have formal core lists that may comprise a part of each student's total list, while others do not. In all cases, students are expected to organize their major field lists according to the specific themes/nations/issues that have informed their graduate study, since no major field list can be all-inclusive. The number of titles on a major field list should be around 100, with 80–120 titles representing a reasonable range.

2. The discussion of the dissertation project will be framed by a five- to ten-page prospectus written by the student and submitted to the committee with the book list, at least three weeks before the exam. The purpose of the discussion is to determine the feasibility of the scope of the project and to offer suggestions about source materials and research strategies.

Should a student fail the examination, the examining committee will clarify the weaknesses in the exam, so that the student can prepare to take it a second time. If a second oral examination is warranted, the department requires that it should be taken no later than one quarter after the first examination. If the student fails the oral examination a second time, his or her graduate studies in the department will be terminated.

An M.A. degree may also be awarded to continuing Ph.D. students upon successfully passing the oral qualifying examination. The M.A. is not automatically awarded; students must apply in advance to receive the degree, but no additional work is required. Note: Students who wish to receive an M.A. degree as part
of the Ph.D. program must apply for master's degree candidacy by the end of the second week of the quarter in which they expect to receive the degree. Please see the graduate coordinator regarding this application.

The various requirements noted above apply to students who have done no previous graduate work in history. If a candidate has completed some graduate work before entering UCSD, appropriate adjustments in course work may be approved by general petition to the graduate committee. Nevertheless, all candidates are required to meet language requirements, pass field examinations, and complete and defend a dissertation.

**Dissertation**

After completing all relevant examinations and language requirements, the student is expected to write a dissertation under the supervision of his or her faculty advisor and the doctoral committee. The Department of History has established the following guidelines for dissertation work. The dissertation should:

- represent an original and significant contribution to knowledge
- be based upon primary research
- clearly demonstrate the capacity of the student to pursue independent historical research
- be written in clear and coherent prose

The scope of the dissertation and its length will depend upon the nature of the problem and the documentation. The department encourages students to complete their research and writing by the end of their sixth year of study. The scope and length of the dissertation should therefore be such that a complete project can be executed in no more than three years, but it should also be capable of further development for publication as a series of articles in scholarly journals, or as a book.

**Guidelines for Ph.D. Completion**

**First Year**

- All courses must be taken for a letter grade.
- Research seminar and field group historiography courses.
- Cross-field graduate colloquium (recommended).
- One language requirement.
- Select an advisor in major field.
- Define major and two minor fields with advisor.
- Complete one minor field.

**Second Year**

- Second research seminar and remaining field group required courses.
- Complete language requirement.
- Complete second minor field.

**Third Year**

- If not done so already, complete all minor field exams, language requirements, and course work (twelve four-unit courses required).
- Write a dissertation prospectus in preparation for the major field exam.
- Pass qualifying exam in major field.

**Fourth Year**

- Primary/field/archival research for the dissertation.

**Fifth–Seventh Years**

- Writing and completing dissertation.

**Note:** While students may take an eighth year to complete the Ph.D., they may not receive financial support from the university or the department, including TAships or readerships after the seventh year.

**Departmental Ph.D. Time Limit Policies**

- Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

**Financial Support**

- Upon recommendation of the department, several types of financial aid are available to graduate students: teaching assistantships, readerships, research assistantships, fellowships, and travel grants, and full or partial remission of fees and tuition. Graduate students are eligible for one or a combination of the six forms of financial support.

- Entering students who are offered a multi-year financial package are either offered fellowships or readerships, along with fee and tuition remission during their first year, followed by guaranteed employment as a teaching assistant in subsequent years. In some cases, guaranteed dissertation writing funds are part of such a package. Regardless of the initial financial package, the department seeks to ensure that all continuing Ph.D. students are financially supported, usually through TAships. In recent years all students needing support have received either fellowships, teaching assistant, or research assistant positions. To the extent that resources are insufficient to meet the need, the department, on the advice of the graduate committee, will rank students using a combined criterion of academic performance and financial need.

- Fellowships, travel grants, and research assistantships are granted by the Office of Graduate Studies (OGS) upon the recommendation of the department. Teaching assistants are appointed by the department upon the recommendation of the graduate committee and by the college writing programs. Readers are appointed by the department upon the recommendation of the professor whose course requires such assistance. At the discretion of the department, half-time graduate students are eligible for 25 percent TAships. Graduate students must maintain a minimum grade-point average of 3.0 to be considered for any type of financial aid. Financial support is not renewed automatically but is approved by the department on a yearly basis.

- Departmental policy has been to seek seven years of support for students in the program. The Office of Graduate Studies grants partial remission of fees for nine quarters after advancement to candidacy (“normative time”) if the student is advanced to candidacy by the end of the third year. (If the student delays advancement, the amount of normative time is reduced accordingly.) Upon expiration of normative time the student must complete the dissertation or resume full payment of fees.

**Opportunities for Teaching**

Undergraduate teaching, for which graduate teaching assistants earn regular academic credit, is an integral part of the graduate program at UCSD. The department considers experience in teaching an important part of a graduate student’s professional training. To prepare for an academic career, the Ph.D. candidate is encouraged to assist in courses offered by the department, ordinarily as a course Reader (grader) or Teaching Assistant. A maximum of four units per quarter may be taken in undergraduate teaching.

Readerships are available in a variety of upper-division history courses, while the department offers positions for teaching assistantships in lower-division East Asian and U.S. history courses. Graduate students in other fields usually serve as TAs in the interdisciplinary college programs, such as ERC’s “Making of the Modern World,” Revelle’s “Humanities,” Marshall’s “Dimensions of Culture,” Sixth’s “CAT,” and the Muir College Writing Program. Assistantships must maintain a minimum grade-point average of 3.0 in order to receive academic employment on campus.

**Job Placement**

In recent years, 85 percent of the department’s Ph.D. graduates received positions as tenure-track assistant professors at colleges and universities around the country. The remaining 15 percent are currently administrators, visiting scholars, lecturers, or postdoctoral fellows at various educational institutions. Experience indicates that many from this latter group will eventually get professional appointments.

**COURSES**

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

**+ Courses that focus on the period before 1800.**

**LOWER-DIVISION**

**HILD 2A–B–C, United States**

A year-long lower-division course that will provide students with a background in United States history from colonial times to the present, concentrating on social, economic, and political developments. (Satisfies Muir College humanities requirement and American History and Institutions requirement.)

**HILD 7A–B–C, Race and Ethnicity in the United States**

Lectures and discussions surveying the topics of race, slavery, demographic patterns, ethnic variety, rural and urban life in the U.S.A., with special focus on European, Asian, and Mexican immigration.

**HILD 7A, Race and Ethnicity in the United States (4)**

A lecture-discussion course on the comparative ethnic history of the United States. Of central concern will be
slavery, race, oppression, mass migrations, ethnicity, city life in industrial America, and power and protest in modern America.

HILD 7B. Race and Ethnicity in the United States (4)
A lecture-discussion course on the comparative ethnic history of the United States. Of central concern will be the Asian-American and white ethnic groups, race, oppression, mass migrations, ethnicity, city life in industrial America, and power and protest in modern America.

HILD 7C. Race and Ethnicity in the United States (4)
A lecture-discussion course on the comparative ethnic history of the United States. Of central concern will be the Mexican-American, race, oppression, mass migrations, ethnicity, city life in industrial America, and power and protest in modern America.

HILD 10-11-12. East Asia
A lower-division survey that compares and contrasts the development of China and Japan from ancient times to the present. Themes include the nature of traditional East Asian society and culture; East Asian responses to political and economic challenges posed by an industrialized West, and war, revolution and modernization in the twentieth century.

HILD 10. East Asia: The Great Tradition (4)
The evolution of East Asian civilization from the first writing through classical Heian Japan and late imperial Song China. Primary and secondary readings on basic ideas, institutions, and practices of the Confucian, Daoist, and Buddhist paths and of the state and family.

HILD 11. East Asia and the West, 1279–1911 (4)
From the Mongol conquests to China's last dynasty and Japan's annexation of Korea, this course examines political, institutional, and cultural ruptures and continuities as the East Asian countries responded to the challenges of Western imperialism with defense, reform, conservative reaction and creative imitation.

HILD 12. Twentieth-Century East Asia (4)
Examines the emergence of a regionally dominant Japan before and after World War II; the process of revolution and state-building in China during the Nationalist and Communist eras; and Korea's encounter with colonialism, nationalism, war, revolution and industrialization.

HILD 14. Film and History in Latin America (4)
Students watch films on Latin America and compare them to historical research on similar episodes or issues. Films will vary each year but will focus on the social and psychological consequences of colonialism, forced labor, religious beliefs, and "Modernization."

UPPER-DIVISION

Please note: The following upper-division courses are offered on a regular basis, although not every class is available every year. Check with the department to see what is available each quarter.

AFRICA

Lecture Courses

HIAF 111. Modern Africa Since 1880 (4)
A survey of African history dealing with the European scramble for the broad outlines of historical developments in the sub-region through the twentieth century, including such themes as religious, political, and social changes. Prerequisite: upper-division standing.

HIAF 112. West Africa Since 1880 (4)
West Africa from the nineteenth century onwards and examines the broad outlines of historical developments in the sub-region through the twentieth century, including themes as social, political, and economic. Prerequisite: upper-division standing.

HIAF 113. Small Wars and the Global Order: Africa and Asia (4)
Examines the traumas, interrelation, and global repercussions of national conflicts ('small wars') in the postcolonial world. Focus on Africa and Asia from the Cold War to the present with particular attention to the intersection of foreign interests, insurgency, and geopolitics. Prerequisite: upper-division standing or instructor consent.

HIAF 120. History of South Africa (4)
The origins and the interaction between the peoples of South Africa. Special attention will be devoted to industrial development, urbanization, African and Africaner nationalism, and the causes and development of apartheid and its consequences. Prerequisite: upper-division standing.

HIAF 122. Traditional African Religions (4)
A study of the meaning, structure, and sources of African traditional religion. The course examines the attitudes of mind and belief and practices which have evolved in many societies in Africa.

HIAF 123. West Africa from Earliest Times to 1800 (4)
Plant and animal domestication, iron-working and the distribution of ethnic/language groups, urbanization, regional and long-distance commerce, and the rise of medieval kingdoms. Prerequisite: upper-division standing. +

HIAF 124. Islam in Contemporary African Societies (4)
The spread of Islam in Africa. The rise of Islamic orthodoxy during the eighteenth and nineteenth centuries, and the social and political effects in the contemporary period geared towards the establishment of Islamic theocracies. Prerequisite: upper-division standing.

HIAF 130. African Society and the Slave Trade (4)
Topics include trans-Saharan trade, slavery with African societies, Atlantic slave trade, East African slave trade, problems of numbers exported and profitability, impact of slave trade on African society, and the abolition of the slave trade. Prerequisite: upper-division standing.

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HIAF 161/261. Special Topics in African History (4)
This colloquium is intended for students with sufficient background in African history. Topics, which vary from year to year, will include traditional political, economic, and religious systems, and theory and practice of indirect rule, decolonization, African socialism, and pan-Africanism. Department stamp required.

HIAF 162/262. The African Diaspora in the Atlantic World (4)
Expose students to the competing paradigms adopted by scholars in the search for an appropriate analytical framework for understanding the African diaspora in the Atlantic world, as well as examine the African impact on Atlantic communities. Graduate students are required to submit an additional paper. Prerequisite: upper-division or graduate standing. Department stamp required.

HIAF 199. Independent Study in African History (4)
Directed readings for undergraduates. Prerequisite: consent of instructor and academic advisor required.

EAST ASIA

Lecture Courses

HIEA 111. Japan: Twelfth to Mid-Nineteenth Centuries (4)
Covers important political issues—such as the medieval decentralization of state power, unification in the sixteenth and seventeenth centuries, the Tokugawa system of rule, and conflicts between rulers and ruled—while examining long-term changes in economy, society, and culture.
HIEA 125. Women and Gender in East Asia (4)
The impact of modern transformations on female roles and gender relations in China, Japan, and Korea, focusing on the late imperial/early modern periods through the twentieth-century. Prerequisite: upper-division standing or instructor consent.

HIEA 126. The Silk Road in Chinese and Japanese History (4)
This course studies the peoples, cultures, religions, economics, arts, and technologies of the trade routes known collectively as the Silk Road from c. 200 BCE to 1000 CE. We will use an interdisciplinary approach. Primary sources will include written texts and visual materials. We will examine these trade routes as an early example of globalization. Prerequisite: upper-division standing or consent of instructor. +

HIEA 128. History of Material Culture in China (4)
Introduction to material culture in China from a historical perspective. Consider Chinese primary sources (including both historical texts and objects) from the point of view of the new interdisciplinary field of material culture studies. Prerequisite: upper-division standing. +

HIEA 129. Faces of the Chinese Past (4)
Through the biographies and autobiographies of prominent and ordinary men and women from antiquity to today, this course explores the evolution of the individual's social structures, class and gender in personal experience, and the production of primary and secondary sources. Prerequisite: upper-division standing or consent of instructor. +

HIEA 131. China in War and Revolution, 1911–1949 (4)
An exploration of the formative period of the twentieth-century Chinese Revolution: the New Culture Movement, modern urban culture, the nature of Nationalist (Guomindang) rule, war with Japan, revolutionary nationalism, and the Chinese Communist rise to power. Prerequisite: upper-division standing or instructor consent.

HIEA 132. History of the People’s Republic of China (4)
This course analyzes the history of the PRC from 1949 to the present. Special emphasis is placed on the problem of postrevolutionary institutionalization, the role of ideology, the tension between city and countryside, Maoism, the Great Leap Forward, the Cultural Revolution. Prerequisite: upper-division standing or consent of instructor. +

HIEA 133. Twentieth-Century China: Cultural History (4)
This course looks at how the historical problems of twentieth-century China are treated in the popular and elite cultures of the Nationalist and Communist eras. Special emphasis is placed on film and fiction. Prerequisite: upper-division standing or consent of instructor. +

HIEA 134. History of Thought and Religion in China: Confucianism (4)
Course will take up one of the main traditions of Chinese thought or religion, Confucianism, and trace it from its origins to the present. The course will explain the system of thought and trace it as it changes through history and within human lives and institutions. Prerequisite: upper-division standing or instructor consent. +

HIEA 135. History of Thought and Religion in China: Buddhism (4)
Course will take up one of the main traditions of Chinese thought or religion, Buddhism, and trace it from its origins to the present. The course will explain the system of thought and trace it as it changes through history and within human lives and institutions. Prerequisite: upper-division standing or instructor consent. +

HIEA 136. History of Thought and Religion in China: Daoism (4)
Course will take up one of the main traditions of Chinese thought or religion, Daoism, and trace it from its origins to the present. The course will explain the system of thought and trace it as it changes through history and within human lives and institutions. Prerequisite: upper-division standing or instructor consent. +

HIEA 137. Women and the Family in Chinese History (4)
The course explores the institutions of family and marriage, and women's roles and experiences within the family and beyond, from classical times to the early twentieth century. Prerequisite: upper-division standing or consent of instructor. +

HIEA 138. Women and the Chinese Revolution (4)
Examines women's roles and experiences in the twentieth-century Chinese revolution, the ways in which women participated in the process of historical change, the question of to what extent the revolution "liberated" women from "Confucian tradition." Prerequisite: upper-division standing or consent of instructor.

HIEA 150. Modern Korea, 1800–1945 (4)
This course examines Korea's entrance into the modern world. It utilizes both textual and audio-visual materials to explore key geopolitical shifts and global phenomena, such as imperialism, nationalism, capitalism, and socialism. Prerequisite: upper-division standing or consent of instructor. +

HIEA 151. The Two Koreas, 1945–Present (4)
This course traces the peninsula's division into two rival regimes. It utilizes both textual and audio-visual materials to reveal the varied experiences of North and South Korea, with authoritarianism, industrialization, and globalization. Prerequisite: upper-division standing or consent of instructor. +

Colloquia
The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Prerequisites: upper-division or graduate standing, department stamp.+

HIEA 160/260. Seminar in Modern Japanese History (4)
This colloquium examines controversial domestic and international issues in Japanese history from 1850 to recent times. Topics will vary from year to year. Prerequisite: department stamp, consent of instructor.

HIEA 162/262. History of Women in China (4)
This course concerns women in Chinese history in Imperial times. This course will focus on women's changing roles in the family, society, and culture. Topics will vary from year to year. Requirements will vary for undergraduate, M.A., and Ph.D. students. Prerequisite: upper-division standing.

HIEA 163/263. Cinema and Society in Twentieth-Century China (4)
This colloquium will explore the relationship between cinema and society in twentieth-century China. The emphasis will be on the social, political, and cultural impact of filmmaking. The specific period under examination (1930s, 1940s, post-1949) may vary each quarter. Graduate students will be expected to submit an additional paper. Prerequisite: upper-division or graduate standing and department stamp.

HIEA 164/264. Seminar in Late Imperial Chinese History (4)
Pairs primary sources with scholarship built on them to illuminate later imperial state, society, and individual lives, and to show how historians generate and answer questions. Topics vary; may be repeated for credit. Graduate students will be expected to submit an additional paper or project. Prerequisite: upper-division or graduate standing and department stamp. +

HIEA 165/265. Topics in Medieval Chinese History (4)
Topics will vary in the history of medieval China. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students will submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. Prerequisite: upper-division or graduate standing and department stamp. +

HIEA 166/266. Creating Ming Histories (4)
The Ming (1368–1644) is often considered expanding Europe's opposite: absolutist, closed, and stagnant. Reading new scholarship in conjunction with its primary sources, we'll explore the period's dynamic politics and competitive society, and the production of historical knowledge. Graduate students will be required to submit an additional paper. Prerequisite: upper-division or graduate standing and department stamp.

HIEA 167/267. Special Topics in Modern Chinese History (4)
This seminar examines various domestic and international issues in Chinese history from 1800 to recent times. When topics vary, may be repeated for credit. Graduate students will be required to submit a more substantial piece of work or an additional paper. Prerequisite: upper-division standing or consent of instructor.

HIEA 168/268. Topics in Classical and Medieval Chinese History (4)
Chinese society, thought, religion, culture, economy and politics from the Shang through the Song dynasties, through primary and secondary sources. Topics vary; may be repeated for credit. Requirements differ for undergraduate, M.A. and Ph.D. students. Graduate students will be required to submit a more substantial piece of work or an additional paper. Prerequisite: upper-division standing or consent of instructor.

HIEA 171/271. Society and Culture in Premodern China (4)
Explores premodern Chinese society and culture through the reading and discussion of classics and masterpieces in history. Examines how values and ideas were represented in the texts and how they differed, developed, or shifted over time. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit an additional paper. Prerequisite: upper-division or graduate standing, department stamp. +

HIEA 180. Topics in Modern Korean History (4)
This colloquium will examine selected topics in modern Korean history through both primary sources (in translation) and secondary sources. Topics will vary year to year. Prerequisites: upper-division standing and departmental stamp.

HIEA 199. Independent Study in East Asian History (4)
Directed reading for undergraduates under the supervision of various faculty members. Prerequisite: consent of instructor required.

EUROPE
See History of Science for more European courses (HISC 101ABC, HISC 106).

Lecture Courses
HIEU 101. Greece in the Classical Age (4)
The social, political, and cultural history of the ancient Greek world from the Persian Wars to the death of Alexander the Great (480–323 B.C.). +

HIEU 101A. Ancient Greek Civilization (4)
The social political, and cultural history of the ancient Greek world from the earliest settlements to the empire of Alexander the Great (c. 300–323 B.C.). Prerequisite: upper-division standing or consent of instructor.
HIEU 102. The Roman Republic (4)
The political, economic, and intellectual history of the Roman world from the foundation of Rome to the time of Julius Caesar. +

HIEU 103. The Roman Empire (4)
The political, economic, and intellectual history of the Roman world from the time of Julius Caesar to the death of Justinian (A.D. 565). +

HIEU 104. Byzantine Empire (4)
A survey of the political, economic, and cultural developments of the Byzantine state from the reign of Constantine to the fall of Constantinople. This course will emphasize the importance of the Byzantine state within a larger European focus, its relationship to the emerging Arab states, its political and cultural contributions to Europe and the late medieval period. +

HIEU 105. The Early Christian Church (4)
A study of the origins and development of early Christian thought, literature, and institution from the New Testament period to the Council of Chalcedon. Prerequisite: upper-division standing or consent of instructor. +

HIEU 110. The Rise of Europe (4)
The development of European society and culture from the decline of the Roman Empire to 1050. Prerequisite: Humanities.

HIEU 111. Europe in the Middle Ages (4)
The development of European society and culture from 1050 to 1400. Prerequisite: Humanities sequence or its equivalent. +

HIEU 112. Saints and Sinners in the Middle Ages (4)
This class examines medieval history through the lens of hagiography and biography. Such texts provide intimate views of the culture, including: family and social structures; attitudes towards the supernatural; the body, gender, and aging; peace and violence; hierarchy and dissent. Prerequisite: upper-division standing or consent of instructor. +

HIEU 113. Rule, Conflict, and Dissent in the Middle Ages (4)
This course explores the question of religious and political dissent in Europe from the twelfth through the fifteenth centuries. We will explore the tensions between ideal models of religious and cultural unity, and the realities of community conflict, heretical controversies, and popular uprisings. +

HIEU 113A. Conflict and Settlement in Medieval Europe (4)
The course studies conflict resolution in Europe during the ninth to thirteenth centuries when governments were too weak to enforce norms of peace and order. We will read medieval literature and histories and anthropological accounts of conflict resolution in stateless societies. Prerequisite: upper-division standing or instructor consent. +

HIEU 115. The Pursuit of the Millennium (4)
The year 2000 provokes questions about the transformation of time, culture, and society. Taking the year 1000 as a touchstone, this class examines the history of apocalyptic expectations in the Middle Ages through a close scrutiny of both texts and art. Prerequisite: upper-division standing or consent of instructor. +

HIEU 116. The Greek Diaspora (4)
This course examines the history of the Greek Diaspora in Canada, South America, Australia, and Africa from 1700 to the present. Special attention is paid to the Greek migration to North America during the twentieth century. Prerequisite: upper-division standing or consent of instructor.

HIEU 117A. Greece and the Balkans in the Age of Nationalism (4)
This course examines the history of Greece and the Balkans (1830–1912) and the political and economic development in the eighteenth century, nationalism, independence wars, state-nation formation, interstate relations, the Eastern Question, rural society, urbanization, emigration, and the Balkan Wars. Prerequisite: upper-division standing or consent of instructor.

HIEU 117B. Greece and the Balkans during the Twentieth Century (4)
This course examines the history of Greece and the Balkans (1914–2001). Topics covered: World War I, population exchange, authoritarianism, modernization, World War II, resistance, civil war, Greek-Turkish relations, Cyprus, collapse of Communism, 1990s conflicts, and EU expansion. Prerequisite: upper-division standing or consent of instructor.

HIEU 118. Americanization in Europe (4)
Examines problems surrounding the transfer of American culture, values, and styles to Europe in the twentieth and twenty-first centuries. Topics may include: consumer society, popular culture, commercial and business practices, “McDonaldization,” political and military influence, democratization, and resistance to Americanization. Students may not receive credit for both HIEU 117A and HIEU 118. Prerequisite: upper-division standing or consent of instructor.

HIEU 119. Modern Italy: From Unification to the Present (4)
History of Italy from the 1860s to the present with special focus on the changing relationship between state and society. Topics include the “Southern Problem,” the Catholic Church, the fascist dictatorship, the Cold War, terrorism, contemporary politics and culture. Prerequisite: upper-division standing or consent of instructor.

HIEU 120. The Renaissance in Italy (4)
The social, political, and cultural transformation of late-medieval Italy from the heyday of mercantile expansion before the plague to the dissolution of the Italian state system with the French invasions of 1494. Special focus upon family, associational life and factionalism in the city, the development of the techniques of capitalist accumulation, and the spread of humanism. Prerequisite: upper-division standing. +

HIEU 122. Politics Italian Renaissance Style (4)
Modern political and historical thought find their roots in the realistic examination of fifteenth- and sixteenth-century Italian political experience. Contemporary Renaissance humanists and thinkers—Machiavelli, Guicciardini, Castiglione, Botero, and Campanella—tested classical, Christian, and legal models against practical necessities. +

HIEU 125. Reformation Europe (4)
The intellectual and social history of the Reformation and Counter-Reformation from the French invasions to the Edict of Nantes. Emphasis is upon reform from below and above, the transformation of grass-roots spirituality into institutional control. Prerequisite: upper-division standing or consent of instructor. +

HIEU 126. Age of Expansion: Europe and the World, 1400–1600 (4)
Course will begin with a survey of the major empires of the fifteenth century, concentrating on the links between them. It will then examine the entrance of Europeans on the global scene in the sixteenth century. This part of the course will examine European/ non-European encounters, focusing on perceptions, economic interaction, and institutional adaptation and will emphasize the Hispanic American, Ottoman, and Indian Ocean cases. +

HIEU 127. Sport in the Modern World (4)
This course looks at the phenomenon of sport in all of European history from Ferdinand and Isabella to 1700. Argument will focus on colonialism in Africa. Prerequisite: upper-division standing or consent of instructor.

HIEU 128. Europe Since 1945 (4)
An analysis of European history since the end of the Second World War. Focus is on political, social, economic, and cultural developments within European societies as well as on Europe’s relationship with the wider world (the Cold War, decolonization).

HIEU 129. Paris, Past and Present (4)
This course surveys the historical and cultural significance of Paris from about 1500 to the present. The focus is on interactions between political, architectural, and urban evolutions, and the changing populations of Paris in times of war, revolutions, and peace. +

HIEU 130. Europe in the Eighteenth Century (4)
A lecture-discussion course focusing on Europe from 1688–1789. Emphasis is on the social, cultural, and intellectual history of France, Germany, and England. Topics considered will include family life, urban and rural production and unrest, the poor, absolutism, and the Enlightenment from Voltaire to Rousseau. Prerequisite: upper-division standing. +

HIEU 131. The French Revolution: 1789–1814 (4)
This course examines the Revolution in France and its impact in Europe and the Caribbean. Special emphasis will be given to the origins of the Revolution, the development of political and popular radicalism and symbolism from 1789 to 1794, the role of political participants (e.g., women, sans-culottes, Robespierre), and the legacy of revolutionary wars and the Napoleonic system on Europe. Prerequisite: upper-division standing. +

HIEU 132. Germany from Luther to Bismarck (4)
How Germany, from being a maze of tiny states rife with religious conflict, became a nation. Did the nations-building process lead to Nazism? Prerequisite: upper-division standing or consent of instructor. +

HIEU 133. Gender in Antiquity and the Early Medieval Mediterranean (4)
This course examines gender roles and relations at the end of the classical period and its development into the Middle Ages in both Eastern and Western Mediterranean. Course will examine the ways in which our medieval predecessors assigned gender traits and relationships to members of society. It will approach the topic in part through an examination of the language used about gender and in part through use of modern gender theories. Prerequisite: upper-division standing. +

HIEU 134. The Formation of the Russian Empire, 800–1855 (4)
This course discusses society and culture in Russia under the tsars at the end of the period of serfdom. Special emphasis will be given to the period from 1725 to 1790 and the impact that the Russian Empire had on the eighteenth century. Prerequisite: upper-division standing or consent of instructor.

HIEU 136. Social History of Crime and Criminal Justice in Europe, 1700–1914 (4)
This course investigates the social history of crime, criminal justice, and policing in Europe between approximately 1700 and 1900. The topic enables students to investigate a wide variety of issues, including state formation, gender relations, and class relations. Prerequisite: upper-division standing or consent of instructor.

HIEU 136A. European Society and Social Thought, 1688–1870 (4)
A lecture and discussion course on European political and cultural development and social theory from 1688–1870. Important writings will be considered both as responses to and as provocations for political and cultural change. +

HIEU 136B. European Society and Social Thought, 1870–1989 (4)
A lecture and discussion course on European political and cultural development and theory from 1870–1989. Important writings will be considered both as responses to and as provocations for political and cultural change.

HIEU 137. History of Colonialism: From New Imperialism to Decolonization (4)
This course surveys the age of colonialism in the nineteenth and twentieth century. The course will focus on the debates on colonialism in the metropolis as well as on the conflicts inside the colonies. Considerable emphasis will be placed on colonialism in Africa. Prerequisite: upper-division standing or consent of instructor.

HIEU 138. Imperial Spain, 1476–1808 (4)
The rise and decline of Spain’s European empire from Ferdinand and Isabella to 1700. The revival of Spain and her return to European affairs in the eighteenth century.
HIEU 139. The Origins of Constitutions (4)
The course will cover the development of constitutional ideas and institutions from the twelfth century to the U.S. Constitution. Students will read legal texts and commentatorsthat established the foundations of the ideas of the rule of law, limited government, and independent judiciary. Students will study the formation of institutions such as parliament, the court system, and common law. The course will start and finish with an analysis of the U.S. Constitution. Prerequisite: upper-division standing or consent of instructor. +

HIEU 141. European Diplomatic History, 1870–1945 (4)

HIEU 142. European Intellectual History, 1780–1870 (4)
European thought from the late Enlightenment and the French Revolution to Marx and Baudelaire, emphasizing the origins of romanticism, idealism, and positivism in England, Germany, and France. Prerequisite: upper-division standing or consent of instructor.

HIEU 143. European Intellectual History, 1870–1945 (4)
A lecture-discussion course on the crisis of bourgeois culture, the redefinition of Marxist ideology, and the transformation of modern social theory. Readings will include Nietzsche, Sorel, Weber, Freud, and Musil. (This course satisfies the minor in the Humanities Program.) Prerequisite: upper-division standing.

HIEU 145. The Holocaust as Public History (4)
We will study historical accounts, memoirs, diaries, and oral histories to master the Holocaust epoch. We will contrast scholarly narratives to personal experience as different ways to learn about the past. Students will design projects for public education. Prerequisite: upper-division standing or consent of instructor.

HIEU 146. Fascism, Communism, and the Crisis of Liberal Democracy: Europe 1919–1945 (4)
A consideration of the political, social, and cultural crisis that faced Western liberal democracies in the interwar period, with emphasis on the mass movements that opposed bourgeois liberalism from both the left and the right.

HIEU 147. Women and Gender in Early Modern Europe (4)
This course examines the history of European women and gender issues from about 1500 to 1700. Three major themes are covered: intellectual and cultural trends; the nature of the human body and work roles; and, spiritual beliefs, experiences, and practices. Prerequisite: upper-division standing or consent of instructor. +

HIEU 147A. Women in the Middle Ages (4)
This course examines the image and the reality of women in the period from 200–1500. We will focus upon the ambivalent status of women in this period as "internal others" to medieval—simultaneously necessary to the functioning of society, yet viewed as marginal to its interests or even as outsiders. Prerequisite: upper-division standing or instructor consent. +

HIEU 148. Women and Gender from the Enlightenment to the Victorian Eras (4)
This course examines European women and gender issues from about 1700 to 1871. Major themes covered are: intellectual and cultural trends (e.g., education and politics); attitudes toward female and male bodies and work roles; and, spiritual beliefs and practices. Prerequisite: upper-division standing or consent of instructor. +

HIEU 149. History of Women in Europe: 1870 to the Present (4)
This course explores the history of women across classes from 1870 to the present, with an emphasis on the variety of women’s experience and the efforts towards and obstacles to empowerment. Topics include: women and the state, science and gender, feminist movements and the evolution of women’s work. Prerequisite: upper-division standing.

HIEU 150. Modern British History (4)
Emphasis on changes in social structure and corresponding shifts in political power. The expansion and the end of empire. Two World Wars and the erosion of economic leadership. Prerequisite: upper-division standing or consent of instructor.

HIEU 151. Spain since 1808 (4)
Social, political, cultural history of Spain since Napoleon. Features second Spanish Republic, the Civil War, Franco era, and transition to democracy. Prerequisite: upper-division standing.

HIEU 152. The Worst of Times: Everyday Life in Authoritarian and Dictatorial Societies (4)
Examines how ordinary citizens coped with the problems of life under Europe’s authoritarian regimes. Topics may include Nazism, fascism, and quasi-fascist societies (e.g., Franco’s Spain, Salazar’s Portugal), and communist practice from Leninism to Stalinism to the milder Titoism of ‘Yugoslavia.’ Prerequisites: upper-division standing or consent of instructor.

HIEU 154. Modern German History: From Bismarck to Hitler (4)
An analysis of the volatile course of German history from unification to the collapse of the Nazi dictatorship. Focus is on domestic developments inside Germany as well as on their impact on European and global politics in the twentieth century.

HIEU 155. Modern Austria (4)
The political, social, and intellectual history of Austria from Maria Theresia to the First Republic with special emphasis on the crisis of liberal culture in the late nineteenth century. Prerequisite: upper-division standing or consent of instructor.

This course explores war, revolution, development, and terror in the Soviet Union from 1905–1991. Prerequisite: upper-division standing or consent of instructor.

HIEU 157. Religion and the Law in Modern European History (4)
Comparative examination of the relationship between religious and legal norms in Europe from the Reformation to the present. Topics may include government sponsorship; religious expression; conflicts with secular law; religious rights as human rights; and religious and cultural politics. Prerequisite: upper-division standing or consent of instructor.

HIEU 158. Why Hitler? How Auschwitz? (4)
Why did Germany in 1919 produce an Adolf Hitler; how did the Nazis take power in 1933; and why did the Third Reich last until 1945? Why did the war against the Jews become a reality? Which were the vicissitudes of Jewish life in Palestine? Prerequisite: upper-division standing or consent of instructor.

HIEU 159. Three Centuries of Zionism, 1648–1948 (4)
For centuries the land of Israel was present in Jewish life in Palestine? Why did the war against the Jews become a reality? Which were the vicissitudes of Jewish life in Palestine? Prerequisite: upper-division standing or consent of instructor.

HIEU 160/260. Topics in the History of Greece (4)
A seminar focusing on selected topics in Greek history from the Bronze Age to the Roman Conquest. Prerequisite: upper-division standing or consent of instructor. +
and citizenship, conflicts over Muslim immigration; and implications for European integration. Students may not receive credit for both HIEU 181/281 and ERC 101. Graduate students will be expected to submit an additional paper. Prerequisites: upper-division or graduate standing and department stamp.

HIEU 182/282. The Muslim Experience in Contemporary European Society (4)
Comparative study of Islam in Europe since 1945. Topics include: indigenous populations; immigration; Islamic law; church-state questions; EU expansion/integration; gender issues; terrorism; Islamophobia; “Europeanizing” Islam; the historical tradition of European-Muslim encounter and its present political/cultural issues. Graduate students will be required to do an additional paper. Prerequisites: upper-division or graduate standing and department stamp.

HIEU 183/283. Social History and Anthropology of the Mediterranean (4)
This seminar examines the social history and anthropology of the Mediterranean. Topics covered are: the Mediterranean debate, rural economy, peasant society, gender relations, honor and shame, rural violence, class formation, and emigration. The seminar introduces the methodology of historical anthropology. Graduate students will be expected to complete an additional paper or project. Prerequisite: upper-division or graduate standing and department stamp.

HIEU 184/284. Yugoslavia: Before, During, and After (4)
Examines the three ethno-religious Yugoslav states that existed from 1918 until the 1990s. Topics include inter-ethnic relations, foreign affairs, Tito’s revisionist communism, the consumerist Yugoslav Dream, culture and society, the violent break-up of the 1990s, and the post-Yugoslav order. Graduate students will be required to submit an additional paper. Prerequisite: upper-division or graduate standing and department stamp.

HIEU 198. Directed Group Study (1, 2, 3, 4)
Directed group study on European history under the supervision of a member of the faculty on a topic not generally included in the regular curriculum. Students must make arrangements with individual faculty members. Prerequisites: upper-division standing, completion of at least ninety units of UCSD undergraduate study, a minimum UCSD G.P.A. of 2.95, a completed and approved Special Studies form, and department stamp.

HIEU 199. Independent Study in European History (4)
Directed readings for undergraduates under the supervision of various faculty members. Prerequisite: consent of instructor.

LATIN AMERICA

Lecture Courses

HILA 100. Latin America—Colonial Transformations (4)
Lecture-discussion survey of Latin America from the pre-Columbian era to 1825. It addresses such issues as the nature of indigenous cultures, the implanting of colonial institutions, native resistance and adaptations, late colonial growth and the onset of independence. +

Lecture-discussion survey of Latin America in the nineteenth century. It addresses such issues as the collapse of colonial practices in the society and economy as well as the creation of national governments, political instability, disparities among regions within particular countries, and the economies oriented toward the export of goods to Europe and the United States.

HILA 102. Latin America in the Twentieth Century (4)
This course surveys the history of the region by focusing on two interrelated phenomena: the absence of democracy in most nations and the region’s economic dependence on more advanced countries, especially the United States. Among the topics discussed will be the Mexican Revolution, the military in politics, labor movements, the wars in Central America, liberation theology, and the current debt crisis. Prerequisite: upper-division standing or consent of instructor.

HILA 103. Revolution in Modern Latin America (4)
A political, economic, and social examination of the causes and consequences of the Mexican, Cuban, and Nicaraguan revolutions. Also examine guerrilla movements that failed to gain power in their respective countries, namely the Shining Path in Peru, FARC in Colombia, and the Zapatistas in Mexico. Prerequisite: upper-division standing.

HILA 104. Modern U.S.–Latin American Relations (4)
A survey of inter-American relations during the twentieth century. Emphasis will be placed on U.S. territorial and economic expansion, U.S. national-security and ideological morality, and Latin American efforts to influence U.S. policy in order to strengthen, in most cases, elite domination of society. Prerequisite: upper-division standing.

HILA 112. Economic and Social History of the Andean Region (4)
Study of the economic and social problems of the Andean region from the colonial period until the crisis of 1912, with special attention to theoretical models to explain the processes of change. Prerequisite: upper-division standing.

HILA 113. Lord and Peasant in Latin America (4)
Examination of the historical roots of population problems, social conflict, and revolution in Latin America, with emphasis on man-land relationships. Special emphasis on modern reform efforts and on Mexico, Cuba, Brazil, and Argentina. Lecture, discussion, and films. Prerequisite: upper-division or consent of instructor. +

HILA 114. Dictatorships in Latin America (4)
How did dictatorships come about? Who were the authoritarian leaders? How did they organize their regimes and what were the consequences? Recent publications on dictators in Latin America allow for comparisons across countries and throughout time to answer those questions. Prerequisite: upper-division standing.

HILA 115. The Latin American City, a History (4)
A survey of the development of urban forms of Latin America and of the role that cities played in the region as administrative and economic centers. After a brief survey of pre-Columbian centers, the lectures will trace the development of cities as outposts of the Iberian empires and as “city-states” that formed the nucleii of new nations after 1810. The course concentrates primarily on the cities of South America, but some references will be made to Mexico City. It ends with a discussion of modern silt and Third World urbanization. Lima, Santiago de Chile, Buenos Aires, Rio de Janeiro, and Sao Paulo are its principal examples. Prerequisite: upper-division standing.

From coffee boom through rebellion, militarization, revolution, state terrorism, and migration, the U.S. has loomed large in the history of El Salvador. This course explores this relationship from 1920 to the present through the prisms of revolution and human rights. Prerequisite: upper-division standing.

HILA 120. History of Argentina (4)
A survey from the pre-Columbian to the present, with an emphasis on the nineteenth and twentieth centuries. Among the topics covered: the expansion of the frontier, the creation of a cosmopolitan, predominately European culture, and the failure of industrialization to provide an economic basis for democracy. Prerequisite: upper-division standing.

HILA 121. History of Brazil (4)
From colonial times to the present, with an emphasis on the nineteenth and twentieth centuries. Among the topics covered: the evolution of a slave-based economy, the key differences among regions, the military in politics; and the creation of the nation and industrialized country in Latin America. Prerequisite: upper-division standing.

HILA 121A. History of Brazil, 1808 to 1904 (4)
This course will discuss transformations in Brazilian society from 1808 to 1904, covering the Independence, the Empire, end of slavery, beginning of a Republican system, modernization, social protests, popular culture, nation building, and changes in the politics of social dominance. Prerequisite: upper-division standing or consent of instructor.

HILA 122. Cuba: From Colony to Socialist Republic (4)
A lecture-discussion course on the historical roots of revolutionary Cuba, with special emphasis on the impact of the United States on the island’s development and society. Prerequisite: upper-division standing.

HILA 124A. History of Women and Gender in Latin America (4)
A broad historical overview of Hispanic-American women’s history focusing on issues of gender, sexuality, and the family as they relate to women, as well as the historiographical issues in Latin American and Chicana women’s history. Prerequisite: upper-division standing or consent of instructor.

HILA 126. From Columbus to Castro: Caribbean Culture and Society (4)
Exploration of the relationships between socioeconomic and cultural development in Caribbean history; slavery and empire; nationalism and migration; voodoo and Rastafarianism, and the literary arts. Prerequisite: upper-division standing.

HILA 127. History, Culture, and Power (4)
What is the historical evidence on the relationship between culture and power: from the indigenous “national” revolution (eighteenth century) to “indigenismo”; from indigenous upheavals in Ecuador, Bolivia, Mexico and Peru, to the intellectual “archaic utopia” (twentieth century). Prerequisite: upper-division standing or instructor consent.

HILA 131. A History of Mexico (4)
A century of Mexican history, 1821–1924: the quest for political unity and economic solvency, the forging of a nationality, the Gilded Age and aftermath, the ambivalent Revolution of Zapata and his enemies. Prerequisite: upper-division standing or consent of instructor.

HILA 132. A History of Contemporary Mexico (4)
The paradox of a conservative state as heir to a legendary social upheaval, with special emphasis on the mural art renaissance, the school crusade, the economic dilemma, and the failure to eradicate poverty and inequality. Lectures and discussion. Prerequisite: upper-division standing or consent of instructor.

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HILA 161/261. History of Women in Latin America (4)
A broad historical overview of Hispanic-American women’s history focusing on issues of gender, sexuality, and the family as they relate to women, as well as the historiographical issues in Latin American and Chicana women’s history. Prerequisites: upper-division standing and consent of instructor.

HILA 162/262. Special Topics in Latin American History (4)
Topics will vary from year to year or quarter to quarter. May be repeated for an infinite number of times due to the nature of the content of the course always changing. Prerequisite: upper-division standing or consent of instructor.

HILA 163/263. The History of Chile 1880–Present (4)
The course surveys Chile’s basic developments beginning with the era of nitrate exports. Students will have the opportunity to address a specific issue of his/her own choosing and develop the topic for class presentation and a final paper. Graduate students are expected to submit a more substantial piece of work. Prerequisite: upper-division standing or consent of instructor.
HILA 167/267. Scholarship on Latin American History in the Colonial Period (4)
Introduction to the historiography on Latin America for the colonial period from Spanish and Portuguese conquests to the Wars of Independence. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit an additional research paper. Prerequisites: upper-division standing or consent of instructor and department stamp.

HILA 168/268. Scholarship on Latin American History in the Nineteenth Century (4)
Introduction to the historiography on Latin America for the nineteenth century: world economy, nation-state building, agrarian processes, incipient industrialization, political and cultural thought, and social structure. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit an additional research paper. Prerequisites: upper-division standing or consent of instructor; reading knowledge of Spanish; department stamp.

HILA 199. Independent Study in Latin American History (4)
Directed readings for undergraduates under the supervision of various faculty members. Prerequisite: consent of instructor and department stamp.

NEAR EAST
Lecture Courses
HINE 101A. History of Ancient Mesopotamia (4)
Course will trace the political and cultural history of Mesopotamia (modern Iraq), beginning with rise of cities in the fourth millennium B.C.E., continuing through the Sumerian, Akkadian, Assyrian, and Babylonian periods, and ending with the fall of Babylon (539 B.C.E.). Prerequisite: upper-division or instructor consent.

HINE 102. The Jews in Their Homeland in Antiquity (4)
The Jews lived from the sixth century BCE to the seventh century CE. Statehood, nationalism, and autonomy within the framework of the Persian empire, the Hellenistic kingdoms, and the Roman-Byzantine empire. Cultural and religious developments will be explored. Prerequisite: upper-division standing or instructor consent.

HINE 103. The Jewish Diaspora in Antiquity (4)
The Jews outside their homeland and in pre-Islamic times, concentrating on the Greco-Roman West and the Parthian-Sasanian East. Topics include assimilation and survival; anti-Semitism and missionizing; patterns of organization and autonomy; cultural and religious developments. Prerequisite: upper-division standing.

HINE 108. The Middle East before Islam (4)
The peoples, politics, and cultures of Southwest Asia and Egypt from the sixth century B.C.E. to the seventh century C.E. The Achemenid Empire, the Ptolemaic and Seleucid kingdoms, the Roman Orient, the Parthian and Sasanian states. Prerequisite: upper-division standing.

HINE 109B. Learning to Read Biblical Hebrew II (4)
Continued study of the language of the Bible with emphasis on advanced grammar and vocabulary. Prerequisite: HINE 109A. Offered during the summer.

HINE 111. Anthropology and the Hebrew Bible (4)
This course approaches the Hebrew Bible (Old Testament) from the perspective of cultural anthropology. Institutions studied will include the family, rites of passage, taboos, warfare, animism, demons, sorcery, and animal sacrifice. Prerequisite: upper-division or instructor consent. Not offered this academic year.

HINE 112AL. Great Stories from the Hebrew Bible/Religious Language (1)
Students with advanced Hebrew can study the texts in HINE 112A in the original language. Prerequisite: upper-division standing or consent of instructor.

HINE 112B. Great Poems from the Hebrew Bible (4)
A close reading of select poetic passages from the Hebrew Bible/Old Testament. Prerequisite: upper-division standing or consent of instructor.

HINE 112BL. Great Poems from the Hebrew Bible/Foreign Language (1)
Students with advanced Hebrew can study the texts in HINE 112B in the original language. Prerequisite: upper-division standing or consent of instructor.

HINE 113. Ancient Near East Mythology (4)
Course will analyze and compare major myths from Egypt, Israel, Ugarit, and Mesopotamia, employing a variety of modern approaches. Prerequisite: upper-division standing or consent of instructor.

HINE 114. History of the Islamic Middle East (4)
A survey of the Middle East from the rise of Islam to the region's economic, political, and cultural integration into the West (mid-nineteenth century). Emphasis on socio-economic and political changes in the early Arab empires and the Ottoman state.

HINE 115. Islamic Civilization (4)
An introductory survey of Islamic civilizations. History and society, law, science and philosophy, arts and letters, and architecture. A broad picture of the dynamics and achievements of Islamic societies over time. Prerequisite: upper-division standing or consent of instructor.

HINE 116. The Middle East in the Age of European Empires (1798-1914) (4)
Examines the contacts of the late Ottoman Empire and Qajar Iran with Europe from the Napoleonic invasion of Egypt to World War I, the diverse facets of the relationship with the West, and the reshaping of the institutions of the Islamic states and societies.

HINE 118. The Middle East in the Twentieth Century (4)
An introduction to the history of the Middle East since 1914. Themes such as nationalism, imperialism, the oil revolution, and religious revivalism will be treated within a broad chronological and comparative framework drawing on the experience of selected countries.

HINE 119. US Mid-East Policy Post-WWII (4)
An examination of post-WWII Middle East conflicts, including the Israeli-Arab conflicts, the Lebanese Civil War, and the Gulf War of the 1980s. The roles of the superpowers and Middle Eastern states during the period.

HINE 122. Politicization of Religion in the Middle East (4)
Islamic formulation of dissent from the nineteenth century to our day; social, cultural, and political movements influenced by religion; domestic, interregional, and international dimensions with emphasis on the Arab East, Iran, and Turkey. Prerequisite: upper-division standing.

HINE 123. The Emergence of Middle East Nationalisms (4)
A survey of nationalism in the modern Middle East with reference to current theories of identity formation in Europe and South Asia. The course will examine shifting identities in the Ottoman Empire, its Turkish and Arab successor states, and Iran. Prerequisite: upper-division standing or consent of instructor.

HINE 126. Iranian Revolution in Historical Perspective (4)
Iran's social and political history in the twentieth century with emphasis on the Constitutional movement of the late Qajar period, formation and development of the Pahlavi state, anatomy of the 1978–79 Revolution, and a survey of the Islamic Republic. Prerequisite: upper-division or instructor consent.

HINE 127. History of Modern Turkey (4)
Eastern problems on the example of Turkey and with special attention to collective identities, state-society dynamics, foreign and regional policies, and varieties of modernity. Prerequisite: upper-division standing or consent of instructor.

HINE 151B/251B. Introduction to Aramaic Dialects (4)
Study of Ancient Inscriptional Persian Imperial and Syriac Aramaic.

HINE 152A/252A. The Evolution of the Northwest Semitic Dialects (4)
Principles of historical linguistics, application to the languages of the ancient Levant. Prerequisites: knowledge of at least one Semitic language; a course in general linguistics is also desirable.

HINE 152B/252B. Introduction to Uguritic (4)
Decipherment of Uguritic tablets, history, and culture of ancient Ugur, study of Uguritic myths.

HINE 152C/252C. Advanced Uguritic (4)
Continued study of Uguritic literature, comparison with Canaanite inscriptions.

HINE 153A/253A. Introduction to Akkadian Language and Mesopotamian Culture (4)
Students study cuneiform script and elements of Babylonian-Assyrian grammar, as well as the history of Ancient Mesopotamia.

HINE 153B/253B. Continued Akkadian Language (4)
Student begins to read and analyze ancient Mesopotamian texts from a variety of genres.

HINE 153C/253C. Advanced Akkadian Language (4)
Continued study of Mesopotamia literature and history.

Colloquia
The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HINE 161/HINE 261. Seminar in the Hebrew Bible (4)
Systematic reading and rendering of the books of the Hebrew Bible in order. Each time the class is taught, we will look at a different book. Adequate knowledge of Biblical Hebrew is required. Graduate students will have to write an extra paper or exam. Prerequisites: Judaic Studies 103, graduate standing, or consent of instructor.

HINE 162/262. Anthropology and the Hebrew Bible (4)
This course approaches the Hebrew Bible (Old Testament) from the perspective of cultural anthropology. Institutions studied will include the family, rites of passage, food taboos, warfare, animism, demons, sorcery, and animal sacrifice. Formerly HINE 111; students may receive credit for HINE 111 and HINE 162/262. Graduate students will be required to complete an extra paper. Prerequisites: upper-division or graduate standing and department stamp.
HINE 163/263. Topics in the Ancient World (4)
Topics on the ancient world will vary from year to year. Requirements will vary for undergraduate and graduate students. Graduate students will submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. Prerequisite: upper-division or graduate standing and departmental stamp.

HINE 166/266. Nationalism in the Middle East (4)
Growth of nationalism in relation to imperialism, religion, and revolution in the nineteenth- and twentieth-century Middle East. Emergence of cultural and political ethnic consciousness in the Ottoman state. Comparative study of Arab, Iranian, and Turkish nationalism as well as Zionism. Prerequisite: department stamp or consent of instructor.

HINE 170/270. Special Topics in Jewish History (4)
This course studies a period or theme in Jewish history. Topics will vary from year to year. Prerequisite: department stamp required.

HINE 181/281. Problems in the Study of Hebrew Manuscripts (4)
Detailed study of a portion of biblical text. Focus on textual-critical and source-critical problems. Prerequisite: upper-division or graduate standing.

HINE 186/286. Special Topics in Middle Eastern History (4)
Focused study of historical roots of contemporary problems in the Middle East: Islamic modernism and Islamist movements; contacts with the West; ethnic and religious minorities; role of the military; economic resources and development. Department stamp and permission of instructor.

HINE 199. Independent Study in Near Eastern History (4)
Directed readings for undergraduates under the supervision of various faculty members. Prerequisite: consent of instructor.

HISTORY OF SCIENCE

Lecture Courses

HISC 101A. Science in the Greek and Roman World (4)
A survey of the principal features of ancient science: the origins of Greek naturalism, the criticism of magic, notions of quantification. Topics may include astronomy, astrology, mechanics and physical theory, classification of living beings, and human cognition. Emphasis on primary sources, such as the presocratic natural philosophers: Plato, Aristototle, Euclid, Archimedes, Ptolemy, Pliny Galen, and Proclus. Prerequisite: upper-division standing.

HISC 101B. Medieval Science in the Latin West, ca. 500–1500 (4)

HISC 10C. Early Modern Science (4)

HISC 102. Technology in World History (4)
Technology as an agent of change. How have humans harnessed the power of nature? What factors have contributed to successes and failures? How has technology changed human life? How should we evaluate the quality of these changes? Prerequisite: upper-division standing.

HISC 103. Gender and Science in Historical Perspective (4)
History of women's struggles and strategies for access and equality in professional science. Questions related to gender bias in science—as a social institution and as an epistemological premise—will be addressed in light of the historical and biographical readings. Prerequisite: upper-division standing.

HISC 104. History of Popular Science (4)
Historical aspects of the popularization of science. The changing relation between expert science and popular understanding. The reciprocal impact of scientific discoveries and theories, and popular conceptions of the natural world. Prerequisite: upper-division standing or consent of instructor.

HISC 105. History of Environmentalism (4)
History of human effects on the natural environment, with emphasis on understanding the roles of the physical and biological sciences in providing insights into environmental processes. Prerequisite: upper-division standing or consent of instructor.

HISC 106. The Scientific Revolution (4)
A cultural history of the formation of early modern science in the sixteenth and seventeenth centuries: the social forms of scientific life; the construction and meaning of the new cosmologies from Copernicus to Newton; the sciences and politics and the politics of science; the origins of experimental practice: how Sir Isaac Newton restored law and order to the West. Prerequisite: upper-division standing.

HISC 107. The Emergence of Modern Science
The development of the modern conception of the sciences, and of the modern social and institutional structure of scientific activity, chiefly in Europe, during the eighteenth and nineteenth centuries. Prerequisite: upper-division standing.

HISC 108. Life Sciences in the Twentieth Century (4)
The history of twentieth-century life sciences, with an emphasis on the way in which model organisms such as fruit flies, guinea pigs, bacteriophage, and zebra fish shaped the quest to unlock the secrets of heredity, evolution, and development. Prerequisite: upper-division standing or consent of instructor.

HISC 109. Science in Western Civilization (4)
An introduction to scientific thought as it relates to Western culture. Among the topics considered: Aristotelian, medieval, modern, and postmodern science; the scientific revolution; the Newtonian universe; science and the Enlightenment; evolution; science and the modern state; technoscience and biotechnology. Prerequisite: upper-division standing or consent of instructor.

HISC 111. The Atomic Bomb and the Atomic Age (4)
Development of nuclear science and weapons—1930s to present—including the discovery of radioactivity and fission, the Manhattan project, the bombings of Hiroshima and Nagasaki and end of WWII, the H-bomb, and legacies of nuclear proliferation, environmental damage, and radioactive waste. Prerequisite: upper-division standing or consent of instructor.

HISC 114. The Darwinian Legacy (4)
The Origin of Species by means of Natural Selection, and its scientific, intellectual, and political legacies. Topics include social Darwinism, eugenics, Nazi racial hygiene, population control, neo-Malthusianism in the modern environmental movement. Prerequisite: upper-division standing.

HISC 115. History of Modern Medicine (4)
Explores the origin of clinical method, the hospital, internal surgery, and the medical laboratory, as well as the historical roots of debates over health-care reform, genetic determinism, and the medicalization of society. Prerequisite: upper-division standing or consent of instructor.

HISC 116. History of Bioethics (4)
The story behind the postwar rise of bioethics—medical scandals breaking in the mass media, the development of novel technologies for saving and prolonging life, the emergence of new diseases, the unprecedented scope for manipulation opened up by biology. Prerequisite: upper-division standing or consent of instructor.

HISC 117. History of the Neurosciences (4)
A survey of the history of the neurosciences from the seventeenth century to the present, exploring the political, philosophical, cultural, aesthetic and ethical aspects of research into the workings of the human brain. Prerequisite: upper-division standing or consent of instructor.

HISC 118. History of Sexology (4)
Analyses the history of sexology as a series of episodes in the science of human difference, from the European reception of the first translation of the Kama Sutra in 1883 to the search for the ‘gay gene’ in the 1990s. Prerequisite: upper-division standing or consent of instructor.

HISC 120A. Technology in America I (4)
The role of technology in America's history through the Civil War. Indigenous and colonial development, transportation infrastructures, and industrialization are explored to understand the connections among technology, society, and culture. Prerequisite: upper-division standing.

HISC 121. Listening In: Sound, Music, and Noise in America (4)
Explores the cultural meaning of sound by examining the history of the phonograph, radio, movies, Muzak, noise-abatement, and architectural acoustics. What needs did these technologies fulfill? How did they reinforce and challenge the society in which they were developed? Prerequisite: upper-division standing.

HISC 123. Technology in the Twentieth Century (4)
Major technological developments in the twentieth century, including the rise and decline of technologies, unexpected hazards and unanticipated consequences, and why some technologies fail. Prerequisite: upper-division standing.

HISC 131. Science, Technology, and Law (4)
Science and law are two of the most powerful establishments of modern Western culture. Science organizes our knowledge of the world; law directs our action in it. Will explore the historical roots of the interplay between them. Prerequisite: upper-division standing.

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HISC 160/260. Historical Approaches to the Study of Science (4)
Major recent publications in the history of science will be discussed and analyzed; the topics will range in period from the seventeenth century to the twentieth, and will deal with all major branches of natural science. Special topics. Topics will vary from year to year. Prerequisite: consent of instructor.

HISC 161/261. Seminar in Newton and Newtonianism (4)
This course focuses on the single most important figure of the scientific revolution, Isaac Newton, and on his science and philosophy which set the frame of reference for physics and general science until the twentieth century. Graduate students are required to submit an additional piece of work. Prerequisite: upper-division or graduate standing and department stamp.
HISC 163/263. History, Science, and Politics of Climate Change (4)
The complex historical development of human understanding of global climate change, including key scientific work, and the cultural dimensions of proof and persuasion. Special emphasis on urban systems and the differential political acceptance of the scientific evidence in the U.S. and the world. Graduate students are required to submit an additional paper. Prerequisite: upper-division or graduate standing. Department stamp required.

HISC 164/264. Topics in the History of the Physical Sciences (4)
Intensive study of specific problems in the physical sciences, ranging in period from the Renaissance to the twentieth century. Topics vary from year to year, and students may therefore repeat the course for credit.

HISC 165. Topics in Twentieth-Century Science and Culture (4)
This seminar explores topics at the interface of science, technology, and culture, from the late nineteenth century to the present. Topics change yearly; may be repeated for credit with instructor's permission. Prerequisite: upper-division standing or consent of instructor.

HISC 166/266. The Galileo Affair (4)
Galileo's condemnation by the Catholic Church in 1633 is a well-known but misunderstood episode. Was Galileo punished for holding dangerous scientific views? Personal arrogance? Disobedience? Religious transgressions? Readings in original sources, recent historical interpretations. Graduate students will be expected to submit a more substantial piece of work.

HISC 167/267. Gender and Science (4)
Why have women been traditionally excluded from science? How has this affected scientific knowledge? How have scientists constructed gendered representations not only of women, but also of science and nature? We will address these questions from perspectives including history, philosophy, and psychoanalytic theory. Prerequisite: upper-division standing or consent of instructor.

HISC 168/268. The Extraterrestrial Life Question (4)
The changing fortunes of the belief in the existence of life beyond the Earth (pluralism) from 1750–present as it evolved from a marginal speculation to a central scientific question with wide-ranging consequences for traditional religious belief-systems. Graduate students will be expected to submit a more substantial piece of work. Prerequisite: upper-division or graduate standing or consent of instructor.

HISC 170/270. Topics in the History of Science and Technology (4)
This seminar explores topics at the interface of science, technology, and society, ranging from the seventeenth century to the twentieth. Requirements will vary for undergraduates, M.A., and Ph.D. students. Graduate students are required to submit an additional paper. Prerequisite: upper-division standing or consent of instructor.

HISC 172/272. Building The history of the built environment in the United States, from skyscrapers to subways, canals and railroads to factories and department stores. The technological history of structures and infrastructures, and the social and cultural values that have been “built into” our material environment. Graduate students are required to submit an additional paper. Prerequisite: upper-division standing or consent of instructor.

HISC 173/273. Seminar on Darwin and Darwinisms (4)
Examines evolutionary theory before Darwin, the development of the theory of natural selection, the ongoing challenge from Lamarckism, nineteenth-century social Darwinism, the emergence of the neo-Darwinist synthesis, and the recent controversies over evolutionary psychology and creationism. Graduate students are expected to submit an additional paper. Prerequisite: upper-division standing or graduate and department stamp.

HISC 174/274. History of Localization of Brain Function (4)
From the beginnings of brain anatomy in the 1660s to the current rage for functional magnetic resonance imaging studies, this class investigates philosophical, ethical, and cultural dimensions of the quest to localize psychological phenomena in the physical brain. Graduate students are required to submit an additional paper. Prerequisite: upper-division or graduate standing and department stamp.

HISC 175/275. The Historical Sciences in the Nineteenth Century (4)
A critical analysis of the host of “historical sciences” that developed over the course of the long nineteenth century, from archaeology and paleontology to psychoanalysis and craniometry, including the science of history itself. Graduate students will be required to submit an additional paper. Prerequisite: upper-division or graduate standing and department stamp.

HISC 199. Independent Study in the History of Science (4)
Directed readings for undergraduates under the supervision of various faculty members. Prerequisite: consent of instructor.

TOPICS
Courses

HITO 87. Special Freshman Seminar (1)
A seminar intended for exposing undergraduate students, especially freshmen, to exciting research conducted by department faculty. Enrollment is limited. Topic will vary quarter by quarter.

HITO 99. Independent Study on History Topics (1)
Independent study for undergraduates with lower-division standing under the supervision of a member of the faculty on a topic not generally included in the regular curriculum. Students must make arrangements with individual faculty members. Prerequisites: lower-division standing, completion of thirty units of UCSD undergraduate study, a minimum UCSD GPA of 3.0, and a completed and approved Special Studies form.

HITO 102. Religious Traditions: East Asian Religious Traditions (4)
Introduction to the major religious traditions of Asia: Hinduism, Buddhism, Taoism, Shinto, and Confucianism. The course will focus on one religion each year. Since special topics will vary from year to year the course may be repeated for credit three times. Prerequisite: upper-division standing. +

HITO 104. The Jews and Judaism in the Ancient and Medieval World (4)
The political and cultural history of the Jews through the early modern period. Life under ancient empires, Christianity and Islam. The post-biblical development of the Jewish religion and its eventual crystallization into the classical, rabbinic model. +

HITO 105. The Jews and Judaism in the Modern World (4)
Topics include the political emancipation of the Jews of Europe; the emergence of Reform, Conservative, and Modern Orthodox Judaism; hasidism; modern anti-Semitism; Jewish socialism; Zionism; the Holocaust; the American Jewish community; the State of Israel.

HITO 106. Love and Family in the Jewish Past (4)
Jewish women's experiences from the seventeenth century to the present, covering Europe, the United States, and Israel. We examine work, marriage, motherhood, spirituality, education, community, and politics across three centuries and three continents. Prerequisite: upper-division standing.

HITO 111/211. Marxist Theory (4)
A survey and examination of the principal writings of Marx concerning economic theory and analysis. Emphasis on the theory of value, production, technical change, reproduction and accumulation. Some consideration will also be made of certain neo-Marxist contributions and critiques. Prerequisite: introductory economics or consent of instructor.

HITO 117. World History 1200–1800 (4)
This course examines the interaction between sections of the globe after 1200. It emphasizes factors operating on a transcontinental scale (disease, climate, migration) and historical/cultural phenomena that bridge distance (religion, trade, urban systems). This is not narrative history, but a study of developments that operated on a global scale and constituted the first phase of globalization. Prerequisite: upper-division standing or consent of instructor. +

HITO 119/HMNR 100. Human Rights I: History and Theory (4)
Explores where human rights come from and what they mean by integrating them into a history of modern society, from the Conquest of the Americas and the origins of the Enlightenment, to the Holocaust and the contemporary human rights regime. Prerequisite: upper-division standing or consent of instructor.

HITO 126. A History of Childhood (4)
This course will examine the different ways that attitudes toward children have changed throughout history. By focusing on the way that the child was understood, we will examine the changing role of the family, the role of culture in human development, and the impact of industrialization and modern institutions on the child and childhood.

HITO 133. War and Society: The Second World War (4)
An examination of the Second World War in Europe, Asia, and the United States. Focus will be on the domestic impact of the war on the belligerent countries as well as on the experiences of ordinary soldiers and civilians. Prerequisite: upper-division standing or consent of instructor.

HITO 134. International Law—War Crimes and Genocide (4)
Comparative study of genocide and war crimes, stressing European developments since 1900 with reference to cases elsewhere. Topics include historical precedents; evolving legal concepts; and enforcement mechanisms. Emphasis on the Holocaust, the USSR under Stalin, ex-Yugoslavia, and the Armenian genocide. Students may not receive credit for both HITO 134 and ERC 102. Prerequisite: upper-division standing or consent of instructor.

HITO 135. Historical Anthropology (4)
This course will give an interdisciplinary introduction to anthropological thought in the nineteenth and twentieth centuries. Secondly, it will deal with different fields of historical anthropology. Central questions and approaches will be discussed by presenting selected case studies. Prerequisite: upper-division standing or consent of instructor.

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduates, M.A., and Ph.D. students.

HITO 166/266. Death Penalty Global Perspectives Since 1492 (4)
From early modern witches, rebels, and heretics to hyper-modern gangsters, terrorists, and serial killers, applying capital punishment to foreign nationals and ethnic minorities has sustained a global obsession about the sanctity of human life and the meaning of citizenship in the Americas and Europe. Graduate students must complete an additional paper. Prerequisite: upper-division or graduate standing and department stamp.

HITO 172/272. War in the Twentieth Century: A Psychological Approach (4)
Reckoning by novelists, essayists, and biographers with the phenomenon of contemporary warfare as an unprecedented experience and an abiding threat. Graduate students are required to submit a more substantial piece of work. Prerequisite: upper-division or graduate standing and department stamp.
UNITED STATES

See History of Science for more U.S. courses (HISC 105, HISC 108, HISC 111).

Lecture Courses

HIOUS 100. Colonial Period to 1763 (4)
Political and social history of the thirteen colonies: European background, settlement and expansion, begin-
nings of culture, and the imperial context. Prerequisite: upper-division standing. +

HIOUS 101. The American Revolution (4)
Causes and consequences of the revolution: intellectual and social change, the problems of the new nation, the
Constitution, and the origins of political parties. Prerequisite: upper-division standing. +

HIOUS 103. The World We Have Lost: Social History of Early America (4)
Selected themes in early American social history—in-
cluding race, gender, faith, economy, and age—from an
anthropological perspective. What distinguished it from
our own world? Prerequisite: upper-division standing. +

HIOUS 104. The Revolutionary Atlantic (4)
The upheavals that transformed the early modern Atlantic emphasizing the United States, Caribbean, and Great
Britain. Topics: struggles to define democracy, the reorga-
nization of the Atlantic state system, the Enlightenment, and
international responses to the American and French Revolutions. Prerequisite: upper-division standing. +

HIOUS 106B. American Foreign Relations, since 1900 (4)
Examines foreign relations of the United States from acquisition of a formal overseas empire in the aftermath
of the Spanish-American War to the end of the Cold War. Topics cover a range of public and private interactions
with the world. Prerequisite: upper-division standing or consent of instructor.

HIOUS 107. The Early Republic (4)
This course will examine the transformation of American society and politics between the American Revolution and
the Jacksonian period. Topics to be considered include the emergence of domesticity, the development of political
parties, the expansion of capitalist relations, the debate over slavery, the early labor movement, and the origins
and motivations of middle-class reform. +

HIOUS 108A/ETNN 112A. History of Native Americans in the United States I (4)
This course examines the history of the Native Americans in the United States with emphasis on the lifeways,
mores, warfare, cultural adaptation, and relations with the
European colonial powers and the emerging United States until 1870. Prerequisite: upper-division standing or consent of instructor. +

HIOUS 108B/ETNN 112B. History of Native Americans in the United States II (4)
This course examines the history of the Native Americans in the United States with emphasis on the lifeways, mores,
warfare, cultural adaptation, and relations with the United States from 1870 to the present. Prerequisite: upper-
division standing or consent of instructor.

HIOUS 109. Intellectual History: From Contact to Civil War (4)
An exploration of cultural, political, religious, and social thought in early America. Emphasis will be placed on the
trans-Atlantic context and on the relationships between intellectuals and authority. Prerequisite: upper-division standing or consent of instructor. +

HIOUS 114. California History (4)
This course examines California history from 1800 onward, with an emphasis on social, economic, and political change.
The course will explore the effect of national and interna-
tional events as well as the ways in which California—the
ideal and the real—shapes the American experience.

HIOUS 115. History of Sexuality in the United States (4)
Constructions of sex and sexuality in the United States from the time of pre-contact Native America to the present,
focusing on sexual behaviors, sexual ideologies, and the uses of sexuality for social control.

HIUS 116. War and American Society (4)
The connection between social relations and America’s wars. Ways that American society has influenced deci-
sions to prepare for or go to war as well as the impact of war on class relations and ideologies of race and gender. Prerequisite: upper-division standing.

HIUS 117. History of Los Angeles (4)
This course examines the history of Los Angeles from the late tenth century to the present. Particular issues to be addressed include urbanization, ethnicity, politics,
technological change, and cultural diversification.

HIUS 120. Peace Movements in America (4)
Topics will include Quaker origins of the American peace movements and examples of opposition to wars in the
twentieth century from World Wars I and II, Vietnam, anti-
nuclear movements, and intervention in Central America
in Iraq. Prerequisite: upper-division standing or consent of instructor.

HIUS 122. History and Hollywood: America and the Movies Since the Great Depression (4)
A lecture-discussion course utilizing written texts and films to explore major themes in American politics and culture
in the Great Depression through the 1990s. Topics will include the wars of America, McCarthyism, the counter-
culture of the 1960s, and the transformation of race and gender relations. Prerequisite: upper-division standing or consent of instructor.

HIUS 123/USP 167. History of New York City (4)
New York City breathes history. Whether it is in the music, the literature, or the architecture, the city informs our
most basic conceptions of American identity. This course examines the evolution of Gotham from the colonial era
to today. Prerequisite: upper-division standing or consent of instructor.

HIUS 124/ETNN 125. Asian American History
Explore how Asian Americans were involved in the political, economic, and cultural formation of United States society. Topics include migration; labor systems; gender, sexuality and social organization; racial ideologies and anti-Asian movements; and nationalism and debates over citizenship.

HIUS 128. African-American Legal History (4)
This course sketches the shifting experience persons of African descent have had with the law in the United States. Films, cases, articles, and book excerpts are used to convey the complex nature of this four hundred year journey. Prerequisite: upper-division standing or consent of instructor.

HIUS 130. Cultural History from 1607 to the Civil War (4)
This course will explore connections between American culture and the transformations of class relations, gender
ideology, and political thought. Topics will include the transformations of religious perspectives and practices,
republican art and architecture, artisan and working class
culture, the changing place of art and artists in American society, antebellum reform movements, antislavery and proslavery thought. Prerequisite: upper-division standing or consent of instructor.

HIUS 131. Cultural History from the Civil War to the Present (4)
This course will focus on the transformation of work and leisure and the development of consumer culture. Students
will consider connections between culture, class relations, gender ideology, and politics. Topics will include labor
radicalism, Taylorism, the development of organized sports, the rise of department stores, the transformation of middle-class sexual morality, the growth of commercial entertainment, and the culture of the Cold War.

HIUS 132. Civil War—Reconstruction in Pop Culture (4)
This course considers how cultural processes have shaped histories of the Civil War and Reconstruction. Students
will analyze the relationship between popular culture and major themes of the era through the use of literature,
texts, film, television, and print. Students may not receive
credit for both HIUS 132 and HIUS 132S. Prerequisite: upper-division standing or consent of instructor.

HIUS 133. The Golden Age of Piracy (4)
This interdisciplinary lecture course focuses on the history and literature of global piracy in the English-speaking world from Sir Francis Drake to Blackbeard and how this Golden Age was remembered in the popular fiction of the nineteenth and twentieth centuries. Prerequisite: upper-division standing or consent of instructor. +

HIUS 134. From Be Bop to Hip Hop: African American Cultural History Since 1945 (4)
Explore the politics of black culture in the postwar period. Topics include: the dynamic interplay of social factors (migration, civil rights, black power, deindustrialization, globalization), since World War II. Prerequisite: upper-division standing or consent of instructor.

An examination of interactions among the peoples of western Europe, Africa, and the Americas that transformed the Atlantic basin into an interconnected “Atlantic World.” Topics will include maritime technology and the European Age of Discovery, colonization in the Americas, the beginnings of the transatlantic slave trade and the early development of plantation agriculture in the New World. Prerequisite: upper-division standing or consent of instructor. +

HIUS 135B/ETHN 170B. Slavery and the Atlantic World (4)
The development of the Atlantic slave trade and the spread of racial slavery in the Americas before 1800. Explores the diversity of slave labor in the Americas and the different slave culture of African Americans produced under the constraints of slavery. Prerequisite: upper-division standing or consent of instructor. +

HIUS 138/ETHN 167. African-American History in War and Peace: 1917 to the Present (4)
The social, political, economic, and ideological pressures generated during the two world wars. Prerequisite: upper-division standing or consent of instructor.

HIUS 139/ETHN 149. African-American History in the Twentieth Century (4)
This course examines the transformation of African America across the expanse of the long twentieth century: imperialism, migration, urbanization, de-segregation, and deindustrialization. Special emphasis will be placed on issues of culture, international relations, and urban politics. Prerequisite: upper-division standing.

HIUS 140/Econ 158A. Economic History of the United States I (4)
The United States as a raw materials producer, as an agrarian society, and as an industrial nation. Emphasis on the logic of the growth process, the social and political tensions accompanying expansion, and pre-twentieth-century transformations of American capitalism.

HIUS 141/Econ 158B. Economic History of the United States II (4)
The United States as modern industrial nation. Emphasis on the logic of the growth process, the social and political tensions accompanying expansion, and nineteenth- and early-twentieth-century transformations of American capitalism.

HIUS 142. Great Trials of the Anglo-American World (4)
Examines the history of the United States since 1845 and the consequences of colonization, the evolution of the civil rights movement, and the growth of African American culture, including music, film, and literature. Prerequisite: upper-division standing or consent of instructor.

HIUS 142A. United States in the Twentieth Century, 1900–1945 (4)
Examines the political, economic, and social history of the American people from the turn of the twentieth century to the end of World War II. Topics: progressive movement, impact of the Great Depression, and the consequences of two world wars. Prerequisite: upper-division standing or consent of instructor.

HIUS 142B. United States in the Twentieth Century, 1945 to the Present (4)
Examines the political, economic, social history of the American people from the end of World War II to the present. Topics: postwar politics and society, the Cold War struggle for racial justice, and the rise of American conservatism since the 1980s. Prerequisite: upper-division standing or consent of instructor.

HIUS 146. Race, Riots, and Violence in the U.S. (4)
Examining the history of racial practice and the evolution of American society from the Civil War to the present. Topics include: slavery, segregation, discrimination, and civil rights movements. Prerequisite: upper-division standing or consent of instructor.

HIUS 147/USP 165. History of the American Suburb (4)
This lecture explores the development of suburbs in America, from the early nineteenth century to the contemporary era. Topics include suburbanization, class, ethnic and racial dimensions, government influences, social life, and cultural responses to suburbia. The class will explore competing theories of urbanization as it surveys the major literature. Prerequisite: upper-division standing or consent of instructor.

HIUS 148/USP 103. The American City in the Twentieth Century (4)
This course focuses on the phenomenon of modern American urbanization. Case studies of individual cities will help illustrate the social, political, and environmental consequences of rapid urban expansion, as well as the ways in which urban problems have been dealt with historically.

HIUS 149. The United States in the 1950s (4)
An overview of the social and political developments that polarized American society in the tumultuous decade of the 1950s. Topics include suburbanization, class, ethnic and racial dimensions, government influences, social life, and cultural responses to suburbia. The class will explore competing theories of urbanization as it surveys the major literature. Prerequisite: upper-division standing or consent of instructor.

HIUS 150. American Legal History to 1865 (4)
The history of American law and legal institutions. This quarter focuses on crime and punishment in the colonial era, the emergence of theories of popular sovereignty, the forging of the Constitution and American federalism, the relationship between law and economic change, and the crisis of slavery and Union. Prerequisite: upper-division standing. +

HIUS 151. American Legal History since 1865 (4)
The history of American law and legal institutions. This course examines legal developments since the Civil War, focusing on the period from 1865 to the present. Topics include: the constitutional development of constitutional thought and practice in the United States since 1865, the rise of big business, the origins of the modern welfare state, and the Great Depression. Prerequisite: upper-division standing or consent of instructor.

HIUS 152A. A Constitutional History of the United States to 1865 (4)
The historical development of constitutional thought and practice in the United States from the era of the American Revolution through the Civil War, with special attention to the role of the Supreme Court under Chief Justices Marshall and Taney. Prerequisite: upper-division standing or consent of instructor.

HIUS 152B. A Constitutional History of the United States Since 1865 (4)
The historical development of constitutional thought and practice in the United States since 1865, with special attention to the role of the Supreme Court from Chief Justices Chase to Rehnquist. Prerequisite: upper-division standing or consent of instructor. +

HIUS 153. American Political Trials (4)
Survey of politicized criminal trials and impeachments from Colonial times to the 1880s. Examines politically-motivated prosecutions and trials that became subjects of political controversy, were exploited by politicians for political purposes, or had their outcomes determined by political considerations. +

HIUS 154. Western Environmental History (4)
This course examines human interaction with the western American environment and explores the distinction between objective environmental understanding of science and the subjective views of history and historians. The course will also analyze the most compelling environmental issues in the contemporary West.

HIUS 155. From Zoot Suits to Hip Hop: Race and Popular Culture since World War II (4)
Tracing popular cultural production and consumption in the United States since World War II. It explores how popular culture as an arena where social relations are negotiated and where race, class, and gender identities are constructed, transformed, and contested. Prerequisite: upper-division standing or consent of instructor.

HIUS 155A. Religion and Law in American History: Foundations to the Civil War (4)
Selected problems in the history of the relationship between religious beliefs and practice and legal institutions in the Anglo-American world. Topics include the English background, religion in the age of the American Revolution and the antebellum period. Prerequisite: upper-division standing or consent of instructor. +

HIUS 155B. Religion and Law in American History: Civil War to the Present (4)
Selected problems in the history of the relationship between religious beliefs and practice and legal institutions in America from the Civil War to the present. Topics include the religion and government aid; sacred duties and the law; and religion and cultural politics. Prerequisite: upper-division standing or consent of instructor.

HIUS 156. American Women, American Womanhood (4)
This course explores the emergence of a dominant ideology of womanhood in America from the eighteenth century and contrasts the ideal with the historically diverse experience of women of different races and classes, from settlement to 1870. Topics include witchcraft, evangelicalism, cult of domesticity, sexuality, race of industrial capitalism and the transformation of women’s work, Civil War, and the first feminist movement. Prerequisite: upper-division standing. +

HIUS 157. American Women, American Womanhood 1870 to Present
This course explores the making of the ideology of womanhood in modern America and the diversity of American women’s experience from 1870 to the present. Topics include the suffrage movement, the struggle for reproductive rights and the ERA; immigrant and women’s, women’s work, and labor organization; education; the modern feminist movement and the contemporary politics of reproduction, including abortion and surrogate motherhood. Prerequisite: upper-division standing. +

HIUS 158/ETHN 130. Social and Economic History of the Southwest I (4)
This course examines the history of the Spanish and Mexican frontiers (what became the U.S. Southwest) from roughly 1400 to 1848, focusing specifically on the area’s social, cultural, and political development.

HIUS 159/ETHN 131. Social and Economic History of the Southwest II (4)
(Cross-listed as Ethnic Studies 131.) This course examines the history of the American Southwest from the U.S.-Mexican War in 1846–48 to the present, focusing on immigration, racial and ethnic conflict, and the growth of Chicano national identity.

Colloquia
The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course.
HIUS 178/278. The Atlantic World, 1400–1800 (4)
This course explains the origin of the Atlantic as a zone of interaction for Europeans, Indigenous Americans, and Africans, and evaluates the consequences of the interaction over several centuries by exploring contests over political power and demographic change. Graduate students will submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. Prerequisites: upper-division or graduate standing and departmental stamp. +

HIUS 180/ETHN 134. Immigration and Ethnicity in Modern American Society (4)
Comparative study of immigration and ethnic-group formation in the United States from 1880 to the present. Topics include immigrant adaptation, competing theories about the experiences of different ethnic groups, and the persistence of ethnic attachments in modern American society. Prerequisite: upper-division standing.

HIUS 181/281. Topics in Twentieth Century United States History (4)
A colloquium dealing with special topics in U.S. history from 1900 to the present. Themes will vary from year to year. Prerequisite: department stamp or consent of instructor.

HIUS 183/283/ETHN 159. Topics in African American History (4)
A colloquium dealing with special topics in the history of people of African descent in the United States. Themes will vary from quarter to quarter. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students will be required to submit a more substantial piece of work. Prerequisite: upper-division standing or consent of instructor.

HIUS 187/287. Topics in American Social History (4)
Colloquium on selected topics in American social history. Topics will vary from year to year, and the course may therefore be repeated for credit.

HIUS 188/288. Topics in Culture and Politics (4)
Colloquium on select topics in culture and politics in the United States. Topics will vary from quarter to quarter. Graduate students will be required to submit an additional piece of work. Prerequisite: upper-division or graduate standing and departmental stamp.

HIUS 189/289. The Social History of Seafaring in Early America (4)
All American colonies were originally maritime colonies. This seminar will explore the social history of fishing, whaling, shipping, and freebooting during the colonial period, and will investigate through primary and secondary sources the experience of living in communities that followed the sea. Graduate students are required to submit an additional paper. Prerequisites: upper-division standing or consent of instructor and departmental stamp.+

HIUS 199. Independent Study in United States History (4)
Directed readings for undergraduates under the supervision of various faculty members. Prerequisite: consent of instructor and departmental stamp required.

GRADUATE
Graduate standing is a prerequisite for all graduate-level courses. For more graduate courses (200+), look at history undergraduate colloquia (courses numbered 160–190).

HIGR 200. History and Theory (4)
An introductory graduate course for students in all fields. Themes include cross-field historiography and theory, interdisciplinary approaches to history and historical method. (May be taken twice for credit, if the reading list is significantly different.)

HIGR 204A-B. The History of the University (4-4)
Traces the history and idea of the university from its medieval origins, with emphasis on its post-WWII incarnation as an engine of scientific investigation, economic growth, socio-cultural analysis, and artistic experimentation. Research project will utilize original sources in UCSD’s archives. Students must complete both HIGR 204A and 204B in order to get credit for both. HIGR 204A focuses on the research portion of the class.

HIGR 205. Feminist Historical Studies (4)
An introduction to feminist historical studies, this course is designed for interested graduate students from all history fields. Graduate students from other disciplines are also encouraged to participate. The course will provide students a rigorous training in women’s history, in the feminist theories that undergird that scholarship, and in the engagement field of gender analysis. The particular content of the course will change from year to year, but each course will include theoretical texts, historical case studies, and primary sources. Readings will be drawn from different times and places. This course is strongly recommended for those preparing minor fields in women’s history. The course can be repeated twice for credit.

HIGR 210. Historical Scholarship on Modern Chinese History (4)
This course will introduce students to the monographic literature and the main historiographic controversies of modern Chinese history.

HIGR 211. Historical Scholarship on Modern Japanese History (4)
This course will introduce students to the monographic literature and the main historiographic controversies of modern Japanese history.

HIGR 212. Historical Scholarship on Modern East Asian History (4)
This course will introduce students to the monographic literature and the main historiographic controversies of modern East Asian history.

HIGR 213. Sources on Modern Chinese History (4)
An introduction to Chinese documentary sources and collections on Qing and Republican History. This course will introduce students to the language of Qing documents, and to the contents and uses of imperial documents and archives, documentary collections, periodicals, gazetteers, etc.

HIGR 215A-B. Research Seminar in Modern Chinese History (4-4)
A two-quarter research seminar in Chinese history. A paper, based on original research, will be due in the second semester. This seminar topic will be announced at the end of the first quarter. Final grade will not be given until the end of the second quarter. Prerequisite: 215A is a prerequisite for 215B.

HIGR 216A-B. Research Seminar in Modern Japanese History (4-4)
A two-quarter research seminar in Japanese history. A paper, based on original research, will be due in the second semester. This seminar topic will be announced at the end of the first quarter. Final grade will not be given until the end of the second quarter. Prerequisite: 216A is a prerequisite for 216B.

HIGR 217A. Historical Scholarship on Pre-Modern Chinese History: Foundations—China before Buddhism (4)
Ancient society differed dramatically from the imperial, bureaucratic, commercial, Buddhist China of later times. Yet texts and artifacts of antiquity echoed powerfully through the centuries. We will study foundational texts, practices, and objects in their own contexts and also consider their later uses.

HIGR 217B. Historical Scholarship on Pre-Modern Chinese History: Han Dynasty through the Song Dynasty (4)
Course introduces history and society during the Chinese Middle Ages (c. 200 BCE–1200 CE), including the Han, Six, Tang, and Song Dynasties. Examination of the birth and
development of China's great religions, Buddhism and Daoism, and the international culture of the Silk Road, and political and cultural systems that still resonate in China today.

HIGR 217C. Historical Scholarship on Pre-Modern Chinese History: Late Imperial Chinese History, 1200–1800 (4) Course subject varies among periods before 1900. 218A includes secondary scholarship studied for content, method, and structure; research methods and resources; and development of the research topic. In 218B students write an original research paper using primary sources. Prerequisites: graduate standing or consent of instructor. Reading knowledge of Chinese. HIGR 218A.

HIGR 218B. Graduate Seminar in Pre-Modern Chinese History (4) Course subject varies among periods before 1900. 218A includes secondary scholarship studied for content, method, and structure; research methods and resources; and development of the research topic. In 218B students write an original research paper using primary sources. Prerequisites: graduate standing or consent of instructor. Reading knowledge of Chinese. HIGR 218A.

HIGR 220. Historical Scholarship on European History, 1500–1715 (4) Introduction to the historiography on Renaissance, Reformation, and early modern Europe: an overview of methodologies with emphasis on sources and critical ap- proaches. Required for all beginning European history graduate students.

HIGR 221. Historical Scholarship on European History, 1715–1850 (4) Selected topics in European history from the early modern to the modern era. Readings and discussions focus on issues of methodology and interpretation. Required for all beginning European history graduate students.

HIGR 222. Historical Scholarship on European History, since 1850 (4) Critical evaluation of selected topics in the period of modern Europe from the mid-nineteenth century to the present. Required for all beginning European history gradu- ate students.

HIGR 230A-B. Research Seminar in Early Modern Europe (4-4) Selected topics in the period from the sixteenth century through the early nineteenth, with an emphasis on the theory and practice of socio-economic history. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. Prerequisite: 230A is a prerequisite for 230B.

HIGR 231A-B. Research Seminar in Modern European History (4-4) Selected topics in the period of the nineteenth and twen- tieth centuries. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. Prerequisite: 231A is a prerequisite for 231B.

HIGR 235. Science, Empire, and Exploration (4) Examines links between scientific work, particularly expedi- tions and exploration, and political programs of empire in the seventeenth to twentieth centuries. Topics: collecting expeditions as expressions of empire; role of colonial administrative networks in facilitating field-based inves- tigations; relation between European and non-European knowledge systems.

HIGR 236A-B. Research Seminar in History of Science (4-4) A two-quarter research seminar comprising intensive study of a specific topic in the history of science. The first quarter will be devoted to readings and discussions; the second chiefly to the writing of individual research papers. Topics vary from year to year, and students may therefore repeat the course for credit. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter.

HIGR 237. Topics in the History of Ocean Sciences (4) (Cross-listed with SIO 201.) Intensive study of specific prob- lems in the history of the ocean sciences, and of related earth and atmospheric sciences, in the modern period. Topics vary from year to year, and students may therefore repeat the course for credit.

HIGR 238. Introduction to Science Studies (4) (Cross-listed as Communication 225A, Philosophy 209A, and Sociology 255A.) Study and discussion of classic work in history of science, sociology of science and philosophy of science, and of work that attempts to develop a unified science studies approach. Required for all students in the Science Studies Program. Prerequisite: enrollment in Science Studies Program.

HIGR 239. Seminar in Science Studies (4) (Cross-listed as Communication 225B, Philosophy 209B, and Sociology 255B.) Study and discussion of selected topics in the science studies field. Required for all students in the Science Studies Program. May be repeated as course content changes annually. Prerequisite: enrollment in the Science Studies Program.

HIGR 241. Advanced Approaches to Science Studies (4) (Cross-listed as CSOR 225D, PHIL 290D, SOCQ 225D.) Focus on recent literature in the history, philosophy, and sociol- ogy of science, technology, and medicine. Required of all students in the Science Studies Program. Prerequisites: HIGR 238 is a prerequisite for HIGR 241; enrollment in Science Studies Program or instructor's permission.

HIGR 242. Topics in the History of Earth and Life Sciences (4) Intensive study of specific problems in the history of the life sciences and earth sciences, ranging in period from the Renaissance to the twenty-first century. May be repeated for credit as topics will vary annually. Prerequisites: graduate standing and department stamp required.

HIGR 243. Historical Scholarship in Technology (4) An introduction to the historiography of technology. This reading seminar provides an overview of scholarly approaches to the history of technology by critically examining classic and contemporary works in the field. Prerequisite: graduate standing or consent of instructor.

HIGR 244. Introduction to Sound Studies (4) Study and discussion of classic and recent scholarship on sound production and cultures of listening. Emphasizes historical literature but also includes works in literary studies, art history, music, and other fields. Prerequisite: graduate standing or consent of instructor.

HIGR 245A-B-C. Historical Scholarship on Latin American History (4-4-4) Introduction to the literature of Latin American history. A three-quarter sequence of readings and discussions taught each quarter by members of the staff required for all beginning students for a graduate degree specializing in Latin American history; open and strongly recommended to other students using Latin American history as a sec- ondary field for a graduate degree. HIGR 245A covers the colonial period, from conquest to independence to today; HIGR 245B covers South America from independence to today; HIGR 245C covers Mexico, Cuba, and Central America from independence to today. The three quarters need not be taken in sequence. Reading knowledge of Spanish is required.

HIGR 247A-B. Research Seminar in Colonial Latin America (4-4) A two-quarter course involving readings and research on sixteenth- through eighteenth-century Latin America. Students are expected to compose a paper based on original research that is due in the second quarter. Reading knowledge of Spanish required. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter.

HIGR 248A-B. Research Seminar in Latin America, National Period (4-4) A two-quarter course involving readings and research; the first quarter is devoted to the nineteenth and the second quarter to the twentieth centuries. Students are expected to compose a paper based on original research that is due in the second quarter. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. Reading knowledge of Spanish and/or Portuguese is helpful but not required.

HIGR 252. History, Social Evolution, and Intellectuals in the Andes: Mariátegui, Haya de la Torre, and Arguedas (4) The course will study three major twentieth-century inter- preters of Andean history and society: Mariátegui is Latin America’s most original social socialist intellectual; Haya de la Torre is the founder of Peru’s most important party; and Arguedas was the most profound interpreter of the role of Indian peasants in the Andean nations.

HIGR 255. The Literary History of the Ancient Near East (4) An introduction to the bibliography, methodology, and an- ciliary disciplines for the study of ancient Near East, with readings and discussion on selected topics within the field. May be repeated for credit, topic will vary year to year.

HIGR 257A. Historical Scholarship on Modern Middle East, Eighteenth to Twentieth Century (4) Readings in the historiographical literature on the late Ottoman Empire (eighteenth to twentieth century). Prerequisite: graduate standing or consent of instructor.

HIGR 257B. Historical Scholarship on Modern Middle East, Colonial Period (4) Readings in the historiographical literature on Middle Eastern states in the colonial period. Prerequisite: graduate standing or consent of instructor.

HIGR 257C. Historical Scholarship on Modern Middle East, Post-Colonial Era (4) Readings in the historiographical literature on the Middle East in the national/post-colonial era. Prerequisite: graduate standing or consent of instructor.

HIGR 260A-B-C. Historical Scholarship on Judaic Studies (4-4-4) Weekly graduate seminar. Faculty and students present results of research. Student research may be towards course work on thesis.

HIGR 265A-B-C. Historical Scholarship on American History (4-4-4) A three-quarter sequence of readings and discussions on the bibliographical and monographic literature of American history from the colonial period to the present. Taught by different members of the staff each quarter, the course is required of all beginning graduate students in American history.

HIGR 267A-B. Research Seminar in United States History (4-4) Readings and discussion in selected areas of American history for advanced graduate students. An IP (in progress) grade will be awarded the first quarter. The second quarter will be devoted to the presentation, discussion, and evaluation of work in progress. A final grade will be awarded at the end of the second quarter. Prerequisite: 267A is a prerequisite for 267B.

HIGR 271. New Research Directions in U.S. History (4) Students will develop skills in presenting and assessing newer research and offering feedback to work in progress by senior students and faculty. Course is required to be taken twice by third-year students and highly recommended for audit by all students in U.S. History. (S/U grades only.)
HIGR 275A. Research Seminar in Middle Eastern History (4)
HIGR 275A is the first quarter of a two-quarter research seminar in Middle Eastern history. Seminar topics will vary. Reading knowledge of Arabic or Turkish is expected. A paper, based on original research, will be due at the end of the second quarter. Final grade will not be given until the end of the second quarter. Prerequisite: graduate standing or consent of instructor.

HIGR 275B. Research Seminar in Middle Eastern History (4)
HIGR 275B is the second quarter of a two-quarter research seminar in Middle Eastern history. Seminar topics will vary. Reading knowledge of Arabic or Turkish is expected. A paper, based on original research, will be due at the end of the quarter. Final grade will be awarded for HIGR 275A and B at the end of the second quarter. Prerequisites: 275A and graduate-standing or consent of instructor.

HIGR 295. Thesis Seminar (4)
For students advanced to candidacy to the doctorate. Discussion, criticism, and revision of drafts of chapters of theses and of work to be submitted for publication.

HIGR 298. Directed Reading (1–12)
Guided and supervised reading in the literature of the several fields of history. This course may be repeated for an indefinite number of times due to the independent nature of the content of the course. (S/U grades permitted.)

Independent work by graduate students engaged in research and writing of doctoral theses. This course may be repeated for an indefinite number of times due to the independent nature of thesis writing and research. (S/U grades only.)

HIGR 500. Apprentice Teaching in History (1–4)
A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation and grading of examinations and other written exercises, and student relations. (S/U grades only.)
a broad spectrum of issues in human development: from brain and perceptual development, to reasoning and problem solving, to social interaction and the evolution of cultural systems. The Human Development Program unifies and coordinates the excellent research and teaching resources currently available on campus in this area and profiles the factors that influence the ways in which humans develop and change.

Human development is a very large field, but there is a set of basic questions which serve to define and integrate it: What underlies the development of human knowledge? To what extent is the capacity to know, indeed the concepts themselves, encoded in the genes? How is the role of learning and environmental influences accounted for? How do we learn? What are the ways in which children become competent participants in their social groups? What is the origin and nature of social interaction and organization? The study of human development has become increasingly central to a range of important issues affecting infants, young children, and adolescents, as well as the changing structure of the American family and public policy on children and education. An understanding of the processes that underlie human development is crucial to our evaluation of these issues and to our ability to offer avenues for remediation of the attendant problems. The three major areas of study within the Human Development Program are: Biological Development, Ontogenetic Development, and Socio-Cultural Development. These areas consider issues that pertain to development of specific neural and cognitive processes and development within a larger social and cultural context.

CAREER GUIDANCE

A degree in human development offers training of special interest to those considering admission to graduate or professional schools and careers in medicine, law, education, counseling, clinical psychology, public health, public policy, public administration, or social work. Students who are interested in these areas are advised to see a Human Development Program advisor for assistance in selecting elective and major courses. A major in human development is designed to impart fundamental skills in critical thinking, comparative analysis, research analysis, and written expression. A human development major can offer preparation for teaching in elementary schools. However, if you are interested in earning a California teaching credential from UC San Diego, contact the Education Studies Program (EDS) for information about prerequisite and professional preparation requirements. It is recommended you contact EDS as early as possible in your academic career.

EDUCATION ABROAD

Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP) while still making progress towards the major. Students interested in studying abroad should see a Human Development Program advisor to discuss curriculum plans and appropriate courses. It is strongly recommended that students obtain HDP pre-approval for EAP courses that are intended to count toward the major. Information on EAP/OAP is detailed in the Education Abroad Program section of the UC San Diego General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit the Web site at http://programsabroad.ucsd.edu/. Financial aid is applicable and special study abroad scholarships are available.

PREREQUISITES FOR HUMAN DEVELOPMENT MAJORS

A bachelor of arts degree in human development will be given to students who satisfactorily complete the general-education and graduation requirements of Marshall, Muic, Revelle, Roosevelt, Sixth, or Warren College in addition to the Human Development Program requirements. In accordance with UCSD academic regulations, upper-division courses used to satisfy major requirements cannot be applied towards minors (please note there is some overlap permitted for double majors). See college advisor and major advisor for questions and restrictions.

APPLYING FOR THE HDP MAJOR

Students who wish to declare the Human Development Program major must meet premajor requirements and apply for entrance into the major. All lower-division requirements must be fulfilled before applying for the major. All lower-division courses must be completed with a grade of C or better. The cumulative GPA for the eight lower-division courses must equal or exceed 2.75. Students must meet with an HDP advisor and obtain approval to declare the human development major, no later than the second quarter of the student’s junior year.

GRADE REQUIREMENTS FOR THE MAJOR

A minimum grade-point average of 2.0 is required in the major. Students must receive a grade of C– or better in any course counted toward fulfillment of the major requirements. All courses taken to satisfy the program's lower- and upper-division requirements must be taken for a letter grade. HDP 1, HDP 130, HDP 181, and HDP 191 must be taken in residence. No substitutions will be approved.

LOWER-DIVISION REQUIREMENTS

1. Introduction to Human Development: HDP1
2. One statistics course selected from the approved list: PSYC 60, COGS 14, BIEB 100, ECON 120A, POLI 30, or MATH 11
3. One formal skills course selected from the approved list: PHIL 10, PHIL 12, LIGN 17, or one course from the MATH 10 sequence or MATH 20 sequence
4 & 5. Two biological sciences courses selected from the approved list: ANTH 2, BILD 1, BILD 2, BILD 3, BILD 7, BILD 10, BILD 12, BILD 18, BILD 20, BILD 26, COGS 11, COGS 17, PSYC 2
6 & 7. Two social sciences courses selected from the approved list: ANTH 1, ANTH 3, CAT 1, CAT 2, COGN 20, COGS 1, One course from the HILD 7A, B, or C sequence (only one allowed), LIGN 4, LIGN 7, LIGN 8, LIGN 101, MMW 1, MMW 2, PSYC 1, PSYC 3, PSYC 6, PSYC 7, SOCI 1, SOCI 20

THE HUMAN DEVELOPMENT MAJOR

The scientific study of human development focuses on issues of growth, development, and behavioral change across the lifespan. The Human Development Program is interdisciplinary, incorporating courses from the Departments of Anthropology, Biology, Cognitive Science, Communication, Ethnic Studies, History, Linguistics, Literature, Psychology, Sociology, Education Studies Program, and Urban Studies and Planning Program. The curriculum is designed to emphasize the idea of development as an essential perspective from which to understand human behavior. The courses cover
8. One computer literacy course selected from the approved list: MAE 5, COGS 3, COGS 8, COGS 18, CSE 3, CSE 5A, CSE 11

UPPER-DIVISION REQUIREMENTS FOR THE HDP MAJOR

1. Two Methods courses
2. Four Core Series courses
3. Six Development courses
4. HDP 150
   (Full information follows)

A. Methods Courses

1. HDP 181 (Students are encouraged to take this course their junior year.)
2. HDP 191 (Students are encouraged to take this course their junior year.)

B. Core Series Courses

(Four courses selected from the approved list required, one from each domain)

Domain 1: The biological basis of human development
HDP 110. Brain and Behavioral Development
ANBI 111. Advanced Principles of Human Evolution
BIPN 144. Developmental Neurobiology

Domain 2: Ontogenetic—the social-cognitive and linguistic basis of human development (Two required—one from each area)

A. Social-Cognitive Development (One required)
HDP 121/COGS 110. The Developing Mind
HDP 122. Social Development
PSYC 187. Development of Social Cognition

B. Language Development (One required)
HDP 120. Language Development
COGS 156. Language Development
LIGN 171. Child Language Acquisition

Domain 3: The socio-cultural basis of human development
HDP 133. Socio-cultural Foundations of Human Development
ANSC 126. Childhood and Adolescence
HITO 126. History of Childhood

C. Development Courses

(Six courses required; at least one from each area of focus)

Biological Development
ANBI 116. The Evolution of Primate Reproduction
ANBI 140. The Evolution of the Human Brain
ANBI 159. Biological and Cultural Perspectives on Intelligence
ANBI 173. Cognition in Animals and Humans
ANTH 102. Humans are Cultural Animals
BICD 100. Genetics
BICD 130. Embryos, Genes, and Development
BICD 131. Embryology Laboratory
BICD 134. Human Reproduction and Development
BIPN 144. Developmental Neurobiology

COGS 115. Neurological Development and Cognitive Change
COGS 184. Modeling the Evolution of Cognition
PSYC 168. Psychological Disorders of Childhood

Ontogenetic Development
COGS 113. Cognitive Development
COGS 154. Communication Disorders in Children and Adults
COGS 156. Language Development
COHI 100. Introduction to Communication and the Individual
COHI 114. Bilingual Communication
COHI 119. Learning to Read
COHI 121. Literacy, Social Organization, and the Individual

EDS 119/LIGN 119. First and Second Language Learning: From Childhood through Adolescence
LIGN 171. Child Language Acquisition
LIGN 179. Second Language Acquisition
PSYC 101. Introduction to Developmental Psychology
PSYC 136. Cognitive Development
PSYC 146. Language and Conceptual Development
PSYC 156. Cognitive Development in Infancy
PSYC 168. Psychological Disorders of Childhood
PSYC 172. Psychology of Human Sexuality
PSYC 180. Adolescence
PSYC 187. Development of Social Cognition
PSYC 190. Parenting

Socio-Cultural Development
ANBI 159. Biological and Cultural Perspectives on Intelligence
ANSC 125. Gender, Sexuality, and Society
ANSC 126. Childhood and Adolescence
ANSC 127. Discourse, Interaction, and Social Life
COHI 123. Children and Media
EDS 115. Cognitive Development and Education
EDS 117. Language, Culture, and Education
HDP 115/COMT 115. Media and Design of Social Learning Contexts
HDP 135/COMT 116. Practicum in Child Development
LTLW 114. Children's Literature
LTLW 116. Adolescent Literature
PSYC 180. Adolescence
PSYC 190. Parenting
SOCl 117. Language, Culture, and Education
SOCl 116/LIGN 174. Gender and Language in Society
SOCl 129. The Family
SOCl 131. Sociology of Youth
SOCl 159. Special Topics in Organizations and Institutions (Open only when topic is approved for HDP major)
SOCl 161. Sociology of The Life Course
USP 145. Aging—Social and Health Policy Issues

D. HDP 150. Advanced Human Development
(HDP students should enroll in this course in their senior year.)

ADVANCED HUMAN DEVELOPMENT REQUIREMENT HDP 150

Seminar for graduating HDP seniors. Readings and discussion of special topics in human development. Provides advanced-level study on subfields of human development. Topics vary quarterly. Prerequisites: HDP 1, HDP 181, HDP 191, senior standing, and department approval one quarter prior to enrollment.

FIELD RESEARCH REQUIREMENT HDP 191

This course provides students with the opportunity to participate jointly in a research project in conjunction with a mentor/collaborator from a local service site. This applied research experience allows students to design and conduct research projects in a variety of settings ranging from laboratory research settings to service oriented placements. In addition to literature research and a final paper at the end of the quarter, students will participate at an off-campus site for a minimum of four hours per week. Research sites are prearranged one academic year in advance (see the student affairs office or the HDP Web site for enrollment information). Students’ interests and future career plans are considered for site placement. Various research orientations and methodologies are reviewed in class. Prerequisites: HDP 1 and department approval one academic year prior to enrollment.

HONORS IN HUMAN DEVELOPMENT HDP 194A-B-C

The Human Development Program offers an honors option for those students who have demonstrated excellence in the human development major. The honors program allows eligible undergraduates to explore advanced issues in the field through an honors thesis on a topic of their choice and under faculty supervision. In order to be admitted to the honors program, students must have 1) junior standing and 2) maintained a minimum cumulative grade-point average of 3.2, and a 3.5 GPA for courses taken in the human development major. Interested students need to apply for departmental honors in spring quarter of their junior year. Students in the honors program are expected to complete the following additional requirements:

1. An advanced course in statistics or methods design (see the HDP student affairs office for more information).
2. HDP 194A-B-C, a year-long independent research project, which results in an Honors Thesis.
3. Weekly attendance of the Center for Human Development Seminar and participation.

PETITIONING COURSES

There are three circumstances under which petitions to receive credit for courses not explicitly approved for the major will be considered: (1) approved courses are detailed in the UC San Diego General Catalog, HDP section); Requests from transfer students, requests from students planning to study abroad, and exceptional courses identified by a student. In all cases, students are required to submit a petition in writing that clearly describes the course for which they wish to receive HDP major credit, and to attach to the petition as much information as possible about the content of the course (e.g., syllabus, course description, etc.). With the exception of courses petitioned by transfer students, ALL REQUESTS FOR APPROVAL OF COURSES NOT
EXPLICITLY LISTED IN THE UC San Diego General Catalog SHOULD BE SUBMITTED BEFORE THE COURSE IS TAKEN BY THE STUDENT.

Transfers. Students transferring from a community college or other university must petition for HDP credit for courses taken at their previous institution. For students transferring from the California Community College System, articulation agreements for many courses have been developed that facilitate the petition process. Transfer students should make an appointment with an HDP advisor to review courses for which they will most likely receive credit and fill out a written petition for each course. Education Abroad. Students planning to study abroad may receive credit toward the major for courses taken in another country. IT IS STRONGLY RECOMMENDED THAT STUDENTS RECEIVE PRELIMINARY APPROVAL (BEFORE LEAVING THE COUNTRY) FOR COURSES THEY ARE CONSIDERING TAKING DURING THEIR TIME ABROAD. While the preliminary approval does not guarantee that the actual course will be approved, the great majority of courses for which preliminary approval has been obtained are approved when the actual petition is submitted upon the student’s return.

Other courses. Occasionally students identify a UCSD course that has the potential to fulfill an HDP requirement. Students may petition in writing to request credit for such courses. However, it is important to note that very few such petitions are successful, and students are strongly cautioned to petition and receive approval for such a course BEFORE ENROLLING IN THE COURSE.

Note: Courses are not officially approved for credit until the written petition has been approved by the HDP Executive Committee and signed by the HDP director.

THE MINOR PROGRAM

(Courses must be discussed with and approved by a Human Development academic advisor.) A total of seven courses are required to complete a minor in human development. These include Introduction to Human Development (HDP 1), and six developmental courses, one from each major area of study from the developmental course list. All courses for the HDP minor must be taken for a letter grade.

Finish-in-Four Plan

Students interested in a particular career field should see the student affairs office for more specific Finish-in-Four plans for their particular college.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

LOWER-DIVISION

HDP 87. Freshman Seminar (1)

This seminar is designed to provide new students with the opportunity to explore an intellectual topic in a small seminar setting. Topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

HDP 98. Directed Group Study (1-2)

Directed group study, on a topic or a field not included in the department curriculum, by arrangement with a faculty member. Topics will vary from quarter to quarter. Pass/Not Pass grades only. Enrollment requires prior consent of the instructor; students must have at least thirty units completed and a minimum 3.0 GPA. Student may enroll for no more than a total of two units in one quarter. Cannot be used towards HDP major credit. Prerequisites: 3.0 GPA and at least thirty units completed.

HDP 99. Independent Study in Human Development (2-4)

Independent study and research under the direction of a human development program, or affiliated, faculty member. Pass/Not Pass only. Cannot be used towards HDP major credit. Prerequisites: lower-division standing, completion of thirty units of UCSD undergraduate study, a minimum UCSD GPA of 3.0, and a completed and approved Special Studies form: UCSD Application for Enrollment Special Studies Courses 97, 98, 99.

UPPER-DIVISION

HDP 110. Brain and Behavioral Development (4)

The purpose of this course is to familiarize students with basic mechanisms of brain and behavioral development from embryology through aging. Multiple levels of analysis will be discussed, including the effects of hormones on behavior, developmental events at the level of cells, structures, and neural systems, and the neural basis of cognition, social, perceptual, and language development.

Prerequisite: HDP 1 or PSYC 101.

HDP 115. Media and Design of Social Learning Contexts (6)

(Same as COMT 115) A combined lecture/lab course, cross-listed in communication and human development. Students attend lecture, write field notes, and spend three hours per week in specially designed after-school setting working with children and designing new educational media and producing special projects. Prerequisite: HDP 1 or COHI 100. (F,W,S)

HDP 120. Language Development (4)

Examination of children’s acquisition of language from babbling to the formation of sentences. Topics covered include: pre-linguistic gestures, relationships between babbling and sound systems, speech perception, linking words with objects, rule overgeneralization, bilingualism, nature vs. nurture, individual differences, cultural differences. Prerequisite: HDP 1.

HDP 121. The Developing Mind (4)

(Same as COGS 110) This course examines changes in thinking and perceiving the physical and social world from birth through childhood. Evidence of significant changes in encoding information, forming mental representations, and solving problems is culled from psychological research, cross-cultural studies, and cognitive science. Prerequisite: HDP 1 or COGS 1.

HDP 122. Social Development (4)

This course covers topics in social development research. Content will address general principles such as the mutual influences of caregivers and children upon each other and the interplay of person and context. Discussion areas will include attachment, parenting styles, gender differences, aggression, social cognition, social components of achievement motivation, and development of conscience. Prerequisite: HDP 1.

HDP 133. Socio-cultural Foundations of Human Development (4)

This course will provide students with an understanding of the social and cultural foundations of human development. The topics will be explored with both national and international comparisons from infancy through adolescence. Prerequisite: HDP 1 or PSYC 1.

HDP 135. Practicum in Child Development (6)

(Same as COMT 116) A combined lecture and laboratory course for students in psychology, communication, and human development. Student backgrounds should include a background in general psychology or communication. Students are expected to spend four hours a week in a supervised practical after-school setting at one of the community field sites involving children. Additional time will be devoted to readings and class prep, as well as six hours a week transcribing field notes and writing a paper on some aspect of the fieldwork experience as it relates to class lectures and readings. Prerequisite: HDP 1 or COHI 100 or PSYC 101. (F,W,S)

HDP 150. Advanced Human Development (4)

Seminar for graduating HDP seniors. Readings and discussion of special topics in human development. Provides advanced-level study on subfields of human development. Topics vary quarterly. Prerequisites: HDP 1, HDP 181, HDP 191, senior standing, and department approval. (F,W,S)

HDP 160. Special Topics Seminar in Human Development (4)

Special topics in human development are discussed. (May repeat when topics vary.) Prerequisite: department approval.

HDP 181. Experimental Projects in Human Development Research (6)

This laboratory course in human development is designed around a variety of intensive experimental projects. With lectures providing background information on research methods and child development, each assignment will include data collection and/or analysis, and a written laboratory report. Prerequisites: HDP 1, Statistics, and must be a declared HDP major. (F,W,S)

HDP 191. Field Research in Human Development (6)

This course combines lectures on research methodology (three hours/week) with an applied field research experience (four hours/week) conducted at a pre-approved study site. Required: Completion of a field notebook, review paper, oral presentation, and final paper. Prerequisites: HDP 1. Students must submit the pre-enrollment questionnaire one academic year prior to enrollment. See HDP Web site for details. (F,W,S)

HDP 193. Advanced Research in Human Development (4)

Specialized research project under the direction of a human development affiliated faculty member. May be taken for one or two quarters of credit. Prerequisites: declared HDP major, overall GPA of 2.8, nine units completed, three HDP core courses completed, and consent of instructor.

HDP 194A-B-C. Honors Thesis (4-4-4)

Students will take part in a weekly research seminar. In addition, they will plan and carry out a three-quarter research project under the guidance of a faculty member. The project will form the basis for their senior honors thesis. Prerequisites: overall GPA of 3.2, and a 3.5 GPA for courses taken in the human development major; an advanced course in statistics or experimental design, and consent of instructor.

HDP 195. Instructional Apprentice in Human Development (4)

Introduction to teaching within the discipline of human development. Students will attend lecture, be responsible for assisting the instructor with course preparation, and will lead a discussion section of one of the lower-division courses in the human development program. Limited to upper-division students majoring in human development with consent of instructor. Pass/Not Pass only. Prerequisites: Declared HDP major, overall GPA of 3.0, 90 units completed, and consent of instructor.

HDP 199. Independent Study in Human Development (4)

Independent study and research under the direction of a faculty member. Pass/Not Pass only. Prerequisites: consent of the instructor, completion of at least ninety undergraduate units with a minimum of 2.5 GPA, and a completed and approved Special Studies Form.
### Humanities

OFFICE: Galbraith Hall, Room 180, Revelle College  
http://humanities.uscd.edu

The Humanities Program offers interdisciplinary courses in history, philosophy, and literature, with a focus on major aspects of the Western humanistic tradition. In these courses, students examine the development of a wide variety of ideas and forms of expression that exert a major influence on modern America. Through lectures and class discussions, and through the writing of essays, students learn to interpret literary, historical, and philosophical texts and to conduct independent critical assessments of documents and ideas.

The sequence of courses, Humanities 1 through 5, meets the humanities and writing requirement of Revelle College. Instruction in university-level writing is part of all five courses, but students in Humanities 1 and 2 (six units each) receive intensive writing instruction.

Students must have satisfied the UC Entry Level Writing requirement before registering for any part of the humanities sequence. Humanities 1 and 2 must be taken before Humanities 3–5.

For detailed description of the Revelle College humanities requirement, see “Revelle College, General-Education Requirements, Humanities.”

### THE HUMANITIES MINOR

The humanities minor consists of at least seven courses chosen from the listings of the Departments of History, Philosophy, Literature, Visual Arts, Music, and Theatre. All seven courses may be selected from the upper-division offerings, but at least five upper-division courses must be included. Students for whom Humanities 1–5 fulfill general-education requirements may use two of these courses towards fulfillment of requirements for the humanities minor.

For students who entered UC San Diego before January 1, 1998, the required number of courses for the minor is six courses, at least three of which must be upper-division.

Courses selected for the minor must be selected from the offerings of more than one department. They must concern themselves with more than one historical, national, or ethnic culture; and they must offer broad treatment of centrally important topics in the humanities. Thus, a course on the history of the United States since the Civil War would not be appropriate for the humanities minor, while a course in the history of California would not.

Here are some examples of study lists appropriate for the present humanities minor:

**Example 1**
- History HILD 2AB. United States
- History HILD 11. East Asia and the West 1279–1911
- History HIEU 143. European Intellectual History, 1870–1945
- Literature LTEA 110B: Modern Chinese Fiction in Translation
- Philosophy 160. Ethical Theory

**Example 2**
- Philosophy 177. Philosophy and Literature
- Theatre and Dance TDHT 116. Old Myths in New Films

**Example 3**
- Humanities HUM 1. The Foundations of Western Civilization: Israel and Greece
- Humanities HUM 2. Rome, Christianity and the Middle Ages
- Literature LTEN 145. The English Novel in the Twentieth Century
- Literature LTEN 146. Women and English/American Literature
- Literature LTEN 101. The Bible: The Narrative Books

Students should review their plans for the minor with the humanities advisor as well as with the advisors in their college. Before undertaking the minor, students must submit a study list for approval to the humanities office.

### THE HUMANITIES MAJORS

Normally, students interested in majoring in humanities must choose a specific major in the humanities departments, i.e., history, literature, or philosophy. But students from Revelle and Muir Colleges may request to graduate with an approved individual/special project major in the humanities.

### COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

### LOWER-DIVISION

1. The Foundations of Western Civilization: Israel and Greece (6)
   - Texts from the Hebrew Bible and from Greek epic, history, drama, and philosophy in their cultural context. Revelle students must take course for letter grade. Prerequisite: satisfaction of the UC Entry Level Writing requirement. (F)

2. Rome, Christianity, and the Middle Ages (6)
   - The Roman Empire, the Christian transformation of the classical world in late antiquity, and the rise of a European culture during the Middle Ages. Representative texts from Latin authors, early Christian literature, the Germanic tradition, and the high Middle Ages. Revelle students must take course for letter grade. Prerequisite: satisfaction of the UC Entry Level Writing requirement. (S)

THE MINOR

The minor in International Migration Studies is administered by Eleanor Roosevelt College (ERC). It is designed to provide students with an in-depth understanding of the causes, politics, and social consequences of international migration from a broad comparative perspective. This program of study helps to prepare students for a career in research and teaching, immigrant service-providing organizations, government agencies, or law. The unique research and writing opportunities offered by this minor also make it an excellent preparation for graduate school.

This interdisciplinary minor covers a wide range of topics, including the economic, cultural, demographic, and political impacts of immigration; laws and government policies for controlling immigration and refugee flows; ethnic, gender, citizenship, and transnational dimensions of immigration; the integration of immigrant minorities in receiving societies; and immigrant history and literature. Students learn about other countries of immigration (especially in Western Europe and East Asia) in order to place the U.S. experience in comparative perspective.

REQUIREMENTS

The minor consists of a total of seven courses (twenty-eight units). The requirements can be fulfilled by courses at the lower- and upper-division levels or a combination of course work and either field research in immigrant communities or internships with local immigrant service organizations.

For more information about minor requirements, visit http://roosevelt.ucsd.edu/int-migrat-studies/index.html

1. All students in the minor are required to take one lower-division U.S. ethnic diversity course from the following list:

   ANLD 23. Debating Multiculturalism: Race, Ethnicity, and Class in American Societies (4)

   DOC 2. Dimensions of Culture: Justice (6)

2. Students also must take one of the following upper-division overview courses on comparative immigration:

   COHI 175. Special Topics: Transnationalism and Globalization (4) (proposed course)

3. Students complete the minor (twenty more required units) by pursuing one of two separate tracks.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

Track A: Additional Course Work

Students choosing this track will take five additional courses from the following list, four of which must be upper-division. Students in the course work track may not take more than a total of four courses from any one department for this minor.

ANLD 23. Debating Multiculturalism: Race, Ethnicity, and Class in American Societies (4) (if not taken as a required course above)

COHI 114. Bilingual Communication (4)

COHI 175. Special Topics: Communication and the Borders (4)

COCU 164. Representing Race, Nation, and Violence in Multicultural California (4)

COCU 168. Latino Space, Place, and Culture (4)

COCU 175. Advanced Topics in Communication, Culture: A Discussion of Migrant’s Survival Strategies in the Southwest (4)

COCU 175 E00. Advanced Topics in Built Environment: Space, Place, and Culture: The Politics and Poetics of the Latino Barrio (4)

CO 175. Special Topics: Transnationalism and Globalization (4) (proposed course)

ECON 114. Economics of Immigration (4)

ETHN 1A. Introduction to Ethnic Studies: Population Histories of the United States (4) (if not taken as a required course above)

ETHN 1B. Introduction to Ethnic Studies: Immigration and Assimilation in American Life (4) (if not taken as a required course above)

ETHN 116. The United States-Mexico Border in Comparative Perspective (4)

ETHN 118. Contemporary Immigration Issues (4)

ETHN 121. Contemporary Asian-American History (4)

ETHN 122. Asian-American Culture and Identity (4)

ETHN 123. Asian-American Politics (4)

ETHN 144. Bilingual Communities in the U.S.A. (4)

ETHN 151. Ethnic Politics in America (4)

ETHN 189. Special Topics: Chicana/ Latina Identities (4)

ETHN 189. Special Topics: Comparative Vietnamese and Filipino American Identities and Communities (4)

ETHN 189. Special Topics: Work and Family in Immigrant Communities (4)

HIEU 181. Immigration, Ethnicity, and Identity in Contemporary European Society (4)

HIEU 182. The Muslim Experience in Contemporary European Society (4)

HILA 162. Topics in Latin American History: The United States and El Salvador (4)

HILD 7A. Race and Ethnicity in the United States (4) (if not taken as a required course above)

HILD 7B. Race and Ethnicity in the United States (4) (if not taken as a required course above)

HILD 7C. Race and Ethnicity in the United States (4) (if not taken as a required course above)

HUS 124. Asian-American History (4)

HUS 140. Economic History of the United States I (4)

HUS 141. Economic History of the United States II (4)

HUS 167. Topics in Mexican-American History (4)

HUS 180. Immigration and Ethnicity in Modern American Society (4)

LTAM 100. Latino/a Cultures in the United States (4)

LTAM 102. Contemporary Chicano/a-Latino/a Cultural Production: 1960 to Present (4)

LTAM 105. Gender and Sexuality in Latino/a Cultural Production (4)

LTAM 106. Modern Chicana and Mexican Women Writings (4)

LTAM 107. Comparative Latino/a and U.S. Ethnic Cultures (4)

LTAM 109. Cultural Production of the Latino/a Diasporas (4)

LTPS 150A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960 (4)

LTPS 150B. Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present (4)

LTPS 151. Topics in Chicano/a-Latino/a Cultures (4)

LTPS 177. Literary and Historical Migrations (4)

LTEN 178. Comparative Ethnic Literature (4)

LTEN 181. Asian-American Literature (4)

POLI 100H. Race and Ethnicity in American Politics (4)
POLI 150A. Politics of Immigration (4)
(if not taken as a required course above)
SOC B 114. Culture and Ethnicity (4)
SOC B 125. Sociology of Immigration (4)
(if not taken as a required course above)
SOC B 127. Immigration, Race, and Ethnicity (4)
SOC B 133. Immigration in Comparative Perspective (4)
SOC C 139. Social Inequality: Class, Race, and Gender (4)
SOC B 127. Immigration, Race, and Ethnicity (4)
SOC B 127. Immigration, Race, and Ethnicity (4)
SOC B 133. Immigration in Comparative Perspective (4)
SOC D 151. Comparative Race and Ethnic Relations (4)
SOC D 169. Citizenship, Community, and Culture (4)
SOC D 175. Nationality and Citizenship (4)
SOC D 183. Minorities and Nations (4)
THHS 111. Hispanic-American Dramatic Literature (4)
USP 135. Asian and Latina Immigrant Workers in the Global Economy (4)

Track B: Field Research or Internship

Students choosing this track will receive intensive training in field research methods appropriate for studying international migration and then conduct field research in immigrant communities or do an academic internship in a local immigrant/refugee service-providing organization.

(A) Field Research Methods, Practicum, and Data Analysis

Students who choose this option will take the following three-course sequence:
Sociology 122A. Field Research Methods for Migration Studies (Fall Quarter)
Sociology 122B. Field Research Practicum (Winter Quarter)
Sociology 122C. Data Analysis/Write-up (Spring Quarter)

These courses provide students with field research methods training and allow them to go to Mexico for two weeks to conduct research in a rural community that sends migrant workers to the United States. They will also analyze and write up the data that is collected. Participants must be proficient in Spanish.

(B) Independent Field Research

Students who choose this option are required to take one upper-division research-methods course from the following:
ETHN 190. Studying Racial and Ethnic Communities
SOC 104. Field Research–Participant Observation
SOC 108A. Survey Research Design

Students will then do an academic internship in a nongovernmental organization or government agency that serves immigrants or refugees in the San Diego/Tijuana area. Internships for up to eight units will be arranged by the UCSD Academic Internship Program (AIP). The remaining units needed to complete the minor will consist of courses from the list under Track A.

(C) Internship

Students who choose this option are required to take one upper-division research-methods course from the following:
ETHN 190. Studying Racial and Ethnic Communities
SOC 104. Field Research–Participant Observation
SOC 108A. Survey Research Design

Students will then do an academic internship in a nongovernmental organization or government agency that serves immigrants or refugees in the San Diego/Tijuana area. Internships for up to eight units will be arranged by the UCSD Academic Internship Program (AIP). The remaining units needed to complete the minor will consist of courses from the list under Track A.

local immigrant community and write a substantial research paper based on this research.

THE MASTER OF PACIFIC INTERNATIONAL AFFAIRS (M.P.I.A.)

REQUIREMENTS FOR ADMISSION

Students interested in pursuing the M.P.I.A. degree program at UCSD’s Graduate School of International Relations and Pacific Studies (IR/PS) must have earned a B.A., or its equivalent, from an institution of comparable standing to the University of California. A minimum grade-point average of 3.0 or better in undergraduate course work or prior graduate study is required for admission. Undergraduate preparation that includes one or more of the following areas is strongly encouraged: the social sciences (specifically economics and political science), quantitative methods (such as calculus and statistics), foreign language, and related area studies courses. The admissions committee looks for students with previous professional employment, a history of meaningful international experience, and demonstrated leadership ability.

Applicants are required to submit the following: an online UCSD application for graduate study (http://graduateapp.ucsd.edu); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement; a Graduate Record Examination (GRE) or Graduate Management Admission Test (GMAT) score report. Test of English as a Foreign Language (TOEFL) scores are also required of international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. A minimum score of 550 on the paper/pencil version and a minimum score of 213 on the computer-based version of the TOEFL is required. For further details regarding the application process, procedures, and deadlines please visit the IR/PS Web site, http://irps.ucsd.edu, and click on “Programs.”

Orientation tours are available for all prospective applicants who would like further information about the M.P.I.A. program. Tours assist prospective applicants in becoming better acquainted with IR/PS and in understanding how the program might relate to their long-term career goals. To sign up for a tour, please contact the IR/PS Office of Admissions at (858) 534-5914 or e-mail irps-apply@ucsd.edu.

The M.P.I.A. is a two-year, full-time program.

THE M.P.I.A. CURRICULUM

The M.P.I.A. curriculum (ninety-eight units) is made up of a set of core disciplinary and skill-oriented courses (thirty-eight units), a regional specialization (eight units), the foreign language requirement (up to twenty-four units), a professional career track (twenty-four units), and unstructured electives.
encouraged to undertake significant language study prior to coming to IR/PS.

Students on the Country and Regional Studies track are subject to a different foreign language requirement. These students must pass both the speaking and the reading proficiency examination in their selected language. The writing proficiency examination is optional. The minimum required level of proficiency is equivalent to a Foreign Service Institute (FSI) Scale 2+ for Spanish, 2 for Portuguese, and 2- for most other languages.

The proficiency examination is administered by appointment throughout the academic year. Students not following the Country and Regional Studies track may take the exam once free of charge in a language that IR/PS currently provides instructional support. Those students on the Country and Regional Studies track may take the exam twice free of charge, regardless of language selection. Please consult with the IR/PS Student Affairs for additional information.

A variety of language courses are offered by UCSD. IR/PS offers four-unit language courses for international relations professionals in Japanese, Mandarin Chinese, and Spanish at the intermediate or advanced levels. In addition, subject to demand, courses in Bahasa Indonesia or other Pacific Rim languages may be offered. Students electing to study a foreign language where IR/PS instructional support is not offered must secure their own language instruction and funding. Course credit for self-supported language learning may be given upon evaluation and approval of the IR/PS faculty. Please contact the IR/PS Student Affairs for additional information.

Students are placed in foreign language courses based on prior preparation and on the results of a placement test administered during orientation.

Career Tracks

Beyond the core curriculum, the regional specialization, and the foreign language requirement, students are offered an array of career tracks from which to choose. The career tracks provide an opportunity to focus on a specialized professional career path and to work closely with other students and faculty who share similar interests. A career track consists of six courses (twenty-four units). Each track combines some designated requirements and a range of relevant electives from which to choose. All students must complete a career track. A student whose interests do not fall within the existing range of tracks may complete the Self-Design track, and create a tailor-made package of courses in consultation with their faculty advisor. Currently, IR/PS offers the following career tracks:

International Management
International Politics
International Environmental Policy
Public Policy
International Economics
International Development and Non-Profit Management
Country and Regional Studies

Electives

Students may use remaining units to take electives across the range of IR/PS courses in management, political science, economics, regional studies, and language, as well as (with approval) courses offered elsewhere on campus. The number of elective units available to a student will vary, depending on factors such as prior language study. Prospective students are advised to consult the IR/PS Office of Admissions for a full list of elective courses currently offered.

EDUCATION ABROAD PROGRAM

Students are encouraged to participate in the Education Abroad Program (EAP) in their second year of study. Though this may necessitate a third year of study to meet M.P.I.A. requirements, the opportunity provides unparalleled experience in the selected regional study area and language. By petition, certain credits earned through EAP may be applied to the M.P.I.A. degree requirements.

CAREER SERVICES

The IR/PS Career Services office provides students on-going guidance, expertise, and resources to successfully manage their careers. This personalized process begins before school starts with Career Management Orientation, and continues during the two-year program and throughout the students’ careers as alumni.

The Career Services team offers IRPS CAREERS, an online system available twenty-four hours a day, seven days a week, which has a calendar of events, student profiles, online resumes, and a specialized database of employers with job/internship opportunities. Career consultants are available for daily scheduled appointments or quick consultations for resume writing, cover letters, effective job search strategies, interviewing skills (including videotaped mock interviews), labor market trends, job offer evaluation, and negotiation of total compensation packages. Alumni return to campus often for panels, information sessions, and employer interviews.

INTERNSHIPS

Students are strongly encouraged to participate in a variety of internship programs aligned with their career goals in business and industry, federal and state government, and nonprofit and multilateral organizations. The Career Services office works closely with students and alumni to make connections with global employers in the nonprofit, public, and private sectors based on the students’ interests.

To enhance students’ professional skills, IR/PS strongly recommends each student participate in an internship during the summer between the first and second year. Students with unpaid summer internships may receive financial support from IR/PS donors. Internships offer opportunities to explore career options, apply theoretical knowledge to real work situations, and gain experience important to potential future employers.

MASTER OF ADVANCED STUDIES IN INTERNATIONAL AFFAIRS (M.A.S.-I.A.)

REQUIREMENTS FOR ADMISSION

Students interested in pursuing the M.A.S.-I.A. degree program at UCSD’s Graduate School of International Relations and Pacific Studies must have earned a B.A., or its equivalent, from an institution of comparable standing to the University of California and have a minimum of five years of relevant work experience and/or graduate-level studies and relevant international experience including demonstrated proficiency in a regional language.

A minimum grade-point average of 3.0 or better in undergraduate course work or prior graduate study is required for admission. Undergraduate preparation that includes one or more of the following areas is strongly encouraged: the social sciences (specifically economics and political science), quantitative methods (such as calculus and statistics), foreign language, and related area studies courses.

Applicants are required to submit the following: an online UCSD application for graduate study (http://graduateapp.ucsd.edu); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement. Test of English as a Foreign Language (TOEFL) scores are also required of international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. A minimum score of 550 on the paper/pencil version, a minimum score of 80 for the Internet-based test, and a minimum score of 213 on the computer-based version of the TOEFL is required. For further details regarding the application process, procedures, and deadlines please visit the IR/PS Web site, http://irps.ucsd.edu, and click on “Programs.”

Orientation tours are available for all prospective applicants who would like further information about the M.A.S.-I.A. program. Tours assist prospective applicants in becoming better acquainted with IR/PS’s M.A.S.-I.A. program and in understanding how the program might relate to their long-term career goals. To sign up for a tour, please contact the IR/PS Office of Admissions at (858) 534-5914 or e-mail irps-apply@ucsd.edu.

The M.A.S.-I.A. is a nine-month, full-time course of study.

THE M.A.S.-I.A. CURRICULUM

The M.P.I.A. curriculum (forty-eight units) is made up of two core courses (eight units), a regional specialization (eight units), three M.A.S.-I.A. career track courses (twelve units), four elective courses from the IR/PS curriculum (sixteen units), and a four-unit capstone course.

Core Curriculum

The core curriculum is designed to provide a solid foundation in the study of international affairs and is devoted to the politics and economics of the region. It comprises the following courses:

The Politics of International and National Policy Making (IRCO 481)
The Regional Specialization

The regional specialization is made up of two designated courses on the economy and political system of a student’s chosen country or region. All students must complete a regional specialization, and may choose from among the following five options: Latin America, Japan, Korea, China, and Southeast Asia.

Foreign Language Proficiency

IR/PS considers foreign language competency to be an indispensable skill for international relations professionals. The M.A.S.-I.A. language proficiency requirement may be satisfied in any one of three ways: (a) native speaker ability; (b) completing six quarters (four semesters) of college-level language instruction from UCSD or a comparable institution, with a grade of B or better in the final course; or (c) passing a special IR/PS-administered language exam, which is the equivalent of the final exam administered in the sixth-quarter course in the selected language. The foreign language proficiency requirement may be completed prior to matriculation at IR/PS. Please contact IR/PS Student Affairs for additional information.

Career Tracks

Beyond the core curriculum and the regional specialization, M.A.S.-I.A. students are offered three career tracks from which to choose. The career tracks provide an opportunity to focus on a specialized professional career path and to work closely with other students and faculty who share similar interests. A career track consists of three courses (twelve units). Currently, IR/PS offers the following career M.A.S.-I.A. tracks:

International Security
International Political Economy
International Public Policy

Electives

Students may use remaining units to take electives across the range of IR/PS courses in management, political science, economics, regional studies, and language, as well as (with approval) courses offered elsewhere on campus. Prospective students are advised to consult the IR/PS Office of Admissions for a full list of elective courses currently offered.

THE PH.D. IN ECONOMICS AND INTERNATIONAL AFFAIRS

APPLICATION PROCESS

Applicants who seek admission to the highly competitive joint Ph.D. program must have earned a B.A., or its equivalent, from an institution of comparable standing to the University of California. Preference will be given to students with prior academic records of distinction and to those who have a background in one of the fields of emphasis and/or geographical areas covered by the program. Applicants are required to submit the following: an online UCSD application for graduate study (http://graduateapp.ucsd.edu); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement; a writing sample; a Graduate Record Examination (GRE) score report. Test of English as a Foreign Language (TOEFL) scores are also required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. A minimum score of 550 on the paper/pencil version and a minimum score of 213 on the computer-based version of the TOEFL is required.

Applicants are required to submit the following: an online UCSD application for graduate study (http://graduateapp.ucsd.edu); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement; a writing sample; a Graduate Record Examination (GRE) score report. A minimum score of 550 on the paper/pencil version and 213 on the computer-based version of the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English.

Candidates must present a dissertation prospectus no later than March of their third year in the doctoral program. They will be examined on their prospectus by their dissertation committee and must complete a dissertation, which makes a substantial and original contribution to knowledge commensurate with the standards of the University of California in order to receive the Ph.D. degree.

THE DOCTORATE OF PHILOSOPHY IN POLITICAL SCIENCE AND INTERNATIONAL AFFAIRS (PH.D.)

REQUIREMENTS FOR ADMISSION

Applicants who seek admission to the highly competitive joint Ph.D. program must have earned a B.A., or its equivalent, from an institution of comparable standing to the University of California. Preference will be given to students with prior academic records of distinction and to those who have a background in one of the fields of emphasis and/or geographical areas covered by the program.

Applicants are required to submit the following: an online UCSD application for graduate study (http://graduateapp.ucsd.edu); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement; a writing sample; a Graduate Record Examination (GRE) score report. A minimum score of 550 on the paper/pencil version and 213 on the computer-based version of the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English.

The minimum criteria required for admission to the extremely selective joint Ph.D. program can be

The minimum criteria required for admission to the extremely selective joint Ph.D. program can be
found on the following Web site: http://irps.ucsd.edu/programs/phd-program/apply.htm. Admission is offered to zero to two applicants per year.

THE PH.D. CURRICULUM

Program of Study

The Ph.D. in political science and international affairs prepares students for research careers in political science, with an emphasis in either international policy analysis or comparative policy analysis. The program combines the analytical skills of political science with political economy, institutional analysis, policy analysis (especially economic policy) and regional training, with special attention to East Asia and/or Latin America.

Course Requirements

The Ph.D. curriculum in political science and international affairs is designed to provide students with basic training in the techniques of modern political science, as well as applications to specific policy areas and countries or regions.

Seventeen courses are required prior to advancement to candidacy. There is a common core sequence, consisting of comparative public policy, two courses in comparative politics, two courses in international relations and research design.

Each student must declare a primary field of either international policy analysis (I.P.A.) or comparative policy analysis (C.P.A.), consisting of three specialized courses. There is also a regional focus of five courses. Three additional courses must be taken from a set of electives.

Regional Requirement

The regional focus consists of international relations of Asia Pacific or international relations of the Americas (depending on which region is the student’s primary region), three additional courses in the student’s primary region, and one course in another region offered by either IR/PS or the Department of Political Science are required. By petition, students may count a region other than one of the IR/PS offerings (currently China, East Asia, Japan, Latin America, or South-east Asia) as their primary region.

Language Requirement

All students in the program are required to meet a high standard of proficiency in a foreign language before being advanced to candidacy. The language must be linked to the student’s region.

Seminar Papers

Each student must submit two seminar papers, one in each field. The penultimate draft of each seminar paper must be completed prior to taking the appropriate field exam, and the final draft must be completed by the end of the quarter in which the exam is taken. Both papers must demonstrate knowledge of the student’s regional focus, as well as knowledge of relevant theory in the field. At least one of the papers must also demonstrate knowledge of a substantive policy area, related to the student’s primary focus field.

Comprehensive Examinations

Each student must pass two comprehensive examinations, one in international relations and one in comparative politics. Each exam will be graded by a joint committee consisting of three permanent faculty members, with at least one from political science and at least one from IR/PS.

The primary field exam contains a focus field, which may be either a substantive field of policy analysis (e.g. trade, environment, international finance) or the student’s chosen primary region.

Regardless of focus field, that part of the exam will test the student’s knowledge of theoretical literature and ability to apply it to a policy issue of relevance to the region.

Dissertation

Candidates must present a dissertation prospectus to be examined by their dissertation committee, and must complete a dissertation which makes a substantial and original contribution to knowledge commensurate with the standards of the University of California in order to receive the Ph.D. Degree. The dissertation committee shall consist of four faculty members chosen from the Department of Political Science and IR/PS, with at least one from each unit. A fifth member must be from outside these two departments.

Oral Defense

Students will defend their dissertation at a final oral examination, which will be open to the public.

Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of the fourth year. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

BACHELOR OF ARTS IN INTERNATIONAL STUDIES AND MASTER OF INTERNATIONAL AFFAIRS B.A./M.I.A.

REQUIREMENTS FOR ADMISSION

Students interested in pursuing the B.A./M.I.A. degree program at UCSD’s School of International Relations and Pacific Studies (IR/PS) must be currently enrolled in UCSD’s International Studies (IS) undergraduate major. Students who meet the admissions requirements listed below may apply for admission to the combined degree program prior to receipt of the B.A. degree.

1. Completion of fall and winter quarters of junior year with a minimum overall GPA of 3.00 and a minimum 3.4 GPA in International Studies upper-division course work.
2. Satisfactory completion of the foreign language requirement for the undergraduate International Studies major. The foreign language must be one of the Pacific Rim languages required by IR/PS.

4. Two letters of recommendation from individuals who can attest to the applicant’s academic promise and depth of interest in professional training in international affairs.
5. Students will also be required to complete a noncredit, professional internship in the field of international affairs during the summer prior to matriculation in the M.I.A. degree program.

Applicants will be admitted to the combined degree program on the basis of demonstrated academic excellence in upper-division course work in the International Studies major, Pacific Rim language proficiency, strong support from UCSD faculty in letters of recommendation, international experience, leadership, and community involvement.

THE B.A./M.I.A. CURRICULUM

International Studies (IS) students are required to declare a primary track (eight upper-division courses) and a secondary track (five upper-division courses). In addition, IS majors must successfully complete two upper-division gateway courses (INTL 101 and 102) and a senior research seminar (INTL 190). In addition to these required courses, IS majors admitted to the combined degree program must also complete two quantitative methodology courses (IRCO 453 and 454).

IS majors admitted to the combined degree program will complete all of these requirements for the International Studies degree in either Economics or Political Science in years one through four of their study at UCSD.

B.A. in International Studies–Economics

Economics Primary Track (eight courses)

The following courses are required:

IRCO 401: Managerial Economics
IRCO 403: International Economics
IRCO 420: Accounting
IRCO 421: Finance

In addition, students are required to take four additional Economics courses chosen from the IS-Economics course list or from IR/PS Economics courses, for a total of eight courses.

Political Science Secondary Track (five courses)

The following courses are required:

IRCO 400: Policymaking Processes
IRCO 410: International Politics and Security
IRCO 412: Globalization, the World System, and the Pacific

Two additional courses from the approved IS-Political Science course list or IR/PS electives in regional politics, comparative public policy, or international politics. Of the thirteen track courses, three must focus on one country or region.

B.A. in International Studies–Political Science

Political Science Primary Track (eight courses)

The following courses are required:

IRCO 412: Globalization, the World System, and the Pacific
IRCO 400: Policymaking Processes
IRCO 410: International Politics and Security
Additional Requirements

In the fifth year of the combined degree program, students will complete the requirements for the one-year M.I.A. degree. The M.I.A. requires a minimum of forty-eight units of 400-level course work complete at IR/PS, including a regional specialization (two four-unit courses), a professional career track (six four-unit courses), a capstone requirement (one four-unit course), elective course work (three four-unit courses), and an internship requirement (noncredit). The combined degree program includes the following additional requirements:

1. Language requirement: All International Studies majors must complete a language requirement equivalent to four quarters of undergraduate training in a Pacific Rim language (as defined by IR/PS) prior to admission to the combined degree program. In order to receive the M.I.A. degree at the end of the fifth year, students must complete at least two additional quarters in the same Pacific Rim language, for a total of six quarters. As an alternative to the six-quarter language requirement, students may demonstrate proficiency at the level currently required by IR/PS.

2. All students in the combined degree program will declare a special primary and secondary track in their International Studies major. These combined degree tracks will be Economics (primary track)/Political Science (secondary track) or Political Science (primary track)/Economics (secondary track). Students will complete the existing lower-division requirements for the Economics primary or secondary track (Mathematics 10A-8-C or Mathematics 20A-8-C, Economics 1-2-3).

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

IRPS 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15–20 students, with preference given to entering freshmen.

IRGN 199. Independent Research/Study (2-4)
Independent research/study under the guidance of a faculty member of IR/PS. Prerequisite: consent of under-graduate advising office and instructor.

M.P.I.A. CORE CURRICULUM

IRCO 400. Policy-Making Processes (4)
This course is designed to teach students how to "read" a country's political and economic system. The course will examine how the evolution of different institutional frameworks in the countries of the Pacific region influences the way in which political choices are made. Prerequisite: IR/PS students only.

IRCO 401. Managerial Economics (4)
Survey of basic tools in economics. Examination of how commodity demand is determined, what affects supply of the commodity, how price is determined, when optimal market allocation of resources and failure occur, and basic topics concerning the aggregate economy.

IRCO 403. International Economics (4)
The theory and mechanics of international economics. Included will be such topics as real trade theory, international movements of capital, the effects of trade and capital flows on domestic economies, and policies toward trade and foreign investment.

IRCO 410. International Politics and Security (4)
Development of analytic tools for understanding international relations with applications to contemporary problems such as the environment, nuclear proliferation, human rights, humanitarian interventions, and the roots of conflict and cooperation among countries.

IRCO 412. Globalization, (4)
This course examines globalization and other economic and political factors that shape the international relations of the Pacific Rim. Specific topics include financial market integration, state cooperation and intervention, and case studies of individual countries.

IRCO 420. Accounting (4)
An introduction to financial accounting designed to prepare students to understand their own organizations' international operations and interpret information from outside organizations. The emphasis will be on understanding the
potential uses and limitations of accounting information for various management purposes, and the procedural aspects of accounting will be introduced only to the extent necessary to explicate the basic concepts.

IRCO 421. Finance (4)
This course surveys the financial problems facing managers and analyzes financial institutions, financial instruments, and capital markets. Tools acquired will prepare students to analyze international financial topics such as exchange rate behavior, the management of international risk, and international financing. Prerequisites: IRCO 420, 453, and 454.

IRCO 453. Quantitative Methods II (2)
This course is designed to provide proficiency in quantitative methods that are used for optimization and decision making. The use of spreadsheets is applied to data analysis and problem solving. Statistical theory and regression analysis are introduced.

IRCO 454. Quantitative Methods II (4)
This course covers elements from statistics that are central to business decision-making under uncertainty. In particular, regression analysis and estimation will be applied to problems of forecasting and optimization.

IRCO 460. Managerial Decision Making (4)
This course develops practical decision-making skills useful in a management setting. It stresses identifying relevant information and presenting it effectively. Skills include strategic analysis, negotiation, and application of quantitative models. Prerequisites: IRCO 400, 410, 412, 420, 421, 453 and 454, or consent of instructor.

IRCO 461. Business and Government in the Global Economy (4)
Business and government interaction in the world economy are examined from both public policy and private sector management perspectives. Topics include competitive advantage, the challenging boundaries of private and public, and the influence of private interests on public sector regulation. Prerequisites. IRCO 400, 410, 412, 420, 421, 453, and 454, or consent of instructor.

IRCO 462. Public Policy Workshop (4)
Prerequisite: IRCO 400, 410, 412, 420, 421, 453, and 454, or consent of instructor.

IRCO 463. Strategy and Negotiation (4)
This class introduces the fundamentals of corporate strategy, based on case studies requiring corporate analysis; and the principles of negotiation, based on exercises and class learning. Both sections of this class are highly applied, and require intensive out-of-class preparation and teamwork that help students acquire skills in analytical thinking, strategic action planning, and hands-on negotiations. Prerequisites: IRCO 400, 401, 410, 412, 420, 421, 453, and 454, or consent of instructor.

IRCO 464. The Corporation in the Global Economy: The Interaction of Business and Government (4)
What can countries, firms, and individuals do to position themselves effectively in the world economy? This course uses data and analysis to explore the global division of labor in the production value chain, government policy and the micro-organization of the firm. Prerequisites: IRCO 400, 401, 410, 412, 420, 421, 453, and 454, or consent of instructor.

GENERAL COURSES

Not all general courses are offered each year.

IRGN 400. International Relations of Asia-Pacific (4)
International relations and developing international political economies of nations bordering the Pacific. Topics include: the "Pacific Basin" concept; the U.S. and "hegemonic-stability" theory; legacies of the Korean War and Sino-Soviet dispute; immigration patterns and their consequences; and Japan's foreign policy.

IRGN 401. Ethnic Conflict (4)
Explanations for why ethnic conflicts break out, why they are difficult to resolve, and what effect outside intervention has on them. Introduce students to the major theories of ethnic and internal conflict. Policy debates regarding how the international community can best respond to these conflicts. Prerequisite: admission to program or consent of instructor.

IRGN 402. International Political Economy: Money and Finance (4)
Examination of effects of national policies and international collaboration on public and private international financial institutions in particular. The internationalization of debt crises, economic policy coordination, and the role of international lender of last resort. Prerequisite: IRCO 411 or consent of instructor. Conjoined with Political Science 144D and 262.

IRGN 404. Chinese Politics (4)
This course will analyze post-1949 Chinese politics, including political institutions, the policy making process, and citizen political behavior. Special attention will be given to the prospects for political reform in China.

IRGN 405. U.S.—China Relations (4)
Can the United States and China develop a constructive relationship or are they headed toward a hostile relationship? This course addresses this question by examining the domestic and international influences on the foreign policies of both countries and key issues in the bilateral relationship. Students also do policy projects.

IRGN 406. Financial Institutions (4)
This course analyzes the roles of money and financial institutions in the economy. The first part of the course focuses on microeconomics and the financial system. The topics include money, financial markets, financial intermediaries, banking regulations, and bank runs. The second part of the course focuses on the microeconomics aspects of financial institutions. The topics include financial development, financial liberalization, and their effects on the economy, especially economic growth and development. Prerequisite: IRCO 403 and IRCO 421 or consent of instructor.

IRGN 407. Policy Implementation Process (4)
Course builds on Policy-Making Processes class by focusing on the details of implementation. A case study approach is used to illustrate the process of policy making and implementation. Prerequisite: IRGO 400.

IRGN 408. Internal Conflict after the Cold War (4)
We will examine the process of conflict resolution and state reconstruction. Theoretical approaches discussed will then be applied to three recent case studies: Cambodia, Rwanda, and Bosnia. Policy implications for the international community will be discussed. Prerequisite: IRGO 410.

IRGN 409. Economic Policy in Latin America (4)
This course seeks to enhance the students' understanding of the main policy alternatives open to the largest Latin American countries. Development and stabilization policies are analyzed, emphasizing the current debate between conventional and heterodox policy packages and their impact on decisionmaking. Prerequisites: IRGO 401, 403.

IRGN 410. Corporate Governance (4)
Why do corporate governance systems—the way firms are run, the relationships among managers, stockholders, and workers—differ widely around the world? This course examines the various explanations for these striking differences and the consequences. Prerequisite: graduate level or consent of instructor.

IRGN 411. Business and Management in Japan (4)
This course introduces the main aspects of Japanese business and industrial organization (keiretsu), Japanese management practices, and the representation and influence of business interests in the Japanese political economy.

IRGN 412. International Competitiveness and the Globalized Value Chain (4)
This course explores the strategies countries pursue in the highly competitive world economy. It examines the global value chain and public policy toward education, labor, corporate social responsibilities, free markets and global trade, finance and sharing, and the political process.

IRGN 413. Corporate Strategy and the Environment (4)
This seminar examines the ability of firms to increase shareholder value through improved environmental performance. Topics include product differentiation, environmental regulations, the "Porter hypothesis" and environmental management systems. Readings include case studies and research articles. Prerequisites: IRGO 401, 421, 453, and 454.

IRGN 416. Post-War Politics in Japan (4)
Overview of post-war politics in Japan, including American Occupation reforms, political institutions, major political factors, mass and elite, and political behavior. Special attention will be paid to the issue of Japan's changing democracy.

IRGN 417. Microfinance (4)
Prerequisite: IRGO 421.

IRGN 420. Strategic Marketing Planning (4)
This course develops the microeconomic foundations of market exchange by explicitly examining the marketing details of transactions: demand and product differentiation, incomplete and incorrect information, search costs and promotion costs. It is argued that within this theoretical framework (i.e., model) most observed marketing behavior can be reconciled. The primary objective of this course is to learn to deduce firm and consumer motives from observed behavior. Prerequisites: IRGO 401 and 403, or consent of instructor.

IRGN 422. Investments (4)
Analysis of the risk/return characteristics of different assets as perceived by different investors and their implications for asset management and corporate financial policies. The course focuses on the valuation, use in hedging, and role as components of liabilities that mitigate risk and agency problems in business firms. Prerequisite: IRGO 421.

IRGN 420. Strategic Marketing Planning (4)
Prerequisite: IRGO 421.

IRGN 424. Corporate Finance (4)
The course focuses on the role of government as a regulator of financial markets and as a source of financial support for private sector activities. The course is designed for students with a strong background in finance and economics.

IRGN 429. The Globalization of Production (4)
This course examines how trade policy, information technology, and other factors shape the production strategies of multinational enterprises. Topics include foreign direct investment and the mode of entry into foreign markets, global outsourcing and the globalization of work, and the impact of trade and investment policy on the world location of production. Prerequisites: IRGO 401 and 403, or consent of instructor.

IRGN 431. Fiscal and Monetary Policy (4)
Prerequisite: IRGO 421.

IRGN 431. Fiscal and Monetary Policy (4)
Effects of fiscal and monetary policies on aggregate variables such as output, nominal and real interest rates, price level, and employment. Additional topics include the inflation/ unemployment trade-off, budget deficit, and economic growth.
IRGN 432. Immigration and Immigration Policy (4)
This course examines the role of immigration in the globalization of Pacific Rim economies. Topics include the economic forces behind immigration; the impact of immigration on wages, employment, and industry structure in sending and receiving economies; and the nature, scope, and political economy of immigration policy. Prerequisite: IRCO 401 or consent of instructor.

IRGN 434. Strategic Analysis (4)
This course analyzes competitive interactions, surveying the modern economic analysis of relationships between and within organizations. The foundations of the course are game theory and nonlinear dynamics of information. Topics include bargaining and contracting, principal agent models, and bidding models. Prerequisite: graduate standing or consent of instructor.

IRGN 435. Topics in International Trade (4)
This course develops new analytical models of international trade and examines their relevance for trade policy. Topics include setting trade policy where firms have global market power; the interaction between international trade, innovation, and economic growth; regional economic policy, dynamic industry clusters, and information technology; and new trade theory and the world distribution of income. Prerequisites: IRCO 401 and 403, or consent of instructor.

IRGN 436. Information and Management (4)
This is a seminar course on the use of information by organizations in strategic and tactical decision-making. Actual content varies, and currently includes doing business on the Internet and supply chain management. Prerequisite: IRGN 438 or consent of instructor.

IRGN 437. Policy Design (4)
Course teaches how to make strong, reasoned cases for new policy initiatives. Covers cost-benefit analysis, cost-effectiveness evaluation, multigain analysis, and how these are used in policymaking. Covers tools to predict policy impacts, like drawing on “best practice” and related experiences.

IRGN 438. Management: Analysis and Control (4)
This course provides a comprehensive introduction to the fundamental decisions and trade-offs associated with the control of a firm’s operations function. It analyzes production processes, quality control, inventory and material planning, kanban and just-in-time principles. Prerequisites: IRCO 453 and 454, or consent of instructor.

IRGN 439. Policy Evaluation Research (4)
Research-design class focusing on strategies for evaluating policy effectiveness with data in small quantities. Skills taught: understanding limits of what data say, and using information in the context of qualitative analysis. The concepts taught are similar to those presented in QM3. Prerequisites: IRCO 453 and IRCO 454.

IRGN 440. Managerial Accounting and Control (4)
Focus on planning, managing, controlling and evaluating costs for competitive advantage in global markets. Key topics will include cost structure, cost-based management decision making, strategic cost management, JIT/TOC cost management, and accounting control systems. Prerequisite: IRCO 420 or consent of instructor.

IRGN 443. Economics of Telecommunications (4)
This course will focus on the underlying economics of the telecommunications and public policy rationale of regulations applied to this industry. Both theoretical models and case studies will be used to provide better understanding of the telecommunication marketplace and the nature of competition between service providers in the industry. Prerequisite: IRCO 401 or consent of instructor.

IRGN 444. Product Development (4)
This course examines how high-tech companies develop successful products. Emphasizes interplay between business and technical issues, including marketing, financing, manufacturing, prototyping, testing, and design. Student teams develop novel products, from concept to working prototype, including a business plan for launching the product. Discussion of concurrent engineering, rapid prototyping, industrial design, and other design methodologies.

IRGN 446. Applied Data Analysis and Statistical Decision Making (4)
The goal of the course is to teach how to evaluate quantitative information in business and economics contexts, and to make sound managerial decisions in complex situations. Much of the process for the course will involve statistical software and spreadsheet analysis of data. The course covers various applied multivariate statistical methods beyond basics. Prerequisites: IRCO 453 and 454, or consent of instructor.

IRGN 447. Organizations (4)
A seminar course based on the modern economics of organizations and collective action. Both theoretical models and empirical evidence are used to explore the interplay between different organizational and collective action. Prerequisites: IRCO 453 and 454, or consent of instructor.

IRGN 448. Civil Society and Development (4)
To explore the roles that civil society/NGOs/the third sector can play in developing political, social, and economic progress in developing countries. To consider the strengths and weaknesses, capacities, and limitations of NGOs in developing countries. To provide students with experience in evaluating NGOs and in making professional recommendations to enhance their ability to make a difference. To prepare students to take leadership roles—whether in government, the private sector, or NGOs—in promoting civil-society participation in development.

IRGN 449. Making U.S. Foreign Policy (4)
Analysis of the interests, structure, and procedures of the main executive branch agencies involved in the formulation of U.S. foreign policy, and of the foreign policy process. Case studies and “daily briefings” to prepare students to perform professionally in the foreign policy arena. Prerequisites: IRCO 410 or consent of instructor.

IRGN 451. Economic Development (4)
This course examines comparative patterns of industrialization and agricultural modernization with a focus on certain common features of the modernization process and widely varying endowments, policies, and experiences, of different countries. Prerequisites: IRCO 401 and 403, or consent of instructor.

IRGN 452. Quantitative Methods for Advanced Analysts (4)
This course caters to the needs of those who routinely face a variety of advanced data-analysis challenges, such as international marketing and sales managers, consulting analysts, or international business development and intelligence specialists. Knowledge of introductory optimization and statistics, including linear regression, is assumed. The course is entirely practical in that it is organized around in-depth case studies, requiring students to work extensively with data. Methods covered include cluster, factor, and discriminate analysis, and modeling and simulation.

IRGN 453. Sustainable Development (4)
The course will cover the concept of sustainable development, ways in which sustainable development can be measured, evaluation of environmental damages and benefits, and the role of discounting, and will analyze cases demonstrating failure of the market.

IRGN 454. Current Issues in U.S.- Latin American Relations (4)
Issues to be actively debated include the collective defense of democracy, coping with revolutionary change, counter-narcotics, anti-corruption, international finance, trade, and U.S.- Mexican relations. Students analyze the strengths and weaknesses of U.S. policy and advocate alternative options. Prerequisite: IRCO 410 or consent of instructor.

IRGN 455. Economic Theories of Regional Integration (4)
The first part of the course covers the basic economics of trade among nations with more complicated topics in the theory of preferential trading arrangements, customs unions, and currency unions. In the second part we use the formal theory to compare economic integration in different parts of the world. Prerequisites: IRCO 401 and 403 or consent of instructor.

IRGN 456. Program Design and Evaluation (4)
Introduction to elements of program design and evaluation. Examines principles and guidelines used in creating a program and evaluating its success or failure. International case studies are explored. Students have the opportunity to develop their own program and evaluate projects.

IRGN 457. Cost Benefit Analysis (4)
Examination of public policy analysis, such as cost-benefit analysis and project evaluation, for use in policy formation. Sustainable development will receive particular attention. Case studies emphasizing the environment, agriculture and food, and economic development will be included.

IRGN 458. International Environmental Policy and Politics (4)
This course analyzes multilateral environmental agreements and negotiating positions of key countries on climate change, biodiversity conservation, sustainable development, and other subjects. It explores the challenges countries face to balance economic development objectives with global environmental concerns.

IRGN 459. Conflict Resolution of Environmental Issues (4)
Use of bilateral negotiations (U.S.-Canada), regional organizations (APEC and acid rain in Europe), and United Nations’ specialized agencies (UNEP and WMO) on ozone depletion and climate change) to mediate environmental disputes. Consideration of nontraditional approaches resolving international environmental problems. Prerequisite: graduate standing.

IRGN 460. The Politics of U.S.-Japan Economic Relations (4)
This course will analyze how the domestic politics of each country, their international negotiations, and their interaction concerning economic issues have affected the U.S.-Japan relationship. Both the politics of cooperation and integration, and trade friction and conflict will be addressed in part through study of specific cases.

IRGN 461. Doing Business in China (4)
This course describes the Chinese commercial, organizational, and cultural environment. Case studies of foreign businesses in China are examined, and the opportunities and pitfalls of operation in China are considered. Negotiation with Chinese counterparts is covered through a negotiation exercise. The focus is on mainland China, but some attention is given to business in Hong Kong and Taiwan as well. Students are required to prepare business plans for proposed Chinese ventures.

IRGN 462. Economies in Southeast Asia (4)
This course focuses on the long-run and current economic issues of Southeast Asia. Topics are economic growth, human capital, inequality and poverty, social institutions, the business sector, the financial sector, government, the external sector, and regional and interregional economic relations. For each topic, we will discuss the issues from selected countries in the region in more detail. Prerequisites: IRCO 401 and IRCO 403 or consent of instructor.

IRGN 463. Politics of Southeast Asia (4)
This course provides an introduction to five Southeast Asian countries: Indonesia, Thailand, Malaysia, the Philippines, and Vietnam. The focus will be on national level of political and economic issues in these countries. In addition, a number of region-wide issues will also be examined such as: Chinese business groups and networks; clientelism and corruption; regional trade and investment linkages; democratization; and the implications of political change for economic development. Prerequisite: Graduate standing or consent of instructor.

IRGN 464. Strategies and Skills for Effective Consulting (4)
This course will provide an introduction to the field of consulting. It will focus both on effective consulting strategies and on skills and tools that are helpful in the process. Technical, cultural, economic, and political issues will be considered, as the various aspects of consultant work are examined.
IRGN 465. Management of Non-profit Organizations (4)
Analyzes the particular environment in which non-profit organizations define and achieve their objectives. Management tools are applied to existing non-profits and to student projects.

IRGN 466. Public Finance (4)
Describes prudential investment and expenditure analysis; public budgeting; and assessment of budget priorities.

IRGN 467. Policymaking and Political Economy in Japan (4)
Examines the policymaking process in Japan, the interaction and role of state and non-state actors in shaping Japan’s economy. Analysis and comparison, through case studies of industrial policies (toward high-tech and declining industries), and non-industrial policies and their consequences.

IRGN 470. International Business Strategy (4)
This course analyzes corporate strategies and management issues in their international dimensions. Based on numerous case studies, the class examines the strategic opportunities and problems that emerge when companies transfer corporate skills and competence to other countries.

IRGN 471. Japanese Economy (4)
A broad survey of the Japanese economy, together with in-depth examination of some distinctively Japanese phenomena such as savings behavior, financial structure, industrial organization, and labor markets. Prerequisites: IRCO 401 and 403, or consent of instructor.

IRGN 472. Japanese Corporate Culture (4)
This course examines Japanese culture values and social relations in the context of business organizations. The central focus will be on the integration of individuals into their organizations and on the human relations characteristic of their work environments.

IRGN 473. International Negotiation (4)
This course attempts to reach a broad audience of students who seek in-depth understanding of how states and other international actors attempt to achieve specific objectives through give-and-take of the negotiation process. Cases include Northern Ireland and Middle East peace processes, negotiations leading to Dayton accords, and negotiations over Anti-ballistic Missile Treaty.

IRGN 478. Japanese Foreign Policy (4)
Examines the domestic and strategic sources of Japan’s foreign policy in the postwar era. Unlike IRGN 460, this course emphasizes Japan’s foreign economic policy in regional and global multilateral organizations, and the major security issues it confronts with its Asian neighbors.

IRGN 479. Politics and Institutions in Latin America (4)
Overview of Latin American politics and the “rules of the game,” both formal and informal. Key topics include military rule, presidentialism, and clientelism in the region as a whole, with special emphasis on Argentina, Brazil, Chile, and Mexico.

IRGN 481. Managing Country Risk in the Modern Multinational Corporation (4)
Examines ways to analyze, assess, and reduce country risk.

IRGN 483. Business and Policy in Southeast Asia (4)
Surveys various dimensions of business in Southeast Asia, with particular attention to the policy context. Special focus on technological capabilities of business organizations in Southeast Asia.

IRGN 484. Korean Politics (4)
This course will examine characteristics and distinctive aspects of contemporary Korean society and politics. Emphasis will be placed on continuity and change in social values, political culture and leadership, economic growth and its impact, and democratization and its future prospects. Prerequisite: consent of instructor.

IRGN 485. The Korean Economy (4)
Analytical review of South Korea’s economic performance. Examination of major policy changes (e.g., shifts toward export promotion, heavy and chemical industries promotion); Korea’s industrial structure including the role of large enterprises (chaeboll); role of government; links between Korea and other countries.

IRGN 486. Economic and Social Development of China (4)
This course examines China’s development experience from a generally economic standpoint. Contents include: patterns of growth; Chinese society and economy, geography and resource constraints, impact of the West and Japan; development since 1949 and contemporary problems and options.

IRGN 487. Applied Environmental Economics (4)
This course teaches students how to analyze environmental and natural resource policy issues in developing countries using economic concepts and methods. Weekly spreadsheet exercises based on real-world data provide hands-on practice. Prerequisites: IRCO 401, 453, 454, or consent of instructor.

IRGN 490. Special Topics in Asia Pacific Affairs (4)
A seminar course at an advanced level on a special topic in Asia Pacific international affairs. May be repeated for credit.

IRGN 492. Special Topics in Pacific Studies (2)
A seminar course at an advanced level on a special topic in Pacific Studies.

IRGN 497. Internship (2)
Independent research that draws on an internship with an organization relevant to career track and/or regional specialization. Nature of the required product to be determined by professor supervising the course. May be repeated for credit.

IRGN 498. Directed Group Study (2)
Directed reading in a selected area. The content of each course is to be decided by the professor directing the course with the approval of the student’s faculty advisor. May be repeated for credit.

IRGN 499. Independent Research (2-12)
Independent research under the guidance of a faculty member of IR/PS. May be repeated for credit.

**LANGUAGE COURSES**

IRLA 400A-B-C. Chinese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a low-intermediate level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisites: IR/PS majors only, or by consent of instructor.

IRLA 401A-B-C. Chinese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an intermediate level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisites: IR/PS majors only, or by consent of instructor.

IRLA 402A-B-C. Chinese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an advanced-intermediate level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisites: IR/PS majors only, or by consent of instructor.

IRLA 410A-B-C. Japanese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a low-intermediate level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisites: IR/PS majors only or by consent of instructor.

IRLA 411A-B-C. Japanese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an intermediate level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisites: IR/PS majors only, or by consent of instructor.

IRLA 412A-B-C. Japanese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an advanced-intermediate level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisites: IR/PS majors only, or by consent of instructor.

IRLA 430A-B-C. Portuguese Language for Spanish Speakers (4-4-4)
This course is designed to enable Spanish-speaking students to acquire proficiency in the Portuguese language through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisites: IR/PS majors only or by consent of instructor.

IRLA 431A-B-C. Second Year Portuguese Language for Spanish Speakers (4-4-4)
A continuation of first-year Portuguese for Spanish speakers. This course is designed to enable Spanish speaking students to be introduced to the level of Portuguese language through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisites: IR/PS majors only or by consent of instructor.

IRLA 440A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a low-intermediate level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisites: IR/PS majors only or by consent of instructor.

IRLA 441A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an intermediate level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisites: IR/PS majors only, or by consent of instructor.

IRLA 442A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an advanced-intermediate level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisites: IR/PS majors only, or by consent of instructor.
I RGN 444A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a superior level of proficiency to maintain and improve their Spanish language skills through individual training with an instructor. Prerequisites: IR/PS majors only, or by consent of instructor.

I RGN 445A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a superior level of proficiency to maintain and improve their Spanish language skills through individual training with an instructor. Prerequisites: IR/PS majors only, by consent of instructor.

I RGN 446A-B-C. Bahasa Indonesia for Professional Proficiency (4-4-4)
This course is designed to enable students with basic knowledge and skills of Bahasa Indonesia to further develop communicative skills through a combination of classes, exercises, and other language experiences. Prerequisites: IR/PS majors only or consent of instructor.

I RL 500. Apprentice Teaching of Language (1-4)
This course is designed for graduate students serving as teaching assistants, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. Prerequisite: Graduate standing.

PH. D. LEVEL COURSES
IRGN 200. Theory of International Relations: International System (4)
This course examines the concepts of international structure and system in the field of international relations. It covers the literature on realism, neorealism, world systems theory, and other system-level explanations of patterns of international conflict and cooperation, continuity, and change.

IRGN 201. Ethnic Conflict (4)
Explanations for why ethnic conflicts break out, why they are difficult to resolve, and what effect outside intervention has on them. Introduce students to the major theories of ethnic and internal conflict. Policy debates regarding how the international community can best respond to these conflicts. Prerequisite: admission to program or consent of instructor.

Examination of effective policies and international collaboration on public and private international financial institutions, in particular the management of international debt crises, economic policy coordination, and the role of international lender of last resort.

IRGN 204. International Relations of the Pacific (4)
International relations and developing international political economies of nations bordering the Pacific. Topics include the "Pacific Basin" concept; the U.S. and "hegemonic-stability" theory; legacies of the Korean War and Sino-Soviet dispute; immigration patterns and their consequences; and Japan's foreign policy.

IRGN 205. U.S.—China Relations (4)
Can the United States and China manage to develop a constructive relationship or are they headed toward a hostile relationship? This course addresses this question by examining the domestic and international influences on the foreign policies of both countries and key issues in the bilateral relationship. Students also do policy projects.

IRGN 206. Corporate Strategy and the Environment (4)
This seminar examines the ability of firms to increase shareholder value through improved environmental performance. Topics include product differentiation, strategic use of regulations, the "Porter hypothesis," and environmental management systems. Readings include case studies and research articles. Prerequisites: IRGO 401, 421, 453, 454, or consent of instructor.

IRGN 207. Policy Implementation Process (4)
This course builds on the core Policy-Making Processes class by focusing on the role of officials in setting and implementing policy. Ideally, elected officials make policies that unbiased, technically proficient bureaucrats carry out. This course provides some insights into why the real world departs from this. Prerequisite: IRGO 400.

IRGN 209. Strategic Marketing Planning (4)
This course develops the microeconomics foundations of market exchange by explicitly examining the marketing details of transactions: demand and product differentiation, incomplete and incorrect information, search costs and promotion costs. It is argued that within this theoretical framework (i.e., model) most observed marketing behavior can be reconciled. The primary objective of this course is to learn to derive firm and consumer motives from observed behavior. Prerequisites: IRGN 221 and 243, or consent of instructor.

IRGN 210. International Politics and Security (4)
Development of analytic tools for understanding international relations and the dispositions to contemporary problems such as the environment, nuclear proliferation, human rights, humanitarian interventions, and the roots of conflict and cooperation among countries.

IRGN 211. Financial Institutions (4)
This course analyzes the roles of money and financial institutions in the economy. The first part of the course focuses on microeconomics and the financial system. The topics include money, financial markets, financial intermediaries, banking regulations, and bank runs. The second part of the course focuses on the macroeconomics aspects of financial institutions. The topics include financial development and financial liberalization, and their effects on the economy, especially economic growth and development. Prerequisite: graduate level or consent of instructor.

IRGN 212. International Competitiveness and the Globalized Value Chain (4)
This course explores the strategies countries pursue in the highly competitive world economy. It examines the global value chain and public policy toward education, labor, corporate social responsibility, free markets and global trade, finance and shareholding, and the political process.

IRGN 212. The Politics of International Competitiveness (4)
Examination of policy debates concerning international economic relations, what policies promote or encourage effective participation in the international economy, and what political factors support or oppose such policies. Examples drawn from the experiences of the U.S., Japan, Europe, Latin America, and East Asia.

IRGN 213. Risk Management (4)
This course provides an introduction to derivative assets such as options, futures, and swap contracts. The main topics include money, financial markets, financial intermediaries, and bank runs. The second part of the course focuses on the microeconomics aspects of financial institutions. The topics include financial development and financial liberalization, and their effects on the economy, especially economic growth and development. Prerequisite: IRGN 221 and 243, or consent of instructor.

IRGN 214. Corporate Governance (4)
Why do corporate governance systems—the way firms are run, the relationships among owners, investors, stockholders, and workers—differ widely around the world? This course examines the various explanations for these striking differences and the consequences. Prerequisites: Corporate Governance, and Corporate Governance.

IRGN 216. Post War Politics in Japan (4)
Overview of postwar politics in Japan, including American Occupation reforms, political institutions, major political factors, mass and elite, and political behavior. Special attention will be paid to the issue of Japan's changing democracy.

IRGN 217. Microfinance (4)
This course will begin by examining financial markets in poor countries. Investigates how microfinance contracts overcome problems that had previously barred the extension of business credit in many environments. Prerequisite: admission to program or consent of instructor.

IRGN 218. Globalization, the World System, and the Pacific (4)
This course examines globalization and other economic and political factors that shape the international relations of the Pacific Rim. Specific topics include financial market integration, state cooperation and intervention, and case studies of individual countries.

IRGN 221. Managerial Economics (4)
Survey of basic tools in economics. Examination of how commodity demand is determined, what affects supply of the commodity, how price is determined, when optimal market allocation of resources and failure occur, and basic topics concerning the aggregate economy.

IRGN 222. Investments (4)
An analysis of the risk/return characteristics of different assets as perceived by different investors and their implications for security price behavior, emphasizing real world capital market behavior. International aspects include the role of exchange rate risk and international diversification. Prerequisites: IRGO 421, 453, and 454.

IRGN 223. The Globalization of Production (4)
This course examines how trade policy, information technology, and other factors shape the production strategies of multinational enterprises. Topics include foreign direct investment, the mode of entry into foreign markets, global outsourcing and the globalization of work, and the impact of trade and investment policy on the world location of production. Prerequisites: IRGN 221 and IRGN 243, or consent of instructor.

IRGN 224. Corporate Finance (4)
The topics covered are dividend policy and capital structure, options, debt financing, and short and long-term in financial planning. Course format will be mostly lectures with occasional cases. Some international aspects of corporate finance will also be discussed. Prerequisites: IRGN 221, 243, IRGO 420, 421, 453 and 454, or consent of instructor.

IRGN 225. Managing Service Operations (4)
This course covers (1) strategic issues such as service vision, market positioning, growth, and globalization; (2) process design, facility design, and capacity planning; (3) system control and performance measurement; and (4) human resources, information technology, and other service media. Prerequisites: IRGO 460 and either IRGO 438 or consent of instructor.

IRGN 226. Management of Technology (4)
How companies choose and develop new technology. Case studies, lectures by executives. National technology policy, including the roles of intellectual property. This course emphasizes technology strategy at corporate/national level; the Product Development course emphasizes tactics for development teams.

IRGN 227. Organizations (4)
A seminar course based on the modern economics of organization. Covers an eclectic set of readings on a diverse range of organizations, looking at how incentives for collective action are set. Prerequisites: IRGN 221 and 243 or consent of instructor.

IRGN 229. Business and Management in Japan (4)
This course introduces the main aspects of Japanese business and industrial organization (keiretsu), Japanese management practices, and the representation and influence of business interests in the Japanese political economy.

IRGN 231. Fiscal and Monetary Policy (4)
Effects of fiscal and monetary policies on aggregate variables such as output, nominal and real interest rates, price level, and employment. Additional topics include the inflation/unemployment trade-off, budget deficit, and economic growth.

IRGN 232. Immigration and Immigration Policy (4)
This course examines the role of immigration in the globalization of Pacific Rim economics. Topics include the economic forces behind immigration; the impact of immigration on wages, employment, and industry structure in
sending and receiving countries; and the nature, scope, and political economy of immigration policy. Prerequisites: IRCO 401 or consent of instructor.

IRGN 235. Topics in International Trade (4)
This course develops new analytical models of international trade and examines their relevance for trade policy. Topics include setting trade policy where firms have global market power; how trade affects country welfare; and the effect of international trade on innovation, and economic growth; regional economic policy, dynamic industry clusters, and information technology; and new trade theory and the world distribution of income.

IRGN 237. Policy Design (4)
Course teaches how to make strong, reasoned cases for new policy initiatives. Covers cost-benefit analysis, cost-effectiveness analysis, and other evaluation methods. Special emphasis is placed on the use of information technology in policy-making. Covers tools to predict policy impact, like drawing on “best practice” and related experiences.

IRGN 238. Production and Operations Management: Analysis and Control (4)
This course provides a comprehensive introduction to the fundamental decisions and trade-offs associated with the control of a firm’s operations function. It analyzes production processes, quality control, inventory and materials planning, kanban, and just-in-time principles. Prerequisites: IRCO 453 and 454, or consent of instructor.

IRGN 239. Policy Evaluation (4)
Research design and focus on strategies for evaluating policies’ effectiveness with data in small quantities. Skills taught: understanding limits of what data say, and using information optimally. The emphasis is on qualitative analysis. The concepts taught are similar to those presented in OMS. Prerequisites: IRCO 453 and 454.

IRGN 240. Applied Data Analysis and Statistical Decision Making (4)
The goal of the course is to teach how to evaluate quantitative information in business and economics contexts, and to make sound managerial decisions in complex situations. Much of the problems and the course work will involve statistical software and spreadsheet analysis of data. The course covers various applied multivariate statistical methods beyond basics. Prerequisites: IRCO 453 and 454, or consent of instructor.

IRGN 242. Economics of Telecommunications (4)
This course will focus on the underlying economics of the telecommunication market and public policy rationale of regulations applied to this industry. Both theoretical models and case studies will be used to provide better understanding of the telecommunication marketplace and the nature of competition between service providers in the industry. Prerequisite: IRGN 221 or consent of instructor.

IRGN 243. International Economics (4)
The theory and mechanics of international economics. Included will be such topics as real trade theory, international movements of capital, the effects of trade and capital flows on domestic economies, and policies toward trade and foreign investment.

IRGN 244. Product Development (4)
This course examines how high-tech companies develop successful products. Emphasizes interplay between business and technology issues, including marketing, finance, manufacturing, prototyping, testing, and design. Student teams develop novel products, from concept to working prototype, including a business plan for launching the product. Discussion of concurrent engineering, rapid prototyping, industrial design, and other design methodologies.

IRGN 248. Civil Society and Development (4)
To explore the roles that civil society/NGOs/the third sector can play in advancing political, social, and economic progress in developing countries. To consider the strengths and weaknesses, capacities, and limitations of NGOs in developing countries. To provide students with experience in evaluating NGOs and in making professional recommendations to enhance their ability to make a difference. To prepare students to play leadership roles in government, the private sector, or NGOs—in promoting civil-society participation in development.

IRGN 249. Making U.S. Foreign Policy (4)
Analysis of the interests, structure, and procedures of the main executive branch agencies involved in the formulation of foreign policy, and of the roles of Congress, the media, public opinion, and non-governmental actors. Case studies of major foreign policy problems will be used to prepare students to perform professionally in the foreign policy arena. Prerequisite: IRGN 210 or consent of instructor. Suggested: IRGN 211.

IRGN 250. The Politics of U.S.-Japan Economic Relations (4)
This course will analyze how the domestic politics of each country, their international negotiations, and their interaction with other countries have affected the U.S.-Japan relationship. Both the politics of cooperation and integration, and trade friction and conflict will be addressed in part through study of specific cases.

IRGN 251. Economic Development (4)
This course examines comparative patterns of industrialization and agricultural modernization with a focus on certain common features of the modernization process and widely varying endowments, policies, and experiences of different countries. Prerequisites: IRGN 221 and 243, or consent of instructor.

IRGN 252. Quantitative Methods for Advanced Analysts (4)
This course caters to the needs of those who routinely face a variety of advanced data analysis challenges such as international marketing and sales managers, consulting analysts, or international business development and intelligence specialists. Knowledge of introductory optimization and statistics is assumed. The course is entirely practical in that it is organized around in-depth case studies, requiring students to work extensively with data. Methods covered include cluster, factor, and discriminant analysis, and modeling and simulation.

IRGN 256. Program Design and Evaluation (4)
Introduction to elements of program design and evaluation. Examines principles and guidelines used in creating a program and evaluating its success or failure. International case studies are explored. Students have the opportunity to develop their own program and evaluate projects.

IRGN 257. Cost Benefit Analysis (4)
Examination of public policy analysis, such as cost-benefit analysis and project evaluation, for use in policy formation. Sustainable development will receive particular attention. Case studies emphasizing the environment, agriculture and food, and economic development will be included.

IRGN 258. International Environmental Policy and Politics (4)
This course examines multilateral environmental agreements and negotiating positions of key countries on climate change, biodiversity conservation, sustainable development, and other subjects. It explores the challenges countries face to balance economic development objectives with global environmental concerns.

IRGN 259. Conflict Resolution of Environmental Issues (4)
Use of bilateral negotiations (U.S.-Canada), regional organization (ECO and acid rain in Europe), and United Nations’ specialized agencies (UNEP and WMO on ozone depletion and climate change) to mediate environmental disputes. Consideration of various international approaches to resolving international environmental problems.

IRGN 260. Economic and Social Development of China (4)
This course examines China’s development experience from a generally economic standpoint. Contents include: patterns of traditional Chinese society and economy; geography and resource constraints, impact of the Western and Japan; development since 1949, and contemporary problems and options.

IRGN 261. Chinese Politics (4)
This course covers post-1949 Chinese politics, including political institutions, the policy-making process, and citizen political behavior. Special attention will be given to the prospects for political reform in China.

IRGN 263. Political Economy of Southeast Asia (4)
This course provides an introduction to five Southeast Asian countries: Indonesia, Thailand, Malaysia, the Philippines, and Vietnam. The focus will be on national level political and economic issues in these countries. In addition, we will also be examining a number of region-wide issues: Chinese business groups and networks; clientelism and corruption; regional trade and investment linkages; democratization; and the implications of political change for future economic development. Prerequisite: graduate standing or consent of instructor.

IRGN 264. Economies in Southeast Asia (4)
This course focuses on the long-run and current economic issues of Southeast Asia. The topics are economic growth, human capital, inequality and poverty, social institutions, the business sector, the financial sector, government, the external sector, national and regional economic relations. For each topic, we will discuss the issues from selected countries in the region in more detail.

IRGN 265. Management of Non-Profit Organizations (4)
Analyzes the particular environment in which non-profit organizations define and achieve their objectives. Management tools are applied to existing non-profits and to student projects.

IRGN 266. Public Finance (4)
Describes principles of taxation and expenditure analysis; public budgeting; and assessment of budget priorities.

IRGN 270. International Business Strategy (4)
This course analyzes corporate strategies and management issues in their international dimensions. Based on numerous case studies, the class examines the strategic opportunities and problems that emerge when companies transfer corporate skills and competence to other countries.

IRGN 271. Japanese Economy (4)
A broad survey of the Japanese Economy, together with in-depth examination of some distinctively Japanese phenomena such as savings behavior, financial structure, the role of thebanking system, and its effects on aggregate demand, and the implications of political change for future economic development. Prerequisites: IRGN 221 and 243, or consent of instructor.

IRGN 273. Current Issues in U.S.-Latin American Relations (4)
Issues to be actively debated include the collective defense of democracy, coping with revolutionary change, counter-narcotics, anti-corruption, international finance, trade, and U.S.-Mexican and U.S.-Brazilian relations. In each case, students analyze the strengths and weaknesses of current U.S. policy and advocate alternative options. Prerequisite: IRCO 210 or consent of instructor.

IRGN 274. Economic Policy in Latin America (4)
This course seeks to enhance the students’ understanding of the main policy alternatives open to the largest Latin American countries. Development and stabilization policies are analyzed, emphasizing the current debate between conventional and heterodox policy packages and their impact on decision making. Prerequisites: IRGN 221 and 243.

IRGN 276. International Negotiation (4)
This course attempts to reach a broad audience of students who seek in-depth understanding of how states and other international actors attempt to achieve specific objectives through give-and-take of the negotiation process. Cases include Northern Ireland and Middle East peace processes, negotiations leading to Dayton accords, and negotiations over Anti-Ballistic Missile Treaty.

IRGN 278. Japanese Foreign Policy (4)
Examines the domestic and strategic sources of Japan’s foreign policy in the postwar era. Unlike IRGN 460, this course emphasizes Japan’s foreign economic policy in regional and global multilateral organizations, and the major security issues it confronts with its Asian neighbors.

IRGN 281. Managing Country Risk in the International Business Environment (4)
Case studies will be used to provide better understanding of the international marketplace and the nature of competition between service providers in the industry. Prerequisites: IRGN 221 and 243.
IRGN 284. Korean Politics (4)
This course will examine characteristics and distinctive aspects of contemporary Korean society and politics. Emphasis will be placed on continuity and change in social values, political culture and leadership, economic growth and its impact, and democratization and its future prospects. Prerequisite: consent of instructor.

IRGN 285. The Korean Economy (4)
Analytical review of South Korea's economic performance. Examination of major policy changes (e.g., shifts toward export-promotion, heavy and chemical industrial promotion), Korea's industrial structure including the role of large enterprise (chaebol); role of government; links between Korea and other countries.

IRGN 287. Politics and Institutions in Latin America (4)
Overview of Latin American politics and the "rules of the game," both formal and informal. Key topics include military rule, presidentialism, and clientelism in the region as a whole, with special emphasis on Argentina, Brazil, Chile, and Mexico.

IRGN 289. Applied Environmental Economics (4)
This course teaches students how to analyze environmental and natural resource policy issues in developing countries using economic concepts and methods. Weekly spreadsheet exercises based on real-world data provide hands-on practice. Prerequisites: IRCO 453, 454, IRGN 221, or consent of instructor.

IRGN 290. Special Topics in Pacific International Affairs (4)
A seminar course at an advanced level on a special topic in Pacific international affairs. May be repeated for credit.

IRGN 292. Special Topics in Pacific Studies (2)
A seminar course at an advanced level on a special topic in Pacific Studies.

IRGN 298. Directed Group Study (2)
Directed reading in selected area. The content of each course is to be decided by the professor directing the course with the approval of the student's faculty advisor. May be repeated for credit. Prerequisites: graduate standing and consent of faculty advisor.

IRGN 299. Independent Research (2-12)
Independent research under the guidance of a faculty member in IR/PS. May be repeated for credit. Prerequisites: graduate standing and consent of faculty advisor.
International Studies

PROGRAM FACULTY
Eric J. Bakovic, Ph.D., Associate Professor, Linguistics
Prashant Bharadwaj, Ph.D., Assistant Professor, Economics
Suzanne Brenner, Ph.D., Associate Professor, Anthropology
J. Lawrence Broz, Ph.D., Associate Professor, Political Science
Robert Cancel, Ph.D., Associate Professor, Literature
Marsha A. Chandler, Ph.D., Professor, International Relations and Pacific Studies
William Chandler, Ph.D., Professor, Political Science
Ellen T. Comisso, Ph.D., Professor, Political Science
Ann L. Craig, Ph.D., Associate Professor, Political Science
Joseph W. Esherick, Ph.D., Professor, History
Karen E. Ferree, Ph.D., Assistant Professor, Political Science
James H. Fowler, Ph.D., Associate Professor, Political Science
Clark Gibson, Ph.D., Professor, Political Science; Director, International Studies Program
Peter A. Gouveitch, Ph.D., Professor, International Relations and Pacific Studies
Theodore Groves, Ph.D., Professor, Economics
Stephen M. Haggard, Ph.D., Professor, International Relations and Pacific Studies
Gordon H. Hanson, Ph.D., Professor, International Relations and Pacific Studies
Takeo Hoshi, Ph.D., Professor, International Relations and Pacific Studies
Alan C. Houston, Ph.D., Professor, Political Science; Provost, Eleanor Roosevelt College
Christine Hunefeldt, Ph.D., Professor, History; Director, CILAS
Stephanie H. Jed, Ph.D., Associate Professor, Literature
Bennetta W. Jules-Rosette, Ph.D., Professor, Sociology
Miles E. Kahler, Ph.D., Professor, International Relations and Pacific Studies
Hasan Kayali, Ph.D., Associate Professor, History
Todd Kontje, Ph.D., Professor, Literature
Nancy H. Kwak, Ph.D., Assistant Professor, History
David A. Lake, Ph.D., Professor, Political Science
Lisa Lowe, Ph.D., Professor, Literature
Victor V. Magagna, Ph.D., Associate Professor, Political Science
Meguni Naoi, Ph.D., Assistant Professor, Political Science
Nancy G. Postero, Ph.D., Associate Professor, Anthropology
Michael T. Provence, Ph.D., Associate Professor, History
Pamela Radcliff, Ph.D., Associate Professor, History
James E. Rauch, Ph.D., Professor, Economics
Roddy Reid, Ph.D., Professor, Literature
Joel Robbins, Ph.D., Professor, Anthropology
Akos Rona-Tas, Ph.D., Associate Professor, Sociology
Sharon Rose, Ph.D., Associate Professor, Linguistics
Christina J. Schneider, Ph.D., Assistant Professor, Political Science
Lisa R. Shaffer, Ph.D., Adjunct Professor, International Relations and Pacific Studies/Director, Sustainability Solutions Institute
Peter H. Smith, Ph.D., Professor, Political Science
Stefan A. Tanaka, Ph.D., Professor, History
Christina L. Turner, Ph.D., Associate Professor, Sociology
Carlos H. Waisman, Ph.D., Professor, Sociology
Lisa Yoneyama, Ph.D., Associate Professor, Literature
Leon Zamosc, Ph.D., Associate Professor, Sociology

THE INTERNATIONAL STUDIES PROGRAM

Technology and the forces of cultural and economic integration appear to reduce the distances between societies, which now impinge on one another on many dimensions. At the same time, ethnic, religious, and economic conflicts erupt within and between societies, often in violent form. Both the proximity of other societies and the remaining divides within and between them demand a better understanding of their cultures and institutions. Societies cannot be understood in isolation or at a single point in time, however; they are shaped by global and regional environments—political, military, economic, cultural—and their pasts. Individuals and societies in turn shape those environments as they reinterpreta their histories.

Using different disciplinary lenses, the international studies major explores the interaction between international and national, global and local, contemporary and historical. The program builds on the strengths of existing international specializations at UC San Diego. International relations and comparative politics are established and distinguished fields of political science. The comparative study of societies and cultures lies at the core of sociology and anthropology. Literature and linguistics offer a rich array of courses dealing with languages and traditions outside the English-speaking societies. Area studies programs provide comprehensive understanding of particular countries and regions.

The international studies major provides students with both a firm grounding in a discipline and the flexibility to permit exploration from alternative perspectives. The primary and secondary tracks chosen by each student contain the disciplinary foundations of the major. International studies majors also complete two core courses that serve as gateways to disciplinary approaches and to central international and comparative issues that cut across disciplines. Among these subjects are cultural boundaries and identities, economic and social development, international and regional integration and their effects, the evolution of political and social institutions, and forms of communication and language. A required capstone seminar permits the completion of a research paper in close association with a member of the faculty. International studies majors benefit throughout from the activities and programs of the Institute for International, Comparative, and Area Studies (IICAS), the home for international studies at UCSD.

Education Abroad

Majors in international studies are encouraged to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP). Subject to approval by the faculty director of the major, up to six courses taken through EAP/OAP will be accepted for credit toward the major. Students are strongly encouraged to complete INTL 101 and INTL 102 before departure. Students interested in studying abroad should see an international studies program advisor to discuss appropriate courses and programs for their plan of study. Information on EAP/OAP is given in the Education Abroad Program section of the UC San Diego General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at http://programsabroad.ucsd.edu. Financial aid can be used for EAP/OAP study, and special study abroad scholarships are also available.

For information on study abroad in the ISP, visit http://isp.ucsd.edu and http://programsabroad.ucsd.edu/pao/pdffiles/newintlabroadmap.pdf.

Careers

International studies attracts students who are interested in a variety of careers, including government and international organizations, international business, non-governmental organizations, journalism, the arts, and the media. Because of its strong disciplinary core, the major also prepares students who wish to pursue graduate degree programs in international affairs or in one of the participating disciplines.

Honors

The Honors Program in International Studies recognizes academic excellence in the major. The Honors Program allows qualified students to complete an honors thesis on a topic of their choice in close collaboration with a member of the UCSD faculty. Students who wish to participate in the Honors Program in International Studies should indicate their interest in the spring quarter of their junior year. Honors program applications are available on the ISP Web site. Applications are due by Monday of the ninth week, the quarter before you enroll in 190H.

Referto http://isp.ucsd.edu/content/is_major/honors.php for additional requirements and information pertaining to the ISP Honors Program.

Requirements for the Honors Program

Candidates for honors in any of the International Studies degrees must meet the following requirements:

• A GPA of 3.5 in courses in the International Studies Major (INTL 101, 102, primary track, and secondary track courses)

• Completion of INTL 190H: Senior Honors Seminar in International Studies.

• Completion of a senior honors thesis (INTL 196H). On the recommendation of the student’s instructor in INTL 190H and with the approval of the director of the International Studies program, qualified students will enroll in INTL 196H:
Directed Thesis Research (4 units) and complete a senior honors thesis under the direction of a member of the International Studies faculty. The thesis must reflect a research project that is substantially broader in scope and that includes more original research than the research paper required of all International Studies students in INTL 190.

Criteria for “Distinction,” “High Distinction,” and “Highest Distinction”

- Students must maintain a 3.5 GPA in the major to graduate with distinction.
- Each student whose honors thesis also earns a grade of A– shall be entitled to the designation “with distinction.”
- Each student whose honors thesis earns a grade of A shall be entitled to the designation “with high distinction.”
- Each student whose honors thesis earns a grade of A+ shall be entitled to the designation “with highest distinction.”

Please refer to the International Studies Program Web site for additional requirements.

THE INTERNATIONAL STUDIES MAJOR

A student who satisfactorily completes the general-education requirements of Muir, Revelle, Marshall, Warren, Roosevelt, or Sixth College in addition to the international studies requirements described below will be awarded one of the following bachelor of arts degrees based upon selection of the primary track:

International Studies—Anthropology
International Studies—Economics
International Studies—History
International Studies—Linguistics
International Studies—Literature
International Studies—Political Science
International Studies—Sociology

All upper-division courses applied to the requirements of the major must be taken for a letter grade. A 2.0 grade-point average is required in the major, and students must earn at least C– in each course counted for the major. Transfer students should see the international studies advisor to determine whether courses taken elsewhere satisfy international studies program requirements.

LOWER-DIVISION REQUIREMENTS

Foreign language (four quarters of college-level language or equivalent proficiency).

Students majoring in international studies are required to demonstrate basic proficiency in a modern foreign language by completing four quarters of foreign language instruction (or equivalent) with a passing grade. Students may also complete this requirement by demonstrating advanced language ability on a proficiency exam.

College-level language study is a prerequisite for study abroad in most non-English speaking countries and enhances understanding of those societies. Students who plan to study abroad in non-English speaking countries may need to take additional language classes, and they will need to take all language courses for letter grades.

Students should make substantial progress toward fulfilling college general-education requirements and the foreign language requirement of the international studies major before beginning the core sequence of the international studies major.

UPPER-DIVISION REQUIREMENTS

The upper-division requirements for a major in international studies are:

1. Two core courses (INTL 101 and INTL 102)
2. A capstone seminar (INTL 190)
3. Eight 4-unit, upper-division, non-language courses in a primary track
4. Four 4-unit, upper-division, non-language courses in a secondary track (different from primary track)

Core Courses

Two core courses (INTL 101 and INTL 102) provide an intellectual gateway to central issues and disciplinary approaches in international studies. Students may begin the sequence with either course. Sophomore status is a prerequisite for both courses.

INTL 101. Culture and Society in International Perspective (4)
INTL 102. Economics, Politics, and International Change (4)

Capstone Seminar

All majors will complete the capstone seminar during their senior year. Students are required to complete a research paper for this course. INTL 190. Seminar in International Studies (4)

Regional Requirement

Of the thirteen track courses (eight primary and five secondary), three courses must concentrate on one country or region outside the United States to complete the International Studies Program regional requirement.

Departments Offering Both Primary and Secondary Tracks

Anthropology

Primary Track: Students are required to take at least one course from the following:

ANTH 101. Foundations of Social Complexity
ANTH 102. Human Evolution
ANTH 103. Sociocultural Anthropology

The remaining upper-division courses should be selected from the Anthropology: Sociocultural (ANSC) and Archaeology (ANAR) listings. Up to two approved courses from Anthropology: Biological Anthropology (ANBI) can also be counted toward the major with the approval of the international studies program advisor.

Secondary Track: Students are encouraged to take ANTH 101 and 103; all other courses should be from the ANTH, ANSC, or ANAR series; one course from the ANBI series will be accepted for credit by petition.

Economics

Primary and Secondary Tracks: Both primary and secondary track IS majors must satisfy the following six lower-division department requirements with a C– or better:

Calculus. Mathematics 10A-B-C or Mathematics 20A-B-20C and Economics 1, 2, 3

Upper-division courses may be selected from

Economics 100A-B-C. Microeconomics
Economics 110A-B. Macroeconomics
Economics 120A-B-C. Econometrics
Economics 101. International Trade
Economics 103. International Monetary Relations
Economics 114. Economics of Immigration
Economics 116. Economic Development
Economics 117. Economic Growth
Economics 125. Demographic Analysis and Forecasting
Economics 131. Economics of the Environment
Economics 132. Energy Economics
Economics 133. International Environmental Agreements
Economics 144. Economics of Conservation
Economics 145. Economics of Ocean Resources
Economics 161. Global Integration of Latin America
Economics 162. Economics of Mexico
Economics 163. Japanese Economy
Economics 165. Middle East Economics

Both primary and secondary track majors must take at least two of the following courses:

Economics 101. International Trade
Economics 103. International Monetary Relations
Economics 114. Economics of Immigration
Economics 116. Economic Development
Economics 117. Economic Growth
Economics 125. Demographic Analysis and Forecasting
Economics 131. Economics of the Environment
Economics 132. Energy Economics
Economics 133. International Environmental Agreements
Economics 144. Economics of Conservation
Economics 145. Economics of Ocean Resources
Economics 161. Global Integration of Latin America
Economics 162. Economics of Mexico
Economics 163. Japanese Economy
Economics 165. Middle East Economics

At least one of the above must be Economics 101, 103, or 116.

History

Primary Track: At least six of eight courses must be taken in any of the following categories:

History of Africa (HIAF)
History of Europe (HIEU)
History of East Asia (HIEA)
History of the Near East (HINE), with the exception of HINE 151, 152, 153
History of Latin America (HILA)
History of Science (HISC)
History of Religion (HIRE) and/or History Topics (HIITO), except HIITO 194–199

Up to two courses may be taken in History of the United States (HIUS).

Secondary Track: All courses must be taken in non-U.S. history.

**Linguistics**

Primary Track: Eight upper-division courses in linguistics, which must include LIGN 101 (Introduction to the Study of Language) and at least three courses from the following list:
- LIGN 105. Law and Language
- LIGN 108. Languages of Africa
- LIGN 141. Language Structures
- LIGN 142. Language of Typology
- LIGN 143. Structure of Spanish
- LIGN 145. Pidgins and Creoles
- LIGN 174. Gender and Language in Society
- LIGN 175. Sociolinguistics
- LIGN 176. Language of Politics and Advertising
- LIGN 177. Multilingualism

At most, one of the eight courses can be LIGN 199 (Independent Study in Linguistics) by petition.

Secondary Track: Five upper-division courses in linguistics, which must include LIGN 101 (Introduction to the Study of Language) and at least two courses from the list above. At most, one of the five courses can be LIGN 199 (Independent Study in Linguistics) by petition.

**Literature**

Primary Track: Eight upper-division courses may be selected from the following:
- Literatures in English (LTEN)
- LTEN 188. Contemporary Caribbean Literature
- LTEN 189. Twentieth-Century Postcolonial Literatures
- Literatures of the World (LTWL)
- LTWL 140. Novel and History in the Third World
- LTWL 141. Islam and Modernity
- LTWL 149. The Last Turn of the Century in the West
- LTWL 150. Modernity and Literature
- LTWL 152. Introduction to Islam
- Literature/Cultural Studies (LTCS)
- LTCS 133. Globalization and Culture
- LTCS 140. Subaltern Studies in Context
- LTCS 141. Race and Empire
- LTCS 145. National Cultures in Colonial and Postcolonial Contexts

And all courses listed under:
- African Literatures (LTAF)
- Literatures in Chinese (LTCH)
- East Asian Literatures (LTEA)
- European and Eurasian Literature (LTEU) with exception of LTEU 100, 102, 105
- Literatures in French (LTFR) with exception of LTFR 160
- Literatures in German (LTGM)
- Literatures in Italian (LTIIT) with exception of LTIIT 161
- Korean Literature (LTKO)
- Literatures in Portuguese (LTPR)
- Russian Literature (LTRU) with exception of LTRU 104 A, B, C
- Literatures in Spanish (LTSP) with exception of LTSP 150, 151, 152, 153, 154, 160, 162, 166

With approval of the undergraduate advisor, students may take up to two theory or methods courses selected from Literature/Theory (LTTH) courses LTTH 110, LTTH 115, or LTTH 150, and from among the Literature/Cultural Studies (LTCS) courses LTCS 100, LTCS 102, or LTCS 120.

Secondary Track: Five courses selected from the above.

**Political Science**

Primary Track: Eight courses selected from the following. All courses numbered POLI 120 through POLI 159:
- Comparative Politics: POLI 120A through POLI 139A
- International Relations: POLI 140A through POLI 159

Up to three courses may be from the following subfields:
- American Politics: POLI 100A through POLI 108
- Political Theory: POLI 110A through 119A
- Policy Analysis: POLI 160AA through 168
- Research Methods: POLI 170A and POLI 181

Secondary Track: Five upper-division courses selected from courses numbered POLI 120 through POLI 159 (see above); one of the five courses may be selected from the following subfields:
- American Politics: POLI 100A through POLI 108
- Political Theory: POLI 110A through 119A
- Policy Analysis: POLI 160AA through 168
- Research Methods: POLI 170A and POLI 181

**Sociology**

Primary Track: Eight upper-division courses selected from the following list:
- SOCI 110E. Human Rights–Principles and Problems
- SOCI 111F. Human Rights–Practices and Cases
- SOCI 125. Sociology of Immigration
- SOCI 133. Immigration in Comparative Perspective
- SOCI 134. The Making of Modern Medicine
- SOCI 136E. Sociology of Mental Illness: An Historical Approach
- SOCI 136F. Sociology of Mental Illness in Contemporary Society
- SOCI 148. Political Sociology
- SOCI 156. Sociology of Religion
- SOCI 157. Religion in Contemporary Society
- SOCI 158. Islam in the Modern World
- SOCI 162R. Religion and Popular Culture in East Asia
- SOCI 163. Migration and the Law
- SOCI 169. Citizenship, Community, and Culture
- SOCI 175. Nationality and Citizenship
- SOCI 176. War and Society
- SOCI 177. International Terrorism
- SOCI 178. The Holocaust
- SOCI 179. Social Change
- SOCI 180. Social Movements and Social Protest
- SOCI 181. Modern Western Society
- SOCI 182. Ethnicity and Indigenous Peoples in Latin America
- SOCI 183. Minorities and Nations
- SOCI 185. Globalization and Social Development
- SOCI 187. African Societies through Films SOCI 188D. Latin America: Society and Politics
- SOCI 188E. Community and Social Change in Africa
- SOCI 188F. Modern Jewish Societies and Israeli Society
- SOCI 188G. Chinese Society
- SOCI 188J. Change in Modern South Africa
- SOCI 189. Special Topics in Comparative-Historical Sociology

Note: SOCI 189 must be preapproved by program advisor.

Secondary Track: Five upper-division courses selected from the above lists.

DEPARTMENTS AND PROGRAMS OFFERING ONLY SECONDARY TRACKS

**Communication**

Course Prerequisites: Must take COGN 20 for a letter grade to enroll in upper-division courses.

Secondary Track: Five courses selected from the following lists:
- Communication as a Social Force (COSF)
- COSF 100. Introduction to Communication as a Social Force
- COSF 123. Communication, Dissent, and Social Movements
- COSF 124. Black Women, Feminism, and the Media
- COSF 140A. Comparative Media Systems: Asia
- COSF 140B. Comparative Media Systems: Europe
- COSF 140C. Comparative Media Systems: Latin America and the Caribbean
- COSF 159. Work and Industry in the New Information Economy
- COSF 160. Political Economy/Global Consumer Culture
- COSF 161. Global Economy and National Identity
- COSF 181. Political Economy of International Communications
- COSF 183. The Politics of World Music
- COSF 184. The Mass Media and Politics in Africa
- COSF 185. Gender, Labor, and Culture in the Global Economy
- Communication and Culture (COCU)
- COCU 110. Cinema in Latin America
- COCU 126. African Cinema
- COCU 130. Tourism: Global Industry and Cultural Form
- COCU 131. Cinema of the Cuban Revolution
- COCU 162. Popular Culture
- COCU 179. Colonialism and Culture
- Communication and Human Information Processing (COHI)
- COHI 114. Bilingual Communication
- COHI 115. Education and Global Citizenship
- COHI 121. Literacy, Social Organization, and the Individual
- COHI 135. Language and Globalization
Area Studies Secondary Tracks

Five upper-division courses in a single area studies program selected from the following list of programs:
- African Studies
- Chinese Studies
- German Studies
- Italian Studies
- Japanese Studies
- Latin American Studies
- Middle East Studies
- Russian and Soviet Studies
- Third World Studies

Course lists can be found in the UC San Diego General Catalog. All courses must be four-unit, upper-division, non-language courses, taken for a letter grade C– or better. Please contact ISP academic advisor with questions.

Students seeking a broader regional focus (e.g., European or East Asian Studies) may elect to combine courses from area studies programs dealing with that region. Courses must be preapproved prior to enrolling.

INTEGRATED BACHELOR OF ARTS/MASTER IN INTERNATIONAL AFFAIRS

The International Studies Program and the School of International Relations and Pacific Studies have collaborated to create a combined five-year Bachelor of Arts/Master of International Affairs program (B.A./M.I.A.). The combined program is designed specifically for selected UCSD undergraduate majors in international studies who seek advanced training for leadership positions in the Pacific Rim community. In addition to serving the needs of UCSD undergraduate students, the program provides a societal benefit by providing students with advanced training that is suitable for a wide array of careers in government, industry, nonprofit institutions, and other organizations involved in the international affairs of the Pacific Rim.

The B.A./M.I.A. program retains and builds on the interdisciplinary core of the existing international studies degree and adds to it the professional training of a new one-year Master of International Affairs professional degree (year five of the combined program). This streamlined program will permit undergraduates to incorporate graduate-level courses into their final year of the international studies major. The combined degree program will provide an interdisciplinary program of study in the International Studies Program during the first four years. It is expected that up to ten undergraduate students will be accepted into this program each year.

The structure of the program is as follows:

**Years 1–3**

Undergraduate lower- and upper-division course work; general-education, language courses, INTL courses, major prerequisites, and half the undergraduate track courses.

**Year 4**

Students are still undergraduates, but the majority of course work is completed at IR/PS at the graduate level; at end of year 4, students graduate with a B.A. in International Studies.

**Summer**

Required summer internship between years 4 and 5.

**Year 5**

Students enter IR/PS and complete remaining graduate course work; upon successful completion, they graduate with a Master of International Affairs (M.I.A.) at end of year 5.

Please note: This program is only open to students whose two tracks are economics and political science, in either order.

Students apply to the program at the end of winter quarter in year 3. Acceptance is tentative until successful completion of year 4 and the required summer internship; student is then officially accepted into the M.I.A. program and begins to pay professional fees.

The B.A./M.I.A. Program is much more rigidly structured than the regular IS major. Students will need to meet frequently with the International Studies Program academic advisor from their first year onward to ensure proper course selection each quarter.

The approved course list for the B.A./M.I.A. Program is slightly different than the list for the regular IS major. Please be sure to consult the appropriate list to find approved courses.

Students must study a Pacific Rim foreign language for this program because the language must match the IR/PS region of specialization during the fifth year. Consult the ISP Web site for a complete list of approved B.A./M.I.A. languages and their corresponding IR/PS regions.

Students must complete a minimum of four quarters of a Pacific Rim foreign language in order to meet the B.A. requirement. Two additional quarters are required for the M.I.A. It is recommended (but not required) that students complete all six quarters at the undergraduate level.

Students choosing to satisfy their language requirement by taking six quarters of course work must earn a grade of C– or better in the fifth quarter and a grade of B or better in the sixth quarter.

For additional information about the B.A./M.I.A. program, please visit our Web site at [http://isp.ucsd.edu](http://isp.ucsd.edu). For application information and admissions criteria, please visit [https://graduateapp.ucsd.edu](https://graduateapp.ucsd.edu).

THE INTERNATIONAL STUDIES MINOR

The international studies minor is designed to offer students an introduction to the interdisciplinary investigation of other societies and the forces of global integration and conflict. To receive a minor in international studies, a student must complete seven four-unit courses (twenty-eight units).

(A) LANGUAGE REQUIREMENT

All minors must demonstrate basic proficiency in a modern foreign language by completing four quarters of foreign language instruction (or equivalent). Students may also complete this requirement by demonstrating advanced language ability on a proficiency exam. Students completing the language requirement through waiver (700 or better on SAT II language exam or if you attended high school outside the U.S.) or proficiency will fulfill the language component of the minor by completing one of these requirements but no course credit will be applied toward the seven courses required for the minor.

Up to two courses in foreign language can be included in the seven courses required for the minor. These may be lower-division courses but must be taken for a C– or better to apply. The remaining five courses must be upper-division courses in the humanities and social sciences. (See below)

(B) ADDITIONAL COURSE REQUIREMENTS

1. All minors must take INTL 101 and INTL 102. INTL 101 and 102 may be taken in any order and are offered during different quarters throughout the academic year. You can enroll in INTL 101 and INTL 102 on WebReg if you have sophomore standing and are declared in the IS major or minor program. If you do not meet these requirements and wish to add INTL 101 or 102, contact the International Studies Advising Office. INTL 101 and 102 are gateway courses and should be taken in the sophomore or junior year.

2. The remaining three to five courses (depending on the number of language courses applied to the minor) must be distributed in two broad areas (tracks). Specifically, students must take at least one course in each of two tracks:

   - Track 1. Economics, Politics, and International Change
   - Track 2. Culture and Society in International Perspective

   (See course listings for each track.)

3. The minor must include courses from at least two departments.

4. All courses applied to the minor (including applicable language courses) must receive a letter grade of C– or better.

5. Minors in international studies are encouraged to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP). Subject to approval by the IS faculty director, up to three courses taken through EAP/OAP or at another university will be accepted for credit toward the minor.

TRACKS IN THE INTERNATIONAL STUDIES MINOR

*Track 1: Economics, Politics, and International Change*

- Communication
  - COSF 123. Communication, Dissent, and Social Movements
  - COSF 159. Work and Industry in the New Information Economy
  - COSF 160. Political Economy/Global Consumer Culture
  - COSF 161. Global Economy and National Identity
  - COSF 181. Political Economy of International Communications

*Track 2: Culture and Society in International Perspective*

- Modern Languages and Literatures
  - COSF 101. Russian and Soviet Studies
  - COSF 110. Chinese Studies
  - COSF 120. Japanese Studies
  - COSF 130. Italian Studies
  - COSF 140. Third World Studies

Muir College
http://history.ucsd.edu/programs/caesar-programs/italian-stud/index.html

Italian studies is an interdisciplinary program in the language, literature, history, theater, music, and art of Italy. Italian studies coordinates the resources of the Departments of History, Literature, Music, Theatre and Dance, and Visual Arts, and offers students the opportunity to design a major, leading to a B.A., around the course offerings of these five departments. Students in Italian studies are encouraged to participate in the University of California Education Abroad Program (EAP), which is affiliated with the Universities of Padua, Trento, and Bologna: this provides the possibility of a junior year abroad, including both language courses and courses dealing with various aspects of Italian studies. EAP credits may be transferred back to UC San Diego to coordinate with on-campus offerings.

THE MAJOR PROGRAM

A major in Italian studies consists of a choice of twelve upper-division courses in literature, history, music, theatre, and visual arts approved for the program and listed below. Courses in other areas of Italian studies taken abroad or on our campus may also apply. At least three areas must be represented in the student's program of study. The particular courses making up each student's major will be selected in consultation with the program advisor. The study of Dante (LTIT 115) is considered central for all Italian studies majors.

THE MINOR PROGRAM

A minor in Italian studies consists of seven upper-division courses from among those listed below (at least three areas must be represented). Credit from the EAP program may be applied toward the minor.

UPPER-DIVISION/ITALIAN STUDIES COURSES

For description of courses listed below, see appropriate departmental listing.

LITERATURE

LTIT 1A-B-C. The Language of Italian Culture
LTIT 100. Introduction to Literatures in Italian
LTIT 110. Selected Topics in Italian Literature
(may be repeated for credit as topics vary)
LTIT 115. Medieval Studies
LTIT 122. Studies in Modern Italian Culture
LTIT 137. Studies in Modern Italian Prose
LTIT 143. Major Italian Authors
LTIT 161. Advanced Stylistics and Conversation
LTIT 192. Senior Seminar in Literatures in Italian
LTIT 196. Honors Thesis
LTIT 198. Directed Group Study
LTIT 199. Special Studies

Note: Students must complete the following prerequisites for all upper-division work in Italian literature:
1. Linguistics/Italian 1A-B-C, or LTIT 1A-B-C
2. Literature/Italian 2A-B, 50

VISUAL ARTS

122CN. Defining High Renaissance Art
122D. Michelangelo
128B. Topics in Early Modern Art History (when on Italian topic)
129B. Seminar in Early Modern Art History (when on Italian topic)

HISTORY (HIEU)

113. Rule, Conflict, and Dissent in the Middle Ages
122. Politics, Italian Renaissance Style
199. Independent Study in European History

The following courses may be applied to the major or minor, when 50 percent or more of the course focus is on Italian topics:
Music 113
THHS 101

Additional courses counting toward a major in Italian studies are offered on a year-to-year basis. As these often cannot be listed in the catalog in advance, interested students should consult the program faculty for an up-to-date list.
Japanese Studies

THE MAJOR

A. LOWER-DIVISION REQUIREMENT (9 COURSES)

1. Japanese language: two years lower-division or the transferred equivalent:
   - Japanese Studies 10A-B-C
   - Japanese Studies 20A-B-C

2. The remaining three courses must be chosen from among the following:
   a. East Asian History: HILD 10-11-12
   b. Eleanor Roosevelt College students may petition to use MMW Courses 2 and 5.

B. UPPER-DIVISION REQUIREMENT (12 COURSES)

1. Japanese language: six upper-division language courses or the transferred equivalent from
   - Japanese Studies 100A-B-C
   - Japanese Studies 130A-B-C
   - Japanese Studies 140A-B-C
   - Japanese Studies 150A-B-C

   Students may petition to include three upper-division language courses taken abroad under EAP or OAP.

2. Japanese Studies 190 (JAPN 190): Selected Topics in Contemporary Japanese Studies. This is a seminar-style course focusing on selected topics in contemporary interdisciplinary studies of Japan. Prerequisite: upper-division standing; student must complete a minimum of one upper-division Japanese studies approved course, or consent of instructor.

3. The remaining five courses must be taken from two or more different disciplines.
   a. Students may petition to include two non-language upper-division courses taken abroad under EAP or OAP.
   b. Students may include one 199.

4. All upper-division courses must be taken for a letter grade, with the exception of JAPN 199.

5. The language requirement can be waived by demonstrating the equivalent proficiency through exam. The required number of courses must be fulfilled by taking other non-language, upper-division courses.

C. HONORS PROGRAM

1. Junior standing or higher.
2. A GPA of 3.5 or better in the major.
3. Overall GPA of 3.2 or better.
4. Completion of at least four upper-division non-language courses approved by the Program in Japanese Studies.
5. Recommendation of a faculty sponsor familiar with the student's work.

Students who qualify for honors take a two-quarter sequence Japanese Studies 196A-B (fall and winter quarters preferred) of directed study during which they define a research project, carry out the research, and complete an honors thesis.

The completed honors thesis will be evaluated by a committee consisting of the student’s thesis advisor and one other faculty member appointed by the Program in Japanese Studies director.

THE MINOR

A minor in Japanese studies consists of at least fifteen units of Japanese language (lower- or upper-division) and at least sixteen units of upper-division non-language course work taken from two or more departments. Students may use one non-language course taken abroad. All courses to be used for the minor must be approved by the Program in Japanese Studies and must be taken for a letter grade. Beginning in fall 2010, students who declare for the Japanese studies major and minor will be allowed no more than one course with a D grade to count towards the program requirement. This new requirement will not apply to students who declared their major or minor prior to fall 2010. Students who are already beyond first- and second-year language levels will be placed in one of our upper-division Japanese language courses, written Japanese (100A-B-C), Third-Year Japanese (130A-B-C), Fourth-Year Japanese (140A-B-C), or Advanced Japanese (150A-B-C), and will be required to take four upper-division language courses and three upper-division non-language courses. The language requirement can be waived by demonstrating the equivalent proficiency through exam. The required number of courses must be fulfilled by taking other non-language, upper-division courses.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

All graduate-level courses require permission of the instructor for undergraduate students. Course titles may vary from year to year.

Courses with asterisk can be approved as Japanese Studies courses when more than 33 percent of the course content concerns Japan.

HISTORY

HIEA 111. Japan: Twelfth through Mid-Nineteenth Century
HIEA 112. Japan: from Mid-Nineteenth Century through U.S. Occupation
HIEA 113. The Fifteen-Year War in Asia and the Pacific
HIEA 114. Postwar Japan
HIEA 115. Social and Cultural History of Twentieth-Century Japan
HIEA 116. Japan-U.S. Relations
HIEA 117. Ghosts in Japan
HIEA 119 Religion and Pop Culture in East Asia (Same as SOC/B 162R)
HIEA 160. Colloquium on Modern Japanese History

JAPANESE STUDIES

JAPN 190. Selected Topics in Contemporary Japanese Studies
LANGUAGE

(Students who have prior preparation of Japanese language are placed in language courses based on the results of a placement exam or an oral interview with an instructor. Students who have lived in Japan, or use Japanese at home are required to take a placement exam administered prior to the beginning of the fall quarter. Contact the Japanese Studies office for more information.)

10A-B-C. First-Year Japanese
(No prior study of Japanese language is required for 10A.)
Prerequisite for B and C: previous course or consent of instructor.

20A-B-C. Second-Year Japanese
Prerequisite: previous course or consent of instructor.

100A-B-C. Japanese for Bilingual Speakers I
(These courses are for those students who have a high level of speaking proficiency in Japanese but no or little reading and writing abilities.) Prerequisite for A: consent of instructor. Prerequisite for B and C: previous course or consent of instructor.

130A-B-C. Third-Year Japanese
Prerequisite: previous course or consent of instructor.

140A-B-C. Fourth-Year Japanese
Prerequisite: previous course or consent of instructor.

150A-B-C. Advanced Japanese
Prerequisite: previous course or consent of instructor.

ECONOMICS

ECON 163. Japanese Economy

LITERATURE

LTEA 130. Earlier Japanese Literature in Translation
(Quarter offerings will vary among A. General Literature; B. Poetry; C. Prose Fiction; D. Drama; and E. Essays, travelogues, diaries, etc.)

LTEA 132. Later Japanese Literature in Translation
(Quarter offerings will vary among A. General Literature; B. Poetry; C. Prose Fiction; D. Drama and Film; and E. Essays, criticism, etc.)

Judaic Studies

PH.D. IN ANTHROPOLOGY

The Department of Anthropology offers graduate training in social, cultural, and psychological anthropology, as well as in anthropological archaeology and biological anthropology. In conjunction with the Judaic Studies Program, students may concentrate in Near Eastern archaeology with a focus on Israel and Jordan. Students pursuing anthropological archaeology are expected to take required courses in anthropology and engage in field research.

Archaeology

Since 1993, the Judaic Studies Program has sponsored major archaeological excavations in Israel's northern Negev desert. Shortly after the peace treaty was formalized between Israel and Jordan, the program began a long-term archaeological field program in the Jabal Hamrat Fidan Region (JHF) of southern Jordan. The project aims at studying the influence of early procurement and metallurgy on social change from the Neolithic period through the Iron Age. UC San Diego graduate students play an active role in the fieldwork and laboratory studies of material from these excavations. Qualified students are encouraged to use these data as part of their doctoral studies. In 2006, the UCSD Judaic Studies Program will join in several excavations along the Wadi al-Guwayb and Wadi al-Jariyeh in southern Jordan. This is part of the UCSD Fall Session Middle East Field School.

The Judaic Studies Program supports a state-of-the-art archaeological laboratory in the Social Sciences Building. A wide range of digital-based technologies is used for archaeological data and image processing that are linked through the Internet. Labs for processing pottery, stone tools, and other materials are available for student use.

THE M.A. IN JUDAIC STUDIES

The M.A. in Judaic studies, offered under the auspices of the Department of History, is an interdisciplinary program permitting the student to select courses primarily in history and literature, but also in anthropology, political science, sociology, and philosophy.

FELLOWSHIPS

Four fellowships are available for Ph.D. students. These include

The Dita and Erwin Gumpel Judaic Studies Endowed Fellowship
The University Fellowship
The Wexler Family Judaic Studies Fellowship Fund in honor of David Noel Freedman

Teaching assistantships are available in the Revelle College Humanities/Writing Program and in other writing programs and departments. Dissertation fellowships may be awarded to doctoral students at the dissertation stage of their studies. Funds are also available for support of travel to archaeological excavations. Students are also eligible for research-travel funds to other campus libraries of the University of California, as well as for grants that permit research in archives and libraries elsewhere. Students who deliver papers at scholarly conferences may also receive financial support for their participation.

Publications

The program produces a series of volumes: Biblical and Judaic Studies, from the University of California, San Diego (published by Eisenbrauns Winona Lake, USA). The Anchor Bible (Commentary, Reference Library, and Dictionary) is edited by David Noel Freedman at UCSD. The series Approaches to...
Application Procedures

The deadline for applications is January 9. For further information contact
University of California, San Diego

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010-11, please contact the department for more information.

Following are course offerings in this area.

For descriptions of the courses listed below, refer to the appropriate department's section of the catalog.

Judaic Studies 1. Beginning Hebrew (4)
Acquisition of basic vocabulary, fundamentals of Hebrew grammar, conversation, and reading.

Judaic Studies 2. Intermediate Hebrew (4)
Continued study of vocabulary and grammar, emphasis on fluency in conversation, and reading.

Judaic Studies 3. Intermediate Hebrew, Continued (4)
Vocabulary, grammar, conversation, introduction to literary and nonliterary texts.

Judaic Studies 100. Introduction to Hebrew Bible (4)
An introduction to the Hebrew Bible focusing on the first five books, the Torah.

Judaic Studies 101. Introduction to Hebrew Texts (4)
Reading and analysis of texts from Biblical through modern authors, study of advanced vocabulary and grammar. Course taught in Hebrew and in English.

Judaic Studies 102. Intermediate Hebrew Texts (4)
Further reading and analysis of Hebrew literature from a range of periods. Advanced grammar and vocabulary. Course taught in Hebrew and in English.

Judaic Studies 103. Advanced Hebrew Texts (4)
Synthesis of fluency, reading, and grammatical skills. Reading of texts from a range of periods.

Judaic Studies 110. Introduction to Judaism (4)
An introductory survey of Jewish history, literature, and culture from antiquity to contemporary times. Topics include sacred texts, the variety of groups and views of Judaism, the historical and geographical movements of the Jewish people, and the intersection of religion, ethnicity, and culture.

Judaic Studies 111. Topics in Judaic Studies (4)
Study of a particular period, theme, or literature in Jewish civilization.

Judaic Studies 120. Topics in Zionism: Israelis and Palestinians: Two Cultures in Conflict (4)
This course examines Israeli culture, Palestinian culture, and the conflict between them. We will discuss what is distinct about each culture, how they are different, how they are similar, their histories, and what influences the relationship/conflict between them. Prerequisite: upper-division standing or consent of instructor.

Judaic Studies 196A. Judaic Studies Honors Course (4)
First quarter of honors thesis research for students accepted into honors program. Research is conducted under the supervision of a faculty member selected with the approval of the director of the Judaic Studies Program. Prerequisites: admission to Judaic Studies Honors Program; previous enrollment in Judaic Studies 196A; JUDA 100, JUDA 103, HITO 104, HITO 105; upper-division electives in Judaic Studies; at least junior standing; overall 3.3 GPA; 3.5 in Judaic Studies.

Judaic Studies 196B. Judaic Studies Honors Course (4)
Second quarter of honors thesis research for students accepted into honors program. Research is conducted under the supervision of a faculty member selected with the approval of the director of the Judaic Studies Program. Prerequisites: admission to Judaic Studies Honors Program; previous enrollment in Judaic Studies 196A; JUDA 100, JUDA 103, HITO 104, HITO 105; upper-division electives in Judaic Studies; at least junior standing; overall 3.3 GPA; 3.5 in Judaic Studies.

Judaic Studies 198. Directed Group Study in Judaic Studies (1-4)
Directed group study on a topic not generally included in the regular curriculum. Student must make arrangements with individual faculty members. (P/NP only)

Judaic Studies 199. Independent Study in Judaic Studies (1-4)
Independent study on a topic not generally included in the regular curriculum. Student must make arrangements with individual faculty members. (P/NP only)

ANLD 3. World Prehistory (4)
ANGL 100. Special Topics in Socio-Cultural Anthropology: Law, Religion, and Politics in Israel (4)
ANGL 142. Pastoralism in Archaeological Ethnographic Perspective (4)
ANGN 181. Foundations of Archaeology (4)
ANGN 183. Chiefdoms, States, and the Emergence of Civilizations (4)
ANPR 194. Archaeological Field School (4)
ANRG 116. Archaeology of the Holy Land: Prehistory (4)
ANRG 150. The Rise and Fall of Ancient Israel (4)
ANRG 162. Peoples of the Middle East (4)
ANRG 286. Archaeology, Anthropology and the Bible—Foundations, Data, and Debate
HIGR 260A-B-C. Seminar in the Judaic Studies (4-4-4)
HIGR 264. Topics in Pre-Islamic Jewish History (4)
HIGR 295. Thesis Seminar (4)
HIGR 298. Directed Reading (1-12)
HIGR 299. Ph.D. Thesis Direction (1-12)
HIGR 500. Apprentice Teaching (1-40)
HIGR 298. Directed Reading (1-12)
HIGR 295. Thesis Seminar (4)
HIGR 299. Ph.D. Thesis Direction (1-12)
HIGR 500. Apprentice Teaching (1-40)

HINE 100. The Ancient Near East and Israel (4)
HINE 101. Seminar in the Hebrew Bible (4)
HINE 102. The Jews in Their Homeland in Antiquity (4)
HINE 103. The Jewish Diaspora in Antiquity (4)
HINE 104. The Bible and the Ancient Near East: The Primary History (4)
HINE 105. The Bible and the Near East: The Prophets (4)
HINE 106. The Bible and the Near East: The Writings (4)
HINE 108. The Middle East before Islam (4)
HINE 109. Learning to Read Biblical Hebrew (4)
HINE 110. History of the Islamic Middle East (4)
HINE 116. The Middle East in the Age of European Empires (1798 to 1914) (4)
HINE 118. The Middle East in the Twentieth Century (4)
HINE 151A/251A. Introduction to Aramaic Language (4)
HINE 151B/251B. Introduction to Aramaic Dialects (4)
Prerequisite: previous course.
HINE 151C/251C. Introduction to Aramaic Dialects (4)
Prerequisite: previous course.
HINE 152A/252A. The Evolution of the Northwest Semitic Dialects (4)
Prerequisite: knowledge of at least one Semitic language; a course in general linguistics also desirable.
HINE 152B/252B. Introduction to Ugaritic (4)
Prerequisite: previous course.
HINE 152C/252C. Advanced Ugaritic (4)
Prerequisite: previous course.
HINE 153A/253A. Introduction to Akkadian Language and Mesopotamian Culture (4)
HINE 153B/253B. Continued Akkadian Language (4)
Prerequisite: previous course.
HINE 153C/253C. Advanced Akkadian Language (4)
Prerequisite: previous course.
HINE 161/261. Seminar in the Hebrew Bible (4)
HINE 166/266. Nationalism in the Middle East (4)
HINE 170/270. Special Topics in Jewish History (4)
HINE 181/281. Problems in Hebrew Manuscripts (4)
HINE 186/286. Topics in Middle Eastern History (4)
HINE 199. Independent Study in Near Eastern History (4)
HITO 104. The Jews and Judaism in the Ancient and Medieval Worlds (4)
HITO 105. The Jews and Judaism in the Modern World (4)
HITO 106. How Jewish Women Lived in Modern Times (4)

Humanities 1. The Foundations of Western Civilization: Israel and Greece (6)
LTCO 212. Studies in the Hebrew Bible (4)
LTEU 105. Medieval Studies: Crusade, Conquest, Conversion in Medieval Literature (4)
LTNE 101. Bible: The Narrative Books (4)
LTNE 102. Bible: The Prophetic Books (4)
LTNE 103. Bible: The Poetic Books (4)
LTLW 115. Contemporary Literature/Italy and Holocaust: Jewish Experience in Literature (4)
LTLW 134. A Cultural History of American Jewry (4)
LTLW 138. Critical Religion Studies (4)
LTLW 148. Yiddish Literature in Translation (4)
LTLW 198. Directed Group Study (4)
LTLW 199. Special Studies (4)

Courses cross-listed as LTNE and LTLW may be taken as Hebrew literature by students proficient in the language or as general literature by students without knowledge of Hebrew.

Music II. Folk Music Klezmer Music (4)
Philosophy 185. Philosophy of Religion (4-4)
Political Science 121. Government and Politics of the Middle East (4)
Political Science 121B. Politics in Israel (4)
Political Science 138D. The Arab-Israeli Conflict (4)
Sociology/C 156. Sociology of Religion (4)
Sociology/C 157. Religion in Contemporary Society (4)
Sociology/D 178. The Holocaust (4)
Sociology/D 188F. Modern Jewish Societies and Israeli Society (4)
Language and Communicative Disorders

PROFESSORS
Farrell Ackerman, Ph.D., Linguistics
Ursula Bellugi, Ed.D., Adjunct/Psychology
Jeff Elman, Ph.D., Cognitive Science
Eric Halgren, Ph.D., Radiology
Mark Krichesky, M.D., Clinical Neurosciences
Marta Kutas, Ph.D., Cognitive Science
Rachel Mayberry, Ph.D., Linguistics
John Moore, Ph.D., Linguistics
Farrell Ackerman, Ph.D., Communicative Language and
Gedeon Deak, Ph.D., Cognitive Science
Keith Rayner, Ph.D., Psychology
Victor Ferreira, Ph.D., Psychology
ASSOCIATE PROFESSORS
Leslie Carver, Ph.D., Psychology
Seana Coulson, Ph.D., Cognitive Science
Gedeon Deak, Ph.D., Cognitive Science
John Moore, Ph.D., Linguistics
Doris Trauner, M.D., Neurosciences/Pediatrics
ASSOCIATE RESEARCH SCIENTIST
Jeanne Townsend, Ph.D., Neurosciences
OFFICE: Cognitive Science Building, Room 266
Mail Code: 0526
(619) 594-6775, or http://slhs.sdsu.edu/phdmain.php

THE JOINT DOCTORAL PROGRAM
San Diego State University (SDSU) and the
University of California, San Diego (UCSD),
offer jointly a doctoral program in Language and
Communicative Disorders. The program's focus is the
interdisciplinary study of language and communica-
tive disorders. A major emphasis of the program is to
apply techniques developed in cognitive science and
neuroscience to the study of language and language
disorders. The program involves study and research
in normal language (including sign languages of
the deaf and language impairments), and in the
neural bases of language use and language loss.
Participating faculty have research interests in a
wide range of issues in processes of language
development, language and aging, multilingualism,
language disorders, assessment, and intervention.
Graduates of the program will be qualified to serve
as faculty in university programs in a variety of
disciplines, and to provide leadership in research
and health services. The doctoral program faculty
at UCSD are an interdisciplinary group from the
Departments of Cognitive Science, Communication,
Linguistics, Neurosciences, and Psychology. The
doctoral program faculty at SDSU are members of the
School of Speech, Language and Hearing Sciences
and the Departments of Linguistics and Psychology.
The program is coordinated by the doctoral program
coordinators at each campus, in conjunction with an
Executive Committee comprising three faculty from
each campus appointed by the Graduate Deans from
each campus.

The program is innovative in that many of the
requirements are designed to function as a model
of professional preparation specifically incorporating
activities in which a successful teacher and
researcher must engage after obtaining the Ph.D.:
students will be required to participate in interdisci-
niplinary research throughout the program, learn
about the nature and ethics of research, prepare
grant proposals, write manuscripts, and will gain
experience in oral presentations and teaching.
Graduates from the program will be well prepared
for the rigors of an academic/research career. The
doctoral program in Language and Communicative
Disorders, being interdisciplinary, draws from a
variety of undergraduate disciplines including com-
municative disorders, psychology, cognitive science,
linguistics, engineering, and other related sciences.
Students should have preparation in mathematics,
statistics, and biological sciences. Background in neuroscience and/or language
sciences, or language disorders is helpful, but not
required for admission.

By the end of the first year, all students will select
a major field of emphasis by choosing one of three
concentrations. The Adult Language concentra-
tion is intended to provide intensive education
in communicative disorders in adults. Students in
this concentration will also develop expertise in
the study of language processing in normal adults.
The Child Language concentration is intended to
provide specialized education in childhood (birth to
adolescence) communicative disorders. Students in
this concentration will also achieve competence in
developmental psycholinguistics emphasizing lan-
guage acquisition in normally developing children.
The Multilingualism concentration is intended to
provide education in cross-linguistic, ethnographic,
and other comparative studies of communicative
disorders in children and/or adults, including those
associated with bilingualism and second-language
acquisition (including acquisition of sign language
in deaf individuals). All students will be required to
take some courses in each of the three concentra-
tions. In addition, each student will elect a methods
minor, applying one of the new technologies of
cognitive neuroscience to research on language
and communicative disorders. These may include
computer-controlled studies of language processing
in real-time functional brain imaging (including
event-related brain potentials and/or functional
magnetic resonance imaging), or neural-network
simulations of communicative disorders.

The program is designed as a five-year cur-
riculum, based on a twelve-month academic year.
Students will be admitted to the doctoral program
only in the fall semester/quarter. Information regard-
ing admission is found in the current edition of the
Bulletin of the Graduate Division of San Diego State
University. To receive an application for admission,
contact: SDSU/UCSD Joint Doctoral Program in
Language and Communicative Disorders, San Diego
State University, 5500 Campanile Drive, San Diego,
CA 92182-1518, (619) 594-6775, or http://slhs.sdsu,
edu/phdmain.php.

Required courses include the Tools requirement
two courses in statistics/research design, a course
in neuroanatomy and physiology, a course in
language structure and theory and a professional
survival skills course), the Foundations require-
ment (three courses on normal language and
three courses on disorders of language) and the
Electives requirement (at least five courses, with a
minimum of three courses related to the chosen
concentration, chosen from a broad list of approved
options from Cognitive Science, Communication,
Computer Science, Linguistics, Neurosciences, and
Psychology). Consult with advisor for approved list
of elective courses. The five required electives must be
approved by the student's advisor and the Doctoral
Program Coordinators. In addition to their course
requirements, students are required to complete
three laboratory rotations in different research
methodologies (each lasting a minimum of one
quarter), two research projects (first year and second
year), a qualifying examination for advancement to
candidacy, and a dissertation proposal in the form
of grant proposal to one of the public agencies that
funds research in communicative disorders.

PH.D. TIME LIMIT POLICIES
Students must be advanced to candidacy by
the end of four years. Total university support cannot
exceed seven years. Total registered time at UCSD
cannot exceed eight years.

COURSES
For course descriptions not found in the UC San
Diego General Catalog, 2010–11, please contact the
department for more information.

(See individual departments for details; for
courses available at SDSU, see SDSU Graduate
Catalogue.)

TOOLS REQUIREMENT
Quantitative Methods in Psychology 201A-B-C
Ethics and Survival Skills in Academia
Cognitive Science 241
Systems Neuroscience
Cognitive Science 201 or
Basic Neurology SOMC 205
Foundations: Theories and Methods in the Study of
Cognitive Phenomena
Cognitive Science 203 or
Introduction to Grammatical Theory (Linguistics
221A) and
Introductory Phonology (Linguistics 211A)

FOUNDATIONS REQUIREMENT
Special Topics in Psycholinguistics
Psychology 244

ELECTIVES
COGNITIVE SCIENCE
200: Cognitive Science Seminar
202: Foundations: Computational Modeling of
Cognition
211A-B-C: Research Methods in Cognitive Science
213: Issues in Cognitive Development

2010-2011 UC SAN DIEGO GENERAL CATALOG • LANGUAGE AND COMMUNICATIVE DISORDERS 1
260: Seminar on Special Topics
272: Topics in Theoretical Neurobiology
273: Biological Basis of Attention

COMMUNICATION
200A: Communication as Social Force
200B: Communication and Culture
200C: Communication and the Individual
201B: Ethnographic Methods for Communication Research
201C: Discourse Analysis

LINGUISTICS
211A: Introductory Phonology
221A: Introduction to Grammatical Theory
225: Topics in Syntax
270: Psycholinguistics
272: Topics in Neurolinguistics
278: Research in Second Language Acquisition

PSYCHOLOGY
218A-B: Cognitive Psychology
222: Biological Psychology
236: Substance Abuse
244: Special Topics in Psycholinguistics
252: Seminar on Cognitive Neuroscience

COMPUTER SCIENCE AND ENGINEERING
250A-B: Artificial Intelligence
253: Neural Networks
256: Statistical Natural Language Processing
258A: Cognitive Modeling

NEUROSCIENCES
243: Physiological Basis of Human Information
263: Developmental Neuroscience

PHILOSOPHY
234: Philosophy of Language

1 Students who use this course to fulfill the Tools requirement may not use this as an elective.
Languages

Students wishing to major or minor in a foreign language or enroll in language courses should go to the following sections of this catalog:

- Departments of History, Linguistics, and Literature
- Programs in Chinese Studies, Japanese Studies, Judaic Studies, and Latin American Studies
- School of International Relations and Pacific Studies (IR/PS)

For additional information and a chart listing languages offered at UC San Diego, go to the Language Web site at http://www.ucsd.edu/current-students/academics/languages/index.html on TritonLink.

Lisa Sánchez, Ph.D., Assistant Professor, Ethnic Studies
Marta Sánchez, Ph.D., Professor Emeritus, Literature
Rosaura Sánchez, Ph.D., Professor, Literature
Matthew Shugart, Ph.D., Professor, International Relations and Pacific Studies
Dean Sidelinger, M.D., Assistant Adjunct Professor, Pediatrics
Denise Ferreira da Silva, Ph.D., Associate Professor, Ethnic Studies, Program Director
Harold Simon, M.D., Professor Emeritus, Family and Preventive Medicine
Peter H. Smith, Ph.D., Professor, Political Science
SteFFanie Straitheen, Ph.D., Professor, Family and Preventive Medicine
Roberto Tejada, Ph.D., Associate Professor, Visual Arts
Eric Van Young, Ph.D., Professor, History
Olga A. Vásquez, Ph.D., Associate Professor, Communication
Carlos Waisman, Ph.D., Professor, Sociology
Daniel Widener, Ph.D., Assistant Professor, History
Winifred Woodhull, Ph.D., Associate Professor, Literature
Christopher Woodruff, Ph.D., Associate Professor, International Relations and Pacific Studies
Kathryn Woolard, Ph.D., Professor, Anthropology
León Zamosc, Ph.D., Associate Professor, Sociology
Ana Celía Zentella, Ph.D., Professor Emerita, Ethnic Studies
Elana Zilberg, Ph.D., Assistant Professor, Communication
Maria Zuniga, Ph.D., Assistant Adjunct Professor, Pediatrics

AFFILIATED ACADEMIC STAFF
Harold Colson, M.L.S., Librarian, International Relations and Pacific Studies
Karen Lindvall-Larson, M.L.S., Librarian, Geisel Library

THE LATIN AMERICAN STUDIES PROGRAM
UC San Diego’s program in Latin American studies has attained national and international distinction for its excellence in teaching, research, and public service. Each year its faculty offers approximately 100 Latin America-related courses in fourteen academic departments, and the Latin American Studies Program offers three interdisciplinary degrees:

- Bachelor of arts in Latin American Studies
- Minor in Latin American Studies
- Master of arts in Latin American Studies

Latin American studies at UCSD offers distinct advantages:

- At the undergraduate level, students may take elective courses on Latin American topics or pursue a minor or a B.A. degree in Latin American Studies. At the graduate level, students can obtain a M.A. degree in Latin American studies. In addition, various doctoral programs in academic departments across the social sciences and humanities offer a regional focus on Latin America.

- Latin American studies integrates teaching, research, and policy analysis, encouraging students to develop interdisciplinary perspectives and to work actively with faculty on research projects and conferences.

- Students participate in the activities of an outstanding array of research and teaching organizations, including the Center for Iberian and Latin American Studies, the Center for U.S.-Mexican Studies, the Graduate School of International Relations and Pacific Studies, the Center for Comparative Immigration Studies, and the Institute of the Americas. The Center for Iberian and Latin American Studies (CILAS) sponsors multidisciplinary colloquia, conferences, projects, and publications. CILAS also awards fellowships and grants each year to promising graduate students.

- Students are encouraged to interact with visiting Latin American scholars and to participate in Latin America-related internships, seminars, clubs, foreign exchange programs, and other extracurricular activities.

- Students at UCSD have access to one of the largest and fastest-growing library collections on Latin America in the United States.

Degree programs in Latin American studies are supervised by an interdisciplinary faculty group under the direction of the director and program director of the Center for Iberian and Latin American Studies.
THE CURRICULAR PROGRAM

UNDERGRADUATE MAJOR IN LATIN AMERICAN STUDIES

The bachelor of arts in Latin American studies blends coverage of methodological and theoretical approaches to the study of Latin America with a broad foundation in the humanities and social sciences. Students receiving this degree will be prepared for private and government employment or for graduate training; the major also provides a valuable supplement for those who subsequently pursue professional degrees in business, law, engineering, medicine, or other fields.

To satisfactorily complete the B.A. degree, students must take a broad range of courses from at least three of UCSD’s humanities and social science departments. The collection of courses should be structured so as to provide both depth in a special area of study and breadth across the broader field. Students must also demonstrate proficiency in Spanish.

All students entering the major must enroll in LATI 50 “Introduction to Latin America,” an interdisciplinary course that prepares majors to build a coherent curriculum on Latin America. During the senior year, all B.A. candidates are required to successfully complete LATI 190, a writing seminar. This course will culminate in the preparation of an interpretive paper based on the secondary analysis of existing scholarly research (approximately twenty to forty pages in length). As part of the overall requirements, students are strongly encouraged to enroll in four credits of Individual Study (LATI 199) with a member of the Latin Americanist faculty, who will serve as the student’s principal advisor.

All upper-division courses applied to the requirements of the major must be taken for a letter grade. No more than five courses from one department will count for credit. At least three courses must be from one department.

Students majoring in Latin American studies are also urged to minor in a core discipline such as anthropology, economics, history, literature, political science, or sociology. In summary, the requirements for the bachelor of arts in Latin American studies are:

Lower-Division Requirements

1. The equivalent of at least two years of college-level language instruction in Spanish, comparable to satisfactory completion of Literature/Spanish 2C; students who satisfy this requirement are strongly encouraged to study Portuguese.
2. LATI 50: Introduction to Latin America

Upper-Division Requirements

1. Eleven upper-division courses selected from the approved interdisciplinary course list for Latin American studies as follows:
   a. Course work must be in at least three departments.
   b. At least three courses must be from one department.
   c. No more than five courses from one department will count for credit.
   d. At least two courses must concentrate exclusively on periods earlier than the twentieth century.
2. Enrollment in the four-credit Senior Seminar (LATI 190), usually to be taken in the winter quarter of the senior year; satisfactory completion of a substantial paper is required of all graduating majors.
3. Maintain a 2.0 grade-point average, earning at least a C– in each course counting for the major. With the sole exception of LATI 199, all courses must be taken for a letter grade.

HONORS IN LATIN AMERICAN STUDIES

The Latin American Studies Program offers an Honors Program for students who demonstrate excellence in the major. In order to receive Honors in Latin American Studies a student must:
1. Satisfy all lower-division requirements of the major program;
2. Complete nine upper-division courses selected from the Approved Interdisciplinary Course List for Latin American Studies as follows:
   a. Course work must be in at least three departments.
   b. At least three courses must be from one department.
   c. No more than five courses from one department will count for credit.
   d. At least two courses must concentrate exclusively on periods earlier than the twentieth century.
3. Complete a three-course sequence in the senior year consisting of Individual Study, the Senior Seminar, and the Honors Seminar (LATI 199, 190, and 191, respectively);
4. Produce an original thesis based on primary research under the direction of a mentor selected from the Latin Americanist faculty, and defend this thesis during the spring quarter before an interdisciplinary faculty committee; and
5. Maintain a minimum GPA of 3.5 in the major.

UNDERGRADUATE MINOR IN LATIN AMERICAN STUDIES

The Latin American studies minor allows students to explore interdisciplinary approaches to a significant world region while pursuing a major in an academic discipline. To complete the program, students take at least seven classes (twenty-eight units) in Latin American studies, five (twenty units) of which must be upper-division. These courses need to be approved Latin American studies classes from the humanities and social sciences. All classes need to be taken for a letter grade and satisfactorily completed.

1. Course work must be in at least three departments.
2. A student needs to be LATI 50, which is offered once per year.
3. One course needs to fulfill the language requirement, which should be the culmination of at least two years of college-level language instruction in Spanish or Portuguese. This course can be fulfilled in the following ways:
   • LTSP 2C for non-native speakers
   • LTSP 2D for native speakers
   • LTSP 50 or above
   • A UCSD-approved Spanish/Portuguese education-abroad course

EDUCATION ABROAD

Students in Latin American studies are encouraged to participate in the Education Abroad Program (EAP) in Brazil, Chile, Costa Rica, or Mexico, or in other study abroad programs offered by the Opportunities Abroad Program (OAP). Subject to approval by petition after courses have been completed (based on syllabi and course work), courses taken through EAP/OAP will be accepted for credit toward the major or minor. The equivalent of six UCSD upper-division courses can be petitioned for credit toward the major, and a maximum of two UCSD upper-division courses can be petitioned for credit toward the minor.

Students interested in studying abroad should see the Latin American studies student affairs coordinator to discuss appropriate courses and programs for their plan of study before they leave. They should also visit the following Web site: http://pao.ucsd.edu/academic/CILASabroad.htm. Information on EAP/OAP is given in the “Education Abroad Program” section of the UC San Diego General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at http://pao.ucsd.edu. Financial aid can be used for EAP/OAP study, and special study-abroad scholarships are also available.

MASTER OF ARTS IN LATIN AMERICAN STUDIES

The master of arts in Latin American studies is designed for students who seek to integrate a broad range of disciplinary approaches to a world region of growing international significance. Upon graduation, most students pursue additional advanced degrees in academic or professional fields; others proceed to careers in the private sector, in international organizations, or in government.

To qualify for admission, students must have a B.A. with a grade-point average of at least 3.5 on a 4.0 scale for the final two years of undergraduate study plus satisfactory scores on the Graduate Record Examination.

To receive the master of arts in Latin American studies, a student must:
1. Demonstrate foreign language competence in Spanish or Portuguese.
2. Maintain a 3.0 GPA in forty units of course work (about ten courses) to be completed as follows:
   a. Complete the Latin American Studies Basic Seminar Sequence: twelve units must be taken in the required Core Seminar in Latin American Studies (LATI 200, four units), four units in approved theory seminar, and four units in approved methodology seminar.
   b. Courses must be completed in at least three fields, with no more than sixteen units in any
one department. Students are encouraged to include four units of independent research (LATI 299) for work on the master’s thesis.

c. At least sixteen units must be taken in upper-division, graduate-level courses and up to sixteen units may be taken in upper-division, graduate-level courses.

3. Successfully complete either a comprehensive exam or master’s thesis.

M.A. students have the option to upgrade upper-division, undergraduate-level courses to graduate-level courses (contact the Latin American studies student affairs coordinator for information on requirements and procedures). To convert an undergraduate-level course (100 level) into a 298 graduate-level course, a student must attend all of the course meetings and incorporate a component of additional, graduate-level research work, upon arrangement with the faculty member teaching the course (a special form describing the supplementary work must be filled by the student and approved by the instructor and CLAS’ academic coordinator). In all such cases, the supplementary work should (a) increase the amount of reading to match the regular reading expectations of a graduate seminar, (b) include additional meeting time with the professor for a graduate-level discussion of the material, and (c) require the student to write a research paper (which would generally be on the order of fifteen to twenty pages).

**DISCIPLINARY AND THEMATIC CONCENTRATIONS**

M.A. students in Latin American studies who are interested in specific disciplines or research topics may apply for a disciplinary or thematic concentration. Currently students may choose from concentrations in cultural studies, gender studies, international migration, history, and sociology. In addition to the general requirements for all candidates applying for admission to the Master of Arts in Latin American studies, applicants to a concentration must submit a statement explaining their intellectual and career interests in that specific area of study. Applications from new students will be considered for the fall quarter. Current students in the Latin American studies master’s program may apply in the spring quarter of their first year. M.A. students who were previously enrolled as undergraduates at UCSD will not be allowed to repeat courses for credit toward the concentration. In all cases there are alternatives, and those students will be expected to take other classes to fulfill the requirements.

**GENERAL CONCENTRATION REQUIREMENTS**

To receive the master of arts in Latin American studies with a concentration, a student must

1. Demonstrate foreign language competence in Spanish or Portuguese.

2. Maintain a 3.0 GPA in forty units of course work (about ten courses) to be completed as follows:

   a. Complete the Latin American Studies Basic Seminar Sequence: twelve units must be taken in the required Core Seminar in Latin American Studies (LATI 200, four units), four units in approved theory seminar, and four units in approved methodology seminar.
   
   b. Complete sixteen units within the specifications of the concentration (as specified below). All of the concentration units must be taken at the graduate level (200 level), and a maximum of two undergraduate-level courses (100 level) may be upgraded to graduate-level 298 courses.
   
   c. Complete twelve units of general electives within the specification of the concentration (as specified below). At least 50 percent of the general elective units must be taken at the graduate level (200 level).

3. Successfully complete a master’s thesis on a topic relevant to the area of concentration.

**CONCENTRATION IN CULTURAL STUDIES**

To receive the master of arts degree in Latin American studies (cultural studies), a student must complete the following units as concentration course work and general electives:

1. Two seminars (eight units) from the approved list of core seminars. These may be used to satisfy the theory and methodology requirements of the LAS M.A. program (ETHN 259, ETHN 260, HIGR 200, HIGR 205, HIGR 207, HIGR 247A-B, HIGR 248A-B, HIGR 252, LTCS 201, LTCS 210, LTCS 225, LTCS 250, LTCS 255, LTSP 272, LTSP 275, VIS 259).

3. The selection of these seminars and courses must be formally approved by the student’s personal advisor (by signing the student’s graduate student general petition form). With approval from his/her advisor, however, students in the cultural studies concentration may take other seminars and courses that do not appear in the approved list, provided that the content of the work that they do is directly related to Latin American issues, topics, or themes.

4. General Electives: The remaining twelve units must be taken as follows: two courses from the Approved List of Courses on Latin America (eight units), and one course of Directed Reading or Independent Research (298 or 299, four units).

**CONCENTRATION IN GENDER STUDIES**

To receive the master of arts degree in Latin American studies (gender studies), a student must complete the following units as concentration course work and general electives:

1. One general theoretical course in gender studies (four units in any of the following: ANGR 244, CGS 100, CGS 101, CGS 104, CGS 112, COCU 132, COCU 139, ETHN 256, LTCS 250, SOCB 118, SOCC 132, SOCC 267).

2. One course in feminist theory (four units in any of the following: CGS 103, COCU 138, HIGR 205, POLI 116A, POLI 217).

3. One course focused on gender studies in Latin America (four units in any of the following: ETHN 129, ETHN 148, HILA 261, LTAM 105, LTAM 106, LTSP 175, POLI 134P, USP 135).

4. One course of directed reading (298, four units), taken with a faculty member affiliated with the CGS Program, focused on a topic relevant to Latin American gender studies.

5. General Electives: The remaining twelve units must be taken as follows: one course from the approved list of courses on Latin America (four units), four units of directed reading (298), and four units of independent research (299).

**CONCENTRATION IN HISTORY**

To receive the master of arts degree in Latin American studies (history), a student must complete the following units as concentration course work and general electives:

1. A required research seminar sequence in Latin American history (eight units in any of the following: HIGR 245A-B-C, HIGR 247A-B, or HIGR 248A-B).

3. General Electives: The remaining twelve units must be taken in departments other than the Department of History as follows: one course from the approved list of courses on Latin America (four units), four units of directed reading (298), and four units of independent research (299).

**CONCENTRATION IN INTERNATIONAL MIGRATION**

To receive the master of arts degree in Latin American studies (international migration), a student must complete the following units as concentration course work and general electives:

1. One course focused on economic and social factors in international migration (four units in any of the following: ECON 114, ETHN 118, ETHN 131,
ETHN 134, HIUS 159, IRGN 490, POLI 248, SOCG 282).

2. One course focused on Immigration Policy (4 units in any of the following: POLI 150, POLI 236, IRGN 490).

3. One course focused on Latin American international migration (four units in any of the following: COHI 175, ETHN 189, HIUS 180, HIUS 186, IRGN 490, LTAM 109, JTS 177).

4. One course of directed reading (four units in a 298 course, focused on a topic relevant to Latin American migratory movements).

5. General Electives: The remaining twelve units must be taken as follows: one course from the approved list of courses on Latin America (four units), four units of directed reading (298), and four units of Independent Research (299).

**CONCENTRATION IN SOCIOLOGY**

To receive the master of arts degree in Latin American studies (sociology), a student must complete the following units as concentration course work and general electives:

1. One seminar in classical sociological theory (four units in SOC 201A or SOC 201B).

2. One seminar in sociological research methods (four units in any of the following: SOC 203, SOC 250, SOC 205, SOC 206, SOC 207, SOC 227).

3. One core sociological field seminar (four units in any of the following: SOC 212, SOC 216, SOC 222, SOC 226, SOC 234, SOC 244, SOC 264, SOC 267).

4. One sociology course or seminar focused on Latin America (four units in any of the following: SOCD 182, SOCD 188D, SOCG 258).

5. General Electives: The remaining twelve units must be taken in departments other than the Department of Sociology as follows: one course from the approved list of courses on Latin America (four units), four units of directed reading (298), and four units of independent research (299).

**COURSES**

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

LATI 1A. Zapotec Conversation and Analysis I (4)
Presentation and practice of the grammatical structures of Valley Zapotec, an indigenous language from Mexico. Course focuses on listening, speaking, and writing. Students gain basic knowledge of grammatical principles in order to understand the structure and rules of the language.

LATI 1B. Zapotec Conversation and Analysis II (4)
Presentation and practice of the grammatical structures of Valley Zapotec, an indigenous language from Mexico. Course teaches comprehensive vocabulary through listening, speaking, reading, and writing activities. Course also focuses on oral proficiency/grammar, including verb conjugation and other grammatical structures. Prerequisite: LATI 1A.

LATI 1C. Zapotec Conversation and Analysis III (4)
Presentation and practice of the grammatical structures of Valley Zapotec, an indigenous language from Mexico. Course gives students an advanced understanding of written and spoken Valley Zapotec through reading, conversation, group presentations, and composition. Prerequisite: LATI 1B.

LATI 50. Introduction to Latin America (4)
Interdisciplinary overview of society and culture in Latin America—including Mexico, the Caribbean, and South America: legacies of conquest, patterns of economic development, changing roles of women, expressions of popular culture, cycles of political change, and U.S.-Latin American relations.

LATI 50XL. Foreign Language Discussion—Introduction to Latin America (1)
Students will exercise advanced foreign language skills to discuss materials and the correspondingly numbered Latin American Studies courses in English. Course is taught by the course instructor, has no final exam, and does not affect the grade in the core course, LATI 50.

LATI 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen.

LATI 120/220. Special Topics in Latin American Studies (1-4)
A course designed to cover various aspects and various disciplines of Latin American Studies.

LATI 190. Senior Seminar (4)
Research seminar on selected topics in the study of Latin America; all students will be required to prepare and present independent research papers. (Honors students will present drafts of senior research theses, of no less than fifty pages in length; non-honors students will present final versions of analytical papers of approximately twenty-five to forty pages in length.) Prerequisites: satisfactory completion of LATI 50 and a working knowledge of Spanish.

LATI 191. Honors Seminar (4)
Independent reading and research under direction of a member of the faculty group in Latin American Studies; goal is to provide honors students with an opportunity to complete senior research thesis (to be defended before three-person interdisciplinary faculty committee). Prerequisites: successful completion of LATI 50, working knowledge of Spanish; minimum GPA of 3.5 in the major.

LATI 199. Individual Study (4)
Guided and supervised reading of the literature on Latin America in the interdisciplinary areas of anthropology, communications, economics, history, literature, political science, and sociology. For students majoring in Latin American Studies, reading will focus around potential topics for senior papers; for honors students in Latin American Studies, reading will culminate in formulation of a prospectus for the research thesis. Prerequisites: LATI 50 and working knowledge of Spanish.

LATI 200. Core Seminar on Interdisciplinary Research and Methodology in Latin American Studies (4)
A team-taught course wherein members of the faculty group in Latin American Studies present diverse disciplinary and thematic approaches to the region. Topics vary from year to year. Grades are based on discussions and on a series of analytical papers. Prerequisite: enrollment in the master's degree program in Latin American Studies or permission of instructor.

LATI 210A-B. Latin American Library Resources and Research Methodology (2-2)
A detailed survey of major research methods and resources for the study of Latin America. Both conventional library materials and those available electronically will be explored. Skills will transfer to any major research library. Various methodologies will also be explored in relation to the students' individual projects. A critical review, annotated bibliography, and a statement of research methodology, related to any proposed topics, will be required. Not offered in 2009–10.

LATI 298. Directed Reading (1-12)
Guided and supervised reading of the literature of the several areas included in the interdisciplinary fields of anthropology, communications, economics, history, literature, political science, and sociology. Prerequisite: graduate standing in Latin American Studies.

LATI 299. Independent Research (1-12)
Independent work by graduate students engaged in thesis research and writing under the direct supervision of a faculty advisor.

LATI 500. Teaching Apprenticeship (1-4)
The course is designed for teaching assistants to learn effective teaching methods through supervision and mentorship by the faculty. Students will learn handling of discussions; preparation and grading of examinations and other written exercises; and student relations.

**COURSES THAT SATISFY UNDERGRADUATE/GRADUATE DEGREE REQUIREMENTS IN LATIN AMERICAN STUDIES**

Approved Interdisciplinary Courses: The following is a list of courses available in UCSD departments that are approved to satisfy the requirements of the major, minor, and master's in Latin American studies. Please note that these courses may not be offered every quarter or year and new courses may be added. Check the current Schedule of Classes or the Latin American studies Web site (http://orpheus.ucsd.edu/las) for updated information.

The Departments of Linguistics and Literature and the Graduate School of International Relations and Pacific Studies offer language courses in Spanish and Portuguese. Language courses do not count toward the course requirements for Latin American studies degrees.

**ANTHROPOLOGY**

ANAR 100. Special Topics in Anthropological Archaeology (when Latin American content)

ANAR 153. The Mysterious Maya

ANAR 154. Aztecs and Their Ancestors

ANAR 155. Study Abroad: Ancient Mesoamerica

ANAR 156. The Archaeology of South America

ANAR 156-XL. The Archaeology of South America (FLD)

ANAR 157. Early Empires of the Andes: The Middle Horizon

ANAR 157-XL. The Andean Middle Horizon (FLD)

ANAR 158. The Inca: Empire of the Andes

ANSC 100. Special Topics in Socio-Cultural Anthropology

ANSC 125. Gender, Sexuality, and Society

ANSC 131. Urban Cultures in Latin America

ANSC 131-XL. Foreign Language Discussion—Urban Cultures in Latin America

ANSC 132. Modernity in Brazil

ANSC 133. Indigenous Peoples of Latin America

ANTH 269. Current Readings in Latin America

**COMMUNICATION**

COCU 110. Cinema in Latin America: Visions of a Continent in Transition

COCU 131. Cinema of the Cuban Revolution
COHI 114. Bilingual Communication
COHI 114. Bilingual Communication
COSF 140C. Comparative Media Systems: Latin America and the Caribbean

ECON 114. Economics of Immigration
ECON 161. Latin American Economic Development
ECON 162. Economics of Mexico

ETHNIC STUDIES
ETHN 116. The United States-Mexico Border in Comparative Perspective
ETHN 117. Organic Social Movements
ETHN 118. Contemporary Immigration Issues
ETHN 119. Race in the Americas
ETHN 129. Asian and Latina Immigrant Workers in the Global Economy
ETHN 130. Social and Economic History of the Southwest I
ETHN 131. Social and Economic History of the Southwest II
ETHN 132. Chicano Dramatic Literature
ETHN 133. Hispanic American Dramatic Literature
ETHN 133A. Early Latino/a-Chicano/a Cultural Production, 1848–1960
ETHN 135B. Early Latino/a-Chicano/a Cultural Production, 1960–Present
ETHN 136. Topics in Chicano/a-Latino/a Cultures
ETHN 136B. Early Latino/a-Chicano/a Cultural Production: 1960 to Present

HILA 100. Latin American Colonial Transformation
HILA 101. Latin American Independence 1810–1898
HILA 102. Latin America in the Twentieth Century
HILA 103. Revolution in Modern Latin America
HILA 104. Modern U.S.-Latin America Relations
HILA 112. Economic and Social History of the Andean Region
HILA 113. Lord and Peasant in Latin America
HILA 114. Dictatorship in Latin America
HILA 115. Latin American City, A History
HILA 120. History of Argentina
HILA 121. History of Brazil
HILA 122. Cuba: From Colony to Socialist Republic
HILA 126. From Columbus to Castro: Caribbean Culture and Society
HILA 127. History, Culture, and Power

HILA 131. History of Mexico
HILA 132. History of Contemporary Mexico
HILA 161/261. History of Women in Latin America
HILA 162/262. Special Topics in Latin American History
HILA 163/263. History of Chile 1880–Present
HILA 164/264. Women's Work and Family Life in Latin America
HILA 167/267. Historical Scholarship on Latin American History
HILA 168/268. Historical Scholarship on Latin American History
HILA 169/269. Historical Scholarship on Latin American History
HILA 170/270. Topics in Latin American History, 1820–1910
HILA 171/271. Special Topics in Latin American History since 1910
HILA 172/272. History of Mexico
HILA 173/273. History of Mexico
HILA 174/274. History of Mexico
HILA 175/275. History of Mexico
HILA 176/276. History of Mexico
HILA 177/277. History of Mexico
HILA 178/278. History of Mexico
HILA 179/279. History of Mexico
HILA 180/280. Special Topics in Chicano/a-Latino/a Studies

INTERNATIONAL RELATIONS AND PACIFIC STUDIES
IRGN 409. Economic Policy in Latin America
IRGN 454. Current Issue/U.S.-Latin American Relations

**Law and Society**

**OFFICE:** Interdisciplinary Programs, EBU 3B, Computer Science and Engineering Building, Room 1114, Warren College  
http://provost.ucsd.edu/warren/law/

Law and Society is an interdisciplinary minor that emphasizes the complexity and interrelationship of legal, social, and ethical issues in their historical context. Although it is administered by Warren College, it is available to all UC San Diego undergraduate students considering law-related careers or those with a general interest in law as a social institution. The purpose of the program is to enhance students' critical analysis of social and ethical issues related to law and of the legal implications and ramifications of policy and decision-making in their major fields of study. Students examine the role of the legal system and specific legal issues from the perspectives of the social sciences and humanities. Social forces, historical questions, and issues of values will be considered in the context of the legal system. The focus of the minor is on the process of law—how the law both reflects and defines basic social values—and its relation to the political, economic, and social conflicts within society.

The interdisciplinary content of the Law and Society minor offers students the opportunity to examine law-related issues from the perspectives of a broad range of disciplines, including anthropology, communication, critical gender studies, economics, environmental studies, ethnic studies, history, linguistics, philosophy, political science, psychology, sociology, and urban studies and planning.

Students should consult an academic advisor at their college to determine how the Law and Society minor can best meet their college graduation requirements. Minor declarations must be made online using the TritonLink major and minor application.

Students are urged to supplement the Law and Society minor with a law-related internship. The Academic Internship Program offers local placements with lawyers, judges, elected officials, government offices, and public interest groups. In addition, placements are available in Washington, D.C. with senators, representatives, legislative committees, and political action committees.

A number of extracurricular events and programs are also available to students interested in law. Information on these programs and activities is available in the Warren College Interdisciplinary Programs Office, EBU 3B, Computer Science and Engineering Building, Room 1114, Warren College, or call (858) 534-3068. Web site: http://provost.ucsd.edu/warren/law/.

**LAW AND SOCIETY MINOR REQUIREMENTS**

The minor consists of four required courses and three elective courses. At least five courses must be taken at the upper-division level. To assure an interdisciplinary learning experience, students must include at least one course from each of the following academic departments: history, philosophy, political science, and sociology. Law and Society 101, Contemporary Legal Issues, will count as a history, philosophy, political science, or sociology course according to the departmental affiliation of the instructor. Law and Society 101 may be repeated for credit once (separate topic required), for a maximum total of eight units.

**REQUIRED COURSES**

1. One of the following two courses: Law and Society 101. Contemporary Legal Issues  
   Sociology 50. Introduction to Law and Society
2. Law and Society 101. Contemporary Legal Issues
3. One of the following four courses: History US 150. American Legal History to 1865  
   History US 151. American Legal History since 1865  
   Political Science 104A. The Supreme Court and the Constitution  
   Political Science 104B. Civil Liberties—Fundamental Rights
4. One of the following two courses: Philosophy 168. Philosophy of Law  
   Sociology 140. Sociology of Law

**ELECTIVES CHosen FROM THE FOLLOWING**

- **Anthropology**
  - 100. Topics in Socio-Cultural Anthropology (topic approval required)
- **Communication**
  - 139A–B. Law, Communication, and Freedom of Expression
- **Critical Gender Studies**
  - 106. Gender, Equality, and the Law
  - 107. Gender and Reproductive Rights
  - Dimensions of Culture
- **Economics**
  - 118. Law and Economics: Torts, Property, Crime
  - 119. Law and Economics: Contracts and Corporations
- **Environmental Studies**
  - 110. Environmental Law
- **Ethnic Studies**
  - 152. Law and Civil Rights

  - 104L. Positive Political Theory of Law
  - 104M. Law and Sex
  - 140A. International Law and Organizations
  - 145A. International Politics and Drugs
  - 150A. Politics of Immigration
- **Psychology**
  - 162. Psychology and the Law
- **Sociology**
  - 50. Introduction to Law and Society
  - 120T. Special Topics in Culture, Language, and Social Interaction (topic approval required)
  - 140. Sociology of Law
  - 140F. Law and the Workplace
  - 141. Crime and Society
  - 142. Social Deviance
  - 144. Forms of Social Control
  - 145. Violence and Society
  - 146. Law Enforcement in America
  - 152. Social Inequality and Public Policy
  - 159. Special Topics in Social Organizations and Institutions (topic approval required)
  - 160E. Law and Culture
  - 163. Migration and the Law
  - 173. Elite Crime
- **Urban Studies and Planning**
  - 124. Land Use Planning

Students may petition to substitute courses in the minor that have substantial legal content. Petitions should be submitted to the Warren College Interdisciplinary Programs Office.
RECOMMENDED INTERNSHIP EXPERIENCE

A law-related internship (AIP 197) is recommended and should be arranged at least one quarter in advance through the Academic Internship Program, Literature Building, Second Floor, http://aip.ucsd.edu/.

FACULTY ADVISORY COMMITTEE

Farrell Ackerman, Professor, Linguistics
Steven Adler, Provost, Earl Warren College; Program Director
Richard Arneson, Professor, Philosophy
Thomas Barton, Professor, California Western School of Law
Michal Belknap, Professor, California Western School of Law; Adjunct Professor, History
Laurence Benner, Professor, California Western School of Law; Visiting Professor, Political Science
Gerald Doppelt, Professor, Philosophy
Richard Finkmoore, Professor, California Western School of Law; Visiting Professor, Environmental Studies
Tal Golan, Associate Professor, History
Robert Horwitz, Professor, Communication
Alan Houston, Professor, Political Science; Provost, Eleanor Roosevelt College
Kwai Ng, Assistant Professor, Sociology
Michael Parrish, Professor, History
Patrick Patterson, Assistant Professor, Sociology
Samuel Rickless, Professor, Philosophy
Sanford Schane, Professor Emeritus, Linguistics
John Skrentny, Professor, Sociology
Glenn Smith, Professor, California Western School of Law; Visiting Professor, Political Science

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

Most course work for the Law and Society minor is listed under the academic department providing instruction. Law and Society 101, described below, is an interdisciplinary course. It may be counted toward minor requirements as either History, Philosophy, Political Science, or Sociology. Further information on Law and Society 101 is available in the Interdisciplinary Programs Office.

UPPER-DIVISION

101. Contemporary Legal Issues (4)
This course will deal in depth each year with a different legal issue of contemporary significance, viewed from the perspectives of political science, history, sociology, and philosophy. Required for students completing the Law and Society minor. May be repeated for credit once, for a maximum total of eight units. Prerequisite: upper-division standing or consent of instructor.

102S. Crimes, Civil Wrongs, and Constitution (4)
Through lectures and discussions on several controversial topics, students are introduced to the subjects taught in the first year of law school. They learn briefing, case analysis, and the Socratic method of instruction, engage in role-playing exercises, and take law-school examinations. Prerequisite: upper-division standing or consent of instructor.

In what ways do languages differ, and in what ways are all human languages alike? These are the basic questions that the science of linguistics seeks to answer.

In formulating hypotheses about language it has been found that languages have intricate structure at a number of different levels. Phonetics studies the sounds of speech and how they are produced and perceived. Phonology studies the principles by which the sounds of a language are organized into a system and combined into syllables and larger units. Morphology studies the principles by which smaller units of meaning are combined into words. Syntax is the study of the principles by which words are combined into larger units such as phrases and sentences. Semantics studies meaning—the meanings of words and the ways the meanings of words are related to the meanings of larger units such as the phrase, the sentence, and the discourse. Linguists attempt to discover to what extent the principles at each level vary across languages, and to what extent they are universal.

Because language provides a window into the human mind, linguistics plays a central role in the study of human cognition and figures prominently in the field of cognitive science. We know, for example, that all normal children succeed in learning language relatively quickly at a time when their other cognitive abilities are still developing. The universal properties of human language that linguists discover can be used to provide models of this process, to explain why it occurs so rapidly, and to make specific predictions about the way it unfolds. The results of linguistic research can also be tested directly in experimental studies of how language is represented and processed in the mind (psycholinguistics) and brain (neurolinguistics). Language can also be studied in terms of its function as a cognitive system shared by an entire society; sociolinguistics investigate the ways in which the language we use is affected by our social environment.

The Department of Linguistics offers a series of lower-division courses designed to introduce non-majors to the scientific study of language in the broader perspective of a liberal arts education. These are LIGN 3 (Language as a Social and Cultural Phenomenon), LIGN 4 (Language as a Cognitive System), LIGN 7 (Sign Language and Its Culture), LIGN 8 (Languages and Cultures in America), and LIGN 17 (Making and Breaking Codes). These courses may be used to satisfy the Marshall College disciplinary breadth requirement. Lower-division linguistics courses may be used to satisfy the social sciences requirement at Muir College and Revelle College, and they partially fulfill the requirements for a program of concentration in Warren College. In addition, certain linguistics courses satisfy the American Cultures requirement in Revelle College and the cultural diversity requirement in Muir College and Warren College. LIGN 17 (Making and Breaking Codes) satisfies the Thurgood Marshall Computational Skills requirement in addition to the formal skills requirement in Warren College and in the Human Development Program. This course also satisfies the Structured Reasoning requirement in Sixth College. Students should consult their college advising offices to determine which linguistics courses satisfy these other requirements.

Linguistics courses are relevant to a wide range of fields of study at UC San Diego, including anthropology, cognitive science, communication, computer science, human development, law and society, psychology, and sociology, as well as areas such as African studies, Chinese studies, ethnic studies, Judaic studies, Latin American studies, and others. In some cases certain linguistics courses count toward a major or minor in one of these departments or programs. Students should consult with a faculty advisor in linguistics and the other department or program when deciding on their course of study.

Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP) while still making progress toward the major. Students considering this option should discuss their plans with the department undergraduate advisor before going abroad. Detailed information on EAP/OAP is found in this catalog under the heading “Education Abroad Program.”

The Department of Linguistics oversees the Linguistics Language Program, which offers basic language instruction in Arabic, ASL, French, German, Italian, Portuguese, and Spanish. Courses from the Language Program satisfy general-education requirements, as well as the Department of Linguistics language requirement. Graduate students who require a reading knowledge of French or German may enroll in LIFR 11 or LIGN 11, respectively. The department also offers language instruction for individuals who grew up in an English-speaking environment while speaking a different language at home (Arabic, Armenian, Cantonese, Hindi, Korean, Persian, Tagalog, and Vietnamese; other languages may be added to this list if student demand is sufficient). Instruction in these languages is designed to raise students’ linguistic and cultural competence to professional levels. Finally, directed self-instruction is available for a wide variety of languages through LIDS 19.

Note: Please check with the department office for updates concerning programs and course offerings.

THE MAJOR PROGRAM

GENERAL REQUIREMENTS

Every linguistics major (except the language studies major) must satisfy the undergraduate language requirement and must successfully complete a minimum of twelve upper-division courses. In addition to the general major, the department offers a set of enriched major programs in various specializations. Except for LIGN 199, no course taken on a Pass/Not Pass basis may be counted toward a linguistics major. No more than one quarter of LIGN 199 may be counted toward a linguistics major. For the general linguistics, language and society, and cognition and language majors, at least six out of the twelve upper-division linguistics courses counted toward the major must be linguistics courses taken in residence at UCSD. For the language studies major, at least six out of the twelve upper division courses counted toward the major must be taken at UCSD, and at least four of these must be linguistics courses that satisfy Part A of the language studies course requirements. A letter grade of C– or better is required for every course counted toward a linguistics major, including courses taken to satisfy the department’s undergraduate language requirement.

REQUIRED LINGUISTICS COURSES

Linguistics 101 is required as an introduction to the field and serves as the prerequisite to certain other courses. Students who choose a linguistics major should enroll in it as early as possible.

Every major program in linguistics (except the language studies major) must include the following required courses covering basic areas of the field:

LIGN 101. Introduction to the Study of Language
LIGN 110. Phonetics
LIGN 111. Phonology I
LIGN 120. Morphology
LIGN 121. Syntax I
LIGN 130. Semantics

Students are advised to take these required courses as early as possible, since the background they provide may be needed for other upper-division linguistics courses. Check individual course listings for prerequisite information.

LINGUISTICS ELECTIVES

LIGN 105. Law and Language
LIGN 108. Languages of Africa
LIGN 119. First and Second Language Learning: From Childhood Through Adolescence

2010-2011 UC SAN DIEGO GENERAL CATALOG • LINGUISTICS 1
LIGN 140. The Structure of American Sign Language
LIGN 141. Language Structures
LIGN 142. Language Typology
LIGN 143. The Structure of Spanish
LIGN 144. Discourse Analysis: American Sign Language and Performing Arts
LIGN 145. Pidgins and Creoles
LIGN 146. Sociolinguistics in Deaf Communities
LIGN 150. Historical Linguistics
LIGN 160. Pragmantics
LIGN 165. Computational Linguistics
LIGN 170. Psycholinguistics
LIGN 171. Child Language Acquisition
LIGN 172. Language and the Brain
LIGN 173. Heritage Languages
LIGN 174. Gender and Language in Society
LIGN 175. Sociolinguistics
LIGN 176. Language of Politics and Advertising
LIGN 177. Multilingualism
LIGN 179. Second Language Acquisition Research

Restricted Courses
LIGN 87. Freshman Seminar (does not count as a linguistics elective)
LIGN 192. Senior Seminar in Linguistics (does not count as a linguistics elective)
LIGN 195. Apprentice Teaching (does not count as a linguistics elective)
LIGN 197. Linguistics Internship
LIGN 199. Independent Study in Linguistics
LIGN 199H. Honors Independent Study in Linguistics

Note to Revelle and Warren students
Revelle: For Revelle College only, the classification of the linguistics major as humanities, natural science, or social science must be determined on the basis of each student’s specific program. The classification of the major program will in turn determine what areas will be acceptable for the noncontiguous minor.

Warren: For Warren College only, any courses taken in departments other than linguistics may not overlap with the student’s outside area(s) of concentration.

UNDERGRADUATE LANGUAGE REQUIREMENT
Linguistics majors must demonstrate proficiency in one foreign language.

Proficiency in a foreign language may be demonstrated in three ways:
1. By passing the reading proficiency examination and the oral interview administered by the Department of Linguistics in French, German, Italian, or Spanish; or
2. By successfully completing a course given at UCSD representing the fourth quarter (or beyond) of instruction in any single foreign language with a grade of C– or better; or
3. By scoring four or greater on the Advanced Placement (AP) exam.

Students are encouraged to satisfy this requirement as early as possible in order to be able to use the language for reference in linguistics courses.

Students with native language competence in a language other than English may petition to have English count as satisfying the proficiency requirement.

GENERAL MAJOR (12 COURSES)
The general major in linguistics requires satisfaction of the undergraduate language requirement and successful completion of twelve upper-division courses:

6 required linguistics courses
LIGN 101
LIGN 110
LIGN 111
LIGN 120
LIGN 121
LIGN 130

5 linguistics electives
1 additional linguistics elective or upper-division course in another department pertaining to the study of language. Courses currently approved to satisfy this requirement include the electives for the cognition and language major (except PSYC 105) and the electives for the language and society major (Note: some of these courses may have prerequisites) or a Heritage Language course offered in the Linguistics Language Program (for example, LIHL 112/LIHL 112X).

SPECIALIZED MAJORS
Every student with a specialized major must consult the faculty advisor in the Department of Linguistics to have approved an individual curricular plan to satisfy the major requirements for the option chosen. Each specialized major requires satisfaction of the undergraduate language requirement and successful completion of upper-division requirements as specified below. The specialization will be reflected in the wording of a degree, e.g., “B.A. in Linguistics (with Specialization in Language and Society).”

Cognition and Language (12 courses)
6 required linguistics courses
LIGN 101
LIGN 110
LIGN 111
LIGN 120
LIGN 121
LIGN 130
4 linguistics electives chosen from
LIGN 145
LIGN 165
LIGN 170
LIGN 171
LIGN 172
LIGN 176
LIGN 179
2 additional courses from linguistics or other departments subject to advisor approval. Courses currently approved to satisfy this requirement include the following. Note: Some of these courses may have prerequisites.

Linguistics
Any upper-division courses (except those used to fulfill requirements A and B).

Anthropology
ANBI 140. The Evolution of the Human Brain
ANBI 159. Biological and Cultural Perspectives on Intelligence
ANBI 173. Cognition in Animals and Humans

Cognitive Science
COGS 101C. Language
COGS 102A. Distributed Cognition
COGS 102B. Cognitive Ethnography
COGS 107C. Cognitive Neuroscience
COGS 108D. Programming Methods for Cognitive Science
COGS 108E. Neural Network Models of Cognition I
COGS 108F. Advanced Programming Methods for Cognitive Science
COGS 151. Analogy and Conceptual Systems
COGS 154. Communication Disorders in Children and Adults
COGS 156. Language Development
COGS 170. Natural and Artificial Symbolic Representational Systems
COGS 184. Modeling the Evolution of Cognition
COGS 191. Laboratory Research

Computer Science and Engineering
CSE 133. Information Retrieval

Philosophy
PHIL 120. Symbolic Logic I
PHIL 134. Philosophy of Language
PHIL 136. Philosophy of Mind
PHIL 150. Philosophy of the Cognitive Sciences

Psychology
PSYC 105. Introduction to Cognitive Psychology
PSYC 118A. Real-Time Examination of Language Processing
PSYC 118B. Real-time Examination of Language Processing
PSYC 119. Psycholinguistics/Cognition Laboratory
PSYC 145. Psychology of Language

Language and Society (12 courses)
6 required linguistics courses
2 appropriate upper-division courses in other departments (especially the Departments of Anthropology, Communication, Cognitive Science, or Sociology), selected in consultation with the faculty advisor for language and society. Courses currently approved to satisfy this requirement include the following. Note: Some of these courses may have prerequisites.

ANSC 122 [formerly known as ANGN 112]. Language, Identity, and Community
ANSC 123 [formerly known as ANGN 149]. Language in Society
COCU 100. Introduction to Communication and Culture
COHI 114. Bilingual Communication
COHI 117. Language, Thought, and the Media
COHI 124. Voice. Deaf People in America
COHI 134. Language and Human Communication
COHI 13. Language and Globalization
ETHN 140. Language and American Ethnicity
ETHN 141. Language, Culture, and Inequality
ETHN 144. Bilingual Communities in the USA
SOCI 117/EDS 117. Language, Culture, and Education
SOCI 118E. Sociology of Language
SOCI 120T. Special Topics in Culture, Language, and Social Interaction
EDS 125. History, Politics, and Theory of Bilingual Education

1 course in sociolinguistics (by approval of the faculty advisor, may be taken in another department). Courses currently approved to satisfy this requirement include the following. Note: some of these courses may have prerequisites:

LIGN 174. Gender and Language in Society
LIGN 175. Sociolinguistics
LIGN 177. Multilingualism

3 linguistics electives. Courses particularly relevant to this specialization are

LIGN 105. Law and Language
LIGN 174. Gender and Language in Society
LIGN 175. Sociolinguistics
LIGN 176. Language of Politics and Advertising
LIGN 177. Multilingualism

LANGUAGE STUDIES MAJOR

Students majoring in language studies must consult with the language studies faculty advisor to approve an individual curricular plan.

The language studies major is designed for students who wish to pursue the study of a particular language from a variety of perspectives. To this end, students will take courses in linguistics and literature, as well as electives in linguistics, literature, culture, and area studies. This major provides preparation for a variety of careers that make use of second language skills. Depending on the elective emphasis, these include international business/law, teaching, translation, interpreting, linguistics, and foreign service. Each language studies major will specialize in one language of concentration. In principle, this could be any language other than English. However, some languages may require that some course work be completed outside UCSD. Hence, it is recommended that language studies majors consider a year abroad. Students whose language of concentration is American Sign Language will need to consult the faculty advisor for individualized requirements; these students may also consider an exchange year at Gallaudet University.

REQUIREMENTS

Lower-division preparation:

- Two years of language instruction in the language of concentration, or equivalent proficiency
- Lower-division prerequisites for upper-division courses in the literature of the language of concentration

Upper-division requirements:

Note: At least two of the upper-division courses must be conducted in the language of concentration. Students are encouraged to increase their academic exposure to their language of concentration by taking one-unit seminars in the language and by participating in the EAP program.

1. 6 upper-division linguistics courses, as follows:
   - LIGN 101. Introduction to Linguistics
   - 3 courses chosen from LIGN 110. Phonetics
   - LIGN 111. Phonology I
   - LIGN 120. Morphology
   - LIGN 121. Syntax I
   - LIGN 130. Semantics
   - LIGN 145. Pidgins and Creoles
   - LIGN 150. Historical Linguistics
   - “Structure of” language of concentration course (e.g., LIGN 143 Structure of Spanish). If no such course is available, the student must consult with the undergraduate advisor regarding a possible substitution.

   One additional upper-division LIGN course.

2. 2 upper-division courses in the literature of the language of concentration

3. 4 additional upper-division courses that deal with general linguistics, the language of concentration (e.g., literature), or the corresponding culture/area studies (e.g., anthropology, economics, history, political science, sociology), subject to approval of the faculty advisor.

   Approved courses for this requirement include the following. Note: Some of these courses may have prerequisites.
   - Linguistics: Any upper-division courses (except those used to fulfill requirement A).
   - Literature: Any upper-division courses related to the language of concentration (except those used to fulfill requirement B).
   - Area Studies: Approved courses are listed by language of concentration; other languages of concentration are possible in principle, but probably require course work outside of UCSD.

HONORS PROGRAM

The department offers an honors program for outstanding students. Those students who have a 3.75 GPA in linguistics (3.25 overall) at the end of their junior year are eligible to participate. Students interested in participating in the honors program should consult with their department advisor.
admission to the program requires nomination by the advisor and approval of the department faculty. The honors program requires that two graduate linguistics courses be taken as part of the twelve required courses for the major, and further requires one quarter of LIGN 199H. During one of the two graduate courses, the student, in consultation with the instructor and a faculty advisor, will begin a substantial research project which will be continued during the quarter of 199H and will culminate in an honors paper. Responsibility for proposing possible projects and completing necessary paperwork rests with the student. Upon successful completion of the requirements the designation “with distinction,” “with high distinction,” or “with highest distinction” will appear on the student’s diploma.

INDEPENDENT STUDY AND DIRECTED GROUP STUDY IN LINGUISTICS FOR MAJORS

Upon presentation of a written study proposal or project, and with the consent of the instructor and the advisor, linguistics majors with at least a 3.5 GPA in the major courses may request permission to undertake independent study in linguistics (LIGN 199). No more than one such course (to be taken Pass/Not Pass) may count toward the major.

THE MINOR PROGRAM

The Linguistics minor consists of LIGN 101, plus six additional courses in linguistics, at least four of which must be upper-division.

For all courses counted toward the linguistics minor, the student must receive letter grades of C– or better. Courses counted toward the minor may not be taken on a Pass/Not Pass basis, except LIGN 199. Only one quarter of LIGN 199 may be counted toward the minor.

The Language Studies minor consists of seven courses, at least five of which must be upper-division:

Literature: One upper-division literature course is required in the language of concentration. This will require proficiency as well as lower-division prerequisites. Therefore, the lower-division courses of the minor may consist of prerequisites for the upper-division literature requirement. American Sign Language students may substitute a non-literature upper-division elective with approval of the faculty advisor.

Linguistics: LIGN 101 is required. In addition students must take a “Structure” of language of concentration course (e.g., LIGN 143 Structure of Spanish). If no such course is available, the student must consult with the undergraduate advisor regarding a possible substitution.

Other: Two additional courses that deal with general linguistics, the language of concentration (e.g., literature), or the corresponding culture, subject to approval of the faculty advisor are required.

THE PH.D. PROGRAM

The UC San Diego Ph.D. program in linguistics offers rigorous training in multiple areas of theoretical linguistics, including syntax, semantics, phonetics, phonology, and morphology. The department is particularly strong in the study of interface areas, including syntax/semantics, phonetics/phonology, and phonology/syntax. Research conducted in a variety of theoretical frameworks is integrated into the graduate curriculum. Students receive a firm foundation in both formal and cognitive/functionalist approaches to syntax and semantics. In phonology, basic training includes segmental and autosegmental phonology, constraint-based phonology, syllable theory, metrical theory, and theories of the phonology-morphology interface. The first two years of graduate study are devoted primarily to gaining a strong background in these core theoretical areas.

This theoretical strength of the department is matched by strength in both language study and experimental science. The range of languages represented in faculty research encompasses American Sign Language (ASL), Caucasian, Chinese, Finno-Ugric, Germanic, Greek, Persian, Romance, Semitic, Slavic, and Uto-Aztec. The departmental concern with the empirical facts of language is reflected in a field methods requirement for graduate students as well as in the graduate student language requirement (conversational ability in one language other than English and reading ability in one language other than English). The department has a tradition of working with native speakers of a wide variety of languages. The department’s language laboratory maintains a library of written and recorded materials permitting independent study of dozens of languages; it also includes computers for self-instruction in French, German, Italian, and Spanish. The Linguistics Language Program (LLP) provides basic foreign language instruction for the entire campus, and many linguistics graduate students are employed as TAs in the program. Aside from providing a source of funding, the LLP provides graduate students with valuable teaching experience.

The department houses laboratories devoted to experimental studies of language with emphasis on phonetics, event related brain potentials (ERPs) computational linguistics, and signed languages. The focus of experimental research in the department is the mutual dependence between mechanisms of language processing and theories of phonology, and syntax. Linguistics graduate students may supplement their theoretical studies with experimental research; in addition to departmental laboratories, graduate students have access to experimental laboratories concerned with language issues in other departments.

The department has a strong commitment to, and is an active and integral part of, the cognitive science and neuroscience communities at UCSD. Most linguistics faculty have joint appointments in the Department of Linguistics and the Cognitive Science Interdisciplinary Ph.D. Program, and participate in the Department of Cognitive Science graduate core course in language (Cognitive Science 201D) as well as in the all-campus Interdisciplinary Program seminar (Cognitive Science 200) on a regular basis. Graduate students in the Cognitive Science Department frequently participate in Linguistics graduate courses, and Linguistics graduate students regularly attend courses in the Cognitive Science Department on neuroscience, child language acquisition, aphasia, neural networks, and semantics and cognition. Linguistics graduate students are eligible to pursue a joint degree in Cognitive Science and Linguistics within the Interdisciplinary Program. Areas of secondary specialization that are especially well represented in the cognitive science community at UCSD and related institutes include child development, connectionist modeling, distributed cognition, language disorders, neuroscience, philosophy, and psycholinguistics.

The department has access to rich informational resources; in addition to the extensive linguistics holdings in the main library, the department maintains a collection of research reports, dissertations, and unpublished papers. Access to the libraries of other universities exists through interlibrary loan.

PREPARATION

Since linguistics is a highly technical and analytic field, linguistics students will find their undergraduate training in mathematics and the natural sciences especially valuable. Undergraduate work in certain of the social sciences and humanities, particularly psychology, anthropology, philosophy and literature, is also good preparation for linguistics. The ideal candidate for admission will have both experience with foreign languages and some knowledge of the fundamentals of contemporary linguistic theory. Students who, upon admission, are deficient either in their formal linguistics preparation or languages will be advised by the department on how to make up the deficiency. New graduate students will be admitted only in the fall of any academic year.

LANGUAGE REQUIREMENTS

A candidate for the Ph.D. degree must demonstrate: (1) Conversational ability in one language other than English. (2) A reading knowledge of any one language other than his or her native language, subject to faculty approval.

REQUIRED COURSES

Candidates for the Ph.D. must pass certain linguistics graduate courses prior to taking the qualifying examination. All graduate students must take a common core of ten courses. These are:

- Three courses in Syntax and Semantics: 221A, 221B, 230
- Three courses in Phonology and Phonetics: 210, 211A, 211B
- One course in Field Methods: 240
- Two courses in Research Methods, selected from 241, 245, and 251 (Note: Although 241 is repeatable, only one instance may count toward this requirement.)
- One course in Research Paper Writing: 293

All required courses (except 293) must be taken for a letter grade.

EVALUATIONS

A graduate student is formally evaluated by the entire faculty at particular stages during the first three years of graduate study. The first evaluation...
(at the end of the third quarter of graduate study) pertains chiefly to performance in courses. The second (or comprehensive) evaluation (at the end of the sixth quarter) determines the student's fitness to continue in the Ph.D. Program. It takes into account performance in course work and ability to engage in original research in one area of linguistics as demonstrated in a research paper. The third evaluation (at the end of the ninth quarter) focuses primarily on a second research paper (which must be in a different area of linguistics from the first).

QUALIFYING EXAMINATION

Candidates for the Ph.D. degree must pass an oral qualifying examination which tests the student's knowledge in the area of specialization. Prior to taking this examination, the student must pass the comprehensive evaluation, satisfy all language requirements, successfully complete all required courses, and demonstrate—through research papers—the ability to carry out independent, dissertation-level research. Students must take the qualifying examination by the end of the fourth year of graduate work.

COLLOQUIUM PRESENTATION

Sometime prior to the thesis defense, a student must present a paper orally at a professional gathering. The colloquium requirement is intended to enable a student to develop the skills necessary for organizing research results for oral presentation. The requirement is generally met by presenting a department colloquium or by presenting a paper at a professional meeting. In either case, a faculty member must certify the acceptability of the presentation.

DISSERTATION

The candidate for the Ph.D. will write a substantial dissertation incorporating the results of original and independent research carried out under the supervision of the doctoral committee. The candidate will be recommended for the doctor of philosophy degree after having made a successful oral defense of the dissertation before the doctoral committee in a public meeting and after having the final version of the dissertation accepted by Geisel Library.

APPRENTICE TEACHING

As part of their preparation for a future academic career, graduate students in linguistics at UCSD are given special opportunities to participate in teaching programs under the supervision of a professor. Depending on qualifications, students may conduct conversation or analysis classes in lower-division language courses (LLP and HLP), or may assist a professor in the teaching of an undergraduate linguistics course.

OTHER DEGREES

Candidates for the Ph.D. who have not previously earned a master's degree may be granted the M.A. in linguistics after: 1) satisfactorily completing twelve required courses (all but LIGN 293 must be taken for a letter grade); 2) passing the comprehensive evaluation at the end of the sixth quarter; and 3) demonstrating a reading knowledge of any language except English, subject to faculty approval. Candidates for the Ph.D. may also be granted the C.Phil. upon completion of all degree requirements other than the dissertation.

DEPARTMENTAL PH.D. TIME LIMIT POLICIES

The time a student takes to complete the Ph.D. depends on a number of factors, including previous preparation and the amount of time spent in teaching or other job commitments. Several policies set an upper limit to the length of the program. All degree requirements other than the dissertation must be completed by the end of the fourth year of graduate work. Total instructional support (TAships, etc.) cannot exceed six years; total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

SPECIALIZATION IN ANTHROPOGENY

This is a transdisciplinary graduate specialization in anthropogeny with the aim of providing graduate students the opportunity to specialize in research and education on explaining the origins of the human phenomenon. The aim is to rectify the absence of existing training programs that provide such a broad and explicitly transdisciplinary approach—spanning the social and natural sciences—and focusing on one of the oldest questions known to humankind, namely, the origins of humans and humanism. This specialization is not a stand-alone program, but aims at providing graduate students who have just embarked on their graduate careers with the opportunity to interact and communicate with peers in radically different disciplines throughout the duration of their Ph.D. projects. Such communication across disciplines from the outset is key to fostering a capacity for interdisciplinary “language” skills and conceptual flexibility.

ADMISSION TO THE SPECIALIZATION

The Linguistics Graduate Program will advertise the specialization to those students in our programs who have an interest in human origins. Qualifying applicants will have the opportunity to enroll for the specialization.

SPECIALIZATION REQUIREMENTS

Students pursuing this specialization will be required to take a series of courses in addition to research rounds over four years of study. It is advised that students begin their course work in their second year.

1. Course work: Introduction to Anthropogeny (BIOM 225) and Advanced Anthropogeny (BIOM 229) are each taken once, in the winter and spring of the students second year. Current Topics in Anthropogeny (BIOM 218) is to be taken every quarter for four years.

2. Research Rounds: Monthly seminars during which all participating students talk about their respective research.

QUALIFYING EXAMINATION

Linguistics students in the anthropogeny specialization must meet the departmental requirement for advancement to candidacy. In addition, students must meet internal deadlines, mentoring provisions, and proposal standards of the anthropogeny specialization track.

DISSERTATION

Ph.D. students must complete a dissertation, which meets all requirements of the home program. In addition, it is expected that the Ph.D. dissertation is broadly related to human origins and will be interdisciplinary in nature.

TIME LIMITS

It is expected that students will retain the same time to degree as students not pursuing this specialization. Additional course load consists only of two regular courses (two quarters twenty lectures each). The third proposed course takes place only three times a year from Friday noon to Saturday evening.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

Note: Not all courses are offered every year. It is essential that students consult the linguistics advisor when planning their degree programs.

LINGUISTICS

LOWER DIVISION

3. Language as a Social and Cultural Phenomenon (4)
   The role of language in thought, myth, ritual, advertising, politics, and the law. Language variation, change, and loss; multilingualism, pidginization and creolization; language planning, standardization, and prescriptivism; writing systems. Prerequisite: none.

4. Language as a Cognitive System (4)
   Fundamental issues in language and cognition. Differences between animal communication, sign systems, and human language; origins and evolution of language; neural basis of language; language acquisition in children and adults. Prerequisite: none.

5. The Linguistics of Invented Languages (4)
   Introduction to the study of language through the investigation of invented languages, whether conscious (Elvish, Klingon, Esperanto) or unconscious (creoles, twin/sibling languages). Students will participate in the invention of a language fragment. Topics discussed include language structure, history, culture, and writing systems. Prerequisite: none.

7. Sign Language and Its Culture (4)
   Deaf history since the eighteenth century. The structure of American Sign Language and comparison with oral languages. ASL poetry and narrative and Deaf people's system of cultural knowledge. Basic questions concerning the nature of language and its relation to culture. Prerequisite: none.

8. Languages and Cultures in America (4)
   Language in American culture and society. Standard and non-standard English in school, media, pop-culture, politics; bilingualism and education; cultural perception of language issues over time; languages and cultures in the "melting pot," including Native American, Hispanic, African-American, Deaf. Prerequisite: none.
17. Making and Breaking Codes (4)
A rigorous analysis of symbolic systems and their interpre-
tations. Students will learn to encode and decode infor-
mation using progressively more sophisticated methods;
topics covered include ancient and modern phonetic
writing systems, hieroglyphics, computer languages, and
ciphers (secret codes). Prerequisite: none.

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide
new students with the opportunity to explore an intellectual
topic with a faculty member in a small seminar setting.
Freshman seminars are offered in all campus departments
and understand, how language changes, and how it is
learned. Prerequisite: none.

105. Law and Language (4)
The interpretation of language in understanding the law:
1) the language of courtroom interaction (hearsay, jury
instructions); 2) written legal language (contracts, ambi-
guity, legal fictions); 3) language-based issues in the law
(First Amendment, libel and slander). Prerequisite: none.

108. Languages of Africa (4)
Africa is home to an astonishing variety of languages.
This course investigates the characteristics of the major
language families as well as population movements and
language contact, and how governments attempt to
regulate language use. Prerequisite: none.

110. Phonetics (4)
The study of the sounds which make up human language.
How sounds are physically produced; acoustics of speech
perception; practical training in translating speech signals
into written form and in interpreting computerized speech
signs. Prerequisite: LIGN 101, concurrent enrollment in
LIGN 101, or consent of instructor.

111. Phonology (I) (4)
Why does one language sound different from another?
This course analyzes how languages organize sounds into
different patterns, how those sounds interact, and how they
fit into larger units, such as syllables. Focus on a wide variety of
languages and problem-solving. Prerequisite: LIGN 101.

119. First and Second Language Learning: From Childhood through Adolescence (4)
(Same as ED5 119) An examination of how human language
ability develops and changes over the first two decades of life, including discussion of factors that may
affect this ability. Prerequisite: upper-division standing or
consent of instructor.

120. Morphology (4)
How do some languages express with one word complex
meanings that English needs several words to express?
Discovery of underlying principles of word formation
through problem-solving and analysis of data from a wide
variety of languages. Prerequisite: LIGN 101 or consent
of instructor.

121. Syntax I (4)
What universal principles determine how words combine
into phrases and sentences? Introduction to research
methods and results. Emphasis on how arguments in
problem-solving can be used in the development of
theories of language. Prerequisite: LIGN 101 or consent
of instructor.

130. Semantics (4)
Introduction to the formal study of meaning. What is the
meaning of a word? What is the meaning of a sentence?

Which role does the context play in determining linguistic
meaning? Prerequisite: LIGN 101 or consent of instructor.

140. The Structure of American Sign Language (4)
Examination of ASL phonetics, phonology, morphology,
syntax, semantics. Including linguistic facial expressions
and uses of physical space in verb agreement, aspectual
morphology, and classifier constructions. Discussion of
sound patterns, word forms and word meanings, and
syntactical linguistics, in which we study natural language
language processing negativity, slow anterior negative
ERP components and their MEG correlates: N400, N400-
consent of instructor.

141. Language Structures (4)
Detailed investigation of the structure of one or more
descriptions. May be repeated for credit as topics vary.
Prerequisite: LIGN 101 or consent of instructor.

142. Language Typology (4)
The systematic ways languages differ. Cross-linguistics
studies of specified topics (e.g., word order, agreement,
case, switch reference, phonological systems, and rule
types, etc.) in an effort to develop models of language
variation. Prerequisite: LIGN 101 or consent of instructor.

143. The Structure of Spanish (4)
Surveys aspects of Spanish phonetics, phonology, mor-
phology, and syntax. Topics include dialect differences
between Latin American and Peninsular Spanish (both from
a historical and contemporary viewpoint), gender classes,
verbal morphology, and clause structure. Prerequisite:
LIGN 101 or consent of instructor.

144. Discourse Analysis: American Sign
Language and Performing Arts (4)
A discourse-centered view of ASL verbal arts: rhyme,
meter, rhythm, handedness, non-manual signals,
and spatial mapping; creation of scene and mood; proper-
ties of character, dialogue, narration, and voice; cultural
tropes; poetic constructions in everyday genres; transcrip-
tion, body memory and performance. Prerequisites: LUSL
1C/1CX or consent of instructor.

146. Sociolinguistics in Deaf Communities (4)
An examination of sociolinguistic research on Deaf com-
munities throughout the world, including: sociohistorical
contexts for phonological, lexical and syntactic variation,
contact between languages, multilingualism, language
policies and planning, second language learning, language
attitudes, and discourse analysis of specific social contexts.
Course will be conducted in ASL. Prerequisite: LUSL
1C/1CX or consent of instructor.

150. Historical Linguistics (4)
Language is constantly changing. This course investigates
the nature of language change, how to determine a lan-
guage's history, its relationship to other languages, and
the search for common ancestors or “proto-language.”
Prerequisite: LIGN 101 or consent of instructor.

155. Evolution of Language (4)
History of thought on language origins, genetic, neural,
anatomical, and gestural theories of language evolution
in relation to prior hominid and other species, the role
of generational differences in language acquisition, and
computational models. Prerequisite: upper-division stand-
ing or consent of instructor.

160. Computational Linguistics (4)
An introduction to the context-dependent aspects of
language meaning. Topics include given versus new
information, Gricean maxims and rules of conversation,
premise, implicature, reference and cognitive sta-
tus, discourse coherence and structure, and speech acts.
Prerequisite: LIGN 101 or consent of instructor.

165. Computerizedlinguistics (4)
An introduction to the fundamental concepts of compu-
tational linguistics, in which we study natural language
syntactic and semantics from an interpretation perspective,
describe methods for programming computer systems to
perform such interpretation, and survey applications of
computational linguistics technology. Prerequisite: none.

170. Psycholinguistics (4)
The study of how humans learn, represent, comprehend,
and produce language. Topics include visual and auditory
recognition of words, sentence comprehension, reading,
and sentence production, language acquisition, neural repre-
sentation of language, bilingualism, and language disor-
ders. Prerequisite: LIGN 101, or upper-division standing,
or consent of instructor.

171. Child Language Acquisition (4)
A central cognitive, developmental model is how children
learn their first language. Overview of research in the learn-
ing of sound systems, word means, and word combinations. Exploration of the relation between
cognitive and language development. Prerequisite:
LIGN 101, or upper-division standing, or consent of instructor.

172. Language and the Brain (4)
The mind/body problem, basic neuroanatomy and neuro-
physiology, cerebral lateralization, origins and evolution
of language, aphasia, magnetic resonance imaging (MRI),
and event-related potentials (ERPs). Prerequisite:
LIGN 101, or upper-division standing, or consent of instructor.

173. Heritage Languages (4)
A heritage language (HL) is a language that an individual
has some knowledge of due to childhood exposure. Topics:
HL imperfect language competence, bilinguals vs. HL
speakers, language loss, re-learning of HLS, panellars across
HLs, teaching of HLS, language planning. Prerequisite:
upper-division standing or consent of instructor.

174. Gender and Language in Society (4)
(Same as SOCI 116.) This course examines how language
contributes to the social construction of gender identities,
and how gender impacts language use and ideologies.
Topics include the ways language and gender interact
across the life span (especially childhood and adolescence);
within ethnolinguistic minority communities; and across
cultures. Prerequisite: LIGN 101, or upper-division stand-
ing or consent of instructor.

175. Sociolinguistics (4)
The study of language in its social context, with em-
phasis on the different types of linguistic variation and
the principles underlying them. Dialects; registers; sex-
based linguistic differences; factors influencing linguistic
choice; formal models of variation; variation and change.
Prerequisite: LIGN 101, or upper-division standing,
or consent of instructor.

176. Language of Politics and Advertising (4)
How can we explain the difference between what is liter-
ally said versus what is actually conveyed in the language
of law, politics, and advertising? How people's ordinary
command of language and their reasoning skills are used
to manipulate them. Prerequisite: none.

177. Multilingualism (4)
Official and minority languages, pidgins and Creoles, lan-
guage planning, bilingual education and literacy, code
switching, and language attrition. Prerequisite: LIGN
101, or upper-division standing, or consent of instructor.

179. Second Language Acquisition Research (4)
This course will investigate topics in second language ac-
quision including the critical period, the processing and
neural representation of language in bilinguals, theories of
second language acquisition and creolization, exceptional
language learners, and parallels with first language acquisi-
tion. Prerequisite: LIGN 101, or upper-division standing,
or consent of instructor.

180. Language Representation in the Brain (4)
The mind/body problem, modularity, basic neuroanatomy,
cerebral lateralization, re-evaluation of classical language
areas, aphasia, dyslexia, the KE family and F0X2 gene,
mirror neurons, sign language, brain development, cortical
plasticity, and localization studies of language process-
ing (electrical stimulation, MEG, fMRI, and PET). Students
may not receive credit for both LIGN 172 and LIGN 180.
Prerequisite: LIGN 101, or upper-division standing,
or consent of instructor.

181. Language Processing in the Brain (4)
Modularity and models of language processing, basic
neuroanatomy, neurophysiology, EEG/MEG, event-related
brain potentials (ERPs), cross-linguistic functional significance of
ERP components and their MEG correlates: N400, N400-
700, lexical processing negativity, slow anterior negative
potentials, (early) left anterior negativity, and late positivity.
Prerequisite: LIGN 101, or upper-division standing, or consent of instructor.

192. Senior Seminar in Linguistics (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in linguistics (at the upper-division level). Senior seminars may be offered more than once with different topics. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: department stamp and/or consent of instructor.

195. Apprentice Teaching (0–4)
Student lead a class section of a lower-division linguistics course. They also attend a weekly meeting on teaching methods. (This course does not count toward minor or major.) May be repeated for credit, up to a maximum of four units. (P/NP grades only.) Prerequisites: consent of instructor, advanced standing.

197. Linguistics Internship (2 or 4)
The student will undertake a program of practical research in a supervised work environment. Topics to be researched may vary, but in each case the course will provide skills for carrying out these studies. Prerequisite: consent of instructor.

199. Independent Study in Linguistics (2 or 4)
The student undertakes a program of research and advanced reading in linguistics under the supervision of a faculty member of the Department of Linguistics. (P/NP grades only.) Prerequisite: consent of instructor. May be repeated for credit.

199H. Honors Independent Study in Linguistics (4)
The student undertakes a program of research and advanced reading in linguistics under the supervision of a faculty member in the Department of Linguistics. (P/NP grades only.) Prerequisite: admission to Honors Program.

GRADUATE

200. Research Forum (2)
A forum for discussion of current issues. (S/U grades only.) May be repeated for credit.

210. Phonetics (4)
This is an introduction to articulatory, acoustic, and auditory phonetics. Major phonetic theories in these areas, and the relationship between phonetics and phonology are discussed. The course also covers experimental design and methodology and provides hands-on experience with laboratory equipment. Prerequisite: none

211A. Introductory Phonology (4)
Introduction to the study of the sound patterns of language. Rules of representation, lexical phonology, segmental processes, autosegmental phonology. Prerequisite: LIGN 110 or consent of instructor.

211B. Nonlinear Phonology (4)
This course will introduce topics in prosodic phonology and morphology, including syllable structure, stress, and redundancy. These topics will be investigated within constraint-based phonology. Prerequisite: LIGN 211A or equivalent.

214. Topics in Phonetics (4)
This course examines recent developments in controversial areas of phonetics. Topics will vary, and will address issues in speech production (articulation; acoustic), speech perception, phonetic theory, and the relationship between phonetics and phonology. Prerequisite: LIGN 210, 211A, 211B, or consent of instructor.

215. Topics in Phonology (4)
Descriptive and theoretical problems in phonology. Discussion of work in progress and/or theoretical consequences of alternative analyses. May be repeated for credit when topics vary.

211A. Introduction to Grammatical Theory (4)
This course introduces basic syntactic phenomena and argumentation via the Government and Binding Theory of the 1980s. The phenomena, including NP-Movement, Binding, and Wh-Movement, have been important in the development of Generative Grammar and remain central to current generative frameworks.

221B. Introduction to Grammatical Theory (4)
This course continues to develop Principles and Parameters Theory, as introduced in 221A. It concentrates on A-bar dependencies and the Binding Filipy. Focus will be on testing theoretical proposals and understanding the role of theoretical alternatives, underlying assumptions, and the empirical results upon which these theoretical proposals are based.

222. Current Issues in Principles and Parameters Theory (4)
This course continues to develop developments in Principles and Parameters Theory. Topics include fundamental work that led to the Minimalist Program and more recent developments in this tradition. May be repeated for credit when topics vary.

224. Lexicalist Theories of Grammar (4)
Introduction to conceptual issues and representational apparatus of lexicalist theories of language. Focus on empirical argumentation from numerous languages for lexicalist assumptions. Particular attention to lexical semantics, morphology, and syntax.

225. Topics in Syntax (4)
Descriptive and theoretical problems in syntactic analysis. Theoretical and computational aspects of alternative analyses. May be repeated for credit when topics vary.

230. Semantics (4)
Theories of semantic structure. The relation of meaning to grammar, and how it is to be accommodated in an overall model of linguistic organization. The application of formal semantics to the description of natural language.

235. Topics in Semantics (4)
Advanced material in special areas of the study of meaning and its relation to formal aspects of human language. As subject matter varies, the course may be repeated for credit.

236. Language Universals and Linguistic Typology (4)
Introduction to the typological study of language, contrasting alternative approaches to research in language universals. Main topics covered: cross-linguistic approach to language study (sampling, universal generalizations, hierarchies); explanation of language universals; the role of cross-linguistic analyses in linguistic theory.

238. Topics in Cognitive Linguistics (0–4)
(Same as Cognitive Science 238) Basic concepts, empirical findings, and recent developments in cognitive and functional linguistics. Language viewed dynamically in relation to conceptualization, discourse, meaning construction, and cognitive processing. As topics vary, may be repeated for credit.

240. Field Methods (4)
Techniques of discovering the structure of a language through elicitation of data from native speaker consultants. Phonemic, morphemic, and syntactic analysis. Prerequisite: LIGN 110 or equivalent.

241. Fieldwork (4)
Fieldwork continuing the research of the previous quarter; student-directed elicitations on topics of interest. Prerequisite: LIGN 240.

242. Discourse Interpretation (4)
A graduate course examining discourse interpretation from a computational perspective. Theoretically principled algorithms for resolving pronominal and other types of reference. Techniques for representing discourse, meaning construction, and discourse coherence. Methods for recovering the structure of a discourse and determining its coherence.

245. Computational Corpus Linguistics (4)
Introduction to computational corpus tools for performing empirically-grounded linguistic investigations. Annotated and unannotated corpora, corpus annotation systems. Searching using regular expressions, UNIPAC tools. The PERL programming language. Publically-available language processing systems.

247. Topics in Pragmatics (4)
Advance material covering particular topics relating to the theoretical analysis of the pragmatics of natural languages. May be repeated for credit when topics vary. Prerequisite: consent of instructor.

248. Morphology (4)
Theories of word structure are examined and confronted with data from a variety of languages. Topics may include: the distinction between derivational and inflectional morphology, the morphology/phonology interface, and the morphology/syntax interface. May be repeated for credit when topics vary.

251. Probabilistic Methods in Linguistics (4)
Probabilistic approaches to language knowledge, acquisition, and use. Quantitative analysis of linguistic data. Quantitative models in linguistic theory. Covers basic probability theory and tools of statistical analysis for language, including linear regression, ANOVA, generalized linear models (e.g., logistic regression), data visualization. Familiarity with probability theory highly encouraged.

256. Statistical Natural Language Processing (4)
(Same as CSE 256) Introduction to modern statistical approaches to natural language processing: part-of-speech tagging, word-disambiguation and parsing, using Markov models, hidden Markov models, and probabilistic context-free grammars. Recommended Prerequisite: one of LIGN 165, LIGN 245, CSE 151, CSE 250A, CSE 254. Prerequisite: graduate standing or consent of instructor.

265. Topics in Computational Linguistics (4)
Advanced topics in computational linguistics of current interest. Subjects will vary, and may include computational morphology, syntax, semantics, discourse, psycholinguistics, or language change. May be repeated for credit. Prerequisites: none.

270. Psycholinguistics (4)
Issues of natural language processing in relation to one or more of the following levels of linguistic analysis: phonetics, phonology, the lexicon, morphology, syntax, semantics, information structure, or discourse. May be repeated for credit when topics vary.

272. Topics in Neurolinguistics (4)
Issues of language representation and neural instantiation that arise in studies of neural imaging, language disorders, multilingualism and second language acquisition, animal communication, and the origins and evolution of language. May be repeated for credit when topics vary.

274. Computational Psycholinguistics (4)
Investigation of problems in psycholinguistics—the study of how humans learn, represent, comprehend, and produce language—from a computational perspective. Research articles readings covering word-level, sentence-level, and discourse-level processing. Prior background in psycholinguistics and/or computational linguistics highly recommended.

278. Research in Second Language Acquisition (4)
This will investigate topics in second language acquisition including the critical period, the processing and neural representation of language in bilinguals, theories of second language acquisition and creolization, exceptional language learners, and parallels with first language acquisition.

279. Topics in Language Acquisition (4)
Language acquisition is central to theories about human development, cognition, brain organization, and language origins and change. Topics include the role of input and critical periods on language outcome and processing, neural organization, and sign language creation. Prerequisite: none.

280. Sign Language Research (4)
An overview of sign language research in terms of how it informs language theory. Topics include the structure of ASL acquisition, psycholinguistic and neurolinguistic processing of sign language in comparison to spoken language, critical period effects, and language evolution. Prerequisite: Graduate standing of consent of instructor.
COURSES

LANGUAGE

OFFICE: Linguistics Language Program Office, 3016 Applied Physics and Mathematics Building, Muir College

Students are placed in foreign language courses based on prior preparation and, for French, German, Italian, and Spanish, on the results of a placement test. Information on taking the placement exam is available at http://ling.ucsd.edu/language/placement-test.html or at the Linguistics Language Program Office (3016 Applied Physics and Mathematics Building). For placement in Arabic, American Sign Language, or Portuguese contact the Linguistics Language Program Office (3016 Applied Physics and Mathematics Building).

Conversation sections (Linguistics 1A-1B-1C-1D) consist of small tutorial meetings, plus reading and assigned laboratory work. Analysis sections (Linguistics 1AX-1BX-1CX-1DX) consist of presentations and practice of grammatical structures, discussion sections, assigned laboratory work, and outside reading. Each course in the 1A-1B-1C-1D series must be taken concurrently with the corresponding course in the 1AX-1BX-1CX-1DX series.

Heritage Language courses are offered in Arabic, Armenian, Cantonese, Filipino, Hindi, Korean, Persian, and Vietnamese. These courses are designed for students with a background in the language who want to improve their oral and written expression.

Linguistics 11 courses are self-instructional: intended for reading the language for scholarly purposes. They are particularly aimed at graduate students preparing to fulfill French or German reading requirements.

Linguistics 19 courses, offered in more than sixty languages, are designed for self-instructional study at an introductory level. Students may enroll for two or four units of credit. For some languages, depending on the availability of suitable materials, the course may be repeated for credit.

AMERICAN SIGN LANGUAGE

Linguistics/American Sign Language (LISL)

1A. American Sign Language Conversation (2.5)
Small tutorial meetings with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1AX. Prerequisite: no prior study of ASL.

Linguistics/American Sign Language (LISL)

1AX. Analysis of American Sign Language Conversation (2.5)
Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural information. The course is taught entirely in ASL. Must be taken with LISL 1A. Prerequisite: no prior study of ASL.

Linguistics/American Sign Language (LISL)

1B. American Sign Language Conversation (2.5)
Small tutorial meetings with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1A. Prerequisite: no prior study of ASL.

Linguistics/American Sign Language (LISL)

1C. American Sign Language Conversation (2.5)
Small tutorial meetings with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1C. Prerequisites: LISL 1A with a grade of C– or better, or equivalent and LISL 1AX with a grade of D or better, or equivalent.

Linguistics/American Sign Language (LISL)

1DX. Analysis of American Sign Language Conversation (2.5)
Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural information. The course is taught entirely in ASL. Must be taken with LISL 1D. Prerequisite: no prior study of ASL.

Linguistics/American Sign Language (LISL)

1CX. Analysis of American Sign Language Conversation (2.5)
Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural information. The course is taught entirely in ASL. Must be taken with LISL 1C. Prerequisites: LISL 1B with a grade of C– or better, or equivalent and LISL 1BX with a grade of D or better, or equivalent.

Language courses are intended for students preparing to fulfill French or German reading requirements.

Linguistics/American Sign Language (LISL)

1D. American Sign Language Conversation (2.5)
Small conversation sections taught entirely in American Sign Language. Emphasis on signing fluency and greater cultural awareness. Practice of the principal language functions needed for successful communication. Must be taken in conjunction with LISL 1DX. Successful completion of LISL 1D and LISL 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges. Prerequisites: LISL 1C with a grade of...
ARABIC

See also Linguistics/Heritage Language Program.

Linguistics/Arabic (LIAB) 1A.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1AX. Prerequisite: no prior study of Arabic.

Linguistics/Arabic (LIAB) 1AX.
Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1A. Prerequisite: LIAB 1B with a grade of C– or better, or equivalent and LIAB 1BX with a grade of D or better, or equivalent.

Linguistics/Arabic (LIAB) 1BX.
Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1AX. Prerequisite: LIAB 1A with a grade of C– or better, or equivalent and LIAB 1AX with a grade of D or better, or equivalent.

Linguistics/Arabic (LIAB) 1C.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1CX. Prerequisite: LIAB 1B with a grade of C– or better, or equivalent and LIAB 1BX with a grade of D or better, or equivalent.

Linguistics/Arabic (LIAB) 1CX.
Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1C. Prerequisite: LIAB 1B with a grade of C– or better, or equivalent and LIAB 1BX with a grade of D or better, or equivalent.

Linguistics/Arabic (LIAB) 1D.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1D. Successful completion of LIAB 1D and 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges. Prerequisites: LIAB 1C with a grade of C– or better, or equivalent and LIAB 1CX with a grade of D or better, or equivalent.

Linguistics/Arabic (LIAB) 1EX.
Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1D. Successful completion of LIAB 1D and 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges. Prerequisites: LIAB 1C with a grade of C– or better, or equivalent and LIAB 1CX with a grade of D or better, or equivalent.

Linguistics/Arabic (LIAB) 1CX.
Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1D. Successful completion of LIAB 1D and 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges. Prerequisites: LIAB 1C with a grade of C– or better, or equivalent and LIAB 1CX with a grade of D or better, or equivalent.

Linguistics/Arabic (LIAB) 1DX.
Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1D. Successful completion of LIAB 1D and 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges. Prerequisites: LIAB 1C with a grade of C– or better, or equivalent and LIAB 1CX with a grade of D or better, or equivalent.

Linguistics/Arabic (LIAB) 1D.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1D. Successful completion of LIAB 1D and 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges. Prerequisites: LIAB 1C with a grade of C– or better, or equivalent and LIAB 1CX with a grade of D or better, or equivalent.

Linguistics/Arabic (LIAB) 1E.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1CX. Prerequisites: LIAB 1D with a grade of C– or better, or equivalent, and LIAB 1DX with a grade of D or better, or equivalent.

Linguistics/Arabic (LIAB) 1E.
Arabic Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1C. Prerequisite: LIAB 1B with a grade of C– or better, or equivalent and LIAB 1AX with a grade of D or better, or equivalent.

Linguistics/Arabic (LIAB) 1A.
Heritage Language Program. (Offered in Summer Session only.)

FRENCH

See also Linguistics/Heritage Language Program.

Linguistics/French (LIFR) 1A.
French Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIFR 1AX. Prerequisite: no prior study of French.

Linguistics/French (LIFR) 1AX.
Analysis of French (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in French. Must be taken in conjunction with LIFR 1A. Prerequisite: LIFR 1B with a grade of C– or better, or equivalent and LIFR 1BX with a grade of D or better, or equivalent.

Linguistics/French (LIFR) 1BX.
Analysis of French (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in French. Must be taken in conjunction with LIFR 1A. Prerequisite: LIFR 1B with a grade of C– or better, or equivalent and LIFR 1AX with a grade of D or better, or equivalent.

Linguistics/French (LIFR) 1CX.
Analysis of French (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in French. Must be taken in conjunction with LIFR 1A. Prerequisite: no prior study of French.

Linguistics/French (LIFR) 1C.
French Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIFR 1AX. Prerequisite: LIFR 1B with a grade of C– or better, or equivalent and LIFR 1BX with a grade of D or better, or equivalent.

Linguistics/French (LIFR) 1C.
Heritage Language Program. (Offered in Summer Session only.)

Linguistics/French (LIFR) 1CX.
Analysis of French (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in French. Must be taken in conjunction with LIFR 1C. Prerequisite: LIFR 1B with a grade of C– or better, or equivalent and LIFR 1BX with a grade of D or better, or equivalent.

Linguistics/French (LIFR) 1D.
French Conversation (2.5)
Small conversation sections taught entirely in French. Emphasis on speaking, reading, writing, and culture. Prerequisite: the language functions needed for successful communication. Must be taken in conjunction with LIFR 1CX. Prerequisite: LIFR 1C with a grade of C– or better, or equivalent and LIFR 1CX with a grade of D or better, or equivalent.

Linguistics/French (LIFR) 1C.
Heritage Language Program. (Offered in Summer Session only.)

Linguistics/French (LIFR) 1B.
French Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIFR 1AX. Prerequisite: LIFR 1B with a grade of C– or better, or equivalent and LIFR 1BX with a grade of D or better, or equivalent.

Linguistics/French (LIFR) 1BX.
Analysis of French (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in French. Must be taken in conjunction with LIFR 1A. Prerequisite: LIFR 1B with a grade of C– or better, or equivalent and LIFR 1AX with a grade of D or better, or equivalent.

Linguistics/French (LIFR) 1A.
French Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIFR 1AX. Prerequisite: LIFR 1B with a grade of C– or better, or equivalent and LIFR 1BX with a grade of D or better, or equivalent.

Linguistics/Espenato (LIEO) 5AS.
Fundamentals of Esperanto I (5)
A communicative introduction to Esperanto for students, with no prior exposure, with attention to listening comprehension, conversation, reading, writing, and grammar analysis. (Offered in Summer Session only.)

Linguistics/Espenato (LIEO) 5BS.
Fundamentals of Esperanto II (5)
A course to increase the proficiency level of students who have completed LIEO 5AS or who are at an equivalent level. Attention to listening comprehension, conversation, reading, writing, and grammar analysis. Prerequisite: LIEO 5AS or consent of instructor. (Offered in Summer Session only.)

Linguistics/Espenato (LIEO) 5CS.
Fundamentals of Esperanto III (5)
A course to increase the proficiency level of students who have completed LIEO 5BS or who are at an equivalent level. Attention to listening comprehension, conversation, reading, writing, and grammar analysis. Prerequisite: LIEO 5BS or consent of instructor. (Offered in Summer Session only.)
Linguistics/French (LIFR) 1DX.
Analysis of French (2.5)
Practice of the grammatical functions indispensable for comprehensive communication in the language. The course is taught entirely in French. Must be taken in conjunction with LIFR 1DX, Successful completion of LIFR 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges. Prerequisite: LIFR 1C with a grade of C– or better, or equivalent and LIFR 1CX with a grade of D or better, or equivalent.

Linguistics/French (LIFR) 11.
Elementary French Reading (2–4)
A self-instructional program designed to prepare graduate students to meet reading requirements in French. After a one-week introduction to French orthography/sound correspondence, students work with a self-instructional textbook. Mid-term and final examinations. (F,W,S)

Linguistics/French (LIFR) 5A, 5B, 5C, 5D.
Fundamentals of French (5)
This course concentrates on those language skills essential for communication: listening comprehension, conversational, reading, writing, and grammar analysis. UCSD students: LIFR 5A is equivalent to LIFR 1A/1AX, LIFR 5B to LIFR 1B/1BX, LIFR 5C to LIFR 1C/1CX, and LIFR 5D to LIFR 1D/1DX. Enrollment is limited. Prerequisite: None for 5A; for 5B, two or more years of French in high school or the first semester of college-level French. (Offered in Summer Session only.) See also “Department of Literature.”

GERMAN

Linguistics/German (LIGM) 1A.
German Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIGM 1AX. Prerequisite: no prior study of German.

Linguistics/German (LIGM) 1AX.
Analysis of German (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in German. Must be taken with LIGM 1A. Prerequisite: no prior study of German.

Linguistics/German (LIGM) 1B.
German Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIGM 1BX. Prerequisites: LIGM 1A with a grade of C– or better, or equivalent and LIGM 1AX with a grade of D or better, or equivalent.

Linguistics/German (LIGM) 1BX.
Analysis of German (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in German. Must be taken with LIGM 1B. Prerequisites: LIGM 1A with a grade of C– or better, or equivalent and LIGM 1AX with a grade of D or better, or equivalent.

Linguistics/German (LIGM) 1C.
German Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIGM 1CX. Prerequisites: LIGM 1B with a grade of C– or better, or equivalent and LIGM 1BX with a grade of D or better, or equivalent.

Linguistics/German (LIGM) 1CX.
Analysis of German (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in German. Must be taken with LIGM 1C. Prerequisites: LIGM 1B with a grade of C– or better, or equivalent and LIGM 1BX with a grade of D or better, or equivalent.

Linguistics/German (LIGM) 1D.
German Conversation (2.5)
Small conversation sections taught entirely in German. Emphasis on speaking, reading, writing, and culture. Practice of the language functions needed for successful communication. Must be taken in conjunction with LIGM 1D. Successful completion of LIGM 1D and LIGM 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges. Prerequisites: LIGM 1C with a grade of C– or better, or equivalent and LIGM 1CX with a grade of D or better, or equivalent.

Linguistics/German (LIGM) 1DX.
Analysis of German (2.5)
Practice of the grammatical functions indispensable for comprehensive communication in the language. The course is taught entirely in German. Must be taken in conjunction with LIGM 1D. Successful completion of LIGM 1D and LIGM 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges. Prerequisites: LIGM 1C with a grade of C– or better, or equivalent and LIGM 1CX with a grade of D or better, or equivalent.

Linguistics/German (LIGM) 11.
Elementary German Reading (2–4)
A self-instructional program designed to prepare graduate students to meet reading requirements in German. After a one-week introduction to German orthography/sound correspondence, students work with a self-instructional textbook. Mid-term and final examinations. (F,W,S)

Linguistics/German (LIGM) 5A, 5B, 5C, 5D.
Fundamentals of German (5)
This course concentrates on those language skills essential for communication: listening comprehension, conversational, reading, writing, and grammar analysis. UCSD students: LIGM 5A is equivalent to LIGM 1A/1AX, LIGM 5B to LIGM 1B/1BX, LIGM 5C to LIGM 1C/1CX, and LIGM 5D to LIGM 1D/1DX. Enrollment is limited. Prerequisites: none for 5A; for 5B, two or more years of German in high school or the first semester of college-level German. (Offered in Summer Session only.) See also “Department of Literature.”

GREEK

HERITAGE LANGUAGE PROGRAM

“Heritage” or “incomplete” language acquisition refers to the situation of individuals who are exposed to a language used in their environment during childhood that they may learn to understand or even speak to some degree, but never fully acquire. The idea behind the department’s innovative Heritage Language Program is that such individuals have a set of skills, competencies, and needs that are distinct from those of both native speakers learning to read and write the language for the first time, and also non-native learners who may study it as a foreign language during adulthood. These individuals therefore require a different type of language instruction, one that builds on and enhances the linguistic skills they already possess, and amplifies their cultural competence and literacy. The Heritage Language Program allows students to work towards developing higher levels of proficiency in order to pursue personal and professional goals.

Linguistics/Filipino for Filipino Speakers (LIHL) 112 (4)
For students who already comprehend informal spoken Filipino but wish to improve their communicative and sociocultural competence and their analytic understanding of language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Filipino. Some speaking ability in Filipino recommended. Prerequisite: upper-division standing or consent of instructor.

Linguistics/Advanced Filipino for Filipino Speakers (LIHL) 132 (4)
Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Filipino. Prerequisite: upper-division standing or consent of instructor.

Linguistics/Armenian for Armenian Speakers (LIHL) 113 (4)
For students who already comprehend informal spoken Armenian but wish to improve their communicative and sociocultural competence and their analytic understanding of language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Armenian. Some speaking ability in Armenian recommended. Prerequisite: upper-division standing or consent of instructor. (Not offered in 2010–11.)

Linguistics/Advanced Armenian for Armenian Speakers (LIHL) 133 (4)
Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Armenian. Prerequisite: upper-division standing or consent of instructor. (Not offered in 2010–11.)

Linguistics/Vietnamese for Vietnamese Speakers (LIHL) 114 (4)
For students who already comprehend informal spoken Vietnamese but wish to improve their communicative and sociocultural competence and their analytic understanding of language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Vietnamese. Some speaking ability in Vietnamese recommended. Prerequisite: upper-division standing or consent of instructor.

Linguistics/Advanced Vietnamese for Vietnamese Speakers (LIHL) 134 (4)
Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Vietnamese. Prerequisite: upper-division standing or consent of instructor.

Linguistics/Korean for Korean Speakers (LIHL) 115 (4)
For students who already comprehend informal spoken Korean but wish to improve their communicative and sociocultural competence and their analytic understanding of language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Korean. Some speaking ability in Korean recommended. Prerequisite: upper-division standing or consent of instructor.

Linguistics/Advanced Korean for Korean Speakers (LIHL) 135 (4)
Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Korean. Prerequisite: upper-division standing or consent of instructor.
Linguistics/Arabic for Arabic Speakers (LIHL) 116 (4)
For students who already comprehend informal spoken Arabic but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Arabic. Some speaking ability in Arabic recommended. Prerequisite: upper-division standing or consent of instructor.

Linguistics/Advanced Arabic for Arabic Speakers (LIHL) 136 (4)
Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (Registers). Advanced structural analysis and history of Arabic. Prerequisite: upper-division standing or consent of instructor.

Linguistics/Persian for Persian Speakers (LIHL) 117 (4)
For students who already comprehend informal spoken Persian but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (Registers). Advanced structural analysis and history of Persian. Some speaking ability in Persian recommended. Prerequisite: upper-division standing or consent of instructor.

Linguistics/Advanced Persian for Persian Speakers (LIHL) 137 (4)
Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (Registers). Advanced structural analysis and history of Persian. Prerequisite: upper-division standing or consent of instructor.

Linguistics/Cantonese for Cantonese Speakers (LIHL) 118 (4)
For students who already comprehend informal spoken Cantonese but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Cantonese. Some speaking ability in Cantonese recommended. Prerequisite: upper-division standing or consent of instructor. (Not offered in 2010–11.)

Linguistics/Advanced Cantonese for Cantonese Speakers (LIHL) 138 (4)
Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (Registers). Advanced structural analysis and history of Cantonese. Prerequisite: upper-division standing or consent of instructor.

Linguistics/Hindi for Hindi Speakers (LIHL) 119 (4)
For students who already comprehend informal spoken Hindi but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Hindi. Some speaking ability in Hindi recommended. Prerequisite: upper-division standing or consent of instructor. (Not offered in 2010–11.)

Linguistics/Advanced Hindi for Hindi Speakers (LIHL) 139 (4)
Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (Registers). Advanced structural analysis and history of Hindi. Prerequisite: upper-division standing or consent of instructor. (Not offered in 2010–11.)

HINDI
See also Linguistics/Heritage Language Program.

Linguistics/Hindi (LIHL) 1A. Hindi Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHL 1AX. Prerequisite: no prior study of Hindi. (Not offered in 2010–11.)

Linguistics/Hindi (LIHL) 1AX. Analysis of Hindi (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Hindi. Must be taken with LIHL 1A. Prerequisite: no prior study of Hindi. (Not offered in 2010–11.)

Linguistics/Hindi (LIHL) 1BX. Analysis of Hindi (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHL 1A. Prerequisite: no prior study of Hindi. (Not offered in 2010–11.)

Linguistics/Hindi (LIHL) 1C. Hindi Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHL 1CX. Prerequisite: LIHL 1A with a grade of C– or better, or equivalent and LIHL 1AX with a grade of D or better, or equivalent. (Not offered in 2010–11.)

Linguistics/Hindi (LIHL) 1CX. Analysis of Hindi (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Hindi. Must be taken in conjunction with LIHL 1A. Prerequisite: no prior study of Hindi. (Not offered in 2010–11.)

Linguistics/Hindi (LIHL) 1BX. Analysis of Hindi (2.5)
Smallconversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHL 1A. Prerequisite: LIHL 1A with a grade of C– or better, or equivalent and LIHL 1AX with a grade of D or better, or equivalent. (Not offered in 2010–11.)

Linguistics/Hindi (LIHL) 1D. Hindi Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHL 1DX. Prerequisite: LIHL 1A with a grade of C– or better, or equivalent and LIHL 1AX with a grade of D or better, or equivalent. (Not offered in 2010–11.)

Linguistics/Hindi (LIHL) 1DX. Analysis of Hindi (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Hindi. Must be taken in conjunction with LIHL 1D. Prerequisite: LIHL 1A with a grade of C– or better, or equivalent and LIHL 1AX with a grade of D or better, or equivalent. (Not offered in 2010–11.)

Linguistics/Hindi (LIHL) 1E. Hindi Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHL 1EX. Prerequisite: LIHL 1A with a grade of C– or better, or equivalent and LIHL 1AX with a grade of D or better, or equivalent. (Not offered in 2010–11.)

ITALIAN

Linguistics/Italian (LIIT) 1A. Italian Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIIT 1AX. Prerequisite: no prior study of Italian.

Linguistics/Italian (LIIT) 1AX. Analysis of Italian (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Italian. Must be taken with LIIT 1A. Prerequisite: no prior study of Italian.

Linguistics/Italian (LIIT) 1B. Italian Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIIT 1BX. Prerequisite: LIIT 1A with a grade of C– or better, or equivalent and LIIT 1AX with a grade of D or better, or equivalent. (Not offered in 2010–11.)

Linguistics/Italian (LIIT) 1BX. Analysis of Italian (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Italian. Must be taken with LIIT 1A. Prerequisite: LIIT 1A with a grade of C– or better, or equivalent and LIIT 1AX with a grade of D or better, or equivalent.

Linguistics/Italian (LIIT) 1C. Italian Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIIT 1CX. Prerequisite: LIIT 1B with a grade of C– or better, or equivalent and LIIT 1BX with a grade of D or better, or equivalent.

Linguistics/Italian (LIIT) 1CX. Analysis of Italian (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Italian. Must be taken with LIIT 1C. Prerequisite: LIIT 1B with a grade of C– or better, or equivalent and LIIT 1BX with a grade of D or better, or equivalent.

Linguistics/Italian (LIIT) 1DX. Analysis of Italian (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIIT 1DX. Prerequisite: LIIT 1C with a grade of D or better, or equivalent.

Linguistics/Italian (LIIT) 1EX. Analysis of Italian (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIIT 1EX. Prerequisite: LIIT 1C with a grade of D or better, or equivalent.

PORTUGUESE

Linguistics/Portuguese (LIPO) 1A. Portuguese Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Emphasis on the language and culture of Brazil. Must be taken in conjunction with LIPO 1AX. Prerequisite: no prior study of Portuguese.

Linguistics/Portuguese (LIPO) 1AX. Analysis of Portuguese (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Portuguese. Must be taken in conjunction with LIPO 1A. Prerequisite: no prior study of Portuguese.

Linguistics/Portuguese (LIPO) 1B. Portuguese Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIPO 1BX. Prerequisite: LIPO 1A with a grade of C– or better, or equivalent and LIPO 1AX with a grade of D or better, or equivalent.
vocabulary-building, reading, and culture. Emphasis on the language and culture of Brazil. Must be taken in conjunction with LIPO 1BX. Prerequisites: LIPO 1A with a grade of C– or better and LIPO 1AX with a grade of D or better, or equivalent.

Linguistics/Portuguese (LIPO) 18X. Analysis of Portuguese (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and reading. The course is taught entirely in Portuguese. Must be taken in conjunction with LIPO 1B. Prerequisites: LIPO 1A with a grade of C– or better and equivalent and LIPO 1AX with a grade of D or better, or equivalent.

Linguistics/Portuguese (LIPO) 1C. Portuguese Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary-building, reading, and culture. Emphasis on the language and culture of Brazil. Must be taken in conjunction with LIPO 1CX. Prerequisites: LIPO 1B with a grade of C– or better or equivalent and LIPO 1BX with a grade of D or better, or equivalent.

Linguistics/Portuguese (LIPO) 1DX. Analysis of Portuguese (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and reading. The course is taught entirely in Portuguese. Must be taken in conjunction with LIPO 1C. Prerequisites: LIPO 1B with a grade of C– or better or equivalent and LIPO 1BX with a grade of D or better, or equivalent.

Linguistics/Portuguese (LIPO) 1D. Portuguese Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIPO 1DX. Successful completion of LIPO 1D and LIPO 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges. Prerequisites: LIPO 1C with a grade of C– or better, or equivalent and LIPO 1CX with a grade of D or better, or equivalent.

Linguistics/Portuguese (LIPO) 115. Intermediate Brazilian Portuguese for the Social Sciences: Social Movements (2.0)
Conducted entirely in Portuguese. Course aims to improve oral language skills through discussions of social science topics, with emphasis on political and social movements in contemporary Brazil. Course materials may encompass televised news broadcasts, newspapers and periodicals. Prerequisites: LIPO 1D and 1DX or equivalent by consent of instructor.

Linguistics/Portuguese (LIPO) 17. Intermediate Brazilian Portuguese for the Social Sciences: Ethnicity (2.0)
Conducted entirely in Portuguese. Course aims to improve oral language skills through discussions of social science topics, with emphasis on the role of ethnicity in contemporary Brazil. Course materials may encompass televised news broadcasts, newspapers and periodicals. Prerequisites: LIPO 1D and 1DX or equivalent by consent of instructor.

Linguistics/Portuguese (LIPO) 18. Analysis of Portuguese (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and reading. The course is taught entirely in Portuguese. Must be taken in conjunction with LIPO 1B. Prerequisites: LIPO 1A with a grade of C– or better and equivalent and LIPO 1AX with a grade of D or better, or equivalent.

Linguistics/Spanish (LISP) 1A. Spanish Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LISP 1AX. Prerequisite: no prior study of Spanish.

Linguistics/Spanish (LISP) 1CX. Analysis of Spanish (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and reading. The course is taught entirely in Spanish. Must be taken with LISP 1A. Prerequisite: no prior study of Spanish.

Linguistics/Spanish (LISP) 1B. Spanish Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LISP 1BX. Prerequisites: LISP 1A with a grade of C– or better, or equivalent and LISP 1AX with a grade of D or better, or equivalent.

Linguistics/Spanish (LISP) 18X. Analysis of Spanish (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and reading. The course is taught entirely in Spanish. Must be taken with LISP 1B. Prerequisites: LISP 1A with a grade of C– or better, or equivalent and LISP 1AX with a grade of D or better, or equivalent.

Linguistics/Spanish (LISP) 1C. Spanish Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LISP 1CX. Prerequisites: LISP 1B with a grade of C– or better, or equivalent and LISP 1BX with a grade of D or better, or equivalent.

Linguistics/Spanish (LISP) 115. Intermediate Brazilian Portuguese for the Social Sciences: Social Movements (2.0)
Conducted entirely in Portuguese. Course aims to improve oral language skills through discussions of social science topics, with emphasis on political and social movements in contemporary Brazil. Course materials may encompass televised news broadcasts, newspapers and periodicals. LISP 15 is offered fall quarter only, LISP 16 is offered winter quarter only, and LISP 17 is offered spring quarter only. Each course may be taken one time and need not be taken in sequence. Prerequisites: LISP 1DX/DX or at least three semesters/four quarters of college Spanish or by permission of the instructor.

Linguistics/Spanish (LISP) 15, 16, 17. Intermediate Spanish for the Social Sciences (2)
Conducted entirely in Spanish. Course aims to improve oral language skills through discussions of social science topics, with emphasis on political events and current affairs. Course materials encompass televised news broadcasts, newspapers and periodicals. LISP 15 is offered fall quarter only, LISP 16 is offered winter quarter only, and LISP 17 is offered spring quarter only. Each course may be taken one time and need not be taken in sequence. Prerequisites: LISP 1DX/DX or at least three semesters/four quarters of college Spanish or by permission of the instructor.

Linguistics/Spanish (LISP) 19. Directed Study-Linguistics (2–4)
Introductory-level study of a language in the language laboratory on a self-instructional basis. Depending on the availability of appropriate study materials, the course may be taken in blocks of two or four units of credit and may be repeated up to the total number of units available for that language.

Linguistics/Spanish (LISP) 5A, 5B, 5C. 5D. Fundamentals of Spanish (5)
This course concentrates on those language skills essential for communication: listening comprehension, conversation, reading, writing, and grammar analysis. UCSD students: LISP 5A is equivalent to LISP 1A/1AX, LISP 5B to LISP 5B/5BX, LISP 5C to LISP 1C/1CX and LISP 5D to LISP 1D/1DX. Enrollment is limited. Prerequisites: none for 5A; for 5B, 5C or two or more years of Spanish in high school or the first semester of the first quarter of college-level Spanish. (Offered in Summer Session only.)

The Department of Literature at UC San Diego is unique both conceptually and structurally in that it combines all literary study in a single department, enabling students to concentrate on single-language or national literatures, while at the same time facilitating student engagement in dialogue across literatures and languages. The department also houses undergraduate and graduate study in the craft and theory of creative writing. The department brings together writers, teachers, scholars, and students of several different languages and literatures, uniting them by the nature of the studies they pursue. This lends a comparative aspect to both undergraduate and graduate programs, which lead to the bachelor of arts, master of fine arts, the candidate in philosophy, and doctor of philosophy degrees. All students must show knowledge of a foreign literature by doing upper-division or graduate work in that literature in the original language. Courses are offered not only in the literatures themselves but in the theoretical aspects of literature and—often in cooperation with other departments—in the relationship of literary study to other disciplines such as philosophy, visual arts, music, sociology, history, psychology, linguistics, and communication. With special permission, undergraduates may take graduate courses for credit, and graduate students may also take undergraduate courses for credit.

The UCSD Library’s Mandeville Department of Special Collections offers the undergraduate and graduate literature student an excellent range of resources, including single-author collections, rare and out-of-print books, tapes, maps, and historical archives. Of special interest are the Southworth Collection of Spanish Civil War materials, the Hill Collection of South Pacific Voyages, the Don Cameron Allen Renaissance collection, and the Archive for New Poetry. Within the latter collection are an extensive series of single-author archives, including the papers of Paul Blackburn, Donald Allen, Lew Welch, Charles Reznikoff, Joanne Kyger, Jerome Rothenberg, and others. The Archive for New Poetry is one of the largest collections of contemporary poetry in the United States. Graduate students also have access, facilitated by travel grants, to all other University of California research collections.

Literature majors in languages are trained

• To write effectively, marshalling textual evidence in their engagement with complex and diverse

2010-2011 UC SAN DIEGO GENERAL CATALOG • LITERATURE
ideas.

- To read texts and other cultural productions in a nuanced manner, sensitive to factors of historical context and aesthetic form.
- To develop a critical vocabulary and framework that will promote and facilitate their engagement with texts.
- To work at an advanced level in a second language/literature.
- To lead, evaluate, and apply secondary sources to their analyses of primary texts.
- To develop a lifelong appreciation of the subtleties of cultural texts and the ongoing need to engage with and evaluate their meanings.

Literature majors in writing are trained

- To write clear expository prose.
- To work at an advanced level in a second language/literature, including the ability to complete at least one upper division course in literature, film, etc. taught exclusively in that language.
- To produce original works of fiction, poetry, or nonfiction.
- To demonstrate in-depth familiarity with the literary history of their chosen genre, including canonical and alternative texts across some breadth of time.
- To develop a critical vocabulary for understanding, discussing, and evaluating literary techniques and aesthetic arguments while honing editorial skills.
- To become active, sophisticated, articulate consumers and producers of a variety of texts.

CAREERS FOR LITERATURE MAJORS

Literature majors develop skills and perspectives that prepare them for careers in education and numerous other professions. The writing, analytical, and cultural breadth of majors makes them attractive as preparation for professional schools as well as advanced graduate studies. A degree in literature provides a strong background for the LSAT and law school. Medical schools seek out students who are prepared not only in the sciences, but also in the humanities and writing. The business world seeks college-trained English majors, and international corporations actively recruit students with a specialty in French, German, Italian, Russian, or Spanish. Literature majors’ skills also prepare them for work in advertising, editing, publishing, journalism, communications, mass media, and other professions where writers and editors are in demand. The knowledge of a second language and culture provides literature majors with a decided career advantage.

SECONDARY SCHOOL ENGLISH TEACHING

The literature department offers an excellent preparation for teaching English/ESL in secondary schools. Suggested majors include Literatures of the World, Literatures in English, and Literature/Writing. If you are interested in receiving a California teaching credential from UC San Diego, contact Education Studies (EDS) for information about prerequisites and professional preparation requirements. Please consult EDS and the literature department early in your academic career to plan an appropriate literature curriculum.

THE UNDERGRADUATE PROGRAM

THE MAJOR IN LITERATURE

There are ten majors available to students within the Department of Literature: Literatures in Cultural Studies, English, French, German, Italian, Russian, Spanish, Literatures of the World, Writing, and the composite major in two literatures. Requirements vary from major to major as described below. Once a student has decided upon a major in literature, he or she is required to meet regularly with an advisor in the Department of Literature. Worksheets defining major requirements are available in the literature undergraduate office to help students organize their course work.

All departmental courses taken to satisfy the requirements of the literature major, including courses in the secondary literature, must be taken for a letter grade. No grade below C– is acceptable for a course taken in the major.

At least six of the upper-division courses for the major, including a minimum of four in the primary literature, must be taken at UCSD.

Lower-Division Preparation

Lower-division requirements vary, depending on the literature major in which the student elects to concentrate. However, the department strongly recommends that, as part of the freshman/sophomore course work, students who have chosen or are considering a major in literature begin an appropriate lower-division language sequence in the Departments of Linguistics or Literature as preparation for upper-division course work in a foreign language and literature. All literature majors require knowledge of a second language.

Secondary Literature

All students majoring in literature must study a secondary literature, that is, a literature in a language different from that of their primary literature. The range of secondary literatures includes ASL, Classical Greek, Hebrew, and Latin, as well as the previously mentioned French, German, Italian, Russian, Spanish, and for those concentrating in a foreign literature, English is also an option. Students will satisfy this requirement by taking three courses in the secondary literature, given substantially in the native language. At least one of these courses must be upper-division. Students should see an advisor to confirm the selection of the specific courses that will be taken to satisfy both the lower-division and the upper-division components of the secondary literature requirement.

The lower-division component within the secondary literatures may be satisfied by: American Sign Language 1D/1DX and 1E; French (LTFR) 2B and either 2C or 50; German (LTGM) 2B and 2C; Hebrew (JUDA) 2 and 3 (see “Judica Studies”); Italian (LTIIT) 2B and 50; Greek (LTKG) 2 and 3; Latin (LTLA) 2 and 3; Russian (LTRU) 2B and 2C; two courses from Spanish (LTS) 50A-50B-50C. For majors other than literatures in English, two courses from English (LTEN) 21-22-23-25-26-27-28-29-60 are applicable. Literatures of the World and writing courses may not be applied toward the English secondary literature requirement.

Note: World Literature (LTWL) courses taught in English do not apply unless there is a foreign-language discussion section and materials are available in the foreign language. World Literature courses whose primary focus is U.S. literature may apply toward requirements in literatures in English. Alternative secondary literatures are subject to approval and petition.

Upper-division courses in the secondary literature are counted as part of the total number of upper-division courses required for the major when possible. Students are free to choose from any of the upper-division offerings in their secondary foreign literature. Special studies courses (198s and 199s) cannot be used to satisfy upper-division secondary literature requirements.

All departmental courses taken to satisfy the requirements of the literature major, including courses in the secondary literature, must be taken for a letter grade. No grade below C– is acceptable for a course taken in the major.

At least six of the upper-division courses for the major, including a minimum of four in the primary literature, must be taken at UCSD.

Writing Component in Literature Courses

It is the departmental expectation that students in lower-division courses will write a minimum of 2,500 words per course. In upper-division courses the minimum requirement is 4,000 words per course.

Honors Program

The department offers a special program of advanced study for outstanding undergraduates majoring in literature. Admission to this program requires an overall GPA of 3.5 and a literature major GPA of 3.7 at the beginning of the senior year. Students meeting these requirements will be sent, during the middle of fall quarter, an invitation to participate in the program. Interested students who anticipate that they will not meet the established criteria may petition to participate in the program by submitting a personal statement and a five-page example of their writing by the end of the third week of fall quarter. During the winter quarter of their senior year, all honors students enroll in the honors seminar (LTWL 191), which aims to deepen their understanding of the issues of theory and method implied in the study of literature. This seminar lays the groundwork for an honors thesis, written in spring quarter (LT_ 196), each under the supervision of a faculty member who specializes in the literature of the student’s primary concentration. The Honors Program concludes with an oral examination of each honors candidate by a faculty committee.
which is charged with recommending whether departmental honors are warranted and, if so, which degree of honors will appear on the student’s transcript and diploma. Students from this program will also be recommended for the Burkhart and Williams Prizes, which are awarded at graduation for outstanding achievement in the literature major. The honors seminar and thesis course may be applied toward the primary concentration in the literature major, if applicable. For Literature/Writing majors, the honors seminar is considered to be equivalent to a writing workshop.

Special Studies

These upper-division independent study opportunities are intended for advanced students, able to work on their own, and interested in a topic not normally covered by departmental offerings.

Students with upper-division standing, a departmental GPA of at least 3.0, an overall GPA of at least 2.5, and completion of lower-division prerequisites in the subject, are eligible to take special studies courses (198s and 199s). Those not satisfying these criteria may, with justification supported by the proposed special studies instructor, petition for an exception to the regulation. 198s and 199s require at least 4,000 words of writing or an equivalent project as determined by the instructor. Information and Special Studies Enrollment forms are available in the literature undergraduate office. Enrollment requires departmental approval. Special studies courses may not be taken for a grade. These courses may not be used to satisfy upper-division requirements for majors or minors.

Study Abroad

Study abroad can significantly enhance a student’s major, particularly in ways in which it relates to international issues. Literature students are encouraged to study abroad before their senior year. Students who take Education Abroad Program or Opportunities Abroad Program (EAP/OAP) courses in a country appropriate to their major may use up to five upper-division courses to satisfy major requirements and up to three toward a minor. For composite majors in literature, six courses from abroad may apply, with no more than four toward either one of the two concentrations. These must be approved by the department after they have been entered on the student’s official record at UCSD. The approval process is described in a handbook on receiving transfer credit, available in the Literature Undergraduate Office. Before leaving to study abroad, students should meet with an advisor to identify which EAP courses are appropriate to fulfill the major or minor requirements.

Information on EAP/OAP is given in the “Education Abroad Program” section of the UC San Diego General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at http://programsabroad.ucsd.edu/. Financial aid can be used for EAP/OAP study, and special study-abroad scholarships are also available.

INDIVIDUAL PROGRAM REQUIREMENTS

Primary Concentration in Cultural Studies

The Literature/Cultural Studies major aims to provide students with broad cultural literacy and critical thinking skills—in language, visual media, social practices, and theories of interpretation—which are basic, necessary cornerstones of a humanities education. With four focus areas—visual culture, popular cultures, culture and globalization, and social identities—the undergraduate major in Literature/Cultural Studies, on the one hand, offers literacy in a range of traditional and modern cultural forms (from literature and texts, to film, art, and visual culture) and methods for interpreting these cultural forms, and on the other hand, prepares students to engage with a society whose “culture” is, and will become increasingly, diverse, international, and multilingual.

1. Three lower-division courses:
   a. LTCS 50 and 52
   b. Third course may be selected from: LTEN 25, 26, 27, 28, 29, 60; LTWL 4A-B-C-D-F-M; TW 21-22-23-24-25-26; or LTWL 19A-B-C.

2. Six upper-division LTCS courses (one of each from the four a–d focus areas):
   a. Reading Visual Culture: LTCS 170, 171, 172, 173
   b. Popular Cultures: LTCS 110, 111, 114, 118
   c. Culture and Globalization: LTCS 125, 133, 140, 141, 145
   d. Social Identities: LTCS 130, 131, 132, 135

   Note: At least one upper-division LTCS methods course is recommended and will fulfill the upper-division requirement: LTCS 100, 102, 120, 155.

3. Three courses in a secondary literature, that is, a literature taught in a language other than English. At least one of these courses must be upper-division. Upper-division courses taken to satisfy the secondary literature requirement may be counted as part of the twelve upper-division courses. Special studies courses (198s and 199s) do not apply to the secondary literature requirement. See “Secondary Literature,” above.

4. The remaining upper-division electives, to total twelve upper-division courses, can be drawn from these existing Department of Literature courses:
   a. Literature in English: LTEN 150, 160, 178, 180, 181, 183, 184, 185, 186, 187, 188, 189
   b. Literatures in French: LTRF 145, 164, 170
   c. Literatures in Italian: LTI 122, 140, 150
   d. Literatures in Korean: LTKO 100
   e. Literatures in Spanish: LTSP 123, 137, 150A, 150B, 154, 170, 174, 175, 176, 177

Primary Concentration in a Foreign Literature

Literatures in French

1. Nine upper-division courses as follows:
   a. LTRF 115-116, Themes in French Intellectual and Literary History.
   b. Seven additional upper-division courses in French literature, including at least one course in each of the following periods: seventeenth or eighteenth century; nineteenth century; and twentieth century.

2. Three courses in a secondary literature, that is, a literature taught in a language other than French. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures which are taught in French do not apply to the secondary literature requirement. See “Secondary Literature,” above.

3. Upward-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

Primary Concentration in Literatures in English

1. Six lower-division courses:
   a. LTEN 21, 22, 23, 25, and 26
   b. One of the following: LTEN 27, 28, or 29

2. Nine upper-division courses from literatures in English offerings, including a course from each of the following four a–d categories:
   a. British Literature before 1660
   b. British Literature after 1660
   c. U.S. Literature before 1860
   d. U.S. Literature after 1860

3. One course in world Anglophone literature(s) with focus other than British or U.S. literatures.

4. One upper-division course in the history of criticism or in literary/cultural theory and methods from among the following: LTTH 110; LTTH 115; or LTC 100.

5. Three courses in a secondary literature, that is, a literature taught in a language other than English. At least one of these courses must be upper-division. Upper-division courses taken to satisfy the secondary literature requirement may be counted as part of the twelve upper-division courses. Special studies courses (198s and 199s) do not apply to the secondary literature requirement. See “Secondary Literature,” above.

6. Upper-division elective chosen from Department of Literature offerings to make a total of twelve upper-division courses.
Literatures in German

1. Nine upper-division courses in German literature. Two of these should be in literature written before the year 1850.
2. Three courses in a secondary literature, that is, a literature taught in a language other than German. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in German do not apply to the secondary literature requirement. See "Secondary Literature," above.
Upper-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

Literatures in Italian

1. Nine upper-division courses in Italian literature as follows:
   a. LTIT 100, Introduction to Italian Literature
   b. LTIT 115, Medieval Studies
   c. LTIT 161, Advanced Stylistics and Conversation
   d. One course in Italian North American Culture
   e. Five additional upper-division courses in Italian literature taught in Italian
2. Three courses in a secondary literature, that is, a literature taught in a language other than Italian. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in Italian do not apply to the secondary literature requirement. See "Secondary Literature," above.
3. Upper-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

Literatures in Russian

1. LTRU 1A-B-C and 2A-B-C or their equivalent.
2. Twelve upper-division courses in Russian:
   a. LTRU 104A-B-C
   b. LTRU 110A-B-C
   c. Six additional upper-division courses in Russian literature
3. Three courses in a secondary literature, that is, a literature taught in a language other than Russian. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in Russian do not apply to the secondary literature requirement. See "Secondary Literature," above.
Students in the Russian literature major are encouraged to participate in the Education Abroad Program (EAP) in Moscow and to investigate other options for foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill UCSD degree and major requirements.

Literatures in Spanish

1. Two lower-division Spanish literature courses, as indicated:
   a. LTSP 50A, Peninsular Literature
   b. Either LTSP 50B or LTSP 50C, Latin American Literature
2. Nine upper-division courses as follows:
   a. One course in Spanish Peninsular literature before 1900: LTSP 100, 107, 115, 119AB, 119C, 122, or the following topics course when the topic is pre-twentieth-century literature: LTSP 123
   b. One course in Latin American literature before 1900: LTSP 116, 135A, or any of the following regional, genre, or topics courses when the topic is pre-twentieth-century literature: LTSP 134, 136, 137, 138, 140, 141, 142, 171, 173, 174, 175, 176, 177, 178
   c. Seven additional upper-division courses in Spanish, Latin American, and/or Chicano literature (taught in Spanish)
3. Three courses in a secondary literature, that is, a literature taught in a language other than Spanish. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in Spanish do not apply to the secondary literature requirement. See "Secondary Literature," above, for applicable lower-division courses.
4. Upper-division electives from Department of Literature offerings, whether in Spanish or in another literature, to make a total of twelve upper-division courses.
   Students majoring in Spanish can choose to concentrate on either Spanish or Latin American literature. All students, however, are encouraged to take courses in the various national literatures as well as in Chicano literature for a broad background in Spanish language literatures.
   Students not having a solid linguistic base in Spanish are advised to take intermediate language courses from the LTSP 2 and 50 sequences for additional review of Spanish grammar, development of writing skills, and introduction to literary analysis. Only LTSP 50A and either 50B or 50C, however, can count towards the major.

Primary Concentration in Literatures of the World

The major in Literatures of the World allows students to expand the focus of their work beyond a single-language literature. They plan an individual program with options in regional studies (for example, Europe, the Americas, East Asia, Africa, Near East) and topical studies (for example, genre, period, gender, ethnic literature, literature and the visual arts, cultural studies, writing, Third World studies) as well as the single-language literatures.
1. Lower-division (three courses):
   A three-course sequence in literature chosen from any section in literature.
   Students can combine courses in an original national language/literature with courses in translation to satisfy this requirement, such as LTFR 2A and 2B plus LTWL 4A (Film and Fiction in Twentieth-Century Societies: French). Students may use either the Revelle College Humanities sequence (HUM 1–5) or Eleanor Roosevelt College’s Making of the Modern World (MMW 1–6) to satisfy the lower-division sequence for the LTWL major.
2. Upper-division (twelve courses):
   a. Six courses in a regional or single-language literature, to be taken in the original language(s) or in translation
   b. Four courses focused on a topic or another regional or single-language literature
   c. Two courses in non-European and non-U.S. literature; if satisfied under group (a) or group (b), any other two literature courses may be substituted.
3. Three courses in a secondary literature, that is, a literature taught in a language different from that of the primary literature. At least one of these courses must be upper-division. Upper-division courses taken to satisfy the secondary literature requirement may be counted as part of the twelve upper-division courses for the major and may, where appropriate, be applied to requirements in Group B or C. Students should see an advisor when selecting specific courses that will be taken to satisfy this requirement. Special studies courses (198s and 199s) and courses in foreign literatures taught in translation do not apply to the secondary literature requirement. See "Secondary Literature," above, for applicable lower-division courses.
   At least two of the required twelve upper-division courses must be in literature written before 1850. No more than four courses in literature/writing (LTWR) may be taken as part of the world literatures major, and these will generally apply to Group 2b.

Primary Concentration in Writing

The writing major is designed to provide direct experience in writing fiction, nonfiction, and poetry as well as engage the student writer in both the world of "writing culture”—public readings, publication, and the media—and literary theory and practical critique. An indispensable feature of this program is that it engages students with one another’s work, both critically and communally. Writing majors will move through a sequence of courses within (and between) genres in order to develop their own style and confidence in the work of writing and critique. Students who are interested in teaching writing will find this major an opportunity both for writing extensively and dealing critically with the act of written composition. The major requirements are as follows:
1. LTWR 8A, 8B, and 8C.
2. Three lower-division courses:
   a. LTEN 26
   b. Any two of the following: LTEN 21, 22, 23, 25, 27, 28, 29; TWS 21, 22, 23, 25, 26
   c. Twelve upper-division courses:
   3. Six upper-division courses in Literature/Writing from the writing workshop sequence (LTWR 100–129). These workshops may be repeated for credit (see course listing for number of times workshops may be repeated), but the requirement should show a range of writing experience in at least two major writing types. No other courses may be substituted for this basic requirement of six upper-division workshops.
a. One course from the group numbered LTWR 140–148.
b. Five upper-division electives chosen from Department of Literature offerings, excluding LTWR 100–148 courses.

4. Three courses in a secondary literature, that is, a literature taught in a language other than English. At least one of these courses must be upper-division. Students should see an advisor when selecting specific courses that will be taken to satisfy this requirement. Special studies courses (198s and 199s) and courses in foreign literatures which are taught in English translation do not apply to the secondary literature requirement. See “Secondary Literature,” above.

**Composite Major in Literature**

The composite major in literature permits a student to develop a solid foundation in two literatures while remaining within one department. Because the UCSD Department of Literature houses literatures that are divided among different departments at most universities, our composite major allows students to coordinate their studies with a single, closely-knit group of faculty, and to arrange their program without repeating different sets of major requirements. (For example, since a composite major necessarily combines literatures written in two different languages, it automatically fulfills the secondary language requirement for the literature major.) Students pursuing a composite major work closely with an advisor to plan a program of study that meets the following requirements:

1. Students will select two literatures of concentration (Literature 1 and Literature 2).
   a. One of the literatures must be in a language other than English.
   b. Both concentrations, however, can be in non-English literatures; thus a student can choose English and French, for example, or Russian and Spanish, French and Italian, German and Latin, Spanish and English, etc., but not Literatures of the World or Literature/Writing.

2. Students will meet all lower-division major requirements for each of the two literatures of concentration. See specific “Primary Concentration” listings above: English, Spanish, and Russian, for example, all have lower-division requirements for the major.

3. Students will take eight upper-division courses in each of the two selected literatures of concentration for a total of sixteen upper-division courses.
   a. These must satisfy the upper-division course requirements for each of the two majors. Thus, for example, if one of the concentrations is English, the student must include courses from each of the four stipulated categories; if one of the concentrations is Spanish, upper-division courses must include LTSP 130A and 130B.
   b. Beyond the upper-division requirements for each literature of concentration (Literature 1 and Literature 2), students will take a sufficient number of elective courses in each of the two literatures of concentration to make a total of eight upper-division courses in each chosen concentration.

**Double Major within the Department of Literature in Literature/Writing and Another Literature**

Students who wish to major both in Literature/Writing and in literature (any section) should see the department for information regarding appropriate double major requirements. Generally, all requirements for each major must be completed, though the secondary literature and two upper-division courses, where appropriate, may overlap from one major to the other.

Students must submit a double major petition for approval by the department and the student’s provost office.

**The Minor in Literature**

The department offers a wide range of possibilities for noncontiguous minors. The options include courses in a single regional or national literature, courses in more than one literature, and a combination of language and literature courses. The minors require seven courses. All courses taken to complete a literature minor must be taken for a letter grade. No grade below C– is acceptable. Advanced Placement (AP) credit will not satisfy minor requirements. Please see the department undergraduate office for specific minor requirements.

- A minor in literature will consist of seven courses as described below.
- French, German, Greek, Italian, Latin, Russian, or Spanish literature: seven courses, at least four of which must be upper-division in the same literature.
- Literatures in English, Literatures of the World, and Literature/Writing: seven courses, at least five of which must be upper-division.
- Lower-division courses applicable toward minors: English—LTEN 21, 22, 23, 25, 26, 27, 28, 29, 60 French—LTFR 2A-B-C, 50 German—LTGM 2A-B-C Greek—LTGK 1, 2, 3 Hebrew—JUDA 1, 2, 3 (see “Judaic Studies”) Italian—LITIT 2A-B, 50 Latin—LTLA 1, 2, 3 Russian—LTRU 2A-B-C Spanish—LTSP 2A-B-C-D-E, 50A-B-C Writing—LTWR 8A-B-C Literatures of the World—seven literature courses, at least five of which must be upper-division—usually 1) a two- or three-course lower-division sequence and 2) five upper-division courses with a single unifying theme. Students may use either the Revelle College Humanities sequence (HUM 1–5) or Eleanor Roosevelt College’s Making of the Modern World (MMW 1–6) to satisfy the lower-division sequence for the LTWL minor.

Writing minor—seven courses, at least five of which must be upper-division. The minimum of five upper-division courses must cover at least two major writing genres, with course work chosen from writing courses (LTWR) numbered 100 through 148.

Please see the department for further information and specifics regarding minors in literature.

**The Graduate Program**

**Doctoral Degree Program**

The department offers a single Ph.D. in literature with concentrations in any of the fields in which members of the department do research. The C.Phil. (Candidate in Philosophy) is conferred upon all students who pass the qualifying examination and are advanced to candidacy. Ph.D. students in the doctoral program may also qualify for the M.A. upon completion of their qualifying examinations. Applicants seeking only an M.A. degree are not accepted.

**Admission**

The following are requirements for admission to graduate study in literature:

1. A baccalaureate or a master’s degree with a major in literature or a related field. Official transcripts required.
2. Satisfactory scores on the Graduate Record Examination (GRE) achieved within the past three calendar years. The Subject Test is not required.
3. Satisfactory score on the Test of English as a Foreign Language (TOEFL) achieved with the past two calendar years is required for international applicants.
4. Competence in reading, understanding and interpreting both literary and critical texts as well as the ability to follow seminar discussions in a second language and, for comparative literature students, in a third language as well.
5. Writing sample (twenty-five page minimum) required for all applicants.

Completed applications and supporting materials must be received by the deadline posted on the department Web site (http://literature.ucsd.edu) for admission to the following fall quarter. Those planning to apply should take the GRE/TOEFL far enough in advance so that the scores will be available to the admissions committee in December.

Please refer to the department Web site (http://literature.ucsd.edu) for specific guidelines.

**Course of Study**

Formal study begins with coursework including a three-quarter introductory sequence (Literature/Theory 200A-B-C) which has an interdisciplinary and theoretical emphasis. During the first three years, the course of study will include at least four seminars in one literature and two in another (students in comparative literature must take at least one seminar in a third literature); at least four seminars drawn from offerings in literary theory, the second or a third literature, cultural studies, comparative literature, or composition studies; and five additional seminars open entirely to the student’s choice (four for students in comparative literature). Such “open”
seminars should generally be related to the intended dissertation field. At most, two seminars offered in other campus departments may be substituted for any of the latter group, with the advisor's permission. Students must also fulfill a historical breadth requirement by completing two seminars dealing with texts or cultural practices prior to 1800. For students with M.A. degrees the initial three-year sequence may be reduced, depending on previous course work and on the students' plans for doctoral study.

Students in comparative literature must take four of the above-described seminars in comparative literature or in other sections, provided that they be clearly comparative in nature. Comparative literature seminars taken for the first, second, or third literature requirement must be substantially focused upon the relevant language and deal with materials in the original.

Students wishing to take these courses in a literature for which seminars are not regularly offered may substitute independent study courses (298) or undergraduate courses enhanced by additional assignments. To do so, students must demonstrate through prior course work that they have already attained graduate-level competency in the literature and language in question. Approval from the comparative literature graduate advisor and the director of Graduate Studies must be obtained.

The third year is spent taking seminars and preparing for the qualifying examinations. During this year, students will register for two four-unit independent study courses (298). The first will be used to prepare reading lists for the subject-area qualifying examinations and the second will focus on the long paper required for the qualifying examinations. The qualifying examination is usually taken during the ninth quarter of enrollment. It must be completed by the end of the tenth quarter. The fourth, fifth, and sixth years will be devoted to preparation of the dissertation.

Students may write dissertations in any of the fields in which members of the department do research. These fields may include English, American, French, German, Italian, Greek, Latin, Spanish, Chinese, Japanese, Russian, Chicano, Asian-American, and African-American literature, comparative literature, literary theory, women's studies, cultural studies, early modern studies, and composition studies.

Language Requirements
Graduate students are expected to read literary and secondary texts and to follow seminar discussions or lectures in a second language (a language other than the one in which the literature of their intended specialization is written). Students in comparative literature should have in-depth knowledge of a second and third language.

To satisfy the language requirements, students must demonstrate language proficiency via completion of two graduate seminars in the literature of the second language. In addition, comparative literature students must complete one seminar in the literature of the third language. With the approval of the director of Graduate Studies, students may satisfy the language requirement by substituting an upper-division undergraduate course enhanced by additional assignments (grade of A must be received). If upper-division courses are not available, students may take independent study courses (298) in the language. These options are only allowed when there is no graduate seminar offered in the chosen language.

Students must pass an examination in reading, interpretation, and translation in each of the two or three in the case of comparative literature) courses taken to satisfy the second language requirement. The language requirements must be satisfied prior to the qualifying examination.

Advancement to Candidacy
Students should choose a Ph.D. advisor no later than the first quarter of the third year. The advisor, in consultation with the student, will form a qualifying examination committee. The student and the qualifying examination committee will jointly determine the nature of the long research paper, (approximately thirty pages) and the two areas of specialization on which the student will be examined in writing. After satisfactory completion of the paper and the written examinations, the student will take a two-hour oral examination. On passing the oral examination, the student is declared eligible for advancement to candidacy for the Ph.D. The C. Phil. degree is conferred upon successful advancement. Students may also be eligible for the M.A. degree upon advancement, if no previous graduate degrees have been awarded.

Students whose preparation for the qualifying examinations or whose performance during the course of the qualifying examinations is deemed unsatisfactory, will not be permitted to continue in the graduate program.

Teaching
The department requires that each Ph.D. student participate in apprentice teaching before the completion of the degree; the minimum amount required is equivalent to the duties expected of a half-time teaching assistant for three academic quarters. This teaching involves conducting, with the guidance and support of a supervising professor, discussion sections and related activities in a variety of freshman and sophomore courses. Academic credit is granted for the training given under the apprentice teaching program.

Grading
The only grading option for literature graduate courses is Satisfactory/Unsatisfactory (S/U). Students receive written evaluations of their performance in seminars. Upper-division undergraduate courses must be taken for a letter grade; students must receive a grade of A to maintain acceptable graduate status and continuation of funding.

DEPARTMENTAL PH.D. TIME LIMIT POLICIES
Students must be advanced to candidacy by the tenth quarter of study. Departmental normative time is six years. Total registered time at UC San Diego cannot exceed eight years.

FINANCIAL SUPPORT
Ph.D. students entering the program with a B.A. may be supported (either by employment or fellowships) for six years. Students who have an M.A. and have been given transfer credit may be supported for five years. Such support depends upon the funds available, the number of students eligible, and the rate of progress.

MASTER'S DEGREE PROGRAM
The requirement for the M.A. degree is completion of forty-eight total units distributed as follows:
1. LITH 200A, 200B, 200C (twelve units). A required introductory theory sequence generally taken during the first year in the Ph.D. program.
2. Twenty-eight units of graduate seminars. Students may take a maximum of twelve units of enhanced upper-division course work, when graduate seminars are not available in student's specialization. A maximum of eight units may be taken outside of the Department of Literature.
   • Sixteen units of course work in primary literature of concentration.
   • Eight units of course work in secondary literature (in a language other than that of the student's principal concentration).
   • Four units of course work open to the student's choice.
3. Eight units of guided research (LTXX 298), culminating in an acceptable written and oral comprehensive examination.

Although Ph.D. students sometimes elect to terminate their studies in our department with a master's degree, we do not admit students to a master's degree program in literature.

Master of Fine Arts Program
The Master of Fine Arts (M.F.A.) in Writing is a two-year residency program that offers a degree in the areas of fiction and poetry, and is designed for students who are interested in innovative and interdisciplinary approaches to narrative and poetics. The program is also distinguished by its commitment to community building, alternative forms of literary distribution, and transborder exchange.

The M.F.A. Program is small, with typically eight new students admitted each year. The intimate nature of the program allows students to work very closely with the writing faculty, as well as to receive support in the form of research assistantships and/or teaching assistantships.

The M.F.A. in Writing is part of the Department of Literature, which also offers a doctoral program in literature that emphasizes cultural studies, gender studies, postcoloniality, and critical theory. The M.F.A. Program co-exists with a thriving undergraduate creative writing major, and benefits from a long-established reading series and the university's Archive for New Poetry, which holds the papers of George Oppen, Lyn Hejinian, Susan Howe, Alice Notley, James Schuyler, Ron Silliman, and many other important figures. With strong ties to the Departments of Visual Arts, Theatre and Dance, Communication, and Music, and situated at one of the top-rated science campuses in the country, the program encourages...
its students to generate writing informed by other disciplines and media. In recognition of the diverse community we serve, our location on the border with Mexico, and the resources offered by our faculty, we look forward to offering bilingual workshops in Spanish and English as the program develops.

The M.F.A. Program in Writing offers students a unique opportunity to develop as writers in a community that integrates a multiplicity of collaborative, interdisciplinary, and theoretical approaches by which to complete a literary project.

Program

The Graduate Program in Writing is a two-year program. The M.F.A. degree is awarded upon the satisfactory completion of at least six quarters of registration, seventy-two units of required course work, a preliminary reading or presentation after the first year, a completed manuscript or project, and a final reading or presentation.

1. Four-unit course in Writing and Theory.
2. Four-unit course in Modern Art Movements and Aesthetics.
3. Twelve units of graduate seminars (or upper-division course in literature or guided independent study) in Literature.
4. Twenty units of writing workshops within a specific genre or in a combination of genres.
5. Four to twelve units of graduate-level courses in either an art practice or theory outside of the writing program. This could be in visual arts, music, or theatre, or in graduate seminars offered by the Department of Literature in a language other than English.
6. Eight to twelve units of guided research culminating in an acceptable manuscript of poetry, fiction, or creative nonfiction (which may include collaboration with other genres or media). A discussion of no more than one hour follows submission of the manuscript.
7. Twelve units of apprentice teaching and/or research assistantship at UCSD.

Additional program information available on the department Web site (http://literature.ucsd.edu/grad/mfawriting/).

Admission

The following are requirements for admission to the M.F.A. program:

1. A baccalaureate degree from an accredited institution of higher education, with training comparable in standard and content to that provided by the University of California. Official transcripts are required.
2. Satisfactory score on the Test of English as a Foreign Language (international applicants only).
3. Writing sample.
4. Three letters of recommendation.

Additional information is available on the department Web site (http://literature.ucsd.edu/grad/mfawriting/). Completed applications and support-
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

**PREREQUISITES:** None.

**LTC 98. Directed Group Studies (4)** Directed group study on a topic or in a field not included in the regular department curriculum by special arrangement for undergraduate students. (P/NP only.) Prerequisites: lower-division standing, completion of at least thirty units of undergraduate study at UCSD, minimum 3.0 GPA at UCSD, consent of instructor, and completed and approved Special Studies form.

**UPPER-DIVISION**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

**LTC 100. Theories and Methods in Cultural Studies (4)** Readings and discussion of the major theoretical texts that have framed work in cultural studies, with particular emphasis on those drawn from critical theory, studies in colonialism, cultural anthropology, feminism, semiotics, gay/lesbian studies, historicism, and psychoanalytic theory.

**LTC 102. Practicing Cultural Studies (4)** Survey and application of methods central to cultural studies as a critical social practice, examining the relationship between cultural studies and social transformation. Students will study varieties of material culture, and experiment with techniques of reading, interpretation, and intervention.

**LTC 110. Popular Culture (4)** A reading of recent theory on popular culture and a study of the major texts dealing with popular cultural practices, both contemporary and noncontemporary, as sites of conflict and struggle. Repeatable for credit when topics vary.

**LTC 111. Special Topics in Popular Culture in Historical Context (4)** Exploration of forms of popular culture in different historical and geographical contexts. Topics may include: folklore, dime novels and other types of popular literature, racial performances, popular religions, theatrical melodrama, photojournalism, and early film. Repeatable for credit when readings and focus vary.

**LTC 115. Performance Culture (4)** An investigation of different types of performances such as theater and the genres ranging from melodrama and minstrelsy to various cultural rituals and speech acts. From the perspective of literary studies, performance studies, postcolonial theory, ethnography and theatre history, the course explores race, gender, sexuality, and nation through performance.

**LTC 118. Comedy (4)** Comedy in fiction and film from ancient times to contemporary, including the Bible, Aristophanes, Shakespeare, and modern writers and film makers.

**LTC 120. Historical Perspectives on Culture (4)** The course will explore the relation among cultural production, institutions, history, and ideology during selected historical periods. In considering different kinds of texts, relations of power and knowledge at different historical moments will be discussed. Repeatable for credit when topics vary.

**LTC 125. Cultural Perspectives on Immigration and Citizenship (4)** Introduction to the studies of cultural dimensions of immigration and citizenship. Examines the diverse cultural texts—literature, law, film, music, the televised images, etc., that both shape and are shaped by immigration and the idea of citizenship in different national and historical contexts.

**LTC 130. Gender, Race/Ethnicity, Class, and Culture (4)** The course will focus on the representation of gender, ethnicity, and class in cultural production in view of various contemporary theories of race, sex, and class. Repeatable for credit when topics vary.

**LTC 131. Topics in Queer Cultures/ Queer Subcultures (4)** This course examines the intersection of sex, sexuality, and popular culture by looking at the history of popular representations of queer sexuality and their relation to political movements for gay and lesbian rights. Repeatable for credit when readings and focus vary.

**LTC 132. Special Topics in Social Identities and the Media (4)** A study of media representation and various aspects of identity, such as gender, sexuality, race, ethnicity, social class, culture, and geopolitical location. Students will consider the various media of film, television, alternative, video, advertising, music, and the Internet. Repeatable for credit when readings and focus vary.

**LTC 133. Globalization and Culture (4)** Studies of cultural dimensions of immigration and citizenship. This course examines the diverse cultural texts—literature, law, film, music, the televised images, etc., that both shape and are shaped by immigration and the idea of citizenship in different national and historical contexts.

**LTC 135. Interdisciplinary Approaches to Lesbian, Gay, Bisexual, and Transgender Studies (4)** Introduction to interdisciplinary examination of human sexuality and, especially, lesbian, gay, bisexual, and transgender identities and desires. Juxtaposes perspectives from humanities, social sciences, and natural sciences. Introduces queer theory to understand sexuality in relation to phenomena such as government, family, culture, medicine, race, gender, and class.

**LTC 141. Special Topics in Race and Empire (4)** The role of race and culture within the history of empires; may select a single empire for consideration, such as France, Britain, U.S., or Japan, or choose to examine the role of race and culture in comparative histories of colonialism. Repeatable for credit when readings and focus vary.

**LTC 145. National Cultures in Colonial and Postcolonial Contexts (4)** Studies of emergence of national cultures under colonial rule and their transformations in the process of decolonization. Investigation of ideological constructions of such cultural institutions as modern national language, national history and historiography, national literary canon, and folk literature and culture.

**LTC 150. Topics in Cultural Studies (4)** The course will examine one or more forms of cultural production or cultural practice from a variety of theoretical and historical perspectives. Topics may include: contemporary debates on culture, genres of popular music/fiction/film, AIDS and culture, the history of sexuality, subcultural styles, etc. Repeatable for credit when topics vary.

**LTC 160. Cultural Studies Approaches to Popular Music (4)** An investigation of different types of popular music genres, cultures, and practices such as hip hop, punk rock, R&B, jazz, country, and dance music cultures. From the perspective of ethnography and cultural and performance studies, the course will cover race, gender, sexuality, and the negotiations of local, as well as national communities and subcultures via popular music.

**LTC 165. Special Topics: The Politics of Food** This course will examine the representation and politics of food in literary and other cultural texts. Topics may include: food and poverty, the fast food industry, controversy about seed, sustainable food production, myths about hunger, eating and epistemology, aesthetics, etc. Repeatable for credit up to three times when topics vary.

**LTC 170. Visual Culture (4)** The course will focus on visual practices and discourses in their intersection and overlap, from traditional media, print, and photography to film, video, TV, computers, medical scanners, and the Internet.

**LTC 171. Topics in Television and Popular Media (4)** Examining the relationship between television and national culture, students will study the emergence of TV as a domestic technology, the history of race and gender in television programming, and the global politics of television distribution. Repeatable for credit when readings and focus vary.

**LTC 172. Special Topics in Screening Race/ Ethnicity, Gender and Sexuality (4)** Exploring both Hollywood and international filmmaking, an exploration of screen representations with attention to race/ethnicity, gender, and sexuality in different historical and linguistic contexts. Historical periods may extend from silent, through wartime and cold war, to contemporary era of globalization. Repeatable for credit when readings and focus vary.

**LTC 173. Topics in Violence and Visual Culture (4)** This course focuses on the critical study of representations of violence, such as war, genocide, sexual violence, and crime, across a range of media, including literature, film, photography, and other forms of visual culture. Repeatable for credit when readings and focus vary.

**LTC 192. Senior Seminar in Literatures in Cultural Studies (1)** The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-level/advanced level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: department stamp and/or consent of instructor.

**LTC 199. Special Studies (2 or 4)** Individual reading in an area not covered in courses currently offered by the department. (P/NP only.) Prerequisite: permission of the department.

**GRADUATE**

**PREREQUISITE:** graduate standing or consent of instructor.

**LTC 201. Theories and Methods of Analysis in Cultural Studies (4)** Contemporary theories of cultural studies. The seminar will concentrate on major interpretative approaches drawn from several areas of cultural and political analysis, including historicalism, Marxist theory, feminism, structuralism, psychoanalytic theory, semiotics, postmodernist studies, gay and lesbian studies, and others. The particular focus and approach may vary. Repeatable for credit.

**LTC 210. History and Culture (4)** This seminar will focus on the cultural practices of a particular historical period as a means of analyzing the relation between culture/ideology and economic and political modes of production and domination. Topic, historical period, and theoretical approach may vary. Repeatable for credit.

**LTC 220. Film/TV/Video Studies (4)** The seminar will concentrate on genres or subgenres within film/TV/video studies or on a stand of film TV/video theory. Possible topics may include: horror film, melodrama, sitcoms/soap operas/talk shows, music videos, black or queer cinema, etc. Repeatable for credit.

**LTC 222. Topics in Theory and History of Film (4)** This course will consider various theoretical approaches to film texts (historical-materialist, historicism, psychoanalytic, semiotic) as well as the history of film, the political economy of film production and distribution, exhibition practices,
and spectatorship in national and transnational contexts. Repeatable for credit when topics vary.

LTEN 225. Interdisciplinary and Historical Analysis of Cultural Texts (4)
The seminar will focus on a particular historical period and examine a variety of cultural texts vis-a-vis related historical, economic, political, and sociological discourses. The conjunction and disjunction of approaches will be explored in relation to specific texts. Repeatable for credit.

LTEN 250. Topics in Cultural Studies (4)
This seminar will be organized around any of various topic areas relating to cultural studies. These might include studies in colonialism, historicism, gender, sexuality, social institutions, popular culture, subaltern practices, etc. May be repeated for credit as topics vary.

LTEN 255. Cultural Studies, Colonialism, and Decolonialism (4)
This course considers different approaches to the study of colonialism in a variety of national contexts. Educational, legal, religious, military, and cultural apparatuses of colonialism, theories of decolonization, the “postcolonial” and feminist critiques of “modernity”/modernization will also be studied. May be repeated for credit when topics vary.

LTEN 256. Cultural Studies of Technoscience (4)
The course will explore work in cultural studies, feminist studies, and queer theory of scientific practices altering social relations, cultural identities, and conceptions of “nature.” Topics may include the AIDS pandemic, genetic research, electronic communities, reproductive technologies, and other topics. May be repeated for credit when topics vary.

LTEN 260. National Cultures (4)
Selected topics on the construction of national cultural identities. Investigation of the dynamics of canon formation and nation building in specific historical contexts. May be repeated for credit when topics vary.

LTEN 296. Research Practicum (1–12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTEN 297. Directed Studies: Reading Course (1–12)
This course may be designed according to an individual student’s needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTEN 298. Special Projects: Writing Course (1–12)
Similar to 297. No paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral proResearch toward the dissertation. Open only to Ph.D. students who have advanced to candidacy. Repeatable for credit.

LITERATURES IN ENGLISH

LOWER-DIVISION

LTEN 21. Introduction to the Literature of the British Isles: Pre-1660 (4)
An introduction to the literature written in English in Britain before 1660, with a focus on the interaction of text and history.

LTEN 22. Introduction to the Literature of the British Isles: 1660–1832 (4)
An introduction to the literature written in English in Britain and Ireland between 1660 and 1832, with a focus on the interaction of text and history.

LTEN 23. Introduction to the Literature of the British Isles: 1832–Present (4)
An introduction to the literature written in English in Britain, Ireland, and the British Empire (and the former British Empire) from 1832 to the present, with a focus on the interaction of text and history.

LTEN 25. Introduction to the Literature of the United States, Beginnings to 1865 (4)
An introduction to the literatures written in English in the United States from the beginnings to 1865, with a focus on the interaction of text and history.

LTEN 26. Introduction to the Literature of the United States, 1865 to the Present (4)
An introduction to the literatures written in English in the United States from 1865 to the present, with a focus on the interaction of text and history.

LTEN 27. Introduction to African American Literature (4)
A lecture/discussion course that examines a major topic or theme in African American literature as it is developed over time and across the literary genres of fiction, poetry, and belles lettres. A particular emphasis of the course is how African American writers have adhered to or departed from conventional definitions of genre.

LTEN 28. Introduction to Asian American Literature (4)
This course provides an introduction to the study of the history, communities, and cultures of different Asian-American people in the United States. Students will examine different articulations, genres, conflicts, narrative forms, and characterizations of the varied Asian experience.

LTEN 29. Introduction to Chicano Literature (4)
This course provides an introduction to the literary production of the population of Mexican origin in the United States. Students will examine a variety of texts dealing with the historical (social, economic, and political) experiences of this heterogeneous population.

LTEN 60. Topics in Ethnic American Literature (4)
A lecture and discussion course that critically examines the literary and cultural production emerging out of racialized, ethnic, and immigrant communities in the United States. Course may include fiction, poetry, novels, plays, popular culture, and film.

LTEN 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

PREREQUISITE: none.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTEN 104. Literatures of Medieval England (4)
Lecture/discussion course focusing on literature written in England before 1500. Topics may include themes (e.g., gender, social critique) or focus on specific genre (drama, romance, religious literature). May be repeated for credit when topics vary.

LTEN 107. Chaucer (4)
A study of Chaucer’s poetic development, beginning with The Book of the Duchess and The Parliament of Fowls, including Troilus and Criseyde, and concluding with substantial selections from The Canterbury Tales.

LTEN 110. The Renaissance: Themes and Issues (4)
Major literary works of the Renaissance, an exciting period of social and cultural transformation in England as elsewhere in Europe. Topics may include a central theme (e.g., humanism, reformation, revolution), a genre (e.g., pastoral), or comparison with other arts and sciences.

LTEN 112. Shakespeare I: The Elizabethan Period (4)
A lecture/discussion course exploring the development of Shakespeare’s dramatic powers in comedy, history, and tragedy, from the early plays to the middle of his career. Dramatic forms, themes, characters, and styles will be studied in the contexts of Shakespeare’s theatre and his society.

LTEN 113. Shakespeare II: The Jacobean Period (4)
A lecture/discussion course exploring the rich and varied achievements of Shakespeare’s later plays, including the major tragedies and late romances. Dramatic forms, themes, characters, and styles will be studied in the contexts of Shakespeare’s theatre and his society.

LTEN 114. Shakespeare III: Stage, Film, and Television (4)
A lecture/discussion/laboratory course involving the close study of six to eight plays representative of Shakespeare’s artistic career with particular emphasis upon the interrelation of Elizabethan plays and the stage and the critical implications of transposing plays to film and television. (Generally offered in summer session only.)

LTEN 115A. The Sixteenth Century: Themes and Issues (4)
Selected topics concerned with sixteenth-century English literature as a whole.

LTEN 117A. The Seventeenth Century: Themes and Issues (4)
Selected topics in English literature during a period of social change, religious controversy, emergence of the “New Science”, and the English Civil War. Readings chosen from writers including Jonson, Donne, Bacon, Milton, Marvell, and Dryden, among others. Repeatable for credit.

LTEN 118. Milton (4)
A critical examination of the major works, including Paradise Lost, by an author who was both a central figure in English political life in a revolutionary age and, in the view of most critics, the greatest non-anticlimactic poet in the English language. The course will study his poetic development in a variety of historical contexts.

LTEN 119. Restoration Literature (4)
The literature of a period following twenty years of civil war and revolution which saw the reopening of theatres and the rise of the professional writer. Topics may include Restoration comedy and tragedy; satire; neoclassical literary theory.

LTEN 120A. The Eighteenth Century: Themes and Issues (4)
Selected topics in English literature during an age of satiric writing, the shift from neoclassicism to romanticism, the emergence of the novel, and the expansion of the reading and writing public among the middle class and women. Writers such as Defoe, Pope, Swift, Richardson, Johnson, Burns, Wolstonecraft. May be repeated for credit when topics vary.

LTEN 124. The Nineteenth Century: Themes and Issues (4)
Selected topics in nineteenth-century British literature and culture, drawing on both romantic and Victorian periods: e.g., relationships between literature and imperialism, social and political debate, gender issues, religion, or science; or continuities between romantic and Victorian authors.

LTEN 125A. Romanticism: Themes and Issues (4)
Selected topics concerned with the romantic period as a whole.

LTEN 125B. First Generation Romantic Poets (4)
The poets who came of age during the French Revolution and who inaugurated literary modes that continue in our own time: Wordsworth, Coleridge, Blake, and their contemporaries.

LTEN 125C. Second Generation Romantic Poets (4)
Byron, Keats, Shelley, and their contemporaries.

LTEN 127A. The Victorian Period: Themes and Issues (4)
Selected topics concerned with Victorian literature as a whole.

LTEN 127B. Victorian Poetry (4)
Tennyson, Browning, Arnold, Clough, Hopkins, and their contemporaries.

LTEN 130. Modern British Literature (4)
Selected topics concerned with modern British literature; study of various authors, issues, and trends in literatures of the British Isles from the mid-1850s through the end of
the twentieth century. Repeatable for credit when topics vary. (Replaces the former LTEN 130A and 130B)

LTEN 132. Modern Irish Literature (4)
The Irish Revival and its aftermath: Yeats, Synge, O’Casey, Joyce, Beckett, and their contemporaries. Repeatable for credit when topics vary.

LTEN 134. Twentieth-Century British Poetry (4)
Survey of many poets of the United Kingdom including Scotland and Ireland. Included: War poems (1914–18, 1940–45), 30’s poems of social commitment, the Movement (1950s), recent postmodern figures (Hughes, Pynne).

LTEN 140. The Early Nineteenth-Century British Novel (4)
Includes the work of Jane Austen, Charlotte Bronte, Emily Bronte, Mary Shelly, and Charles Dickens.

LTEN 141. The High Victorian Novel (4)
Dickens, Thackeray, Trollope, Charlotte Bronte, Emily Bronte.

LTEN 142. The End of Victorianism (4)
The work of Robert Louis Stevenson, H.G. Wells, Thomas Hardy, Rudyard Kipling, and Joseph Conrad.

LTEN 143. The English Novel in the Eighteenth Century (4)
This course studies the writing of the novel in the eighteenth century. The focus of the course may be an introduction to selected major writers and texts, or a particular issue or problem in the literary and social history of the novel. May be repeated for credit when topics vary.

LTEN 144. The English Novel in the Nineteenth Century (4)
This course studies the writing of the novel in English during the nineteenth century. The focus of the course may be a survey of the nineteenth century (an introduction to selected major writers and texts), or a particular issue or problem in the literary and social history of the novel. May be repeated for credit when topics vary.

LTEN 145. The English Novel in the Twentieth Century (4)
This course studies the writing of the novel in English during the twentieth century. The focus of the course may be an introduction to selected major writers and texts, or a particular issue or problem in the literary and social history of the novel. May be repeated for credit when topics vary.

LTEN 146. Women and English/ American Literature (4)
Selected topics concerning women and anglophone literature. Topics include women writers, the literary representation of women, and women as readers. May be repeated for credit when topics vary.

LTEN 148. Genres in English and American Literature (4)
An examination of one or more genres in English and/or American literature, for example, satire, utopian fiction, autobiography, landscape poetry, the familiar essay. May be repeated for credit as topics vary.

LTEN 149. Themes in English and American Literature (4)
A consideration of one of the themes that recur in many periods of English or American literature, for instance, love, politics, the role of women in society. May be repeated for credit as topics vary.

LTEN 150. Gender, Text, and Culture (4)
This course will explore representations of the sexes and of their interrelationship in various forms of written production during different phases of English history. Emphasis will be placed upon connections of gender and of literature to other modes of social belief, experience, and practice. Repeatable for credit when topics vary.

LTEN 151. Topics: Literature and the Environment (4)
This course will explore the vital relationship between literature and the environment, investigating how literary representations of the land and/or its nonhuman inhabitants at different historical periods have influenced attitudes toward the natural world. May be taken for credit three times as topics vary.

LTEN 152. The Origins of American Literature (4)
Studies in American writing from the Puritans to the early national period (1620–1830), with emphasis on the thrust and continuity of American culture, social and intellectual, through the beginnings of major American writing in the first quarter of the nineteenth century.

LTEN 153. The Revolutionary War and the Early National Period in U.S. Literature (4)
A critical examination of how writing of various kinds—political, philosophical, and literary—functioned in the construction of the political body of the new American republic and the self-conception of its citizens.

LTEN 154. The American Renaissance (4)
A study of some of the chief works, and the linguistic, philosophical, and historical attitudes informing them, produced by such authors as Emerson, Hawthorne, Melville, Dickinson, and Whitman during the period 1836–1865, when the role of American writing in the national culture becomes an overriding concern.

LTEN 155. Interactions Between American Literature and the Visual Arts (4)
An exploration of the parallels between the work of individual writers, or movements, in American literature and the style and content of the work of certain visual artists. The writers studied are always American; the artists or art movements may represent non-American influences upon these American writers. May be repeated for credit as topics vary.

LTEN 156. American Literature from the Civil War to World War I (4)
A critical examination of works by such authors as Mark Twain, Henry James, Kate Chopin and Edith Wharton, who were writing in an age when the frontier was conquered and American society began to experience massive industrialization and urbanization.

LTEN 158. Modern American Literature (4)
A critical examination of American literature in several genres produced between the turn of the century and World War II. Attention will be given to historical and cultural contexts for defining American modernism. Repeatable for credit when topics vary.

LTEN 159. Contemporary American Literature (4)
A critical examination of American literature in several genres produced since World War II. Attention will be given to historical and cultural contexts for defining American postmodernism. Repeatable for credit when topics vary.

LTEN 160. Ideas and Photographic Images in American Literature (4)
Relate the history of photography in America to the history of ideas in American culture. It assumes that photographers think in images and through their images participate in cultural discourse. Repeatable for credit when topics vary.

LTEN 172. American Poetry II—Whitman through the Modernists (4)
Reading and interpretation of American poets from Whitman through the principal modernists—Pound, H.D., Eliot, Moore, Stevens, and others. Lectures will set the appropriate context in sociocultural and literary history.

LTEN 174. American Fiction II—Since Middle James (4)
Reading and interpretation of American fiction from Henry James through the principal modernists—Fitzgerald, Stein, Welty, Faulkner, and others. Lectures will set the appropriate context.

LTEN 175A. New American Fiction—Post-World War II to the Present (4)
Reading and interpretation of American fiction from the mid-1940s to the present. Lectures will set the appropriate context in sociocultural and literary history. May be repeated for credit when topics vary.

LTEN 175B. New American Poetry—Post-World War II to the Present (4)
Reading and interpretation of American poets whose work has made its major impact since the last war, for instance Charles Olson, Robert Creeley, Denise Levertov, Adrienne Rich, Allen Ginsberg, Frank O’Hara, and John Ashbery. Lectures will set the appropriate context in sociocultural and literary history. May be repeated for credit as topics vary.

LTEN 176. Major American Writers (4)
A study in depth of the works of major American writers. May be repeated for credit as topics vary.

LTEN 177. California Literature (4)
Reading and interpretation of such novelists as London, Norris, Steinbeck, West, and Didion and such poets as Jeffers, Rexroth,Everson, Duncan, and Snyder. May be repeated for credit as topics vary.

LTEN 178. Comparative Ethnic Literature (4)
A lecture-discussion course that juxtaposes the experience of two or more U.S. ethnic groups and examines their relationship with the dominant culture. Students will analyze a variety of texts representing the history of ethnicity in this country. Topics will vary.

LTEN 180. Chicano Literature in English (4)
Introduction to the literature in English by the Chicano population, the men and women of Mexican descent who live and write in the United States. Primary focus on the contemporary period.

LTEN 181. Asian American Literature (4)
Selected topics in the literature by men and women of Asian descent who live and write in the United States. Repeatable for credit when topics vary.

LTEN 182. African-American Humor (4)
African-American humor has historically been divided, consisting of that created by and for a black audience, and that performed for a white audience. We will investigate the origins of this division, and the ways in which African-American humor has shaped African American culture, from ca. eighteenth century to today.

LTEN 183. African American Prose (4)
Analysis and discussion of the novel, the personal narrative, and other prose genres, with particular emphasis on the developing characteristics of African American narrative and the cultural and social circumstances that influence their development.

LTEN 184. African American Poetry (4)
Close reading and analysis of selected works of African American poetry as they reflect styles and themes that recur in the literature.

LTEN 185. Themes in African American Literature (4)
An intensive examination of a characteristic theme, special issue, or period in African American literature. May be repeated for credit when topics vary.

LTEN 186. Literature of the Harlem Renaissance (4)
The Harlem Renaissance (1917–39) focuses on the emergence of the “New Negro” and the impact of this concept on black literature, art, and music. Writers studied include Claude McKay, Zora N. Hurston, and Langston Hughes. Special emphasis on new themes and forms.

LTEN 187. Black Music/Black Texts: Communication and Cultural Expression (4)
Explores roles of music as a traditional form of communication among Africans, Afro-Americans, and West-Indians. Special attention given to poetry of black music, including blues and other forms of vocal music expressive of contemporary political attitudes.

LTEN 188. Contemporary Caribbean Literature (4)
This course will focus on contemporary literature of the English-speaking Caribbean. The parallel development and contrasts of this Third World literature with those of the Spanish- and French-speaking Caribbean will also be explored.

LTEN 189. Twentieth-Century Postcolonial Literatures (4)
The impact of British colonialism, national independence movements, postcolonial cultural trends, and women’s magazines on the global production of literary texts in English. Course is organized by topic or geographical/historical location. May be repeated for credit when topics vary.
LTEN 190. Seminars (4)
These seminars are devoted to a variety of special topics, including the works of single authors, genre studies, problems in literary history, relations between literature and the history of ideas, literary criticism, literature and society, and the like. The student may enroll in more than one section in a single quarter.

LTEN 192. Senior Seminar in Literatures in English (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: department stamp and/or consent of instructor.

LTEN 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral exam. Prerequisites: department approval.

LTEN 198. Directed Group Study (4)
Research seminars and research, under the direction of a member of the faculty. May be repeated for credit three times. (P/NP grades only). Prerequisite: department approval.

LTEN Special Studies (2 or 4)
Tutorial; individual guided reading in an area not normally covered in courses. May be repeated for credit three times. (P/NP grades only). Prerequisite: department approval.

GRADUATE
Prerequisite: graduate standing or consent of instructor.

LTEN 214. Topics in Middle English Literature (4)
Consideration of one or more major figures, texts, or trends in Middle English literature. May be repeated for credit as topics vary.

LTEN 222. Elizabethan Studies (4)
Selected topics in the study of literary, dramatic, and other Elizabethan cultural texts. Emphasis will be upon articulations among a range of discourses, practices, and institutions. May be repeated for credit when topics vary.

LTEN 231. Restoration and Eighteenth-Century English Literature (4)
Consideration of one or more figures, texts, or trends in Restoration and eighteenth-century English literature, including Dryden, Pope, Swift, the early novel, satire. May be repeated for credit as topics vary.

LTEN 243. Early American Literature and Culture (4)
Consideration of one or more major figures, texts, or trends in Colonial and/or Revolutionary period American Literature, in particular, the relationship between literature and culture.

LTEN 245. Nineteenth-Century American Studies (4)
Consideration of some of the principal writers and movements in nineteenth-century American literature. May be repeated for credit as topics vary.

LTEN 246. Victorian Literature (4)
Consideration of one or more major figures, texts, or trends in the Victorian period. May be repeated for credit as topics vary.

LTEN 252. Studies in Modern American Literature and Culture (4)
Consideration of one or more major figures, texts, or trends in American literature, in particular the relationship between literature and culture. May be repeated for credit as topics vary.

LTEN 254. Topics in U.S. Minority Literatures and Cultures (4)
Consideration of one or more topics in “minority” traditions of cultural production in the United States, with an emphasis on the relationship among history, politics, and culture. May be repeated for credit as topics vary.

LTEN 255. Studies in Anglo-American Modernism (4)
A seminar on general topics relating to the study of modernism, utilizing cross-cultural, transnational approaches. Although individual literary texts may provide the focus, this seminar will investigate theoretical and methodological issues relating to modernist cultural studies in general.

LTEN 256. Postcolonial Discourses (4)
A survey of selected responses to imperialism and colonialism as presented in cultural texts produced by colonized or once-colonized peoples. Related issues to be examined: gender dynamics, class, representing others, mimicry, language, cultural theory, and the politics of literary genres. May be repeated for credit when topics vary.

LTEN 258. Studies in Anglophone African and/or African Diaspora Literature and Culture (4)
Consideration of one or more major figures, texts, performance or trends in literature and culture of Africa and/or the African Diaspora. Various theories and methodological approaches are applied to the representations being studied. Repeatable for credit as topics vary.

LTEN 259. Transnational Literary Studies (4)
New developments in the study of literature in diverse frameworks, including but not limited to: globalization, queer theory, diaspora studies, environmentalism, world literary systems, international literary awards, transnational feminism, literary markets, human rights discourse, and translation studies.

LTEN 271. Genres in English (4)
Consideration of one or more genres present in English and/or American literature; for instance, the ballad, landscape poetry, comedy, satire, the familiar essay. May be repeated for credit when topics vary.

LTEN 272. Cultural Traditions in English (4)
The study of writing produced over an extended period of time by members of an identifiable cultural formation as defined, e.g., by political/social ideology, class, religion, ethnicity, or sexual preference. May be repeated for credit when topics vary.

LTEN 281. Practicum in Literary Research and Criticism (4)
This course will focus on strategies for framing, organizing, and drafting projects in literary research. Students will study and apply various forms of literary methodology and will learn about recent developments in bibliography, textual editing, and research. May be repeated twice for credit as topics vary.

LTEN 295. M.A. Thesis (1–8)
Research for the master's thesis. Opened for repeated registration. Prerequisite: must be enrolled in M.A. program.

LTEN 296. Research Practicum (1–12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTEN 297. Directed Studies: Reading Course (1–12)
Research for the master's thesis. Opened for repeated registration. Repeatable for credit.

LTEN 298. Special Projects: Writing Course (1–12)
Similar to a 297, but a paper is required. Papers are usually on subject not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LTEN 299. Dissertation (1–12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

LITERATURES IN FRENCH

LOWER-DIVISION

Language and Literature Courses
Ordinarily, students entering the French literature program elect one of the following sequences: LTFR 2A, 2B, and 2C; or 2A, 2B, and 50.

LTFR 2A. Intermediate French I (5)
First course in a three-quarter sequence designed to prepare students for upper-division French courses. The course is taught entirely in French and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. Basic techniques of literary analysis. Prerequisites: LTFR 1C/1CX or its equivalent, score of 3 on French language AP exam or consent of instructor.

LTFR 2B. Intermediate French II (5)
Second course in a three-quarter sequence designed to prepare students for upper-division French courses. The course is taught entirely in French and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. Basic techniques of literary analysis. Prerequisites: LTFR 2A or its equivalent, score of 4 on French language or score of 3 on French literature AP exams or consent of instructor.

LTFR 2C. Intermediate French III: Composition and Cultural Contexts (4)
Designed to improve writing and conversational skills. Develop written expression in terms of organization or ideas, structure, vocabulary. Grammar review. Discussions of contemporary novel and film. May be taken in lieu of LTFR 50 as a prerequisite for upper-division courses. Prerequisites: LTFR 2B or its equivalent, score of 5 on French language or score of 4 on French literature AP exams or consent of instructor.

LTFR 21. Conversation Workshop I (1)
Designed to allow students to practice and develop their oral skills by expanding the vocabulary necessary to discuss abstract ideas and by building up the confidence necessary to participate in literary classes. Prerequisites: LTFR 1C/1CX or 1D/1DX or LTFR 2A or LTFR 2B or LTFR 2C or LTFR 50 or consent of instructor.

LTFR 31. Conversation Workshop II (1)
A one-credit, one-class-a-week course to develop and maintain oral skills at an advanced level by discussing current cultural issues of the francophone world. Prerequisite: LTFR 2B or consent of instructor.

LTFR 50. Intermediate French III: Textual Analysis (4)
Third course in a three-quarter sequence designed to prepare students for upper-division French courses. The course is taught entirely in French and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. It also introduces the student to basic techniques of literary analysis. Prerequisites: LTFR 2B or its equivalent, score of 5 on French language AP exam, or consent of instructor.

LTFR 60A. French for Reading Knowledge I (2)
A course designed for undergraduate and graduate students interested in developing reading skills only. No previous knowledge of French required. Texts are taken primarily from the humanities and social sciences.

LTFR 60B. French for Reading Knowledge II (2)
A continuation of the course for undergraduate and graduate students interested in developing reading skills only. No previous course work in French required, though recommended. Texts are taken primarily from the humanities and social sciences.

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. All upper-division courses are taught in French. Additional prerequisites may be specified below.
Students are strongly encouraged to take LTFR 115 and 116 before enrolling in other upper-division French literature courses.

LTFR 115. Themes in Intellectual and Literary History (4)
Course in a two-quarter sequence designed as an introduction to French literature and literary history. Each quarter will center on a specific theme or problem. It is recommended that majors whose primary literature is French take this sequence as early as possible. Prerequisite: LTFR 50 or LTFR 2C.

LTFR 116. Themes in Intellectual and Literary History (4)
Course in a two-quarter sequence designed as an introduction to French literature and literary history. Each quarter will center on a specific theme or problem. It is recommended that majors whose primary literature is French take this sequence as early as possible. Prerequisite: LTFR 50 or LTFR 2C.

LTFR 121. The Middle Ages and the Renaissance (4)
Major literary works of the Middle Ages and Renaissance as seen against the historical and intellectual background of the period. Medieval texts in modern French translation. May be repeated for credit as topics vary. Prerequisite: LTFR 115 or 116.

LTFR 122. Eighteenth Century (4)
Major literary works and problems of the eighteenth century. May be repeated for credit as topics vary. Prerequisite: LTFR 115 or 116.

LTFR 124. Nineteenth Century (4)
Major literary works of the nineteenth century. May be repeated for credit as topics vary. Prerequisite: LTFR 115 or 116.

LTFR 125. Twentieth Century (4)
Major literary works and problems of the twentieth century. May be repeated for credit as topics vary. Prerequisite: LTFR 115 or 116.

LTFR 141. Topics in Literatures in French (4)
Examines one or more periods, themes, authors, and approaches in French literature. Topics will vary with instructor. May be repeated for credit. Prerequisite: LTFR 115 or 116.

LTFR 142. Topics in Literary Genres in French (4)
An examination of one or more major or minor genres of French literature: for example, drama, novel, poetry, satire, prose poem, essay. Prerequisite: LTFR 115 or 116.

LTFR 143. Topics in Major Authors in French (4)
A study in depth of the works of a major French writer. Recommended for students whose primary literature is French. May be repeated for credit as topics vary. Prerequisite: LTFR 115 or 116.

LTFR 144. Topics in Literature and Ideas in French (4)
This course will center on writers or movements of international, literary, cultural, or ideological significance. May be repeated for credit when topics vary. Prerequisite: LTFR 115 or 116.

LTFR 145. Contemporary Thought in French (4)
Presentation of major currents and debates in contemporary philosophy, linguistics, psychoanalysis, anthropology, and social and feminist theory that have led to major changes in French culture and literary studies. Prerequisite: LTFR 115 or 116.

LTFR 164. Topics in Modern French Culture (4)
A course on changing topics such as France during the 60s, contemporary social and cultural structures (the school system, economy, political parties), myths of America in France, etc. May be repeated for credit as topics vary. Prerequisite: LTFR 115 or 116.

LTFR 170. Topics in French Film (4)
May include close analysis of films made in the French-speaking world from 1895 to the present; study of film theory, history, criticism; social contexts of films’ emergence and changing contexts of reception; particular movements, styles, or individual directors’ work. Prerequisite: LTFR 115 or 116.

LTFR 192. Senior Seminar in Literatures in French (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: department stamp and/or consent of instructor.

LTFR 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral exam. Prerequisite: department approval.

LTFR 198. Directed Group Study (4)
Research seminars and research, under the direction of a member of the faculty. (P/NP grades only) Prerequisite: department approval.

LTFR 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of French literature not normally covered in courses. (P/NP grades only) Prerequisite: departmental approval.

GRADUATE

LTFR 240. Topics in French Literature (4)
An examination of one or more major topics in French literature. May be repeated for credit when topics vary.

LTFR 295. M.A. Thesis (1–8)
Research for the master’s thesis. Opened for repeated registration up to eight units. Prerequisite: must be enrolled in M.A. program.

LTFR 296. Research Practicum (1–12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTFR 297. Directed Studies: Reading Course (1–12)
This course may be designed according to an individual student’s needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTFR 298. Special Projects: Writing Course (1–12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-semester requirement of the doctoral program. Repeatable for credit.

LTFR 299. Dissertation (1–12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

LITERATURES IN GERMAN

LOWER-DIVISION

Language and Literature Courses

LTGM 2A. Intermediate German I (5)
LTGM 2A follows the basic language sequence of the Department of Linguistics and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. The course includes grammar review and class discussion of reading and audio-visual materials. Specifically, the course prepares students for LTGM 2B and 2C. Prerequisite: LTGM 1C/1X or its equivalent or score of 3 on AP German language exam or consent of instructor.

LTGM 2B. Intermediate German II (5)
LTGM 2B is a continuation of LTGM 2A for those students who intend to practice their skills in reading, listening, comprehension, and writing on a more advanced level. The literary texts are supplemented by readings from other disciplines as well as audio-visual materials. Prerequisite: LTGM 2A or score of 4 on AP German language exam or consent of instructor.

LTGM 2C. Intermediate German III (4)
A course designed for students who wish to improve their ability to speak and write German. Students will read and discuss a variety of texts and films, and complete the grammar review begun in 2A. 2C emphasizes speaking, writing, and critical thinking, and prepares students for upper-division course work in German. Prerequisite: LTGM 2B or equivalent or score of 5 on AP German language exam or consent of instructor.

LTGM 60A. German for Reading Knowledge I (2)
A program for graduate and undergraduate students interested in developing reading skills only. No previous knowledge of German required. Texts are taken primarily from the humanities and social sciences, and include selections from publishers’ catalogs, scholarly articles, and books.

LTGM 60B. German for Reading Knowledge II (2)
A continuation of the program for graduate and undergraduate students interested in developing reading skills only. No previous knowledge of German required, though recommended. Texts are taken primarily from the humanities and social sciences and include selections from publishers’ catalogs, scholarly articles, and books.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTGM 100. German Studies I: Aesthetic Cultures (4)
This course offers an overview of German aesthetic culture in its various forms (literature, film, art, music, and architecture) and methods of analysis. Materials will explore the diversity of aesthetic production from the eighteenth century to the present.

LTGM 101. German Studies II: National Identities (4)
This course offers an overview of issues in contemporary and historical German cultures. How has national identity been constructed in the past? What does it mean to be a German in the new Europe? Materials include fiction, historical documents, films, and the Internet.

LTGM 123. Eighteenth-Century German Literature (4)
Major literary works, authors, or movements of the eighteenth century. May be repeated for credit as topics vary.

LTGM 126. Twentieth-Century German Literature (4)
The development of major forms and modes of German literary prose. May be repeated for credit as topics vary.

LTGM 130. German Literary Prose (4)
The development of major forms and modes of German literature. May be repeated for credit as topics vary.

LTGM 131. German Dramatic Literature (4)
The development of the drama in German. May be repeated for credit as topics vary.

LTGM 132. German Poetry (4)
The development of major forms and modes of German verse. May be repeated for credit as topics vary.

LTGM 190. Seminars in German Culture (4)
These seminars are devoted to a variety of special topics, including the works of single authors, genre studies, problems in literary history, relations between literature and the history of ideas, literary criticism, literature and society, and the like. May be repeated for credit as topics vary.

LTGM 192. Senior Seminar in Literatures in German (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small
group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisite: department stamp and/or consent of instructor.

LTGM 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral exam. Prerequisite: department approval.

LTGM 198. Directed Group Study (4)
Research seminars and research, under the direction of a member of the faculty. May be repeated for credit. (P/NP grades only.) Prerequisite: department approval.

LTGM 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of German literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) Prerequisite: department approval.

GRADUATE

PREREQUISITE: graduate standing or consent of instructor.

LTGM 242. Nineteenth-Century German Literature (4)
Consideration of one or more major figures, texts, or trends in nineteenth-century German literature. Topic varies. May be repeated for credit.

LTGM 272. Genres, Trends, and Forms (4)
Seminars on literary genres, trends, movements, schools, and on aspects of literary forms and structures in any given era or over a certain period of time. May be repeated for credit as topics vary.

LTGM 295. M.A. Thesis (1)
Research for the master’s thesis. Opens for repeated registration up to eight units. Prerequisite: must be enrolled in M.A. program.

LTGM 296. Research Practicum (1–12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTGM 297. Directed Studies: Reading Course (1–12)
This course may be designed according to an individual student’s needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTGM 298. Special Projects: Writing Course (1–12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LTGM 299. Dissertation (1–12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

GREEK LITERATURE

(See also listings under “Classical Studies.”)

LOWER-DIVISION

LTGK 1. Beginning Greek (4)
Study of ancient Greek, including grammar and reading.

LTGK 2. Intermediate Greek (II) (4)
Continuation of study of ancient Greek, including grammar and reading. Prerequisite: LTGK 1 or equivalent.

LTGK 3. Intermediate Greek (III) (4)
Continuation of study of ancient Greek, including grammar and reading of texts. Prerequisites: LTGK 1 and 2 or equivalent.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTGK 101. Greek Composition (4)
Greek prose composition. Corequisites: student must be concurrently enrolled in upper-division Literature/Greek course numbered 110 or above.

LTGK 110. Archaic Period (4)
Readings, in Greek, of texts from the archaic period. May be repeated for credit as topics vary. Prerequisites: LTGK 1, 2, 3 or equivalent.

LTGK 112. Homer (4)
Readings from the works of Homer. Prerequisites: LTGK 1, 2, 3 or equivalent.

LTGK 113. Classical Period (4)
Readings, in Greek, of texts from the fifth and fourth centuries B.C. May be repeated for credit as topics vary. Prerequisites: LTGK 1, 2, 3 or equivalent.

LTGK 118. Hellenistic Period (4)
Reading, in Greek, of texts from Hellenistic period. Prerequisites: LTGK 1, 2, 3 or equivalent.

LTGK 120. Topics in New Testament Greek (4)
Readings, in Greek, in the Greek New Testament. May be repeated for credit as topics vary. Prerequisites: LTGK 1, 2, 3 or equivalent.

LTGK 130. Tragedy (4)
Readings, in Greek, of one or more of the works of the classical tragedians Aeschylus, Sophocles, and Euripides. May be repeated for credit as topics vary. Prerequisites: LTGK 1, 2, 3 or equivalent.

LTGK 131. Comedy (4)
Readings, in Greek, of one or more of the works of Aristophanes. May be repeated for credit as topics vary. Prerequisites: LTGK 1, 2, 3 or equivalent.

LTGK 132. History (4)
Readings, in Greek, in the works of the ancient historians, including Herodotus, Thucydides, Xenophon, and others. May be repeated for credit as topics vary. Prerequisites: LTGK 1, 2, 3 or equivalent.

LTGK 133. Prose (4)
Readings, in Greek, in the works of ancient prose writers. May be repeated for credit as topics vary. Prerequisites: LTGK 1, 2, 3 or equivalent.

LTGK 135. Lyric Poetry (4)
Readings, in Greek, of the works of the ancient lyric poets. May be repeated for credit as topics vary. Prerequisites: LTGK 1, 2, 3 or equivalent.

LTGK 192. Senior Seminar in Literatures in Greek (I)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in Literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisite: department stamp and/or consent of instructor.

LTGK 198. Directed Group Study (4)
Directed group study in areas of Greek literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) Prerequisite: department approval.

LTGK 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of Greek literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) Prerequisite: department approval.

GRADUATE

PREREQUISITE: graduate standing or consent of instructor.

LTGK 297. Directed Studies (1–12)
Guided and supervised reading in a broad area of Greek literature. Offered for repeated registration.

LTGK 298. Special Projects (4)
Treatment of a special topic in Greek literature. Offered for repeated registration.

HEBREW LITERATURE

Please see “Near Eastern Literatures” under “Literatures of the World.”

LITERATURES IN ITALIAN

LOWER-DIVISION

(See “Department of Linguistics” for other course offerings in first-year Italian.)

LTIT 1A. The Language of Italian Culture I (4)
A beginning course in Italian language based on cultural texts: a short novel, folk music lyrics. Preparation for the second-year Italian literature/language sequence. Prerequisite: LTIT 1B or consent of instructor.

LTIT 1B. The Language of Italian Culture II (4)
A continued study of the elements of Italian conversation and grammar based on cultural texts: an opera libretto, a short mystery, short movies. Prerequisite: LTIT 1A or consent of instructor.

LTIT 1C. The Language of Italian Culture III (4)
Further study of Italian conversation and grammar based on cultural texts: a novel, folk music lyrics. Preparation for the second-year Italian literature/language sequence. Prerequisite: LTIT 1B or consent of instructor.

LTIT 2A. Intermediate Italian I (5)
A second-year course in Italian language and literature. Conversation, composition, grammar review, and an introduction to literary and nonliterary texts. Prerequisite: LTIT 1C or LIIT 1CX or its equivalent or a score of 3 on AP Italian Language and Culture Exam or placement result of 3 or 4 on the Language Placement Exam—Italian or consent of instructor.

LTIT 2B. Intermediate Italian II (5)
Continuation of second-year Italian language and literature. Reading, writing, conversation, grammar review, and an introduction to literary genres and contemporary Italian culture and society. Prerequisite: LTIT 2A or its equivalent, or consent of instructor, or a score of 4 on the AP Italian Language and Culture exam.

LTIT 50. Advanced Italian (4)
This course constitutes the sixth and final quarter of the Italian language sequence. It offers an intensive study of Italian grammar, drills in conversation and composition, and readings in modern Italian literature. Prerequisite: LTIT 2A and 2B, or consent of instructor.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTIT 100. Introduction to Literatures in Italian (4)
Reading and discussion of selections from representative authors. Review of grammar as needed. May be repeated for credit three times when topics vary. Prerequisite: LTIT 50 or its equivalent, or consent of instructor, or a score of 5 on the AP Italian Language and Culture exam.

2010-2011 UC SAN DIEGO GENERAL CATALOG • LITERATURE 13
**LTIT 110. Italian Literature (4)**
Topics in Italian literature: regional, historic, thematic. Texts will be read in Italian. May be repeated for credit when topics vary. **Prerequisite:** LTIT 100.

**LTIT 113. Love, War, and Conquest in the Italian Renaissance (4)**
A critical reading of Italian Renaissance texts with special attention to those themes, forms, and ideological conflicts still operative in today's culture. May be repeated for credit when topics vary.

**LTIT 115. Medieval Studies (4)**
Studies in medieval culture and thought with focus on one of the “three crowns” of Italian literature: Dante, Boccaccio, or Petrarch. May be repeated for credit when course content varies.

**LTIT 122. Studies in Modern Italian Culture (4)**
Politics, literature, and culture issues of twentieth-century Italy. May be repeated for credit when topics vary. **Prerequisite:** LTIT 50.

**LTIT 137. Studies in Modern Italian Prose (4)**
A study of the chief modern Italian prosatori, including D’Annunzio, Calvino, Pavese, Pasolini, etc.

**LTIT 143. Major Italian Authors (4)**
A study in depth of the works of a major Italian author. May be repeated for credit when topics vary. **Prerequisite:** LTIT 100 or consent of instructor.

**LTIT 161. Advanced Stylistics and Conversation (4)**
Analysis of Italian essays, journalism, literature. Intensive practice in writing and Italian conversation. **Prerequisite:** LTIT 100 or consent of instructor.

**LTIT 192. Senior Seminar in Literatures in Italian (1)**
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisite:** department stamp and/or consent of instructor.

**LTIT 196. Honors Thesis (4)**
Senior thesis research and writing for students who have been accepted for the literature honors program and who have completed LTWL 191. Oral examination. **Prerequisite:** department approval.

**LTIT 198. Directed Group Study (4)**
Directed group study in areas of Italian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisite:** department approval.

**LTIT 199. Special Studies (2 or 4)**
Tutorial; individual guided reading in areas of Italian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisite:** department approval.

**KOREAN LITERATURE**

**LTKO 1A. Beginning Korean: First Year I (5)**
Students develop beginning-level skills in the Korean language, beginning with an introduction to the writing and sound system. The remainder of the course will focus on basic sentence structures and expressions. **Prerequisite:** placement test required.

**LTKO 1B. Beginning Korean: First Year II (5)**
Students develop beginning-level skills in the Korean language, beginning with an introduction to the writing and sound system. The remainder of the course will focus on basic sentence structures and expressions. **Prerequisite:** LTKO 1A.

**LTKO 1C. Beginning Korean: First Year III (5)**
Students develop beginning-level skills in the Korean language, beginning with an introduction to the writing and sound system. The remainder of the course will focus on basic sentence structures and expressions. **Prerequisite:** LTKO 1B.

**LTKO 2A-B-C. Intermediate Korean: Second Year I-II-III (5-5-5)**
This course will help students develop intermediate-level skills in the Korean language. Upon completion of this course, students are expected to have good command of Korean in various daily conversational situations. **Prerequisites:** LTKO 1C or placement test for 2A; 2B is prerequisite for 2B or 2C.

**LTKO 3. Advanced Korean: Third Year (5)**
This course will help students develop advanced-level skills in the Korean language. Upon completion of this course, students are expected to have good command of Korean in various formal settings and to understand daily news broadcasts/newspapers. **Prerequisites:** LTKO 2C or placement test and consent of instructor.

**LTKO 50. Intermediate Readings and Composition (4)**
Designed to enhance reading and writing skills. We will read and discuss a variety of materials, including newspaper and magazine articles, short essays, and prose fiction. Writing exercises will stress improving students’ ability to express themselves as well as their critical responses to reading. **Prerequisites:** LTKO 2C and/or recommendation of instructor.

**UPPER-DIVISION**

**LTLA 1. Beginning Latin (4)**
Study of Latin, including grammar and reading. **Prerequisite:** LTLA 1, 2, 3 or equivalent.

**LTLA 2. Intermediate Latin I (4)**
Study of Latin, including grammar and reading. **Prerequisite:** LTLA 1 or equivalent.

**LTLA 3. Intermediate Latin II (4)**
Study of Latin, including grammar and reading. **Prerequisite:** LTLA 2 or equivalent.

**LTLA 4. Intensive Elementary Latin (12)**
Equivalent of LTLA 1, 2, and 3. Given in summer session only.

**UPPER-DIVISION**

**LTLA 100. Introduction to Latin Literature (4)**
Reading and discussion of selections from representative authors of one or more periods. Review of grammar as needed. **Prerequisite:** LTLA 3 or equivalent.

**LTLA 111. Pre-Augustan (4)**
Readings, in Latin, of authors of the pre-Augustan period. May be repeated for credit as topics vary. **Prerequisites:** LTLA 1, 2, 3 or equivalent.

**LTLA 114. Vergil (4)**
Readings from the works of Vergil. **Prerequisites:** LTLA 1, 2, 3 or equivalent.

**LTLA 116. Silver Latin (4)**
Readings, in Latin, of the works of Roman writers of the Silver Age. **Prerequisites:** LTLA 1, 2, 3 or equivalent.

**LTLA 131. Epic (4)**
Readings in Latin of the works of Roman epic poets. **Prerequisites:** LTLA 1, 2, 3 or equivalent.

**LTLA 134. History (4)**
Readings, in Latin, of the works of Roman historians. May be repeated for credit as topics vary. **Prerequisites:** LTLA 1, 2, 3 or equivalent.

**LTLA 135. Drama (4)**
Readings, in Latin, of works of Latin dramatists. Repeatable for credit when topics vary. **Prerequisite:** LTLA 3 or equivalent; LTLA 100 recommended.

**LTLA 192. Senior Seminar in Literatures in Latin (1)**
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** department stamp and/or consent of instructor.

**LTLA 198. Directed Group Study (4)**
Directed group study in areas of Latin Literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisite:** department approval.

**LTLA 297. Directed Studies (1-12)**
Guided and supervised reading in a broad area of Latin literature. Offered for repeated registration.

**LTLA 298. Special Projects (4)**
Treatment of a special topic in Latin literature. Offered for repeated registration.
PORTUGUESE LITERATURE

LOWER-DIVISION

LTRP 2A. Intermediate Portuguese I: Foundations (5)
Intermediate course in Portuguese language, emphasizing the development of verbal communication, listening comprehension, and reading and writing skills. Conducted in Portuguese, it includes reviews of grammar and vocabulary, weekly compositions, and class discussions. Prerequisite: LTPP 1/1C/1X or 1D/1DX or the equivalent or consent of instructor.

LTRP 2B. Intermediate Portuguese II: Readings and Composition (5)
Continuation of LTRP 2A. Conducted in Portuguese, this course reviews major grammatical points with an emphasis on critical reading and the interpretation of Portuguese-language texts through class discussions, vocabulary development, and written compositions. Prerequisite: LTRP 2A or equivalent or consent of instructor.

LTRP 2C. Intermediate Portuguese III: Cultural Topics and Composition (4)
Continuation of LTRP 2B. This course emphasizes writing and verbal communication skills. It includes discussions of cultural topics, grammatical reviews, and composition writing, further developing students’ abilities to comprehend and interpret articles, essays, and longer pieces of fictional/nonfictional texts. Prerequisite: LTRP 2B or equivalent or consent of instructor.

LTRP 50. Topics in Brazilian Literature in Portuguese (4)
Introductory Portuguese language and literature course designed especially for speakers of Spanish. Will build on students’ knowledge of Spanish, enabling them to acquire competence in language structures of Portuguese and introducing them to Brazilian texts in Portuguese.

RUSSIAN LITERATURE

LOWER-DIVISION

LTRU 1A-B-C. First-Year Russian (5-5-5)
First-year Russian, with attention to reading, writing, and speaking. Prerequisite: LTRP 2A-B-C.

LTRU 2A-B-C. Second-Year Russian (5-5-5)
Second-year Russian grammar, with attention to reading, writing, and speaking. Prerequisites: LTRU 1A-B-C or equivalent.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Note: Many Russian literature courses are cross-listed as courses in European and Eurasian Literatures (LTEU). Lectures and discussions are conducted in English, and students may choose whether to do the reading and writing assignments in translation, in which case they should enroll for the course under its LTEU rubric, or in Russian, in which case they should enroll under the LTRU rubric. Other courses are offered in English translation with one-unit Foreign Language Discussion Sections (XL course number suffix) for students who wish to read and discuss some or all of assignments in Russian.

LTRU 104A-B-C. Advanced Practicum in Russian (4-4-4)
Development of advanced skills in reading, writing, and conversation. Course based on written and oral texts of various genres and styles. Individualized program to meet specific student needs. Prerequisite for 104A: LTRU 2C or equivalent.

LTRU 110A-B-C. Survey of Russian and Soviet Literature in Translation, 1800–Present (4-4-4)
A study of literary works from Pushkin to the present. LTRU 110A is not a prerequisite for LTRU 110B, and LTRU 110B is not a prerequisite for LTRU 110C.

LTRU 110A. 1800–1860
LTRU 110B. 1860–1917
LTRU 110C. 1917–present

LTRU 123. Single Author in Russian Literature in Translation (4)
Study of the works of a single Russian author. May be repeated for credit as topics vary.

LTRU 150. Russian Culture (4)
An introduction to Russia’s past and present through the cross-disciplinary study of literature, the visual and performing arts, social and political thought, civic rituals, popular entertainments, values and practices from 1825 to the present. Prerequisite: upper-division standing.

LTRU 150XL. Russian Culture: The Modern Period—Foreign Language Discussion Section (1)
Students will exercise advanced Russian language skills to read and discuss materials in LTRU 150. This section is taught by the course professor, has no final examination, and does not affect the student’s grade in the parent course. Prerequisites: co-registration in LTRU 150; four quarters of Russian language study or the equivalent.

LTRU 192. Senior Seminar in Literatures in Russian (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: departmental stamp and/or consent of instructor.

LTRU 198. Directed Group Study (4)
Directed group study in areas of Russian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only). Prerequisites: upper-division standing and permission of department.

LTRU 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of Russian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only). Prerequisites: upper-division standing and permission of department.

LITERATURES IN SPANISH

LOWER-DIVISION

Language and Literature Courses

Students entering the Spanish language/literature program must have completed one year of college-level Spanish (Linguistics/Spanish 1C/1X) or its equivalent at another institution or have the consent of the instructor. Ordinarily, students take LTSP 2A, 2B, 2C, and one or more courses from the 50 sequence. Native speakers are encouraged to take LTSP 2D, 2E.

LTRP 2A. Intermediate Spanish I: Foundations (5)
Course is taught in Spanish, emphasizing the development of reading ability, literary comprehension, and writing skills. It includes grammar review, weekly compositions, and class discussions. Successful completion of LTSP 2A satisfies the requirement for language proficiency in Revelle College. Prerequisite: completion of LISP 1C/1X or LISP 1D/1DX or the equivalent or score of 3 on AP Spanish language exam—Spanish, or consent of instructor.

LTRP 2B. Intermediate Spanish II: Readings and Composition (5)
Review of major points of grammar with emphasis on critical reading and interpretation of Spanish texts through class discussions, vocabulary development, and written compositions. It is a continuation of LTSP 2A. Prerequisites: LTSP 2A or score of 4 on AP Spanish language or 3 on AP Spanish literature exams or consent of instructor.

LTRP 2C. Intermediate Spanish III: Cultural Topics and Composition (4)
Continuation of LTSP 2B, with special emphasis in writing and translation. It includes discussion of cultural topics as well as grammar review and composition, further developing the ability to read articles, essays, and longer pieces of fiction/nonfictional texts. Prerequisites: LTSP 2B or equivalent or score of 5 on AP Spanish language or 4 on AP Spanish literature exams or consent of instructor.

LTRP 2D. Intermediate/Advanced Spanish: Spanish for Bilingual Speakers (4)
Spanish for native speakers. Designed for bilingual students seeking to become biliterate. Reading and writing skills stressed with special emphasis on improvement of written expression and problems of grammar and orthography. Prepares native speakers with little or no formal training in Spanish for more advanced courses. Prerequisite: native speaking ability and/or recommendation of instructor.

LTRP 2E. Advanced Readings and Composition for Bilingual Speakers (4)
Second course in a sequence designed for bilingual students seeking to become biliterate. Special emphasis given to improvement of written expression, grammar, and orthography. Prepares bilingual students with little or no formal training in Spanish for more advanced course work. Prerequisites: LTSP 2D and/or recommendation of instructor.

LTRP 21. Conversation Workshop I (1)
Allows students with a basic grounding in Spanish to discuss a variety of topics related to literary and cultural issues. Vocabulary development, use of idiomatic expression, and advancement of oral proficiency in Spanish. May be taken as an adjunct to lower-division LTSP courses. Recommended for students planning to study abroad. Prerequisite: LISP 1C/1X or LISP 1D/1DX or LTSP 2A or 2B or 2C or 2D or 2E or 50A or 50B or 50C.

LTRP 31. Conversation Workshop II (1)
Enhances intermediate/advanced students’ command of spoken Spanish through debates on literary and cultural issues as well as the formulation and expression of thoughts in Spanish. May be taken as an adjunct to lower- and upper-division LTSP courses. Recommended for students planning to study abroad. Prerequisite: LISP 1C/1X or LISP 1D/1DX or LTSP 2A or 2B or 2C or 2D or 2E or 50A or 50B or 50C.

LTRP 41. Conversation and Orthography Workshop (1)
The workshop format of this course allows students to attain a stronger command of skills in matters of Spanish orthography, spelling, punctuation, and accent rules. May be taken as an adjunct to lower- or upper-division LTSP courses. Recommended for students planning to study abroad. Prerequisite: LISP 1C/1X or LISP 1D/1DX or LTSP 2A or 2B or 2C or 2D or 2E or 50A or 50B or 50C.

LTRP 50A. Readings in Peninsular Literature (4)
An introduction to Peninsular literature, this course offers a selection of authors and genres, introducing students to literary analysis through reading extensive texts in Spanish. Two or more quarters of LTSP 50 are suggested before proceeding to upper-division courses. Prerequisites: LTSP 2C or 2D or 2E or the equivalent.

LTRP 50B. Readings in Latin American Literature (4)
An introduction to Latin American literature, this course offers a selection of authors and genres, introducing students to literary analysis through reading extensive texts in Spanish. Two or more quarters of LTSP 50 are suggested before proceeding to upper-division courses. Prerequisites: LTSP 2C or 2D or 2E or the equivalent.

LTRP 50C. Readings in Latin American Topics (4)
An introduction to major topics in Latin American literature, this course focuses on the literature of a particular
Cultural Production (4)

LTSP 115. Early Modern Spanish Cultural Production (4)
Study of writing and/or spectacle in Spain in the sixteenth and seventeenth centuries. Close reading of texts and analysis of ideological and historical context. Topics may include the comedia (public theatre), religious drama, poetry, or early narrative forms such as the picaresque novel. Repeatable for credit when topics vary. Prerequisite: LTSP 150A or consent of instructor.

LTSP 116. Representations of Spanish Colonialism (4)
Analysis of selected materials that represent the cultural and political relationship between Spain and its colonies. Close reading of literary texts and historical documents. Specific periods covered will fall between the origins of empire in the early sixteenth century to the demise of imperial Spain in 1898; topics may include cultural exchanges between Spain and Latin America, the Philippines, and the U.S. Southwest. Repeatable for credit as topics vary. Prerequisite: LTSP 50A.

LTSP 119AB. Cervantes: Teatro y Novelas (4)
Study of Cervantes’s innovations in the short narrative form and theatrical production during the late sixteenth and early seventeenth centuries. Special attention to textual structures and ideological elements such as gender, religion, and early modern conceptions of ethnicity, “race,” and nation. This course fulfills the Cervantes requirement for Spanish literature majors. Prerequisites: LTSP 50A and 50B or SOC or consent of instructor.

LTSP 119C. Cervantes: Don Quijote (4)
Close reading of the 1605s and 1615s texts with special attention to the social and cultural background of the early seventeenth century in Spain. Prerequisites: LTSP 50A and either 50B or SOC.

LTSP 122. The Romantic Movement in Spain (4)
This course will explore the historical context of the emergence of a Romantic movement in Spain, particularly the links between Romanticism and liberalism. Major Romantic works in several genres will be studied in depth. Prerequisite: upper-division standing or consent of instructor.

LTSP 123. Topics in Modern Spanish Culture (4)
Investigation of selected topics concerning Spanish cultural production after 1800. Topics might focus on a genre (film, popular novel, theater) or on the transformations of a theme or metaphor (nation, femininity, the uncanny). Repeatable for credit as topics vary. Prerequisite: LTSP 50A.

LTSP 125. Spanish Modernisms (4)
Analysis and discussion of forms, movements, and issues arising in Spanish culture between 1898 and 1936 in relation to the loss of empire, accelerating modernization and new social movements. Repeatable for credit as topics vary. Prerequisite: LTSP 50A.

LTSP 129. Spanish Writing after 1939 (4)
Analysis and discussion of literary production during and after the Franco dictatorship. May focus on specific genres, sub-periods, or issues. Repeatable for credit as topics vary. Prerequisite: LTSP 50A.

LTSP 130A. Development of Spanish Literature (4)
An introduction to the major movements and periods in Spanish literary history, centered on close reading of representative texts, but aimed at providing a sense of the scope of Spanish literature and its relation to the course of Spain’s cultural and social history. This course is required of all Spanish literature majors. It is strongly recommended that this course be taken before any other upper-division Spanish literature course. Prerequisites: LTSP 50A and either 50B or SOC.

LTSP 130B. Development of Latin American Literature (4)
An introduction to major movements and periods in Latin American literature, centered on a study of key works from pre-Columbian to the present time. Texts will be seen within their sociohistorical context and in relation to main artistic trends of the period. This course is required of all Spanish literature majors. It is strongly recommended that this course be taken before any other upper-division Latin American literature course. Prerequisites: LTSP 50A and either 50B or SOC.

LTSP 133. Contemporary Latin American Literature (4)
A study of the major literary works and problems in Latin America from 1900 to the present as seen against the historical context of the period. Repeatable for credit as topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 134. Literature of the Southern Cone (4)
Study of movements, traditions, key authors, or major trends in Argentina, Paraguayan, Uruguayan, and Chilean literature, such as gauchy poetry, the novelist poet, modern urban narratives, and the Borges School, etc. Repeatable for credit as topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 135A. Mexican Literature before 1910 (4)
Explores the relationships among cultural production, politics, and social changes in Mexico before the 1910 Revolution, specifically the roles of intellectuals and popular culture in nation-building and modernization. Readings may include didactic literature and historiographic writings, forms of popular discourse, as well as novels and poetry. Repeatable for credit as topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 135B. Modern Mexican Literature (4)
Study of popular novels, movements, traditions, key authors, or major trends in modern Mexican literature. May be repeated for credit as topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 136. Andean Literatures (4)
Study of movements, traditions, key authors, or major trends in Peruvian, Ecuadorian, and Bolivian literatures, such as indigenismo, urban narrative, and the works of authors such as Valdez, Icaza, Arguedas, Vargas Llosa. Repeatable for credit as topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 137. Caribbean Literature (4)
Study of movements, traditions, key authors, or major trends in Caribbean literature in Spanish, such as the romantic movement, the literature of independence, the essay tradition, Afro-Antilllean literature, the historical novel. May be repeated for credit as topics vary.

LTSP 138. Central American Literature (4)
Study of movements, traditions, key authors, or major trends in the literatures of Guatemala, El Salvador, Nicaragua, Honduras, Costa Rica, and Panama, such as the anti-imperialist novel, indigenismo, guerrilla poetry, and testimonio. Repeatable for credit as topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 140. Latin American Novel (4)
A study in depth of selected novelists of Latin America. May be organized around a specific theme or idea which is traced in its development through the narratives. Course may be repeated for credit when topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 141. Latin American Poetry (4)
A critical study of some of the major poets of Latin America, focusing on the poet’s central themes, the evolution of poetic style, and the significance of the poetry to the historical context. May be repeated as topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 142. Latin American Short Story (4)
Readings and interpretation of the Latin American short story. Focus is primarily nineteenth and/or twentieth century. May be repeated for credit as topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 150A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960 (4)
Cross-disciplinary study of nineteenth- and early twentieth-century Latino/a-Chicano/a literature, folklore, music, testimony, or other cultural practices. Specific periods covered will fall between the immediate aftermath of the Treaty of Guadalupe Hidalgo to the Cuban revolution. Repeatable for credit when topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 150B. Contemporary Chicano/a-Latino/a Cultural Production: 1960 to Present (4)
Cross-disciplinary study of late twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, film, or other cultural practices. Specific periods covered will fall between the Kennedy years to the era of neoliberalism and the creation of “Hispanic” or Latino/a identities. Repeatable for credit as topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 151. Topics in Chicano/a-Latino/a Cultures (4)
Cross-disciplinary study of late twentieth-century Chicano/a-Latino/a literature, the visual and performing arts, film, or other cultural practices. Representative areas of study are social movements, revolution, immigration, globalization, gender and sexuality, cultures of the U.S.-Mexico border, and Chicano/a-Mexican/a literary relations. Repeatable for credit as topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 153. Chicano/a and Latino/a Poetry (4)
A study of themes and issues in the poetic production of Latino communities in the U.S. Every effort will be made to select texts in Spanish but some may be bilingual. Repeatable for credit as topics vary. Prerequisite: LTSP 50B or SOC.

LTSP 154. Latino/a and Chicano/a Literature (4)
This course will study the representation of a variety of social issues (immigration, racism, class differences, violence, inter/intra-ethnic relations, etc.) in works written in Spanish by Latina/o and Chicano/a writers. Repeatable for credit as topics, texts, and historical periods vary. Prerequisite: LTSP 50B or SOC.

LTSP 156. Spanish Phonetics (4)
A comparative study of the English and Spanish phonetic systems. Includes a study of the organs of articulation, manner of articulation stress and intonation patterns, as well as phrasal variations in both. Prerequisites: upper-division standing, LTSP 50A or SOC or consent of instructor.

LTSP 162. Spanish Language in the United States (4)
A sociolinguistic study of the popular dialects in the U.S.A. and their relation to other Latin American dialects. The course will cover phonological and syntactic differences between the dialects as well as the influence of English on the Southwest dialects.
GROUP SETTING TO EXPLORE AN INTELLECTUAL TOPIC IN LITERATURE (AT 36X111)

LTSP 166. Creative Writing (4)
A workshop designed to foster and encourage writing in Spanish of students working on short forms of fiction. The workshop will include discussions of techniques and intensive writing. Prerequisites: completion of LTSP 50A-B-C or consent of instructor.

LTSP 170. Contemporary Theories of Cultural Production (4)
Selected readings in recent cultural and literary theory. Students will be exposed to a variety of methodologies drawn from the Latin American, European, and U.S. traditions. Final project consists of a practical “application” of a method or methods to a specific cultural object. This course is recommended for students who plan to pursue graduate work in literature. Prerequisite: LTSP 50A or 50B or 50C.

LTSP 171. Studies in Peninsular and/or Latin American Literature and Society (4)
Focus on the interaction between literary expression and the study of society, covering issues such as the sociology of literature, the historical novel, literature and social change, the writer as the intellectual. May be repeated for credit as topics vary.

LTSP 172. Indigenista Themes in Latin American Literature (4)
Study of the literary modes by which nineteenth- and twentieth-century authors have interpreted the themes of indigenous survival and resistance in Latin America, primarily in Mexico and the Andean region. May be repeated for credit as topics vary. Prerequisite: LTSP 50B or 50C.

LTSP 173. Problems in Spanish and Latin American Literary History (4)
Study of the issues involved in understanding the development process of literary expression; the problem of genre; the relation of literature to social institutions; the function of literary influence and tradition; the relation of popular and print cultures. May be repeated for credit as topics vary. Prerequisite: LTSP 50A or 50B or 50C.

LTSP 174. Topics in Culture and Politics (4)
Study of the relationships between cultural production (literature, film, popular cultures), social change, and political conflict, covering topics such as colonialism, imperialism, modernization, social movements, dictatorship, revolution. Repeatable for credit as topics vary. Prerequisite: LTSP 50A or 50B or 50C.

LTSP 175. Gender, Sexuality, and Culture (4)
This course will examine issues of gender, sexuality, and culture in Spanish, Latin American, and/or Chicana/o literatures. Repeatable for credit as topics, texts, and historical periods vary. Prerequisite: LTSP 50A or 50B or 50C.

LTSP 176. Literature and Nation (4)
Study of literature as a means through which the nation has been imagined and as a site of debates over national identity and citizenship. Course materials may focus on Spain and/or Latin America. Repeatable for credit as topics vary. Prerequisite: LTSP 50A or 50B or 50C.

LTSP 177. Literary and Historical Migrations (4)
This course will focus on a variety of Latin American and/or Spanish intra- and inter-national migrations throughout the world and on the literature produced by these exiles or immigrants. Repeatable for credit as topics, texts, and historical periods vary. Prerequisite: LTSP 50A or 50B or 50C.

LTSP 178. Latin American Social Movements (4)
Course will examine the historical context and cultural production associated with social movements in Latin America. Repeatable for credit as regions, constituencies, and historical periods vary. Prerequisite: LTSP 50A or 50B or 50C, or consent of instructor.

LTSP 192. Senior Seminar in Literatures in Spanish (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: department stamp and/or consent of instructor.

LTSP 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral Exam. Prerequisite: department approval.

LTSP 198. Directed Group Study in Spanish Literature (4)
Research seminars and research, under the direction of a member of the faculty. May be repeated for credit three times. (P/NP grades only.) Prerequisites: upper-division standing and department approval.

LTSP 199. Special Studies (2 or 4)
Tutorial. Individual guided reading in areas of Spanish literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) Prerequisites: upper-division standing and department approval.

GRADUATE

PREREQUISITE: graduate standing or consent of instructor.

LTSP 224. Golden Age Studies (4)
Consideration of one or more major figures, texts, trends, or problems in Spanish Golden Age studies. May be repeated for credit as topics vary.

LTSP 252. Topics in Modern Spanish Literature and Culture (4)
Major trends and figures considered in the context of late nineteenth- and twentieth-century Spanish culture. May be repeated for credit as topics vary.

LTSP 258. Spanish American Prose (4)
Consideration of one or more major figures, texts, trends, or problems in Spanish American prose. May be repeated for credit as topics vary.

LTSP 272. Literature and Society Studies (4)
Special topics in critical practice involving social and economic historical perspectives. May be repeated for credit as topics vary.

LTSP 275. Latin American (ist) Literary and Cultural Theories Since the 1960s (4)
A historical survey of late twentieth-century literary and cultural criticism in and about Latin America, focusing on questions of political economy and periodization, cultural heterogeneity and transculturation, gender and sexuality, and the relationships between literary, popular, and mass cultures.

LTSP 295. M.A. Thesis (1–8)
Research for the master’s thesis. Open for repeated registration up to eight units. (S/U grades only.)

LTSP 296. Research Practicum (1–12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTSP 297. Directed Studies: Reading Course (1–12)
This course may be designed according to an individual student’s needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTSP 298. Special Projects: Writing Course (1–12)
Similar to a 297, but a project is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LTSP 299. Dissertation (1–12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

LITERATURE/THEORY

Courses in theory may apply to various literature majors. Please consult your advisor.

Additional theory courses are offered in the various department sections. See quarterly course descriptions in the Department of Literature office, first floor LIT building.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTH 110. History of Criticism (4)
A critical and interpretive review of some of the major documents in criticism from the classical period to the present time.

LTH 115. Introduction to Critical Theory (4)
A critical review of major contemporary theories of the nature of literature, its sociocultural function, and appropriate modes of evaluation.

LTH 150. Topics in Critical Theory (4)
Selected topics in critical theory such as: a particular mode of literary theory; comparative study of theories of text and image; a problem or theme in the history of theory; issues involved in the relationship between fiction and other discourses (science, law, history, philosophy, music). Repeatable for credit when topics vary.

LTH 198. Directed Group Study (4)
Directed group study, under the guidance of a member of the faculty, in an area not covered in courses currently offered by the department (P/NP only).

LTH 199. Special Studies (2 or 4)
Individual reading in an area not covered in courses currently offered by the department. (P/NP only).

GRADUATE

PREREQUISITE: graduate standing or consent of instructor.

LTH 200A. Text/Culture/Critical Practice (4)
An introduction to theories and practices of literary and cultural criticism. Topics may vary, but emphasis will be on terminology, methods of readings, modes of interdisciplinary analysis and argumentation, recent debates on questions of theory, history, textual scholarships, etc. Prerequisites: registered doctoral student in literature and department stamp.

LTH 200B. Problems in Contemporary Literary Theory (4)
The focus is feminist literary/cultural theories and their relations with major contemporary theoretical discourses (e.g., psychoanalysis, poststructuralism, and various forms of historicism). Prerequisites: LTH 200A, registered doctoral student in literature, and department stamp.

LTH 200C. Cultural Perspectives and Cultural Criticism (4)
Literary and cultural relations between the First and Third Worlds, colonialism and neo-colonialism, orality and literacy, construction of ethnicity, formation of canon, and popular culture and the market. Prerequisites: LTH 200B, department stamp, and registered doctoral student in literature.

LTH 201. Contemporary Theoretical Debates and Critical Discourses (4)
An introduction to a wide range of theoretical and methodological issues, schools of thought, and interpretative styles in contemporary literary studies. Required of all M.A. students in the Department of Literature, normally in their first quarter in the program. Prerequisite: admission to the M.A. program in the Department of Literature or consent of instructor.
LTHH 220. Theories of Literary Criticism (4)
Close study of any of the several bodies of literary theory currently applied to literary criticism: psychoanalytic, Marxist, historicist, semiotic, feminist, hermeneutic, reader-response, among others. May be repeated for credit when topics vary.

LTHH 250. Writing and Theory (4)
An overview of issues in modern critical theory as they pertain to writers. Will focus on issues of textuality, cultural forms, and aesthetics as they impact the process and meaning of writing. Prerequisite: department approval.

LTHH 255. Modern Art Movements and Aesthetics (4)
An introduction to modernist aesthetics with a focus on art and literary movements. Particular attention to be placed on relationships between modern literary movements (realism, imagism, surrealism) and their counterparts in visual arts, music, dance, and theater, and the ways in which literary movements are components of or responses to issues of political and social identity. Prerequisite: department approval.

LTHH 296. Research Practicum (1–12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTHH 297. Directed Studies: Reading Course (1–12)
This course may be designed according to an individual student’s needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTHH 298. Special Projects: Writing Course (1–12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LTHH 299. Dissertation (1–12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

LITERATURES OF THE WORLD

AFRICAN LITERATURES
Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTAH 110. African Oral Literature (4)

LTAH 120. Literature and Film of Modern Africa (4)
This course traces the rise of modern literature in traditional African societies disrupted by the colonial and neocolonial experience. Contemporary films by African and Western artists will provide an additional insight into the complex social images of the continent.

LITERATURES OF THE AMERICAS
Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLS) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

LTHH 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate majors. The number and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

LTHH 100. Latino/a Cultures in the United States (4)
An introductory historical and cultural overview of the various Latino/a populations in the U.S. with a study of representative cultural texts.

LTHH 101. Early Latino/a-Chicano/a Cultures: 1848–1960 (4)
A cross-disciplinary study of nineteenth- and early twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, and other cultural practices. May be repeated for credit as topics vary.

LTHH 102. Contemporary Chicano/a-Latino/a Cultural Production: 1960 to Present (4)
A cross-disciplinary study of late twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, and other cultural practices. May be repeated for credit as topics vary.

LTHH 105. Gender and Sexuality in Latino/a Cultural Production (4)
A study of the construction of differences in gender and sexual orientation in Latino/a-Chicano/a literature and other cultural production with an emphasis on examining various theoretical/ideological perspectives on these issues. May be repeated for credit as topics vary.

LTHH 106. Modern Chicana and Mexican Women Writings (4)
A study of themes and issues in the writings of Chicana and Mexican women with a view toward establishing connections while recognizing national and cultural differences between the two. May be repeated for credit as topics vary.

LTHH 107. Comparative Latino/a and U.S. Ethnic Cultures (4)
A comparative and intersecting study of Latino/a and other U.S. ethnic cultures. Literary texts will be viewed as “windows” into real time and spaces where cultures meet and mix. May be repeated for credit as topics vary.

LTHH 108. Chicano/a and Latino/a Cultures: Intellectual and Political Traditions (4)
The course will center on Chicano/a-Latino/a writers and movements of literary, intellectual, cultural, or political significance. Texts may be read in the original language or in English. May be repeated for credit as topics vary.

LTHH 109. Cultural Production of the Latino/a Diasporas (4)
A study of the cultural production of Latino/a immigrant groups with a focus on the literary representation of homeland, national culture, and the forces that led to migration. May be repeated for credit as topics vary.

LTHH 110. Latin American Literature in Translation (4)
Reading of representative works in Latin American literature with a view to literary analysis (form, theme, meaning), the developmental processes of the literature, and the many contexts: historical, social, cultural. Texts may be read in English. May be repeated for credit as topics vary.

LTHH 111. Comparative Caribbean Discourse (4)
Comparative survey of Caribbean literatures from the Spanish, French, English, and Dutch. Caribbean literary texts trace historical paradigms including the development of plantation slavery, emancipation, the quest for nationhood, migration, and transnational identities. Films and music may complement discussion.

LTHH 130. Reading North by South (4)
An analysis of the readings and appropriations of European and U.S. traditions by Latin American, Caribbean, and Filipino writers. The course addresses philosophies, ideologies, and cultural movements and explores the specific literary strategies used by authors in constructing their particular “cosmovision.”

LTHH 132. The Dark Side of Enlightenment in Spain, the Americas, and the Philippines (4)
This course deals with the cultural production of Spain, the Philippines, Latin America, and the U.S. to examine views (both optimistic and pessimistic) on the Enlightenment as a mode of conducting scientific investigation of nature, constituting forms of government, and imagining the future. May be repeated for credit as topics vary.

LTHH 140. Topics in Culture and Politics (4)
Study of the relationships between cultural production (literature, film, popular culture), social change, and political conflict, covering topics such as colonialism, imperialism, modernization, social movements, dictatorship, and revolution. Repeatable for credit when topics vary.

LTHH 192. Senior Seminar in Literatures of the Americas (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: department stamp and/or consent of instructor.

EAST ASIAN LITERATURES
Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLS) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

LTEA 100A. Classical Chinese Poetry in Translation (4)
A survey of different genres of traditional Chinese poetry from various periods.

LTEA 100B. Modern Chinese Poetry in Translation (4)
A survey of Chinese poetic development from 1918 to 1949.

LTEA 100C. Contemporary Chinese Poetry in Translation (4)
A survey of Chinese poetic development from 1949 to the present.

LTEA 110A. Classical Chinese Fiction in Translation (4)
The course will focus on a few representative masterpieces of Chinese literature in its classical age, with emphasis on the formal conventions and the social or intellectual presuppositions that are indispensable to their understanding. May be repeated for credit when topics vary.

LTEA 110B. Modern Chinese Fiction in Translation (4)
A survey of representative works of the modern period from 1919 to 1949. May be repeated for credit when topics vary.

LTEA 110C. Contemporary Chinese Fiction in Translation (4)
An introductory survey of representative texts produced after 1949, with particular emphasis on the social, cultural, and political changes. May be repeated for credit when topics vary.

LTEA 120A. Chinese Films (4)
A survey of representative films from different periods of Chinese cinematic development. Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.

LTEA 120B. Taiwan Films (4)
A survey of “New Taiwan Cinema” of the Eighties and Nineties. Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.
LTEA 120C. Hong Kong Films (4)
An examination of representative works of different film genres from Hong Kong. Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.

LTEA 132. Later Japanese Literature in Translation (4)
An introduction to later Japanese (kogo) literature in translation. Will focus on several "modern" works, placing their form in the historical context. No knowledge of Japanese required. Repeatable for credit when topics vary.

LTEA 136. Special Topics in Japanese Literature (4)
The course will focus on important problematics of literary studies as they relate to Japan (e.g., "feminism," "modernity," "literary mode of production," "Orientalism and nativism"). No knowledge of Japanese required. May be repeated for credit as topics vary.

LTEA 138. Japanese Films (4)
An introduction to Japanese films. Attention given to representative Japanese directors (e.g., Ozu), form (e.g., anime), genre (e.g., feminist revenge horror), or historical context in which films are produced. Priority may be given to Japanese studies majors and literature majors.

LTEA 140. Modern Korean Literature in Translation from Colonial Period (4)
A survey of modern Korean prose fiction and poetry from the colonial period. Exploration of major issues such as Japanese colonization, rise of left-wing and right-wing nationalism, construction of national culture, and relations between tradition and modernity.

LTEA 141. Modern Korean Literature in Translation from 1945 to Present (4)
A survey of modern Korean prose fiction and poetry from 1945 to the 1990s. Examination of literary representations of national division, the Korean War, accelerated industrialization, authoritarian rule, and the labor/agrarian movements.

LTEA 142. Korean Film, Literature, and Popular Culture (4)
A study of modern Korean society and its major historical issues as represented in film, literature, and other popular cultural media such as TV and music video. We will explore additional issues such as cinematic adaptations of prose fiction, fluid distinctions between popular literature and "serious" literature, and the role of mass media under authoritarian rule.

LTEA 143. Gender and Sexuality in Korean Literature and Culture (4)
A study of constructions of gender and sexuality in pre-modern and modern Korean societies. We will discuss literary works as well as historical and ethnographic works on gender relations, representations of masculinity and femininity, and changing roles of men and women in work and family.

LTEA 144. Korean American Literature and Other Literatures of Korean Diaspora (4)
An examination of the experiences of the Korean diaspora linked to the historical contexts of modern Korea, Japan, the United States, and other countries. We will focus on literature with about Korea and the Korean immigrant experience written in the United States but will also read from and about other Korean diasporic contexts.

LTEA 145. Literature, History, and Colonial and Postcolonial Modernity in Korea (4)
Comparative examination of historiographical and literary representations of major issues such as nationalism, industrialization, class division, gender, and sexuality. Literary re-writings of modern Korean history and recent revisionist historiographical works and trends.

LTEA 151. Readings in Tagalog Literature and Culture I (4)
Course will concentrate on selections of literature, history, and cultural texts (painting, drama, religious artifacts) of the 1896 Philippine revolution and the succeeding U.S. takeover of the Philippines. Intermediate fluency in speaking, reading, and writing Tagalog. Repeatable for credit when topics vary.

LTEA 152A. Topics in Filipino Literature and Culture (Nineteenth Century–World War II) (4)
Surveys the authors, intellectual currents, and cultural politics of Filipino culture from the 1850s to World War II. Topics may include the legacy of Spanish colonialism, European enlightenment, and the emergence of nationalism and socialism, and Filipino literature in English. May be repeated for credit as topics vary.

LTEA 152B. Topics in Filipino Literature and Culture (World War II–Present) (4)
Surveys the authors, intellectual currents, and cultural politics of Filipino culture from World War II to the present. Topics may include the dual lingua franca, the birth of "Filipino-American" literature, the culture of dictatorship, and new approaches to narrative. May be repeated for credit as topics vary.

LTEA 198. Directed Group Study (4)
Research seminars and research, under the direction of a faculty member.

LTEA 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas not normally covered in courses. (P/NP grades only.)

European and Eurasian Literatures

Lower-Division

LTEU 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

Upper-Division

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLS) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

LTEU 105. Medieval Studies (4)
Studies in medieval culture and thought with focus on one of the "three pillars" of Italian literature: Dante, Boccaccio, or Petrarch. May be repeated for credit when course content varies.

Topics to be considered include the age of sensibility, enlightenment, neoclassicism. Attention given to historical and cultural contexts.

LTEU 110. European Romanticism (4)
Attention given to historical and cultural contexts. Topics to be considered include the concept of nature, the reaction to science, the role of the imagination.

LTEU 130. German Literature in Translation (4)
One or more aspects of German literature, such as major authors, the contemporary novel, nineteenth-century poetry, German expressionism. Texts may be read in English or the original language. May be repeated for credit as topics vary.

LTEU 137. Seminars in German Culture (4)
These seminars are devoted to a variety of special topics, including the works of single authors, genre studies, problems in literary history, relations between literature and the history of ideas, literary criticism, literature and society, and the like.

LTEU 139. Marx/Nietzsche/Freud (4)
Intensive examination of the major ideas of all three writers, with special attention to the literary styles and problematic aspects of their work.

LTEU 140. Italian Literature in Translation (4)
One or more periods and authors in Italian literature. Texts will be read in English. May be repeated for credit as topics vary.

LTEU 145. Studies in Modern Italian Poetry (4)
Study of the chief modern Italian poets, including Montale, Ungaretti, and Quasimodo, with attention to long, poetic form and contemporary Italian culture. May be repeated for credit as topics vary.

LTEU 146. Studies in Modern Italian Prose (4)
A study of the chief modern Italian prosatori including D’Annunzio, Calvino, Pasolini, etc. Repeatable for credit.

LTEU 147. Women in Italy (4)
A study of historical, political, and literary texts regarding women and feminism in Italian society.

LTEU 150A-B-C. Survey of Russian and Soviet Literature in Translation, 1800 to the Present (4-4-4)
A study of literary works from Pushkin to the present.

150A. 1800–1860
150B. 1860–1917
150C. 1917–present

LTEU 154. Russian Culture (4)
An introduction to Russia’s past and present through the cross-disciplinary study of literature, the visual and performing arts, social and political thought, civic rituals, popular entertainments, values and practices from 1825 to the present.

LTEU 158. Single Author in Russian Literature in Translation (4)
A study of literary works by a single Russian author. All readings will be in English. May be repeated for credit when authors vary.

LTEU 192. Senior Seminar in European and Eurasian Literatures (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisite: department stamp and/or consent of instructor.

Near Eastern Literatures

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLS) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

LTNE 101. The Bible: The Narrative Books (4)
Examination of the Biblical accounts in their ancient Near Eastern context. Emphasis will be placed on the literary and archaeological data; consideration of theological issues. Repeatable for credit as topics vary.

Lit erature s o f th e w orld

In both lower- and upper-division world literature courses, texts may be read in English translation.
when necessary, and lectures and discussions are conducted in English.

Foreign language discussion sections (XLS) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

LOWER-DIVISION

LTWL 4A-B-C-D-F-M. Film and Fiction in Twentieth-Century Societies (4)
A study of modern culture and of the way it is expressed and understood in novels, stories, and films. The sequence aims at an understanding of relationship between the narrative arts and society in the twentieth century, with the individual quarters treating fiction and film of the following language groups: 4A French, 4B German, 4C Asian, 4D Italian, 4M multiple national literatures and film, 4F Spanish.

LTWL 19A-B-C. Introduction to the Ancient Greeks and Romans (4-4-4)
An introductory study of ancient Greece and Rome, their literature, myth, philosophy, history, and art.

LTWL 50. Introduction to Literary and Cultural Studies (4)
A preliminary survey of issues and problems raised by literary and cultural studies. Discussion will focus on basic terms in literary analysis (narrative, genre, character, poetics) and on rhetorical techniques for writing advanced expository papers in literary and cultural topics. It is designed for both non-majors and students who anticipate becoming majors in literature who would like a broad-based introduction to the field.

LTWL 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

LTWL 99. Lower-Division Independent Study (4)
Independent study at the lower-division level, in an area not covered by the department's regular course offerings, under the direction of a member of the Literature Department faculty. Prerequisites: lower-division standing; cumulative 3.0 GPA.

TWS 21-22-23-24-25-26. Third World Literatures (4-4-4-4-4)
(See entry under "Third World Studies" heading.)

The courses in this sequence are equivalent to world literature courses. The sequence satisfies Marshall College general-education requirements.

UPPER-DIVISION

PREREQUISITE: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTWL 100. Mythology (4)
A study of various bodies of myth: their content, form, and meaning. May be repeated for credit as topics vary.

LTWL 102. Women in Antiquity (4)
Selected topics in classical culture, including women and myth, women in Greek and Roman society, and the representation of women in classical literature. May be repeated for credit when topics vary.

LTWL 106. The Classical Tradition (4)
Greek and Roman literature in translation. May be repeated for credit as topics vary.

LTWL 107. Prose Fiction (4)
Aspects of prose fiction. Not confined to a single national literature. Texts may be read in English. May be repeated for credit as topics vary.

LTWL 108. Words and Their Vicissitudes (4)
The history of English and its forebears, focusing on the quirky nature of semantic change in order to equip students with a basis for understanding metaphor, metonymy, and other forms of verbal deviance.

LTWL 110B. Folk and Fairy Tales (4)
A study of folk and fairy tales from various cultures, from the point of view of literary form, psychological meaning, and cultural function. May be repeated for credit as topics vary.

LTWL 111. Medieval Studies (4)
A lecture/discussion course designed to explore a variety of topics in medieval literatures and cultures. Topics may include a genre or combination of genres (e.g., drama, romance, lyric, allegory), or a central theme (e.g., the Crusades or courtly love).

LTWL 114. Children's Literature (4)
A study of literature written for children in various cultures and periods. May be repeated for credit as topics vary.

LTWL 115. Contemporary Literature (4)
A study of novels and authors of the present and recent times. May be repeated for credit as topics vary.

LTWL 116. Adolescent Literature (4)
A study of fiction written for the young adult in various cultures and periods. Consideration will be given to the young adult hero in fiction. May be repeated for credit as topics vary.

LTWL 120. Popular Literature and Culture (4)
A study of various popular forms—such as pop music, cult books, film, fashion, magazines, graphic arts—within a broader cultural context. Focus may be on a particular genre (e.g., best sellers) or era (e.g., the sixties). May be repeated for credit when topics vary.

LTWL 122. Fantasy (4)
Reading and analysis of various works that fall into several categories of the fantastic—e.g., heroic, gothic, irrational, postmodern—with particular attention to the cultural uses of myth, folklore, and fantasy, and to the psychological and structuralist theories of same. May be repeated for credit when topics vary.

LTWL 123. Vampires in Literature (4)
A study of representations of the vampire through a variety of methodological perspectives with an emphasis on historical context and cultural symbolism.

LTWL 124. Science Fiction (4)
An exploration of the genre—past and present, in literature and the visual media—as a cultural response to scientific and technological change, as modern mythmaking, and as an enterprise serving a substantial fan subculture. May be repeated for credit when topics vary.

LTWL 128. Introduction to Semiotics and Applications (4)
Semiotics, basically a theory of signification, describes the models and conceptual contexts through which meaning is grasped and produced. Background in the history of semiotics and its dominant models.

LTWL 129. Wisdom: The Literature of Authority (4)
What is wisdom? Does wisdom refer to a specific type of discourse; a literary genre; a specific content that holds true transculturally and transtemporally? This class will consider these questions by reading literature from diverse times and places.

LTWL 135. The Buddhist Imaginary (4)
An introduction to the imaginative universe of Indian Buddhism, with a focus on the connection between cosmological models and libidinal practices. In this class we read Buddhist narrative and doctrinal literatures, supplemented by archaeological and art historical artifacts.

LTWL 137. Sanskrit (4)
Study of classical Sanskrit, including grammar and reading.

LTWL 138. Critical Religion Studies (4)
Selected topics, texts, and problems in the study of religion. May be repeated for credit when content varies.

LTWL 139. Gnosticism: The Religious Underground from Late Antiquity to the New Age (4)
A survey of Gnostic currents in religious thought which influenced the Abrahamic traditions of Judaism, Christianity, and Islam and which surfaced periodically as heretical challenges to these mainstream traditions and their doctrinal orthodoxies.

LTWL 140. Novel and History in the Third World (4)
This course sets out to explore the relation between the novel and the “dependent” history of the Third World, contrasting and comparing the uses of history in the European novel as defined in the theoretical analysis of Lukacs with uses of history in the Third World novel. An analysis of major themes and movements common to selected ethnic literature in the United States and national literatures in the Third World.

LTWL 141. Islam and Modernity (4)
A survey of developments in the Islamic world during the period of European colonial domination and its aftermath, with special attention to the works of leading Muslim thinkers (e.g., Sayid Ahmed Khan, Muhammad Abduh, Hasan al Banna, Ruhallah Khomeini, among others).

LTWL 142. Islam: The Origins and Spread of a World Religion (4)
An investigation of the historical and textual beginnings of Islam; the development of the religion in the early Middle Ages; and an examination of the formalization of schools of Islamic law and the confrontation between Sunni and Shi'i versions of praxis. Concludes with the rise of Islamic fundamentalism and the post-Islamic fundamentalism.

LTWL 145. South Asian Religious Literatures: Selected Topics (4)
One or two topics in the religious literature of South Asia will be examined in depth. Repeatable for credit when topics vary.

LTWL 147. Readings in Mahayana Buddhism (4)
Students read and discuss Mahayana Buddhist literature, including sutra and narrative literatures, confessional works, doctrinal treaties, and tantric verse. Recommended: completion of LTWL 129 or LTWL 135.

LTWL 149. The Last Turn of the Century in the West (4)
A multi-media examination of the momentous cultural and intellectual changes that accompanied the last turn of the century (nineteenth-twentieth) in the West. Areas covered include literature, philosophy, visual arts, music, religion, social movements, and scientific thought.

LTWL 150. Modernity and Literature (4)
Explores the various cross-cultural historical, philosophical, and aesthetic ideas which formed the basis of most twentieth-century literature. Literature from the Americas, Europe, Asia, and Africa will be studied through lectures and the reading of texts in English translation. Repeatable for credit when topics vary.

LTWL 151. Religion and Politics (4)
Course surveys the historical and theoretical relationships between religion and politics in contemporary South West Asia, focusing on the interplay of religious movements and politics by looking at countries such as Egypt, Iraq, Israel, Lebanon, Saudi Arabia, Syria, and Turkey.

LTWL 152. Introduction to Islam (4)
An exploration of the history and religion of Islam, with focus on theological debates, mystical traditions, and the rise of Islamic movements in contemporary history will also be discussed.

LTWL 153. Literature, Religion, and Culture in Iran (4)
This interdisciplinary course will explore the relationship between culture and religion in the Persian literature from the Abbasid to postrevolutionary Iranian history.

LTWL 154. Literature: Public Sphere (4)
Course focuses on the contentious notion of “public sphere,” surveying its historical rise and various theoretical
debates in defining the term, ranging from political, social, feminist theories to postcolonial studies.

LTWL 155. Gender Studies (4)
The study of the construction of sexual differences in literature and culture. May be repeated for credit when topics vary.

LTWL 157. Iranian Film (4)
Course sets out to explore the history and theory of Iranian films in the context of the country’s political, cultural, and religious settings since 1945. Students are expected to watch and discuss Iranian films, particularly the post-revolutionary films of Kiarostami and Makhmalbaf.

LTWL 158A. Topics in the New Testament (4)
Literary and socio-historical considerations of the diverse writings that developed into the New Testament. Topics include Jewish origins of the "Jesus movement" within Greco-Roman culture; varying patterns of belief/practice among earliest communities; oral tradition and development of canon.

LTWL 158B. Topics in Early Christian Texts and Cultures (4)
This course investigates the manner in which texts shape religious identities on the individual and communal level in socio-historical and cultural contexts: various topics include portraits of Jesus, saints lives, death and afterlife, martyrdom, demonology, apocalypticism, Christianity, and empire.

LTWL 158C. Topics in Other Christianities (4)
A survey of the Christian texts that comprise the fatalities of the battles defining Christian canon: e.g., apocryphal acts, non-canonical gospels, and "Gnostic" texts. Considers the social communities, theological views, religious identities, and practices reflected in largely forgotten texts.

LTWL 160. Women and Literature (4)
This course will explore the relationship between women and literature, i.e., women as producers of literature, as objects of literary discourse, and as readers. Foreign language texts will be read in translation. May be repeated for credit as topics vary.

LTWL 165. Literature and the Environment (4)
With primarily American (and a couple of English) readings, the course inquires into the relation of human and non-human nature. Topics include wilderness, animals, Native American thought, women in nature, description as a kind of writing, the spirituality of place.

LTWL 166. The Yiddish Novel (4)
Yiddish literature is much more than folksongs and jokes. We will read major American and European works by Nobel laureate I.B. Singer, his brother J. Singer and sister Esther Kreptman, Solome Aleichem, Mendele, Chava Rozenfarb, and others. (In English translation.)

LTWL 167. Russia and the Jewish Imagination from the Enlightenment to the Present (4)
Course explores Russian Jewish literature, from Hassidic tales to Gary Shteyngart's Absurdistan. We will read works translated from Hebrew, Yiddish, and Russian. Written before, during, and since the Soviet period, including literature produced in Russia, Israel, and the U.S.

LTWL 168. Death and Desire in India (4)
This class investigates the link between desire and death in classical and modern Hindu thought. It considers the stories of Hindu deities, as well as the lives of contemporary South Asian men and women, in literature and film.

LTWL 172. Special Topics in Literature (4)
Studies in specialized literary, philosophic, and artistic movements and approaches to literature, literary ideas, historical moments, etc.

LTWL 176. Literature and Ideas (4)
The course will center on writers or movements of international literary, cultural, or ideological significance. The texts studied, if foreign, may be read either in the original language or in English. May be repeated for credit as topics vary.

LTWL 180. Film Studies and Literature: Film History (4)
The study of film history and its effects upon methods of styles in literary history. Repeatable for credit when topics vary.

LTWL 181. Film Studies and Literature: Film Movement (4)
Study of analogies between literary movements and film movements. Repeatable for credit when topics vary.

LTWL 183. Film Studies and Literature: Director's Work (4)
Methods of criticism of author's work applied to the study and analysis of film director's style and work. Repeatable for credit when topics vary.

LTWL 184. Film Studies and Literature: Close Analysis of Filmic Text (4)
Methods of literary analysis applied to the study of shots, sequences, poetics, and deep structure in filmic discourse. Repeatable for credit when topics vary.

LTWL 191. Honors Seminar (4)
Explorations in critical theory and method. This course, designed to prepare students to write an honors thesis, is open only to literature majors invited into the department's Honors Program.

LTWL 192. Senior Seminar in Literatures of the World (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: department stamp and/or consent of instructor.

LTWL 195. Apprentice Teaching (0 or 4)
Undergraduate instructional assistance. Student must (1) prepare reading materials assigned by the professor; (2) lead student discussions; (3) assist professor in grading; and (4) prepare report to professor at conclusion of quarter concerning his/her work.

LTWL 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and completed LTWL 191. Oral exam. Prerequisite: department approval.

LTWL 198. Directed Group Study (2 or 4)
Research seminars and research, under the direction of faculty member. Prerequisite: department approval.

LTWL 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of literature (in translation) not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) Prerequisites: upper-division standing and department approval.

GRADUATE

LTWL 300. Apprentice Teaching in Literature (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in literature courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 301. Apprentice Teaching in Humanities (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in humanities sequences under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 503. Apprentice Teaching in Marshall College (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in Marshall College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 504. Apprentice Teaching in Warren College (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in Warren College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 506. Apprentice Teaching in Roosevelt College (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in Roosevelt College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

WRITING/LITERATURE

LOWER-DIVISION

LTWR 8A. Writing Fiction (4)
Study of fiction in both theory and practice. Narrative technique studied in terms of subjectivity and atmosphere, description, dialogue, and the editing process will be introduced through readings from the history of the novel and short story. Writing exercises accompany reading assignments. Prerequisite: completion of college writing requirement.

LTWR 8B. Writing Poetry (4)
Study and practice of poetry as artistic and communal expression. Techniques of composition (traditional forms, avant garde techniques, dramatic monologue, performance poetry, and new genre) studied through written and spoken examples of poetry. Writing exercises accompany reading assignments. Prerequisite: completion of college writing requirement.

LTWR 8C. Writing Nonfiction (4)
Study of nonfiction prose in terms of genre and craft. Techniques of composition (journalism, essay, letters, reviews) will be studied through written examples of the genre. Practical imitations and exercises accompany the reading assignments. Prerequisite to upper-division non-fiction prose workshops. Prerequisite: completion of college writing requirement.

UPPER-DIVISION

Departmental approval is required for enrollment in all upper-division literature/writing courses.

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

(See "Department of Theatre and Dance" for course offerings in dramatic writing.)

Prose Fiction, Poetry, Media Workshops

LTWR 100. Short Fiction Workshop (4)
A workshop for students with some experience and special interest in writing fiction. This workshop is designed to encourage regular writing in the short forms of prose fiction and to permit students to experiment with various forms. There will be discussion of student work, together with analysis and discussion of representative examples of short fiction from the present and previous ages. May be taken for credit three times. Prerequisites: LTWR 8A; department approval.
LITERATURE

LITERATURE 101. Writing Fiction in Spanish (4)
A workshop for students with interest in writing fiction in Spanish. Includes discussion of student work, together with analysis and discussion of representative examples of short fiction from the present and previous ages. A working knowledge of Spanish required. May be taken for credit three times. Prerequisites: LTWR 8A; LSTP 50A or 50B; department approval.

LITERATURE 102. Poetry Workshop (4)
A workshop for students with some experience and special interest in writing poetry. This workshop is designed to encourage regular writing of poetry. There will be discussion of student work, together with analysis and discussion of representative examples of poetry from the present and previous ages. May be taken for credit three times. Prerequisites: LTWR 8B; department approval.

LITERATURE 104A. The Novella I (4)
A two-quarter workshop for fiction writers ready to explore a longer form, and committed to developing a single piece over the course of two consecutive quarters. In addition to analyzing student work, we will read and discuss a wide range of published novellas. Two-quarter sequence; students must complete LTWR 104A and LTWR 104B in order to receive final grade in both courses. Prerequisites: LTWR 100; department approval.

LITERATURE 104B. The Novella II (4)
A continuation of LTWR 104A in which fiction writers complete the novella manuscripts they began during the previous quarter. Each student will produce a novella of at least fifty revised pages by the end of the quarter. We will continue to read and discuss published novellas with a particular emphasis on narrative strategy, structure, and revision. Two-quarter sequence; students must complete LTWR 104A and LTWR 104B in order to receive final grade in both courses. Prerequisites: LTWR 100A; department approval.

LITERATURE 106. Science Fiction, Fantasy, and Irrealism Workshop (4)
In this workshop, students will practice skills of narration, characterization, and style with particular attention to the demands of non-realistic genres, especially the challenge of suspending disbelief in fictional environments that defy conventional logic. Readings and lectures will accompany writing exercises. May be taken for credit three times. Prerequisites: LTWR 8A; department approval.

LITERATURE 110. Intercultural Writing Workshop (4)
This course is an introduction to modes of writing from other cultural systems vastly different from the cultural-aesthetic assumptions of Anglo-American writing. While disclosing the limitations of the English language, this course attempts to provide new language strategies for students. May be taken for credit three times. Prerequisites: LTWR 8A, 8B, or 8C; department approval.

LITERATURE 114. Graphic Texts Workshop (4)
From illuminated manuscripts to digital literature, from alphabets to concrete poems, from artists' books to comics, this course explores the histories and techniques of combinatory image/word literary arts. The course may emphasize specific movements or genres. May be taken for credit three times. Prerequisites: LTWR 8A or 8B; department approval.

LITERATURE 115. Experimental Writing Workshop (4)
This workshop explores writing for which the traditional generic distinctions of prose/poetry, fiction/ documentary, narrative/discourse do not apply. Students taking this course will be asked to challenge the boundaries of literature to discover new forms and modes of expression. May be taken for credit three times. Prerequisites: LTWR 8A, 8B, or 8C; department approval.

LITERATURE 119. Writing for Performance (4)
A workshop and survey of experimental approaches to the writing and production of performance works in a range of literary genres. Emphasis will be placed on the integration of written texts with non-verbal elements from the visual arts, theater, and music. Prerequisite: LTWR 8A or 8B; to be determined by quarterly offerings of LTWR 119; department approval.

Nonfiction Prose Workshops

LITERATURE 120. Personal Narrative Workshop (4)
A workshop designed to encourage regular writing of all forms of personal experience narrative, including journals, autobiography, firsthand biography, and firsthand chronicle. Instructor and students will discuss student work as well as published personal narratives. May be taken for credit three times. Prerequisites: LTWR 8A, 8B, or 8C; department approval.

LITERATURE 121. Media Writing Workshop (4)
Workshop focusing on the review, the op-ed piece, the column, the blurb, the profile, the interview, and "content-providing" for Web sites. We'll examine current examples of media writing; students will produce a body of work and critique one another's productions. May be taken for credit three times. Prerequisites: LTWR 8C; department approval.

LITERATURE 122. Writing for the Sciences Workshop (4)
A workshop in writing about science for the public. Students will study and then construct metaphors or analogues which introduce readers to scientific perplexities. Completion of LTWR 8A, 8B, or 8C highly recommended. May be repeated for credit three times. Prerequisite: department approval.

LITERATURE 124. Translation of Literary Texts Workshop (4)
A writing workshop on the theory and practice of literary translation. Students will translate literary texts and workshop with the instructor and other course members. Selected readings include translation theory. May be repeated for credit three times. Prerequisites: LTWR 8A, 8B, or 8C; department approval.

LITERATURE 126. Creative Nonfiction Workshop (4)
A writing, reading, and critical-thinking workshop designed to produce nonfiction pieces that fall outside the limits of the essay form. Included are travel narratives, memoir, and information-based writing that transform their own materials into compelling literature. May be repeated for credit three times. Prerequisites: LTWR 8C; department approval.

LITERATURE 129. Distributing Literature Workshop (4)
Workshop designed to critique and engage the means of distributing literature within culture. Publishing from "zine" through mainstream publication; Web publications; readings and "slams"; publicity and funding; colloquia with writers; politics and literature; and the uses of performance and media. May be taken for credit three times. Prerequisites: LTWR 100, LTWR 102, or LTWR 120; department approval.

Writing Process, Written Discourse, and Writing Pedagogy

These courses are not writing workshop courses like those listed above. Rather, they examine various aspects of writing as a field of study and writing pedagogy. Writing majors who plan to teach writing may be particularly interested in these courses. See the department for applicability of these courses to the writing major requirements.

Note: As of fall 1991, all writing majors are required to take one course chosen from offerings numbered LTWR 140-148 to fulfill one of their upper-division requirements.

LITERATURE 143. Stylistics and Grammar (4)
A course designed to teach students how to write in a variety of genres. Emphasis will be placed on the integration of written texts with non-verbal elements from the visual arts, theater, and music. Prerequisite: LTWR 8A or 8B; department approval.

LITERATURE 144. The Teaching of Writing (4)
Wide reading in current theory and practice of teaching writing in schools and colleges. Careful attention to various models of classroom writing instruction and to different approaches in the individual conference. Students in this course may observe instruction in the UCSD college writing programs or tutor freshman students in those programs. Prerequisite: department approval.

LITERATURE 148. Theory for Writers/Writing for Theory (4)
Hybrid workshop offering writing students a working knowledge of literary theory while exposing literature students to practical techniques from poetry, fiction, and nonfiction to refresh their writing of theoretical nonfiction texts. Discussion of student work and published work. Prerequisite: department approval.

Directed Study and Special Study

LITERATURE 192. Senior Seminar in Literatures in Writing (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level); Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: department stamp and/or consent of instructor.

LITERATURE 195. Apprentice Teaching (4)
Undergraduate instruction assistance. Students will 1) assist TA in editing students' writing for LTWR 8A and 8C during class and outside of class, and 2) prepare a paper and report for the professor at the end of the quarter. Prerequisite: LTWR 144.

LITERATURE 196.Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral exam. Prerequisite: department approval.

LITERATURE 198. Directed Group Study (2 or 4)
Directed group study in areas of writing not normally covered in courses. (P/NP grades only). Repeatable for credit when areas of study vary.

LITERATURE 199. Special Studies (2 or 4)
Tutorial; individual guidance in areas of writing not normally covered in courses. (P/NP grades only). May be taken for credit three times. Prerequisites: upper-division standing and department approval.

GRADUATE

PREREQUISITE: graduate standing or consent of instructor.

LITERATURE 200. Fiction Workshop (4)
A weekly meeting between a faculty member, guest fiction writers, and small group of students for focused discussion of new student writing produced during the time of the workshop. The workshop guides students toward beginning the full-length manuscript that will constitute their M.F.A. project. Prerequisite: department approval.

LITERATURE 202. Poetry Workshop (4)
A weekly meeting between a single faculty member, occasional guest poets, and a small group of M.F.A. students engaged in a discussion of new student work produced during the time of the workshop. There will be assigned readings and some writing exercises to give the course focus. Prerequisite: department approval.

LITERATURE 215. Cross-Genre Workshop (4)
In the generative workshop, writers create intergeneric works and practice unconventional workshopping techniques that function less as editorial roundtables and more as discussions of the relationships between aesthetics and culture. Prerequisite: department approval.

LITERATURE 260. Autoethnographies of Literacy (4)
Designed for public school teachers, this writing seminar concerns ethnographic and autoethnographic studies of "literates" and "illiterates" in the United States.

LITERATURE 271. Theory and Practice of College Writing Instruction (4)
In this course we will explore the implications for writing instruction of current discourse theory and of linguistics (sentence-level and text-level). We will also review research on writing instruction and look carefully at several models of classroom instruction and individual conferencing.
LTWR 272. Research in Composing and Writing Discourse (4)
This course will survey current research on composing and written discourse. It will also explore various problems and issues in designing research studies.

LTWR 282. Writing States (4)
This course will be a cross-genre writing workshop where graduate students in literature with some experience in creative writing can work with other writers and broaden their own practices. The seminar will read selected texts that spur specific writing assignments. Students who already have a new or ongoing writing project can workshop that as an alternative to doing assignments. The group will critique one another’s efforts, each participant creating a twenty-page manuscript. Also at the end of the quarter the students will collectively agree on a project—a reading, performance, video, or publishing project that will document the workshop.

LTWR 295. M.F.A. Thesis (1–12)
Research for master’s thesis. Offered for repeated registration. Open only to M.F.A. students. Prerequisite: department approval.

LTWR 298. Directed Studies: Writing Course (1–12)
This course may be designed according to an individual student’s needs when seminar offerings do not cover subjects, genres, or authors of interest. May be applied toward the guided research or graduate seminar in literature requirement of the M.F.A. program. Repeatable for credit. Prerequisite: department approval.
The Making of the Modern World

OFFICE: Eleanor Roosevelt College, Administration Building  
http://roosevelt.ucsd.edu/mmw/

The Making of the Modern World (MMW) is an interdisciplinary, six-course program that provides a broad, global overview of the past from the dawn of human history and early societies (MMW 1) to social, environmental, economic, and political challenges facing the contemporary world (MMW 6). It is designed to encourage students to think historically, comparatively, and in an interdisciplinary manner about both the past and the present. MMW also provides instruction in university-level writing and analysis as students examine and interpret both primary and secondary source material. ERC students entering UC San Diego as freshmen are required to complete the full MMW sequence (six quarters), while transfer students, entering UCSD as upper classmen, are only required to take any three quarters, usually including the transfer specific course MMW 4T. Each course includes lectures, discussion sections, and writing assignments. Courses in the sequence may be taken for a letter grade only. Students in the Making of the Modern World 2 and 3 (offered in winter and spring quarters respectively) fulfill their University of California transscriptive writing requirement by receiving intensive instruction in university-level writing. Subject matter for writing instruction is drawn from or related to course material. Instruction in writing is provided in discussion sessions, which meet twice each week. Each of these two writing-intensive quarters carries six units of credit. Students must have satisfied the university’s Entry Level Writing requirement before enrolling in the Making of the Modern World 2 or 3.

For further details on Eleanor Roosevelt College requirements, see “Eleanor Roosevelt College, General-Education Requirements.”

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

TRADITIONS

1. Prehistory and the Birth of Civilization (4)
This quarter introduces students to what is known about early humans, including the evolution of the human body and the reconstruction of Paleolithic and Neolithic cultures. It examines contemporary hunting-and-gathering and tribal societies and illuminates the complexity of such cultures with respect to mythology and oral tradition, inter-personal relations, and ecological practices. The course will conclude with an analysis of the emergence of large agrarian societies and the earliest great settled communities and civilizations. Three hours of lecture, one hour of discussion. Open to Eleanor Roosevelt College students only. (Letter grade only.) (F)

2. The Great Classical Traditions (6)
An introduction to five major classical civilizations of the ancient world. Equal attention will be given to the ancient Near East, Greece, India, China, and the Roman Republic, all of which have left legacies to the present. The course covers the great early systems of religious and social thought, using an approach that combines history and social science. This course includes intensive instruction in writing expository prose. Three hours of lecture, two hours of writing and discussion sections. Prerequisite: satisfaction of the UC Entry Level Writing requirement. Open to Eleanor Roosevelt College students only. (Letter grade only.) (W)

3. The Medieval Heritage (6)
A survey of the period from about 29 BCE to 1200 CE, this quarter concentrates on the development of China from the Han to the Sung dynasties, the growth and eventual dissolution of the Roman Empire, the development of Christianity, and the rise of Islam. This course includes intensive instruction in university-level writing. Three hours of lecture, two hours of writing and discussion sections. Prerequisite: satisfaction of the UC Entry Level Writing requirement. Open to Eleanor Roosevelt College students only. (Letter grade only.) (S)

TRANSFORMATIONS

4. New Ideas and the Clash of Cultures (4)
An examination of the world from 1200 to 1750, the course focuses on the transition from medieval to modern by addressing philosophical, social, political, economic, and technological changes in Asia, Europe, and Islamic territories. Topics may include the Mongol invasions and their impact; the European Renaissance, Reformation, and Scientific Revolution; Islamic and Chinese empires; exploration and trade; and European expansion into the Americas. Three hours of lecture, one hour of discussion. Prerequisites: satisfaction of the UC Entry Level Writing requirement; successful completion of MMW 2 and/or MMW 3. Open to Eleanor Roosevelt College students only. (Letter grade only.) (F)

4T. Understanding the Premodern World (Transfer Students Only) (4)
This course is designed specifically for transfer students and provides a background to major trends and issues addressed in previous MMW courses. MMW 4T also reviews and strengthens students’ analytical, research, and writing skills. This course helps students adjust to the UCSD environment by preparing them for writing and research for other MMW courses and beyond. A research paper is due at the end of this term. Three hours of lecture, one hour of discussion. Prerequisites: transfer student and satisfaction of the UC Entry Level Writing Requirement. Open to Eleanor Roosevelt College students only. (Letter grade only.) (F)

5. Revolution, Industry, and Empire (4)
A consideration of the great changes in European society from the late eighteenth century to the Russian Revolution, and their impact on the non-Western world. Topics include industrialization, the rise of nationalism and the nation-state, Western imperialism, and the colonial experience. Developments in non-Western countries during this period will be examined from their own internal perspective. Three hours of lecture, one hour of discussion. Prerequisites: satisfaction of the UC Entry Level Writing requirement; successful completion of MMW 2, MMW 3, and/or MMW 4. Open to Eleanor Roosevelt College students only. (Letter grade only.) (W)

6. Twentieth Century and Beyond (4)
The course begins with a consideration of the causes and consequences of World War I, and then looks at the post-war crisis of liberal values and institutions. It addresses the deepening of crisis in the thirties, especially evident in the emergence of ideological politics and extreme nationalism in the context of worldwide depression. This period of crisis provides the background for understanding World War II. Attention is then devoted to the cold war, the competition between capitalism and communism, and the process of decolonization. The course ends with a discussion of the collapse of communism and the emerging world order (or disorder). Three hours of lecture, one hour of discussion. Prerequisites: satisfaction of the UC Entry Level Writing requirement; successful completion of MMW 2, MMW 3, MMW 4, and/or MMW 5. Open to Eleanor Roosevelt College students only. (Letter grade only.) (S)
THE M.B.A. CURRICULUM (NINETY-TWO UNITS)

The M.B.A. curriculum (ninety-two units) is made up of a set of core disciplinary and skill-oriented courses with an emphasis on industry sectors, unstructured electives, and the Professional Seminar. The basic curriculum is the same for the full-time and Flex students.

Industry Sector Emphasis

The Rady School’s M.B.A. is designed to allow students to develop depth in industry sectors of particular interest. Selection of an industry is not required. The program combines a solid core, an integrative course sequence focused on innovation, a strong elective curriculum, a commitment to leadership development, and an emphasis on cutting-edge industry sectors.

Core Curriculum

The core curriculum provides a comprehensive education in the fundamentals of business and management and lays a strong foundation for further study.

Electives

Students may choose from electives in the full range of business and management disciplines, including accounting, finance, management, marketing, operations and information technology, and strategy. In addition, students may, with approval, take graduate courses offered elsewhere on campus. Prospective students are advised to consult the RSM Office of Admissions for a list of planned elective courses.

Professional Seminar

The Professional Seminar is a one-credit course offered each quarter. The seminar brings business leaders and experts to campus to speak to students and provides workshops focused on professional and leadership development and on personal and career effectiveness. The seminar may be taken multiple times for credit.

Internships

Full-time M.B.A. students are strongly encouraged to participate in internships during the summer between the two years of the academic program. Part-time internships are also available during the academic year. Internships are coordinated through M.B.A. Career Connections, the school’s career center.

Executive Mentor Program

The Rady School’s Executive Mentor program matches small groups of M.B.A. students with senior business executives. Mentors work directly with their groups, offering perspective, guidance, and expertise based on their deep experience in business. Mentors help guide M.B.A. students as they map out areas for personal and professional development, gain understanding of career progression and the skills and abilities required for successful leadership, and seek feedback about opportunities and areas of concern.

Career Services

M.B.A. Career Connections, the Rady School’s career center, provides students with expertise, guidance, and resources to successfully manage their careers. Services and resources of M.B.A. Career Connections are available to all M.B.A. students, with some limitations for those sponsored by their employers. For full-time M.B.A. students, the center’s personalized approach to career management begins before the student’s first quarter and continues throughout the program. M.B.A. Career Connections actively works to identify opportunities for students and to enable students to build strong professional networks.

Career services include career assessment, individual career coaching, career fairs, workshops, employer presentations and panels, internship and career employment listings, and on-campus interviews. Specialized M.B.A. career workshops focus on resume writing, interviewing skills (including videotaped mock interviews), effective job search strategies, and job offer evaluation and negotiation.
THE PH.D. IN MANAGEMENT

The Rady School offers a Ph.D. in management designed to prepare graduates for careers in academic research. Only students who intend to pursue a doctorate should apply; the department does not enroll students who seek a master's degree as a terminal degree.

Students with undergraduate preparation in various areas of the social and physical sciences may apply to the program. Students who elect to specialize in management science and finance are required to have additional mathematical knowledge, such as advanced calculus and statistics.

To be considered for admission candidates must:
- Hold an undergraduate degree from an accredited college or university.
- Complete the UCSD Application for Admission with application fee.
- Submit test scores from the Graduate Management Admissions Test (GMAT) or Graduate Record Examination (GRE) taken within five years of the date of application. Official Test of English as a Foreign Language (TOEFL) exam scores are required of applicants whose primary language is not English or who graduate from a university at which the language of instruction was not English.
- Submit two copies of official transcripts from all colleges and universities attended.
- Submit three letters of recommendations that speak to the candidate's potential as a researcher.
- Submit a statement of purpose.
- Take “Mathematics for Economists” from the UCSD economics department prior to the start of the first fall quarter.

Note: At the discretion of the Admissions Committee, personal interviews may be required.

Program instruction includes formal core and domain/methodology course work, directed study in close consultation with faculty in preparation for a research career, and individual research required for the student's dissertation. The core curriculum consists of a mathematics review and two course sequences designed to ensure that students are educated in the fundamentals of economic and social sciences. Individual students may be required to take additional courses depending upon educational background. The domain/methodology course requirement helps the student acquire the deep domain knowledge and methodological skills required to conduct research in his or her areas of interest.

The main Ph.D. requirements are that a student completes the core and elective course work, qualifying examinations, original research papers and presentations, a dissertation acceptable to the doctoral committee, and a final oral examination on the dissertation. Rather than a separate qualifying exam on each topic, students will be required to pass graduate course exams with a cumulative GPA of 3.6. If a student does not have the 3.6 (A-) average, the topic qualifying exams will be required.

Ph.D. students must be in residence a total of six quarters, three of which must be spent in continuous residence at the Rady School on the San Diego campus. A minimum of three quarters of residency must pass between the date of formal advancement to candidacy and the date of the final examination.

Nonresident students who have failed to establish California residency after the first year will be responsible for their own tuition.

Normative time (defined as that period of time in which students under normal circumstances are expected to complete their doctoral program) is four to five years, based on the student's background and progress. The maximum length of time that a student may remain a pre-candidate for the Ph.D. degree is three years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

A detailed description of the Ph.D. program is available on the Internet at http://management.ucsd.edu/grad/ or by contacting the Ph.D. program coordinator at radyphd@ucsd.edu. Residence and other campuswide regulations are described in the graduate studies section of this catalog.

THE ACCOUNTING MINOR

The Rady School of Management's accounting minor is designed to provide students a breadth of understanding of accounting theory, practices, and applications. The minor will appeal to students who envision careers in the accounting profession. Because of accounting's broad application, these careers would span across public accounting firms, corporate accounting departments, and government, nonprofit, and nongovernmental organizations. For many students, this will be their first step in achieving a Certificate in Public Accounting, CPA.

ACCOUNTING MINOR REQUIREMENTS

The accounting minor will consist of seven courses that cover the key accounting principles, processes, and applications. Required courses include two lower-division courses and five upper-division courses:

Lower-Division Courses

MTG 4. Financial Accounting or Econ. 4: Financial Accounting
MTG 5. Managerial Accounting

Upper-Division Courses

MTG 131A. Intermediate Accounting A
MTG 131B. Intermediate Accounting B
MTG 132. Auditing
MTG 135. Federal Taxation—Companies
MTG 136. Advanced Accounting

In order to count toward the minor, all courses must be taken for a letter grade and students must earn a C– or better in each course. Lower-division transfer credits for courses that are clearly equivalent in scope and content to lower-division courses required for the accounting minor will be accepted from regionally accredited United States institutions and from foreign institutions recognized by the Rady School of Management.

C.P.A. Accounting Requirements

A student who completes nine Rady accounting courses (the seven courses required for the minor plus two electives for a total of thirty-six quarter units) will have met the accounting portion of the educational requirement for their C.P.A.
MGTV 134. Federal Taxation—Individuals (4)
Covers theory and practical application of federal income tax regulations for individuals pertaining to gross income, adjusted gross income, itemized deductions, business operations, passive activities, property transactions, deferred taxes, tax avoidance, and reporting standards. Prerequisite: MGT 132.

MGTV 135 Federal Taxation—Companies (4)
Covers the theory and practical application of federal income tax regulations for corporations and other enterprisers pertaining to formulations, annual operations, distributions, liquidations, reorganizations, affiliations, and reporting standards. Prerequisite: MGT 132.

MGTV 136. Advanced Accounting (4)
Covers accounting topics related to consolidated financial statements, variable interest entities, foreign currency translation, segment reporting, and business combinations. Prerequisite: MGT 135.

MGTV 164. Organizational Leadership (4)
Will study alternative organizational structures, their stakeholders and cultures and use in meeting strategic enterprise priorities. Insights into motivation, leadership, decision making, communication styles, and change management. Attention given to what the organization measures, controls, and rewards. Prerequisite: upper-division standing.

MGTV 166. Business Ethics and Corporate Responsibility (4)
Will cover ethical conduct issues for leaders from a wide array of organizations and industries including consideration of differences among global trading partners. The issues impacting corporate responsibility will be examined as will full-cycle cost analysis of products and services. Prerequisite: upper-division standing.

MGTV 172. Business Project Management (4)
Addresses effective practices for management of business projects. Includes both project management processes—scheduling, milestone setting, resource allocation, budgeting, risk mitigation—and human capital management—communication, teamwork, leadership. Also considers requirements for effectively working across functional and organizational boundaries. Prerequisite: upper-division standing.

MGTV 174. Supply Chain and Operations Management (4)
Will cover process design and optimization, inventory control and forecasting, vendor selection and management, operations, planning and management, global distribution techniques, material, labor, and overhead costing, and work-in-process tracking and valuation, quality control along with organizational issues. Prerequisite: upper-division standing.

MGTV 181. Enterprise Finance (4)
Will cover debt and equity financing of the enterprise, the role of commercial banks, venture firms, and investment banks; along with enterprise valuation, cash flow management, capital expenditure decisions, return on investment, economic value added, and foreign currency translation. Prerequisite: upper-division standing.

MGTV 199. Directed Independent Study (4)
Directed individual study or research by special arrangement and under supervision of a faculty member. Prerequisites: consent of instructor and departmental approval; approved Special Studies form.

M.B.A. APPROVED COURSE LIST

MGTV 201. Marketing Strategy (4)
Addresses formulation and implementation of marketing strategy, based on an integrative view of competitive brand strategy over the product life cycle. Provides a framework for developing marketing strategies yielding sustainable competitive advantage based on customer, competitor, industry, and environmental analysis. Prerequisite: admission to degree program or consent of instructor.

MGTV 202. Research for Marketing Decisions (4)
Methods and applications of qualitative and quantitative market research. Instructional methods include problem formulation, research design, questionnaire construction, and sampling to yield the most valuable information, and on the proper use of statistical methods. Prerequisite: admission to degree program or consent of instructor.

MGTV 203. Consumer Behavior (4)
The course identifies the factors that influence the selection and usage of products and services. Students will be introduced to problems/decisions that include evaluating behavior; understanding the consumers' decision process, and strategies to control consumer behavior. Prerequisite: admission to M.B.A. program or consent of faculty.

MGTV 204. Marketing Communications (4)
This course differentiates decisions/principles considered when developing an overall communications and promotion strategy. Key decisions include the promotional mix, the design, implementation and evaluation of communications strategies, and the thinking required to develop a creative strategy. Prerequisite: admission to M.B.A. program or consent of faculty.

MGTV 209. Topics in Marketing (2 or 4)
Introduces advanced topics of special interest in marketing. May be repeated for a maximum of eight credits if the topics are substantially different. Prerequisite: admission to M.B.A. program or consent of faculty.

MGTV 210. Regulation and Innovation (4)
Addresses the complex role of regulation in business innovation. Includes legal issues such as how to structure a business, whether to seek intellectual property protection, and how to raise capital or formulate exit strategies. Prerequisite: core finance course or consent of instructor.

MGTV 211. CEO, the Board of Directors and Corporate Governance (4)
Provides an understanding of relationships among shareholders, managers, and boards. Focuses on the office of the chief executive officer and on the board of directors, including the roles and responsibilities of directors, and the legal, economic, managerial, and psychological issues they confront. Prerequisite: admission to M.B.A. program or consent of instructor.

MGTV 219. Topics in Corporate Governance (2 or 4)
Introduces advanced topics of special interest in corporate governance. May be repeated for a maximum of eight credits if the topics are substantially different. Prerequisite: admission to M.B.A. program or consent of faculty.

MGTV 220. Opportunity and Business Model Analysis (4)
Builds on core management courses and deals with identifying and assessing new technological and product opportunities. Assessment methods and frameworks will be introduced for technologies and opportunities. Various business models to profitably address market opportunities will also be discussed. Prerequisite: core finance course (MGTV 408) or consent of instructor.

MGTV 221. Topics in Innovation (2 or 4)
Advanced topics in business innovation, delivered by lecture, case discussion, and online instruction. Prerequisite: admission to M.B.A. program or consent of instructor.

MGTV 222. Creativity and Innovation (4)
Focuses on fostering and maintaining creativity in entrepreneurial ventures and, more broadly, in general management. Reading materials, cases, classroom, and home exercises will help students understand and be able to use creativity in their own working lives. Prerequisite: admission to M.B.A. program or consent of instructor.

MGTV 223. Topics in International Business (2 or 4)
Introduces advanced topics of special interest in international business (e.g., global supply chain and the rise of Mexican maquiladoras; entrepreneurship in Russia). May be repeated for a maximum of eight credits if the topics are substantially different. Prerequisite: admission to M.B.A. program or consent of faculty.

MGTV 230. Strategic Cost Management (4)
The course details the knowledge and analytical skills necessary to use accounting cost information as a basis for formulating and evaluating corporate strategies. Sessions focus on the principles of strategic positioning analysis, value chain analysis, and cost driver analysis. Prerequisite: admission to M.B.A. program or consent of faculty.

MGTV 239. Topics in Accounting (2 or 4)
Introduces advanced topics of special interest in accounting. May be repeated for a maximum of eight credits if the topics are substantially different. Prerequisite: admission to M.B.A. program or consent of faculty.

MGTV 240. Decision Analysis (4)
Provides practical techniques to help structure decision problems and analyze them quantitatively. Techniques help thinking clearly about objectives, alternatives, consequences, and uncertainties, and enable logical judgments with other types of information. Prerequisite: admission to M.B.A. program or consent of faculty.

MGTV 249. Topics in Decision Sciences (2 or 4)
Introduces advanced topics of special interest in management and decision sciences. May be repeated for a maximum of eight credits if the topics are substantially different. Prerequisite: admission to M.B.A. program or consent of faculty.

MGTV 250. Biotechnology Industry, Structure, and Strategy (4)
Provides a business overview of the life-science industry, its major market segments, financial structure, and financing strategies. Develops an understanding of major industry issues and strategies, including new product development, financing, partnering and alliances, emerging trends, ethical and policy issues. Prerequisite: completion of M.B.A. core curriculum or consent of instructor.

MGTV 251. Topics in Business Strategy (2 or 4)
Advanced topics in business strategy. Instructional methods include face-to-face lecture sessions and case discussions. Prerequisite: admission to M.B.A. program or consent of instructor.

MGTV 259. Global Business Intensive (2)
Introduces advanced topics in global business, with a regional emphasis. Instructional methods include lectures, case presentations, readings, and discussions. A substantial portion of learning outcomes will be met by visiting students.
businesses in another world region, observing operations, and interviewing executives. The visit to the foreign region will typically be one to two weeks and may occur outside the normal academic year. Prerequisites: admission to M.B.A. program or consent of faculty.

MGT 260. Negotiation (4) Examines methods of conflict resolution needed for effective management in a constantly changing business environment. Applies these tools to the broad spectrum of negotiation problems faced by the manager and professional. Includes simulations, role playing, and cases. Prerequisite: admission to M.B.A. program or consent of instructor.

MGT 269. Topics in Organizational Behavior (2 or 4) Introduces advanced topics of special interest in management and organizational behavior. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. Prerequisite: admission to M.B.A. program or consent of faculty.

MGT 270. Project Management (4) Provides management concepts and tools to enable the more effective design, planning, and control of projects. Includes both the qualitative and quantitative aspects of project management. Prerequisite: admission to M.B.A. program or consent of instructor.

MGT 271. Technology Strategy (4) Outlines tools for formulating and evaluating technology strategy. Includes an introduction to the economics of technical change, models of technological evolution, and models of organizational dynamics and innovation. Provides an understanding of how technology firms gain and sustain competitive advantage. Prerequisite: admission to M.B.A. program or consent of instructor.

MGT 272. New Product Development (4) Provides comprehensive analytical coverage of the new-product development process, focusing on the basic tools, methods, and organizational structures used in new-product development and management. Prerequisite: admission to M.B.A. program or consent of instructor.

MGT 273. Supply Chain Management (4) Describes the systems approach to managing the entire flow of information, materials, and services from raw materials suppliers through factories and warehouses to the end customer, which is the key to productivity and competitiveness of manufacturing and service enterprises. Prerequisite: admission to M.B.A. program or consent of faculty.

MGT 279. Topics in Operations and Technology (2 or 4) Introduces advanced topics of special interest in management and value systems. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. Prerequisite: admission to M.B.A. program or consent of faculty.

MGT 280. New Venture Finance (4) Focuses on the financing of new ventures and technological innovation. Includes perspectives of the entrepreneur and the investor, investigating the venture-capital industry and for other technology-driven firms. Develops managerial communication skills. Provides an introduction to case study and to ethical issues confronting managers in technology or science-driven firms. Develops managerial communication skills. Prerequisite: M.B.A. student or departmental stamp.

MGT 407. Marketing (4) By taking an analytical approach to the study of marketing principles, this course provides an understanding of customers and competitors as a basis for developing, pricing, promoting, and distributing goods and services that satisfy customer and organizational objectives. Prerequisite: M.B.A. student or departmental stamp.

MGT 408. Finance (4) Through lecture and online delivery, this course will focus on the strategic management of technology-driven firms, providing an understanding of challenges of finance in start-up and small- and medium-sized enterprises. Prerequisite: M.B.A. student or departmental stamp.

MGT 409. Organizational Strategy and Human Resource Management (4) After identifying characteristics common to technology-driven firms, the implications of living in, managing, and leading such an organization are explored. Covers skills such as leadership of project teams and negotiations. Prerequisite: M.B.A. student or departmental stamp.

MGT 410. Strategy (4) Through lecture and online delivery, this course explores the strategic management of technology-driven firms focusing on the analytical tools and techniques that support strategy formulation and the related managerial skills and decision processes that foster strategy implementation. Prerequisite: M.B.A. “stamp” or departmental stamp.

MGT 412. Lab to Market: Opportunity and Business Model Analysis (4) An integrated examination of competencies needed to transform innovations into profitable market opportunities. Focus on processes to generate ideas, which are viable business opportunities, and evolve them into products and businesses. Prerequisite: M.B.A. student or departmental stamp.

MGT 413. Operations, Information Systems, and Data Analysis (4) Through lecture and online delivery, students will be familiarized with the problems and issues confronting operations managers, and to introduce language, conceptual models, and analytical techniques that are broadly applicable in confronting such problems. Prerequisite: M.B.A. student or departmental stamp.

MGT 414A. Lab to Market Workshop I (4) Through lecture and online delivery, provides broad coverage of leading edge developments in technical and scientific research, with an eye to their potential applicability in business. Provides basis for project-based Lab to Market Workshop II. An IP grade will be awarded at the end of the quarter. Final grade will not be given until the completion of MGT 414B. Prerequisite: M.B.A. student or departmental stamp.

MGT 414B. Lab to Market Workshop II (4) Project-based course, requiring identification and completion of major project assessing potential business value of emerging or potential technology or science. Students work individually or in teams. Periodic class meetings include presentation of interim and final reports. Prerequisite: M.B.A. “stamp” or departmental stamp.

MGT 490A. Special Topics in Marketing (4) Through lecture and online delivery, a course at an advanced level on marketing topics. Will fulfill the required elective for students in Communication and Information Technology Services (CITS) Management track. Prerequisite: M.B.A. student or departmental stamp.

MGT 490B. Special Topics in Marketing (4) Through lecture and online delivery, a course at an advanced level on marketing topics. Will fulfill the required elective for students in Management and the Life Sciences and Health Industries track. Prerequisite: M.B.A. student or departmental stamp.

The master of advanced studies (M.A.S.) in Marine Biodiversity and Conservation is a unique program of study equipping its graduates with the knowledge they need to improve conservation of marine biodiversity in the world’s most diverse and threatened eco-regions through development of local capacity and science-based management tools. Led by faculty of Scripps Institution of Oceanography (SIO), the program is designed to teach current and future professionals about marine ecosystems from the scientific, economic and policy perspectives, as well as provide important cultural and communication skills. The degree is most appropriate for marine resource managers in all regions of the world, practicing marine science professionals who wish to broaden their understanding and influence in this arena, science policy analysts and advocates, and natural scientists interested in obtaining a more firm grounding in the public policy and economics of marine conservation.

The M.A.S. in Marine Biodiversity and Conservation is a full-time, self-supporting degree program that most students complete in a twelve-month period, mid-June through mid-June each year. The UC San Diego graduate division confers the M.A.S. degree and the Center for Marine Biodiversity and Conservation at SIO is responsible for the academic management of the curriculum. UC San Diego Extension administers the program and provides student advising and career counseling services.

ADMISSION
New students are admitted in the summer (June) of each academic year. Prospective candidates should submit and complete the official UCSD online graduate application for admission, the application fee, one set of official transcripts from each institution attended after high school, three letters of recommendation, and a current résumé or c.v. The GRE/GMAT is not required. Candidates must normally have a minimum of three years of relevant work experience. International applicants must submit official scores from the Test of English as a Foreign Language (TOEFL). The application deadline is January 31 for the summer through spring academic program.

PROGRAM OF STUDY
The full-time degree program is designed to be completed in one year. In the summer session, classes are scheduled five days a week, eight hours a day. In the fall, summer, and spring, students take courses that are held during regularly scheduled university class hours. Students are required to complete forty-eight units of courses, comprising forty core units, including a six-unit capstone project, and eight elective units.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

CORE CURRICULUM
SIO 295S. Introduction to Marine Biodiversity and Conservation—Seminar (8)
Lectures on ecological, economic, social, and legal issues related to marine biodiversity and case studies on socio-economic and legal issues. Students are expected to attend field trips at sea and to various sites around San Diego County as part of the corequisite course. Students who have taken SIO 295S may not receive credit for SIO 295S. Prerequisite: consent of instructors. Corequisite: SIO 295LS and M.A.S. students only.

SIO 295LS. Introduction to Marine Biodiversity and Conservation—Lab (8)
Laboratory work on major biological taxa, field trips on biodiversity in situ, computer labs for informatic tools. Students are expected to attend field trips at sea and to various sites around San Diego County as part of the course. Students who have taken SIO 295S may not receive credit for SIO 295LS. Prerequisite: consent of instructor. Corequisite: SIO 295S and M.A.S. students only.

SIO 286. Marine Science, Economics, and Policy (4)
This course investigates global issues in marine conservation and potential policy solutions. The approach is interdisciplinary, fast paced, and discussion oriented. Students will become acquainted with sufficient background in marine biology, ecology, marine and conservation economics, international law and policy as preparation for participation in discussion on real-world issues in marine conservation. Topics and instructors change each quarter. Prerequisite: graduate standing or consent of instructor.

MAS MBC students are required to take a minimum of four units of economics, and a minimum four units of a policy/communications course as approved by the MAS MBC program chair.

MBC 296. Capstone Independent Study Project (6)
Building on the knowledge and experience gained from the entire curriculum of the Master’s in Marine Biodiversity and Conservation (M.A.S.-MBC) program, students will design and present a specific marine conservation project. Limited to registered students in MAS-MBC program. Prerequisite: SIO 286. (F,W)

MBC 258. Special Topics/Marine Biology–MBC M.A.S. Forum (1)
Required course for M.A.S.-MBC students will focus on development of M.A.S. Capstone Projects and discussions covering marine conservation issues, including informal student presentations on political, economic, historical, educational, and natural science issues related to conservation and analysis of marine biodiversity. Prerequisites: SIO 295S and SIO 295LS summer courses. Limited to registered students in M.A.S. Marine Biodiversity and Conservation program. (S/U grades only.) Jackson, R. Norris (F,W,S)

Electives. Varies (8)
Students enroll in eight elective units of course work relating to marine biodiversity and conservation issues that are approved by the MAS MBC program chair.

Materials science and engineering is concerned with the structure, properties, and applications of materials. The university-wide Materials Science and Engineering Program (MSE) at UC San Diego aims to provide fundamental knowledge for understanding of materials with the objective of predicting, modifying, and tailoring the properties of materials to yield enhanced material performance.

The foundations of materials science are the basic sciences of physics, chemistry, mathematics, and engineering principles. The interdisciplinary nature of the program at UCSD is ideally suited to address this requirement. The graduate students in the Materials Science and Engineering Program benefit from the unique and broad combination of faculty members and research facilities existing at UCSD, in the Departments of Mechanical and Aerospace Engineering, Electrical and Computer Engineering, NanoEngineering, Physics, Chemistry and Biochemistry, Bioengineering, Structural Engineering, Scripps Institution of Oceanography, and Scripps Institution of Oceanography as well as the School of Medicine and the Division of Biological Sciences. Students pursuing their M.S. or Ph.D. degree in the MSE Program can have any faculty member from these participating departments and schools in UCSD as their thesis advisor or co-advisor, based on matching of the interests and/or financial support arrangements.

Of particular emphasis within the program are: a study of microstructure-property relationships; design of electronic, superconducting, magnetic, and nano materials for electronic and high-tech device and energy applications; optical and chemical materials for telecom and display applications; biomaterials and medical device materials for biotech applications; experimental investigation and theoretical modeling of the mechanical behavior of materials; and advanced composite materials for civil structures.

THE GRADUATE PROGRAM

The Materials Science and Engineering Program at UC San Diego is interdisciplinary, with participation of faculty members from several departments. Faculty from the following departments participate in the Materials Science and Engineering Program: Mechanical and Aerospace Engineering, Physics, Scripps Institution of Oceanography, Structural Engineering, Electrical and Computer Engineering, NanoEngineering, Chemistry and Biochemistry, Bioengineering, the Division of Biological Sciences, the School of Medicine, and the School of Pharmacy. The director of the program, in consultation with the executive committee, carries out the governance of the program. The executive committee coordinates all affairs of the Materials Science and Engineering Program, including student admissions, degree requirements, graduate courses in materials science given by various participating departments, maintenance of laboratory instructional facilities, seminars, special courses, part-time instructors, and related matters.

Undergraduate preparation for pursuing the M.S. and Ph.D. in materials science and engineering at UCSD would normally include a degree in materials sciences, or in engineering or physical sciences, such as physics, chemistry, biology, geology, and related disciplines. Students are expected to have an adequate mathematics, physics, chemistry, and related basic sciences background, as well as acceptable GPA and GRE scores.

MASTER’S DEGREE PROGRAM

The program offers the M.S. degree in materials science and engineering under both the Thesis Plan I and the Comprehensive Examination Plan II; see “Graduate Studies: Master’s Degree.” The requirements for the M.S. degree are as follows:

1. All students must complete a total of thirty-six units.

2. All students must complete four Mandatory Core Courses and at least two of the six Elective Core Courses:

Mandatory Core Courses
MS 201A-C, MS 227

Elective Core Courses (required to select at least two to fulfill requirements)
MS 205A, MS 251A-B, MS 252, MS 253, PHYS 152A (Physics 211A can replace 152A with advisor’s permission.) See “Courses” for description.

3. Students may include up to twelve units of undergraduate courses. These include the one undergraduate core course, Physics 152A.

4. Enroll in MAT200, as required. See “Courses” for descriptions.

5. Remaining courses to complete the thirty-six unit requirement for the MS degree may be selected from an approved list of graduate courses with the consent of a faculty advisor.

6. Students either complete a thesis (Plan I) or pass a comprehensive examination (Plan II) as described in the “Graduate Studies” section of this catalog.

7. Students must meet all other requirements established by the university.

Students who transfer with some graduate credit or an M.S. from another institution will have their records reviewed by a faculty advisor, and an appropriate individual course of study may be approved.
THE PH.D. PROGRAM

After completing the M.S. degree (or meeting equivalent requirements) and meeting the minimum standard on the comprehensive examination to be admitted to or continue in the Ph.D. program, a student must:

1. Meet all the university's residency and other requirements.

2. Successfully complete three advanced graduate courses (in addition to those required for the M.S. degree) which have been approved by the student's potential dissertation advisor.

3. Enroll in MATS200, as required. See "Courses" for descriptions.

4. Pass the Literature Review Examination. This requirement must be successfully completed within one year after passing the Comprehensive Examination.

5. Pass the Ph.D. Qualifying Examination (Senate Exam) to be advanced to Ph.D. candidacy.

6. Successfully complete and defend a dissertation which, in the opinion of the dissertation committee, contains original work that should lead to publication of at least one significant article in an appropriate refereed journal.

In principle, it should be possible to finish the M.S. degree in three quarters, and a Ph.D. in an additional three years. Ph.D. time limits are as follows:

- Pre-candidacy—four years;
- Support limit—six years;
- Additional three years. Ph.D. time limits are as follows:
  - M.S. degree in three quarters, and a Ph.D. in an additional three years.

THE COMPREHENSIVE EXAMINATION

The examination will consist of twelve questions, two from each of the six core courses. A passing grade is 60 percent for the Master's degree, and 70 percent for the Ph.D. The examination will not exceed six hours in duration. The examination is usually administered the second week in January, and a week after spring quarter finals week in June. Typically, students take the exam after one year of full-time enrollment. This exam may only be retaken once before the end of the second year of study.

THE LITERATURE REVIEW EXAMINATION

The Literature Review Examination tests the student's ability to prepare and present a comprehensive overview of a topic based on existing journal literature. It should be a comprehensive discussion of the literature, scientific theory, problems or theoretical deficiencies, and possible areas of research in some area of materials science and engineering. The topic may be in the general area in which the student plans to pursue his or her thesis research, or it may be in an unrelated field. The topic must be approved by the three faculty member committee in advance of the seminar. The Literature Review Examination is not to be a discussion of the student's research project or their research proposal. A presentation which includes the student's own work which has not been published will constitute a no pass grade. This exam must occur within one year of the student having passed the Comprehensive Examination.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

GRADUATE

200. Graduate Seminar (0)
Each graduate student in the Materials Science and Engineering Program is expected to attend a weekly seminar in materials science or related areas. M.S. students must enroll for three quarters, Ph.D. students for six quarters, as of fall 1995. (S/U grades only.) (F,W,S)

201A. Thermodynamics of Solids (4)
The thermodynamics and statistical mechanics of solids. Basic concepts: equilibrium properties of alloy systems; thermodynamic information from phase diagrams, surfaces, and interfaces, and crystalline defects. Prerequisite: consent of instructor.

201B. Solid State Diffusion and Reaction Kinetics (4)
Thermally activated processes, Boltzmann factor, homogeneous and heterogeneous reactions, solid state diffusion, Fick's laws, diffusion mechanisms, Kirkendall effect, Boltzmann-Matano analysis, high diffusivity paths. Prerequisite: consent of instructor.

201C. Phase Transformations (4)

205A. Imperfections in Solids (4)
Point, line, and planar defects in crystalline solids, including vacancies, self-interstitials, solute atoms, dislocations, stacking faults, and grain boundaries; effects of imperfections on mechanical properties; interactions of dislocations with point defects; strain hardening by micro-obstacles, precipitation, and alloying elements. Prerequisite: consent of instructor.

207. Surface Reactions, Corrosion, and Oxidation (4)

211A. Mechanical Properties (4)
Review of basic concepts in mechanics of deformation; elasticity, plasticity, viscoelasticity, and creep; effects of temperature and strain-rate on inelastic flow; microstructure and mechanical properties; application of basic concepts to selected advanced materials. Prerequisite: consent of instructor. (Cross-listed with MAE 229.)

213A. Dynamic Behavior of Materials I (4)
 Elastic waves in continuum; longitudinal and shear waves. Surface waves. Elastic waves; shock waves. Rankine-Hugoniot relations. Method of characteristics, differential and difference form of conservation equations; dynamic plasticity and dynamic fracture. Shock wave reflection and interaction. Prerequisite: consent of instructor. (F) (Cross-listed with MAE 273A.)

225. Materials for Magnetic Recording (4)
Properties of magnetic materials utilized as magnetic recording media and heads: magnetic structure of oxides and metals; fine particle magnetism; micromagnetic analysis; hysteresis and reversal mechanisms of hard materials; dynamic processes and domain patterns of soft materials; thermal fluctuations; multilayer phenomena; giant magnetoresistance. Prerequisites: undergraduate electromagnetism and solid state physics or consent of instructor. (Cross-listed with ECE 246A.)

227. Structure and Analysis of Solids (4)
Key concepts in the atomic structure and bonding of solids such as metals, ceramics, and semiconductors. Symmetry operations, point groups, lattice types, space groups, simple and complex inorganic compounds, structure/property correlations, structure determination with X-ray diffraction. Ionic, covalent, metallic bonding compared with physical properties. Atomic and molecular orbitals, bands versus bonds, free electron theory. Prerequisite: graduate student or consent of instructor.

236. Advanced Ceramic (4)
Topics include phase equilibria and crystallography, defects and thermodynamics (Kroger-Vink notation), glass science, electrical and ionic transport behavior, Brouwer diagrams, powder synthesis and compaction, sintering theory and grain growth, mechanical, optical, magnetic, electrical properties, fuel cells. Prerequisite: consent of instructor.

240A. Scanning Electron Microscopy and X-Ray Microanalysis (4)
Electron optics, electron-beam-specimen interactions. Image formation in the SEM. The role of specimen and detector in contrast formation. Imaging strategies. X-ray spectral measurements. Qualitative and quantitative microanalysis. Materials specimen preparation. Prerequisite: consent of instructor. The laboratory section will teach the operation of the microscope to conduct material analysis via SEM.

240B. Transmission Electron Microscopy (4)
Operation and calibration of the TEM, lens defects and resolution, formation of images and diffraction patterns, electron diffraction theory (kinematic dynamical), indexing diffraction patterns, diffraction contrast. Quantitative analysis of crystal defects, phase contrast, and specimen preparation. Prerequisite: MS 240A or consent of instructor. The laboratory section will teach the operation of the microscope to conduct material analysis via TEM.

243. Modern Materials Analysis (4)
Analysis of the near surface of materials via ion, electron, and X-ray spectroscopies. Topics to be covered include particle solid interactions. Rutherford Backscattering, secondary ion mass spectroscopy, electron energy loss spectroscopy, particle induced X-ray emission, Auger electron spectroscopy, extended X-ray absorption fine structure and channeling. Prerequisite: consent of instructor. (Cross-listed with ECE 237.)

251A. Electronic and Photonic Properties of Materials (4)
The electronic and optical properties of metals, semiconductors, and insulators. The concept of the band structure. Electronic and lattice conductivity. Type I and Type II superconductivity. Optical engineering using photonic band gap crystals in one-, two-, and three-dimensions. Current research frontiers. Prerequisites: consent of the instructor. (Cross-listed with MAE 265A.)

251B. Magnetic Materials: Principles and Applications (4)
The basis of magnetism: classical and quantum mechanical points of view. Different kinds of magnetic materials. Magnetic phenomena including anisotropy, magnetostriction, domains, and magnetization dynamics. Current frontiers of nano-magnetics research including thin films and particles. Optical, data storage, and biomedical engineering applications of soft and hard magnetic materials. Prerequisites: consent of the instructor. (Cross-listed with MAE 265B.)

252. Biomaterials (4)
This class will cover biomaterials and biomimetic materials. Metal, ceramic, and polymer biomaterials will be discussed. Emphasis will be on the structure-property relationships, biocompatibility/degradation issues and tissue/material interactions. Synthesis and mechanical testing of biomimetic
materials will also be discussed. **Prerequisite:** consent of instructor. (Cross-listed with MAE 266.)

253. Nanomaterials and Properties (4)
This course discusses synthesis techniques, processing, microstructural control, and unique physical properties of materials in nano-dimensions. Topics include nanowires, quantum dots, thin films, electrical transport, electron emission properties, optical behavior, mechanical behavior, and technical applications of nanomaterials. **Prerequisite:** consent of instructor. (Cross-listed with MAE 267.)

Fabrication of Micro-Electro Mechanical Systems (MEMS) by bulk and surface micromachining of single crystal, polycrystal, and amorphous silicon and other materials. Performance issues including electrostatic, magnetic, piezoelectric actuations, residual stresses, deformation. Novel device applications, future trends in smart materials and nano-electro-mechanical (NEMS) systems. **Prerequisite:** consent of instructor. (Cross-listed with MAE 268.)

255. Presentations, Inventions, and Patents (4)
This course covers methodology and skills for oral and written presentations. Topics include preparation of presentation materials, presentation exercise, publication manuscripts, research work proposals, understanding and securing of inventions and intellectual properties, patent applications and licensing. **Prerequisite:** consent of instructor. (Cross-listed with MAE 269.)

256. Energy Materials and Applications (4)
This class will cover the fundamentals/engineering aspects of various energy materials based on metallic, ceramic, semiconductor; and chemical structures and their applications related to solar cells, fuel cells, batteries, fusion energy, and hydrogen storage will be discussed. (Cross-listed with MAE 278.) **Prerequisite:** consent of instructor/department stamp.

257. Polymer Science and Engineering (4)
Quantitative basic understanding of different branches of polymer science varying from polymer chemistry, characterization, thermodynamics, rheological properties, smart materials, self-assembly in biopolymers (natural) and synthetic polymers, and applications of polymers ranging from medicine to structure. (Cross-listed with BENG 242.) **Prerequisite:** graduate standing in bioengineering (BE 75) or materials science (MS 76) or consent of instructor.

258. Medical Device Materials (4)
In this interdisciplinary course, the nature, properties, and applications of various medical device materials will be discussed. The devices include coronary stents, catheters, drug delivery vehicles, and other implant, surgery, or therapeutics related devices. (Cross-listed with MAE 250.)

295. Research Conference (2)
Group discussion of research activities and progress of group members. **Prerequisite:** consent of instructor.

296. Independent Study (4)
**Prerequisite:** consent of instructor.

299. Graduate Research (1-12)
(S/U grades only.) Subject to the approval of a faculty advisor, students may also choose from the following courses offered by departments participating in the Materials Science and Engineering Program (see the relevant pages of this catalog for descriptions):

**MECHANICAL AND AEROSPACE ENGINEERING (MAE)**

MAE 229A. Mechanical Properties (4)
MAE 231A. Foundations of Solid Mechanics (4)
MAE 231B. Elasticity (4)
MAE 232A-B-C. Finite Element Methods in Solid Mechanics (4-4-4)
MAE 233A. Fracture Mechanics (4)
MAE 233B. Micromechanics (4)
MAE 238. Stress Waves in Solids (4)
MAE 251. Structure and Analysis of Solids (4)

**ELECTRICAL AND COMPUTER ENGINEERING (ECE)**

ECE 230A. Solid-State Electronics (4)
ECE 230B. Solid-State Electronics (4)
ECE 230C. Solid-State Electronics (4)
ECE 237. Modern Materials Analysis (4)
ECE 246A. Materials for Magnetic Recording (4)

**PHYSICS**

Phys. 133/219. Condensed Matter/Materials Science Laboratory (2)
Phys. 211A. Solid-State Physics (5)
Phys. 211B. Solid-State Physics (4)

THE UNDERGRADUATE PROGRAM
The mathematics department offers a wide range of courses in pure and applied mathematics for its majors and for students in other disciplines. The department offers six majors leading to the B.S. degree: mathematics, applied mathematics, mathematics–computer science, joint major in mathematics and economics, mathematics–scientific computation, and probability and statistics, and two leading to the B.A. degree: mathematics-applied science, and mathematics-secondary education. In addition, students can minor in mathematics or mathematics education. The department also has an Honors Program for exceptional students in any of the eight majors. See the sections on major programs and the other areas mentioned above as well as the course descriptions at the end of this section for more specific information about program requirements and the courses offered by the department. You may visit our Web site, http://math.ucsd.edu, for more information, including course Web pages, career advising, and research interests of our faculty.

FIRST-YEAR COURSES
Entering students must take the Mathematics Placement Exam (MPE) prior to orientation unless they have an appropriate score on an AP calculus exam, an appropriate score (600 for Math. 10A; 650 for Math. 20A) on the SAT II Math Level 2 exam, an appropriate score on the International Baccalaureate Higher Level Mathematics Exam, credit by means of a foreign exam (e.g. GCE), or transferable college credit in calculus. The purpose of the MPE is to recommend placement for entering students in Math. 3C, 4C, 10A, or 20A. For more information about the MPE (test dates, test description, sample exams, online practice tests), see the Mathematics Testing and Placement Web site, http://mathtesting.ucsd.edu.

Prerequisites for Math. 3C, 4C, 10A-B-C, 20A-B-C-D-E-F, and 31AH-BH-CH are enforced through TritonLink. Students need to ensure that test scores and transferable college credit are submitted to the Registrar prior to enrollment through WebReg.

Math. 3C is the department’s preparatory course for the Math. 10 sequence, providing a review of algebraic skills, facility in graphing, and working with exponential and logarithmic functions.

Math. 4C is the department’s preparatory course for the Math. 20 sequence, providing a brief review of college algebra followed by an introduction to trigonometry and a more advanced treatment of graphing and functions.

Math. 10A-B-C is one of three calculus sequences. The students in this sequence have completed a minimum of two years of high school mathematics. This sequence is intended for majors in liberal arts and the social and life sciences. It fulfills the mathematics requirements of Revelle College and the option of the general-education requirements of Muir College. Completion of two quarters fulfills the requirement of Marshall College and the option of Warren College and Eleanor Roosevelt College.

The second first-year calculus sequence, Math. 20A-B-C, is taken mainly by students who have completed four years of high school mathematics or have taken a college level precalculus course such as Math. 4C. This sequence fulfills all college level requirements met by Math. 10A-B-C and is required of many majors, including chemistry and biochemistry, bioengineering, cognitive science, economics, mathematics, molecular biology, psychology, MAE, CSE, ECE, and physics. Students with adequate backgrounds in mathematics are strongly encouraged to take Math. 20 since it provides the foundation for Math. 20D-E-F which is required for some science and engineering majors. Note: As of summer 2003, Math. 21C and 21D have been renumbered to Math. 20C and 20D.

Certain transfers between the Math. 10 and Math. 20 sequences are possible, but such transfers should be carefully discussed with an advisor. Able students who begin the Math. 10 sequence and who wish to transfer to the Math. 20 sequence, may follow one of three paths:

1. Follow Math. 10A with Math. 20A, with two units of credit given for Math. 20A. This option is not available if the student has credit for Math. 10B or Math. 10C.

2. Follow Math. 10B with Math. 20B, receiving two units of credit for Math. 20B.

3. Follow Math. 10C with Math. 20B, receiving two units of credit for Math. 20B and two units of credit for Math. 20C.
Credit will not be given for courses taken simultaneously from the Math. 10 and the Math. 20 sequence. The department also offers a three-quarter Honors Calculus sequence in Multivariable Vector Calculus and Linear Algebra. This sequence, Math. 31AH-BH-CH, is designed for well-prepared students who have both a strong aptitude and a deep interest in mathematics and who wish to undertake a challenging series of courses. The sequence has a prerequisite of a score of 5 on the AP Calculus BC exam. These demanding, proof-based courses cover the material in Math. 20F, 20C, and 20E respectively—and entering students with a 5 on the Calculus BC exam should consider starting in the Honors sequence if their major (or minor) program requires them to take, at least, Math. 20A-B-C and 20F. Math. majors who complete the entire three-quarter honors sequence will have also satisfied the requirement of Math. 109 for their major program. They would be able to replace Math. 109 with any four-unit upper-division mathematics elective course. 

MAJOR PROGRAMS

The department offers six different majors leading to the B.S. degree: (1) mathematics, (2) applied mathematics, (3) mathematics-computer science, (4) joint major in mathematics and economics, (5) mathematics-scientific computation, and (6) probability and statistics, and two leading to the B.A. degree: (1) mathematics-applied science, and (2) mathematics-secondary education. The specific emphases and course requirements for these majors are described in the following sections. All majors must obtain a minimum 2.0 grade-point average in the upper-division courses used to satisfy the major requirements. Further, the student must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. Any mathematics course numbered 100–194 may be used as an upper-division elective. (Note: 195, 196, 197, 198, 199, and 199H cannot be used towards any mathematics major.) All courses used to fulfill the major must be taken for a letter grade. No more than three upper-division courses taken externally from UCSD can be counted towards any major. Special exceptions may be considered via petition.

It is strongly recommended that all mathematics majors review their programs at least annually with a departmental advisor, and that they consult with the Advising Office in AP&M 6016 before making any changes to their programs. Current course offering information for the entire academic year is maintained on the department’s Web page at http://www.math.ucsd.edu. Special announcements are also e-mailed to all majors.

Students who plan to go on to complete a Ph.D. in mathematics should be advised that only the best and most motivated students are admitted. Many graduate schools expect that students will have completed a full sequence of abstract algebra (Math. 100A-B-C) as well as a full sequence of analysis (Math. 140A-B-C). The advanced Graduate Record Exam (GRE) often has questions that pertain to material covered in the last quarter of analysis or algebra. In addition, it is advisable that students consider Summer Research Experiences for Undergraduates.

This is a program funded by the National Science Foundation to introduce students to math research while they are still undergraduates. In their senior year or earlier, students should consider taking some graduate courses so that they are exposed to material taught at a higher level. In their junior year, students should begin to think of obtaining letters of recommendation from professors who are familiar with their abilities.

Note: Math. 20D, E, and F do not need to be taken in order. Math majors are strongly advised to take 20F as early as possible after successfully completing 20C.

EDUCATION ABROAD

Students may be able to participate in the UC Education Abroad Program (EAP) and UC San Diego’s Opportunities Abroad Program (OAP) while still making progress towards the major. Students interested in this option should contact the Programs Abroad Office in the International Center and discuss their plans with the mathematics advising officer before going abroad.

The department must approve courses taken abroad. Information on EAP/OAP can be found in the “Education Abroad Program” section of the UC San Diego General Catalog and the Web site http://pao.ucsd.edu.

MAJOR IN MATHEMATICS

The upper-division curriculum provides programs for mathematics majors as well as courses for students who will use mathematics as a tool in the biological, physical and behavioral sciences, and the humanities.

Required Courses

Lower-Division

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D

Upper-Division

2. Mathematical Reasoning: Math. 109 (Note: Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)

3. One of the following sequences:
   b. Advanced Calculus: Math. 142A-B and Math. 120A (Math. 140A-B-C recommended for graduate school)

4. One of the following sequences:
   a. Modern Algebra: Math. 100A-B
   b. Modern Applied Algebra: Math. 103A-B and Math. 102 (Math. 100A-B-C recommended for graduate school)

5. Upper-division electives to complete thirteen four-unit courses, chosen from any mathematics course numbered between 100 and 194 (including those taken from the requirements listed above.)

As with all departmental requirements, more advanced courses on the same material may be substituted with written approval from the departmental advisor.

To be prepared for a strong major curriculum, students should complete the last three quarters of the 20 sequence and Math. 109 before the end of their sophomore year. Either Math. 140A-B or 100A-B should be taken during the junior year.

MAJOR IN APPLIED MATHEMATICS

A major in applied mathematics is also offered. The program is intended for students planning to work on the interface between mathematics and other fields.

Required Courses

Lower-Division

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D

2. Programming (one of the following):
   a. SE 8A-AL-8 (Intro to Computer Sci: Java)
   b. CSE 11 (Intro to Computer Sci: Java, Accelerated Pace)
   c. MAE 9 (C/C++ Programming)

Upper-Division

3. Mathematical Reasoning: Math. 109 (Note: Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)

4. Linear Algebra: Math. 102 or Math. 170A

5. Advanced Calculus: Math. 140A-B or Math. 142A-B

6. One of the following sequences:
   a. Math. 180A-B-C-181A
   b. Math. 180A-181A and any two from Math. 181B-C
   c. Math. 183 or Math. 180A-181A and any three from Math. 170A-B-C-175-179

7. One additional sequence which may be chosen from the list (#6) above or the following list: Math. 110A-120A-130A, 110A-B, 120A-B, 152-184A, 154-184A, 155A-B, 171A-B, 193A-B.

8. Upper-division electives to complete at least thirteen four-unit courses, chosen from any mathematics course numbered between 100 and 194 (including those taken from the requirements listed above) except
   a. Up to twelve units may be taken from outside the department in an approved applied mathematical area. A petition specifying the courses to be used must be approved by an applied mathematics advisor. No such units may also be used for a minor or program of concentration.
   b. MAE 107, Econ. 120A-B-C, cannot be counted toward the thirteen required courses.

To be prepared for a strong major curriculum, students should complete the last three quarters of
the 20 sequence and Math. 109 before the end of their sophomore year.

**MAJOR IN MATHEMATICS–SCIENTIFIC COMPUTATION**

This major is designed for students with a substantial interest in scientific computation. The program is a specialized applied mathematics program with a concentration in computer solutions of scientific problems.

**Required Courses**

**Lower-Division**

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
2. Computer Programming: MAE 9 and (CSE 8A-AL-B or CSE 11)
3. Basic Computation: Math. 15A (or CSE 20) and Math. 15B (or CSE 21) and CSE 12

**Upper-Division**

4. Mathematical Reasoning: Math. 109 (Note: Students completing Math 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)
5. Linear Algebra: Math. 102
6. Probability and Statistics: Math. 183 or 180A-181A (Note: No credit for Math. 183 if Math. 180A or 181A taken prior or concurrently.)
7. Analysis: Math. 140A-B or 142A-B
10. Scientific Computing: Math. 179
11. Additional elective upper-division courses to total 15 chosen from the following: Math. 107A-B, 110A-B, 120A-B, 130A-B, 131, 152, 155A-B, 170C, or 175.
   At least 15 upper-division mathematics courses are required for the major, except
   a. Up to 3 upper-division courses may be taken outside the department in an approved scientific computation area in the sciences or engineering. A petition specifying the courses to be used must be approved by a mathematics-scientific computation advisor.
   b. MAE 107, Econ. 120A-B-C, Math. 195, 196, 197, 199, and 199H cannot be counted toward the 13 four-unit upper-division courses.

**MAJOR IN MATHEMATICS–PROBABILITY AND STATISTICS**

**Effective Winter 2007**

This major is designed for students with a substantial interest in probability theory and statistics. It is useful preparation for many fields of employment as well as graduate school.

**Required Courses**

**Lower-Division**

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
2. Programming (one of the following):
   1. CSE 8A-AL-B (Java)
   2. CSE 11 (Java: Accelerated Pace)
   3. MAE 9 (C/C++)

**Upper-Division Mathematics Requirements**

3. Mathematical Reasoning: Math. 109 (Note: Students completing Math 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)
4. Linear Algebra: Math. 102 or Math. 170A
5. Analysis/Advanced Calculus: Math. 140A-B or Math. 142A-B
7. Probability: Math. 180A-B-C
9. One of the following: Math. 181C, 181E, 193A, 193B, 194
10. Computational Statistics: Math. 185
   At least 15 four-unit upper-division mathematics courses are required, except
   a. Two upper-division electives may be outside the department in an approved mathematical area. A petition approved by a math advisor is required.
   b. MAE 107, Econ. 120A-B-C, Math. 195-199 cannot be counted toward the upper-division requirements.

To be prepared for a strong major curriculum, students should complete the last three quarters of the 20 sequence and Math. 109 before the end of their sophomore year.

**MAJOR IN MATHEMATICS–APPLIED SCIENCE**

This major is designed for students with a substantial interest in mathematics and its applications to a particular field such as physics, biology, chemistry, biochemistry, cognitive science, computer science, economics, management science, or engineering.

**Required Courses**

**Lower-Division**

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
2. Programming (one of the following is required):
   a. CSE 8A-AL-B (Intro to Computer Sci: Java)
   b. CSE 11 (Intro to Computer Sci: Java, Accelerated Pace)
   c. MAE 9 (C/C++ Programming)

**Upper-Division Applied Science Requirements**

8. Seven upper-division courses selected from one or two other departments (these cannot be from mathematics). At least three of these seven upper-division courses must require calculus as a prerequisite.

Students must submit an individual plan for approval in advance by a mathematics department advisor, and all subsequent changes to the plan must be approved by a mathematics department advisor.

**MAJOR IN MATHEMATICS–COMPUTER SCIENCE**

Graduates of this program will be mathematically oriented computer scientists who have specialized in the mathematical aspects and foundations of computer science or in the computer applications of mathematics.

As of fall 2000, a mathematics–computer science major is not allowed to also minor in computer science in the Computer Science and Engineering department.

The detailed curriculum is given in the list below:

**MATHEMATICS–COMPUTER SCIENCE PRE-MAJOR**

In October 2001, the Academic Senate approved a minimum GPA requirement of 2.5 in the lower-division mathematics courses required for the mathematics–computer science major. The 2.5 minimum GPA in the lower-division math courses
reflects minimal preparation for the upper-division courses required for the major. Therefore, students entering UCSD as first-year students for the fall 2002 quarter and later and students entering as transfer students for the fall 2003 quarter and later will be held to this requirement. Applications from students entering UCSD on or after the effective dates above will be held until all lower-division math courses for the major are completed and the minimum GPA in those courses of 2.5 can be verified. Students meeting the 2.5 minimum GPA requirement will be accepted into the mathematics–computer science major.

Required Courses

Lower-Division

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
2. Intro to Computer Science—CSE 8A-AL-B
   Introduction to Computer Science: Java, or CSE 11 Introduction to Computer Science: Java (Accelerated)
3. Basic Data Structures and Object-oriented Programming: CSE 12
4. Computer Organization and Systems Programming: CSE 30 (Note: CSE 30 requires CSE 20 or Math. 15A as a prerequisite.)

Upper-Division:

5. Mathematical Reasoning: Math. 109 (Note: Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)
7. Theory of Computability: Math. 166 (or CSE 105)
8. Intro to Probability: Math. 180A or 183
9. Combinatorics: Math. 184A
10. Computer Implementations of Data Structures: Math. 176 (or CSE 100)
11. Design & Analysis of Algorithms: Math. 188 (or CSE 101)
12. Eight units from: Math. 170A-B-C, 174, 175, 179 (Note duplication of credit between Math. 174 and 170A-B-C)

JOINT MAJOR IN MATHEMATICS AND ECONOMICS

Majors in mathematics and the natural sciences often feel the need for a more formal introduction to issues involving business applications of science and mathematics. Extending their studies into economics provides this application and can provide a bridge to successful careers or advanced study. Majors in economics generally recognize the importance of mathematics to their discipline. Undergraduate students who plan to pursue doctoral study in economics or business need the more advanced mathematics training prescribed in this major.

This major is considered to be excellent preparation for Ph.D. study in economics and business administration, as well as for graduate studies for professional management degrees, including the MBA. The major provides a formal framework making it easier to combine study in the two fields.

Course requirements of the Major in Mathematics and Economics consist principally of the required courses of the pure mathematics major and the economics/management science major.

Required Courses

Lower-Division

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
2. Intro. to Economics: Econ. 1 and 3

Upper-Division

Fifteen upper-division courses in mathematics and economics, with a minimum of seven courses in each department, chosen from the courses listed below (prerequisites are strictly enforced):

3. Mathematical Reasoning: Math. 109 (Note: Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)
5. One of the following: Foundations of Analysis: Math. 140A Advanced Calculus: Math. 142A
7. Microeconomics: Econ. 100A-B-C
8. Econometrics: Econ. 120A-B-C or Math. 180A and Econ. 120B-C or Probability: Math. 180A, 181A and Econ. 120C
9. One of the following:
   a. Macroeconomics: Econ. 110A-B
   or two courses from the following:
   c. Decisions Under Uncertainty: Econ. 171
   d. Introduction to Operations Research: Econ. 172A-B, (Note: 172A is a prerequisite for 172B-C)

Other courses which are strongly recommended are Math. 130B, 131, 131B, 193A-B and 194 and Econ. 109, 113, 175, and 178.

MAJOR IN MATHEMATICS—SECONDARY EDUCATION

This major offers excellent preparation for teaching mathematics in secondary schools. Students interested in earning a California teaching credential from UCSD should contact the Education Studies Program (EDS) for information regarding prerequisites and requirements. It is recommended you contact EDS as early as possible.

Lower-Division Requirements

1. One of the following sequences:
   a. Calculus: Math. 20A-B-C-D-E-F
   b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
   Recommended:
2. One of the following: Introduction to Computer Science: Java: CSE 8A-AL-B, C/C++ Programming: MAE 9

Upper-Division Requirements

3. Mathematical Reasoning: Math. 109 (Note: Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109)
4. Number Theory: Math. 104A
5. History of Mathematics: Math. 163
6. Practicum in Learning: EDS 129A-B-C (can use EDS 136 and EDS 138 instead of EDS 129A)
8. One of the following: Intro. to Probability: Math. 180A, Statistical Methods: Math. 183
10. One of the following: Modern Algebra: Math. 100A, Applied Linear Algebra: Math. 102, Modern Applied Algebra: Math. 103A
11. One of the following: Foundations of Analysis: Math. 140A, Advanced Calculus: Math. 142A
12. Upper-division courses must total thirteen courses. Upper-division courses must include at least one two-quarter sequence from the following list:

MINOR IN MATHEMATICS

The minor in mathematics consists of seven or more courses. At least four of these courses must be upper-division courses taken from the UCSD Department of Mathematics. Acceptable lower-
division courses are Math. 20D, 20E (or 31CH), and 20F (or 31AH).
Math. 195, 196, 197, 198, 199, and 199H are not acceptable courses for the mathematics minor. A grade of C– or better (or P if the Pass/Not Pass option is used) is required for all courses used to satisfy the requirements for a minor. There is no restriction on the number of classes taken with the P/NP option.
Upper-division courses cannot overlap between major and minor programs.

MINOR IN MATHEMATICS EDUCATION

The education studies mathematics education minor is intended for students interested in understanding how people learn mathematics, including: students considering K-12 teaching as a career; students interested in teaching at the college level; and students who are interested in becoming better, more reflective learners. All majors are welcome, but the Calculus 10 or 20 sequence is a prerequisite requirement for two of the upper-division courses required for the minor. For more information contact Education Studies: http://eds.ucsd.edu/undergraduate/minors.shtml.

MATHEMATICS HONORS PROGRAM

The Department of Mathematics offers an honors program for those students who have demonstrated excellence in the major. Successful completion of the honors program entitles the student to graduate with departmental honors (see Department Honors in the Academic Regulations section).

Requirements for admission to the program are

1. Junior standing
2. An overall GPA of 3.0 or higher
3. A GPA in the major of 3.5 or higher
4. Completion of Math. 109 (Mathematical Reasoning) or Math. 31CH (Hons. Vector Calculus) and at least one of Math. 100A, 103A, 140A, or 142A. (Completion of additional major courses is strongly recommended.)

Applications to the program should be made the spring quarter before the student is at senior standing.

Completion of the honors program requires the following:

1. At least one quarter of the student colloquium, Math. 196 (Note: Math. 196 is only offered in the fall quarter.)
2. At least one Economics honors course: Econ. 100AH, 100BH, 110AH, 110BH, 120AH, 120BH, 120CH. Note: enrollment in these honors classes is by special permission; check with the undergraduate advisors in the Economics Student Services Office (SH 245).
3. An Honors Thesis. The research and writing of the thesis will be conducted over two quarters of the senior year under the supervision of a faculty advisor. The completed thesis must be approved by the Joint Mathematics and Economics Honors Committee, which comprises the Mathematics Honors Committee and the Economics Honors Committee, and presented orally at the Undergraduate Research Conference or another appropriate occasion.
   a. If the student is a declared major in the mathematics department (MA33), this thesis will be credited as eight units of Math. 199H. Enrollment in Math. 199H is by special permission; check with the advisors in the mathematics department Undergraduate Affairs Office (AP&M 7018) or the Mathematics Advising Office (AP&M 6016). Completed applications can be returned to the Mathematics Advising Office.

The department’s Honors Committee will determine the level of honors to be awarded, based on the student’s GPA in the major and the quality of the honors work. Applications for the mathematics department’s Honors Program can be obtained at the mathematics department Undergraduate Affairs Office (AP&M 7018) or the Mathematics Advising Office (AP&M 6016). Completed applications can be returned to the Mathematics Advising Office.

For Joint Mathematics and Economics Majors:

To graduate with honors requires the following:

1. At least one quarter of the Student Colloquium, Math. 196 (Note: Math. 196 is only offered in the fall quarter.)
2. At least one Economics honors course: Econ. 100AH, 100BH, 110AH, 110BH, 120AH, 120BH, 120CH. Note: enrollment in these honors classes is by special permission; check with the undergraduate advisors in the Economics Student Services Office (SH 245).
3. An Honors Thesis. The research and writing of the thesis will be conducted over two quarters of the senior year under the supervision of a faculty advisor. The completed thesis must be approved by the Joint Mathematics and Economics Honors Committee, which comprises the Mathematics Honors Committee and the Economics Honors Committee, and presented orally at the Undergraduate Research Conference or another appropriate occasion.
   a. If the student is a declared major in the economics department (EN28), the student must enroll in Econ. 191A-B. Enrollment in Econ. 191 is by special permission; check with the undergraduate advisors in the Economics Student Services Office (SH 245).

4. A minimum GPA of 3.0 overall, 3.5 in the upper-division courses required for the major and a 3.5 in the following four classes: Math. 196, Economics Honors class and either Econ. 191A-B or two quarters of Math. 199H. The Joint Mathematics and Economics Honors Committee will determine the level of honors to be awarded, based on the student’s GPA in the major and the quality of the honors work.

DUPLICATION OF CREDIT

Information on duplication of credit (both full and partial) can be found in the course descriptions. It is the student’s responsibility to be aware of the credit restrictions listed.

Faculty Advisors

Advisors change yearly. Contact the undergraduate office at (858) 534-3590 for current information.

THE GRADUATE PROGRAM

The Department of Mathematics offers graduate programs leading to the M.A. (pure or applied mathematics), M.S. (statistics), and Ph.D. degrees.

The application deadline for fall admission is January 7 for Ph.D. candidates, and February 7 for M.A./M.S. candidates. Candidates should have a bachelor’s or master’s degree in mathematics or a related field from an accredited institution of higher education or the equivalent. A minimum scholastic average of B or better is required for course work completed in upper-division or prior graduate study. In addition, the department requires all applicants to submit scores no older than twelve months from both the GRE General Test and Advanced Subject Test in Mathematics. Completed files are judged on the candidate’s mathematical background, qualifications, and goals.

Departmental support is typically in the form of teaching assistantships, research assistantships, and fellowships. These are currently only awarded to students in the Ph.D. program.

GENERAL REQUIREMENTS

All student course programs must be approved by a faculty advisor prior to registering for classes each quarter, as well as any changes throughout the quarter.

Full-time students are required to register for a minimum of twelve (12) units every quarter, eight (8) of which must be graduate-level mathematics courses taken for a letter grade only. The remaining four (4) units can be approved upper-division or graduate-level courses in mathematics-related subjects (Math. 500 may not be used to satisfy any part of this requirement). After advancing to candidacy, Ph.D. candidates may take all course work on a Satisfactory/Unsatisfactory basis. Typically, students should not enroll in Math. 299 until they have satisfactorily passed both qualifying examinations (see “Ph.D. in Mathematics”) or obtained approval of their faculty advisor.

MASTER OF ARTS IN PURE MATHEMATICS

[Offered only under the Comprehensive Examination Plan.] The degree may be terminal or obtained on the way to the Ph.D. A total of forty-eight units of credit is required. Twenty-four of these units must be graduate-level mathematics courses approved in consultation with a faculty advisor.

In the selection of course work to fulfill the remaining twenty-four units, the following restrictions must be followed:
1. No more than eight units of upper-division mathematics courses.
2. No more than twelve units of graduate courses in a related field outside the department (approved by the Department of Mathematics).
3. No more than four units of Math. 295 (Special Topics) or Math. 500 (Apprentice Teaching).
4. No units of Math. 299 (Reading and Research) may be used in satisfying the requirements for the master's degree.

Comprehensive Examinations

Seven written departmental examinations in three areas (refer to “Ph.D. In Mathematics,” Areas 1, 2, and 3, for list of exams). A student must complete two examinations, one from Area 1 and one from Area 2, both with an M.A. pass or better.

Foreign Language Requirement

A reading knowledge of one foreign language (French, German, or Russian) is required. In exceptional cases other languages may be substituted. Testing is administered by faculty in the department who select published mathematical material in one of these languages for a student to translate.

Time Limits

Full-time students are permitted seven quarters in which to complete all degree requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

MASTER OF ARTS IN APPLIED MATHEMATICS

[Offered only under the Comprehensive Examination Plan] The degree may be terminal or obtained on the way to the Ph.D. Out of the total forty-eight units of required credit, two applied mathematics sequences comprising twenty-four units must be chosen from the following list (not every course is offered each year):

- Math. 261A-B-C. (Probabilistic Combinatorics and Algorithms)
- Math. 264A-B-C. (Combinatorics)
- Math. 270A-B-C. (Numerical Mathematics)
- Math. 271A-B-C. (Numerical Optimization)
- Math. 273A-B-C. (Advanced Techniques in Computational Math)

In certain cases, a petition may be approved to substitute one of these requirements from the following list of sequences:

- Math. 220A-B-C. (Complex Analysis)
- Math. 231A-B-C. (Partial Differential Equations)
- Math. 240A-B-C. (Real Analysis)
- Math. 280A-B-C. (Probability Theory)
- Math. 281A-B-C. (Mathematical Statistics)

In choosing course work to fulfill the remaining twenty-four units, the following restrictions must be followed:
1. At least eight units must be approved graduate courses in mathematics or other departments. [A one-year sequence in a related area outside the department such as computer science, engineering, physics, or economics is strongly recommended.]
2. A maximum of eight units can be approved upper-division courses in mathematics; and
3. A maximum of eight units can be approved upper-division courses in other departments.
4. A maximum of four units of Math. 500 (Apprentice Teaching).

5. NO UNITS of Math. 295 (Special Topics) or Math. 299 (Reading and Research) may be used.

Students are strongly encouraged to consult with a faculty advisor in their first quarter to prepare their course of study.

Comprehensive Examinations

Two written comprehensive examinations must be passed at the master’s level in any of the required applied mathematics sequences listed above. The instructors of each course should be contacted for exam details.

Foreign Language Requirement

There is no foreign language requirement for the M.A. in applied mathematics.

Time Limits

Full-time M.A. students are permitted seven quarters in which to complete all requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

PH.D. IN MATHEMATICS

Written Qualifying Examinations

The department offers written qualifying examinations in seven subjects. These are grouped into three areas as follows:

Area #1

- Complex Analysis (Math. 220A-B-C) Real Analysis (Math. 240A-B-C)

Area #2

- Topology (Math. 290A-B-C)

Area #3

- Numerical Analysis (Math. 270A-B-C) Statistics (Math. 281A-B-C)
1. Three qualifying exams must be passed. At least one must be passed at the Ph.D. level, and a second must be passed at either the Ph.D. or Provisional Ph.D. Level. The third exam must be passed at least at the master’s level.
2. Of the three qualifying exams, there must be at least one from each of Areas #1 and #2. Algebra and Applied Algebra do not count as distinct exams in Area #2.

3. Students must pass a least two exams from distinct areas with a minimum grade of Provisional Ph.D. (For example, a Ph.D. pass in Real Analysis, Provisional Ph.D. Pass in Complex Analysis, M.A. pass in Algebra would NOT satisfy this requirement, but a Ph.D. Pass in Real Analysis, M.A. pass in Complex Analysis, Provisional Ph.D. Pass in Algebra would, as would a Ph.D. Pass in Numerical Analysis, Provisional Ph.D. Pass in Applied Algebra, and M.A. pass in Real Analysis.)
4. All exams must be passed by the September exam session prior to the beginning of the third year of graduate studies. (Thus, there would be no limit on the number of attempts, encouraging new students to take exams when they arrive, without penalty.)

Department policy stipulates that at least one of the exams must be completed with a Provisional Ph.D. Pass or better by September following the end of the first year. Anyone unable to comply with this schedule will lose their funding as a Ph.D. student. They will be terminated from the doctoral program and transferred to one of our master’s programs.

Any master’s student can submit for consideration a written request to transfer into the Ph.D. Program when the qualifying exam requirements for the Ph.D. Program have been met and a dissertation advisor is found. Approval by the Qualifying Exam and Appeals Committee (QEAC) is not automatic, however.

Exams are typically offered twice a year, one scheduled in the spring quarter and again in early September (prior to the start of fall quarter). Copies of past exams are made available for purchase in the Graduate Office.

In choosing a program with an eye to future employment, students should seek the assistance of a faculty advisor and take a broad selection of courses including applied mathematics, such as those in Area #3.

Foreign Language Requirement

A reading knowledge of one foreign language (French, German, or Russian) is required prior to advancing to candidacy. In exceptional cases other languages may be substituted. Testing is administered within the department by faculty who select published mathematical material in one of these languages for a student to translate.

Advancement to Candidacy

It is expected that by the end of the third year (nine quarters), students should have a field of research chosen and a faculty member willing to direct and guide them. A student will advance to candidacy after successfully passing the oral qualifying examination, which deals primarily with the area of research proposed but may include the project itself. This examination is conducted by the student’s appointed doctoral committee. Based on their recommendation, a student advances to candidacy and is awarded the C.Phil. degree.

Dissertation and Final Defense

Submission of a written dissertation and a final examination in which the thesis is publicly defended are the last steps before the Ph.D. degree is awarded. When the dissertation is substantially completed, copies must be provided to all committee members at least four weeks in advance of the proposed defense date. Two weeks before the scheduled final defense, a copy of the dissertation must be made available in the department for public inspection.

Time Limits

The normative time for the Ph.D. in mathematics is five years. Students must have a dissertation advisor by the end of nine quarters. Students must be advanced to candidacy by the end of eleven quarters. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

A student making normal progress must meet the time limits described below. Ph.D. students who fail to meet these time limits may lose their TA funding.

1. Pass Qualifying Exams requirement by the fall quarter of the beginning of the third year.
2. Find Thesis advisor by the end of nine quarters.
3. Advance to Candidacy by the end of eleven quarters.

PH.D. IN MATHEMATICS WITH SPECIALIZATION IN COMPUTATIONAL SCIENCE

The Ph.D. in mathematics, with a Specialization in Computational Science is designed to allow a student to obtain standard basic training in his or her chosen field of science, mathematics, or engineering with training in computational science integrated into those graduate studies. The Specialization in Computational Science recognizes the nation’s growing and continuing need for broadly trained advanced computational scientists in academic, industry, and government laboratories. Its graduates will be well-positioned to compete effectively for the best jobs in these areas.

Computational science refers to the use of computer simulation and visualization for basic scientific research, product development, and forecasting. It is an interdisciplinary field that combines mathematics (mathematical modeling, numerical analysis) and computer science (architecture, programming, networks, graphics) with one of the scientific or engineering disciplines.

The specialization draws upon the expertise of faculty from bioengineering, biological sciences, chemistry and biochemistry, computers and engineering, electrical and computer engineering, mathematics, mechanical and aerospace engineering, physics, Scripps Institution of Oceanography, structural engineering as well as research staff from the San Diego Supercomputer Center.

Admission

Prospective students must apply to the Ph.D. program of a participating home department, be admitted to that department and then be admitted to the specialization. The five participating academic departments that have a Specialization in Computational Science are chemistry and biochemistry, computer science and engineering, mathematics, mechanical and aerospace engineering, and physics. Requirements consist of those of the admitting home department (one of the five participating departments) as well as the proficiency, qualifying, and elective course requirements as outlined below. Requirements and policies relating to the home department can be found in the UC San Diego General Catalog under that department’s name. In the case of the mathematics department, the admission requirements for the mathematics doctoral program are those outlined above.

Specialization in Computational Science Policies

1. The specialization requires that students complete all home department requirements for the Ph.D. along with satisfying the CSME proficiency, qualifying, and elective requirements. In the case of the mathematics department, the requirements and timelines for the normal mathematics Ph.D. program are as described above.
2. CSME Proficiency (see below) must be satisfied by the end of the first year.
3. The CSME qualifying exams must be passed by the end of the second year or, on petition, by end of the third year.
4. The CSME qualifying exams can be attempted repeatedly but no more than once per quarter per subject.
5. The regular qualifying exams in the home department and the CSME qualifying exams must all be passed before the student is permitted to take the candidacy (Senate) exam.
6. Two CSME electives outside the home department must be taken.
7. The two CSME electives can be taken at any time before defending the thesis.
8. One of the CSME electives may be taken Pass/Fail; the other must be taken for a letter grade.
9. No CSME field examination requirements will be imposed beyond those of the admitting home department.
10. No CSME foreign language requirements will be imposed beyond those of the admitting home department.

Proficiency Requirements: All Ph.D. students participating in the CSME doctoral program must demonstrate advanced undergraduate level proficiency in numerical analysis and in computer algorithms and data structures. Proficiency may be demonstrated by taking UCSD’s courses in both subjects while enrolled in the graduate program (four units per course):

1. Numerical Methods (Math. 174/274 or MAE 290A)
2. Data Structures and Algorithms (CSE 100/101)

Alternatively, proficiency in the material contained in these courses may be satisfied by having previously taken these or equivalent courses at other institutions, or through other evidence of sufficient knowledge of this material. Demonstrating proficiency without taking these courses at UCSD is subject to approval by the CSME Executive Committee on an individual basis.

Qualifying Requirements: In addition to the home department qualifying exam requirements, Ph.D. students participating in the CSME doctoral program must pass the final exams in all three qualifying exam courses listed below. The three qualifying exams...
exam courses have been selected to provide a general broad set of tools in computational science. It is expected that most students will register for and take these courses (four units per course), but the CSME Qualifying Exam Committee may allow an exceptionally well-prepared student to take the final exams without taking the courses. Students must pass the qualifying examinations by the end of the second year or, on petition, by the end of the third year.

1. Math. 275 or MAE 290B (Numerical PDEs)
2. Phys. 244 or CSE 260 (Parallel Computing)
3. Course to be selected from List A

**LIST A: CSME Qualifying Exam Courses**

Courses taken to satisfy the qualifying requirements cannot count toward the elective requirements.

1. Phys. 243 (Stochastic Methods)
2. Math. 270A, B, or C (Numerical Analysis; not permitted for math. students, who typically take Math. 270A-B as a normal mathematics qualifying course.)
3. Math. 272A, B, or C (Advanced Numerical PDEs)
4. MAE 223 (Computational Fluid Dynamics)
5. MAE 232A or B (Computational Solid Mechanics)
6. MAE 280A or B (Linear Systems Theory)
7. (To be determined by Executive Committee)

**Elective Requirements:** To encourage Ph.D. students specializing in computational science to both broaden themselves in an area of science or engineering as well as to obtain more specialized training in specific areas of computational science, students will be required to take and pass two elective courses from the following approved List B (four units per course), both of which must be outside of their home department, the first of which must be taken for a letter grade, and the second of which may be taken pass/fail. The CSME Executive Committee may approve the use of courses not appearing on the following list on a case-by-case basis. Courses taken to satisfy the elective requirements cannot count toward the qualifying requirements.

**LIST B: Elective Graduate Courses in Mathematics, Science, and Engineering**

1. Math. 270A-B-C (Numerical Analysis; not permitted for math. students, who typically take Math. 270A-B-C as a normal mathematics qualifying course.)
2. Math. 271A-B-C (Optimization)
3. Math. 272A-B-C (Advanced Numerical PDEs)
4. Math. 273A-B-C (Computational Mathematics Project)
5. Phys. 141/241 (Computational Physics I)
6. Phys. 142/242 (Computational Physics II)
7. Phys. 221 AB (Nonlinear dynamics)
8. Chem. 215 (Modeling Biological Macromolecules)
9. BGGN 260 (Neurodynamics)
10. (To be determined by Executive Committee)

**Thesis/Dissertation:** Students participating in the Ph.D. in mathematics with a Specialization in Computational Science must complete a dissertation that meets all requirements for the regular Ph.D. in the home department. In addition, it is expected that the Ph.D. dissertation will be interdisciplinary in nature and involve some aspect of computational science.

**Final Examination:** Students participating in the Ph.D. in mathematics with a Specialization in Computational Science must meet the regular final examination requirements of the home department.

**COURSES**

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

All prerequisites listed below may be replaced by an equivalent or higher-level course. The listings of quarters in which courses will be offered are only tentative. Please consult the Department of Mathematics to determine the actual course offerings each year.

### LOWER-DIVISION

**3C. Pre-Calculus (4)**

Functions and their graphs. Linear and polynomial functions, zeros, inverse functions, exponential and logarithmic, trigonometric functions and their inverses. Emphasis on understanding algebraic, numerical and graphical approaches making use of graphing calculators. (No credit given if taken after Math. 4C, 1A/10A, or 2A/20A.) Three or more years of high school mathematics or equivalent recommended. **Prerequisite:** Math Placement Exam qualifying score.

**4C. Pre-Calculus for Science and Engineering (4)**

No credit given if taken after Math. 1A/10A or 2A/20A. Two units of credit granted if taken after Math. 3C. **Prerequisite:** Math Placement Exam qualifying score or Math. 3C with a grade of C– or better.

**10A. Calculus (4)**

Differentiation and integration of algebraic functions. Fundamental theorem of calculus. Applications. (No credit given if taken after Math. 20A. **Prerequisite:** Math Placement Exam qualifying score, or AP Calculus AB score of 2, or SAT II Math. Level 2 score of 600 or higher, or Math. 3C with a grade of C or better, or Math. 4C with a grade of C– or better.)

**10B. Calculus (4)**

Further applications of the definite integral. Calculus of trigonometric, logarithmic, and exponential functions. Complex numbers. (No credit given if taken after Math. 2B/20B. Formerly numbered Math. 1B. **Prerequisite:** AP Calculus AB score of 3, 4, or 5 (or equivalent AB subscore on BC exam), or SAT II Math. Level 2 score of 600 or higher, or Math. 2A with a grade of C– or better, or Math. 20A with a grade of C– or better.)

**10C. Calculus (4)**

Vector geometry, velocity, and acceleration vectors. (No credit given if taken after Math. 2C/20C. Formerly numbered Math. 1C. **Prerequisite:** AP Calculus BC score of 3, 4, or 5, or Math. 108 with a grade of C– or better, or Math. 20B with a grade of C– or better.)

**11A. Discrete Mathematics (4)**

Basic discrete mathematical structures: sets, relations, functions, sequences, equivalence relations, partial orders, number systems. Methods of reasoning and proofs: propositional logic, predicate logic, induction, recursion, pigeonhole principle. Infinite sets and diagonalization. Basic counting techniques: permutations and combinations. Applications will be given to digital logic design, elementary number theory, design of programs, and proofs of program correctness. Equivalent to CSE 20. Credit not offered for both Math. 15A and CSE 20. **Prerequisites:** CSE 8A or CSE 8B or CSE 11. CSE 8B or CSE 11 may be taken concurrently with Math. 15A/CSE 20. (Not offered in 2010–11.)

**15B. Mathematics for Algorithm and Systems (4)**

This course introduces mathematical tools for the qualitative and quantitative analysis of algorithms and computer systems. Topics to be covered include basic enumeration and counting techniques; recurrence relations; graph theory; asymptotic notation; elementary applied discrete probability. Equivalent to CSE 21. Credit not offered for both Math. 15B and CSE 21. **Prerequisite:** Math. 15A or CSE 20 or 160A; CSE 12 is strongly recommended for CSE 21. (Not offered in 2010–11.)

**20A. Calculus for Science and Engineering (4)**

Integral calculus of one variable. Functions, graphs, continuity, limits, derivative, tangent line. Applications with algebraic, exponential, logarithmic, and trigonometric functions. Methods of integration. Infinite series. Pole coordinates in the plane and complex exponentials. (Two units of credit given if taken after Math. 15B and CSE 21. **Prerequisite:** Math. 15A or CSE 20 or 160A; CSE 12 is strongly recommended for CSE 21. (Not offered in 2010–11.)

**20B. Calculus for Science and Engineering (4)**

Integral calculus of one variable and its applications, with exponential, logarithmic, hyperbolic, and trigonometric functions. Methods of integration. Infinite series. Polar coordinates in the plane and complex exponentials. (Two units of credit given if taken after Math. 15B and CSE 21. **Prerequisite:** AP Calculus AB score of 4 or 5, or AP Calculus BC score of 3, or Math. 20A with a grade of C– or better, or Math. 108 with a grade of C– or better, or Math. 10C with a grade of C– or better.)

**20C. Calculus and Analytic Geometry for Science and Engineering (4)**

Vector geometry, vector functions and their derivatives. Partial differentiation. Maxima and minima. Double integration. Two units of credit given if taken after Math. 15B. **Prerequisite:** AP Calculus BC score of 4 or 5, or Math. 20B with a grade of C– or better.)

**20D. Introduction to Differential Equations (4)**

symbolic and graphical solutions using Matlab. Formerly numbered Math. 21D. May be taken as repeat credit for Math. 21D. Prerequisite: Math. 20C (or Math. 21C) or Math. 31B with a grade of C– or better.

20E. Vector Calculus (4)

20F. Linear Algebra (4)
Matrix algebra, Gaussian elimination, determinants. Linear and affine subspaces of Euclidean spaces. Eigenvalues and eigenvectors, quadratic forms, orthogonal matrices, diagonalization of symmetric matrices. Applications. Computing symbolic and graphical solutions using Matlab. Credit not offered for both Math. 20F and 31AH. Prerequisite: Math. 20C (or Math. 21C) with a grade of C– or better.

31AH. Honors Linear Algebra (4)
First quarter of three-quarter honors integrated linear algebra/multivariable calculus sequence for well-prepared students. Topics include: real/complex number systems, vector spaces, linear transformations, bases and dimension, change of basis, eigenvalues, eigenvectors, diagonalization. Credit not offered for both Math. 31AH and 20F. Prerequisite: AP Calculus BC score of 5 or consent of instructor.

31BH. Honors Multivariable Calculus (4)
Second quarter of three-quarter honors integrated linear algebra/multivariable calculus sequence for well-prepared students. Topics include: derivative in several variables, Jacobian matrices, extremum and constrained extremum, integration in several variables. Credit not offered for both Math. 31BH and 20F. Prerequisite: Math. 31AH with a grade of B– or better, or consent of instructor.

31CH. Honors Vector Calculus (4)
Third quarter of honors integrated linear algebra/multivariable calculus sequence for well-prepared students. Topics include: change of variables formula, integration of differential forms, exterior derivative, generalized Stoke's theorem, conservative vector fields, potentials. Credit not offered for both Math. 31CH and 20E. Prerequisite: Math. 31BH with a grade of B– or better, or consent of instructor.

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a small group of students in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshman. Prerequisites: none.

95. Introduction to Teaching Math (2)
(Cross-listed with EDS 30.) Revisits students’ learning difficulties in mathematics in more depth to prepare students to make meaningful observations of how K–12 teachers deal with these difficulties. Explore how instruction can use students’ knowledge to pose problems that stimulate students’ intellectual curiosity. Prerequisites: none.

99R. Independent Study (1)
Independent study for research under direction of a member of the faculty. Prerequisites: Must be of first-year standing and a Regent’s Scholar.

UPPER-DIVISION

100A. Abstract Algebra I (4)
First course in a rigorous three-quarter introduction to the methods and basic structures of higher algebra. Topics include: groups, subgroups and factor groups, homomorphisms, rings, fields. Students may not receive credit for both Math. 100A and Math. 103A. Prerequisite: Math. 31CH or Math. 109 or consent of instructor.

100B. Abstract Algebra II (4)
Second course in a rigorous three-quarter introduction to the methods and basic structures of higher algebra. Topics include: rings (especially polynomial rings) and ideals, unique factorization, fields; linear algebra from perspective of linear transformations, inclusion spaces, including inner product spaces, determinants, diagonalization. Students may not receive credit for both Math. 100B and Math. 103B. Prerequisite: Math. 100A or consent of instructor.

100C. Abstract Algebra III (4)
Third course in a rigorous three-quarter introduction to the methods and basic structures of higher algebra. Topics include: order, cardinality, noncommutative and nonassociative fields, group actions, homomorphisms. Prerequisite: Math. 100B or consent of instructor. (F,W,S)

102. Applied Linear Algebra (4)
Second course in linear algebra from a computational yet geometric point of view. Elementary Hermitian matrices, Schur’s theorem, normal matrices, and quadratic forms. Moore-Penrose generalized inverse and least square problems. Vector and matrix norms. Characteristic and singular values. Canonical forms. Determinants and multilinear algebra. Prerequisite: Math. 20F. or Math. 31AH. (W)

103A. Modern Algebra I (4)
First course in a three-quarter introduction to abstract algebra with some applications. Emphasis on group theory. Topics include: definitions and basic properties of groups, properties of isomorphisms, subgroups. Students may not receive credit for both Math. 100A and Math. 103A. Prerequisite: Math. 31CH or Math. 109 or consent of instructor.

103B. Modern Algebra II (4)
Second course in a two-quarter introduction to abstract algebra with some applications. Emphasis on rings and fields. Topics include: definitions and basic properties of rings, fields, field extensions, isomorphisms, irreducibility of polynomials. Students may not receive credit for both Math. 100B and Math. 103B. Prerequisite: Math. 103A or Math. 100A or consent of instructor.

104A. Number Theory I (4)
Elementary number theory with applications. Topics include unique factorization, irrational numbers, residue systems, congruences, primitive roots, reciprocity laws, quadratic forms, arithmetic functions, partitions, Diophantine equations, distribution of primes. Applications include fast Fourier transform, signal processing, coding, cryptography. Prerequisite: Math. 109 or Math. 31CH, or consent of instructor.

104B. Number Theory II (4)
Topics in number theory such as finite fields, continued fractions, Diophantine equations, character sums, zeta and theta functions, prime number theorem, algebraic integers, quadratic and cyclotomic fields, prime ideal theory, class number, quadratic forms, units, Diophantine approximations, p-adic numbers, elliptic curves. Prerequisite: Math. 104A or consent of instructor.

104C. Number Theory III (4)
Topics in algebraic and analytic number theory, with an advanced treatment of material listed for Math. 104B. Prerequisite: Math. 104B or consent of instructor.

107A-B. Computer Algebra (4-4)
An introduction to algebraic computation. Computational aspects of groups, rings, fields, etc. Data representation and algorithms for symbolic computation. Polynomials and their arithmetic. The use of a computer algebra system as an experimental tool in mathematics. Programming using algebra systems. Prerequisite: prior or concurrent enrollment in the Math. 109 or 103 sequence. (Not offered in 2010–11.)

109. Mathematical Reasoning (4)
This course uses a variety of topics in mathematics to introduce the students to rigorous mathematical proof, emphasizing quantifiers, induction, negation, proof by contradiction, existence, equivalence relations, and epsilon-delta proofs. Required of all departmental majors. Prerequisite: Math. 20F or Math 31AH or consent of instructor.

110A. Introduction to Partial Differential Equations (4)
Fourier series, orthogonal expansions, and eigenvalue problems. Sturm–Liouville theory. Separation of variables for partial differential equations of mathematical physics, including topics on Bessel functions and Legendre polynomials. Formerly Math. 110A. Students may not receive credit for Math. 110A and Math. 110. Prerequisites: Math. 20D and either 20F or Math. 31AH, or consent of instructor. (F,S)

110B. Elements of Partial Differential Equations and Integral Equations (4)
Basic concepts and classification of partial differential equations. First order equations, characteristics. Hamilton–Jacobi theory. Laplace’s equation, wave equation, heat equation. Separation of variables, eigenfunction expansions, existence and uniqueness of solutions. Formerly Math. 132A. Students may not receive credit for Math. 110B and Math. 132A. Prerequisite: Math. 110A or consent of instructor. (W)

111A. Mathematical Modeling I (4)
An introduction to mathematical modeling in the physical and social sciences. Topics vary, but have included mathematical models for epidemics, chemical reactions, political organizations, magnets, economic mobility, and geographical distributions of species. May be repeated for credit when topics change. Prerequisites: Math. 20D and either Math. 20F or Math. 31AH, or consent of instructor.

111B. Mathematical Modeling II (4)
Continued study on mathematical modeling in the physical and social sciences, using advanced techniques that will expand upon the topics selected in the mathematical theory presented in Math. 111A. May be repeated for credit when topics change. Prerequisite: Math. 111A or consent of instructor.

120A. Elements of Complex Analysis (4)
Complex numbers and functions. Analytic functions, harmonics, contour integration, saddle points, complex integration. Power series. Cauchy’s theorem. Cauchy’s formula. Residue theorem. Prerequisite: Math. 20E or Math. 31CH, or consent of instructor. (F,W)

120B. Applied Complex Analysis (4)
Applications of the residue theorem. Conformal mapping and applications to potential theory, flows, and temperature distributions. Fourier transformations. Laplace transforms, and applications to integral and differential equations. Selected topics such as Poisson’s formula, Dirichlet’s problem, Neumann’s problem, or special functions. Prerequisite: Math. 120A. (W,S)

121A. Foundations of Teaching and Learning Mathematics I (4)
(Cross-listed with EDS 121A.) Develop teachers’ knowledge base (knowledge of mathematics content, pedagogy, and student learning) in the context of advanced mathematics. This course builds on the previous courses where these components of knowledge were addressed exclusively in the context of high-school mathematics. Prerequisites: EDS 30/Math. 95, Calculus 10C or 20C.

121B. Foundations of Teaching and Learning Math II (4)
(Cross-listed with EDS 121B.) Examine how learning theories can consolidate observations about conceptual development with the individual student as well as the development of knowledge in the history of mathematics. Examine how teaching theories explain the effect of teaching approaches addressed in the previous courses. Prerequisite: EDS 121A/Math. 121A.

130A. Ordinary Differential Equations I (4)
Linear and nonlinear systems of differential equations. Stability theory, perturbation theory. Applications and introduction to numerical solutions. Three lectures. Prerequisites: Math. 20D and either Math. 20F or Math. 31AH or consent of instructor. (F)

130B. Ordinary Differential Equations II (4)
Existence and uniqueness of solutions to differential equations, local and global solutions, and differentiability. Three lectures. Prerequisite: Math. 130A or consent of instructor. (W)

2010-2011 UC SAN DIEGO GENERAL CATALOG • MATHEMATICS 9
131. Variational Methods in Optimization (4) Maximum-minimum problems. Normed vector spaces, functionals, Gateaux variations. Euler-Lagrange multiplier theorem for an extremum with constraint. Calculus of variations via the multiplier theorem. Applications taken from a variety of areas: applied mechanics, economics, astronautics physics, geometry, control theory. Prerequisite: Math. 20F or Math. 31AH, or consent of instructor. (S)

140A. Foundations of Real Analysis I (4) First course in a rigorous three-quarter sequence on real analysis. Topics include: the real number system, basic topology, numerical sequences and series, continuity. Students may not receive credit for both Math. 140A and Math. 142A. Prerequisite: Math. 31CH or Math. 109, or consent of instructor.

140B. Foundations of Real Analysis II (4) Second course in a rigorous three-quarter sequence on real analysis. Topics include: differentiation, the Riemann-Stieltjes integral, sequences and series of functions, power series, Fourier series, and special functions. Students may not receive credit for both Math. 140B and Math. 142B. Prerequisite: Math. 140A or consent of instructor.

140C. Foundations of Real Analysis III (4) Third course in a rigorous three-quarter sequence on real analysis. Topics include: differentiation of functions of several variables, the implicit and inverse function theorems, the Lebesgue integral, infinite-dimensional normed spaces. Prerequisite: Math. 140B or consent of instructor.

142A. Introduction to Analysis I (4) First course in an introductory two-quarter sequence on analysis. Topics include: the real number system, numerical sequences and series, limits of functions, continuity. Students may not receive credit for both Math. 140 and Math. 142A. Prerequisite: Math. 31CH or Math. 109, or consent of instructor.

142B. Introduction to Analysis II (4) Second course in an introductory two-quarter sequence on analysis. Topics include: differentiation, the Riemann integral, sequences and series of functions, uniform convergence, Taylor and Fourier series, special functions. Students may not receive credit for both Math. 140B and Math. 142B. Prerequisites: Math. 142A or Math. 140A, or consent of instructor.

150A. Differential Geometry (4) Differential geometry of curves and surfaces. Gauss and mean curvatures, geodesics, parallel displacement, Gauss-Bonnet theorem. Three lectures. Prerequisites: Math. 20E with a grade of C– or better and Math. 20F with a grade of C– or better, or consent of instructor. (F)

150B. Calculus on Manifolds (4) Calculus of functions of several variables, inverse function theorem. Further topics may include exterior differential forms, Stokes' theorem, manifolds, Sard's theorem, elements of differential topology, singularities of maps, catastrophes, further topics in differential geometry, topics in geometry of physics. Prerequisite: Math. 150A or consent of instructor. (W)

152. Applicable Mathematics and Computing (4) This course will give students experience in applying theory to real world applications such as Internet and wireless communication problems. The course will incorporate talks by experts from industry and students will be helped to carry out real problems. Topics include: optimization, linear programming, approximation, interpolation, boundary value problems, linear differential equations, non-linear differential equations. Three lectures, one recitation. Prerequisites: Math. 20D and either 20F or Math. 31AH, or consent of instructor.

153. Geometry for Secondary Teachers (4) Two- and three-dimensional Euclidean geometry is developed. Pedagogical issues will emerge from the mathematics and be addressed using current research in teaching and learning geometry. This course is designed for prospective secondary school mathematics teachers. Prerequisite: Math. 109 or Math. 31CH, or consent of instructor.

154. Discrete Mathematics and Graph Theory (4) Basic concepts in graph theory. Combinatorial tools, structures in graphs. (Hamiltonian cycles, perfect matching.) Properties of graphs and applications in basic algorithmic problems (planarity, k-colorability, traveling salesman problem). Prerequisites: Math. 109 or Math. 31CH, or consent of instructor.

155A. Computer Graphics (4) Bezier curves and control lines, de Casteljau construction for subdivision, elevation of degree, control points of Hermite curves, barycentric coordinates, rational curves. Programming knowledge recommended. Students may not receive credit for both Math. 155A and CSE 167. Prerequisite: Math. 20F or Math. 31AH, or consent of instructor. (F)

155B. Topics in Computer Graphics (4) Spline curves, spline interpolation, affine and affine cross ratios, polar forms (blossoming), the Oslo algorithm for knot insertion, NURBS and geometric continuity. Prerequisite: Math. 155A or consent of instructor. (W)

163. History of Mathematics (4) Topics will vary from year to year in areas of mathematics and their development. Topics may include the evolution of mathematics from the Babylonian period to the eighteenth century using original sources, a history of the foundations of mathematics, development of modern mathematics. Prerequisite: Math. 20B or consent of instructor. (S)

166. Intro to the Theory of Computation (4) Introduction to formal languages; regular languages; regular expressions, finite automata, minimization, closure properties, decision algorithms, and non-regular languages; context-free languages, context-free grammars, push-down automata, parsing theory, closure properties, and non-context-free languages; computable languages; Turing machines, recursive functions, Church's thesis, undecidability and the halting problem. Equivalent to CSE 105. Prerequisites: CSE 88 or 98 or 10 or 65 or 628 AND CSE 20 or 160A or Math. 15A or 109 or 100A or 103A. (Not offered in 2010–11.)

168A. Topics in Applied Mathematics–Computer Science (4) Topics to be chosen in areas of applied mathematics and mathematical aspects of computer science. May be repeated once for credit with different topics. Prerequisite: Math. 20F or Math. 31AH, or consent of instructor. (WS)

171A. Introduction to Numerical Optimization: Linear Problems (4) Linear optimization and applications. Linear programming, the simplex method, duality. Selected topics from integer programming, network flows, transportation problems, inventory problems, and other applications. Three lectures, one recitation. Knowledge of programming recommended. Credit not allowed for both Math. 171A and Econ. 172A. Prerequisite: Math. 20F.

174. Numerical Methods for Physical Modeling (4) (Conjoined with Math. 274) Floating point arithmetic, direct and iterative solution of linear equations, iterative solution of nonlinear equations, optimization, approximation theory, interpolation, quadrature, numerical methods for initial and boundary value problems. Formerly Math. 174 and CSE 105. Prerequisite: Math. 170A, B, or CSE 174 has already been taken. Graduate students will do an extra assignment/exam. Prerequisites: Math. 20D or Math. 21D, and either Math. 20F or Math 31AH, or consent of instructor.

175. Numerical Methods for Partial Differential Equations (4) (Conjoined with Math. 275) Mathematical background for working with partial differential equations. Survey of finite difference, finite element, and finite volume methods for the solution of elliptic, parabolic, and hyperbolic partial differential equations. Formerly Math. 172; students may not receive credit for Math. 175/275 and Math. 172. Graduate students do an extra paper, project, or presentation, per instructor. Prerequisite: Math. 174 or Math. 274, or consent of instructor.

176. Advanced Data Structures (4) Descriptive and analytical presentation of data structures and algorithms. Lists, tables, priority queues, disjoint subsets, and dictionaries data types. Data structuring techniques include linked lists, arrays, hashing, and trees. Performance evaluation involves worst case, average and expected case, and amortized analysis. Credit not offered for both Math. 176 and CSE 100. Equivalent to CSE 100. Prerequisites: CSE 12, CSE 21, or Math. 15B, and CSE 30, or consent of instructor. Not offered in 2010–11.

179. Projects in Computational and Applied Mathematics (4) (Conjoined with Math. 279.) Mathematical models of physical systems arising in science and engineering, good models and well-posedness, numerical and other approximation techniques, solution algorithms for linear and nonlinear approximation problems, scientific visualizations, scientific software design and engineering, project-oriented. Graduate students will do an extra project, paper, or presentation per instructor. Prerequisite: Math. 174 or Math. 274 or consent of instructor.

180A. Introduction to Probability (4) Probability spaces, random variables, independence, conditional probability, distribution, expectation, variance, joint distributions, central limit theorem. (Two units of credit offered for Math. 180A if Econ. 120A previously, no credit offered if Econ. 120A concurrently.) Prerequisite: Math. 20C or Math. 31BH, or consent of instructor. (F)

180B. Introduction to Stochastic Processes I (4) Markov chains in discrete and continuous time, random walk, recurrent events. If time permits, topics chosen from stationary normal processes, branching processes, queuing theory. Three lectures. Prerequisite: Math. 180B or consent of instructor. (F)

180C. Introduction to Stochastic Processes II (4) Markov chains in discrete and continuous time, random walk, recurrent events. If time permits, topics chosen from stationary normal processes, branching processes, queuing theory. Three lectures. Prerequisite: Math. 180B or consent of instructor. (S)

190. Introduction to Topology (4)
Topological spaces, subspaces, products, sums and quotient spaces. Compactness, connectedness, separation axioms. Selected further topics such as fundamental group, classification of surfaces, Morse theory, topological groups. May be repeated for credit once when topics vary, with consent of instructor. Three lectures. Prerequisite: Math. 109 or Math 31CH, or consent of instructor. (W)

191. Topics in Topology (4)
Topics to be chosen by the instructor from the fields of differential algebraic, geometric, and general topology. Three lectures. Prerequisite: Math. 190 or consent of instructor. (S)

192. Senior Seminar in Mathematics (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in mathematics at the upper-division level. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: department stamp and/or consent of instructor.

193A. Actuarial Mathematics I (4)
Probabilistic Foundations of Insurance. Short-term risk models, Survival distributions and life tables. Introduction to life insurance. Prerequisite: Math. 180A or Math. 183, or consent of instructor.

193B. Actuarial Mathematics II (4)
Life Insurance and Annuities. Analysis of premiums and premium reserves. Introduction to multiple life functions and decrement models as time permits. Prerequisite: Math. 193A or consent of instructor.

194. The Mathematics of Finance (4)
Introduction to the mathematics of financial models. Basic probabilistic models and associated mathematical machinery will be discussed, with emphasis on discrete time models. Concepts covered will include conditional expectation, martingales, optimal stopping, arbitrage pricing, hedging, European and American options. Prerequisites: Math. 20D, and either Math. 20F or Math. 31AH, and either Math. 180A or Math. 183, or consent of instructor.

195. Introduction to Teaching in Mathematics (4)
Students will be responsible for and teach a class section of a lower-division mathematics course. They will also attend a weekly meeting on teaching methods. (Does not count towards a minor or major.) Five lectures, one recitation. Prerequisite: consent of instructor. (F,W,S)

196. Student Colloquium (1)
A variety of topics and current research results in mathematics will be presented by guest lecturers and students under faculty direction. May be taken for P/NP grade only.

197. Mathematics Internship (2 or 4)
An enrichment program which provides work experience with public/private sector employers. Subject to the availability of positions, students will work in a local company under the supervision of a faculty member and site supervisor. Units may not be applied towards major graduation requirements. Prerequisites: completion of 90 units, 2 upper-division mathematics courses, an overall 2.5 UCSD GPA, consent of mathematics faculty coordinator, and submission of written contract. Department stamp required.

199. Independent Study for Undergraduates (2 or 4)
Independent reading in advanced mathematics by individual students. Three periods. (P/NP grades only.) Prerequisite: permission of department. (F,W,S)

199H. Honors Thesis Research for Undergraduates (2–4)
Honors thesis research for seniors participating in the Honors Program. Research is conducted under the supervision of a mathematics faculty member. Prerequisite: admission to the Honors Program in mathematics, department stamp.

200A–B–C. Algebra (4–4–4)
Group actions, factor groups, polynomial rings, linear algebra, rational and Jordan forms, unitary and Hermitian matrices, Sylow theorems, finitely generated abelian groups, unique factorization, Galois theory, solvability by radicals, Hilbert Basis Theorem, Hilbert Nullstellensatz, Jacobson radical, semisimple Artinian rings. Prerequisite: consent of instructor.

201A–B. Basic Topics in Algebra (4–4)
Recommended for all students planning to take graduate algebra. Basic topics include categorical algebra, commutative algebra, group representations, homological algebra, nonassociative algebra, ring theory. Prerequisites: Math. 200A-B or consent of instructor. (F,W,S)

202A. Applied Algebra I (4)
Introduction to algebra from a computational perspective. Groups, rings, linear algebra, rational and Jordan forms, unitary and Hermitian matrices, matrix decompositions, perturbation of eigenvalues, group representations, symmetric functions, fast Fourier transform, commutative algebra, Grobner basis, finite fields. Prerequisite: graduate standing or consent of instructor.

202B. Applied Algebra II (4)
Second course in algebra from a computational perspective. Groups, rings, linear algebra, rational and Jordan forms, unitary and Hermitian matrices, matrix decompositions, perturbation of eigenvalues, group representations, symmetric functions, fast Fourier transform, commutative algebra, Grobner basis, finite fields. Prerequisite: Math. 202A or consent of instructor.

202C. Applied Algebra III (4)
Third course in algebra from a computational perspective. Groups, rings, linear algebra, rational and Jordan forms, unitary and Hermitian matrices, matrix decompositions, perturbation of eigenvalues, group representations, symmetric functions, fast Fourier transform, commutative algebra, Grobner basis, finite fields. Prerequisite: Math. 202B or consent of instructor.

203A–B–C. Algebraic Geometry (4–4–4)
Planes, Hilbert Nullstellensatz, varieties, product of varieties, correspondences, nonsingular curves and linear systems; Riemann-Roch theorem; resolution of singularities of curves. Grothendieck schemes; cohomology, Hilbert schemes; Picard schemes. Prerequisites: Math. 200A-B-C, (F,W,S)

204. Topics in Number Theory (4)
Topics in analytic number theory, such as zeta functions and L-functions and the distribution of prime numbers, zeros of zeta functions and Siegel’s theorem, transcendence theory, modular forms, and finite and infinite symmetrical spaces. Prerequisite: consent of instructor.

205. Topics in Algebraic Number Theory (4)
Topics in algebraic number theory, such as cyclotomic and Kummer extensions, class number, units, splitting of primes in extensions, zeta functions of number fields and the Brauer-Siegel Theorem, class field theory, elliptic curves and curves of higher genus, complex multiplication. Prerequisite: consent of instructor.

207A–B. Topics in Algebra (4–4)
In recent years, topics have included number theory, commutative algebra, noncommutative rings, homological algebra, and Lie groups. May be repeated for credit with consent of advisor. Prerequisite: consent of instructor.

208. Seminar in Algebra (1)
Various topics in algebra. Prerequisite: graduate standing or consent of instructor. (S/U grade only.)

209. Seminar in Number Theory (1)
Various topics in number theory. Prerequisite: graduate standing or consent of instructor. (S/U grade only.)

210A. Mathematical Methods in Physics and Engineering (4)
Complex variables with applications. Analytic functions, Cauchy’s theorem, Taylor and Laurent series, residue theorem and contour integration techniques, analytic continuation, argument principle, conformal mapping.
potential theory, asymptotic expansions, method of steep-extend descent. Prerequisite: Math. 202DF, 140A/142A or consent of instructor.

210B. Mathematical Methods in Physics and Engineering (4)
Linear algebra and functional analysis. Vector spaces, ortho-normal bases, linear operators and matrices, eigenvalues and diagonalization, least squares approximation, infinite-dimensional spaces, completeness, integral equations, spectral theory, Green’s functions, distributions, Fourier transform. Prerequisite: Math. 210A or consent of instructor. (W)

210C. Mathematical Methods in Physics and Engineering (4)
Calculation of variations, Euler-Lagrange equations, Noether’s theorem. Fourier analysis of functions and distributions in several variables. Partial differential equations: Laplace, wave, and heat equations; fundamental solutions (Green’s functions); well-posed problems. Prerequisite: Math. 210B or consent of instructor. (S)

212A. Introduction to the Mathematics of Systems and Control (4)
Linear and nonlinear systems, and their input-output behavior, linear continuous time and discrete-time sys-tems, reachability and controllability for linear systems, feedback and stabilization, eigenvalue placement, non-linear controllability, feedback linearization, disturbance rejection, nonlinear stabilization, Lyapunov and control-Lyapunov functions, linearization principle for stability. Prerequisites: Math. 102 or equivalent, Math. 120A or equivalent, Math. 141 or equivalent.

212B. Introduction to the Mathematics of Systems and Control (4)

212C. Introduction to the Mathematics of Systems and Control (4)
Topics of current interest on systems theory, control, and estimation to be chosen by instructor. Prerequisite: Math. 212B.

216. Topics in Pure Mathematics (4)
This course brings together graduate students, postdocs, and faculty to examine a current research topic of broad interest. Previous topics have included: noncommutative geometry, loop groups, geometric quantization. Prerequisite: consent of instructor.

217A. Topics in Applied Mathematics (4)
In recent years, topics have included applied complex analy-sis, special functions, and asymptotic methods. May be repeated for credit with consent of advisor. Prerequisite: consent of instructor.

220A-B-C. Complex Analysis (4-4-4)
Complex variables and functions. Cauchy’s theorem and its applications, calculus of residues, expansions of analytic functions, analytic continuation, conformal mapping and Riemann mapping theorem, harmonic functions. Dirichlet principle, Riemann surfaces. Prerequisites: Math. 140-A or consent of instructor. (F,W,S)

221A-B. Topics in Several Complex Variables (4-4)
Formal power series, Weierstrass preparation theorem; Cartan-Ruckert theorem, analytic sets; mapping theorems; domains of holomorphy; proper holomorphic mappings; complex manifolds; modifications. Prerequisites: Math. 200A and 220B-C or consent of instructor.

221A-B-C. Partial Differential Equations (4-4-4)
Existence and uniqueness theorems. Cauchy-Kowalewski theorem, first order systems. Hamilton-Jacobi theory, ini-tial value problems for hyperbolic and parabolic systems, boundary value problems for elliptic systems. Green’s function, eigenvalue problems, perturbation theory.

237A-B. Topics in Differential Equations (4-4) or May be repeated for credit with consent of advisor. Prerequisite: consent of instructor.

240A-B-C. Real Analysis (4-4-4)
Lebesgue integral and Lebesgue measure, Fubini theorems, functions of bounded variations, Stieltjes integral, derivatives and indefinite integrals, the spaces L1 and C, equi-continuous families, continuous linear functionals, general measures and integrations. Prerequisites: Math. 140A-B-C. (F,W,S)

241A-B. Functional Analysis (4-4)
Metric spaces and contraction mapping theorem; closed graph theorem; uniform boundedness principle; Hahn-Banach theorem; representation of continuous linear functionals; compact spaces; weak topologies; extreme points; Krein-Milman theorem; fixed-point theorems; Riesz convexity theorem; Banach algebras. Prerequisites: Math. 240A-B or consent of instructor.

242. Topics in Fourier Analysis (4)
A course on Fourier analysis in Euclidean spaces, groups, symmetric spaces. Prerequisites: Math. 240A-B-C or consent of instructor.

245A. Convex Analysis and Optimization I (4)
Convex sets and functions, convex and affine hulls, relative interior, closure, and continuity, recession and existence of optimal solutions, saddle point and min-max theory, subgradients and subdifferentials. Prerequisites: Math. 20F and Math. 142A, or graduate standing, or consent of instructor.

245B. Convex Analysis and Optimization II (4)
Optimality conditions, strong duality and the primal func-tion, conjugate functions, Fenchel duality theorems, dual derivatives and subgradients, subgradient methods, cutting plane methods. Prerequisite: Math. 245A or consent of instructor.

245C. Convex Analysis and Optimization III (4)
Convex optimization problems, linear matrix inequalities, second-order cone programming, semidefinite program-ming, sum of squares of polynomials, positive polynomials, distance geometry. Prerequisite: Math. 245B or consent of instructor.

247A-B-C. Topics in Real Analysis (4-4-4)
In recent years, topics have included Fourier analysis, distribution theory, martingale theory, operator theory. May be repeated for credit with consent of advisor. Prerequisite: consent of instructor.

248. Seminar in Real Analysis (1)
Various topics in real analysis. Prerequisite: graduate standing or consent of instructor. (S/U grade only.)

250A-B-C. Differential Geometry (4-4-4)
Differential manifolds, Sard theorem, tensor bundles, Lie derivatives, DeRham theorem, connections, geodesics, Riemannian metrics, curvature tensor and sectional curva-ture, completeness, characteristic classes. Differential manifolds immersed in Euclidean space. Prerequisite: consent of instructor. (F,W,S)

251A-B-C. Lie Groups (4-4-4)
Lie groups, Lie algebras, exponential map, subgroup subal-gebra correspondence, adjoint group, universal enveloping algebra. Structure theory of semi-simple Lie groups, global decompositions, Weyl group. Geometry and analysis on symmetric spaces. Prerequisites: Math. 200 and 250 or consent of instructor. (F,W,S)

256. Seminar in Lie Groups and Lie Algebras (1)
Various topics in Lie groups and Lie algebras, including structure theory, representation theory, and applications. Prerequisite: graduate standing or consent of instructor. (S/U grade only.)

257A. Topics in Differential Geometry (4) in recent years, topics have included Morse theory and general relativity. May be repeated for credit with consent of advisor. Prerequisite: consent of instructor.

257B. Topics in Differential Geometry (4) in recent years, topics have included Morse theory and general relativity. May be repeated for credit with consent of advisor. Math. 257A must be taken before Math. 257B. Prerequisite: consent of instructor.

257C. Topics in Differential Geometry (4) in recent years, topics have included Morse theory and general relativity. May be repeated for credit with consent of advisor. Math. 257B must be taken before Math. 257C. Prerequisite: consent of instructor.

258. Seminar in Differential Geometry (1)
Various topics in differential geometry. Prerequisite: graduate standing or consent of instructor. (S/U grade only.)

259A-B-C. Geometrical Physics (4-4-4)
Manifolds, differential forms, homology, deRham’s theorem. Riemannian geometry, harmonic forms. Lie groups and algebras, connections in bundles, homotopy sequence of a bundle, Chern classes. Applications selected from Hamiltonian and continuum mechanics, electromagnetism, thermodynamics, special and general relativity, Yang-Mills fields. Prerequisite: graduate standing in mathematics, physics, or engineering, or consent of instructor.

260A. Mathematical Logic I (4)
Propositional calculus and first-order logic. Theory prov-ing, Model theory, soundness, completeness, and compact-ness, Herbrand’s theorem, Skolem-Lowenheim theorems, Craig interpolation. Prerequisite: graduate standing or consent of instructor.

260B. Mathematical Logic II (4)
Theory of computation and recursive function theory, Church’s thesis, computability and undecidability. Feasible computability and complexity. Peano arithmetic and the incompleteness theorems, nonstandard models. Prerequisite: Math. 260A or consent of instructor.

261A. Probabilistic Combinatorics and Algorithms (4)
Introduction to the probabilistic method. Combinatorial applications of the linearity of expectation, second moment method, Markov, Chebyshev, and Azuma inequalities, and the local limit lemma. Introduction to the theory of random graphs. Prerequisite: graduate standing or consent of instructor.

261B. Probabilistic Combinatorics and Algorithms II (4)

261C. Probabilistic Combinatorics and Algorithms III (4)

262A–B–C. Topics in Combinatorial Mathematics (4–4–4)
Development of a topic in combinatorial mathematics starting from basic principles. Problems of enumeration, existence, construction, existence with regard to finite sets. Some familiarity with computer programming desirable but not required. Prerequisites: Math. 100A-B-C.

264A–B–C. Combinatorics (4–4–4)
Topics from partially ordered sets, Mobius functions, sim-plicial complexes and shellability. Enumeration, formal power series and formal languages, generating functions, partitions, Lagrange inversion, exponential structures, combi-natorial species. Finite operator methods, q-analogues, Polya theory, Ramsey theory. Representation theory of the symmetric group, symmetric functions and operations with Schur functions. (F,W,S)

269. Seminar in Combinatorics (1)
Various topics in combinatorics. Prerequisite: graduate standing or consent of instructor. (S/U grade only.)
270A. Numerical Linear Algebra (4)
Error analysis of the numerical solution of linear equations and least squares problems for the full rank and rank deficient cases. Error analysis of numerical methods for eigenvalue problems and singular value problems. Iterative methods for linear systems. Gaussian elimination for sparse systems of linear equations. Prerequisites: graduate standing or consent of instructor.

270B. Numerical Approximation and Nonlinear Equations (4)

270C. Numerical Ordinary Differential Equations (4)

271A-B-C. Numerical Optimization (4-4-4)
Formulation and analysis of algorithms for constrained optimization. Optimally conditions; linear and quadratic programming; interior methods; penalty and barrier function methods; sequential quadratic programming methods. Prerequisite: consent of instructor. (I.W.S)

272A. Numerical Partial Differential Equations I (4)

272B. Numerical Partial Differential Equations II (4)

272C. Numerical Partial Differential Equations III (4)
Time dependent (parabolic and hyperbolic) PDEs. Methods of lines. Stiff systems of ODEs. Space-time finite element methods. Adaptive meshing algorithms. A posteriori error estimates. Prerequisites: Math. 272B or consent of instructor.

273A. Advanced Techniques in Computational Mathematics I (4)
Models of physical systems, calculus of variations, principles of least action. Discretization techniques for variational problems, geometric integrators, advanced techniques in numerical discretization. Project-oriented; projects designed around problems of current interest in science, mathematics, and engineering. Prerequisite: graduate standing or consent of instructor.

273B. Advanced Techniques in Computational Mathematics II (4)
Nonlinear functional analysis for numerical treatment of nonlinear PDE. Numerical continuation methods, pseudo-arclength continuation, gradient flow techniques, and other advanced techniques in computational nonlinear PDE. Project-oriented: sparse systems of equations designed around problems of current interest in science, mathematics, and engineering. Prerequisite: Math. 273A or consent of instructor.

273C. Advanced Techniques in Computational Mathematics III (4)
Adaptive numerical methods for capturing all scales in one model, multiscale and multiphysics modeling frameworks, and other advanced techniques in computational multi-scale/multi-physics/hybrid systems of linear equations. Prerequisites: graduate standing or consent of instructor.

274. Numerical Methods for Physical Modeling (4)
(Conjoined with Math. 174.) Floating point arithmetic, direct and iterative solution of linear equations, iterative solution of nonlinear equations, approximation, optimization, asymptotic expansions, initial value problems, differential equations, numerical methods for initial and boundary value problems in ordinary differential equations. Students may not receive credit for both Math. 174 and PHYS 105, AMES 153 or 154. Students may not receive credit for Math. 174 if Math. 170A, B, or C has already been taken. Graduate students will complete an additional assignment/exam. Prerequisites: Math. 20D or 21D, and either Math. 20F or Math. 31AH, or consent of instructor.

275. Numerical Methods for Partial Differential Equations (4)
(Conjoined with Math. 175.) Mathematical background for working with partial differential equations. Survey of finite difference, finite element, and other numerical methods for the solution of elliptic, parabolic, and hyperbolic partial differential equations. Students may not receive credit for Math. 175/275 and Math. 172. Graduate students will do an extra paper, project, or presentation, per instructor. Prerequisite: Math. 174 or Math. 274 or consent of instructor.

276. Numerical Analysis in Multi-Scale Biology (4)
(Cross-listed with BENG 276/CHEM 276.) Introduces mathematical tools to simulate biological processes at multiple scales. Numerical methods for ordinary and partial differential equations (deterministic and stochastic), and methods for parallel computing and visualization. Hands-on use of computers emphasized, students will apply numerical methods in individual projects. Prerequisite: consent of instructor.

277A. Topics in Computational and Applied Mathematics (4)
Topics vary from year to year. May be repeated for credit with consent of advisor. Prerequisite: graduate standing or consent of instructor.

277B. Topics in Numerical Mathematics (4)
Topics vary from year to year. May be repeated for credit with consent of advisor. Prerequisite: consent of instructor.

277A. Seminar in Computational Mathematics (1)
Various topics in computational mathematics. Prerequisite: graduate standing or consent of instructor. (S/U grade only.)

277B. Seminar in Mathematical Physics/PDE (1)
Various topics in mathematical physics and partial differential equations. Prerequisite: graduate standing or consent of instructor. (S/U grade only.)

279. Projects in Computational and Applied Mathematics (4)
(Conjoined with Math. 179.) Mathematical models of physical systems arising in science and engineering, good models and well-posedness, numerical and other approximation techniques, solution algorithms for linear and nonlinear approximation problems, statistical visualization, scientific software design and engineering, project-oriented. Graduate students will do an extra paper, project, or presentation per instructor. Prerequisite: Math. 174 or Math. 274, or consent of instructor.

280A-B-C. Probability Theory (4-4-4)
Probability measures; Borel fields; conditional probabilities; random variables; independence; zero-one laws; stochastic processes. Prerequisites: advanced calculus and consent of instructor. (F,W,S)

281A. Mathematical Statistics (4)
Statistical models, sufficiency, efficiency, optimal estimation, least squares and maximum likelihood, large sample theory. Prerequisites: advanced calculus and basic probability theory or consent of instructor.

281B. Mathematical Statistics (4)
Hypothesis testing and confidence intervals, one-sample and two-sample problems. Bayes theory, statistical decision theory, linear models and regression. Prerequisites: advanced calculus and basic probability theory or consent of instructor.

281C. Mathematical Statistics (4)
Nonparametrics: tests, regression, density estimation, bootstrap and jackknife. Introduction to statistical computing using R plus. Prerequisites: advanced calculus and basic probability theory or consent of instructor.

282A-B. Applied Statistics (4-4)
Sequence in applied statistics. First quarter: general theory of linear models with applications to regression analysis. Second quarter: analysis of variance and covariance and experimental design. Third quarter: further topics to be selected by instructor. Emphasis throughout is on the analysis of actual data. Prerequisite: Math. 181B or equivalent or consent of instructor. (S/U grade permitted.)

283. Statistical Methods in Bioinformatics (4)
This course will cover material related to the analysis of modern genomic data: sequence analysis, gene expression/functional genomics analysis, and gene mapping/applied population genetics. The course will focus on statistical modeling and inference issues and not on database mining techniques. Prerequisite: one year of calculus, one statistics course or consent of instructor.

285. Stochastic Processes (4)
Elements of stochastic processes, Markov chains, hidden Markov models, martingales, Brownian motion, Gaussian processes. Prerequisite: Math. 180A (or equivalent) or consent of instructor.

286. Stochastic Differential Equations (4)

287A. Time Series Analysis (4)
Discussion of finite parameter schemes in the Gaussian and non-Gaussian context. Estimation for finite parameter schemes. Stationary processes and their spectral representation. Spectral estimation. Prerequisite: Math. 181B or equivalent or consent of instructor.

287B. Multivariate Analysis (4)
Bivariate and more general multivariate normal distribution. Study of tests based on Hotelling’s t2. Principal components, canonical correlations, and factor analysis will be discussed as well as some competing nonparametric methods, such as cluster analysis. Prerequisite: Math. 181B (or equivalent) or consent of instructor.

287C. Advanced Time Series Analysis (4)
Nonparametric function (spectrum, density, regression) estimation from time series data. Nonlinear time series models (threshold AR, ARCH, GARCH, etc.). Nonparametric forms of ARMA and GARCH. Multivariate time series. Prerequisite: Math. 287B or consent of instructor.

288. Seminar in Probability and Statistics (1)
Various topics in probability and statistics. Prerequisite: graduate standing or consent of instructor. (S/U grade only.)

289A-B. Topics in Probability and Statistics (4-4)
In recent years, topics have included Markov processes, martingale theory, stochastic processes, stationary and Gaussian processes, ergodic theory. May be repeated for credit with consent of advisor.
290A-B-C. Topology (4-4-4)
Point set topology, including separation axioms, compactness, connectedness. Algebraic topology, including the fundamental group, covering spaces, homology and cohomology. Homotopy or applications to manifolds as time permits. **Prerequisites:** Math. 100A-B-C and Math. 140A-B-C. (F,W,S)

291A-B-C. Topics in Topology (4-4-4)
In recent years, topics have included generalized cohomology theory, spectral sequences, K-theory, homotopy theory. **Prerequisite:** consent of instructor.

292. Seminar in Topology (1)
Various topics in topology. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

294. The Mathematics of Finance (4)
Introduction to the mathematics of financial models. Hedging, pricing by arbitrage. Discrete and continuous stochastic models. Martingales. Brownian motion, stochastic calculus. Black-Scholes model, adaptations to dividend paying equities, currencies and coupon-paying bonds, interest rate market, foreign exchange models. **Prerequisite:** Math. 180A (or equivalent probability course) or consent of instructor.

295. Special Topics in Mathematics (1 to 4)
A variety of topics and current research results in mathematics will be presented by staff members and students under faculty direction.

296. Student Colloquium (1 to 2)
A variety of topics and current research in mathematics will be presented by guest lecturers and students under faculty direction. **Prerequisites:** for one unit—upper-division status or consent of instructor (may only be taken P/NP), or graduate status (may only be taken S/U); for two units—consent of instructor, standard grading option allowed.

297. Mathematics Graduate Research Internship (2–4)
An enrichment program which provides work experience with public/private sector employers and researchers. Under supervision of a faculty advisor, students provide mathematical consultation services. **Prerequisites:** consent of instructor.

299. Reading and Research (1 to 12)
Independent study and research for the doctoral dissertation. One to three credits will be given for independent study (reading) and one to nine for research. **Prerequisite:** consent of instructor. (S/U grades permitted.)

**TEACHING OF MATHEMATICS**

500. Apprentice Teaching (1 to 4)
Supervised teaching as part of the mathematics instructional program on campus (or, in special cases such as the CTF program, off campus). **Prerequisite:** consent of advisor. (S/U grades only.)

501. Seminar in Teaching Development (1)
A seminar designed for graduate students serving as teaching assistants in mathematics. Includes discussion of teaching theories, techniques, and materials with a focus on career development. **Prerequisite:** graduate standing or consent of instructor. (S/U grades only.)
THE JOINT DOCTORAL PROGRAM

http://www.sci.sdsu.edu/CRMSE/msed/

PH.D. TIME LIMIT POLICIES

All time limits for this program start when a student first registers in this program. Students must be advanced to candidacy by the end of four years. Total university support to students in this program cannot exceed five years. Total registered time in this program cannot exceed six years. The normative time in this program is five years.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

MSED 290. Issues in Science Education Research (4)
Survey of recent literature highlighting critical issues in science education research. Specific focus on research in biology education, chemistry education, and physics education. Theoretical perspectives and research methodology (both qualitative and quantitative) used to understand learning will be discussed. Prerequisites: admission to the Joint Doctoral Program in Mathematics and Science Education or a master’s degree in biology, chemistry/biochemistry, mathematics, or physics with consent of instructor.

MSED 295. Orientation Practicum (2-6)
This course should be taken the first year. Each practicum lasts five weeks and is designed to inform students about a faculty member’s research program. Assignment as a research assistant may be used as one practicum. Prerequisite: admission to MSED Joint Doctoral Program.

MSED 296A. Theories and Applications of Mathematics and Science Education (4)
The course is designed to cover several major themes in mathematics and science education. It will address theories and applications of cognition, teaching and learning, and curriculum, with particular emphasis on international perspectives. This is a three-quarter sequence. Prerequisites: admission to the Joint Doctoral Program in Mathematics and Science Education or a master’s degree in biology, chemistry/biochemistry, mathematics, or physics with consent of instructor.

MSED 296B. Theories and Applications of Mathematics and Science Education (4)
The course is designed to cover several major themes in mathematics and science education. It will address theories and applications of cognition, teaching and learning, and curriculum, with particular emphasis on international perspectives. This is a three-quarter sequence. Prerequisites: admission to the Joint Doctoral Program in Mathematics and Science Education or a master’s degree in biology, chemistry/biochemistry, mathematics, or physics with consent of instructor. MSED 296A must be taken before MSED 296B.

MSED 296C. Theories and Applications of Mathematics and Science Education (4)
The course is designed to cover several major themes in mathematics and science education. It will address theories and applications of cognition, teaching and learning, and curriculum, with particular emphasis on international perspectives. This is a three-quarter sequence. Prerequisites: admission to the Joint Doctoral Program in Mathematics and Science Education or a master’s degree in biology, chemistry/biochemistry, mathematics, or physics with consent of instructor. MSED 296B must be taken before MSED 296C.
Middle East
Studies

FACULTY
Guillermo Algaze, Professor, Anthropology
Eli Berman, Associate Professor, Economics
Suzanne Brenner, Associate Professor, Anthropology
David Goodblatt, Professor, History; Endowed Chair, History
Hasan Kayali, Associate Professor, History
Sanford A. Lakoff, Professor Emeritus, Political Science
Thomas Levy, Professor, Anthropology
Michael E. Meeker, Professor Emeritus, Anthropology
Esra Özyürek, Associate Professor, Anthropology

THE MINOR
The minor in Middle East studies is an interdisciplinary program aimed at a comparative study of the Middle East (including North Africa).

The program consists of seven courses, of which at least five must be upper-division courses. Three courses have to deal with the Middle East since the emergence of Islam, as listed here under “Core Courses.” The remaining courses may be chosen from either the Core Courses or the Supporting Courses; and they may be courses dealing with the ancient, medieval, or modern Middle East or a three-quarter sequence of a Middle Eastern language (in which case only four of the seven courses need to be upper-division). Ordinarily, all seven courses must be taken for a letter grade.

The courses that make up the minor must be approved by the student’s college and by the Middle East Studies Program.

Approved courses taken at other universities or through participation in the Education Abroad Program can be included as part of the minor by petition.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

CORE COURSES
ANTH 199. Independent Study
(Middle East Anthropology)
ANSC 133. Peoples and Culture of the Middle East
HINE 108. The Middle East before Islam
HINE 114. History of the Islamic Middle East
HINE 116. The Middle East in the Age of European Empires
HINE 118. The Middle East in the Twentieth Century
HINE 166. Nationalism in the Middle East
HINE 186. Special Topics in Middle Eastern History
HINE 199. Independent Study in Near Eastern History
HITO 105. Jews and Judaism in the Modern World
LTWL 141. Islam and Modernity
LTWL 160. Women in Literature: Arabic Women in Literature & Society
POLI. 121. Government and Politics of the Middle East
POLI. 138D. Special Topics/Comparative Polities: The Arab-Israeli Conflict
Soci./D 122. Jerusalem: Sacred and Profane
SOCI 158. Islam in the Modern World
SOCI 188F. Modern Jewish Societies and Israeli Society
SOCI 199. Independent Study
(Middle East Sociology)
TWS 25. Third-World Literatures

SUPPORTING COURSES
ANAR 140. Foundations/Social Complex/Near East
ANAR 141. Prehistory of the Holy Land
ANTH 3. World Prehistory
JUDA 1. Beginning Hebrew
JUDA 2. Intermediate Hebrew
JUDA 3. Intermediate Hebrew Continued
JUDA 101. Introduction to Hebrew Texts
JUDA 102. Intermediate Hebrew Texts
JUDA 103. Advanced Hebrew Texts
HINE 102. The Jews in Their Homeland in Antiquity
HINE 104. The Bible and the Ancient Near East
HINE 106. The Bible and the Near East: The Writings
HINE 160. Special Topics in the Bible and the Ancient Near East
HINE 170. Special Topics in Jewish History
LIAB 1A. Beginning Arabic
LIAB 1B. Beginning Arabic
LIAB 1C. Elementary Arabic
LIAB 1D. Elementary Arabic
LIHL 116. Arabic for Arabic Speakers
ASSISTANT PROFESSORS

Jack Bui, M.D., Ph.D., Pathology
Seth J. Field, M.D., Medicine
Jonathan Lin, M.D., Ph.D., Pathology
Mana Parasai, M.D., Ph.D., Pathology
Bing Ren, Ph.D., Cellular and Molecular Medicine
Christina Sigurdson, D.M.V., Ph.D., Pathology
Jing Yang, Ph.D., Pharmacology and Pediatrics

ADJUNCT PROFESSORS

Rolf Bodmer, Ph.D., Burnham Institute
Marcia Dawson, Ph.D., Burnham Institute
Hudson Freeze, Ph.D., Medicine, Burnham Institute
Minoru Fukuda, Ph.D., Pathology, Burnham Institute

THE GRADUATE PROGRAM

The Molecular Pathology Program is closed for entrance of new students as of the 2008 academic year. The program has been integrated into the Biomedical Sciences Program as a track in the Biomedical Sciences Program.

The goal of the molecular pathology program is to produce outstanding researchers focused on the molecular basis of human disease who also understand disease at levels of histology and pathology. The molecular pathology graduate program is an interdepartmental and interinstitutional program administered by the UC San Diego Department of Pathology in affiliation with the Burnham Institute. The program provides a comprehensive knowledge of normal and abnormal biological processes, with a particular emphasis on the molecular mechanisms of human diseases. Faculty research focuses on determining how normal cellular processes are altered in human disease. Research falls within six areas: cancer cell biology; stem cell and developmental biology; neurobiology and neurologic disease; structural biology and signal transduction; microbioology and immunology; and cardiovascular, muscle, and organ development/disease. Most program faculty reside in the Departments of Pathology, Medicine, and Pediatrics at the UCSD School of Medicine, in the Burnham Institute, and in The Scripps Research Institute.

COURSE WORK

The core science curriculum includes classes in Molecular Biology of the Cell, Methods in Cellular and Molecular Pathology, The Molecular Pathology of Cancer, and Neurologic and Muscle Disease. Learning is focused on reading and evaluating current scientific literature, with special attention to identifying the major open questions within a field and designing an effective experimental plan to answer these questions. Two elective classes (6 units total) are required. Electives taught by program faculty are offered in Microbial Pathogenesis (4 units) and Mouse Models for Human Disease (2 units). Electives may also be selected from graduate-level courses offered by other medical school programs or by other campus departments (e.g., Division of Biological Sciences, Department of Chemistry and Biochemistry, and Department of Bioengineering). This option allows students the opportunity to acquire advanced training in areas they have selected for graduate research. Popular electives are Molecular Modeling, Macromolecular Recognition, Molecular Biology of the Cardiovascular System, and graduate-level courses in Signal Transduction, Immunology, Animal Virology, Developmental Biology, Genetics, and Neurobiology. An education in histology and pathology is acquired by taking the School of Medicine course in Histology and an overview course in human pathology developed by pathology faculty for molecular pathology and pharmacy students. Students may elect to take in-depth pathology training in their particular disease(s) of interest by attending a set of comprehensive lectures (eight to twelve) taught as part of the comprehensive medical school pathology curriculum. Concurrent with their thesis research, third-year students can acquire a practical consideration of the clinical treatment of disease by attending pathology conferences: Breast Pathology Conference, Tumor Board, Pediatric Autopsy, Neuropathology “Brain-Cutting” Conference, Infectious Disease Rounds, or Hematology Conference. In such conferences, students learn how disease presents and progresses, how physicians currently treat disease, what the practical obstacles are in disease treatment, and where opportunities are for development of molecular therapeutics.

EXAMINATIONS

First Qualifying Examination (Minor Proposition)

The purpose of this examination is to test the student's ability to choose a research problem in molecular pathology and to propose an experimental approach to its solution. The problem should be unrelated to the student's thesis project. The student is expected to demonstrate knowledge in molecular
biology and basic pathology. The first qualifying examination will be taken by the end of the fall quarter of the second year.

**Second Qualifying Examination (Major Proposition)**

The second qualifying examination, a university requirement, consists of an oral report by the student about research accomplished and the goals to be achieved for completion of the examination, the student will advance to candidacy. The second qualifying examination should be complete by the end of the third year and must be completed by the end of the fourth year.

**DEPARTMENTAL PH.D. TIME LIMIT POLICIES**

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

**COURSES**

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

**SPPS 215. Human Disease (3)**
This introduction to human disease includes etiology and mechanisms of common disease states and integrates pathology with previous core curriculum. Students will focus on an understanding of disease processes and the dynamics of changes related to drug therapy. **Prerequisites:** admission to the School of Pharmacy and Pharmaceutical Sciences, or admission to the Molecular Pathology Graduate Program, or consent of instructor.

**PATH 220. Drugs and Disease: Nervous System Disease and Therapy (4)**
This course will explore the molecular pathology associated with various diseases other than cancer. Emphasis will be placed on understanding the aberrant cellular processes, caused by mutation or environmental factors, that are associated with the disease state. Cardiovascular, neurological, immunological, and other diseases will be investigated.

**PATH 221. Molecular Pathology of Cancer (4)**
The purpose of this course is to present exciting new developments in molecular carcinogenesis, with particular emphasis on oncogene expression and functions of onco-genic proteins. The relevance of molecular mechanisms for understanding human cancer will be discussed.

**PATH 222. Microbial Pathogenesis (4)**
Topics covered in this course include molecular and cellular mechanisms of viral, bacterial, and protozoan pathogenesis. Host response and microbial mechanisms of host defense will also be discussed. Sessions will consist of faculty and student presentations of current literature.

**PATH 223. Mouse Models of Human Disease (2)**
This course provides an overview of the use of mouse models in biomedical research. Sessions will cover general mouse biology, genetics, and technologies for generating mutant mice, and will focus on model selection, methodological approaches, data interpretation, experimental design, and ethics of animal research. Student participation and discussion will be encouraged. **Prerequisite:** graduate standing or consent of instructor.

**PATH 225. Molecular Pathology Research Seminars (2)**
This course presents developments in cellular and molecular pathology research. Both faculty and students actively participate in the individual sessions. All students are required to give one to two formal presentations (under faculty supervision) during the year. The relevance of molecular mechanisms for understanding human disease will be discussed. **Prerequisite:** consent of instructor.

**PATH 228/PHAR 228/BION 228. Modern Drug Discovery Technologies (2)**
Drug discovery is an emerging science available to academic investigators. This course provides an overview of these drug discovery techniques, including high throughput screening, cell-based screening, computational methods of lead compound discovery, and chemical methods of optimization. **Prerequisite:** graduate student status or consent of graduate program director.

**PATH 230G. Molecular Biology of the Cell (6)**
This course presents key concepts and methodologies used in cellular and molecular pathology research. Topics include protein purification, biochemical characterization, identification of post-translational modifications, DNA/protein microinjection, immunofluorescence, digital imaging, electron microscopy, stem cell culture, gene/promoter analysis, protein-protein interaction analysis using the yeast 2-hybrid system, transgenic and knockout mouse construction, analysis of bacterial virulence factors, and genomic/proteomic approaches to disease analysis.

**PATH 232. Statistical Methods and Experimental Design (2)**
This course will emphasize the relationships between experimental design, statistical methods, and biomedical research. The content of the course will include basic issues in experimental design and commonly used statistical methods. The assumptions behind the statistical tests, their appropriate use, and examples of misuse will be discussed.

**PATH 296. Directed Reading (1–4)**
Reading and laboratory study of special topics under the direction of a faculty member. Exact subject matter to be arranged in individual cases.

**PATH 299. Independent Study or Research (1–12)**
Independent study or research.

**SOM 213. Histology (2)**
This course teaches the structural basis of normal and abnormal function at the cellular and tissue levels. Emphasis is based on microscopic study conducted in small laboratory groups under close faculty supervision.

**SPPS 215. Human Disease (3)**
This introduction to human disease includes etiology and mechanisms of common disease states and integrates pathology with previous core curriculum. The focus will be to understand disease processes and the dynamics of changes related to drug therapy. Our goal is to give the student an overview of the illnesses and disorders of human organs, systems and functions, in other words, human disease, with the hope that this background will lead the students to clinical understanding of patients and future insight into the pathogenesis of disease and new treatments. This course will include general pathology and system-based pathology, taught in lecture, case discussion, and lab format.
THE WRITING PROGRAM

OFFICE: Provost, Muir College
2126 Humanities and Social Sciences Building

THE WRITING PROGRAM

OFFICE: 2346 Humanities and Social Sciences Building, Muir College
(858) 534-2522
http://muir.ucsd.edu/muir-writing

The Muir College Writing Program is a sequence of courses in critical thinking and writing during which students must advance beyond the basic competency expected at entrance to understand and write discourse acceptable at the university level. Even when faced with challenging topics, students must demonstrate the ability to comprehend textual arguments at more than a superficial level; their writing must exhibit an understanding of academic arguments including focused theses, systematic methods of analysis and argumentation, awareness of audience, strong organization and development, clear presentation of ideas, appropriate syntax and diction, and—needless to say—correct grammar and usage.

To achieve these ends, the courses focus on principles of analysis and reasoned argumentation. Students will learn to identify underlying assumptions and values in arguments from such fields as the sciences, social and behavioral sciences, and the humanities. They will then write reasoned arguments of their own. Students will also write annotated bibliographies, paper proposals, and research papers as appropriate. In addition, students learn to monitor and adapt their own writing processes. Since the ability to evaluate one’s own writing and carry out appropriate revision strategies is crucial to effective writing and argument, all students are required to revise their papers several times. Attention is devoted to developing skill in evaluation and revision in classes and in individual conferences with instructors. Sections of MCWP 50 vary in theme and content, giving students the opportunity to write in areas that interest them or that may be relevant to their major fields. (Descriptions of the MCWP 50 sections are available each quarter in the Muir Writing Program office during pre-enrollment.)

Students are required to take both MCWP 40 and MCWP 50 for a letter grade in their first year of residence at the college. All transfer students, upon satisfaction of Subject A, must take MCWP 40 and MCWP 50 in their first year of residence. In cases where more than one quarter of practice is needed to prepare a student for MCWP 50, an IP grade is given in MCWP 40, and the student takes MCWP 41. MCWP 41 is then followed by MCWP 50. Completion of the sequence allows students to meet the Muir College writing requirement.

MCWP 40. Critical Writing (4)
First course of sequence in university reading and writing which satisfies the Muir College graduation requirement in writing. Required of all Muir College first-year students and of transfer students who have not completed a comparable course elsewhere. MCWP 40 introduces students to the basic elements of argument and analysis. Students engage in close reading of texts, weekly writing and revision, and individual conferences. Course must be taken for a letter grade. Those who need additional work to prepare for MCWP 50 will be given a grade of IP and will be required to take MCWP 41. Prerequisite: satisfaction of the UC Entry Level Writing requirement.

MCWP 41. Special Study in Writing (4)
An advanced course in argumentation and analysis, with students confer individually with instructors on a regular weekly basis to talk about writing problems. The course is designed for students who have taken MCWP 40 or its equivalent but need additional writing practice to prepare for MCWP 50. MCWP 41 does not satisfy the first part of the Muir Writing requirement. MCWP 41 must be taken for a letter grade and must be taken within two quarters of MCWP 40. Prerequisite: MCWP 40 or its equivalent.

MCWP 50. Critical Writing (4)
Second course of sequence in reading and writing which satisfies the Muir College graduation requirement in writing. Required of all Muir College first-year students and of transfer students. MCWP 50 focuses on advanced skills of argument and analysis. Students engage in close reading of texts, weekly writing and revision, and individual conferences. Course must be taken for a letter grade. Prerequisite: satisfaction of MCWP 40 requirement or completion of TAG or IGETC agreement.

MCWP 125. Argument and Analysis (4)
An advanced course in argumentation and analysis, with particular attention both to constructing arguments and analyzing the logic and rhetoric of others’ arguments. Students will engage in close reading of texts, weekly writing and revision, and individual conferences. A course specially designed for and required of transfer students who enter Muir College under the aegis of TAG or IGETC. Prerequisite: departmental approval.

Peter Otto, M.F.A., Director (Lecturer)
Tom Erbe, B.S., Studio Director (Lecturer)

OFFICE: Conrad Prebys Music Center
http://music.ucsd.edu

This department is dedicated to the development of musical intelligence and capacity, centering its quest on the music of our own time. The undergraduate programs intend to enhance the exercise and comprehension of the music-making process. The graduate programs aim to educate practitioners and researchers who can nourish the entire domain of music as well as extend its boundaries.

RESOURCES

PERFORMANCE/PRODUCTION OPPORTUNITIES

Performing in front of an audience is an essential part of the performance program; composers too must hear their works performed. Both performance and non-performance students are encouraged to participate in ensembles, festivals, and collaborative events. Practice facilities include grand pianos, disclaimers and uprights, an electronic keyboard lab, several harpsichords, a wide array of percussion instruments, a percussion studio, and instruments for student checkout.

Each academic year, more than 150 public concerts are presented in well-equipped venues: Mandeville Center Auditorium (792 seats), Mandeville Recital Hall (150 seats), Erickson Hall (150 seats), and Studio A (100 seats). Substantial resources and staffing are dedicated to performances of faculty and student works by new music ensembles, experimental and improvisational ensembles, student performance collectives (New Music Forum, Performers Forum, and IS Forum), and an annual graduate Spring Festival.

Our concert calendar can be viewed at http://music.ucsd.edu/events.

Ensembles in Residence
• Chamber Music Advanced
• Chamber Singers
• Concert Choir
• Gospel Choir
• Ensemble Realizations of Unconventionally Notated Scores
• Improvisation Ensemble
• Jazz Ensembles
• La Jolla Symphony and Chorus
• redfishbluefish
• Wind Ensemble
• World Music (Sitar & Tabla)
• Indian classical music

Visiting Artists/Artist in Residence

Visiting artists and artists in residence play an integral part in research and collaborate with faculty and students in focus seminars, concerts, weeklong festivals, and colloquia, bringing in new ideas and ideas. Recent special events included Powering Up/Powering Down, an international festival of radical media arts, and the IS Intermedia Festival, featuring sound installation, performance, and critical theory.

Music Technology Facilities

The Department of Music maintains highly sophisticated, continuously upgraded facilities for the support of graduate and undergraduate instruction. http://music.ucsd.edu/facilities.

Computer Music Instructional Laboratory (CML)—Established in 1987 to support undergraduate and graduate studies in computer music, CML is a 900-square-foot facility with recessed storage and printing areas, machine isolation, acoustical treatments, a presentation console, ergonomic workstation components, a high-resolution data projection system, CD and DVD authoring, and integrated digital audio equipment for student access to audio processing, duplicating, high-definition digital mixing and high-quality (Dynaudio) multichannel audio monitoring. The facility provides adequate space for instrumental rehearsal and interfacing experimentation, and provides several FireWire interfaces for laptop computing. Mobile desktop systems optimized for live performance applications are also maintained in CML.

Our server has high-speed network and wireless connections, mass storage, and archiving systems. Intel and Macintosh computer workstations run unique music software packages developed at UC San Diego. Pd is a new, real-time, interactive musical and graphics programming environment written and under continuing development by Professor Miller Puckette. Other audio and graphics editing and processing software packages are also supported, including Pro Tools HD, development compilers, and several standard music-production packages. The facility is configured and optimized to support direct connection of musical instruments to computers for prototyping of real-time interactive performance and compositional projects using MAX/MSP/Jitter and Pd computer music software. The facility is also used for advanced seminars and classes in such topics as sound spatialization, music software programming, computer music techniques, repertoire analysis, and research.

Digital Music Project Studio—This is a 900-square-foot facility, including an isolation booth, absorption and diffusion treatments, data connections, and audio tie-lines to CML and Erickson Hall. The studio houses Macintosh and Linux systems and many dedicated devices for music production and recording, including a Pro Tools HD digital audio production package with sixteen channels of digital I/O for precise digital recording and editing. Recent upgrades include improved microphone preamps and an array of new software packages, including Waves plug-ins and convolution reverb. The studio features a Yamaha 02R96 digital mixing console with all upgrades, S.1 and stereo monitoring, and sound-for-picture capabilities. The studio supports MIDI for synthesis, processing, and control in music composition and performance, and includes hardware and software for CD and DVD mastering.

Open Computing Laboratory (OCL)—This facility occupies 1,950 square feet, with audio and printer connections to CML and the Digital Music Project Studio. Most workstations are networked, and several stations are equipped with CD and DVD burning equipment. OCL was established in 1990 to support many facets of the department curriculum, and has been upgraded incrementally every year thereafter. It now comprises seventeen computer workstations (iMacs, desktop G4s and G5s, and several Intels), most with MIDI interfaces and...
Yamaha SY22/33 synthesizers, Coda Finale, Max/MSP, Soundhack, Metasynth, DVD Studio Pro, Final Cut, Pd, Pro Tools, and IRCAM Forum are some of the packages supported in the lab. Large-format music and text printing are supported. For instructional presentation, the room features a high-quality data projection and surround sound system. The presentation station also features a PC workstation, a GS Mac with Pro Tools editing, DAT, Bias Peak editor and SpectraFoo, signal display software, and DVD-authoring software burner.

Media Networking—All instructional labs and all of the Department of Music’s performance spaces and classroom spaces have been upgraded for wireless and fast Ethernet and media networking. Media networking allows advanced students and researchers to “stream” digital video and audio among diverse on-campus facilities and onto the internet. Additionally, there is wireless connectivity at most campus locations. All UCSD music production and research facilities are designed for ease of data portability and as complementary components of a powerful, well-designed, thoroughly integrated continuum of resources serving the needs of entering students through postdoctorate students and faculty researchers.

Music Technology Equipment Checkout—The music department maintains an inventory of technology equipment available to music majors and graduate students for overnight and weekend checkout. Equipment includes laptops with music software installed, FireWire audio interfaces, MIDI keyboards and interfaces, microphones, cables, and other recording and production sound equipment. This equipment is provided primarily to support class-related, dissertation, thesis and ICAM senior projects.

Concert Recording and CD Releases—All faculty and most student concerts are recorded by professional staff or their assistants, and qualified students can utilize the department’s extensive high-tech resources for experimental projects resulting in public performance and recordings of new works. Regularly released CDs, under advisement by faculty mentors, feature advanced graduate students who perform, compose, edit, and collaborate to produce a snapshot of musical achievement that predicts distinguished careers and new avenues of musical thought and practice.

Music Center Studios—The Department of Music has a state-of-the-art recording and faculty research complex, completely refurbished in 2004-05, with studios designed to meet the following objectives:

- Serve as an unsurpassed facility for recording and mastering classical and contemporary music.
- Serve as a reference-critical listening space for the evaluation of audio production.
- Support faculty research in psychoacoustics, computer music, and digital signal processing (DSP) for audio.

The facility incorporates two large recording studios (50 x 60 feet) with variable wall and floor surfaces for diverse acoustical configurations, a control room (20 x 30 feet), an isolated machine room, and other support spaces. Music center studios host live performances as well as six-camera video shoots, and are well suited for high-tech presentations and concert recording. A 120-dimmer grid with a digital lighting board supports theatrical lighting for performance, and for television and video production. The control room features highly refined acoustical qualities and new all-digital mixing and editing systems including Pyramix and Pro Tools HD. ATC monitoring systems have been upgraded for surround sound. An excellent range of microphones supports an unusual array of recording possibilities; a fine selection of pianos, percussion, and electronic instruments is also part of the holdings of the complex. Graduate students may apply for staff positions and recording-project support at music center studios, and ICAM majors may apply for engineering and production internship credits. The department’s instructional labs are designed to be networked, network-compatible satellites to the music center studios. http://music.ucsd.edu/facilities

Center for Research in Computing and the Arts (CRCA), and California Institute for Telecommunications and Information Technology (Calit2)

The Center for Research in Computing and the Arts (CRCA) is an organized research unit of UCSD. Historically rooted in the Center for Music Experiment (CME), CRCA now exists to foster collaborative working relationships among a wide array of artists, scientists, and technologists by identifying and promoting projects in which common research interests may be advanced through computing.

Music projects at CRCA cover a wide spectrum, from pure research to technically advanced creative endeavors. Current research includes, but is not limited to, interactive multimedia and performance, digital audio and synthesis techniques, video/image processing, spatial audio, computer music languages, virtual environments, robotics, computer composition, installation, artificial intelligence, and Web art.

CRCA offers a broad array of events in its facilities, reflecting the research and artistic expression of faculty, students, associates, and visiting scholars. Research residencies and fellowships are available for undergraduate and graduate students on an annual, competitive basis. In fall 2005 CRCA moved into its new home in the Media Arts wing of UCSD’s new Calit2 building. This impressive new structure houses offices, labs, and performance spaces on a world-class stage that places CRCA at the crossroads of artistic and technical innovation. CRCA affirms work alongside leading researchers in the areas of wireless communications, computer imaging, signal processing, bioinformatics, chip design, immersive media, and a host of new and emerging disciplines. http://www.crca.ucsd.edu; http://www.calit2.net/

Music Library

The Music Library (located in Geisel Library) maintains extensive collections of materials in all areas of music, and is known internationally for contemporary music holdings. Ethnic music collections are aggressively being expanded. The Music Library’s Services Room has fifty-two stations for playback of the recordings collection, including CD, DVD, VHS, LP, or tape formats. Ten of the remote control stations are equipped with video monitors. The Seminar Room is equipped with audio and video equipment for group presentations. Digital Audio Reserves (DAR) provide students with 24/7 access, including off-campus access, to course listening assignments, via the UCSD network. http://orpheus.ucsd.edu/music

THE UNDERGRADUATE PROGRAM

Undergraduate courses offered in the Department of Music satisfy a wide range of interests for non-music majors as well as for students majoring in music.

Students wishing to acquire a musical background to support further study should take MUS 1A-B-C, which develops skills musicians use in the analysis and performance of music. Students interested in "music appreciation" should choose from the following courses, which introduce aspects of the rich heritage of music: MUS 4–15. None of the aforementioned courses have prerequisites. For students with prior musical background who wish to continue in upper-division theory courses, MUS 2A-B-C (in lieu of 1A-B-C) is essential.

MUSIC MAJOR PROGRAMS

The undergraduate program at UCSD offers a bachelor of arts degree in music and in music humanities. The curriculum emphasizes the development of musical listening and performance skills as applied to both contemporary and traditional music. A third degree program, interdisciplinary computing in the arts (ICAM-music), is also offered.

The music major is intended for students who may choose to engage in music as a profession. This major thus requires intensive development of musical skills. A student without the appropriate level of those skills upon entrance to UCSD must devote considerable time to attaining them, either in lower-division courses or independent study. Students can concentrate in composition, performance, literature, technology, or jazz and the music of the African diaspora.

The Department of Music is committed to creative music making; thus all music majors are required to enroll in ensemble performance for at least three quarters (see #8 below).

The music/humanities major is intended for students who wish to pursue a broad liberal arts program that includes music as a central element. This program emphasizes music history and literature, and allows the individual student to select an area of interest for the major within the broad field of the humanities.

The interdisciplinary computing in the arts major is intended for students who wish to pursue the field of music specializing in the art and technology of our time. Below is a detailed description of this major.

MUSIC MAJOR REQUIREMENTS

The lower-division prerequisites for the music major are MUS 2A-B-C, and MUS 2AK-BK-CK. Jazz emphasis students take MUS 2JK in lieu of 2CK. To continue within the major, all students must pass Music 2C or an equivalent proficiency exam. Composition emphasis students must take Music 33A-B-C, Introduction to Composition I, II, and III,
or take a proficiency exam for the three-quarter sequence course. All required music major courses must be taken for a letter grade, with the exception of MUS 143, which is taken on a Pass/Not Pass basis. All courses to be counted toward satisfying the major requirements must be passed with a grade of C or better.

To complete the music major the following courses are required. Courses that are specific to each area of emphasis are shown in parentheses.

1. One of the following sequences:
   - MUS 101A-B-C (performance, composition, literature, and technology)
   - MUS 101A-B and 104 (jazz)
2. One of the following sequences:
   - MUS 102A-B-C (performance, composition, literature, and technology)
   - MUS 137A-B-C (jazz)
3. MUS 120A-B-C
4. One quarter of MUS 133 (normally taken in the winter quarter of the junior or senior year)
5. One of the following:
   - MUS 107, 110, 116, or 150 (performance, composition, literature, and technology)
   - MUS 150 (jazz)
6. One of the following:
   - three quarters of MUS 132 or 132V (performance)
   - MUS 103A-B-C (composition)
   - three courses from the series MUS 107-116, 126, 127A-B, and 150, of which at least one must be 107, 110, 116, or 150 (in addition to #5 above) [literature]
   - Music 170/171/175 (technology)
   - two courses from MUS 105, 126, 127A, and 127B; plus one course from MUS 107, 110, 111, 114, 115, 116, or 150 (in addition to #5 above) (jazz)
7. One additional course to be selected from:
   - MUS 107-116, 126, 127A-B, and 150 (performance, composition, literature, and technology)
   - MUS 151-154 (jazz)
8. One of the following sequences:
   - Two quarters chosen from MUS 95C, 95D, or 95K and one quarter from MUS 95B-W, 130, 131, and 134 (performance, composition, literature, and technology)
   - Two quarters of MUS 95C or 131, and one quarter of MUS 95C, 95D, 95G, or 95K (jazz)
9. MUS 143 every quarter

MUSIC/HUMANITIES MAJOR REQUIREMENTS

The prerequisite for the music/humanities major is Music 1A-B-C (or 2A-B-C, if qualified). To complete the major the following courses are required:

1. MUS 120A-B-C
2. Three courses chosen from MUS 107-116, 126, 127A-B, and 150, of which at least one must be 107, 110, 116, or 150
3. A coherent set of six upper-division courses selected from the humanities or fine arts (including music) that focuses on a specific topic, chosen in consultation with the music/humanities academic advisor
4. Two quarters chosen from MUS 95C, 95D, or 95K, and one quarter from MUS 95B-W, 130, 131, and 134
5. MUS 143 every quarter

Students interested in this major should confer with the music/humanities faculty advisor to work out a course of study, which must be submitted at the beginning of the junior year for the advisor's written approval.

INTERDISCIPLINARY COMPUTING AND THE ARTS (ICAM) MAJOR

The Interdisciplinary Computing and the Arts major in the Departments of Music and Visual Arts draws upon and aims to bring together ideas and paradigms from computer science, art, and culture theory. It takes for granted that the computer has become a metamedium and that artists working with computers are expected to combine different media forms in their works. All of this makes the program unique among currently existing computer art or design programs which, on the one hand, usually focus on the use of computers for a particular media (for instance, specializing in computer animation, or computer music, or computer design for print) and, on the other hand, do not enter into a serious dialogue with current research in computer science, only teaching the students off-the-shelf software. The goals of the program are to:

- provide the next generation of artists who will be functioning in a computer-mediated culture
- give students necessary technical, theoretical, and historical backgrounds so they can contribute to the development of new aesthetics for computer media
- prepare students to mediate between the worlds of computer science and technology, the arts, and the culture at large by being equally proficient with computing and cultural concepts
- give students sufficient understanding of the trajectories of development in computing so they can anticipate and work with the emerging trends, rather than being locked in particular software currently available on the market.

Major Course Requirements

Twenty courses are required in the computing and the arts major for the attainment of the Bachelor of Arts degree. A minimum of twelve of these courses must be upper division.

All courses taken to satisfy major requirements must be taken for a letter grade, and only grades of C– or better will be accepted in the major.

MUS 4. Introduction to Western Music
VIS 1. Introduction to Art-Making
ICAM 40/VIS 40. Introduction to Computing in the Arts
Math. 20A. Calculus for Science and Engineering
Math. 20B. Calculus for Science and Engineering
CSE 11. Introduction to Computer Science: JAVA
and choose one from
MUS 1A. Musical Literacy
MUS 2A. Basic Musicianship
MUS 5. Sound in Time
and choose one from
MUS 6. Electronic Music
MUS 7. Music, Science, and Computers
MUS 14. Contemporary Music

*Math. 20A and Math. 20B is an accelerated calculus course for science and engineering. Math. 10A-B-C covers similar material in a non-accelerated format, and can be substituted. CSE 11 is an accelerated course in the JAVA programming language. CSE 8A and CSE 8B, which cover the same material in a non-accelerated format, may be substituted.

Upper-Division (twelve courses required)

Survey (one course required)
ICAM 110. Computing in the Arts: Current Practice
Foundation (three courses required)
ICAM 101/VIS 140. Digital Imaging: Image and Interactivity
ICAM 102/VIS 145A. Digital Media I: Time, Movement, Sound
ICAM 103/MUS 170. Musical Acoustics
Advanced (four courses required)

Choose one from
MUS 172. Computer Music II
VIS 141B. Computer Programming for the Arts II
VIS 145B. Time- and Process-Based Digital Media II
VIS 147B. Electronic Technologies for Art II
Choose three from
ICAM 120. Virtual Environments
ICAM 130/VIS 149. Seminar in Contemporary Computer Topics
MUS 171. Computer Music I
MUS 173. Audio Production: Mixing and Editing
MUS 174A-B. Audio and MIDI Studio Techniques
MUS 175. Musical Psychoacoustics
MUS 176. Music Technology Seminar
VIS 109. Advanced Projects in Media
VIS 131. Special Projects in Media
VIS 132. Installation Production and Studio
VIS 141A. Computer Programming for the Arts I
VIS 147A. Electronic Technologies for Art I
VIS 174. Media Sketchbook

Theory and History (two courses required)
ICAM 150/VIS 159. History of Art and Technology
and choose one of
MUS 111. World Music Traditions
MUS 114. Music of the Twentieth Century
MUS 175. Musical Psychoacoustics
VIS 123CN. Early Print Culture: The First Media Revolution
VIS 125E. History of Performance
VIS 150. History and Art of the Silent Cinema
VIS 151. History of the Experimental Film
VIS 152. Film in Social Context
VIS 153. The Genre Series
VIS 154. Hard Look at the Movies
VIS 155. The Director Series
VIS 156N. Special Problems in Film History and Theory
VIS 157. Video History and Criticism
VIS 158. Histories of Photograph
VIR 194S. Fantasy in Film

Senior Project (two courses required)

ICAM 160A. Senior Project in Computer Arts I
ICAM 160B. Senior Projects in Computer Arts II

All Computing and the Arts (ICAM) course descriptions are listed at the end of the lower- and upper-division sections under “Courses.” Not all courses are offered each year.

Recommendations for Transfer Students

Transfer students should attempt to complete the following lower-division courses before transferring to UCSD: CSE 11 (or CSE 8A/8AL/8B), Math. 20A-B (or Math. 10A-B-C), and MUS 4. Go to http://www.assist.org. ASSIST is an online student-transfer information system that shows how course credits earned at one public California college or university can be applied when transferred to another. ASSIST is the official repository of articulation for California’s public colleges and universities and provides the most accurate and up-to-date information about student transfer in California.

Students should also be able to find courses equivalent to MUS 1A, 6, and 14 at some colleges. While some of these may be listed on ASSIST, transfers should be prepared to provide course descriptions, syllabi, and/or other materials that may be required to determine the content of the courses taken at other institutions.

Transfers entering with thirty-six or more quarter units by their third quarter of study at UCSD should complete their remaining lower-division courses for the major by the end of the third quarter.

HONORS

1. To be admitted into the honors program a student must have the following:
   - Excellence in a specific subject matter (performance, composition, literature, technology, jazz and music of the African diaspora, or music/humanities) and faculty support.
   - Performers must have previously performed at Undergraduate Performers Forum and enrolled in Chamber Music, MUS 130. Vocals can seek an exception.) Other students must have completed all Music 95 requirements prior to entering the honors program. Jazz and music of the African diaspora students must have performed, or had their compositions performed, at the Undergraduate Performers Forum.
   - A GPA in the Department of Music of 3.6; an overall GPA of 3.0
   - All of the requirements below must be completed before the last day of instruction in the spring quarter prior to the academic year in which the student proposes to pursue an honors curriculum.
   - Performance students must present a piece before the performance faculty that demonstrates their technical and musical abilities. In addition, students must provide a proposed program for an honors recital.
   - Composition students must have a composition performed on the New Music Forum series. Either the student’s principal instructor must attend this performance or a tape of this performance must be provided for faculty review. In addition, students must provide a proposed portfolio of original scores for an honors recital.
   - Literature students who have (1) presented historically or musicologically oriented research papers at campus venues featuring undergraduate research, or (2) been involved in the faculty mentor program, or (3) participated in the presentation of the winter opera with the accompanying symposium, may submit a portfolio of papers to the Integrative Studies faculty. In addition, students must propose a fifty minute lecture for the Department Seminar (MUS 143).
   - Music science and technology students must present a portfolio of projects to the music technology faculty and propose a fifty-minute lecture/demonstration for the Department Seminar (MUS 143).
   - Jazz and music of the African diaspora students must perform a piece before the faculty that demonstrates their compositional and improvisational abilities. In addition, students must provide for evaluation a portfolio of three original recordings and a proposed program for an honors recital.

2. Once admitted to the honors program
   - Students must be supervised by a faculty advisor throughout the honors program.
   - Composition students admitted to the honors program will enroll in twelve units of the Composition Honors course (MUS 103D-E-F). Performance students will enroll in twelve units of MUS 132R (after at least three quarters of MUS 132). Technology students will enroll in twelve units of MUS 176 or 199; Music Literature and music humanities students will enroll in twelve units of MUS 199, 150, or 107. Jazz and music of the African diaspora students will enroll in twelve units of MUS 137D, 137E, and 137F (Honors Seminar in Jazz Studies I, II, III).

3. To receive honors
   - A student must publicly demonstrate an appropriate level of excellence, an acceptable GPA, and suitable participation in department presentations and seminars, as determined by the student’s honors committee.
   - Jazz and music of the African diaspora students will have a recital in the spring quarter of their senior year. The recital will include a program of a minimum of 50 percent of original compositions.

Please note: Being admitted to the honors curriculum does not guarantee that a student will receive honors.

For further information on the Department of Music Honors Program and to obtain an application form, students should make an appointment with the undergraduate staff advisor.

TRANSFER STUDENTS

Students who plan to transfer into the music major should have strong skills in basic musicianship. For those planning to emphasize performance, solid proficiency on the instrument is required. A general course in the history of music is recommended. All transfer students must pass a proficiency examination in MUS 2C (Basic Musicianship) and MUS 2CK (Basic Keyboard) or take the two sequence courses. To verify the acceptability of transfer music courses, students must make an appointment with the undergraduate staff advisor.

MINOR PROGRAMS

Please obtain a Department of Music brochure of approved minors from the undergraduate office. Students must seek advice and obtain approval from the undergraduate advisor prior to embarking upon a minor program.

The music minor for students entering UCSD in and after winter quarter 1998 consists of:
   - two lower-division music courses except performance ensembles (Music 95B–Music 95W) and lessons (Music 32)
   - five upper-division music courses
   - Students who entered UCSD before winter 1998 may select either the new minor or one of the music minors offered at the time of their entry into the university.

A minor with an emphasis in ICAM consists of seven specific courses, of which at least five must be upper division. Prospective minors should consult with the respective departmental advisor for a complete list of appropriate classes acceptable for the minor.

ADVISING OFFICE

Undergraduate Staff advisor:
Eileen Voreades
Room 195, Conrad Prebys Music Center

Evoreades@ucsd.edu

OFFICE: Conrad Prebys Music Center
http://music.ucsd.edu

THE GRADUATE PROGRAM

UC San Diego offers the master of arts and doctor of philosophy in music as well as a doctor of musical arts. Areas of emphasis for the M.A. include Composition, Computer Music, Integrative Studies, and Performance. For the Ph.D., areas of emphasis offered are Composition, Computer Music, and Integrative Studies. The doctor of musical arts has an emphasis in Contemporary Music Performance.

COMPOSITION

http://music.ucsd.edu/grad/composition.php

The Composition Program is committed to nourishing the individual gifts and capacities of student composers in a diverse and active environment, with an emphasis on intensive personal interaction between faculty and student. The faculty mentor considers a student’s particular goals and then attempts to strengthen his or her technical capacity to meet them. The diversity and liveliness of our program itself often challenges students to reevaluate their goals.

An incoming member in the M.A. or Ph.D. program begins with a year-long seminar (taught by a different faculty composer each quarter) and
continues with individual studies thereafter. At the close of the first year fall quarter and again after the following spring quarter, the entire composition community gathers for a day-long “jury.” Each seminar member is allotted a block of time during which the composition that has just been completed is performed and recorded in a carefully rehearsed presentation. There is a detailed discussion of each work by the faculty composers, and the student has opportunity to comment, explain, and pose questions. Following the performance and discussions of this day, the composition faculty meets to assess the students’ work collectively and to offer any guidance deemed necessary. This process is at the root of the uniqueness of the UC San Diego program, and manifests the range, seriousness, and vitality with which compositional issues are explored here.

After completing three quarters of seminar and two juries, students come to know something about the ideas and perspectives of each faculty composer; the faculty, in turn, is aware of each student’s objectives and needs. At this point, an individual mentor is agreed upon and this relationship becomes the center of the student’s continuing work as the degree is completed. A Third Year Forum presents, under departmental auspices, a work composed by each third-year Ph.D. composer in the four quarters since his or her second jury. As a part of preparation for this forum, each student composer is expected to have a faculty performer on his or her Ph.D. committee (as a regular member, or as an additional sixth member). The faculty performer is the student’s performance mentor and guide in interfacing with the performance community. There is also a biweekly Focus on Composition Seminar at which faculty, students and selected visitors present work of interest (compositional, analytical, technological, and even whimsical).

The seminars serve to foster mutual awareness within the student composer group. Collegial relationships develop which lead not only to friendships but also to further creative outlets in cooperative projects, including the student-run Composers’ Forums, performance collectives, and recital projects. UCSD performers—faculty and student—are all committed to the playing of new music, and frequent composer/performer collaborations are a vital aspect of life in the Department of Music.

COMPUTER MUSIC

http://music.ucsd.edu/grad/comp_music.php

The Computer Music Program emphasizes research in new techniques for electronic music composition and performance, catalyzed through an active concert program of new works by students, faculty, and visitors. Areas of research include:

• new audio synthesis techniques
• audio signal processing
• music cognition
• live improvisation with and by computers
• integrating audio and video
• electronic spatialization of sounds
• techniques for live electronic music performance
• computer music software and HCL design
• audio analysis and feature detection

The Computer Music Program encourages work which overlaps with the other programs of study: Composition, Performance, and Integrative Studies. Analyzing and performing electronic music repertoire as well as writing new music involving electronics are encouraged.

The first-year computer music curriculum is centered on a yearlong “backbone” course covering the essentials of the computer music field. This material divides naturally into three portions (audio signal processing, compositional algorithms, and musical cognition).

In their second year, students work individually with faculty members to deepen their mastery of their subject areas of concentration. For example, a student wishing to focus on signal processing aspects might study techniques for digital audio analysis and resynthesis, drawing on the current research literature.

Also during these first two years, students take seminars on music analysis, composition, and performance practice. After having taken a critical mass of such subjects, Ph.D. students enter a qualifying examination preparation period, and, once successful, they start their dissertation research.

UCSD’s Center for Research in Computing and the Arts (http://crica.ucsd.edu) offers an ideal research environment for graduate students in this area. The Department of Music also provides extensive laboratory and computing support for computer music.

INTEGRATIVE STUDIES

(formerly Critical Studies/Experimental Practices)

http://music.ucsd.edu/grad/is.php

The graduate program in Integrative Studies (IS) promotes an engagement with contemporary music activity and discourse that integrates diverse methodologies, experiences, learning styles, and resources. IS respects multiple ways of knowing and seeks to explore connections among ideas and processes in the arts, humanities, and sciences. Students are encouraged to combine their artistic and academic pursuits; to think systematically, critically, and reflectively; and to focus on the articulations and points of overlap between specialized and generalized knowledge. Drawing on diverse fields, including cultural theory, new media studies, ethnomusicology, improvisation, cognitive science, and systems theory, among others, the IS program combines an exploration of contemporary Western and non-Western music making with an examination of ideas and concepts that are relevant to its nature, creation, production, and reception.

This integrative and interactive environment encourages cross-fertilization and hybridity between diverse musical forms and the theoretical and critical discourses that surround them, often drawing in those who may not fit categories of “composer” or “performer,” or whose work is not constrained by traditional disciplinary boundaries. Core seminars explore multiple ways of thinking about music—including critical, cognitive, and intercultural approaches—in tandem with creative practices that frequently incorporate new technologies and integrate diverse media and forms. Student-generated projects and collaborations are encouraged and promoted with formal juries conducted by the faculty.

The program comprises four interconnected specializations: critical studies, ethnomusicology, systems inquiry, and creative practice. IS graduate students initially enroll in introductory courses taught by core faculty members designed to present an overview of each specialty and to generate possibilities for future independent and collaborative research. In subsequent quarters students choose between a variety of focused and revolving topic seminars in each of the four primary specializations. By the end of their first year in residency, students declare a primary and secondary specialty within the program. Seminars offered in other departments—for instance in visual arts, literature, theatre and dance, anthropology, communication, ethnic studies, cognitive science, psychology, or computer science—are encouraged and may fulfill degree requirements, if approved by a student’s faculty advisor.

Exposure to a range of disciplines and inter-disciplinary methodologies prepares students to pursue innovative artistic/academic projects and careers. The program teaches students to situate and contextualize knowledge and practices on a broad intellectual and artistic continuum and to recognize the responsibilities and opportunities associated with living in an increasingly interconnected and interdependent world.

PERFORMANCE

http://music.ucsd.edu/grad/performance.php

Fostering the creative, intelligent, and passionate performance of contemporary music is the mission of the Performance Program of the Department of Music. As once stated by founding faculty composer Robert Erickson, we at UCSD are a “community of musicians.”

Performers act and interact in a communal environment by means of collaboration with faculty and student composers, research in the areas of new performance modalities, music technology, and improvisation, among many other pursuits. The performance of contemporary music is viewed as a creative act that balances expertise and exploration.

Graduate performance students pursue either a master of arts or a doctor of musical arts degree in contemporary music performance. The course of study for both programs involves the completion of required graduate seminars and intensive study with a mentoring faculty member. Students are encouraged to adopt a vigorous, exploratory orientation in their private study. Final degree requirements include a recital, or in the case of the DMA, two recitals and the presentation of personal performance research.

The work of graduate performance students forms an integral component of a rich musical environment, which produces an astonishing quantity and variety of performances. Students may perform in collaborative performances with fellow students and faculty. Ensembles include groups specializing in the interpretation of unconventionally notated scores, the percussion group red fish blue fish and other ensembles. The Performance Forum, a student-initiated concert series, provides an opportunity for students to present a wide variety of repertoire which may include improvised music, world music,
and music with technology. A strong, collaborative spirit among the curricular areas of the department (Performance, Composition, Music Technology, and Integrative Studies) also yields many new projects each year. Works by graduate student composers are performed on the annual Spring Festival and other concert series. The sense of musical community engendered by diverse interactions permeates the atmosphere and makes the Department of Music at UCSD a uniquely rewarding place to create the newest of music. Graduate Admissions

Students are admitted to begin in fall quarter only. The deadline for submission of ALL application materials is January 10. Failure to meet this deadline jeopardizes admission and financial support.

Step 1 Preliminary Application

The application process begins at the Department of Music Web site (http://music.ucsd.edu) with a preliminary online application. We encourage all applicants to apply as early as September.

Step 2 Portfolio

Music applicants must submit a portfolio consisting of the following by January 10 to UCSD, Department of Music, MC 0099, La Jolla, CA 92039. Please include your most recent works as well as twentieth-century pieces, when possible.

- For all applicants, a repertory list of works (solo and chamber) performed or composed during the past few years and a sample of printed concert programs in which you have participated, either as performer, composer, or collaborator.
- For all applicants, a minimum of two papers illustrating writing ability in any of the following areas: musical analysis, criticism, aesthetics, music theory, or music technology.
- In addition:
  - For composition applicants only, a minimum of three scores of instrumental works with taped examples of the works being performed. (These may include, but should not be exclusively, electroacoustic works.)
  - For computer music and IS applicants only, representative documentation (e.g., papers, performances, intermedia works, computer programs, etc.) of prior work.
  - For performance applicants only, tapes or CD demonstrating the level of vocal and/or instrumental performance. In person auditions are desirable when possible, but not required.

Step 3 UCSD Application for Graduate Admission

All sections of the official online UCSD Application for Graduate Admission with the $70 nonrefundable fee, or $90 for international students, must be submitted by January 10. Applications must include all supporting documents:

- statement of purpose
- three letters of recommendation
- official transcripts
- Graduate Record Examination (GRE) required for all applicants.
- TOEFL (Test of English as a Foreign Language) or International English Language Testing System (IELTS) required for all applicants whose country of citizenship does not have English as its primary language. Minimum TOEFL score is 550 for the paper-based test, 213 for the computer-based test, or 80 for the Internet-based test. The minimum IELTS score is 7.

ADVISORY EXAMINATIONS

After completion of an advisory examination during Welcome Week, each new student will meet with the departmental M.A. or Ph.D. advisor. Students found to be deficient in any areas covered on the advisory examination (dictation, sight reading, keyboard proficiency, history, and literature) will be advised to remedy deficiencies during their first year.

CORE GRADUATE CURRICULUM

All graduate students are required to take Music 201 (Projects in New Music Performance) as outlined under each area, Music 210 (Musical Analysis), Music 228 (Conducting), and Music 291 (Problems and Methods of Music Research and Performance). Students who completed Music 210, 228, and 291 during their master’s degree program at UCSD, do not need to retake those courses for their doctoral curriculum.

To assure that all requirements are being adequately met, all graduate students must make an appointment with the graduate staff advisor for a degree check no later than the winter quarter of the second year.

MASTER’S DEGREE PROGRAM

The master of arts in music degree includes areas of emphasis in Composition, Computer Music, Integrative Studies, and Performance. The degree requires completion of at least thirty-six quarter units of graduate courses (courses numbered 201–299), including six units of Music 500 (Apprentice Teaching in Music) and six units of Music 299 (Advanced Research Projects and Independent Study) bearing directly on completion of the master’s thesis. Master’s students are expected to complete all requirements for the degree in six quarters of residence.

REQUIREMENTS

In addition to the core graduate curriculum, all master’s degree students are required to complete requirements in their area of emphasis:

Composition

- MUS 201 (A, B, C, D, E, or F)—must take at least two times.
- MUS 203A-B-C—successful completion of the jury process is necessary to get a passing grade in the corresponding seminar.
- MUS 203D—after successful completion of 203C, students must enroll in Music 203D (with their committee chair) every quarter until graduation.
- MUS 204—every quarter until graduation.
- MUS 206 and/or 207—a combination of any two courses.

Computer Music

- MUS 201 (A, B, C, D, E, or F)—must take at least two times.
- MUS 270A-B-C—must take within the first year of the program.
- MUS 270D—required every quarter of the second year.
- MUS 206, 207, and/or 267—a combination of any two courses.
- Integrative Studies
- MUS 201 (A, B, C, D, E, or F)—must take at least one time.
- MUS 205—every quarter until graduation.
- MUS 206 or 207—at least three courses; two approved for a student’s primary specialty and one approved for his or her secondary specialty.
- MUS 211, 212, 213, and 214—must complete the series of four courses within the first year of the program.
- MUS 251, 252, 253, or 254—at least once course corresponding to the student’s primary specialty. Additional courses from this series may also be taken for corresponding 206 or 207 credit if approved by the student’s faculty advisor.

It is the student’s responsibility to check if a given course will count towards his or her primary or secondary specialty prior to enrolling.

Performance

- MUS 201(A, B, C, D, E, or F)—every quarter until graduation.
- MUS 206 or 207—a combination of any two courses.
- MUS 232—every quarter until graduation.
- MUS 245—every quarter in residence.

MASTER’S DEGREE COMPLETION REQUIREMENTS

A folio of three research papers in professional format (normally to be written in connection with the courses the student will be taking) must be accepted by the student’s committee prior to approval of the thesis.

MA candidates will present a thesis consisting of the following under the supervision of the student’s committee chair in MUS 299:

- Candidates emphasizing Composition will prepare a folio of three chamber compositions together with tape recordings of at least two of them.
- Candidates emphasizing Computer Music will write a research paper (thesis) and present a lecture-performance in which the scientific, technological, and musical aspects of an original computer music composition are documented, played, and discussed.
Candidates emphasizing Integrative Studies with a primary specialty in critical studies, ethnomusicology, or systems inquiry must complete a master’s thesis of roughly sixty pages.

Candidates emphasizing Performance will present a recital supported by lecture-quality notes. The program must be approved by the student’s committee chair.

All of the above master’s requirements must have final approval from the student’s individual committee upon completion.

DOCTORAL DEGREE PROGRAM

Students of superior musical competence may pursue a program with emphasis in Composition, Computer Music, or Integrative Studies leading to the Ph.D. or doctor of musical arts (D.M.A.) degree in Contemporary Music Performance.

All doctoral students within the Department of Music must complete the Core Graduate Curriculum (outlined in the section above the Master’s Degree Program) plus additional core requirements for the Ph.D. or D.M.A. program. These additional core requirements are

Successful completion of an M.A. degree, including requirements equivalent to those described above for the M.A. in music. UCSD M.A. students who apply to the Ph.D./D.M.A. program must complete all departmental requirements, obtain OGS approval, and file the M.A. degree at Geisel Library before enrolling in any Ph.D./D.M.A. level courses.

The Department of Music strongly recommends that entering students have acquired a reading ability in at least one of the standard reference foreign languages (French, German, Italian, or Spanish) in addition to their native language.

All Ph.D./D.M.A. students are required to complete six units of credit in Music 500 (Apprentice Teaching) unless the student has completed this requirement in UCSD’s master’s degree program.

After completing the qualifying examination, all students must remain in residence for at least three quarters, during which time they must enroll in twelve units of Music 299 (Advanced Research Projects and Independent Study) with their committee chair or members every quarter.

COURSE REQUIREMENTS

In addition to the core graduate and Ph.D./D.M.A. curriculum, doctoral students (according to their area of emphasis) must complete the following courses prior to the qualifying examination:

Composition

- MUS 201 (A, B, C, D, E, or F)—must take at least two times.
- MUS 203A-B-C—successful completion of the jury process is necessary to get a passing grade in the corresponding seminar. Continuing students from the UCSD Composition M.A. program may be excused from MUS 203B-C by successfully completing MUS 203A at the Ph.D. level.
- MUS 203D—after successful completion of 203C, students must enroll in MUS 203D (with their committee chair) every quarter in residence.
- MUS 204—every quarter in residence.
- MUS 206 and/or 207—a combination of any three courses.
- MUS 209—must be taken at least three times.
- MUS 298—must complete at least six units.

Computer Music

- MUS 201 (A, B, C, D, E, or F)—must take at least two times.
- MUS 270A-B-C—must be taken within the first year of the program unless previously taken as a UCSD M.A. student.
- MUS 270D—after successful completion of 270C, students must enroll in MUS 270D (with their committee chair) every quarter in residence.
- MUS 206, 207, 209, and/or 267—a combination of any six courses.
- MUS 298—must complete at least six units.

Integrative Studies

- MUS 201 (A, B, C, D, E, or F)—must take at least two times.
- MUS 205—every quarter until advanced to candidacy.
- MUS 206 or 207—at least five courses with three approved for a student’s primary specialty and two approved for his or her secondary specialty.
- MUS 211, 212, 213, and 214—entire series must be taken within the first year of the program unless previously taken as a UCSD M.A. student.
- MUS 251, 252, 253, or 254—must take two courses, one to correspond with student’s primary specialty and one to correspond with the student’s secondary specialty; additional courses from this series may also be taken for corresponding 206 or 207 credit if approved by the student’s faculty advisor.
- MUS 298—must complete at least six units.

Those students declaring creative practice as their primary specialty for the Ph.D. are required to pass a jury at the end of their first year of doctoral study. Each student is allotted a block of time to present and/or perform his or her work in front of a panel comprising area and affiliated faculty. Each presentation is followed by a detailed discussion of the student’s work at which students have the opportunity to comment, explain, and pose further questions. After the completion of the jury process, the faculty meets in order to further assess each student’s work and to offer additional guidance. It is the student’s responsibility to check if a given course will count towards his or her primary or secondary specialty prior to enrolling.

Performance

- MUS 201A, B, C, D, E, or F—every quarter until completion of qualifying examination.
- MUS 206/207/209—as approved by D.M.A. advisor, a combination of any six seminars related to the primary and secondary area of specialization. Music 296 may be substituted for up to four seminars with permission of D.M.A. advisor.
- MUS 232—every quarter until completion of qualifying examination.
- MUS 245—every quarter in residence.
- MUS 250—must be taken at least three times.
- MUS 298—must complete at least six units.

QUALIFYING EXAMINATION/ADVANCEMENT TO CANDIDACY

Requirements prior to taking the qualifying examination:

- Completion of all Ph.D./D.M.A. required course work.
- Formation of the Doctoral Committee. Students must choose the chair of their Doctoral Committee no later than their last quarter of course work. They must choose two more internal members of the Doctoral Committee by the end of the fall quarter of their third year. In consultation with the chair of the Doctoral Committee, two faculty members from outside the department should be added to the committee by the end of the spring quarter of the third year. All internal members of the committee must be faculty of the Department of Music. The final composition of the committee is approved by the Office of Graduate Studies.
- For Ph.D. students, one research paper judged to be of publishable quality must be completed prior to qualifying examinations. The subject of the publishable paper will be developed during the student’s first two years and must be approved by the student’s Ph.D. committee chair.
- For Composition students, in addition to the publishable paper, a folio of not fewer than three compositions (not previously accepted for an M.A. degree) must be completed prior to qualifying examinations. A Third Year Forum presents, under departmental auspices, a work composed by each third-year Ph.D. composer in the four quarters since his or her second jury. As a part of preparation for this forum, each student composer is expected to have a faculty performer on his or her Ph.D. committee (as a regular member, or as an additional sixth member). The faculty performer is the student’s performance mentor and guide in interfacing with the performance community.
- For D.M.A. students, one major recital; plus either (a) an abstract of the thesis or research project which will be given to the Doctoral Committee at the qualifying examination; or (b) a substantial portion of the works from the student’s first two “major recitals” will be presented at the qualifying examination.
- For Integrative Studies students, a dissertation prospectus must be submitted to the student’s committee no later than three weeks prior to the oral portion of the qualifying examination. The
dissertation prospectus is a document that presents the research topic of the dissertation, places it in the context of the relevant literature or in the context of recent artistic developments, discusses its significance, specifies and justifies the research methods, theoretical orientation, and/or artistic approach, and indicates the anticipated steps leading to completion.

The qualifying examination for all doctoral students will consist of the following:

A written and oral defense of three questions provided by the Doctoral Committee pertaining to appropriate areas of specialization. For Integrative Studies students, one question will involve a defense of the student’s dissertation prospectus and the remaining two questions will pertain to the student’s primary and secondary specialties.

Successful completion of the qualifying exam marks the student’s advancement to doctoral candidacy, which must take place no later than the end of the spring quarter of the fourth year.

**PH.D./D.M.A. DEGREE COMPLETION REQUIREMENTS**

- For Composition students, completion of a major composition project.
- For Computer Music students, completion of an acceptable dissertation.
- For Integrative Studies students, a primary specialty in ethnomusicology, systems inquiry, or critical studies, completion of a book-length dissertation demonstrating original research and critical insight. For Integrative Studies students with a primary specialty in creative practice, a major creative work and a written defense of that work. Prior to the dissertation defense, the student’s work must be reviewed by a faculty jury and performed publicly (see the description of the jury process given above for more details).
- For D.M.A. students, completion of a second major recital plus one of the following: (a) thesis or research project; (b) a concert that is innovative in design and/or content and which is supported by a document containing extensive stylistic or analytical discussion of the program; (c) a lecture/concert pertaining to innovative and/or original material, with appropriate documentation as determined by the committee; or (d) two approved chamber music concerts, with appropriate documentation as determined by the committee.
- For all doctoral students, a final public defense of the composition/dissertation/recitals.
- A full copy of the student’s dissertation/research project must be in the hands of the student’s Doctoral Committee members four weeks before the dissertation defense.
- It is understood that the edition of the dissertation given to committee members will not be the final form, and that the committee members may suggest changes in the text at the defense. Revisions may be indicated and, in extreme cases, may require this examination to be taken more than once.
- Acceptance of the dissertation by the university librarian represents the final step in completion of all requirements for the Ph.D.

Materials previously submitted for other degrees are not acceptable for submission for the Ph.D./D.M.A. degree.

**TIME LIMIT POLICY FOR THE DOCTORAL DEGREE**

**Normative Time Limits**

4 years: Students entering the Ph.D./D.M.A. program with a master’s degree from another institution.

6 years: Students continuing into the Ph.D./D.M.A. program with a master’s degree from UCSD. Time limit is calculated from the beginning of the M.A. program (i.e., two years for M.A. program plus four years normative time for Ph.D./D.M.A.).

**Support Time Limits**

6 years: Students entering the Ph.D./D.M.A. program with a master’s degree from another institution.

7 years: Students continuing into the Ph.D./D.M.A. program with a master’s degree from UCSD. Time limit is calculated from the beginning of the M.A. program.

**Total Registered Time Limits**

6 years: Students entering the Ph.D./D.M.A. program with a master’s degree from another institution.

8 years: Students continuing into the Ph.D./D.M.A. program with a master’s degree from UCSD. Time limit is calculated from the beginning of the M.A. program.

Students who have not completed all Ph.D. requirements within the maximum total registered time will no longer be permitted to register for classes.

**COURSES**

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

Note: The following course offerings outline the general scope of our program. Not all courses are offered every year. It is essential that students work closely with departmental advisors when planning their degree programs.

**LOWER-DIVISION**

1A. Fundamentals of Music A (4)
This course, first in a three-quarter sequence, is primarily intended for students without previous musical experience. It introduces music notation and basic music theory topics such as intervals, scales, keys, and chords, as well as basic rhythm skills. Prerequisites: none.

1B. Fundamentals of Music B (4)
This course, second in a three-quarter sequence, focuses on understanding music theory and in developing musical ability through rhythm, ear training, and sight singing exercises. Topics include major and minor scales, seventh-chords, transportation, compound meter and rudiments of musical form. Prerequisite: Music 1A.

1C. Fundamentals of Music C (4)
This course, third in a three-quarter sequence, offers solid foundation in musical literacy through exercises such as harmonic and melodic dictation, sight singing exercises and rhythm in various meters. Topics include complex rhythm, harmony, and basic keyboard skills. Prerequisite: Music 1B.

2A–B–C. Basic Musicship (4–4–4)

2AK-BK-CK. Basic Keyboard (2-2-2)
Scales, chords, harmonic progressions, transposition, and simple pieces. Prerequisites: concurrent enrollment in Music 2A, B, C.

2JK. Jazz Keyboard (2)
This course will introduce basic voicings and voice leading, stylistically appropriate accompaniment, and basic chord substitution. For majors with a Jazz and the Music of the African Diaspora emphasis to be taken concurrently with Music 2C. Prerequisites: Music 2AK and 2BK or passing proficiency exam, or consent of instructor. Concurrent enrollment in Music 2C. Majors only.

4. Introduction to Western Music (4)
A brief survey of the history of Western Music from the Middle Ages to the present. Much attention will be paid to the direct experience of listening to music and attendance of concerts. Class consists of lectures, listening labs, and live performances. Prerequisite: none.

5. Sound in Time (4)
An examination and exploration of the art and science of music making. Topics include acoustics, improvisation, composition, and electronic and popular forms. There will be required listening, reading, and creative assignments. No previous musical background required. Prerequisite: none.

6. Electronic Music (4)
Lectures and listening sessions devoted to the most significant works of music realized through the use of computers and other electronic devices from the middle of this century through the present. Prerequisite: none.

Exploration of the interactions among music, science, and technology, including the history and current development of science and technology from the perspective of music. Prerequisite: none.

8. American Music (4)
A course designed to study the development of music in America. The focus will be on both the vernacular traditions including hymn singing, country music, jazz, big band, rock, etc., as well as the cultivated traditions of various composers from William Billings to John Cage. Prerequisite: none. (Offered in selected years.)

9. Symphony (4)
The symphonic masterworks course will consist of lectures and listening sessions devoted to a detailed discussion of a small number of recognized masterworks (e.g., Mozart, Beethoven, Berlioz, Stravinsky, Ligeti, etc.). Prerequisite: none. (Offered in selected years.)

10. Chamber Music (4)
Chamber Music will consist of lectures and listening sessions devoted to a detailed discussion of recognized
chamber masterworks. (e.g., Haydn, Mozart, Beethoven, Bartok, etc.). Prerequisite: none. (Offered in selected years.)

11. Folk Music (4)
A course on folk music of the world, covered through lectures, films, and listening sessions devoted to detailed discussion of music indigenous to varying countries/areas of the world. Topics vary from year to year. May be repeated once for credit. Prerequisite: none.

12. Opera (4)
A study of opera masterworks that often coincide with operas presented in the San Diego Opera season. Class consists of lectures, listening labs, live performances, and opera on video. Prerequisite: none.

13A. World Music/Africa (4)
A course that focuses on the music of Africa and on African ways of music making in the Diaspora to the Caribbean and South America. Prerequisite: none.

13AM. World Music/Multicultural America (4)
A study of music cultures in the United States, particularly Native American, Hispanic American, European American, Asian American, and Pacific Islanders from the perspective of ethnicity, origin, interaction, and the contribution of various ethnic groups to American musical life. Prerequisite: none.

13A. World Music/Asia and Oceania (4)
Introduction to selected performance traditions of Asia and Oceania with links to local and visiting musicians from these cultures. No prior technical knowledge of music is necessary. Prerequisite: none.

14. Contemporary Music (4)
This course offers opportunities to prepare oneself for experiences with new music (through preview lectures), hear performances (by visiting or faculty artists), to discuss each event informally with a faculty panel; an effort to foster informed listening to the new in music. Prerequisite: none.

15. Popular Music (4)
A course on popular music from different time periods, covered through lectures, films, and listening sessions. Topics vary from year to year. May be repeated once for credit. Prerequisite: none.

32. Instrumental/Vocal Instruction (2)
Individual instruction on intermediate level in instrumental technique and repertory. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course. Prerequisite: audition and department stamp.

32G. Group Instructional Instrumental Instruction (2)
Group instruction in instrumental or vocal technique and repertory. Intended for students who wish to make an important contribution to Department of Music ensembles. Prerequisite: Written recommendation from ensemble director and audition for performance faculty on first day of classes required. Department stamp required. Prerequisite: audition and department stamp.

32V. Vocal Instruction (1)
Individual instruction on intermediate level in vocal technique and repertory. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course and in Music 32VM. May be taken six times for credit. Prerequisite: audition and department stamp.

32VM. Vocal Masterclass (1)
All students enrolled in voice lessons (32V, 132V, or 132C) are permitted to perform with their instructor. Students critique in-class performances, with emphasis on presentation, diction, dramatic effect, vocal quality, and musicality. Prerequisite: concurrent enrollment in Music 32V, 132V, or 132C.

33A. Introduction to Composition I (4)
First course in a sequence for music majors and non-majors pursuing an emphasis in composition. The course examines "sound" itself and various ways of building sounds into musical structures, and develops skills in music notation. Students compose solo pieces in shorter forms. Students may not receive credit for both Music 33 and 33A.

33B. Introduction to Composition II (4)
Second part of course sequence for students pursuing a composition emphasis. Course continues the building of skills with the organization of basic compositional elements: pitch, rhythm, and timbre. It explores issues of musical texture, expression, and structure in traditional and contemporary repertoire. Writing for two instruments in more extended forms. Prerequisite: Music 33A.

33C. Introduction to Composition III (4)
Third part of course sequence for students pursuing a composition emphasis. Course continues the development of skills in instrumentation and analysis. It includes a survey of advanced techniques in contemporary composition, with additional focus on notation, part-preparation, and the art of writing for small groups of instruments. Prerequisite: Music 33B.

87. Freshman Seminar (I)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen.

95. Ensemble Performance (2)
Performance in an ensemble appropriate to student abilities and interests. Normally each section requires student participation for the whole academic year, with credit for participation each quarter. Sections of Music 95W have included: African drumming, Korean percussion, Indian sitar and tabla, koto, and Indonesian flute. Not all sections will be offered every year. May be repeated for credit. Grading on participation level, individual testing, comparative papers on repertoire content, etc. Prerequisites: audition and consent of instructor for each section. Materials fee required.

Note: Students in the Music 95 series courses may enroll with a letter grade option a total of twelve units for registered music majors and a total of six units for all other students; after which students may continue to enroll in Music 95 courses, but only with a P/NP grade option. There is one exception to the above grading policy. Music 95GC, Gospel Choir, can only be taken for a P/NP grading option.

Section B. Instrument Choir
Section C. Concert Choir
Section D. Symphonic Chorus
Section E. Chamber Orchestra
Section G. Gospel Choir
Section H. Chamber Opera (Not offered every year.)
Section J. Jazz Chamber Ensembles
Section L. Large Jazz Ensemble
Section K. Chamber Singers
Section L. Wind Ensemble
Section W. World Music Ensembles

ICAM 40. Introduction to Computing in the Arts (4)
An introduction to conceptual uses and historical precedents for use of computers in art making. Introduces students to the programming of computer facilities and teaches them basic computer skills. Prerequisites: Visual Arts and ICAM majors and minors only. Note: Materials fee required.

UPPER-DIVISION

101A. Music Theory and Practice I (4)
Study of modal counterpoint in the style of the sixteenth century. Two-voice species counterpoint studies. Analysis of music of the period. Musicianship studies: sight-singing, dictation, and keyboard skills. Prerequisites: Music 2C and 2CK.

101B. Music Theory and Practice II (4)
Study of tonal harmony and counterpoint. Analysis of Bach chorales and other music from the Baroque period. Musicianship studies: sight-singing, dictation, and keyboard skills. Prerequisite: Music 101A.

101C. Music Theory and Practice III (4)
Tonal harmony and counterpoint. Analysis of larger classical forms: Sonata, Variation, Minuet and Trio, Rondo. Musicianship studies: sight-singing, dictation, and keyboard skills. Prerequisite: Music 101B.

102A. Music Theory and Practice IV (4)
Advanced study of the materials and structures of music (Beethoven to Wagner) emphasizing the evolution of music through chromatic harmony and voice leading. Development of aural discrimination and in-depth analysis. Prerequisite: Music 101C.

102B. Music Theory and Practice V (4)
Advanced study of the materials and structures of music (Schoenberg, Stravinsky, Webern, etc.—1900–1940) emphasizing the evolution of music through extended harmony post tonality and neoclassicism. Development of aural discrimination and in-depth analysis. Prerequisite: Music 102A.

102C. Music Theory and Practice VI (4)
Advanced study of the materials and structures of music (1945–2006) emphasizing the evolution of music through the many compositional trends of the late twentieth century. Development of aural discrimination and in-depth analysis. Prerequisite: Music 102B.

103A. Seminar in Composition I (4)
First part in composition course sequence. Individual projects will be reviewed in seminar. Techniques of instrumentation will be developed through examination of scores and creative application. Assignments will include short exercises and analysis, and final project for standard ensemble. Prerequisite: Music 33C.

103B. Seminar in Composition II (4)
Second part in composition course sequence. Intensive work in free composition by drafting a composition for presentation at the end of Music 103C. Written analysis of contemporary repertoire is introduced. Instruction about calligraphic conventions including computer engraving programs. Prerequisite: Music 103A.

103C. Seminar in Composition III (4)
Third part in composition course sequence. A mixture of individual lessons as well as group meetings, with discussion of topics germane to the development of composers, including musical aesthetics and contemporary orchestration techniques. Final performance of students’ works will take place at the end of the quarter. Prerequisite: Music 103B.

103D-E. F. Honors Seminar in Composition (4-4-4)
Advanced individual projects for senior music majors pursuing honors in composition. Projects will be critically reviewed in seminar with fellow students and faculty composers. Prerequisites: Music 103A-B-C, and admission into the Department of Music Honors Program in composition. Department stamp required.

104. Jazz Transcription and Analysis (4)
An introduction to the practice of transcribing and analyzing improvised music. Discussion of music technique, style, aesthetics, and the ideology of transcription. Prerequisites: Music 101A and 101B.

105. Jazz Composition (4)
This course will explore a range of compositional possibilities from song forms to modal and more extended forms. May be repeated once for credit. Prerequisite: Music 104 or consent of instructor.

107. Critical Studies Seminar (4)
This seminar explores the history of music in relation to critical issues, such as race, gender, sexuality, the environment, and politics. Readings include recent literature in cultural studies, musicology, and sociology. Topics vary. May be taken three times for credit. Prerequisite: Music 120C.
110. Introduction to Ethnomusicology Seminar (4)
This seminar introduces the central theories, methods, and approaches used to study the musics of contemporary cultures, in their local contexts. In addition to surveying key writings, students will document music from their local environments. Prerequisite: upper-division standing or consent of instructor.

111. Topics/World Music Traditions (4)
A study of particular regional musics in their repertory, cultural context, and interaction with other traditions. Topics vary. Prerequisite: none.

112. Topics in European Music Before 1750 (4)
This course will address topics in medieval, Renaissance, and Baroque music; topics will vary from year to year. May be repeated five times for credit. Prerequisites: knowledge of music notation or consent of instructor; Music 4, 8–10, or 120 recommended.

113. Topics in Classic, Romantic, and Modern Music (4)
This course will focus on Western music between 1750 and the early 20th century; topics will vary from year to year. May be repeated five times for credit. Prerequisites: knowledge of music notation or consent of instructor; Music 4, 8–10, or 120 recommended.

114. Music of the Twentieth Century (4)
An exploration of materials and methods used in the music of our time. There will be an extra discussion group for music majors. May be repeated once for credit. Prerequisites: none.

115. Women in Music (4)
A survey of the biographical, historical, sociological, and political issues affecting women composers, their creativity, their opportunities, and their perception by others. It compares and contrasts the work of women composers, performers, patrons, teachers, and writers on music from the Middle Ages through the present. Prerequisite: consent of instructor.

116. Popular Music Studies Seminar (4)
This course examines special topics in popular music from various sociopolitical, aesthetic, and performance perspectives. Readings include recent literature in cultural studies, musicology, and/or performance practice. Topics vary. May be taken three times for credit. Prerequisites: upper-division standing or consent of instructor.

120A. History of Music in Western Culture I (4)
First part of intensive historical, analytical, and cultural-aesthetic examination of music in Western culture from the ninth through the twenty-first centuries. Considers both sacred and secular repertories, from Gregorian chant through early opera, c. 800–1600. Prerequisites: Music 1C or 2C or passing grade on proficiency exam. Music majors should be enrolled concurrently in Music 101A. Department stamp required for non-majors.

120B. History of Music in Western Culture II (4)
Second part of intensive historical, analytical, and cultural-aesthetic examination of music in Western culture from the ninth through the twenty-first centuries. Considers both instrumental and vocal repertories, from the Baroque to the Romantic, c. 1600–1830. Prerequisites: Music 120A. Music majors should be enrolled concurrently in Music 101B. Department stamp required for non-majors.

120C. History of Music in Western Culture III (4)
Third part of intensive historical, analytical, and cultural-aesthetic examination of music in Western culture from the ninth through the twenty-first centuries. Considers both established traditions and new trends, from Romanticism through Modernism and Post-Modernism, c. 1800–present. Prerequisites: Music 120B. Music majors should be enrolled concurrently in Music 101C. Department stamp required for non-majors.

126. Blues: An Oral Tradition (4)
This course will examine the development of the Blues from its roots in work-songs and the minstrel show to its flowering in the Mississippi Delta to the development of Urban Blues and the close relationship of the Blues with Jazz, Rhythm and Blues, and Rock and Roll. (Cross-listed with Ethnic Studies 178.) Prerequisite: none.

127A. Jazz Roots and Early Development (1900–1943) (4)
This course will trace the early development of Jazz and the diverse traditions which helped create this uniquely American art form. We will witness the emergence of Louis Armstrong as a force and examine the composer’s role in Jazz with Jelly Roll Morton and Duke Ellington. (Cross-listed with Ethnic Studies 179A.) Prerequisite: none.

127B. Jazz Since 1946: Freedom and Form (4)
This course will examine the evolution of Jazz from 1943 to the present. The course will survey the contrasting and competing styles in Jazz from bebop to cool to the avant-garde and fusion. (Cross-listed with Ethnic Studies 179B.) Prerequisite: none.

128. Principles and Practice of Conducting (4)
The theory and practice of instrumental and/or choral conducting as they have to do with basic baton techniques, score reading, interpretation, orchestration, program building, and functional analysis. Members of the class will be expected to demonstrate their knowledge in the conducting of a small ensemble performing literature from the eighteenth, nineteenth, and twentieth centuries. Prerequisites: Music 2A-B-C and 101A-B-C. Department stamp required.

129. Orchestration (4)
This course will give practical experience in orchestration. Students will study works from various eras of instrumental music and will demonstrate their knowledge by orchestrating works in the styles of those various eras, learning the capabilities, timbre, and articulation of all the instruments in the orchestra. Prerequisite: Music 101B.

130. Chamber Music Performance (2–4/0)
Instruction in the preparation of small group performances of representative instrumental and vocal chamber music literature. May be taken for credit six times, after which students must enroll for zero units. Prerequisite: consent of instructor through audition.

131. Advanced Improvisation Performance (4/0)
Master class instruction in advanced improvisation performance for declared majors and minors only or consent of instructor. Audition required at first class meeting. May be repeated six times for credit. Prerequisites: consent of instructor through audition. Department stamp required.

132. Pro-Seminar in Music Performance (4)
Individual or master class instruction in advanced instrumental performance. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course. Prerequisites: Music 102 and department stamp.

132R. Recital Preparation (4)
Individual instruction in advanced vocal performance. Emphasis placed on diction and musical issues. For declared majors and minors. Topics will vary. Prerequisites: Music 102 and department stamp. May be repeated six times for credit.

132C. Vocal Coaching (4)
Individual instruction in advanced vocal coaching. Emphasis placed on diction and musical issues. For declared music majors and minors. Students must be simultaneously enrolled in the Vocal Masterclass, Music 32VM. May be taken six times for credit. Prerequisites: at least one quarter of Music 12DV and consent of instructor. Department stamp required.

132V. Pro-Seminar in Vocal Instruction (3)
Individual instruction in advanced vocal performance. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course. Prerequisites: by audition only; Music 132B. Department stamp required.

132R. Recital Preparation (4)
Advanced instrumental/vocal preparation for senior music majors pursuing honors in performance. Repertoire for a solo recital will be developed under the direction of the appropriate instrument/vocal faculty member. Special audition required for incoming fall quarter. Prerequisites: by audition only; Music 132V. Department stamp required.

133. Projects in New Music Performance (4)
Performance of new music of the twentieth century. Normally offered winter quarter only. Required a minimum of one time for all music majors. May be repeated two times for credit. Prerequisite: consent of instructor through audition.

134. Symphonic Orchestra (4)
Repertoire is drawn from the classic symphonic literature of the eighteenth, nineteenth, and twentieth centuries with a strong emphasis on recently composed and new music. Distinguished soloists, as well as The La Jolla Symphony Chorale, frequently appear as guides for the orchestra. The La Jolla Symphony Orchestra performs two full-length programs each quarter, each program being performed twice. May be repeated six times for credit. Prerequisites: audition and department stamp required.

137A. Jazz Theory and Improvisation (4)
Study of jazz theory and improvisation, focused on fundamental rhythmic, harmonic, melodic, and formal aspects of modern jazz style. Application of theoretical knowledge to instruments and concepts will be reinforced through listening, transcription work, and composition and improvisation exercises. First course of a year-long sequence. Prerequisites: MUS 2A-B-C, proficiency exam, or consent on instructor.

137B. Jazz Theory and Improvisation (4)
Study of jazz theory and improvisation, focused on fundamental rhythmic, harmonic, melodic, and formal aspects of modern jazz style. Application of theoretical knowledge to instruments and concepts will be reinforced through listening, transcription work, and composition and improvisation exercises. Second course of a year-long sequence; continuation of Music 137A. Prerequisites: MUS 2A-B-C and 137A, proficiency exam, or consent on instructor.

137C. Jazz Theory and Improvisation (4)
Study of jazz theory and improvisation, focused on fundamental rhythmic, harmonic, melodic, and formal aspects of modern jazz style. Application of theoretical knowledge to instruments and concepts will be reinforced through listening, transcription work, and composition and improvisation exercises. Third course of a year-long sequence; continuation of MUS 137B. Prerequisites: MUS 2A-B-C and 137B, proficiency exam, or consent on instructor.

137D. Seminar in Jazz Studies I (4)
Advanced individual projects for senior music majors pursuing honors in jazz and music of the African diaspora. Projects will be critically reviewed in seminar with fellow students and jazz faculty. First course of a year-long sequence. Prerequisites: MUS 137A-B-C and admission into the Music Department Honors Program in jazz. Department stamp required.

137E. Seminar in Jazz Studies II (4)
Advanced individual projects for senior music majors pursuing honors in jazz and music of the African diaspora. Projects will be critically reviewed in seminar with fellow students and jazz faculty. Second course of a year-long sequence; continuation of 137D. Prerequisites: MUS 137D and department stamp.

137F. Seminar in Jazz Studies III (4)
Advanced individual projects for senior music majors pursuing honors in jazz and music of the African diaspora. Projects will be critically reviewed in seminar with fellow students and jazz faculty. Third course of a year-long sequence; continuation of 137E. Prerequisites: MUS 137E and department stamp.

143. Department Seminar (1)
The department seminar serves both as a general department meeting and as a forum for the presentation of research and performances by visitors, faculty, and students. Required of all undergraduate music majors every quarter.

150. Jazz and the Music of the African Diaspora: Special Topics Seminar (4)
An in-depth writing and listening intensive investigation into a jazz or diaspora-related music history topic. Topics vary from year to year. May be repeated once for credit. Prerequisite: Music 126, 127A or 127B, or consent of instructor.

151. Race, Culture, and Social Change (4)
Aggrieved groups generate distinctive cultural expressions by turning negative ascription into positive affirmation and by transforming segregation into congregation. This course
152. Hip Hop: The Politics of Culture (4)
Examination of hip-hop's music, technology, lyrics, and its influence in graffiti, film, music video, fiction, advertising, gender, corporate investment, government and censorship with a critical focus on race, gender, popular culture, and the politics of creative expression. (Cross-listed with Ethnic Studies 128.) Prerequisite: upper-division standing or consent of instructor.

153. African Americans and the Mass Media (4)
Examination of media representations of African Americans from slavery to the present focusing on emergence and transmission of enduring stereotypes, their relationship to changing social, political, and economic frameworks, and African Americans' responses to and interpretations of these mediated images. (Cross-listed with Ethnic Studies 164.) Prerequisite: upper-division standing or consent of instructor.

154. Black Music/Black Texts: Communication and Cultural Expression (4)
Explores roles of music as a traditional form of communication among Africans, Afro-Americans, and West Indians: Special attention is paid to the possibilities of black music, including blues and other forms of vocal music expressive of contestatory political attitudes. (Cross-listed with Ethnic Studies 176 and Literature in English 187.) Prerequisite: upper-division standing or consent of instructor.

170. Musical Acoustics (4)
(Formerly Music 160A.) An introduction to the acoustics of music with particular emphasis on contemporary digital techniques for understanding and manipulating sound. Prerequisite: Music 1A, 2A, or 4, Cross-listed with ICAM 103.

171. Computer Music I (4)
(Formerly Music 160C.) A practical introduction to computer techniques for desktop audio, including audio editing, MIDI control, and real-time music algorithms using the MAX programming environment. Prerequisites: Music 170, music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.

172. Computer Music II (4)
(Formerly Music 161.) Computer synthesis techniques including waveable and additive synthesis, waveshaping, and sampling. Transformation of musical sounds using filters, modulation, and delay effects. Fourier analysis of sounds. Prerequisites: Music 171 (formerly Music 160C); music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.

173. Audio Production: Mixing and Editing (4)
(Formerly Music 162.) Theoretical and practical aspects of recording, mixing, and editing software and hardware techniques explored in project setting. Topics include microphone design, digital recording and editing, analog and digital interfaces, workflow, analytical listening. Prerequisites: Music 170, music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.

174A. Audio/MIDI Studio Techniques I (2)
First of three-part sequence, detailing digital studio resources and production techniques. Hardware and software techniques explored in project setting. Topics include electronic and acoustic mixing, signal processing, MIDI, synchronization and basic sound-for-picture. Prerequisites: Music 170, music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.

174B. Audio/MIDI Studio Techniques II (2)
Second of three-part sequence, detailing digital studio resources and production techniques. Hardware and software techniques explored in project setting. Topics include electronic and acoustic mixing, signal processing, MIDI, synchronization and basic sound-for-picture. Prerequisites: Music 170, music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.
The goal of the course is to investigate and develop analytical procedures that yield significant information about specific works of music, old and new. Reading, projects, and analytical papers. Prerequisites: graduate standing in music; others by written consent of instructor and department stamp.

211. Introduction to Ethnomusicology (2) This course introduces the student to the study of music societies and ethnic groups, and to the anthropological and sociological aspects of Ethnomusicology. Prerequisite: graduate standing in music.

212. Introduction to System Inquiry (2) The course introduces the network of concepts and approaches that comprise systems inquiry and explores the theoretical, philosophical, and methodological implications of systems thinking for musical research and practice. Prerequisites: graduate standing in music.

213. Introduction to Critical Studies (2) This course introduces important themes and thinkers from the fields of critical theory and cultural studies and explores how musical behaviors and phenomena relate to matters of ideology, national, social, cultural, and political dimensions of its manifestations and practice. Prerequisites: graduate standing in music.

228. Conducting (4) This course will provide practical experience in conducting a variety of works from various eras of instrumental and/or vocal music. Students will study problems of instrumental or vocal techniques, theoretical and expressive analysis of the music, and manners of rehearsal. Required of all graduate students. Prerequisites: graduate standing in music; others by written consent of instructor and department stamp. (Offered in selected years.)

229. Seminar in Orchestration (4) A seminar to give practical experience in orchestration. Students will study works from various eras of instrumental and vocal music and will demonstrate their knowledge by orchestrating works in the style of various eras, learning the capabilities, timbre, and articulation of all the instruments in the orchestra. Prerequisite: graduate standing. (Offered in selected years.)

230. Chamber Music Performance (4) Performance of representative chamber music literature, instrumental and/or vocal, through coached rehearsal and seminar study. Course may be repeated for credit since the literature studied varies from quarter to quarter. Prerequisite: consent of instructor.

232. Pro-Seminar in Music Performance (1–4) Individual or master class instruction in advanced instrumental/vocal performance. Prerequisite: consent of instructor through audition.

234. Symphonic Orchestra (4) Repertoire is drawn from the classic symphonic literature of the eighteenth, nineteenth, and twentieth centuries with a strong emphasis on recently composed and new music. Distinguished soloists, as well as The La Jolla Symphony Chorus, frequently appear with the orchestra. The La Jolla Symphony Orchestra performs two full-length programs each quarter, each program being performed twice. May be repeated six times for credit. Prerequisites: audition required.

245. Focus on Performance (2) The purpose of this seminar is to bring together performance students, faculty, and guests for discussion, presentation of student and faculty projects, performances by guest artists, and master classes with different members of the performance faculty. Prerequisite: consent of instructor. (S/U grade option only.)

250. Special Projects (1–12) An umbrella course offered to music graduate students in lieu of normal seminar offerings. Topics will be generated by faculty and graduate students and submitted in December each year for review by faculty. Students may use this course to pursue further study of a specialized research topic with given faculty. May be taken for up to twelve units a quarter. (S/U grade option only.)

251. Integrative Studies Seminar in Ethnomusicology (4) Provides an in-depth look at the shifting definitions, methods, and scope of ethnomusicology and explores contemporary writings and sources shaping the field today. Prerequisite: graduate standing in music.

252. Integrative Studies Seminar in Systems Inquiry (4) Traces the development of systems thinking and encourages work of a transdisciplinary nature, integrating models, strategies, methods, and tools from natural, human, social, and technological realms. Prerequisite: graduate standing in music.

253. Integrative Studies Seminar in Critical Studies (4) Develops critical thinking and self-reflexive inquiry through in-depth study of a diverse range of critical and scholarly traditions as they relate to music. Students are encouraged to investigate their own sense of identity and voice, as embodied in their creative and/or scholarly work. Prerequisite: graduate standing in music.

254. Integrative Studies Seminar in Creative Practice (4) Students will explore a variety of approaches to collaborative work and will be challenged to develop a personal aesthetic in experimental art and new media and design original work for presentation at faculty juries. Prerequisite: graduate standing in music.

267. Advanced Music Technology Seminar (4) Advanced topics in music technology and its application to composition and/or performance. Offerings vary according to faculty availability and interest. May be repeated for credit. Prerequisites: Music 173 or equivalent and consent of instructor.

270B. Musical Cognitive Science (4) Theoretical bases for analyzing musical sound. Approaches to perception and cognition, including psychoacoustics and information processing, both ecological and computational. Models of audition including Helmholtz’s consonance/dissonance theory and Bregman’s streaming model. Musical cognition theories of Lerdahl and Narmour. Neural network models of music perception and cognition. Models of the problem of timbre and timbre perception. Prerequisite: consent of instructor.

270D. Advanced Projects in Computer Music (4) Meetings on group basis with computer music faculty in support of individual student research projects. Prerequisites: consent of instructor and completion of Music 270A-B-C.

271A. Survey of Electronic Music Techniques (1–4) A hands-on encounter with several important works from the classic electronic repertory, showing a representative subset of the electronic techniques available to musicians.
Students who have taken MUS 271 for credit may not take MUS 271A for credit. **Prerequisite:** graduate standing in music.

### 271B. Survey of Electronic Music Techniques II (4)
A continuation of 271A, with emphasis on live interactive techniques (e.g., audio processing; analysis/resynthesis; score following). **Prerequisites:** Music 271A and graduate standing in music.

### 271C. Survey of Electronic Music Techniques III (4)
A continuation of 271A and B, with emphasis on compositional techniques (e.g., computer-aided composition; production; spatialization). **Prerequisites:** Music 271B and graduate standing in music.

### 272. Seminar in Live Computer Music (4)
Group projects to create new pieces of live electronic music involving research in electronic music and/or instrumental techniques. May be repeated for credit. **Prerequisites:** Music 271A-B-C or consent of instructor and graduate standing in music.

### 291. Problems and Methods of Music Research and Performance (2)
The course will give practical experience in historical research, including use of important source materials, evaluation of editions, and examination of performance practice problems. (S/U grade option only.)

### 296. Directed Group Research in Performance (4)
This group research seminar involves the investigation and exploration of new and experimental performance concerns. Areas could include: improvisation, graphic notation, performance electronics, and working with combined media (such as dance, poetry, and theater). **Prerequisite:** graduate standing. (S/U grade option only.)

### 298. Directed Research (1–4)
Individual research. (S/U grades permitted.) May be repeated for credit. Enrollment by consent of instructor only.

### 299. Advanced Research Projects and Independent Study (1–12)
Individual research projects relevant to the student’s selected area of graduate interest conducted in continuing relationship with a faculty advisor in preparation of the master’s thesis or doctoral dissertation. **Prerequisites:** graduate standing in music; others by written consent of instructor and department stamp. (S/U grades permitted.)

### 500. Apprentice Teaching (1–4)
Participation in the undergraduate teaching program is required of all graduate students at the equivalent of 25 percent time for three quarters (six units is required for all graduate students). **Prerequisites:** graduate standing in music; others by written consent of instructor and department stamp. (S/U grade option only.)

### 501. Apprentice Teaching—Nondepartmental (4)
Consideration and development of pedagogical methods appropriate to undergraduate teaching. **Prerequisites:** graduate standing and consent of instructor. (S/U grade option only.)

THE GRADUATE PROGRAM

The Neurosciences Graduate Program accepts candidates for the Ph.D. degree who have undergraduate majors in such disciplines as biology, chemistry, engineering, microbiology, mathematics, physics, psychology, and zoology. A desire...
and competence to understand how the nervous system functions is more important than previous background and training.

**DOCTORAL DEGREE PROGRAM**

Students in this program receive guidance and instruction from a campuswide group of faculty interested in nervous system mechanisms. Each student, in consultation with an advisory committee, selects courses relevant to his or her research interests and goals. The selection will include formal courses listed in this catalog and informal seminars offered by the department. A regular schedule of rotation through the laboratories of faculty members is a feature of the first year; the student is exposed in this way to the various approaches, techniques, and disciplines represented on the campus.

**SPECIALIZATION IN COMPUTATIONAL NEUROSCIENCE**

The Neuroscience Graduate program offers a specialization in Computational Neuroscience. Students in the Computational Neuroscience specialization are trained in the broad range of scientific and technical skills essential to understand the computational resources of neural systems. Students in this specialization will be required to fulfill all of the academic requirements of students in the Neurosciences Graduate Program. In addition to these requirements, students in the Computational Neuroscience specialization must successfully complete a set of three core computational courses, an advanced laboratory, and computational neurosciences journal clubs.

Required courses include:

- **Core Courses:**
  - Neurosci. 200A-B-C
  - Neuosci. 225
  - Neuosci. 241
  - Neuosci. 257
  - Neurosci. 276

- **Computational Neuroscience Specialization Courses:**
  - BGGN 246A-B
  - BGGN 260
  - BGGN 266
  - Cog. Sci. 260
  - Physics 271

- **COURSE WORK**
  - By the time of the minor proposition (see below), students are expected to demonstrate competence in the basics of neuroscience by taking five quarters of mandatory course work—three quarters of Basic Neuroscience (Neurosci. 200 A-B-C), and one quarter each of Neuroanatomy Lab (Neurosci. 257) and Statistical Methods and Experimental Design (Neurosci. 225). In addition, students choose among various core elective courses, such as Molecular and Cellular Neuroendocrinology (Neurosci. 222), Neuropsychopharmacology (Neurosci. 277), Molecular and Cellular Neurobiology (Neurosci. 268), Developmental Neuroscience (Neurosci. 263) and approved courses from other graduate departments. Students are also permitted to substitute previous courses that are similar to the Neurosciences core courses. Such a substitution would require approval of the chair of the Curriculum Committee or the director of the Graduate Program.

- **MINOR PROPOSITION**
  - The purpose of this examination is to test the student's ability to choose a problem in the neurosciences and propose an experimental approach to its solution. The problem should be broad, requiring experimental approaches from more than one discipline. The problem should be outside the area of the student's anticipated dissertation research. Students will be required to demonstrate a working knowledge of the disciplines involved in the minor proposition.
  - Oral defense of the minor proposition will be required at the end of the winter quarter of the second year of study.

- **DISSERTATION**
  - During the second year, students are expected to propose and initiate work on a dissertation problem under the guidance of a faculty preceptor. The neurosciences group at UCSD currently conducts animal research and clinical studies in the fields of neuroanatomy, neurochemistry, neuroparmacology, neurophysiology, comparative neurology, physiology of excitable membranes, synaptic transmission, neuronal integration and coding, nervous system tissue culture, neuroimmunology, brain function, sensory physiology, motor mechanism, and systems analysis as applied to neurological problems.

- **QUALIFYING EXAMINATION**
  - This examination, a university requirement, focuses on the proposed research that the student will undertake for his or her dissertation. This examination is conducted by the approved doctoral committee.

- **DISSERTATION EXAMINATION**
  - The required formalities listed in the Instruction for Preparation and Submission of Doctoral Dissertations issued by the Office of Graduate Studies and Research to students should be followed closely. The final examination includes both a public presentation followed by a closed defense of the dissertation with members of the Committee.

- **TEACHING**
  - All students are required to perform as a teaching assistant for at least one quarter during their graduate career. To this end, opportunities to lecture and assist in laboratory exercises and demonstrations are available through a number of departments, including neurosciences, biology, and cognitive science.

- **P.H.D. TIME LIMIT POLICIES**
  - Students must advance to candidacy by the end of four years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

- **COURSES**
  - For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.
information processing. Prerequisites: Neurosci. 238 or
Psych. 231, and consent of instructor. (S/U grades only.) (F)

259. Workshop in Electron Microscopy (4)
This course is to introduce graduate students in the
neurosciences to research methods used in electron
microscopy (EM) through one hour of formal lecture, one
hour of seminar, three hours of demonstration, and three
hours of supervised laboratory work per week. Students
will become familiar with sectioning EM, scanning EM,
and freeze-fracture EM. Prerequisites: graduate-student
standing in neurosciences doctoral program and consent
of instructor. Enrollment limited. (S/U grades only.) (S)

263. Developmental Neuroscience (3)
A graduate reading course that highlights selected topics
in the molecular study of neural development.

266. Development of Neural Circuits (4)
Course focuses on developmental processes during forma-
tion of neural circuits. Molecular, genetic, cellular mecha-
nisms controlling neurogenesis, neuronal differentiation,
positioning (migration), axon/dendrite patterning, and
synapse formation will be discussed. Role of neural activity
shaping circuit formation will be explored. Prerequisites:
graduate standing only. For students in the following major
codes: NE75, BI77, BI79, or consent of instructor.

268. Molecular and Cellular Neurobiology (4)
Molecular and cellular approaches to the study of the ner-
vous system are advancing neurobiology at an increasingly
rapid pace. This graduate-level course will address the latest
molecular advances in the areas of: 1) synapse formation,
neurotransmitter release, and neurotransmitter receptors;
2) nerve growth factors, their receptors, and neuronal
apoptosis; 3) transcriptional regulation in the brain and
peripheral nervous system; 4) cell culture, transgenic, and
knock-out mouse model systems; 5) the molecular bases
of genetic, psychiatric, and degenerative diseases of the
nervous system; and 6) the current molecular knowledge
of genetic, psychiatric, and degenerative diseases of the
nervous system; and 6) the current molecular knowledge
of vision, sensory transduction, circadian rhythms, learning,
memory, and behavior.

276. Neuroscience Research Rounds (1)
Neurosciences group faculty members and graduate
students will present and discuss ongoing research.
Attendance will be mandatory for first- and second-year
graduate students. Faculty, advanced graduate students,
medical students, postdoctoral trainees, and other inter-
ested parties are encouraged to attend. (F,W,S)

277. Neuropsychopharmacology (4)
An examination of the molecular and biochemical bases of
drug and transmitter action. The course is devoted to recep-
tor mechanisms, neuropharmacology, and drug action
on excitable tissues. Prerequisite: graduate standing. (S)

285. Clinical Trials: Issues and
Dilemmas in Clinical Trials (3)
This course provides a methodological perspective on
clinical trials. Topics will include ethics, design of Phase I–IV
trials, randomization/blinding, bias, and sample-size power.
Lectures will also cover “application” with eminent UCSD
trialists describing conduct, design, and statistical issues
of specific studies. Prerequisites: medical or graduate
student standing.

296. Neurosciences Research Rotation (1-12)
Independent study. (S/U grades only.) (F,W,S)

298. Neurosciences Independent
Study Project (ISP) (1-12)
Prerequisite: approved ISP proposal. (F,W,S)

299. Neurosciences Research (1-12)
Independent study. (S/U grades only.) (F,W,S)

401. Neurology General Clinical
Selective Clerkship (7)
Provides opportunities for practical application of
neurological skills to the understanding and treatment of
a variety of clinical disorders of the nervous system.
Prerequisite: successful completion of first two years of
medical school. (F,W,S)

426. Subintern Pediatric Neurology (7)
Subinterns are responsible for the primary care of hospit-
ilized pediatric neurology patients under direct resident

and attending physician supervision. Students will perform
procedures such as lumbar puncture and participate in
night call, daily teaching round, neurology Grand Rounds,
and Journal Clubs. Prerequisite: Neurology 401 or consent
of instructor. (F,W,S)

427. Neurology Outpatient (7)
The student will rotate through the general and subspe-
cialty (stroke, epilepsy, headache, nerve, and muscle)
neurology clinics based at UCSD Medical Center, Perlman,
VAMC, and Children’s Hospital. There are lectures and
clinical conferences. Prerequisite: Neurosciences 401 or
equivalent. (F,W,S)

496. Clinical Independent Study (1-21)
Independent clinical study for medical students (S/U grades
only.) (F,W,S)

500. Apprenticeship Teaching (1-4)
Participation in the department teaching program is re-
quired of all students working toward a Ph.D. degree. In
general, students are not expected to teach in the first year,
but are required to serve as teaching assistants or tutors
for one quarter at any time during their subsequent years
of training. The amount of teaching required is equivalent
to the duties expected of a 50 percent assistant for one
quarter. Prerequisite: neurosciences graduate students.
(S/U grades only.) (F,W,S)
UC San Diego Opportunities Abroad Program

Students interested in going abroad should investigate possibilities through the Opportunities Abroad Program, which can assist with placement in a wide range of academic programs outside the UC system. These programs include study for an academic year, semester, quarter, or summer. They may be sponsored by other U.S. universities or include direct enrollment in foreign institutions. Academic credit may also be earned on a number of overseas internship programs that combine work experience and courses.

Students going abroad through the Opportunities Abroad Program earn transfer credit from the sponsoring institution. Courses taken abroad may satisfy general-education, major, or minor requirements, depending on department or college approval. Federal and state financial aid for approved plans of study abroad is available. Special study abroad scholarships are also available.

In addition to these academic programs, the Programs Abroad Office can assist students in selecting a wide range of volunteer, paid work, and educational travel programs.

INTRODUCTION TO THE DEPARTMENT
Philosophy addresses some of the most basic questions humans ask about the world. Some questions are very broad, such as how can minds know about the external world, themselves, and other minds? How can we arrive at reasonable answers to ethical questions about right and wrong? What distinguishes science from other kinds of knowledge and are there limits to science? What is the role of moral choice and values in human life? Do standards of truth and logic apply in areas such as religion, art, politics, and law?

Philosophy also seeks answers to particular problems in specific areas of science, medicine, law, ethics, and technology. For example, it explores the ways that modern physics impacts our notions of space, time, causation, and nature itself. It considers the ways that neuroscience and genetics impact the traditional ideas about free will and responsibility. It debates the limits of democratic governments in regulating individuals’ conduct. It wrestles with problems about the right to die and the varied responsibilities of medical professionals. It inquires into the relation between science and religion. Related issues concern privacy, the limits of private property, and who should have access to what information.

CAREER GUIDANCE
Philosophy is a broad field with diverse subfields. Some students may want to pursue a general course of study for the major, sampling courses across several of these distinct subfields. This strategy develops a solid foundation for graduate work in philosophy and for any career that requires breadth of knowledge, intellectual flexibility, as well as communicative and analytic skills.

Other students may wish to pursue a more specialized program of studies. Below are descriptions of several areas of emphasis within philosophy. These illustrate the possibilities of developing your own coherent and focused set of courses that fulfill the requirements for the major in ways that are tailored to your specific intellectual and career interests. Philosophy is preparation for a wide range of careers—including science, law, medicine, teaching, business, and public policy.

Choosing a philosophy major is an excellent way to follow a disciplined and rigorous course of study that joins the breadth of a traditional college education with specialization in a chosen area.

UNDERGRADUATE PROGRAM—MAJOR
The Department of Philosophy offers the degree of bachelor of arts (B.A.) in philosophy for the undergraduate major. A major in philosophy requires a total of fifteen philosophy courses, at least twelve of which must be upper-division (courses numbered 100 and above). Up to two upper-division courses outside of philosophy can count among the twelve required for the major if they are drawn from a related field and contribute to the major’s philosophical program; such credit must be approved by the undergraduate advisor. Honor’s and directed study courses (Philosophy 191–199) may not be used to satisfy the major requirement of fifteen philosophy courses. Major requirements may be met by examination.

There is no required introduction to philosophy or the major. The department offers a variety of lower-division courses and sequences (numbered 1–99), any of which could be a suitable introduction to philosophy. The only required lower-division course for majors is Philosophy 10, Introduction to Logic.

At the upper-division level, majors are encouraged to take courses in the central areas of philosophical study:
- Metaphysics and Epistemology
- Law, Ethics, and Politics
- Philosophy of Science and Logic
- History of Philosophy

Though many upper-division courses have no prerequisite, any combination of three-lower-division courses would provide a good foundation for taking most upper-division courses.

CORE REQUIREMENTS FOR THE MAJOR
1. History of Philosophy. A history of philosophy core sequence 157, 158, and 159. It is strongly recommended that majors complete these courses in order.
2. Logic. Philosophy 10, and Philosophy 120 are required of all majors. Because Philosophy 120 is a prerequisite for a variety of upper-division courses, prospective majors are strongly encouraged to take Philosophy 10 and Philosophy 120 as early as possible.
3. Moral and Political Philosophy. Majors must take at least one upper-division course in moral or political philosophy from among Philosophy 160, 161, 166, or 167.
4. Metaphysics and Epistemology. Majors must take at least one upper-division course in traditional areas of analytic philosophy—metaphysics, epistemology, philosophy of language, and philosophy of mind—from among Philosophy 130, 132, 134, or 136.
5. Philosophy of Science. Majors must take at least one upper-division course in philosophy of science from among Philosophy 145, 146, 147, 149, 150, 151, or 152.

OPTIONAL AREAS OF EMPHASIS IN THE MAJOR
The Department of Philosophy offers four optional areas of emphasis within the major, as described below. Students selecting an optional area of emphasis for the major must take and pass five of the courses listed under that area. Courses taken to complete an area of emphasis are counted toward the fifteen courses required for the major. Particular courses may be applied both to the completion of the area of emphasis and in fulfillment of a core requirement for the major. Students should be aware, as they plan their course of study, that only some of the courses listed for an area of emphasis will be taught in any given year.

The department encourages students considering a philosophy major to consult with the philosophy undergraduate coordinator and the philosophy faculty undergraduate advisor to plan a program of study that is suitable to their particular interests and needs. The department Web site http://philosophy.ucsd.edu provides additional information about courses falling within each area of emphasis. Areas of emphasis are not noted on transcripts or diplomas. The optional areas of emphasis are

1. Law, Ethics, and Society

This area targets the nature and source of our moral rights and obligations, the authority of the state and law, the basis of value and goodness. Several courses in this area target ethical issues in medicine, the environment, technological change, economic inequality, and matters concerning race, gender, class, ethnicity, and nationality. In this area, students will learn how moral and legal reasoning can reshape the political debates.
2. Science, Technology, and Medicine

This emphasis focuses on the insights and challenges presented by science. Modern science and technologies affect our view of ourselves and of nature, introducing novel promises and problems. For instance, how do we balance technical, economic, environmental, and ethical values in making decisions concerning which technologies or drugs to develop? Modern science has also changed our understanding of nature. Quantum physics, the genetic revolution, and neuroscience (to name a few) present problems and have important implications for human life. Finally, there are questions about science itself. What are the methods of modern science? Do they vary from one science to another? Can the sciences be value free?

This area will appeal especially to those students interested in pursuing careers in philosophy, science, clinical medicine, medical research, the social sciences, science journalism, and public policy.

123. Philosophy of Logic
145. Philosophy of Science
146. Philosophy of Physics
147. Philosophy of Biology
148. Philosophy and the Environment
149. Philosophy of Psychology
150. Philosophy of Cognitive Sciences
151. Philosophy of Neuroscience
152. Philosophy of Social Science
153. Philosophy of History
163. Biomedical Ethics
164. Technology and Human Values

3. Mind, Brain, and Cognitive Sciences

Traditional epistemology (the theory of how and what we know) and philosophy of mind (the theory of that-which-perceives-and-thinks) have recently been joined by several scientific disciplines in a collective search for illuminating theories. Psychology, cognitive neurobiology, computer science, and sociology have all made explosive contributions to a tradition as old as Plato and Aristotle. For example, our growing understanding of the biological brain has given new life to our traditional attempts to understand the nature of the mind. New accounts of the various mechanisms of cognition—both at the cellular and the social levels—have provided entirely new perspectives on the nature of consciousness, the self, knowledge and free will, and on the nature of science itself.

This area is excellent preparation for careers in cognitive science, neuroscience, artificial intelligence, science journalism, and philosophy.

132. Epistemology
134. Philosophy of Language
136. Philosophy of Mind
145. Philosophy of Science
147. Philosophy of Biology
149. Philosophy of Psychology
150. Philosophy of Cognitive Sciences
151. Philosophy of Neuroscience
180. Phenomenology

4. Historical Perspectives on Philosophy, Science, and Religion

Throughout its history, philosophy has developed in a complex relationship with the natural sciences and religion. Philosophical ideas have both contributed to and challenged our understanding of nature and God, and developments in the sciences and religion have posed new challenges for philosophical thinking. The historical perspectives emphasis focuses on the fertile interplay between philosophy, science, and religion in several key periods: ancient Greece, the Scientific Revolution, and Enlightenment and post-Enlightenment Europe. The aim is not simply to document the history of philosophical ideas, but to use this history as a way of better understanding contemporary debates about the basic questions of human life.

This area prepares students for postgraduate work in philosophy, and for any career that requires breadth of knowledge, intellectual flexibility, as well as communicative and analytical skills.

100. Plato
101. Aristotle
102. Hellenistic Philosophy
104. The Rationalists
105. The Empiricists
106. Kant
107. Hegel
108. Nineteenth-Century Philosophy
109. History of Analytic Philosophy
161. Topics in the History of Ethics
166. Classics in Political Philosophy
180. Phenomenology
181. Existentialism
183. Philosophy and Race
184. Philosophy and the Environment

GRADE RULES FOR MAJORS/MINORS

All courses applied toward the major or minor must be completed with a grade of C– or higher. Further, a GPA of 2.0 must be maintained in courses applied toward the major or minor. It should be noted that courses taken under the Pass/Not-Pass (P/NP) grading option cannot be applied toward the major or minor.

HONORS PROGRAM

The philosophy department offers an honors program for outstanding students in the major. Majors who have a 3.7 GPA in philosophy (3.25 overall) at the end of their junior year and who have taken at least four upper-division philosophy courses are eligible to apply. Interested students must consult with a faculty sponsor by the last day of classes during the spring term of their junior year. Admission to the honors program requires nomination by a faculty sponsor and approval of the undergraduate advisor. Nominating Petitions can be obtained from the philosophy department.

In addition to the usual major requirements, an honors student is required to complete a senior honors thesis by the end of winter quarter. During the fall and winter quarters, the student will be registered for Philosophy 191A and 191B and will be engaged in thesis research that will be supervised and evaluated by the student’s faculty sponsor. A departmental committee will read and assess the completed thesis and determine if philosophy honors are to be awarded. Honors students are expected to maintain an average of 3.7 or better for all work taken in the program. (Qualified students wishing to participate in the honors program according to a different timetable than the one described above can apply to do so by petitioning the undergraduate advisor.)

TRANSFER CREDIT

Courses taken at other institutions may be applied toward the major by petition only. Petitions should be submitted to the Department of Philosophy main office, and must be accompanied by supporting materials (transcripts, syllabi, course work, etc.). Students are required to submit one petition per transfer course.

For specific regulations regarding transfer credit for Philosophy 10 (Introduction to Logic), please see the information on the department Web site: http://philosophy.ucsd.edu.

It is important to note that seven of the twelve upper-division courses in the major must be taken in the Department of Philosophy at UC San Diego.

Note: All courses applied toward major must be taken for a letter grade.

UNDERGRADUATE PROGRAM—MINOR

The Department of Philosophy offers a minor in philosophy. As with the major, the minor is an attractive option for a wide range of career paths, including medicine, law, research in the natural and social sciences, journalism, education, and government. A minor requires a total of seven philosophy courses, at least five of which must be upper division. If choosing an area of emphasis, at least four upper-division courses must be from the chosen area of emphasis. All courses must be taken for a letter grade, C– or better.

ADVISING OFFICE

Students who desire additional information concerning our course offerings or program may contact individual faculty or the assistant director of the undergraduate program through the department main office at 7002 H&SS, (858) 534-3070.

OFFICE: 7002 Humanities and Social Sciences Building Muir College

http://philosophy.ucsd.edu
GRADUATE PROGRAM REQUIREMENTS

The department offers programs leading to the M.A. and Ph.D. It is the intention of the graduate program to enable the student to obtain an understanding of diverse traditions and to develop as a philosopher in his or her own right. To this end, the department offers courses and seminars in the history of philosophy and in traditional and contemporary philosophical issues, from a variety of perspectives.

DOCTORAL DEGREE PROGRAM

COURSE WORK

Over the first two years, students will normally take at least three courses per quarter, of which at least two are philosophy seminars (numbered 200–285). The balance may be made up from additional graduate courses in philosophy, up to two independent studies in philosophy, upper-division courses in philosophy (those numbered 100–199), approved upper-division or graduate courses in related departments, and, if the student is a teaching assistant, Philosophy 500 Apprentice Teaching. In any case, before advancing to candidacy, students must have completed fourteen graduate seminars, twelve of which are graduate philosophy seminars.

PROSEMINAR

In fall quarter of their first year of residence, graduate students will take a proseminar designed to introduce them to philosophical methods and improve their skills at writing and analysis. Enrollment in the proseminar is limited to first-year students. The proseminar may be team-taught. The topics to be covered will address some central area or areas of philosophy and will vary from year to year. The proseminar is a regular four-unit seminar.

CORE COURSES

In the following areas, the department shall offer "core" or advanced introductory seminars: philosophy of mind, philosophy of language, philosophy of science, the history of philosophy, epistemology, metaphysics, ethics and political philosophy. The department shall offer at least three of these courses in each academic year. Students must take two of these core courses by the end of their second year of residence. Courses taken to satisfy this requirement may be applied toward the distribution requirement.

Core courses are not necessarily distinguished by the numbers under which they are offered, but by their content. A core course provides a point of entry into a field that is suitable for graduate students with no prior work in this area of philosophy as well as students with some background knowledge. A core course may be a general survey of a field, or alternatively may take up some central, relatively nonspecialized topic. Though core courses are intended to provide students with an entry point into particular philosophical topics, students are welcome to supplement the graduate core courses with upper-division undergraduate philosophy courses (those numbered 100–199), which are often organized as surveys. A core course may offer students the option of writing shorter papers rather than one long seminar paper; in some cases a final examination may be offered. The decision whether to count a course as core will be made by the instructor in consultation with the graduate advisor.

DISTRIBUTION REQUIREMENTS

Before advancing to candidacy students must have completed, nine graduate seminars in philosophy (in addition to the proseminar) distributed across the subfields of philosophy listed below. Students must take three seminars in the history of philosophy, including one in ancient philosophy and one in modern philosophy), two seminars in two other areas, and at least one seminar in every area.

1. History of Philosophy
2. Philosophy of Science
3. Philosophy of Mind and Philosophy of Language
4. Ethics and Political Philosophy
5. Metaphysics and Epistemology

Courses used to satisfy a requirement in one category cannot be used to satisfy a requirement in another category. The determination as to what category or categories a particular seminar taught in a given quarter may count toward is normally made by the seminar instructor.

LOGIC REQUIREMENT

In their first year of residence, all graduate students must demonstrate proficiency in basic formal logic (the predicate calculus, up to and including functions, relations, and identity) either by passing an examination in this material (normally offered each fall and often in spring) or by taking Philosophy 120 (Symbolic Logic) during their first year of study and achieving a grade of B+ or better. By the end of their second year of residence, all students must pass an advanced logic course (Philosophy 122, 123, 126, 222, or another logic class approved by the graduate advisor).

THIRD YEAR ESSAY REQUIREMENT

During the third year each student shall write an original research essay of about 7,500–9,000 words under the supervision of the student's third-year committee, which is responsible for determining that the research essay meets the necessary standards of philosophical sophistication. The intent of the requirement is to demonstrate that the student has acquired the skills necessary for exploring a philosophical problem and addressing it in a polished essay that is more substantial and sustained than is typical in the writing of papers for graduate seminars. It is intended that the student will complete this requirement during his or her third year of residence; in any case, the student must satisfy this requirement before advancing to candidacy.

RESEARCH SKILLS REQUIREMENT

Before advancing to candidacy, students will normally be required to demonstrate competence in a skill outside philosophy but relevant to his or her dissertation research. Which skill is appropriate will be decided by the student in consultation with his or her first- or second-year advisors and the graduate advisor.

Examples of ways in which students may satisfy the skills requirement include demonstrating competence in a foreign language relevant to their research (e.g., Classical Greek, Latin, French, or German, for students working in the history of philosophy); passing three upper-division undergraduate or graduate-level courses in biology, physics, mathematics, or linguistics (for students working in the philosophy of biology, physics, mathematics, or language); passing three upper-division undergraduate or graduate-level courses in political science, economics or sociology (for students working in political philosophy or ethics). Undergraduate courses taken must be passed with a grade of B+ or better.

Specific decisions about the satisfaction of this requirement will be made on a case-by-case basis by the graduate advisor and the student's advisors, and will be made on grounds of the intellectual relevance of the proposed research skill and the needs of the student.

INDEPENDENT STUDY COURSES

Philosophy 290 (Directed Independent Study) is appropriate for a graduate student still in the process of fulfilling course requirements for the degree. However, this course will not normally be approved for students in the first year of the program, and will not normally count toward the satisfaction of distribution requirements.

Philosophy 295 (Research Topics) is an appropriate course for a student in the process of working towards a dissertation prospectus.

Philosophy 299 (Thesis Research) is appropriate for a student working on his or her dissertation.

TEACHING REQUIREMENTS

Participation in undergraduate teaching is one of the requirements for a Ph.D. in philosophy. Students are required to serve as a teaching assistant for (at a minimum) the equivalent of one-quarter time (ten hours per week) for three academic quarters. The duties of a teaching assistant normally entail grading papers and examinations, conducting discussion sections, and related activities, including attendance at lectures in the course for which he or she is assisting.

DISSERTATION PROSPECTUS AND ORAL CANDIDACY EXAM

Sometime after completing the distribution requirements, the student must submit a dissertation prospectus to his or her doctoral committee. The committee will then orally examine the student on the intended subject and plan of research. The examination will seek to establish that the thesis proposed is a satisfactory subject of research and that the student has the preparation and the abilities necessary to complete that research. This oral qualifying exam must be passed before the end of the fourth year of study (twelfth quarter of residence). Students who are passed and have met the other requirements will be advanced to candidacy for the Ph.D.

DOCTORAL DISSERTATION

Under the supervision of a doctoral committee, each candidate will write a dissertation demonstrating a capacity to engage in original and independent
research. The candidate will defend the thesis in an oral examination by the doctoral committee.

ACADEMIC ADVISING

First and Second Year Academic Advising

After consultation with the graduate advisor, each entering student will be assigned a faculty advisor. Students are encouraged to meet with their faculty advisors once a quarter during their first two years to plan their course of study and review their progress in the program. Students may change their faculty advisor after one has been assigned. Advising duties will shift to the third-year committee in the student’s third year of study, and then to the dissertation committee once the student begins the dissertation.

Third Year Academic Advising

At the end of the student’s second year of study, the department will appoint a three-member faculty committee for that student. The composition of the committee will reflect the student’s preferences and the area of philosophy in which the student is inclined to do dissertation work. One of the members of the committee will be designated as the committee chair, and will serve as the student’s main advisor. The committee will meet, at a minimum, once in the spring of the student’s second year of study; once in the fall of the student’s third year, and once in the spring of the student’s third year. The responsibilities of the committee include advising the student in developing a sound dissertation project, the acquisition of professional skills (possibly through the departmental professional skills workshop), and advancing to candidacy in a timely manner. The members of this third-year committee may but need not be members of the student’s dissertation committee.

Professional Skills Workshop

The department will offer each year a noncredit workshop on professional skills. Topics covered may include publication strategies, the mechanics of the job market, and how to write a cv. This workshop is open to any student in the department, and all students are encouraged to attend at least once before going on the job market.

Academic Advising after Candidacy

After advancing to candidacy, the student will select a dissertation committee that will advise him or her throughout the writing of the dissertation, supply feedback on the material of the dissertation, and conduct the oral dissertation defense. The standard committee consists of five faculty members. Three of these faculty members will be from the Department of Philosophy, and one of these (who must be tenured) will be designated as the principal director of the student’s dissertation. In addition to the three philosophy faculty, the dissertation committee must include at least two faculty from outside the Department of Philosophy, at least one of whom must be a tenured UC San Diego faculty member.

MASTER’S DEGREE

The UCSD Department of Philosophy does not admit students with the intention of completing their studies at the master’s level. Nonetheless, Ph.D. students in the department sometimes elect to receive the master’s degree in the course of their academic progress.

To qualify for a master’s degree in philosophy, a student must pass eight of the distribution requirement seminars as described above, under the subheading “Distribution Requirements.” No more than four seminars from any one of the five areas count toward the master’s degree. The student must also complete a master’s research paper under the direction of a faculty member or his or her choice, and have it approved by two members of the department faculty.

INTERDISCIPLINARY DEGREE PROGRAMS

The philosophy department at UCSD participates in three interdisciplinary programs, the requirements for which are outlined below.

INTERDISCIPLINARY DEGREE PROGRAM IN COGNITIVE SCIENCE

The Interdisciplinary Ph.D. Program in Cognitive Science includes faculty from a number of UCSD departments including the Departments of Anthropology, Biology and Neurobiology, Cognitive Science, Communication, Computer Science and Engineering, Linguistics, Music, Neurosciences, Philosophy, Psychiatry, Psychology, and Sociology. This group includes many outstanding figures in contemporary cognitive science.

Students wishing to pursue a Ph.D. in philosophy and cognitive science register in the philosophy program in the normal fashion, but pursue a significant portion of their studies with faculty in the several departments participating in the interdisciplinary program. Students may apply for admission to the interdisciplinary program at the same time that they apply to the Department of Philosophy, or at some point after entering UCSD. (All students wishing to transfer into any interdisciplinary program must do so prior to the end of the fifth quarter of residency.) Students in philosophy/cognitive science are required to complete all of the requirements for the Ph.D. in philosophy with the following five amendments:

1. The student must take six quarters of Cognitive Science 200.
2. The student must take the equivalent of one year’s course work (usually six courses) in one or more of the other departments affiliated with the Department of Cognitive Science. (It should be noted that a philosophy graduate student who completes this requirement is deemed thereby to have satisfied the philosophy special skills requirement by gaining an approved special competency.)
3. The distribution requirement is amended as follows. Before advancing to candidacy a philosophy/cognitive science student must have completed nine graduate seminars in philosophy distributed across the areas of (A) philosophy of science, (B) philosophy of mind and philosophy of language, (C) ethics and political philosophy, (D), epistemology and metaphysics, and (E) history of philosophy. The student must take at least one seminar from each of these five areas and at least two seminars from any four of these areas.

4. The course work requirement is amended as follows: Over the first two years, a philosophy/cognitive student will normally take at least three courses/seminars per quarter. Besides graduate seminars in philosophy and cognitive science, these may include up to two independent studies in philosophy, upper-division courses in philosophy (those numbered 100–199), approved upper-division or graduate courses in cognitive science and affiliated departments, and, if the student is a teaching assistant, Philosophy 500 (Apprentice Teaching). (It should be noted that philosophy/cognitive students who complete all the other requirements for cognitive studies and who complete the amended distribution requirement above are thereby deemed to have completed the fourteen graduate seminars required of students prior to their advancing to candidacy.)

5. A plan detailing the course of study must be approved by the Cognitive Science Program Committee. The dissertation should be interdisciplinary, reflecting the two areas of specialization.

INTERDISCIPLINARY PROGRAM IN SCIENCE STUDIES

The Science Studies Program at UCSD is committed to interdisciplinary investigations. Understanding, interpreting, and explaining the scientific enterprise demand a systematic integration of the perspectives developed within the communication of science, history of science, sociology of science, and philosophy of science. The program offers students an opportunity to work towards such integration, while receiving a thorough training at the professional level in one of the component disciplines (communications, history, sociology, philosophy).

Students enrolled in the program choose one of the component disciplines for their major field of specialist studies (for students enrolled in the Department of Philosophy, this major field is, of course, philosophy), and are required to complete minor field requirements in the others. The core of the program, however, is a year-long seminar in science studies, led by faculty from all participating departments.

Students may apply for admission to the interdisciplinary program at the same time that they apply to the Department of Philosophy, or at some point after entering UCSD. (All students wishing to transfer into any interdisciplinary program must do so prior to the end of the fifth quarter of residency.) Students in philosophy/science studies are required to complete all of the requirements for the Ph.D. in philosophy with the following seven amendments:

1. The student must attend the Science Studies Colloquium series for his or her entire first and second years. He or she will receive course credit (course 200C) in any two quarters of his or her
choice (once in the first year and once in the second year, with exceptions to be considered by the director of science studies). This course is taken for an S/U grade option only.

2. Before defending his or her prospectus, the student must take Introduction to Science Studies I (209A), Introduction to Science Studies II (209D), and two iterations (with changed content) of the Core Seminar in Science Studies (209B). (These courses are required in addition to the proseminar in philosophy which is required of all Ph.D. students in philosophy.)

3. The student must, prior to defending his or her prospectus, take two additional science studies courses outside philosophy drawn from a list of approved courses available each year from the Science Studies Program office. (One course in one of the sciences may be substituted for one of these courses as part of an approved program of study.)

4. The distribution requirement is amended as follows. Before advancing to candidacy, a philosophy/science studies student must have completed nine seminars in philosophy distributed across the areas of (A) philosophy of science, (B) philosophy of mind and philosophy of language, (C) ethics and political philosophy, (D) metaphysics and epistemology, and (E) history of philosophy. Students must take at least one seminar from each of these five areas and at least two seminars from any four of these areas.

5. The course work requirement is amended as follows. Over the first two years, a philosophy/science studies student will normally take at least three courses/seminars per quarter. Besides graduate seminars in philosophy and science studies, these may include up to two independent studies in philosophy, upper-division courses in philosophy (those numbered 100–199), approved upper-division or graduate courses in science studies and affiliated departments, and, if the student is a teaching assistant, Philosophy 500 (Apprentice Teaching). (It should be noted that philosophy/science studies students who complete all the other requirements for science studies and who complete the amended distribution requirements for philosophy are thereby deemed to have completed the fourteen graduate seminars required of students prior to their advancing to candidacy.)

6. The student’s program of study must be approved by the Department of Philosophy faculty advisor for science studies.

7. At least two internal members and at least one external member of the student’s dissertation committee should be faculty of the Science Studies Program. Exceptions to this policy require permission from the director of the Science Studies Program.

DUAL DEGREE PROGRAM WITH UNIVERSITY OF SAN DIEGO LAW SCHOOL

Students pursuing the Ph.D. in philosophy at UCSD can also pursue a degree at the University of San Diego (USD) School of Law, either the J.D. (normally a three-year degree) or the M.S.L.S. (a one-year master’s degree). Students must be admitted independently to the two programs and must complete the requirements for both programs. Once admitted to both programs, the expectation is that students would first complete their first two years of Ph.D. course work and any associated qualifying exams at UCSD. They can then take a leave from the UCSD program, freezing their clock here, to complete the appropriate course work at USD. For their M.S.L.S. degree, this will require a one-year leave, while for their J.D. degree this will require two years leave. While on leave, students would not be eligible for financial aid from UCSD. Students would then return to UCSD to complete their Ph.D., drawing on their combined training here and at USD in their thesis research, and getting advice on their research from faculty at both universities. Each program will make specific arrangements to grant some course credit toward their degrees for courses taken at the other university. The expectation is that students will pursue dual degrees rather than concurrently, and that the UCSD clock will stop while students are enrolled at USD. Consequently, in the normal course of events the UCSD Department of Philosophy sees no special need for extending time limits on advancing to candidacy, years of support, or time toward the degree. However, exceptional cases can be handled by petition.

PH.D. TIME LIMIT POLICIES

Students must be advanced to candidacy by the end of four years. The department’s normative time to graduation is six years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

APPLICATION REQUEST

For information regarding the graduate program call (858) 534-6809 or write to University of California, San Diego Graduate Advisor, Philosophy 9500 Gilman Dr. # 0119 La Jolla, CA 92093-0119

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

LOWER-DIVISION

1. Introduction to Philosophy (4)
   A general introduction to some of the fundamental questions, texts, and methods of philosophy. Multiple topics will be covered, and may include the existence of God, the nature of mind and body, free will, ethics and political philosophy, knowledge and skepticism.

10. Introduction to Logic (4)
   Basic concepts and techniques in both informal and formal logic and reasoning, including a discussion of argument, inference, proof, and common fallacies, and an introduction to the syntax, semantics, and proof method in sentential (propositional) logic. (May be used to fulfill general-education requirements for Warren and Eleanor Roosevelt Colleges.)

12. Logic and Decision Making (4)
   An introduction to the study of probability, inductive logic, scientific reasoning, and rational choice among competing hypotheses and alternative courses of action when the evidence is incomplete or uncertain. (May be used to fulfill general-education requirements for Marshall, Warren, and Eleanor Roosevelt Colleges.)

13. Introduction to Philosophy: Ethics (4)
   An inquiry into the nature of morality and its role in personal or social life by way of classical and/or contemporary works in ethics. (May be used to fulfill general-education requirements for Muir and Marshall Colleges.)

   A survey of central issues and figures in the Western metaphysical tradition. Topics include the mind-body problem, freedom and determinism, personal identity, appearance and reality, and the existence of God.

15. Introduction to Philosophy: Knowledge and Its Limits (4)
   A study of the grounds and scope of human knowledge, both commonsense and scientific, as portrayed in the competing traditions of Continental rationalism, British empiricism, and contemporary cognitive science.

25. Science, Philosophy, and the Big Questions (4)
   An inquiry into fundamental questions at the intersection of science and philosophy. Topics can include Einstein’s universe; scientific revolutions; the mind and the brain.

26. Science, Society, and Values (4)
   An exploration of the interaction between scientific theory and practice on the one hand, and society and values on the other. Topics include the relationship between science and religion, global climate change, DNA, medicine, and ethics.

27. Ethics and Society (4)
   (Same as Poli. Sci. 27.) An examination of ethical principles (e.g., utilitarianism, individual rights, etc.) and their social and political applications to contemporary issues: abortion, environmental protection, and affirmative action. Ethical principles will also be applied to moral dilemmas in government, law, business, and the professions. Satisfies the Warren College ethics and society requirement. Letter grade only. Prerequisites: CAT 2 and 3, DOC 2 and 3, MCWP 40 and 50, Hum. 1 and 2, MMW 2 and 3, WCWP 10A-B or WCWP 11A-B.

28. Ethics and Society II (4)
   (Same as Poli. Sci. 28.) An examination of a single set of major contemporary social, political, or economic issues (e.g., environmental ethics, international ethics) in light of ethical and moral principles and values. Warren College students must take course for a letter grade in order to satisfy the Warren College general-education requirement. Prerequisite: Phil./Poli. Sci. 27.

31. Introduction to Ancient Philosophy (4)
   A survey of classical Greek philosophy with an emphasis on Socrates, Plato and Aristotle, though some consideration may be given to Presocratic and/or Hellenistic philosophers.

   Beginning with the contrast between medieval and early modern thought, the course focuses on the relation of seventeenth-century philosophy and the emergence of modern natural science. Figures to be studied include Bacon, Galileo, Descartes, Hobbes, Leibniz, and Newton.

33. History of Philosophy: Philosophy between Reason and Despair (4)
   Introduction to nineteenth-century philosophy, focusing on skepticism about the authority of reason to answer questions about the ultimate meaning and value of human life. Figures discussed may include Kant, Schopenhauer, Kierkegaard, Nietzsche, and James.

87. Freshman Seminar (1)
   The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments.
and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty stu-
dents, with preference given to entering freshmen.

90. Basic Problem in Philosophy (4)
An investigation of a selected philosophical topic through readings, discussions, and written assignments. (May be taken for credit twice, when topics vary.)

UPPER-DIVISION

100. Plato (4)
A study of Socrates and/or Plato through major dialogues of Plato. Possible topics include the virtues and happiness; weakness of the will; political authority and democracy; the theory of forms; the soul; immortality; relativism, skepticism, and knowledge. May be repeated for credit with change of content and approval of instructor. Prerequisite: upper-division standing or consent of instructor.

101. Aristotelian (4)
A study of major issues in Aristotle’s works, such as the categories; form and matter; substance, essence, and accident; the soul; virtue, happiness, and politics. Prerequisite: upper-division standing or consent of instructor.

102. Hellenistic Philosophy (4)
A study of selected texts from the main schools of Hellenistic philosophy—Stoicism, Epicureanism, and Skepticism. Prerequisite: upper-division standing or consent of instructor.

104. The Rationalists (4)
The major writings of one or more of the seventeenth cen-
tury rationalists—Descartes, Spinoza, and Leibniz. Topics include the existence of God, the mind-body problem, free will, the nature of knowledge, belief, and error. May be repeated for credit with change of content and approval of instructor. Prerequisite: upper-division standing or consent of instructor.

105. The Empiricists (4)
The major writings of one or more of the British empiri-
cists—Locke, Berkeley, Hume, and Reid. May be repeated for credit with change of content and approval of instructor. Prerequisite: upper-division standing or consent of instructor.

106. Kant (4)
A study of selected portions of the Critique of Pure Reason and other theoretical writings and/or his major works in moral theory. Prerequisite: Philosophy 33 or 105 or con-

sent of instructor. May be repeated for credit with change in content and approval of the instructor.

107. Hegel (4)
A study of some of Hegel’s major works, in particular, The Phenomenology of Spirit and The Philosophy of Right. Readings and discussion may also include other figures in the Idealist tradition—such as Fichte, Holderlin, and Schelling—and critics of the Idealist tradition—such as Marx and Kierkegaard. Prerequisite: upper-division stand-
ing or consent of instructor.

108. Nineteenth-Century Philosophy (4)
A study of one or more figures in nineteenth-century phi-
losophy, such as Schopenhauer, Nietzsche, Kierkegaard, Marx, Emerson, Thoreau, James, and Mill. The focus may be on particular figures or intellectual themes and tradi-
tions. May be repeated for credit with change of content and approval of instructor. Prerequisite: upper-division standing or consent of instructor.

109. History of Analytic Philosophy (4)
Central texts, figures, and traditions in analytic philosophy. Figures may include Frege, Russell, Wittgenstein, Carnap, Moore, Austin, Tarski, Quine, Davidson, Kripke, and Putnam. May be repeated for credit with change of content and approval of the instructor. Prerequisite: upper-division standing or consent of instructor.

115. Philosophical Methods Seminar (4)
This course provides an introduction to the techniques of philosophical inquiry through detailed study of selected philosophical texts and through extensive training in philosophical writing based on those texts. Enrollment limited and restricted to majors; must be taken for letter grade. May not be repeated for credit. Prerequisite: open to philosophy majors only.

120. Symbolic Logic I (4)
The syntax, semantics, and proof-theory of first-order predicate logic with identity, emphasizing both conceptual issues and practical skills (e.g., criteria for logical truth, consistency, and validity, the application of logical methods to everyday as well as scientific reasoning). Prerequisite: Philosophy 10 or consent of instructor.

122. Topics in Logic (4)
A study of new, extended, or alternative logics and/or spe-
cial issues in meta-logic. Topics include the nature of logic, modal logic, higher-order logic, generalized logic, free logic, the Löwenheim-Skolem theorem, the incompleteness of arithmetic, undecidability. May be repeated for credit with change in content and approval of instructor. Prerequisite: Philosophy 120 (and for advanced topics: Philosophy 121) or consent of instructor.

123. Philosophy of Logic (4)
Philosophical issues underlying standard and non-standard logic. The nature of logical knowledge, the relation between logic and mathematics, the revisability of logical, truth and logic, ontological commitment and ontological relativity, logical consequence, etc. May be repeated for credit with change of content and approval of instructor. Prerequisite: Philosophy 120 or consent of instructor.

126. Topics in the History of Logic (4)
Prerequisites: Philosophy 12 or consent of instructor.

130. Metaphysics (4)
Central problems in metaphysics, such as free will and deter-
mination, the mind-body problem, personal identity, causation, primary and secondary qualities, the nature of universals, necessity, and identity. Prerequisite: upper-
division standing or consent of instructor.

131. Topics in Metaphysics (4)
An in-depth study of some central problem, figure, or tradi-
tion in metaphysics. May be repeated for credit with change of content and approval of instructor. Prerequisite: upper-division standing or consent of instructor.

132. Epistemology (4)
Central problems in epistemology such as skepticism; a pri-
ori knowledge; knowledge of other minds; self-knowledge; the problem of induction; foundationalist, coherence, and causal theories of knowledge. Prerequisite: upper-division standing or consent of instructor.

134. Philosophy of Language (4)
An examination of contemporary debates about meaning, reference, truth, and thought. Topics include descriptive theories of reference, sense and reference, compositionality, truth, theories of meaning, vagueness, metaphor, and natural and formal languages. Prerequisite: upper-division standing or consent of instructor.

136. Philosophy of Mind (4)
Different conceptions of the nature of mind and its rela-
tion to the physical world. Topics include identity theories, functionalism, eliminative materialism, internalism and externalism, subjectivity, other minds, consciousness, self-knowledge, perception, memory, and imagination. Prerequisite: upper-division standing or consent of instructor.

137. Philosophy of Action (4)
The nature of action and psychological explanation. Topics include action individuation, reasons as causes, psychologi-
cal laws, freedom and responsibility, weakness of will, self-
deception, and the emotions. Prerequisite: upper-division standing or consent of instructor.

145. Philosophy of Science (4)
Central problems in philosophy of science, such as the nature of confirmation and explanation, the nature of scientific revolutions and progress, the unity of science, and realism and antirealism. Prerequisite: upper-division standing or consent of instructor.

146. Philosophy of Physics (4)
Philosophical problems in the development of modern physics, such as the philosophy of space and time, the epistemology of geometry, the philosophical significance of Einstein’s theory of relativity, the interpretation of quan-
tum mechanics, and the significance of modern cosmol-
ogy. Prerequisite: upper-division standing or consent of instructor.

147. Philosophy of Biology (4)
Philosophical problems in the biological sciences, such as the relation between biology and the physical sciences, the status and structure of evolutionary theory, and the role of biology in the social sciences. Prerequisite: upper-division standing or consent of instructor.

148. Philosophy and the Environment (4)
An investigation of ethical and philosophical questions con-
cerning our relationship to the environment. Topics may include the value of nature, biodiversity, policy and science, and responsibility to future generations. Prerequisite: upper-
division standing or consent of instructor.

149. Philosophy of Psychology (4)
Philosophical issues raised by psychology, including the nature of psychological explanation, the role of nature versus nurture, free will and determinism, and the unity of the person. Prerequisite: upper-division standing or consent of instructor.

150. Philosophy of the Cognitive Sciences (4)
Theoretical, empirical, methodological, and philosophical issues at work in the cognitive sciences (e.g., Psychology, Linguistics, Neuroscience, Artificial Intelligence, and Computer Science), concerning things such as mental representation, consciousness, rationality, explanation, and nativism. Prerequisite: upper-division standing or consent of instructor.

151. Philosophy of Neuroscience (4)
An introduction to elementary neuroanatomy and neurophysiology and an examination of theoretical issues in cognitive neuroscience and their implications for tradi-
tional philosophical conceptions of the relation between mind and body, perception, consciousness, understanding, emotion, and the self. Prerequisite: upper-division stand-
ing or consent of instructor.

152. Philosophy of Social Science (4)
Philosophical issues of method and substance in the social sciences, such as causal and interpretive models of explana-
tion, structuralism and methodological individualism, value neutrality, and relativism. Prerequisite: upper-division standing or consent of instructor.

157. History of Philosophy: Ancient (4)
An examination of ancient Greek philosophy, focusing on major works of Plato and Aristotle. It is recommended that Phil. 157, Phil. 158, and Phil. 159 be taken in order. Prerequisites: upper-division standing and department stamp, or consent of instructor.

158. History of Philosophy: Early Modern (4)
An examination of seventeenth- and eighteenth-century philosophy, focusing on major works of Descartes, Locke, and Hume. It is recommended that Phil. 157, Phil. 158, and Phil. 159 be taken in order. Prerequisites: upper-division standing and department stamp, or consent of instructor.
159. History of Philosophy: Late Modern
An examination of late eighteenth-century philosophy, focusing on major works of Kant and Hegel. It is recommended that Phil. 157, Phil. 158, and Phil 159 be taken in order. Prerequisites: upper-division standing and department stamp, or consent of instructor.

160. Ethical Theory (4)
Systematic analysis and critical perspectives on ethical issues in ethical theory such as deontic, contractualist, and consequentialist conceptions of morality; rights and special obligations; the role of happiness and virtue in morality; moral conflict; ethical objectivity and relativism; and the rational authority of morality. Prerequisite: upper-division standing or consent of instructor.

161. Topics in the History of Ethics (4)
Central issues and texts in the history of ethics. Subject matter can vary, ranging from one philosopher (e.g., Aristotle, Hobbes, Kant, or Mill) to a historical tradition (e.g., Greek ethics or the British moralists). May be repeated for credit with change in content and approval of instructor. Prerequisite: upper-division standing or consent of instructor.

162. Contemporary Moral Issues (4)
An examination of contemporary moral issues, such as abortion, euthanasia, war, affirmative action, and freedom of speech. Prerequisite: upper-division standing or consent of instructor.

163. Biomedical Ethics (4)
Moral issues in medicine and the biological sciences, such as patient's rights and physician's responsibilities, abortion and euthanasia, the distribution of health care, experimentation, and genetic intervention. Prerequisite: upper-division standing or consent of instructor.

164. Technology and Human Values (4)
Philosophical issues involved in the development of modern science, the growth of technology, and control of the natural environment. The interaction of science and technology with human nature and political and moral ideals. Prerequisite: upper-division standing or consent of instructor.

166. Classics in Political Philosophy (4)
Central issues about the justification, proper functions, and limits of the state through classic texts in the history of political philosophy by figures such as Plato, Aristotle, Hobbes, Locke, Rousseau, Mill, and Marx. Prerequisite: upper-division standing or consent of instructor.

167. Contemporary Political Philosophy (4)
Different perspectives on central issues in contemporary political philosophy, such as the nature of state authority and political obligation, the limits of government and individual liberty, liberalism and its critics, equality and distributive justice. Prerequisite: upper-division standing or consent of instructor.

168. Philosophy of Law (4)
A study of issues in analytical jurisprudence such as the nature of law, the relation between law and morality, and the nature of legal interpretation and issues in normative jurisprudence such as the justification of punishment, paternalism and privacy, freedom of expression, and affirmative action. Prerequisite: upper-division standing or consent of instructor.

170. Philosophy and Race (4)
A philosophical investigation of the topics of race and racism. The role of "race" in ordinary speech. The ethics of racial discourse. Anthropological and biological conceptions of race. The social and political significance of racial categories. Post-racialist conceptions of race. Prerequisite: upper-division standing or consent of instructor.

175. Aesthetics (4)
Central issues in philosophical aesthetics such as the nature of art and aesthetic experience, the grounds of artistic interpretation and evaluation, artistic representa-tion, and the role of the arts in education, culture, and politics. Prerequisite: upper-division standing or consent of instructor.

176. Philosophy and Literature (4)
A study of philosophical themes contained in selected fiction, drama, or poetry, and the philosophical issues that arise in the interpretation, appreciation, and criticism of literature. Prerequisite: upper-division standing or consent of instructor.

177. Philosophy and Literature (4)
A study of philosophical themes contained in selected fiction, drama, or poetry, and the philosophical issues that arise in the interpretation, appreciation, and criticism of literature. Prerequisite: upper-division standing or consent of instructor.

180. Phenomenology (4)
An examination of the phenomenological tradition through the works of its major classical and/or contemporary representatives. Authors studied will vary and may include Brentano, Husserl, Heidegger, Merleau-Ponty, Levinas, Bourdieu. Prerequisite: upper-division standing or consent of instructor.

181. Existentialism (4)
Classical texts and issues of existentialism. Authors studied will vary and may include Nietzsche, Kierkegaard, Sartre, and Heidegger. Prerequisite: upper-division standing or consent of instructor.

183. Topics in Continental Philosophy (4)
The focus will be on a leading movement in continental philosophy (e.g., the critical theory of the Frankfurt school, structuralism and deconstruction, post-modernism) or some particular issue that has figured in these traditions (e.g., freedom, subjectivity, historicity, authenticity). May be repeated for credit with change in content and approval of instructor. Prerequisite: upper-division standing or consent of instructor.

185. Philosophy of Religion (4)
A general introduction to the philosophy of religion through the study of classical and/or contemporary texts. Among the issues to be discussed are the existence and nature of God, the problem of evil, the existence of miracles, the relation between reason and revelation, and the nature of religious language. Prerequisite: upper-division standing or consent of instructor.

190A. Core Course in Philosophy of Religion (4)
Independent study by special arrangement with and under the supervision of a faculty member, including a proposal for the honors thesis. Prerequisite: upper-division standing; department stamp and/or consent of instructor. Prerequisite: upper-division standing or consent of instructor.

191A. Philosophy Honors (4)
Independent study by special arrangement with and under the supervision of a faculty member, including a proposal for the honors thesis. Prerequisite: upper-division standing; department stamp and/or consent of instructor.

191B. The Honors Essay (4)
Continuation of 191A: independent study by special arrangement with and under the supervision of a faculty member, leading to the completion of the honors essay. A letter grade for both 191A and 191B will be given at the end of this quarter; a final grade will be given for both quarters at the end of 191B. Prerequisites: department stamp; consent of instructor.

192. Senior Seminar (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in PHIL (at the upper-division level). Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: upper-division standing; department stamp and/or consent of instructor.

195. Introduction to Teaching Philosophy (4)
Under the supervision of the instructor, student will lead one discussion section of a lower-division philosophy class. The student must attend the lecture for the class and meet regularly with the instructor. Applications are available in the Department of Philosophy. Prerequisites: consent of instructor and department chair, G.P.A. of 3.0 or higher, over ninety units.

199. Directed Individual Study (4)
Directed individual study by special arrangement with and under the supervision of a faculty member. (P/NP grades only.) Prerequisite: consent of instructor.

200. Proseminar (4)
Introduction to philosophical methods of analysis through study of classic historical or contemporary texts. Writing intensive. Enrollment limited to entering graduate students.

201A. Core Course in History (4)
A study of selected texts or topics in the history of philosophy. Usually the focus will be on a single major text. May be taken for credit nine times with changed content.

202. Core Course in Ethics (4)
An introduction to some central issues in ethical theory with emphasis on classic texts or contemporary authors. May be taken for credit three times with changed content.

204A. Core Course in Philosophy of Science (4)
An introduction to one or more problems in the philosophy of science, or in the philosophy of one of the particular sciences, such as the nature of confirmation and explanation, the nature of scientific knowledge, reductionism, the unity of science, or realism and antirealism. May be taken for credit three times with changed content.

207A. Core Course in Metaphysics (4)
An introduction to central topics in metaphysics with emphasis on classic texts or contemporary authors. May be taken for credit three times with changed content.

208A. Core Course in Epistemology (4)
An introduction to central topics in epistemology with emphasis on classic texts or contemporary authors. May be taken for credit three times with changed content.

209A. Introduction to Science Studies (4)
Study and discussion of classic work in history of science, philosophy of science, and of work that attempts to develop a unified science studies approach. Required of all students in the Science Studies Program.

209B. Seminar in Science Studies (4)
Study and discussion of selected topics in the science studies field. Required of all students in the Science Studies Program.

209C. Colloquium in Science Studies (4)
A forum for the presentation and discussion of research in progress in science studies, by graduate students, faculty, and visitors. May be taken for credit two times with changed content.

209D. Advanced Approaches to Science Studies (4)
Contemporary themes and problems in science studies. Focus on recent literature in the history, philosophy, and sociology of science, technology, and medicine.

210. Greek Philosophy (4)
A study of selected texts or topics from the history of Greek philosophy. Usually centers on works by Plato or Aristotle. May be taken for credit six times with changed content.

214. Early Modern Philosophy (4)
A study of selected texts or topics from philosophers of the sixteenth and seventeenth centuries, Descartes, Spinoza, Leibniz, or Locke. May be taken for credit six times with changed content.

215. Eighteenth-Century Philosophy (4)
A study of selected texts or topics from philosophers of the eighteenth century: for example, Kant or Hume. May be taken for credit six times with changed content.

218. Contemporary Analytical Philosophy (4)
A study of the historical development of the analytical movement, with emphasis on major texts. May be taken for credit six times with changed content.

222. Philosophy of Logic (4)
A study of selected issues in the philosophy of logic. Focus may be on contemporary texts or historical works or both. May be taken for credit six times with changed content.

230. Metaphysics (4)
Topics may include identity, personal identity, universals and particulars, modality and possible worlds, causation, reduction, supervenience, freedom and determinism, space and time, and realism versus anti-realism. May be taken for credit six times with changed content.

232. Epistemology (4)
This seminar will cover issues such as rival accounts of reduction, supervenience, freedom and determinism, personal identity, universals and particulars, and modality and possible worlds. May be taken for credit six times with changed content.

240. Core Course in Philosophy (4)
A study of philosophical issues contained in selected fiction, poetry, or philosophy. May be taken for credit three times with changed content.
contemporary perspectives on empiricism, rationalism, and pragmatism, and skepticism. May be taken for credit six times with changed content.

234. Philosophy of Language (4)
Central issues in contemporary philosophy of language, such as the nature of linguistic meaning, truth, content, reference, the syntax and semantics of various linguistic constructions, presupposition, speech acts, the epistemology of language understanding and language learning, the mental/psychological basis of linguistic understanding and use. May be taken for credit six times with changed content.

236. Philosophy of Mind (4)
Contemporary debates on the nature, function, and operation of the mental. May include questions about the mind-body relation, mental causation, perception, consciousness, and mental representation. May be taken for credit six times with changed content.

245. Philosophy of Science (4)
This seminar will cover current books and theoretical issues in the philosophy of science. May be taken for credit seven times with changed content.

246. Philosophy of Physics (4)
Systematic problems and historical and contemporary perspectives on foundational issues in physics. May include issues in the philosophy of space and time, the interpretation of relativity theory and quantum mechanics, or the foundations of statistical mechanics and probability. May be taken for credit six times with changed content. Prerequisite: graduate standing or consent of instructor.

247. Philosophy of Biology (4)
Historical and contemporary perspectives on foundational issues about biology. May include questions about the nature of biological explanation, the relation of biology to chemistry and physics, the status of attributions of function, and the relation of biology to the social sciences. May be taken for credit six times with changed content.

250A. Philosophy of the Cognitive Sciences (4)
Contemporary debates about the study of the mind-brain as studied in one or more of the empirical cognitive sciences. May include questions about the different strategies of explanation invoked, the conceptions of representation employed, the connections between theoretical models developed. May be taken for credit six times with changed content.

260. Ethics (4)
Topics may include metaethics (e.g., the semantics, metaphysics, epistemology, and normativity of ethics), consequentialism and deontology, moral psychology (e.g., freedom, responsibility, and weaknesses of will), or substantive moral problems. The approach may be systematic, historical, or both. May be taken for credit six times with changed content.

267. Political Philosophy (4)
Topics may include the nature and limits of state authority, liberty and equality, distributive justice, liberalism and its critics (e.g., feminists, libertarians, and others), or issues in jurisprudence. The focus may be on classic texts or contemporary authors. May be taken for credit six times with changed content.

276. German Translation Workshop (1–2)
This course meets weekly to provide training in reading and translating philosophical German. Students prepare in advance written translations of assigned passages. The course helps train graduate students preparing to take the Departmental German Exam. Can be taken nine times for credit with changed content.

277. Phenomenology Reading Group (1–2)
This course meets biweekly with students reading and presenting material from the phenomenological literature. The course is designed both for students doing active research in phenomenology and for those seeking to gain some familiarity with that tradition. Can be taken nine times for credit with changed content.

278. Topics and Methods in Contemporary Philosophy (1–2)
Investigation of central issues in contemporary philosophy. Content varies but typically will center on a recent and important philosophical book. Can be taken nine times for credit with changed content.

279. Experimental Philosophy Laboratory (1–2)
A weekly forum of presentations, EPL provides a wider range of content than a traditional seminar. Content varies, but the focus is on philosophical problems of mind, representation, language and consciousness through empirical and philosophical methods. Can be taken nine times for credit with changed content.

280. Philosophy of Science Topics and Methods (1–2)
This course meets weekly to discuss recent books or articles in philosophy of science. The reading is designed both for students doing active research in the field and for those seeking to gain some familiarity with it. Can be taken nine times for credit with changed content.

281. History of Philosophy Research and Methods (1–2)
This course meets to discuss work in progress in the history of philosophy. Its aim is to introduce understanding of the methods and standards of research in the field through constructive criticism of each other’s work. Can be taken nine times for credit with changed content.

282. Topics and Methods in Ethics (1–2)
Weekly or biweekly meetings to discuss recent literature in ethics, broadly construed so as to include ethical theory, normative ethics, jurisprudence, and historical traditions in these fields. The course is suitable for those specializing in ethics and for those seeking some familiarity with the field. Can be taken nine times for credit with changed content.

283. Topics and Methods in Political Philosophy (1–2)
Weekly or biweekly meetings to discuss recent literature in political philosophy and historical tradition of this field. The course is suitable for those specializing in ethics and for those seeking some familiarity with the field.

284. Philosophy of Biology Research Group (1–2)
A research group for graduate students engaged in philosophy or history of the biological sciences. The group discusses biological, historical, and philosophical articles and books and ongoing research projects. Can be taken nine times for credit with change of content. Prerequisite: graduate standing or consent of instructor.

285. Seminar on Special Topics (4)
Focused examination of specific problems or themes in some area of philosophy. May be taken for credit nine times with changed content.

286. Philosophy of Physics Reading Group (1–2)
A research group for graduate students engaged in philosophy or history of the physical sciences. The group discusses physical, historical, and philosophical articles and books and ongoing research projects. Can be taken nine times for credit with change of content. Prerequisite: graduate standing or consent of instructor.

287. Greek Reading Group (1–2)
This group provides training in reading and translating philosophical Greek by having students prepare translations of passages and lead discussions. The group helps train graduate students preparing for Departmental Greek Exam. Can be taken nine times for credit with change of content. Prerequisite: graduate standing or consent of instructor.

290. Directed Independent Study (4)
Supervised study of individually selected philosophical topics. S/U grades permitted.

292. Writing Workshop (1–3)
Each enrolled student produces a research essay ready for publication, presents it to students and faculty, and offers critiques of other students’ presentations. Units will vary according to enrollment in course. To be taken in fall quarter of third year of philosophy graduate study.

295. Research Topics (1–12)
Advanced individual research studies under the direction of a member of the staff. Hours of outside preparation will vary with number of units taken. May be taken for credit nine times with changed content.

299. Thesis Research (1–12)
S/U grades permitted.

500. Apprentice Teaching (1–4)
A course designed to satisfy the requirement that graduate students should serve as teaching assistants, either in the Department of Philosophy or in one of the writing programs offered by the various colleges. Each Ph.D. candidate must teach the equivalent of quarter time for three academic quarters. Students are permitted to sign up as TAs for a maximum of eighteen quarters.
The Department of Physics presents the Shang-Keng Ma Memorial Award at commencement each year to a graduating physics student who has shown exceptional ability and promise during the UCSD undergraduate years. The award was established in 1984 to commemorate the contributions of Professor Ma to the UCSD Department of Physics and to the field of theoretical condensed matter physics.

**JOHN HOLMES MALMBERG PRIZE**

The John Holmes Malmberg Prize is presented annually at commencement to a graduating physics student who is recognized for potential for a career in physics and a measure of experimental inquisitiveness. This prize was established in 1993 in memory of Professor Malmberg who pioneered the use of non-neutral plasmas for sophisticated tests of plasma equilibrium, wave, and transport effects. He was an involved teacher of undergraduate and graduate students and was active in departmental and campus affairs.

**SHANG-KENG MA AWARD**

The Department of Physics offers undergraduate programs leading to the following degrees:

- B.S., Physics
- B.S., Physics with Specialization in Astrophysics
- B.S., Physics with Specialization in Biophysics
- B.S., Physics with Specialization in Computational Physics
- B.S., Physics with Specialization in Earth Sciences
- B.S., Physics with Specialization in Materials Physics
- B.A., General Physics
- B.A., General Physics/Secondary Education

A grade-point average of 2.0 or higher in the upper-division major program is required for graduation. Students must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. In exceptional cases, students with a grade-point average in the major of 2.5 or greater may petition to have one grade of D accepted. All courses (lower- and upper-division) required for the major must be taken for a letter grade.

**THE UNDERGRADUATE PROGRAM**

Astrophysics and space physics

Nonlinear dynamics

Computational physics

In addition to on-campus research facilities, the high energy program uses accelerators at SLAC, CERN, and Fermi Laboratory. The astrophysics program uses facilities at Keck, Lick, and Kitt Peak Observatories.
PHYSICS MAJOR (B.S. DEGREE)

The physics major provides a core of basic education in several principle areas of physics, with sufficient flexibility to allow students to prepare either for graduate school or a career in industry. Since in preparing for either goal, more than the required core courses are necessary, it is important for students to meet with a physics department advisor in deciding a schedule.

In the junior year, the emphasis is on macroscopic physics; the two principal physics subjects are electromagnetism and mechanics. The mathematics and computer background required for the physics program is completed in this year.

In the senior year, a sequence of courses in quantum physics provides the student the modern view of atomic and some aspects of sub-atomic physics and the principal analytical methods appropriate in this domain. The relation of the microscopic to the macroscopic world is the subject of courses in thermodynamics and statistical physics, with illustrations drawn from gas dynamics and solid-state physics. Upper-division laboratories teach students the essentials of physical measurement and building advanced equipment, as well as other aspects of experimental science.

The following courses are required for the physics major:

Lower-Division
1. Physics 4A-B-C-D-E or Physics 2A-B-C-D1
2. Physics 2CL and 2DL
3. Chemistry 6A or 2 a programming course such as MAE 9 or MAE 10
4. Mathematics 20C-D-E-F

Suggested Schedule (pre-graduate school)

Upper-Division
1. Physics 100A-B, 105A, 110A, 120A, 130A-B, 140A, and an additional laboratory course from the lab group: 120B, 121, 133, 173
2. Two courses from either the theoretical or experimental pre-grad-school sequence
3. Restricted electives: Three upper-division (four-unit) or graduate courses in physics or mathematics (only one). Courses in other science disciplines may be substituted by petition.

For students wishing to prepare for graduate school it is important that all courses in either the theorist or experimentalist pre-grad-school sequence be taken. Mathematics 120A is also recommended.

PHYSICS MAJOR WITH SPECIALIZATION IN ASTROPHYSICS (B.S. DEGREE)

The astrophysics specialization is appropriate for students who would like to gain an in-depth understanding of modern astronomy and astrophysics, and/or who wish to prepare for graduate school in astronomy or astrophysics. It is similar to the standard physics major with electives being chosen from astronomically oriented courses. A wide variety of technical, academic, and professional careers are possible for students who choose this specialization.

The following courses are required for the physics major with specialization in astrophysics:

Lower-Division
1. Physics 4A-B-C-D-E or Physics 2A-B-C-D1
2. Physics 2CL and 2DL
3. Chemistry 6A or 2 a programming course such as MAE 9 or MAE 10
4. Mathematics 20C-D-E-F

PHYSICS MAJOR WITH SPECIALIZATION IN BIOPHYSICS (B.S. DEGREE)

The Department of Physics offers an undergraduate program that prepares students for careers in biophysics. This program leads to a degree in “B.S., Physics with Specialization in Biophysics.” As a terminal degree, it is an excellent education for students who wish to work in the biotechnology industry, and provides an ideal background for students who plan to attend graduate or professional school in biological or biomedical fields.

This program is intended for students with a strong interest in bringing the concepts and technical advances from the physical sciences to bear on issues in biology. The curriculum is chosen to prepare students as rigorously trained but broad-minded generalists, so that they may attack problems in the biological, biochemical, and biomedical sciences with the tools and confidence that come from rigorous training in the physical sciences.

The curriculum for Physics Major with Specialization in Biophysics is designed to allow premedical students to complete all necessary courses for admission to medical schools.
The lower-division program for physics majors with specialization in biophysics includes basic courses in biology and chemistry as well as physics. Although the sequence Physics 4A through 4E is strongly recommended, students have the choice of petitioning the department to substitute the sequence Physics 2A through 2D.

The following courses are required for the physics major with specialization in biophysics:

### Lower-Division

1. Physics 4A-B-C-D-E and 2CL-DL; or Physics 2A-B-C-D and 2CL-DL (Physics 4 sequence is strongly recommended)
2. Chemistry 6A-B-C and 6BL
3. Biology, BILD 1 and BILD 2
4. Mathematics 20A-B-C-D-E-F

The upper-division program includes advanced courses in physics, including two core lecture courses and one core laboratory course in biophysics, as well as organic chemistry.

### Upper-Division

2. Chemistry 140A

Additional electives, to achieve a count of twelve upper-division courses in the major, may be selected from biology, chemistry and physics. Three additional upper-division courses, in any subject, are required in order to satisfy UCSD requirements.

Premedical students will need to take two additional quarters of organic chemistry (Chemistry 140B and 140C), one quarter of organic chemistry laboratory (Chemistry 143A), and one quarter of an upper level biology course. In addition, some medical schools also require a quarter of biochemistry (Biology BIBC 100 or Chemistry 114A). The premedical requirements may be used to satisfy elective requirements for upper-division courses.

As a guide to prospective students, we consider a schedule of required classes for a Muir College student.

### B.S. IN PHYSICS WITH SPECIALIZATION IN COMPUTATIONAL PHYSICS

The computational physics specialization is designed to support a broad range of career development tracks, so students may pursue (1) a terminal B.S. degree for gainful employment in information technology and high-tech industry, (2) preparation for graduate studies in computational science with an M.S. degree, and (3) graduate work in physics with strong interest in computational physics. This flexibility is afforded by a wide array of restricted electives which allows students to design much of their own program (subject to advisor’s approval), while simultaneously maintaining the essential physics-based curriculum. Academic advising will be provided by physics faculty in the Computational Physics Specialization Program to assist students in designing their optimal career development track in the flexible curriculum.

The following courses are required for Physics Major with Specialization in Computational Physics:

### Lower-Division

1. Physics 4A-B-C-D-E or Physics 2A-B-C-D-F, Physics 2CL-DL
2. Mathematics 20C-F
3. Chemistry 6A
4. MAE 9, or MAE 10, or CSE 11

1. The 2A-B-C-D sequence is an allowed substitute by petition.

### Upper-Division

### Suggested Schedule (restricted electives not shown)

1. Students will choose two required courses from the group Phys. 121, Phys. 141, Phys. 142, and other will drop the third, or take it as one of the six restricted electives.

### Career Track Examples with Restricted Electives

The program of electives is intended to be flexible, and can be tailored to the student’s needs and interests in consultation with the academic advisor.

Grad. School Theorist with Computational Interest Track for student with interest in theoretical physics based computational science:

</tbody>
</table>
Students who anticipate taking Chemistry 120A-B as an upper-division elective are strongly advised to take Chemistry 6C.

### Lower-Division

1. Physics 4A-B-C-D-E or Physics 2A-B-C-D, Physics 2CL-DL
2. Chemistry 6A-B*
3. Mathematics 20C-F
4. MAE 9 or MAE 10 (or equivalent programming experience)

### Upper-Division

2. Four restricted electives, to be chosen from Chemistry 120A-B; Mathematics 120A; ECE 103, 134, 135A-B, 136, 136L; MAE 160, 110A; or any upper division physics course

* Students who anticipate taking Chemistry 120A-B as an upper-division elective are strongly advised to take Chemistry 6C.

### Suggested Schedule (restricted electives not shown)

#### FALL
- Physics 100A
- Physics 105A
- Physics 110A

#### WINTER
- Physics 100B
- Physics 105B
- Physics 110B

#### SPRING
- Physics 120A
- Physics 130A
- Physics 133

### Restricted Electives: Example

As examples of restricted electives, a student opting for a terminal B.S. Degree (Option 1) might choose to take MAE 160, ECE 103, 136, and Physics 121. Students preparing for graduate work in materials science (Option 2) might consider MAE 160, ECE 103, 134, and a fourth elective. Students preparing for graduate work in physics (Option 3) might consider Physics 100C, 110B, 140B, and a fourth elective. The program of electives is intended to be flexible, and can be tailored to the student's needs and interests in consultation with the academic advisor.

For more information, see entry for Integrated Bachelor’s/Master’s Degree Program in Materials Physics.
requires at least twenty-eight units, of which at least twenty units must be upper-division. All courses must be taken for a letter grade. Lower-division transfer courses are permitted.

**ADVISING OFFICE**

All students are assigned an academic advisor. It is strongly recommended that students see their advisor at least once a quarter. Additional advising information may be obtained from the Department of Physics Student Affairs Office, 1110-115 Urey Hall Addition (858) 534-3290.

**HONORS PROGRAM**

The Department of Physics offers an Honors Program for students who demonstrate excellence in the major. Students interested in the Honors Program should consult the Student Affairs Office. Eligibility for the Honors Program includes completion of all required lower-division physics courses, ten upper-division physics courses, and a GPA of at least 3.50 in the physics major. The Honors Program consists of a minimum of eight units of Honors Thesis Research (Physics 199H), an Honors Thesis, and the presentation of the research to faculty and peers at UCSD's Undergraduate Research Conference or an Undergraduate Seminar. Admission to the Honors Program is contingent upon the prior approval of the Honors Thesis "research topic" by the Vice Chair for Education.

**THE GRADUATE PROGRAM**

The Department of Physics offers curricula leading to the following degrees:

- **M.S.**, Physics
- **C.Phil., Physics**
- **Ph.D., Physics**
- **Ph.D., Physics (Biophysics)**
- **Ph.D. Physics Specialization in Computational Science**

Biophysics students will receive their M.S. and C.Phil. degrees in physics. Only their Ph.D. will be in physics (biophysics).

Entering graduate students are required to have a sound knowledge of undergraduate mechanics, electricity, and magnetism; to have had senior courses or their equivalent in atomic and quantum physics, nuclear physics, and thermodynamics; and to have taken upper-division laboratory work. An introductory course in solid-state physics is desirable.

Requirements for the master of science degree can be met according to Plan II (comprehensive examination). The comprehensive examination is identical to the first-year departmental examination for Ph.D. students. A list of acceptable courses is available in the Department of Physics Graduate Student Affairs office. There is no foreign language requirement.

The program offers a M.S. in physics with specialization in materials physics. It is open only to UC San Diego undergraduates, and is a Plan I program only (thesis). During the fourth quarter prior to receipt of the B.S. Degree, students enrolled in the B.S. Degree program with specialization in materials physics (see above) may apply for admission to the M.S. program. To be eligible, students must have completed the first two quarters of their junior year in residence at UCSD and have a GPA of at least 3.0 in both their major and overall undergraduate curriculum. It is strongly recommended that B.S. students who intend to apply to the M.S. program take MAE 160, ECE 103, and ECE 134 as restricted B.S. electives. It is the responsibility of the prospective B.S./M.S. student to select a faculty member (from the Department of Physics or, with physics department approval, from the MAE, ECE, or chemistry departments) who would be willing to serve as the student's advisor and with whom the student would complete at least twelve units of S/U graded research, which could commence as early as the undergraduate senior year. (During the senior year, the units would count only toward the M.S. degree and not toward the B.S.) The student must confirm that the selected faculty advisor will not be off-campus sabbatical leave during any quarter of the scheduled B.S./M.S. project. Students are expected to meet the requirements for the M.S. degree in one year (three consecutive, contiguous academic quarters) from the date of receipt of the B.S. Degree Any deviation from this plan, such as a break in enrollment for one or more quarters, may result in the student being dropped from the program.

The requirements for the M.S. degree are as follows:

1. Completion of at least twelve and no more than twenty-four units of research, which may begin as early as the first quarter of the senior undergraduate year.
2. Completion of three required courses during the fifth (graduate) year (MAT SCI 201A-B-C), and two restricted electives (see below).
3. Completion of restricted elective courses so that the total number of units (research plus required courses plus elective courses) totals no less than 36 units taken as a graduate student. Students accumulate units for their research by enrolling in Physics 295 (M.S. Thesis Research), which may be taken repeatedly.
4. Maintenance of a grade-point average of at least 3.0 for all course work, both cumulatively and for each quarter of enrollment in the B.S./M.S. program.
5. Completion of a thesis, with an oral presentation to, and approval of, a three-member committee from the Department of Physics including the faculty advisor. If the faculty advisor is from outside the physics department, the committee shall consist of the advisor and two members from the physics department faculty.
6. Three complete, separate, and consecutive quarters of full-time residency as a graduate student that will commence the quarter immediately following the quarter in which the B.S. Degree is awarded (not counting summer session).
7. Although students may receive research or teaching assistantships if available from their advisor or through the Department of Physics, there is no guarantee of financial support associated with the M.S. program.
8. M.S. candidates will be permitted to serve as teaching assistants, although teaching will not be a requirement for the degree. Students who obtain a teaching assistantship should make sure that it does not interfere with completion of the M.S. degree requirements within the one year time frame allotted.

**M.S. Program: Fifth Year Curriculum**

1. MAT SCI 201A-B-C
2. Physics 295 (M.S. Thesis Research)
3. Two restricted electives, to be chosen from Physics 201, 211A-B; MAT SCI 227, 240A-B-C; ECE 231, 233: other courses allowed by petition

**DOCTORAL DEGREE PROGRAM**

The department has developed a flexible Ph.D. program that provides a broad, advanced education in physics while at the same time giving students opportunity for emphasizing their special interests. This program consists of graduate courses, apprenticeship in research, teaching experience, and thesis research.

Entering students are assigned a faculty advisor to guide them in their program. Many students spend their first year as teaching assistants or fellows and begin apprentice research in their second year. When a student’s association with a research area and research supervisor is well established, a faculty research progress committee is formed with the responsibility of conducting an annual review of progress and, at the appropriate time, initiating the formation of a doctoral committee. After three years of graduate study, or earlier, students complete the departmental examinations and begin thesis research. Students specializing in biophysics make up deficiencies in biology and chemistry during the first two years and complete the departmental examinations by the end of their third year of graduate study. There is no foreign language requirement.

**ENTRANCE TESTING**

An entrance test covering undergraduate physics is given to entering students during the first week of orientation to give better guidance to students in their graduate program. The results are not entered in the student’s file. Entering students are encouraged, but not obliged, to bring the results to the first meeting with their academic advisor. Entering students may elect to take the departmental examination instead of taking the entrance test.

**REQUIREMENTS FOR THE PH.D.**

Students are required to pass a departmental examination, advanced graduate courses, a qualifying examination, teaching requirement and a final defense of the thesis as described below.

1. **Departmental Written Examination**

Physics students are required to take the departmental written examination after completing one year of graduate work at UCSD. The examination is on the level of material usually covered in upper-division courses and the graduate courses listed below:
2. Advanced Graduate Courses

Physics students are required to take five advanced graduate courses from at least three of the groups listed below no later than the end of the third year of graduate study. A 3.0 average over the five courses is required. (In lieu of the course requirement, students may petition to take an oral examination covering three areas of physics.)

- **Group 1:** Physics 218A-B-C (Plasma), 235 (Nonlin. Plas. Th.)
- **Group 4:** Physics 220 (Group Th.), 221A, 221B (Nonlinear Dyn.), 241 and 242 (Comp. Phys), Physics 243 (Stochastic Methods) and 244 (Parallel Computing in Science and Engineering)
- Mathematics 210A-B, 210C (Mathematics Physics), Mathematics 259A-B-C (Geom. Physics)
- **Group 5:** Physics 225A-B (Relativ.), 271 (Bio. Neurons/Net); 272 (Bio. Molecules)
- **Group 6:** Physics 223 (Stel. Str.), 224 (Intrstel. Med.), 226 (Gal. & Gal. Dyn.), 227 (Cosmology), 228 (HE Astro. & Comp. Obj.)

Students enrolled in the Biophysics Ph.D. program select five courses from biology, biochemistry, chemistry, or physics in consultation with their advisor. At least three courses must be graduate courses. For more information, see the Biophysics section, below.

3. Ph.D. Candidacy Examination

In order to be advanced to candidacy, students must have met the departmental requirements and obtained a faculty research supervisor. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student's graduate program is appointed by the Graduate Council. The committee conducts the Ph.D. candidacy examination during which students must demonstrate the ability to engage in thesis research. This involves the presentation of a plan for the thesis research project. The committee may ask questions directly or indirectly related to the project and questions on general physics that it determines to be relevant. Upon successful completion of this examination, students are advanced to candidacy and are awarded the Candidate of Philosophy degree.

4. Instruction in Physics Teaching

All graduate students are required to participate in the physics undergraduate teaching program as part of their career training. The main component of this requirement is an evaluated classroom-based teaching activity. All graduate student teaching accomplishments are subject to the approval of the vice chair for education. There are several ways to satisfying the teaching requirement, including: (1) leading discussions as a teaching assistant, (2) practical classroom teaching, under faculty supervision, (3) participation in an approved teaching development program offered by the Department of Physics or the campus Center for Teaching Development, or (4) transferred teaching credit from another institution or department. Students who satisfy the requirement by teaching at UCSD should enroll in Physics 500 during the quarter in which they complete it.

5. Thesis Defense

When students have completed their theses, they are asked to present and defend them before their doctoral committees.

**Time Limits for Progress to the Ph.D.**

In accordance with university policy, the Department of Physics has established the following time limits for progress to the Ph.D. A student's research progress committee helps ensure that these time limits are met.

*Theorists*  |  *Experimentalists*
---|---
Advancement to Candidacy | 4 years | 5 years
Total Registered | 7 years | 8 years
Time and Support | | |

**PH.D. IN PHYSICS (BIOPHYSICS)**

The Department of Physics offers a graduate program which prepares students for a career in biophysics and which leads to the following degrees: C.Phil. in Physics Ph.D. in Physics (Biophysics)

Biophysics students will receive their M.S. and C.Phil. degrees in physics. Only their Ph.D. will be in physics (biophysics).

The Ph.D. program consists of graduate courses, apprenticeship in research, teaching experience, and thesis research. Research in biophysics is being actively pursued in several departments (physics, chemistry/biochemistry, and biology) that also offer courses in, or courses relevant to, biophysics.

**Requirements for the Ph.D. in Physics (Biophysics)**

The specialization in biophysics requires that students complete many of the same requirements as for the physics Ph.D. Students must pass a departmental written examination, advanced graduate courses, Ph.D. candidacy examination, teaching requirement, and a final defense of the thesis. However, the requirements for the written examination and advanced courses differ slightly from those of the Ph.D. degree.

Biophysics Ph.D. students are required to take the departmental written examination within two years of beginning graduate studies at UCSD, and no later than the beginning of the third year. Biophysics students are required to pass five courses from biology, chemistry, biochemistry, or physics no later than the end of the third year of graduate study.

The course plan shall be determined in consultation with the advisor. At least three of these courses must be graduate courses. A 3.0 average over the five courses is required. (In lieu of the course requirement, students may petition to take an oral examination covering three areas of physics.)

**PH.D. IN PHYSICS WITH SPECIALIZATION IN COMPUTATIONAL SCIENCE**

See "Computational Science in Mathematics & Engineering (CSME)" for more information.

The UCSD campus is offering a new comprehensive Ph.D. specialization in computational science that will be available to doctoral candidates in participating academic departments at UCSD.

This Ph.D. specialization is designed to allow students to obtain training in their chosen field of science, mathematics, or engineering with additional training in computational science integrated into their graduate studies. Prospective students must apply and be admitted into the Ph.D. program in physics, and then be admitted to the CSME program.

Areas of research in the Department of Physics will include computational astrophysics and cosmology, studying star formation and the large scale structure of the universe, computational condensed matter physics studying nanodevices, computational quantum field theory studying the four basic forces of nature, computational biological physics of protein folding and other biologically important complex structures, computational nonlinear dynamics, and computational plasma physics. Each faculty member works with graduate students on the listed research topics that will greatly benefit from the new program.

The specialization in computational science requires that students complete all home requirements for the physics Ph.D. degree. Students are required to pass the departmental written examination, advanced course requirements, Ph.D. candidacy
examination, teaching requirement, and a final defense of the thesis. The qualifying and elective courses for the CSME program (e.g., Physics 241-244) can be used as part of the advanced course requirement, which is the same as for the physics Ph.D.

Requirements for the Ph.D. in Physics with Specialization in Computational Science:

Qualifying Requirements: In addition to the home department qualifying exam requirements, Ph.D. students must take the final exams in three qualifying exam courses from the list below. Courses taken to satisfy the qualifying requirements will not count toward the elective requirements.
1. Math. 275 or MAE 290B (Numerical PDEs)
2. Phys. 244 or CSE 260 (Parallel Computing)
3. One course to be selected from List A

List A: CSME Qualifying Exam Courses
1. Phys. 243 (Stochastic Methods)
2. Math. 270A, B, or C (Numerical Analysis)
3. Math. 272A, B, or C (Advanced Numerical PDEs)
4. MAE 223 (Computational Fluid Dynamics)
5. MAE 232A or B (Computational Solid Mechanics)
6. MAE 280A or B (Linear Systems Theory)
7. To be determined by Executive Committee

Elective Requirements: To encourage Ph.D. students to both broaden themselves in an area of science or engineering as well as to obtain more specialized training in specific areas of computational science, students will be required to take and pass three elective courses from the following approved List B (four units per course). The Executive Committee may approve the use of courses not appearing on the following list on a case-by-case basis. Courses taken to satisfy the elective requirements will not count toward the qualifying requirements.

List B: Relevant Elective Graduate Courses in Mathematics, Science, and Engineering
1. Math. 270A-B-C (Numerical Analysis, not permitted for mathematics students)
2. Math. 271A-B-C (Optimization)
3. Math. 272A-B-C (Advanced Numerical PDEs)
4. Math. 273A-B-C (Computational Mathematics Project)
5. Phys. 141/241 (Computational Physics I)
6. Phys. 142/242 (Computational Physics II)
7. Phys. 221A-B (Nonlinear Dynamics)
8. Chem. 215 (Modeling Biological Macromolecules)
9. BGNN 260 (Neurodynamics)
10. To be determined by Executive Committee

Program Policies: The following is a list of policies for the Ph.D. specialization with regard to proficiency, qualifying, and elective requirements.

1. Proficiency in computer engineering must be demonstrated by the end of the first year.
2. The qualifying exams must be passed by the end of the second year, or, on petition, by end of the third year.
3. The qualifying exams can be attempted repeatedly but no more than once per quarter per subject.
4. The qualifying exams in the home department and the CSME qualifying exams must all be passed before the student is permitted to take the candidacy (senate) exam.
5. Two electives outside the home department must be taken.
6. The two electives can be taken at any time before defending the thesis.
7. One of the electives may be taken Pass/Fail; the other must be taken for a letter grade.

Recommended schedule for the Ph.D. in physics with specialization in computational science

**YEAR 1: PHYSICS CORE COURSES**
- Phys. 200A
- Phys. 200B
- Phys. 203B
- Phys. 212A
- Phys. 212B
- Phys. 212C

**YEAR 2: CSME QUALIFYING COURSES**
- Math. 275
- Non-Phys. Elective
- Phys. 243

- Elective

DEPARTMENTAL COLLOQUIUM

The department offers a weekly colloquium on topics of current interest in physics and on departmental research programs. Students are expected to register and attend the colloquium.

SUPPLEMENTARY COURSE WORK AND SEMINARS

The department offers regular seminars in several areas of current interest. Students are strongly urged to enroll for credit in seminars related to their research interests and, when appropriate, to enroll in advanced graduate courses beyond the departmental requirement. To help beginning students choose a research area and a research supervisor, the department offers a special seminar (Physics 261) that surveys physics research at UCSD.

**COURSE CREDIT BY EXAMINATION**

Students have an option of obtaining credit for a physics graduate course by taking the final examination without participating in any class exercises. They must, however, officially register for the course and notify the instructor and the Department of Physics graduate student affairs office of their intention no later than the first week of the course.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

LOWER-DIVISION

The Physics 1 sequence is primarily intended for biology.

The Physics 2 sequence is intended for physical science and engineering majors and those biological science majors with strong mathematical aptitude.

The Physics 4 sequence is intended for all physics majors and for students with an interest in physics. This five-quarter sequence covers the same topics as the Physics 2 sequence, but it covers these topics more slowly and in more depth. The Physics 4 sequence provides a solid foundation for the upper-division courses required for the physics major.

**Note:** Since some of the material is duplicated in the Physics 1, 2 and 4 sequences, credit cannot be obtained for both. Please check with the Physics Student Affairs Office when switching sequences.

Example: Physics 1A followed by Physics 2A, no credit for Physics 2A.

Physics 5, 6, 7, 8, 9, 10, 11, and 12 are intended for non-science majors. Physics 5, 6, 7, 8, 9, 10, and 12 do not use calculus while Physics 11 uses some calculus.

**1A. Mechanics (3)**
First quarter of a three-quarter introductory physics course, geared towards life-science majors. Equilibrium and motion of particles in Newtonian mechanics, examples from astronomy, biology and sports, oscillations and waves, vibrating strings and sound. **Prerequisites:** Mathematics 10A or 20A, prior or concurrent enrollment in Mathematics 10B or 20B, concurrent enrollment in Physics 1AL laboratory. (F,W,S)

**1AL. Mechanics Laboratory (2)**
Physics laboratory course to accompany Physics 1A. Experiments in mechanics. **Prerequisite:** concurrent enrollment in Physics 1A. (F,W,S)

**1B. Electricity and Magnetism (3)**
Second quarter of a three-quarter introductory physics course geared toward life-science majors. Electric fields, magnetic fields, DC and AC circuitry. **Prerequisites:** Physics 1A, 1AL, and prior or concurrent enrollment in Mathematics 10C or 20C. Concurrent enrollment in Physics 1BL. (F,W,S)

**1BL. Electricity and Magnetism Laboratory (2)**
Physics laboratory course to accompany Physics 1B. Experiments in electricity and magnetism. Course materials fee is required. **Prerequisite:** concurrent enrollment in Physics 1B. (F,W,S)

**1C. Waves, Optics and Modern Physics (3)**
Third quarter of a three-quarter introductory physics course geared toward life-science majors. Behavior of systems under combined thermal and electric forces, the interaction of light with matter as illustrated through optics and quantum mechanics. Examples from biology and instrumentation. (First offered winter 2003) **Prerequisites:** Physics 1B, 1BL, Mathematics 10C or 10D or 20C. Concurrent enrollment in Physics 1CL. (F,W,S)

**1CL. Waves, Optics, and Modern Physics Laboratory (2)**
Physics laboratory course to accompany Physics 1C. Experiments in waves, optics, and modern physics. Course materials fee is required. First offered in winter 2005. **Prerequisite:** concurrent enrollment in Physics 1C. (F,W,S)
2A. Physics—Mechanics (4)
A calculus-based science-engineering general physics course covering vectors, motion in one and two dimensions, Newton's first and second laws, work and energy, conservation of energy, linear momentum, collisions, rotational kinematics, equilibrium of rigid bodies, oscillations, gravitation. Prerequisites: Mathematics 20A, and concurrent enrollment in Mathematics 20B. (F,W,S)

2B. Physics—Electricity and Magnetism (4)
Continuation of Physics 2A covering charge and matter, the electric field, Gauss's law, electric potential, capacitors and dielectrics, current and resistance, electromagnetic force and circuits, the magnetic field, Ampere's law, Faraday's law, inductance, electromagnetic oscillations, alternating currents and Maxwell's equations. Prerequisites: Physics 2A, Mathematics 20B, and concurrent enrollment in Mathematics 20C. (F,W,S)

2BL. Physics Laboratory—Mechanics and Electrodynamics (2)
One hour lecture and three hours laboratory. Experiments include gravitational force, linear and rotational motion, conservation of energy and momentum, collisions, oscillations and springs, gyroscopes. Experiments on electrostatics involve charge, electric field, potential, and capacitance. Data reduction and error analysis are required for written laboratory reports. Prerequisite: concurrent enrollment in Physics 2B or 4C. (F,W,S) Course materials fee is required.

2C. Physics—Fluids, Waves, Thermodynamics, and Optics (4)
Continuation of Physics 2B covering fluid mechanics, waves, elastic media, water temperatures, wave patterns, heat and the first law of thermodynamics, kinetic theory of gases, entropy and the second law of thermodynamics, Maxwell's equations, electromagnetic waves, geometric optics, interference and diffraction. Prerequisites: Physics 2B, Mathematics 20C, and concurrent enrollment in Mathematics 20D. (F,W,S)

2CL. Physics Laboratory—Electricity and Magnetism, Waves, and Optics (2)
One hour lecture and three hours' laboratory. Experiments on refraction, interference/diffraction using lasers and microwaves; lenses and the eye; acoustics; oscillators and L-R-C circuits; oscillations, resonance and damping, measurement of magnetic fields; and the mechanical equivalence of heat. Prerequisites: prior or concurrent enrollment in Physics 1C, 2C, or 4D. (F,W,S) Course materials fee is required.

2D. Physics—Relativity and Quantum Physics (4)
A modern physics course covering atomic view of matter, electricity and radiation, atomic models of Rutherford and Bohr, relativity, X-rays, wave and particle duality, matter waves, Schrödinger's equation, atomic view of solid state, nuclear radioactivity. Prerequisites: Physics 2B and Mathematics 20D. (F,W,S)

2DL. Physics Laboratory—Modern Physics (2)
One hour lecture and three hours of laboratory. Experiments to be chosen from refraction, diffraction and interference of microwaves, Hall effect, thermal band gap, optical spectra, coherence of light, photoelectric effect, e/m ratio of particles, radioactive decays, and plasma physics. Prerequisites: 2BL or 2CL, prior or concurrent enrollment in Physics 2D or 4E. (S) Course materials fee is required.

4A. Physics for Physics Majors—Mechanics (4)
The first quarter of a five-quarter calculus-based physics sequence for physics majors and students with a serious interest in physics. Topics covered are vectors, particle kinematics and dynamics, work and energy, conservation of energy, conservation of momentum, collisions, rotational kinematics and dynamics, equilibrium of rigid bodies. Prerequisites: Mathematics 20A and concurrent enrollment in Mathematics 20B. (W)

4B. Physics for Physics Majors—Mechanics, Fluids, Waves, and Electrodynamics (4)
Continuation of Physics 4A covering oscillations, gravity, fluid statics and dynamics, waves in elastic media, sound waves, heat and the first law of thermodynamics, kinetic theory of gases, second law of thermodynamics, gaseous mixtures and chemical reactions. Prerequisites: Physics 4A, Mathematics 20B, and concurrent enrollment in Mathematics 20C. (S)

4C. Physics for Physics Majors—Electricity and Magnetism (4)
Continuation of Physics 4B covering charge and Coulomb's law, electric field, Gauss's law, electric potential, capacitors and dielectrics, current and resistance, magnetic field, Ampere's law, Faraday's law, inductance, magnetic properties of matter, LRC circuits, Maxwell's equations. Prerequisites: Physics 4B, Mathematics 20C, and concurrent enrollment in Mathematics 20E. (F)

4D. Physics for Physics Majors—Electromagnetic Waves, Optics, and Special Relativity (4)
Continuation of Physics 4C covering electromagnetic waves and the laws of light, cavities and wave guides, electromagnetic radiation, reflection and refraction with applications to geometrical optics, interference, diffraction, holography, special relativity. Prerequisites: Physics 4C, Mathematics 20E, and prior or concurrent enrollment in Mathematics 20D. (W)

4E. Physics for Physics Majors—Quantum Physics (4)
Continuation of Physics 4D covering experimental basis of quantum mechanics: Schrödinger equation and simple applications; spin; structure of atoms and molecules; selected topics from solid state, nuclear, and elementary particle physics. Prerequisites: Physics 4D, Mathematics 20D, 20E, and prior or concurrent enrollment in Mathematics 20F. (S)

5. The Universe (4)
Introduction to astronomy. Topics include the earth's place in the universe; the atom and light; the birth, life, and death of stars; the Milky Way galaxy; normal and active galaxies; and cosmology. Physics 5 or 7, and SIO 10 and 30 form a three-quarter sequence. Students may not receive credit for both Physics 5 and Physics 7. Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (F,S)

6. Introduction to Astronomy (4)
Introduction to astronomy and astrophysics. Topics same as Physics 5. This course uses basic pre-calculus level mathematics (algebra, exponential and logarithmic functions, trigonometry). Relations of the proportions, logs, similar triangles). Physics 5 or 7 and Earth Sciences 10 and 30 form a three-quarter sequence. Students may not receive credit for both Physics 5 and Physics 7. Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (W)

7. Physics of Everyday Life (4)
Examines phenomena and technology encountered in daily life from a physics perspective. Topics include waves, musical instruments, telecommunication, sports, appliances, transportation, computers, and energy sources. Physics concepts will be introduced and discussed as needed employed in the algebra. No prior physics knowledge is required. Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (S)

8. The Solar System (4)
A non-technical exploration of our Solar System and other planetary systems for non-science majors. The sun, terrestrial and giant planets, satellites, asteroids, comets and meteors. The formation of planetary systems, space exploration, the development and search for life. (F)

10. Concepts in Physics (4)
This is a one-quarter general physics course for nonscience majors. Topics covered are motion, energy, heat, waves, electric current, radiation, light, atoms and molecules, nuclear fission and fusion. This course emphasizes concepts with minimal mathematical formulation. Prerequisite: college algebra or equivalent. Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (W)

11. Survey of Physics (4)
Survey of physics for non-science majors with strong mathematical background, including calculus. Physics 11 describes the laws of motion, gravity, energy, momentum, and relativity. A laboratory component consists of two experiments with gravity and conservation principles. Prerequisites: Mathematics 10A or 20A and concurrent enrollment in Math 108 or 208. (F)

12. Energy and the Environment (4)
A course covering energy fundamentals, energy use in an industrial society and the impact of large-scale energy consumption. It addresses topics on fossil fuel, heat engines, solar energy, nuclear energy, energy conservation, transportation, air pollution and global effects. Concepts and quantitative analysis. (S)

87. Freshman Seminar in Physics and Astrophysics (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

98. Directed Group Study (2)
Directed group study on a topic by special arrangement with a faculty member. (P/NP grading only)

99. Independent Study (2)
Independent reading or research on a topic by special arrangement with a faculty member. (P/NP grading only)

UPPER-DIVISION

100A. Electromagnetism (4)
Coulomb's law, electric fields, electrostatics; conductors and dielectrics; steady currents, elements of circuit theory. Four hours lecture. Prerequisites: Physics 2C or 4D, Mathematics 20D, 20E, 20F. (Concurrent enrollment in Math. 20F permitted.) (F)

100B. Electromagnetism (4)
Magnetic fields and magnetostatics, magnetic materials, induction, AC circuits, displacement currents; development of Maxwell's equations. Four hours lecture. Prerequisite: Physics 100A. (W)

100C. Electromagnetism (4)
Electromagnetic waves, radiation theory; application to optics; motion of charged particles in electromagnetic fields; relation of electromagnetism to relativistic concepts. Four hours lecture. Prerequisite: Physics 100B. (S)

105A. Mathematical and Computational Physics (4)
A combined analytic and mathematically-based numerical approach to the solution of common applied mathematics problems in physics and engineering. Topics: Fourier series and integrals, special functions, initial and boundary value problems, Green's functions; heat, Laplace and wave equations. Prerequisites: Mathematics 20E and 20F and Physics 4E or 2D. (F)

105B. Mathematical and Computational Physics (4)
A continuation of Physics 105A covering selected advanced topics in applied mathematical and numerical methods. Topics include statistics, diffusion and Monte-Carlo simulations; Laplace equation and numerical methods for non-separable geometries; waves in inhomogeneous media, WKBJ analysis; nonlinear systems and chaos. Prerequisite: Physics 105A. (W)

110A. Mechanics (4)
Phase flows, bifurcations, linear oscillations, calculus of variations, Lagrangian dynamics, conservation laws, central forces, systems of particles, collisions, coupled oscillations. Four-hour lecture. Prerequisites: Physics 2C or 4D, Mathematics 20D, 20E, 20F (concurrent enrollment in Mathematics 20F permitted). (F)

110B. Mechanics (4)
Noninertial reference systems, dynamics of rigid bodies, Hamilton's equations, Liouville's theorem, chaos, continuum mechanics, special relativity. Prerequisites: Physics 110A and Mathematics 20E. (W)

510/111/Physics 111. Introduction to Ocean Waves and Tides (4)
This course will cover a broad range of physical oceanography topics, including linear dynamics of surface gravity waves, dispersion relations, spectral descriptions, group velocity, shoaling waves, tidal theory, edge waves, Coriolis force, the tide-generating force, Laplace's tide equations.
120A. Physical Measurements (4-4)
A laboratory-lecture course in physical measurements with an emphasis on electronic methods. Topics include circuit theory, special circuits. Fourier analysis, noise, transmission lines, transistor theory, amplifiers, feedback, operational amplifiers, oscillators, pulse circuits, digital electronics. Three hours lecture, four hours laboratory. Prerequisites: Physics 2CL and 2DL, Physics 100A, (F) Course materials fee is required.

121. Experimental Techniques (4)
A laboratory-lecture courses providing content and experiences useful in modern physics laboratories. Topics include: mechanics of design and machining; mechanics of materials; thermal design/control; vacuum and cryogenic technologies; optical raytracing and design; practical electronics; computer interface to scientific equipment. Prerequisite: Physics 120A. (W)

130A. Quantum Physics (4)
Phenomena which led to the development of quantum mechanics. Wave mechanics, the Schrödinger equation, interpretation of the wave function, the uncertainty principle, piece-wise constant potentials, simple harmonic oscillator, central field and the hydrogen atom. Observables and measurements. Four hours lecture. Prerequisites: Physics 2C or 2D, 4E, or equivalent. (S)

130B. Quantum Physics (4)
Matrix mechanics, angular momentum and spin, Stern-Gerlach experiments, dynamics of two-state systems, approximation methods, the complete hydrogen spectrum, identical particles. Four hours lecture. Prerequisite: Physics 130A. (F)

130C. Quantum Physics (4)
Scattering theory, symmetry and conservation laws, systems of interacting particles, interaction of electromagnetic radiation with matter, Fermi golden rule, the relativistic electron. Prerequisites: Physics 100C or equivalent, 130B. (W)

133/219. Condensed Matter/Materials Science Laboratory (4)
A project-oriented laboratory course utilizing state-of-the-art experimental techniques in materials science. The course prepares students for research in a modern condensed matter-matter materials science laboratory. Under supervision, the students develop their own experimental ideas after investigating current research literature. With the use of sophisticated state-of-the-art instrumentation students conduct research, write a research paper, and make verbal presentations. Prerequisites: Physics 2CL and 2DL for undergraduates; Physics 152A or Physics 211A for graduate students. (S) Course materials fee is required.

137. String Theory (4)
Quantum mechanics and gravity. Electromagnetism from gravity and extra dimensions. Unification of forces. Quantum black holes. Properties of strings and branes. Prerequisites: Physics 100A and 110A or consent of instructor, Physics 130A may be taken concurrently. (S)

140A. Statistical and Thermal Physics (4)
Integrated treatment of thermodynamics and statistical mechanics; statistical treatment of entropy, review of elementary probability theory, canonical distribution, partition function, free energy, phase equilibrium, introduction to ideal quantum gas. Prerequisite: Physics 130A, or consent of instructor. (F)

140B. Statistical and Thermal Physics (4)
Applications of the theory of ideal quantum gases in condensed matter physics, nuclear physics and astrophysics; advanced thermodynamics, the third law, chemical equilibrium, low temperature physics; kinetic theory and transport in quantum equilibrium systems; introduction to critical phenomena including mean field theory. Prerequisite: Physics 140A, or consent of instructor. (W)

141. Computational Physics I: Probabilistic Models and Simulations (4)
Project-based computational physics laboratory course with student's choice of Fortran90/95, or C/C++. Applications from materials science to the structure of the early universe are chosen from molecular dynamics, classical and quantum Monte Carlo methods, physical Langevin/Fokker-Planck processes, and other modern topics. Graduate students will do advanced projects. Prerequisite: Use of probability or consent of instructor. Conjoined with Physics 241. (W)

142. Computational Physics II: PDE and Matrix Models (4)
Project-based computational physics laboratory course for modern physics and engineering problems with student's choice of Fortran90/95, or C/C++. Applications of finite difference PDE models are chosen from quantum mechanics and nanodevices, fluid dynamics, electromagnetism, materials physics, and other modern topics. Graduate students will do advanced projects. Prerequisite: upper-division standing or consent of instructor. Conjoined with Physics 242. (S)

151. Elementary Plasma Physics (4)
Particle motions, plasmas as fluids, waves, diffusion, equilibrium, and stability, nonlinear effects, controlled fusion. Three hours lecture. Prerequisite: Math. 200 or consent of instructor. Physics 100 (B,C) or ECE 107 and Physics 110A are suggested. Cross-listed with MAE 117A. (S)

152A. Condensed Matter Physics (4)
Physics of the solid state. Binding mechanisms, crystal structures and symmetries, diffraction, reciprocal space, phonons, free and nearly free electron models, energy bands, solid state thermodynamics, kinetic theory and transport, semiconductors. Prerequisites: Physics 130A or Chemistry 140A. (W)

152B. Electronic Materials (4)

154. Elementary Particle Physics (4)
The constituents of matter (quarks and leptons) and their interactions (strong, electromagnetic, and weak). Symmetries and conservation laws. Fundamental processes involving quarks and leptons. Unification of weak and electromagnetic interactions. Particle-astrophysics and the Big Bang. Prerequisites: Physics 130B. (W)

155. Nonlinear Dynamics (4)
Qualitative analysis and dissipative dynamical systems: stability of orbits, integrability of Hamiltonian systems, chaos and nonperiodic motion, transition to chaos. Examples to be drawn from mechanics, fluid mechanics, and related physical systems. Numerical work and graphical display and interpretation will be emphasized. Three hours lecture. Prerequisites: Physics 100B and 110B. (S)

160. Stellar Astrophysics (4)
Introduction to stellar astrophysics: observational properties of stars, solar physics, radiation and energy transport in stars, stellar spectroscopy, nuclear processes in stars, stellar structure and evolution, degenerate matter and compact stellar objects, supernovae and nucleosynthesis. Physics 160, 161, and 162 may be taken as a three-quarter sequence for students interested in pursuing graduate study in astrophysics or individually as topics of interest. Prerequisite: Physics 2A. 2B, 2C, 2D or 4A, 4B, 4C, 4D, 4E. (F)

161. Black Holes and The Milky Way Galaxy (4)
The structure and content of the Milky Way galaxy and the physics of black holes. Topics will be selected from general relativity, theory and observation of black holes, galactic X-ray sources, galactic structure, physical processes in the interstellar medium, star formation. Physics 160, 161, and 162 may be taken as a three-quarter sequence for students interested in pursuing graduate study in astrophysics or individually as topics of interest. Prerequisite: Physics 2A, 2B, 2C, 2D or 4A, 4B, 4C, 4D, 4E. (W)

162. Galaxies and Cosmology (4)
The structure and properties of galaxies, galaxy dynamics and dark matter, the expanding universe, plus some of the following topics: the big bang, early universe, galaxy formation and evolution, large scale structure, active galax- ies, quasars. Physics 160, 161, and 162 may be taken as a three-quarter sequence for students interested in pursuing graduate study in astrophysics or individually as topics of interest. Prerequisites: Physics 2A, 2B, 2C, 2D or 4A, 4B, 4C, 4D, 4E. (S)

170. Medical Instruments: Principles and Practice (4)
The principles and clinical applications of medical diag- nostic instruments, including electromagnetic measure- ments, spectroscopy, microscopy, ultrasound, X-rays, MRI, tomography, lasers in surgery, fiber optics in diagnostics. Prerequisite: Physics 1C, or 2C, or equivalent. (F)

171/271. Biophysics of Neurons and Networks (4-4)
Fundamental limits to measurements on nervous systems, the biophysics of excitable membranes and neurons, and the fundamentals of recurrent neuronal networks. The em- phasis is on information processing by the nervous system through physical reasoning and mathematical analysis. Three hours lecture. The graduate version, Physics 271, will include a report at the level of a research proposal. Prerequisites: Physics 100A and 110A, or Physics 101A and 102A, or Chemistry 6C and Physics 140A, for graduate students, consent of instructor. The graduate version, Physics 271, will include a report at the level of a research proposal. (F)

172/272. Biophysics of Molecules (4-4)
Physical concepts and techniques used to study the structure and function of biological molecules, the thermodynamics and kinetics of biological activity, and physical descriptions of biological processes. Examples from enzyme action, protein folding, photobiology, and molecular motors. Three hour lecture. Prerequisites: Physics 100A and 110A, or Chemistry 6C and Physics 130A, or graduate students, consent of instructor. The graduate version, Physics 272, will include a report at the level of a research proposal. (W)

173. Modern Physics Laboratory: Biological and Quantum Physics (4)
A selection of experiments in contemporary physics and biophysics. Students select among pulsed NMR, Mossbauer, Zeeman effect, light scattering, holography, optical trapping, voltage clamp and genetic transcription of ion channels in oocytes, fluorescent imaging, and flight control in flies. Prerequisites: Physics 120A, BILD 1, and Chemistry 6BL. (S)

180/280. Teaching and Learning Physics (4)
How people learn and understand key concepts in physics. Readings in physics, physics education research, and cogni- tive science. Field work teaching and evaluating pre-college and undergraduate students. Useful for students interested in teaching and learning physical sciences. Prerequisites: Physics 1, 2, or 4 series, or consent of instructor. Cross-listed with EDS 105. (S)

191. Undergraduate Seminar on Physics (1)
Undergraduate seminars organized around the research interests of various faculty members. Prerequisite: Physics 2A or 4A series.

192. Senior Seminar in Physics (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in Physics (at the upper-division level). Senior Seminars may be offered in several physics departments. There will be from about one to quarter to quarter. Senior Seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors.

195. Physics Instruction (2–4)
Students will be responsible for and teach a class section of a lower-division physics course. They will also attend a weekly meeting on teaching methods and materials conducted by the professor who supervises their teaching. (P/ NP grades only.) Prerequisite: consent of instructor. (F,WS)
197. Physics Internship (4) An enrichment program which provides work experience with industry, government offices, etc., under the supervision of a faculty member and industrial supervisor. Prerequisite: Completion of 90 units with 2.5 GPA and consent of faculty advisor.

198. Directed Group Study (2 or 4) Direct group study of a topic or in a field not included in the regular departmental curriculum. (P/NP grades only) Prerequisites: consent of instructor and departmental chair. (F,W,S)

199. Research for Undergraduates (2 or 4) Independent reading or research on a problem by special arrangement with a faculty member. (P/NP grades only) Prerequisites: consent of instructor and departmental chair. (F,W,S)

199H. Honors Thesis Research for Undergraduates (2–4) Honors thesis research for seniors participating in the Honors Program. Research is conducted under the supervision of a physics faculty member. Prerequisite: admission to the Honors Program in physics. (F,W,S)

GRADUATE

200A. Theoretical Mechanics (4) Lagrangian equations and Hamilton’s principle; symmetry and conjugate variables. Applications to charged particle motion; central forces and scattering theory; small oscillations; anharmonic oscillations; rigid body motion; continuum mechanics. Prerequisite: Physics 110B or equivalent. (F)

200B. Theoretical Mechanics (4) Hamilton’s equations, canonical transformations; Hamilton-Jacobi theory; action-angle variables and adiabatic invariants; introduction to canonical perturbation theory, nonintegrable systems and chaos; Liouville equation; ergodicity and mixing; entropy; statistical ensembles. Prerequisite: Physics 200A. (W)

201. Mathematical Physics (5) An introduction to mathematical methods used in theoretical physics. Topics include: a review of complex variable topics in particle theory. Unified gauge theories, particle cosmology, and special quantum chromodynamics and the weak interactions. Modern applications of the renormalization group in continuation of 211A. Deals with collective effects in solids arising from interactions between constituents. Topics include electron-electron and electron-phonon interactions, screening, band structure effects, Landau Fermi liquid theory. Magnetism in metals and insulators, superconductivity; occurrence, phenomenology, and microscopic theory. Prerequisites: Physics 210A, 211A. (Offered in alternate years) (W)

212A. Quantum Mechanics (4) Hilbert space formulation of quantum mechanics and application to simple systems: states and observables, uncertainty relations and measurements, time evolution, and mixed states and density matrix. Symmetries; commuting observables and symmetries, rotation group representations, Clebsch-Gordan coefficients, Wigner-Eckhardt theorem, and discrete symmetries (parity, time reversal, etc.). Prerequisite: Physics 130B or equivalent. (F)

212B. Quantum Mechanics (4) Time independent perturbation theory: non-degenerate and degenerate cases, Zeeman effect, fine structure, exclusion principle, and many-electron atoms. Time dependent perturbation theory: interaction picture and Dyson series, transition rates. Radiation theory: quantization of EM field, calculation of atomic line transition rates, line width, and spontaneous decay. Prerequisite: Physics 212A. (W)

215A. Particles and Fields (4) The first quarter of a three-quarter course on field theory and elementary particle physics. Topics covered include the relation between symmetries and conservation laws, the calculation of cross sections and reaction rates, covariant perturbation theory, and quantum electrodynamics. (F)

215B. Particles and Fields (4) Continuation of 215A. Gauge theory quantization by means of path integrals, SU(3) symmetry and the quark model, spontaneous symmetry breakdown, introduction to QCD and the Glashow-Weinberg-Salam model of weak interactions, basic issues of renormalization. Prerequisite: Physics 215A. (W)

215C. Particles and Fields (4) Modern applications of the renormalization group in quantum chromodynamics and the weak interactions. Unified gauge theories, particle cosmology, and special topics in particle theory. Prerequisites: Physics 215A–B. (Offered in alternate years) (S)

217. Field Theory and the Renormalization Group (4) Application of field theoretic and renormalization group methods to problems in condensed matter, or particle physics. Topics will vary and may include: phase transition and critical phenomena, many body quantum systems; quantum chromodynamics and the electroweak model. Prerequisite: Physics 210A.

218A. Plasma Physics (4) The basic physics of plasmas is discussed for the simple case of an unmagnetized plasma. Topics include: thermal equilibrium statistical properties, fluid and Landau theory of electron and ion plasma waves, velocity space instabilities, quasi-linear theory, fluctuations, scattering or radiation, Fokker-Planck equation. (F)

218B. Plasma Physics (4) This course deals with magnetized plasma. Topics include: Appleton-Hartree theory of waves in cold plasma, waves in warm plasma (Bernstein waves, cyclotron damping). MHD equations, MHD waves, low frequency modes, and the adiabatic theory of particle orbits. Prerequisite: Physics 218A. (W)

218C. Plasma Physics (4) This course deals with the physics of confined plasmas with particular relevance to controlled fusion. Topics include: topology of magnetic fields, confined plasma equilibria, energy principles, ballooning and kink instabilities, resistive MHD modes (tearing, rippling and pressure-driven), gyrokinetic theory, microstabilities and anomalous transport, and laser-plasma interactions relevant to inertial fusion. Prerequisite: Physics 218B. (S)

133/219. Condensed Matter/Materials Science Laboratory (4) A project-oriented laboratory course utilizing state-of-the-art experimental techniques in materials science. The course prepares students for research in a modern condensed matter/materials science laboratory. Under supervision, the students develop their own experimental ideas after investigating current research literature. With the use of sophisticated state-of-the-art instrumentation students conduct research, write a research paper, and make verbal presentations. Prerequisites: Physics 2CL and 2DL for undergraduates; Physics 152A or Physics 211A for graduate students. (S)

220. Group Theoretical Methods in Physics (4) Study of group theoretical methods with applications to problems in high energy, atomic, and condensed matter physics. Representation theory, tensor methods, Clebsch-Gordan series. Young tableaux. The course will cover discrete groups, Lie groups and Lie algebras, with emphasis on permutation, orthogonal, and unitary groups. Prerequisite: Physics 212C. (S)

221A. Nonlinear and Nonequilibrium Dynamics of Physical Systems (4) An introduction to the modern theory of dynamical systems and applications. Topics include maps and flows, bifurcation theory and normal form analysis, chaotic attractors in dissipative systems, Hamiltonian dynamics and the KAM theorem, and time series analysis. Examples from real physical systems will be stressed throughout. Prerequisite: Physics 221B (Offered in alternate years) (W)

221B. Nonlinear and Nonequilibrium Dynamics of Physical Systems (4) Nonlinear dynamics in spatially extended systems. Material to be covered includes fluid mechanical instabilities, the amplitude equation approach to pattern formation, reaction-diffusion dynamics, integrable systems and solitons, and an introduction to coherent structures and spatio-temporal chaos. Prerequisites: Physics 210B and 221A. (Offered in alternate years) (S)

222A. Elementary Particle Physics (4) Weak interactions; neutrino physics; CP, and CP violation; electroweak gauge theory and symmetry breaking. Design of detectors and experimental techniques for new phenomena. Prerequisites: Physics 214. (W)

223. Stellar Structure and Evolution (4) Energy generation, flow, hydrostatic equilibrium, equation of state. Dependence of stellar parameters (central surface temperature, radius, luminosity, etc.) on stellar mass and
relation to physical constants. Relationship of these parameters to the H-R diagram and stellar evolution. Stellar interiors, opacity sources, radiative and convective energy flow. Nuclear reactions, neutrino processes. Polytopic models. White dwarfs and neutron stars. Prerequisites: Physics 130A/B/C or equivalent. (S/U grades permitted.) (Offered in alternate years.) (F) 224. Physics of the Interstellar Medium (4) Gaseous nebulae, molecular clouds, ionized regions, and dust. Low energy processes in neutral and ionized gases. Interaction of matter with radiation, emission and absorption processes, formation of atomic lines. Energy balance, steady state temperatures, and the physics and properties of dust. Masers and molecular line emission. Dynamics and shocks in the interstellar medium. Prerequisites: Physics 130A–B or equivalent, Physics 140A–B or equivalent. (S/U grades permitted.) (Offered in alternate years.) 225A–B. General Relativity (4–4) This is a two-quarter course on gravitation and the general theory of relativity. The first quarter is intended to be offered every year and may be taken independently of the second quarter. The second quarter will offer material in alternate years. Topics covered in the first quarter include special relativity, differential geometry, the equivalence principle, the Einstein field equations, and experimental and observational tests of gravitation theories. The second quarter will focus on more advanced topics, including gravitational collapse and black holes, gravitational radiation, cosmology, and quantum gravitation. (225B offered in alternate years.) (F,W) 226. Galaxies and Galactic Dynamics (4) The structure and dynamics of galaxies. Topics include potential theory, the theory of stellar orbits, self-consistent equilibria of stellar systems, stability and dynamics of stellar systems including relaxation and approach to equilibrium. Collisions between galaxies, galactic evolution, dark matter, and galaxy formation. Prerequisite: consent of instructor. (Offered in alternate years.) 227. Cosmology (4) An advanced survey of topics in physical cosmology. The Friedmann models and the large-scale structure of the universe, including the observational determination of Ho (the Hubble constant) and q0 (the deceleration parameter). Galaxy number counts. A systematic exposition of the physics of the early universe, including vacuum phase transitions; inflation; the generation of net baryon number, fluctuations, topological defects and textures. Primordial nucleosynthesis, both standard and nonstandard models. Growth and decay of adiabatic and isocurvature density fluctuations. Discussion of dark matter candidates and contrasts from cosmological observation and experiment. Nucleosynthesis and cosmochronology and the determination of the age of the universe. Prerequisite: consent of instructor. (Offered in alternate years.) 228. High-Energy Astrophysics and Compact Objects (4) The physics of compact objects, including the equation of state of dense matter and stellar stability theory. Maximum mass of neutron stars, white dwarfs, and super-massive objects. Black holes and accretion disks. Compact X-ray sources and transient phenomena, including X-ray and g-ray bursts. The fundamental physics of electromagnetic radiation mechanisms: synchrotron radiation, Compton scattering, thermal and nonthermal bremsstrahlung, pair production, pulsars. Particle acceleration models, neutrino production mechanisms, supernovae, and neutron star production. Prerequisites: Physics 130A–B/C or equivalent. (Offered in alternate years.) 230. Advanced Solid-State Physics (4) Selection of advanced topics in solid-state physics; material covered may vary from year to year. Examples of topics covered: disordered systems, surface physics, strong-coupling superconductivity, quantum Hall effect, low-dimensional solids, heavy fermion systems, high-temperature superconductivity, solid and liquid helium. Prerequisite: Physics 211B. (S) 152B/232. Electronic Materials (4) Physics of electronic materials. Semiconductors: bands, donors and acceptors, devices. Metals: Fermi surface, screening, optical properties. Insulators: dia/-ferro-electrics, displacive transitions. Magnets: dia/-ferro-/antiferromagnetism, phase transitions, low temperature properties. Superconductors: pairing, Meissner effect, flux quantization, BCS theory. Prerequisite: Physics 152A, Phys. 211 or consent of instructor. Graduate students in Phys. 232 will complete a special topics paper. (S) 235. Nonlinear Plasma Theory (4) This course deals with nonlinear phenomena in plasmas. Topics include: orbit perturbation theory, stochasticity, Arnold diffusion, nonlinear wave-particle and wave-wave interactions, resonance broadening, basics of fluid and plasma turbulence, closure methods, models of coherent structures. Prerequisite: Physics 218C or consent of instructor. (Offered in alternate years.) (W) 239. Special Topics (1–3) From time to time a member of the regular faculty or a resident visitor will find it possible to give a self-contained short course on an advanced topic in his or her special area of research. This course is not offered on a regular basis, but it is estimated that it will be given once each academic year. (S/U grades permitted.) 141/241. Computational Physics I: Probabilistic Models and Simulations (4–4) Project-based computational physics laboratory course with student choice of Fortran90 or C/C++. Applications from materials science to the structure of the early universe are chosen from molecular dynamics, classical and quantum Monte Carlo methods, physical Langvin/Fokker-Planck processes, and other modern topics. Graduate students will do advanced projects. Prerequisites: upper-division standing or consent of instructor; graduate standing for 241. (W) 142/242. Computational Physics II: PDE and Matrix Models (4–4) Project-based computational physics laboratory course for modern physics and engineering problems with student’s choice of Fortran90/95 or C/C++. Applications from finite element PDE models are chosen from quantum mechanics and nanodevices, fluid dynamics, electromagnetism, materials physics, and other modern topics. Graduate students will do advanced projects. Prerequisites: upper-division standing; graduate standing for 242. (S) 243. Stochastic Methods (4) Introduction to methods of stochastic modeling and simulation. Topics include: random variables; stochastic processes; Markov processes; one-step processes; the Fokker-Planck equation and Brownian motion; the Langevin approach; Monte-Carlo methods; fluctuations and the Boltzmann equation; and stochastic differential equations. (F) 244. Parallel Computing in Science and Engineering (4) Introduction to basic techniques of parallel computing, the design of parallel algorithms, and their scientific and engineering applications. Topics include: parallel computing platforms; message-passing model and software; design and application of parallel software packages; parallel visualization; parallel applications. (S) 250. Condensed Matter Physics Seminar (0–1) Discussion of current research in physics of the solid state and of other condensed matter. (S/U grades only.) (F,W,S) 251. High-Energy Physics Seminar (0–1) Discussions of current research in high-energy physics, principal in the field of elementary particles. (S/U grades only.) (F,W,S) 252. Plasma Physics Seminar (0–1) Discussions of recent research in plasma physics. (S/U grades only.) (F,W,S) 253. Astrophysics and Space Physics Seminar (0–1) Discussions of recent research in astrophysics and space physics. (S/U grades only.) (F,W,S) 257. High-Energy Physics Special Topics Seminar (0–1) Discussions of current research in high-energy physics. (S/U grades only.) (F,W,S) 258. Astrophysics and Space Physics Special Topics Seminar (0–1) Discussions of current research in astrophysics and space physics. (S/U grades only.) (F,W,S) 260. Physics Colloquium (0–1) Discussions of recent research in physics directed to the entire physics community. (S/U grades only.) (F,W,S) 261. Seminar on Physics Research at UCSD (0–1) Discussions of current research conducted by faculty members in the Department of Physics. (S/U grades only.) (W,S) 266. Recent Topics in Condensed Matter Physics (1–3) The course is dedicated to a topic determined by the area of condensed matter physics through lectures given by graduate students and postdocs. The course teaches practical skills, delivering research lectures, and answering questions in front of a research audience. Prerequisite: physics graduate students in good standing. (F,W,S) 171/271. Biophysics of Neurons and Networks (4–4) Fundamental limits to measurements on nervous systems, the biophysics of excitable membranes and neurons, and the fundamentals of recurrent neuronal networks. The emphasis is on information processing by the nervous system through physiological and mathematical analysis. Three hours lecture. The graduate version, Physics 271, will include a report at the level of a research proposal. Prerequisites: Physics 100A and 110A, BILD 1, Chemistry 6C and Physics 140A, for graduate students, consent of instructor. The graduate version, Physics 271, will include a report at the level of a research proposal. (F) 172/272. Biophysics of Molecules (4–4) Physical concepts and techniques used to study the structure and function of biological molecules, the thermodynamics and kinetics of biological activity, and physical descriptions of biological processes. Examples from enzyme action, protein folding, photobiology, and molecular motors. Three hours lecture. Prerequisites: Physics 100A and 110A, BILD 1, Chemistry 6C and Physics 130A and graduate students consent of instructor. The graduate version, Physics 272, will include a report at the level of a research proposal. (W) 180/280. Teaching and Learning Physics (4) How people learn and understand key concepts in physics. Readings in physics, physics education research, and cognitive science. Field work teaching and evaluating pre-college and college students. Useful for students interested in teaching and learning physics. Undergraduate students are required to read and discuss papers in class. Graduate students are expected to read the papers and prepare an annotated bibliography on the background literature. The instructor will lead the in-class discussion on the topics covered in the papers. Prerequisites: Physics 1, 2, or 4, series, or consent of instructor. 295. M.S. Thesis Research in Materials Physics (1–12) Directed research on M.S. dissertation topic. (F,W,S) 297. Special Studies in Physics (1–4) Studies of special topics in physics under the direction of a faculty member. Prerequisites: consent of instructor and departmental vice chair, education. (S/U grades permitted.) (F,W,S) 298. Directed Study in Physics (1–12) Research studies under the direction of a faculty member. (S/U grades permitted.) (F,W,S) 299. Thesis Research in Physics (1–12) Directed research on dissertation topic. (F,W,S) 500. Instruction in Physics Teaching (1–4) How students in the Department of Physics. (S/U grades only.) (W,S)
Barbara Walter, Ph.D.

THE MAJOR PROGRAM

Political science addresses some of the fundamental problems facing human society. Questions concerning world peace, government policies aimed at achieving economic stability and growth, the management of environmental quality, control over political competition, the possibility of using law to affect social and political change, and the gap between the rich and poor in the United States and abroad are all on the research agenda of contemporary political scientists. The general purpose of the major is to address these and other issues systematically, and, simultaneously, to raise the broad theoretical questions which can help students relate today’s political debates to those debates about politics which have kept a theoretical tradition alive for over 2,000 years.

Students may major in political science as a general program of study, or they may concentrate in one of six areas: (1) American politics, (2) comparative politics, (3) international relations, (4) political theory, (5) public law, and (6) public policy. All majors in political science must satisfy the following sixteen courses: PS 30 (Political Inquiry), three of the four lower-division courses from 10, 11, 12, 13 and twelve upper-division courses. (Note: Lower-division courses PS 27 and PS 40 may not be used to satisfy requirements in these fields.) Moreover, as students may major in political science as a general program of study, or they may concentrate in one of six areas: (1) American politics, (2) comparative politics, (3) international relations, (4) political theory, (5) public law, and (6) public policy. All majors in political science must satisfy the following sixteen courses: PS 30 (Political Inquiry), three of the following four lower-division courses from 10, 11, 12, 13 and twelve upper-division courses.

REQUIREMENTS FOR MAJOR IN POLITICAL SCIENCE WITHOUT AN AREA OF CONCENTRATION

1. Three of the four lower-division courses from 10, 11, 12, 13.
2. Political Science 30
3. Any twelve upper-division political science courses

REQUIREMENTS FOR MAJOR IN POLITICAL SCIENCE WITH AN AREA OF CONCENTRATION

Major in Political Science/American Politics

1. Lower-division required: PS 10 (in addition to two other lower-division courses from 11, 12, 13)
2. Political Science 30
3. Five upper-division American courses:
   a. at least two of which must be from the 100 sequence: 100A-B-C, 100DA, 100E, 100H, 100J, 100K, 100L, 100M, 100N

Major in Political Science/Comparative Politics

1. Lower-division required: PS 11 (in addition to two other lower-division courses from 10, 12, 13)
2. Political Science 30
3. Five upper-division courses, including
   a. at least one from the following thematic courses: 120K, 122A-B, 123, 124A, 125, 125A, 126AA-AB, 127, 136A-B-C, 137A, 150A-B
   b. and at least one each from two of the following three regional areas: Asia: 121, 121B, 130H, 131C, 132C, 133A, 133D, 133D-D, 133G, 133J
      Europe: 120A-B, 120H, 120J-K, 126AA-AB, 130A, 130D
      Latin America: 134AA, 134B, 134D, 134I

Major in Political Science/International Relations

1. Lower-division required: PS 12 (in addition to two other lower-division courses from 10, 11, 13)
2. Political Science 30
3. Five upper-division IR courses with at least one each from the following two groups:

Major in Political Science/Political Theory

1. Three of four lower-division courses from 10, 11, 12, 13
2. Political Science 30
3. 110A-B-C

Major in Political Science/Public Law

1. Lower-division required: PS 10 (in addition to two other lower-division courses from 11, 12, 13)
2. Political Science 30
3. Five of the following: 100A-B, 102L, 104A-B-C-D, 104F, 104I, 104L-M

Major in Political Science/Public Policy

1. Lower-division required: PS 10 (in addition to two other lower-division courses from 11, 12, 13)
2. Political Science 30
3. 160AA
4. One of 160AB, 167A, 168
5. Two of 100A-B-C, 100E-F-G, 100I-J
6. One of 102B-C, 102E, 102L, 103A, 103B, 142A, 142J, 150A-B, 162, 163, 165, 166F

Two upper-division courses in a field may be substituted for that field’s lower-division course. However, these courses cannot also be used to satisfy the upper-division course requirements for a concentration of that field. Since course offerings change from year to year, students are strongly advised to consult the department for the latest listing of courses before preregistration.

Agreements signed between UC San Diego and several community colleges allow students to apply some community college courses toward lower-division course requirements for the major. Transfer students must, however, take at least one of the lower-division courses (10, 11, 12, 13) in residence at UCSD. Courses taken elsewhere may be credited toward the major. Please check with an undergrad student affairs advisor for more information on credit for courses taken elsewhere.

Students who pass the Advanced Placement (AP) Tests in American or Comparative Politics may petition to be exempted from taking PS 10 or 11 (respectively). Effective fall 2004, students must pass with a score of 5 to be exempted from taking PS 10 or 11.

At least nine courses in political science must be taken in residence at UCSD. A total maximum of six courses may be taken elsewhere and applied toward the major. This applies to transfer students, students who pass the AP exam(s), as well as students who study abroad on the Education Abroad Program (EAP) or the Opportunities Abroad Program (OAP). Students planning to transfer course work completed elsewhere are urged to consult an undergraduate student affairs advisor.

Double majors who include political science as one of their two majors must fulfill the requirements of both programs. Please consult an undergraduate student affairs advisor for more information.

Students must maintain an overall 2.0 GPA in the major. To be counted toward satisfying the requirements for the major, upper- and lower-division courses must be completed with a C– or better grade. Courses taken to satisfy requirements for the major may not be taken Pass/Not Pass with the exception of a maximum of two independent study courses (PS 199).

Honors candidates for departmental honors are required to take PS 191A and B in which they write a senior thesis. To be admitted to the Honors Seminar a student must be of senior standing in the first quarter of the seminar, have a minimum GPA of 3.6 in political science, have completed all lower-division requirements including Political Science 30 and five upper-division courses. Also, students must have an advisor prior to enrolling in the Honors Seminar. These courses may be counted toward the upper-division requirement.

CAREER GUIDANCE

The premise of our educational philosophy is that the best professional preparation for productive careers which we can provide is one which is broad, theoretical, and only indirectly related to the current job market. Our majors graduate into a wide range of career options.

Many political science majors at UCSD will seek admission to a law school. Although law schools make no recommendation concerning the usefulness of any undergraduate major, a B.A. in political science should be seen as a useful complement to a law degree. Students who take courses in American government, policy analysis, and law and politics find that they develop a keen understanding of the role of law in the general political process. This helps students understand the limits and possibilities of the legal process in fostering change or in preserving the status quo. This same curriculum provides a solid foundation for a career in journalism. Students with any specific questions regarding law are advised to consult with career services.

Increasingly, political science majors are preparing for careers in business or as policy analysts in both the public and private sectors. Many of these students pursue advanced degrees in public policy or study for a master’s in business administration. Students interested in this option should look into public policy, American, or comparative politics as an area of concentration. Some political science majors are interested in careers in international organization or diplomacy. These students should look into international relations as an area of concentration. In addition, a broad array of courses in comparative politics is essential for anyone interested in a career of international service.

A political science major offers excellent preparation for teaching in the elementary schools. If you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program for information about the prerequisite and professional preparation requirements. It is recommended that you contact TEP as early as possible in your academic career.

Students interested in majoring or minoring in political science should stop by the Department of Political Science Office, SSB 301, or visit our Web site at http://www.polisci.ucsd.edu.

STUDY ABROAD

Political science majors are encouraged to participate in the UC Education Abroad Program (EAP) and UCSD’s Opportunities Abroad Program (OAP). Information on EAP/OAP is given in the “Education Abroad Program” section of the UC San Diego General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at http://programs-abroad.ucsd.edu. Financial aid can be used for EAP/OAP study, and special study-abroad scholarships are also available.

MINOR IN POLITICAL SCIENCE

For students entering UCSD winter 1998 or later the following guidelines for a political science minor will apply: seven political science courses, not including Political Science 27 and 40, with a minimum of five upper-division. Continuing students may follow the guidelines for a minor of a total of six political science courses, with a minimum of three upper-division. All courses taken for a political science minor must be taken for a letter grade.

INTERDISCIPLINARY MINOR

The Department of Political Science takes part in one interdisciplinary minors offered at UCSD. The law and society minor offers students the opportunity to examine the role of the legal system in society. Students should note that Law and Society 101 (Contemporary Legal Issues) may be used in fulfilling the twelve upper-division course requirement for the political science major. Additional information on this program is available through the Warren Interdisciplinary Programs Office.

RESEARCH

The Department of Political Science is closely affiliated with several research centers/institutes/projects currently on campus. Faculty members directly involved include: Steven Erle, director, Urban Studies Program; J. Lawrence Broz, coordinator, Project in International Affairs; Germaine Hoston, director, Center for TransPacific Studies in Values, Culture, and Politics; Mathew McCubbins, director, Public Policy Research Project; Zoltan Hajnal and Thaddeus Kousser, coordinators, American Political Institutions Project; Wayne Cornelius, director, Center for Comparative Immigration Studies; and Clark Gibson, coordinator, Political Economy of Development Series. For further information please refer to the General Catalog section on “Research at UCSD.”

THE PH.D. PROGRAM

The Department of Political Science at the University of California, San Diego offers a program of graduate studies leading to the Ph.D. degree. Instruction is provided in the major fields of the discipline. For purposes of comprehensive examinations, the discipline is broken into four fields: American politics, comparative politics, international relations, and political theory. The department also offers a variety of courses that are of a methodological or epistemological nature, spanning the various fields.

PROGRAM OVERVIEW

Course Work

Students must complete eighteen quarter courses before the end of the second year with an overall grade point average of 3.3 or better. All students must complete the six-course core curriculum, Political Science 200A-C and 204A-C. No other UCSD courses may be substituted to fulfill this requirement. Fifteen of these courses must be offered by the department, with a number between Political Science 200 and 279. (Political Science 200A-C and 204A-C count toward this requirement). No more than three courses, offered within or outside the department, may be taken on a satisfactory/unsatisfactory basis. In some individual fields the faculty normally recommends that students take
Written Examinations

Written field examinations last four hours. These examinations cover major theoretical approaches in a field. They are structured so that passing requires general knowledge and understanding of important work in the field as a whole. Written focus-area examinations last four hours. These examinations cover in greater depth one subfield within a major research literature. Written examinations are open-note and open-book. Students are expected to do their own work, and to compose their answers on the day of the examination. Text from computer files may not be downloaded into these answers.

Oral Examinations

The oral examination normally lasts between one and two hours, and covers all three written examinations. It may also include discussion of the student’s seminar paper. A student must take the oral examination, even if one or more of the written examinations is such that it is deemed impossible to pass the entire examination.

Each field has a designated field coordinator, appointed by the department chair in consultation with the director of graduate studies. The field coordinator, in consultation with the faculty in the field, prepares the written examinations. Each General Examination is graded by a committee of four faculty members, with two from each of the student’s examination fields. These examiners are nominated by the field coordinator and appointed by the department chair. Students are normally informed of the composition of General Examination boards during the fourth week of the spring quarter.

Each General Examination is graded in its entirety. A student passes or fails the entire examination, not simply parts of it. The examination committee may assign a grade of fail, pass, or distinction. A student passes the General Examination if at least three examiners vote to assign a grade of pass or better. A student receives a grade of distinction by vote of at least three examiners. The student will receive written notification of the examination committee’s decision. A student who fails the General Examination must retake it at least one week prior to the start of the fall quarter of the third year. A student who fails the General Examination twice will not be permitted to continue in the graduate program in political science.

Good progress toward the Ph.D. requires that a student complete the General Examination by the end of the second year. A student who has not attempted all parts of the General Examination by the end of the second year may not continue in the program.

Seminar Papers

A student must complete one seminar paper in one of his or her examination fields. This paper may be written as part of the requirements for a regularly scheduled seminar course or in an independent research course.

Certification that a paper fulfills the seminar paper requirement is at the sole discretion of the faculty member supervising the work (i.e., the instructor of the course for which the paper was written).

A student may not take the General Examination before fulfilling the seminar paper requirement. A final draft of the paper, along with the appropriate form certifying that the paper meets the seminar paper requirement, must be submitted to the graduate coordinator before the written portion of the General Examination may be taken. Copies of the seminar paper will be distributed to the General Examination committee.

Dissertation

By the end of the sixth year good progress requires completion of the dissertation. A student who fails to complete the dissertation by the end of the sixth year may be denied all departmental financial assistance.

Advising and Evaluation

Each incoming student is assigned a temporary faculty advisor by the director of graduate studies. At the end of the first year students are given the opportunity to confirm that advisor or select a new one. At the beginning of the third year each student must select a faculty member from the department to serve as prospectus advisor. The prospectus advisor will help guide the student in writing the prospectus and selecting a dissertation committee.
is not assumed that the prospectus advisor will subsequently chair the dissertation committee, or even be a member of it. Those roles should be determined as the prospectus develops.

During the spring quarter each student is evaluated by his or her advisor in consultation with the departmental faculty. The student will receive a written evaluation from the advisor each year. The student must sign this evaluation for it to become an official part of the student’s departmental file. As part of the first-year review each student must complete a plan of study that identifies a faculty seminar paper supervisor, two examination fields, a focus area, and intended preparation in each. This plan must be signed by the student’s faculty advisor and submitted to the graduate coordinator by the end of spring quarter of the first year.

Student Petitions
To contest an evaluation or any departmental action a student must do so in writing. A petition should be submitted to the director of graduate studies no later than the end of the quarter following the evaluation (or other action) contested by the student.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

LOWER-DIVISION
10. Introduction to Political Science: American Politics (4)
This course surveys the processes and institutions of American politics. Among the topics discussed are individual political attitudes and values, political participation, voting, parties, interest groups, Congress, presidency, Supreme Court, the federal bureaucracy, and domestic and foreign policy making.

11. Introduction to Political Science: Comparative Politics (4)
The nature of political authority, the experience of a social revolution, and the achievement of an economic transformation will be explored in the context of politics and government in a number of different countries.

12. Introduction to Political Science: International Relations (4)
The issues of war/peace, nationalism/internationalism, and economic growth/redistribution will be examined in both historical and theoretical perspectives.

13. Power and Justice (4)
An exploration of the relationship between power and justice in modern society. Materials include classic and contemporary texts, films and literature.

27. Ethics and Society (4)
(Same as Phil. 27) An examination of ethical principles (e.g., utilitarianism, individual rights, etc.) and their social and political applications to contemporary issues such as abortion, environmental protection, and affirmative action. Ethical principles will also be applied to moral dilemmas familiar in government, law, business, and the professions. Satisfies the Warren College ethics and society requirement. Prerequisites: (Same as Phil. 27) An examination of ethical principles (e.g., utilitarianism, individual rights, etc.) and their social and political applications to contemporary issues such as abortion, environmental protection, and affirmative action. Ethical principles will also be applied to moral dilemmas familiar in government, law, business, and the professions. Satisfies the Warren College ethics and society requirement. Prerequisites: (Same as Phil. 27) An examination of ethical principles (e.g., utilitarianism, individual rights, etc.) and their social and political applications to contemporary issues such as abortion, environmental protection, and affirmative action. Ethical principles will also be applied to moral dilemmas familiar in government, law, business, and the professions. Satisfies the Warren College ethics and society requirement. Prerequisites: CAT 2 and 3, DOC 2 and 3, MCWP 40 and 50, Hum. 1 and 2, MMW 2 and 3, WCWP 10A & 10B, or WARR 11A & 11B.

30. Political Inquiry (4)
Introduction to the logic of inference in social science and to quantitative analysis in political science and public policy including research design, data collection, data description and computer graphics, and the logic of statistical inference (including linear regression).

40. Introduction to Law and Society (4)
This course is designed as a broad introduction to the study of law as a social institution and its relations to other institutions in society. The focus will be less on the substance of law (legal doctrine and judicial opinions) than on the process of law making. Legal rules both reflect and shape basic social values and their relation to social, political, and economic conflicts within society.

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduates, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen. May not be used to fulfill any major or minor requirements in political science.

98R. Independent Study (1)
Independent study or research under direction of a member of the faculty. Prerequisites: Student must be of freshman class standing, and a Regents Scholar; Approved Special Studies Form.

UPPER-DIVISION
Minimum requirement for all upper-division courses is at least one quarter of lower-division political science, or upper-division standing.

AMERICAN POLITICS
100A. The Presidency (4)
The role of the presidency in American politics. Topics will include nomination and election politics, relations with Congress, party leadership, presidential control of the bureaucracy, international political role, and presidential psychology.

100B. The U.S. Congress (4)
This course will examine the nomination and election of congressmen, constituent relationships, the development of the institution, formal and informal structures, leadership, comparisons of House with Senate, lobbying, and relationship with the executive branch.

100C. American Political Parties (4)
This course examines the development of the two major parties from 1789 to the present. Considers the nature of party coalitions, the role of leaders, activists, organizers, and voters, and the performance of parties in government.

100DA. Voting, Campaigning, and Elections (4)
A consideration of the nature of public opinion and voting in American government. Studies of voting behavior are examined from the viewpoints of both citizens and candidates, and attention is devoted to recent efforts to develop models of electoral behavior for the study of campaigns. The role of mass media and money also will be examined.

100E. Interest Group Politics (4)
The theory and practice of interest group politics in the United States. Theories of pluralism and collective action, the role of interest groups in the political process, and political action committees, and other important aspects of political action in groups are examined. Prerequisite: sophomore standing.

100H. Race and Ethnicity in American Politics (4)
This course examines the processes by which racial and ethnic groups have/have not been incorporated into the American political system. The course focuses on the political experiences of European immigrant groups, blacks, Latinos, and Asians.

100J. Race in American Political Development (4)
Readings examine how the multicultural character of the United States has shaped the broad outlines of American politics. Cases include the founding, the Constitution, southern politics, social organization in formerly Mexican, regions, the New Deal, consequences of limited suffrage. Prerequisite: upper-division standing.

100K. Railroads and American Politics (4)
The railroads transformed the economy and politics of the United States in the nineteenth century. The railroads were the first big businesses and their sheer size lead inevitably to conflict with governments at all levels. This conflict shaped modern politics. Prerequisite: upper-division standing.

100M. Political Psychology (4)
We begin with hypotheses about how people develop political attitudes, and methods to test these hypotheses. The second half focuses on emerging cognitive neuroscience insights, including brain imaging, and asks how these inform theories of political cognition, affect, and behavior. Prerequisite: upper-division standing.

100N. Politics in Washington (4)
Examines Washington as a political community, its institutions, culture, and history. In addition to its elected officeholders and senior government officials, it examines Washington’s subcommunities: the national news industry, diplomatic service, the representation of interests. Prerequisite: department approval is required.

100O. Perspectives on Race (4)
Drawing heavily from the political psychology literature, this course looks at race in American politics from a variety of perspectives. We consider psychological, genetic, neuroscience, economic, political, sociological, and legal views of what drives powerful dynamics of race in our country. Prerequisite: upper-division standing.

100P. Economic Entrepreneurs and American Politics (4)
This course is concerned with the interaction between representative democracy and capitalism in American political history. The key to understanding this interaction is the role of the entrepreneur in the economy and how unexpected economic change shapes politics. Prerequisite: upper-division standing.

102C. American Political Development (4)
Examines selected issues and moments in the political history of the United States, comparing competing explanations and analyses of U.S. politics. Likely topics include the founding. “American exceptionalism,” change in the party system, race in U.S. politics, the “new institutionalism.”

102E. Urban Politics (4)
(Same as USP 107) This survey course focuses upon the following six topics: the evolution of urban politics since the mid-nineteenth century; the urban fiscal crisis; federal/urban relationships; the “new” ethnic politics; urban power structure and leadership; and selected contemporary policy issues such as downtown redevelopment, poverty, and race.

102F. Mass Media and Politics (4)
This course will explore both the role played by mass media in political institutions, processes and behaviors, and reciprocally, the roles played by political systems in guiding communication processes.

102G. Special Topics in American Politics (4)
An undergraduate course designed to cover various aspects of American politics. May be repeated for credit two times, provided each course is a separate topic, for a maximum of twelve units.

102J. Advanced Topics in Urban Politics (4)
(Same as USP 110) Building upon the introductory urban politics course, the advanced topics course explores issues such as community power, minority empowerment, and the politics of growth. A research paper is required. Students wishing to fulfill the paper requirement with field research should enroll in the subsequent PS 102JJ course (offered Summer Session 2). Prerequisite: consent of instructor.

102JJ. Field Research in Urban Politics (2)
(Same as USP 111) To be taken with the approval of the PS 102J instructor, this course allows students to do original field research on topics in urban politics. This course is offered in Summer Session 2 subsequent to a 102J course.
102K. The Urban Underclass (4)
The lives of individuals living in ghetto poverty in the United States. Causes and consequences of ghetto poverty. Political debates surrounding the underclass and different possible solutions. Prerequisite: upper-division standing.

102L. The Politics of Regulation (4)
Politics and policy-making issues in regulation. Themes: regulation as legislation, speech, press, assembly, specific grants of regulatory power; market versus command mechanisms; private property; and risk assessment. Emphasis on American regulatory policy, examples from current regulatory debates (e.g., health care and environment). Prerequisite: upper-division standing.

103A. California Government and Politics (4)
(Same as USP 109) This survey course explores six topics: 1) the state's political history; 2) campaigning, the mass media, and elections; 3) actors and institutions in the making of state policy; 4) local government; 5) contemporary policy issues; e.g., Proposition 13, school desegregation, crime, housing and land use, transportation, water; 6) California's role in national politics.

103B. Politics and Policymaking in Los Angeles (4)
(Same as USP 113) This course examines politics and policymaking in the five-county Los Angeles region. It explores the historical development of the city, suburbs, and region; local and regional government; and major policy challenges facing the city and metropolitan area. Prerequisite: upper-division standing.

103C. Politics and Policymaking in San Diego (4)
(Same as USP 115) This course examines how major policy decisions are made in San Diego. It analyzes the region's power structure (including the roles of non-governmental organizations and the media), governance systems and reform efforts, and the politics of major infrastructure projects. Prerequisite: upper-division standing or consent of instructor.

104A. The Supreme Court and the Constitution (4)
An introduction to the study of the Supreme Court and constitutional doctrine. Topics will include the nature of judicial review, federalism, race, and equal protection. The relation of judicial and legislative power will also be examined.

104B. Civil Liberties—Fundamental Rights (4)
This course will examine issues of civil liberties from both legal and political perspectives. Topics will include the First Amendment, speech, press, assembly, and religion; other "fundamental" rights, such as the right to privacy; and some issues in equal protection. Conflicts between governmental powers and individual rights will be examined.

104C. Civil Liberties—The Rights of Criminals and Minorities (4)
Examines the legal issues surrounding the rights of "marginal" groups such as aliens, illegal immigrants, and the mentally ill. Also includes a discussion of the nature of discrimination in American society.

104D. Judicial Politics (4)
Introduction to the study of law and courts as political institutions and judges as political actors, including the role of the judiciary in our constitutional system and decision making both within the Supreme Court and within the judicial hierarchy.

104F. Seminar in Constitutional Law (4)
This seminar will provide an intensive examination of a major issue in constitutional law, with topics varying from year to year. Recent topics have included equal protection law and the rights of citizens in wartime. Students will be required to do legal research on a topic, write a legal brief, and argue a case to the seminar. Prerequisites: PS 104A/B, department stamp.

104I. Law and Politics—Courts and Political Controversy (4)
This course will examine the role of the courts in dealing with issues of great political controversy, with attention to the rights of speech and assembly during wartime, questions of internal security, and the expression of controversial views on race and religion. The conflict between opposing Supreme Court doctrines on these issues will be explored in the context of the case studies drawn from different historical periods.

104L. Positive Political Theory of Law (4)
We will discuss modern theories of the origins of law and legal behavior.

104M. Law and Sex (4)
How law regulates and impacts sexuality and orientation with focus on constitutional law in areas of privacy, free speech, association, regulation of sexual conduct under criminal law pornography, prostitution, reproductive rights, and regulation of family status. Prerequisite: upper-division standing. Credit will not be allowed for students who have taken Political Science 102G Law and Sex in the following quarters: spring 2002, (section A00); spring 2001 (section A00); fall 1999 (section A00).

105A. Latino Politics in the U.S. (4)
This course examines contemporary issues in Latino politics in the U.S.; comparisons of racial and ethnic group experiences in the U.S.; Latino access to the political system through political participation. Prerequisite: upper-division standing.

105B. Understanding Intercultural Conflict (4)
This course examines and seeks to explain patterns of conflict and cooperation between different racial and ethnic groups within the United States. Why do groups cooperate under certain circumstances and fall into conflict in others? Prerequisite: upper-division standing.

108. Politics of Multiculturalism (4)
This course will examine central issues in debates about race, ethnicity, and multiculturalism in the United States. It will also relate these issues both to different historical periods. Prerequisite: upper-division standing.

This course will examine the political parties, the major political institutions, the Supreme Court, and the making of public policy in the United States. It will also examine the political process, the role of interest groups, and political participation. This course will be offered in the fall of each even-numbered year. This course is required for the major in Political Science. Prerequisite: upper-division standing.

110EB. American Political Thought from Civil War to Civil Rights (4)
The second quarter examines some of the major themes of American political thought in the twentieth century including controversies over the meaning of democracy, equality, and the distributive justice, the nature of "neoconservatism," and America's role as a world power.

110EC. American Political Thought: Contemporary Debates (4)
This course explores contemporary issues in American political thought. Topics may include liberalism and rights, gender and sexuality, race and ethnicity, cultural diversity, and the boundaries of modern citizenship. Readings include political pamphlets, philosophical treatises, court decisions, and works of literature.

110ED. Seminar in American Political Thought (4)
This seminar explores debates over ideals, institutions, and identities in American political thought. Themes and topics will vary. Readings will include political pamphlets, philosophical treatises, court decisions, and works of literature.

110F. Contemporary Political Thought (4)
This course examines the historical development of the ideas of democracy from Plato to the present. Themes and topics will vary. Readings will include political pamphlets, philosophical treatises, court decisions, and works of literature.

110H. Democracy and Its Critics (4)
This course will examine the historical development of the ideas of democracy from Plato to the present. Themes and topics will vary. Readings will include political pamphlets, philosophical treatises, court decisions, and works of literature.

110J. Power in American Society (4)
This course explores how power has been conceived and contested during the course of American history. The course explores the changes which have occurred in political rhetoric and strategies as America has moved from a relatively isolated agrarian and commercial republic to a military and industrial empire.

110T. Modern Political Ideologies (4)
An examination of some of the ideas and values associated with major social and political movements in Europe and the United States since the French Revolution. Topics will vary and may include liberalism, populism, democracy, communism, nationalism, fascism, and feminism.

112A. Economic Theories of Political Behavior (4)
An introduction to theories of political behavior developed with the assumptions and methods of economics. General emphasis will be upon theories linking individual behavior to institutional patterns. Specific topics to be covered will include collective action, leadership, voting, and bargaining.

112C. Political Theory and Artistic Vision (4)
The course explores the modes of political thinking found in arts, especially in drama and literature. It may include ends and means, political leadership, and political economy. Students may not receive credit for both POLI 112CS and POLI 112C. Prerequisite: upper-division standing.

113A. East Asian Thought in Comparative Perspective (4)
This course examines the major traditions of East Asian thought in comparative perspective. Topics include Confucianism, Taoism, Buddhism, and contemporary nationalist and East Asian political thought. Throughout, focused comparisons and contrasts will be made between western and eastern thought. Prerequisite: upper-division standing.

113B. Chinese and Japanese Political Thought I (4)
Examines philosophical traditions of ancient and modern China and Japan, to understand how these have been reflected in Chinese and Japanese development. Course will be in English; however, students with Chinese or Japanese language skills will have opportunity to use these.
students will be required to complete a seminar-length research paper; undergraduate students will write a paper. Prerequisites: upper-division standing for 113B.

114B. Marxist Political Thought (4)
An introduction to Marxist thought from its roots in the western tradition through its development in non-western contexts. Emphasis is placed on how adaptations were made in Marxism to accommodate the specific challenges of each environment.

115A. Gender and Politics (4)
Our understanding of politics, power, conflict, and quality continue to be challenged and transformed by considering gender as it intersects with nationality, race, class, and ethnicity. We will consider the importance of gender in each of the subfields of political science.

116A. Feminist Theory (4)
Readings in historical and contemporary feminist theory; development of gender as a category of political analysis; alternative perspectives on core concepts and categories in feminist thought.

118B. The Political Theory of Liberation Theology (4)
A comparative study of liberation theologies, including Continental, Latin American, South African, and East Asian. Prerequisite: PS 118A.

119A. Special Topics in Political Theory (4)
An undergraduate course designed to cover various aspects of political theory. May be repeated for credit two times, provided each course is a separate topic, for a maximum of twelve units. COMPARATIVE POLITICS

120A. Political Development of Western Europe (4)
An examination of various paths of European political development through consideration of the conflicts which shaped these political systems: the commercialization of agriculture; religion and the role of the church; the army and the state bureaucracy; and industrialization. Stress will be on alternative paradigms and on theorists.

120B. The German Political System (4)
An analysis of the political system of the Federal Republic of Germany with an emphasis on the party system, elections, executive-legislative relations, and federalism. Comparisons will be made with other West European democracies and the Weimar Republic.

120C. Politics in France (4)
This course will examine the consequences of social and economic change in France. Specific topics will include institutional development under a semi-presidential system, parties, and elections.

120D. Germany: Before, During, and After Division (4)
Consideration of political, economic, and security factors that have kept Germany at the center of European developments for more than a century.

120E. Scandinavian Politics (4)
Introduction to the politics and societies of the Scandinavian states (Denmark, Finland, Norway, and Sweden). Focuses on historical development, political culture, constitutional arrangements, political institutions, parties and interest groups, the Scandinavian welfare states, and foreign policy. Prerequisite: upper-division standing.

120H. European Integration (4)
This course reviews the origins and development of the European Community/European Union and its institutions, theories of integration and the challenges inherent in the creation of a supranational political regime.

120I. Politics in Italy (4)
This course will provide a comparative perspective on the development and functioning of the Italian political system, including its political institutions, ideological traditions, parties and elections, political elites in the policy process, and the evolving importance of Italy within European integration.

120K. Politics of Developing Countries (4)
This course critically examines central concepts and theories of development, and assesses their utility in understanding political, economic, and social change in three regions of the developing world: Latin American, sub-Saharan Africa, and Southeast Asia.

121. Government and Politics of the Middle East (4)
This course examines the dynamics of the Russian Revolution from 1905 through the Stalinist period and recent years in light of theories of revolutionary change. Emphasis is placed on the significance of political thought, socioeconomic stratification, and cultural-historical conditions.

121C. The Chinese Revolution (4)
An analysis of the dynamics of the Chinese Revolution from the fall of the Qing Dynasty (1644–1911) to the present. Emphasis is placed on the relationship between political thought and the dynamics of the revolutionary process.

122. Politics of Empire in Comparative Perspective (4)
A comparative analysis of contemporary political systems and unification policies of the two Koreas. Prerequisite: PS 133D.

123. Politics of Human Rights (4)
What do we mean by “international human rights”? Are they universal? This course examines human rights abuses and redress over time, and across different regions of the world. From an empirically grounded perspective, we critically evaluate contemporary human rights debates. Prerequisite: upper-division standing.

123A. Communities and the Environment (4)
A popular new idea in environmental protection is to include local communities in conservation efforts. But what are these communities? What challenges do they face in governing their own resources? This course uses both theoretical and case studies to explore the political economy of community-based conservations.

124A. Foundations of Political Economy: Modern Capitalism (4)
This course explores how economic factors affect political institutions and how political action affects economic behavior in the United States and Western Europe. Particular attention is given to relations between business and labor, economic policy choices, and the impact of international trade. Prerequisite: PS 11 or consent of instructor.

126A. Politics and Economics in Eastern Europe (4)
This course explores the interrelationship of politics and economics in Eastern Europe, analyzing the historic evolution of the area, the socialist period, and contemporary political and economic change there. Prerequisite: upper-division standing.

127. Politics of Developing Countries (4)
This course critically examines central concepts and theories of development, and assesses their utility in understanding political, economic, and social change in the developing world. Case studies are drawn from three regions: Latin America, Sub-Saharan Africa, and Southeast Asia. Prerequisite: upper-division standing.

130A. The Soviet Successor States (4)
An overview of the historical background and contemporary politics of the fifteen successor states of the Soviet Union.

130A. The Soviet Successor States (4)
An overview of the historical background and contemporary politics of the fifteen successor states of the Soviet Union.

130A. The Soviet Successor States (4)
An overview of the historical background and contemporary politics of the fifteen successor states of the Soviet Union.

130A. The Soviet Successor States (4)
An overview of the historical background and contemporary politics of the fifteen successor states of the Soviet Union.

130A. The Soviet Successor States (4)
An overview of the historical background and contemporary politics of the fifteen successor states of the Soviet Union.

130A. The Soviet Successor States (4)
An overview of the historical background and contemporary politics of the fifteen successor states of the Soviet Union.

130A. The Soviet Successor States (4)
An overview of the historical background and contemporary politics of the fifteen successor states of the Soviet Union.

130A. The Soviet Successor States (4)
An overview of the historical background and contemporary politics of the fifteen successor states of the Soviet Union.
136B. Comparative Politics and Political Culture (4)
This course is designed to provide undergraduates with a sound introduction to cultural interpretations of power and politics. The course will also attempt to render an explicit account of the process of theory formation in social science. Special attention will be given to Africa and Asia.

136C. Comparative Bureaucracy (4)
Politics of the administrative state in the world's democracies. How political institutions influence governance across different types of democratic institutional environments.

137A. Comparative Political Parties and Interest Groups (4)
This course serves as an introduction to the comparative study of political parties and interest groups as well as an analytical discussion to parties, interest groups, and their role in democratic representation. Prerequisite: upper-division standing.

138D. Special Topics in Comparative Politics (4)
An undergraduate course designed to cover various aspects of comparative politics. May be repeated for credit two times, provided each course is a separate topic, for a maximum of twelve units.

INTERNATIONAL RELATIONS

140A. International Law and Organizations (4)
International law and organizations are central to the efforts to create a world order to limit armed conflict, regulate world economy, and advance programs for economic redistribution among nations, and set minimum standards for human rights. This course explains the theory of international law and organizations that is accepted by diplomats and compares this viewpoint to the analysis of social scientists concerning the past record and likely future of world order concerning conflict, economic redistribution, and human rights.

140B. Concepts and Aspects of Revolution (4)
Introduction to the analytical and comparative study of revolutionary movements and related forms of political violence. Topics include: the classical paradigms: types of revolutionary episodes; psychological theories; ideology and belief systems; coups; insurgencies; civil wars; terrorism and revolutionary outcomes. Prerequisite: upper-division standing.

140C. International Crisis Diplomacy (4)
A survey of international peacekeeping and peace enforcement in civil conflicts with a simulation of international diplomacy. Prerequisite: upper-division standing.

141B. Scientific Analysis of Conflict and Peace (4)
The use of data to evaluate theories of conflict. Course will examine the relationship between theory and evidence, measurement and research design. Specific issues examined may include the relationship of power, preference, economic relations, and domestic politics to conflict and peace. Prerequisites: POLI 12 and POLI 30.

142A. United States Foreign Policy (4)
United States foreign policy from the colonial period to the present era. Systematic analysis of competing explanations for U.S. policies—strategic interests, economic requirements, or the vicissitudes of domestic politics. Interaction between the U.S., foreign states (particularly allies), and transnational actors are examined. Prerequisite: PS 12 or consent of instructor.

142L. Insurgency and Terrorism (4)
"Terrorism" uses "illegitimate" violence to achieve political goals. This course uses philosophical, historical, and contemporary material from distinct cultures to understand which actions are defined as "terrorist," who uses them, why, and when, as well as the determinants of their effectiveness.

142M. U.S. Foreign Policy/Regional Security (4)
Lectures and readings examine U.S. foreign policy in Europe, Latin America, and East Asia with attention to current problems with specific nations (e.g., Bosnia) and/or issues central to U.S. national security. Prerequisite: upper-division standing.

142N. American Defense Policy (4)
An introduction to analytic techniques for assessing policy options in the field of national security. Prerequisite: upper-division standing.

142O. International Terrorism (4)
(Same as SOC 177) This course covers the definitions, history, and internationalization of terrorism; the interrelation of religion, politics, and terror; and the representation of terrorism in the media. A number of organizations and their activities in Europe and the Middle East are examined. Prerequisite: upper-division standing.

142P. Crisis Areas in World Politics (4)
This course examines the most critical areas in contemporary world politics. While the emphasis will be placed on American involvement in each crisis, an effort will be made to acquaint the student with its historical and political background. Credit will not be allowed for students who have taken POLI 154 "Crisis Areas in World Politics" in the following quarters: SP01; SP02; SP03; SP04; SP05; W006; SP06; S06; FA06; W07; SP07(A00); SP07(A00). Prerequisite: upper-division standing.

143A. War and Society (4)
How has war fighting evolved over the centuries? How has it varied across cultures? What has war been like for soldiers and civilians? How do societies mobilize for war, and how do they change in the short and long term from fighting? Prerequisite: upper-division standing.

144AB. Selected Topics in International Political Economy (4)
This course will consider major theories purporting to explain and predict the workings of the international order from the point of view of political economy. An extended discussion of one aspect of the economic order (e.g., the multinational corporation) will serve as the test case. PS 144AA and one quarter of economics recommended. Prerequisite: PS 12.

144E. The Politics of International Trade (4)
Examines theories of trade and protectionism, focusing both on relations among advanced industrial nations and on relations between developed and developing countries. Topics include standard and strategic trade theory, nontariff barriers to trade, export-led growth strategies, regional trade agreements, and the future of the WTO. Prerequisite: upper-division standing.

144F. The Politics of International Trade and Finance (4)
Examines the welfare and distributional aspects of international trade and finance as they relate to the politics of economic policymaking. Topics include: globalization in historical perspective; origins and consequences of trade policy; exchange-rate arrangements; international capital flows; currency crises; economic development.

145A. International Politics and Drugs (4)
This course examines the domestic and international aspects of the drug trade. It will investigate the drug issues from the perspectives of consumers, producers, traffickers, money launderers, and law enforcement. Course material covers the experiences of the United States, Latin America, Turkey, Southeast Asia, Western Europe, and Japan.

145C. International Relations After the Cold War: Theory and Prospect (4)
The nature of international politics appears to have changed dramatically since 1989. This course applies different theoretical approaches to enhance our understanding of the new international environment, future prospects for peace and war, and current problems of foreign policy. Prerequisite: upper-division standing.

146A. The U.S. and Latin America: Political and Economic Relations (4)
An analytical survey of U.S. relations with Latin America from the 1820s to the present, with particular emphasis on the post–Cold War environment. Topics include free trade and economic integration; drugs and drug trafficking; illegal migration and immigration control. Focus covers U.S. policy, Latin American reactions, dynamics of cooperation, and options for the future.

150A. Politics of Immigration (4)
Comparative analysis of attempts by the United States and other industrialized countries to initiate, regulate and reduce immigration from Third World countries. Social and economic factors shaping outcomes of immigration policies, public opinion toward immigrants, anti-immigration movements, and immigration policy reform options in industrialized countries. Prerequisites: upper-division standing required.

151. International Organizations (4)
Surveys the theory and function of IOs (UN, NATO, EU, World Bank, IMF) in promoting international cooperation in security, peacekeeping, trade, environment, and human rights. Discuss why IOs exist, how they work, and what challenges they face. Prerequisites: PS 12, upper-division standing.

154. Special Topics in International Relations (4)
An undergraduate course designed to cover various aspects of international relations. May be repeated for credit two times, provided each course is a separate topic, for a maximum of twelve units.

POLICY ANALYSIS

160AA. Introduction to Policy Analysis (4)
(Same as USP 101) This course will explore the process by which the preferences of individuals are converted into public policy. Also included will be an examination of the complexity of policy problems, methods for designing better policies, and a review of tools used by analysts and policy makers. Prerequisite: PS 10 or 11.

160AB. Introduction to Policy Analysis (4)
This course, students will use their knowledge of the political and economic foundations of public policy making to conduct research in a wide variety of public policy problems. Prerequisite: PS 160AA.

162. Environmental Policy (4)
This course will explore contemporary environmental issues such as global warming, endangered species, and land use. Students will be asked to analyze various policy options and to write case analyses. Policies may be debated in class.

163. Analyzing Politics (4)
Politics are understood as the combination of individual preferences and decisions into collective choices. What are the issues involved in aggregating individual preferences, what is the choice of rules—formal and informal—for doing so.

165. Special Topic: Policy Analysis (4)
An undergraduate course designed to cover various aspects of policy analysis. May be repeated for credit two times, provided each course is a separate topic, for a maximum of twelve units.

168. Policy Assessment (4)
The use of real data to assess policy alternatives. Introduction to benefit/cost analysis, decision theory, and the valuation of public goods. Applications to health, environmental, and regulatory economic policy making.
170A. Introductory Statistics for Political Science and Public Policy (4)
Introduction to the use of statistics in both political science and public policy concentrating on regression based approaches. Students undertake a series of small quantitative analyses and one project. Prerequisite: upper-division standing.

SPECIAL STUDIES

191A–B. Senior Honors Seminar: Frontiers of Political Science (4-4)
This course is open only to seniors interested in qualifying for departmental honors. Admission to the course will be determined by the department. Each student will write an honors essay under the supervision of a member of the faculty.

192. Senior Seminar in Political Science (1)
The senior seminar is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in political science at the upper-division level. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisite: departmental standing and/or consent of instructor.

(Same as Com/Gen 194; USP 194, HTD 193, SocE 194, COGS 194) Course attached to six-unit internship taken by students participating in the UCDC program. Involves weekly seminar meetings with faculty and teaching assistant and a substantial research paper. Prerequisite: participating in UCDC program.

197L. Political Science Washington Internship (6, 8)
This internship is attached to the UC in DC Program. Students participating in the UC in DC Program are placed in an internship in the Washington, D.C., area, requiring approximately seventeen to twenty-three hours per week. Prerequisite: consent of instructor.

199. Independent Study for Undergraduates (2 or 4)
Independent reading in advanced political science by individual students. (P/NP grades only.) Prerequisite: consent of instructor.

GRADUATE

All graduate courses are categorized as either seminars or independent study.

SEMINARS

200A. Foundations of Political Science (4)
An introduction to the theoretical concepts in the discipline of political science that are commonly used across various sub-fields. Each week will introduce the core concept(s) and discuss applications from several, if not all sub-fields in the department. Prerequisite: graduate student standing.

200B. Democracy (4)
An overview of normative and positive issues associated with modern democracies. The appeal and the social, political, and economic arrangements of democracies will be explored. Prerequisite: graduate student standing.

200C. States and Markets (4)
An overview of the normative and positive issues associated with decentralized (market) versus centralized (political) mechanics of allocation. The appropriate role of government in the economy will be explored. Prerequisite: graduate student standing.

204A. Research Design (4)
This course will study various approaches to knowledge accumulation in social science. A basic outline of scientific method will be used to examine the difference between theories as assumptions and axioms and hypotheses as “if-then” statements derived from theory. Experimental, quasi-experimental, and qualitative designs will be discussed. Prerequisite: graduate student standing.

204B. Quantitative Methods I (4)
The use of quantitative methods (particularly multiple regression and its extensions) in political science. Emphasis on understanding the methods and using them in political science applications. Prerequisite: graduate student standing.

204C. Game Theory I (4)
This course introduces students to the rudiments of decision theory and game theory. Emphasis will be placed on modeling and solving games. Prerequisite: graduate student standing.

210A. Systems of Political Thought: Thucydides to Augustine (4)
This course is a preparation for the field examination in political theory. It will provide an intensive and critical introduction to European political thought from Thucydides to Augustine. Some of the secondary literature on this period will also be explored. Prerequisite: graduate student standing or consent of instructor.

210B. Systems of Political Thought: Machiavelli to Rousseau (4)
This course is a preparation for the field examination in political theory. It will provide an intensive and critical introduction to European political thought from Machiavelli to Rousseau. Some of the secondary literature on this period will also be explored. Prerequisite: graduate student standing or consent of instructor.

210C. Systems of Political Thought: Kant to Nietzsche (4)
This course is a preparation for the field examination in political theory. It will provide an intensive and critical introduction to European political thought from Kant to Nietzsche. Some of the secondary literature on this period will also be explored. Prerequisite: graduate student standing or consent of instructor.

210D. Systems of Political Thought: Contemporary (4)
This course is a preparation for the field examination in political theory. It will provide an intensive and critical introduction to nineteenth-century political thought. Some of the secondary literature on this period will also be explored. Prerequisite: graduate student standing or consent of instructor.

214. Marxist and Post-Marxist Political Philosophy (4)
An examination of selected texts in Marxist and post-Marxist political philosophy, with a focus on the theme of individual and collective identity including issues concerning alienation, consciousness, and ideology. Prerequisite: graduate student standing.

216. Contemporary Liberal and Democratic Theory (4)
Normative approaches to liberty, equality, justice, and democracy, mostly Anglo-American and empirical approaches to justice. Thinkers such as Rawls, Habermas, Nozick, Dworkin, Raz, Roemer, Elster, Strom, Bowles, and Gintis may be considered. Prerequisite: graduate student standing.

219. Special Topics in Political Theory (4)
This seminar is an examination of the different approaches to the study of political theory. Issues and research areas will vary each time the course is offered. Prerequisite: graduate student standing or consent of instructor.

220A. Comparative Politics: State and Society (4)
This course will provide a general literature review in comparative politics to serve as preparation for the field examination. Prerequisite: graduate student standing, or consent of instructor.

220B. Comparative Politics: Institutions (4)
This is a second course in comparative politics designed as a preparation for the field examination. It will focus on the comparative study of political institutions. Prerequisite: graduate student standing, or consent of instructor.

220C. Origins of the State (4)
Survey of theories, with empirical cases explaining origins of the modern state. Prerequisite: graduate student standing.

222A. American Politics in Comparative Perspective (4)
Research seminar that focuses on systematic comparisons of the American political system with about thirty other contemporary democracies, particularly the other large industrialized countries. A central aim will be to assess the claims about American “exceptionalism.” Prerequisite: graduate standing.

223A. Comparative Parliamentary Studies (4)
A survey of the academic literature on parliamentary studies, comparing the research on legislative elections, behavior, and organization in American, European, and Asian democracies. The course will also compare various approaches to studying legislative activity. Prerequisite: graduate student standing.

224. The Politics of Democratization (4)
A survey of theories explaining the processes of democratization and democratic stability. Prerequisite: graduate student standing.

224A. Elections in Consolidating Democracies (4)
Course looks at elections in consolidating democracies with an eye to evaluating existing theories of elections with new data. Also explores new empirical patterns in countries around the world, especially Africa, Latin America, Eastern Europe, and the Soviet successor states. Prerequisite: graduate student standing or consent of instructor.

225B. The Nation-State (4)
A reading and research seminar on the origins, development, and politics of nationalism and the nation-state. Prerequisite: graduate student standing.

227. Comparative Political Economy (4)
An introduction to seminal and current research in comparative political economy. Course explores how various political institutions and processes affect economic outcomes (e.g., growth, inequality) and how the economy influences politics (e.g., democratization, electoral institutions, and welfare states). Prerequisite: POLI 200C or consent of instructor.

228. Comparative Bureaucracy (4)
This course examines the politics of the administrative state in the world’s democracies. The course focuses on how political institutions affect the nature of governance in democracies. Prerequisite: graduate student standing.

229. Special Topics in Comparative Politics (4)
This seminar is an examination of the different approaches to the study of comparative politics. Issues and research areas will vary each time the course is offered. Prerequisite: graduate student standing or consent of instructor.

231E. Politics of Development (4)
An introduction to the study of international relations. A survey of the principal theories and approaches to the study of international relations. Prerequisite: graduate student standing or consent of instructor.

235A. Latin American Politics (4)
An introductory reading seminar on Latin American politics to acquaint students with leading schools of thought, provide critical perspective on premises and methodology, and identify themes for further inquiry. Themes include authoritarianism, revolution, democratization, regional conflict, and emergence of middle-level powers. Prerequisite: graduate student standing.

236. Immigration Policy and Politics (4)
An interdisciplinary seminar covering origins, consequences, and characteristics of worker migration from Third World countries (especially Mexico, Central America, and the Caribbean basin) to the United States, from the nineteenth century to the present. Prerequisite: graduate student standing or consent of instructor.

238. State and Society in Modern East Asia (4)
An examination of the role of the state in economic development in major East Asian societies and its impact on democratization. Case studies will vary but will include China, Japan, Korea, and, as well as at least one other society. Prerequisite: graduate student standing.

240. International Relations Theory (4)
A survey of the principal theories and approaches to the study of international relations. Prerequisite: graduate student standing or consent of instructor.
243. International Security (4)
A colloquium surveying the major theoretical controversies in the study of international and national security. Prerequisite: graduate standing or consent of instructor.

244A. European Integration (4)
This seminar provides perspectives on the theories and politics of European integration. Analysis will focus on the development of the European Union, the functioning of core institutions, and the challenges of creating a supranational political regime.

245. International Political Economy (4)
A seminar surveying the major theoretical controversies in the study of international political economy. Prerequisite: graduate standing or consent of instructor.

247A. Quantitative International Relations (4)
Explores empirical research in international relations with special emphasis on international conflict. Topics covered include theories on the causes of war, the distribution of power and conflict, formal and informal alignment, interdependence and conflict, linkages between domestic and international processes, and issues of research design. Students who have previously taken 247 may not take this course for credit. Prerequisite: graduate standing or consent of instructor.

247B. Formal Models in International Relations (4)
Explores formal analytic and primarily game-theoretic research in international relations with emphasis on conflict and bargaining. Topics include: causes of war and peace, conventional and nuclear deterrence, crisis bargaining, arms race, and two-level games.

248. Special Topics in International Relations (4)
(Same as IRGN 290) This seminar is an examination of the different approaches to the study of international relations. Issues and research areas will vary each time the course is offered. Prerequisite: graduate standing or consent of instructor.

251. American Political Institutions (4)
A critical examination of major contributions to the theoretical and empirical literature on the U.S. Congress, presidency, and federal bureaucracy. Prerequisite: graduate standing or consent of instructor.

252. American Politics: Behavior (4)
Theoretical and empirical perspectives on voting and other forms of political participation, parties, interest groups, and public opinion in the United States. Prerequisite: graduate standing or consent of instructor.

253. Research in State Politics (4)
This seminar will survey the existing literature in state politics with an eye toward proposing new research designs. Topics will include: state variation across states in electoral systems, campaign finance laws, political culture, legislative institutions, judicial arrangements, and policy outcomes. Prerequisite: graduate standing or consent of instructor.

254. American Political Development (4)
This course examines the historical evolution of the American state with particular attention to theories of political development. Special topics include the development of the party system, electoral and policy realignments, and the evolution of national political institutions. Prerequisite: graduate standing in any discipline of the social sciences or humanities or consent of instructor.

255. Urban Politics (4)
Examines central works on the development of political institutions in U.S. cities; analyses of community power structures; who governs, why, and to what ends; processes and prospects for minority empowerment; the prominence of “growth machines”: the political economy of contemporary cities. Prerequisite: graduate standing or consent of instructor.

256A. Judicial Politics (4)
Judicial politics is the study of law and courts as political institutions and judges as political actors, focusing on decision-making and power relations within courts, within the judicial hierarchy, and within the constitutional system. Prerequisite: graduate standing or consent of instructor.

257. Voting and Elections (4)
This course is designed to acquaint graduate students with the central themes and issues in the study of voting in national elections. Prerequisite: graduate standing or consent of instructor.

259. Special Topics in American Politics (4)
This seminar is an examination of the different approaches to the study of American politics. Issues and research areas will vary each time the course is offered. Prerequisite: graduate standing or consent of instructor.

270. Mathematical and Statistical Foundations (4)
This course reviews essential calculus and linear algebra and introduces probability theory (probability rules, random variables, univariate and multivariate distributions) and mathematical statistics (sampling distributions, estimation and inference frameworks). Prerequisite: graduate standing.

276. Mathematical Modeling (4)
This course demonstrates how to construct mathematical models of phenomena of interest to political science. Specific applications examined may include models for the distributions of state size, war magnitude, and democracy over time and space. Prerequisite: graduate standing.

277. Measurement Theory (4)
This course is concerned with methods of estimating latent dimensions of preference and similarity from individuals’ observed choices and judgments. Factor Analysis, Multidimensional Scaling, and related techniques are studied both with classical maximum likelihood and Bayesian methods. Prerequisite: graduate standing.

279. Special Topics in Methodology (4)
This seminar is an examination of the different approaches to the study of methodology. Issues and research areas will vary each time the course is offered. Prerequisite: graduate standing or consent of instructor.

282A-B-C. Workshop on State and Society (4-4-4)
Examination of recent research in American politics, comparative politics, and political theory concerning the relationship of politics to society; development and presentation of research projects by graduate students; presentations of research projects by faculty. Second-year students present seminar paper; third-year students present dissertation prospectus; candidates make yearly presentations of dissertation research. Prerequisite: PS 202 or consent of instructor.

283A-B-C. Workshop in International Relations (4-4-4)
Examination of recent research in international politics; development and presentation of research projects by graduate students; presentations of research projects by faculty. Second year students present seminar paper; third year students present dissertation prospectus; candidates make yearly presentations of dissertation research. Prerequisite: PS 202 or permission of instructor.

284. Workshop on Scientific Communication (4)
Forms of scientific communication, practical exercise in scientific writing and short oral communication, and in criticism and editing; preparation of illustrations, preparation of proposals; scientific societies, and the history of scientific communication. Examples from any field of science, most commonly political science, economics, and law. Prerequisite: PS 202 or consent of instructor.

INDEPENDENT STUDY

298. Directed Reading (1–12)
Guided and supervised reading in the literature of the several fields of political science.

299. Dissertation Research (1–12)
Independent work by graduate students engaged in research and writing of second-year paper and doctoral dissertation, under direct supervision of advisor.

500. Apprentice Teaching (1–4)
A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation, and grading of examinations and other written exercises, and student relations. Twenty-four units of teaching apprenticeship meets the department teaching requirement for the Ph.D. degree.

501. Seminar on Teaching Development—American Politics (1–4)
A seminar designed for graduate students serving as teaching assistants in American politics, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. Prerequisite: graduate standing.

502. Seminar on Teaching Development—Comparative Politics (1–4)
A seminar designed for graduate students serving as teaching assistants in comparative politics, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. Prerequisite: graduate standing.

503. Seminar on Teaching Development—International Relations (1–4)
A seminar designed for graduate students serving as teaching assistants in international relations, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. Prerequisite: graduate standing.

504. Seminar on Teaching Development—Political Theory (1–4)
A seminar designed for graduate students serving as teaching assistants in political theory, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. Prerequisite: graduate standing.
THE UNDERGRADUATE PROGRAM

MAJOR PROGRAMS

The department offers three degree programs: bachelor of arts (B.A.), bachelor of science (B.S.), and the contiguous bachelor of science (B.S.)/master of arts (M.A.). We offer courses in all major areas of experimental psychology, with emphasis in behavior analysis, clinical psychology, cognitive psychology and cognitive neuropsychology, developmental psychology, human information processing, neuroscience and behavior, psychopathology, sensation and perception, and social psychology. The department emphasizes research in the experimental and theoretical analysis of human and animal behavior, and the study of the mind. Students who major in psychology can expect to develop a knowledge of a broad range of content areas, as well as basic skills in experimental and analytic procedures. Once a student has decided upon a major in psychology, he or she is highly encouraged to consult with the Psychology Student Affairs Office.

Majors must have departmental approval for electives taken outside the department. Of the required courses in the area of specialization (three upper-division courses and two research experiences), no more than two may be taken outside the department. We recommend consulting the department before enrolling in courses offered by other departments.

PREREQUISITES FOR THE B.A.

Experimental psychology uses the tools and knowledge of science: calculus, probability theory, computer science, chemistry, biology, physics, and statistics. Accordingly, students in upper-division courses must have an adequate background in these topics. Prerequisites for individual courses are specified in the catalog.

The prerequisites for the bachelor of arts degree in psychology are as follows:
1. Three lower-division, general-introductory natural science courses from the listing of the approved UC San Diego courses below or their equivalent. (The three courses can be distributed in any manner.)
   - Biology: 1, 2, 3, 10, 20, 24, 26
   - Chemistry: 4, 6A, 6B, 6C, 11, 12, 13
   - Physics: Any of the 1 and 2 series, 10, 11
2. Three formal skills courses, at least one of which must be calculus. The other two courses may consist of any combination of courses in calculus or logic. Acceptable calculus courses at UC San Diego include Mathematics 10A-B-C, 20A-B-C. Acceptable logic courses at UCSD include Philosophy 10 and 12.
3. One introduction to computer programming course. Acceptable courses at UCSD are CSE 3, CSE 5A, CSE 5B, CSE 8A, CSE 8B, CSE 11, CSE 12, MAE 5, MAE 9, MAE 10, or CoqSci 18. Other courses will be considered by petition only if they are primarily concerned with programming in a high-level computer language.

All courses listed under 1–3 may be taken Pass/Not Pass.

4. One quarter of statistics. Acceptable courses at UCSD are Psychology 60, Economics 120A, Sociology 60, Mathematics 11, 181, or 183, BIEB 100, Cognitive Science 14, or equivalent. Statistics MUST be taken for a letter grade.

Students should complete these lower-division requirements by the end of the sophomore year.

MAJOR REQUIREMENTS FOR THE B.A.

A minimum of twelve upper-division courses in psychology is required. Five must be taken from the core courses (Psychology 101–106), and at least seven from the upper-division elective courses. A minimum of six upper-division psychology courses must be taken at UCSD. These courses must be taken for a letter grade; courses taken as Pass/Not Pass prior to declaring psychology as a major cannot be used to satisfy the major requirement. Excluded from credit toward the major are Psychology 199 (Special Studies); however, Psychology 195 (Undergraduate Instructional Apprentice) can be credited once. Majors must obtain departmental approval for electives taken outside the department. A grade-point average of at least 2.0 in the upper-division courses of the major is required for graduation.

PREREQUISITES FOR THE B.S.

In general, the lower-division courses required for the B.S. degree in psychology overlap with the B.A. major. However, to fulfill the formal skills, we require the mathematics sequence 20A-B-C.

MAJOR REQUIREMENTS FOR THE B.S.

A minimum of twelve upper-division courses is required. Five of these courses must come from the core courses (Psychology 101–106). The seven elective courses may be chosen from any of the upper-division courses listed for the psychology program at UCSD. B.S. students must choose an area of concentration (behavior analysis, clinical psychology, cognitive psychology, and cognitive neuropsychology, developmental psychology, neuroscience and behavior, sensation and perception, or social psychology), and three courses of the seven electives must be in the chosen area of concentration.

In addition to the twelve upper-division courses, all B.S. degree students must complete course(s) to fulfill the research experience requirement. Research experience courses may comprise either one laboratory course or two Psychology 199 courses (Independent Study). If two Psychology 199 courses are taken to fulfill this requirement, they must be directed by the faculty within the chosen area of concentration and culminate in a research paper approved by the advisor and submitted to the Psychology Student Affairs Office no later than the graduating quarter. The 199 sequence should be taken with the same faculty member.

UPPER-DIVISION COURSE REQUIREMENTS FOR THE B.S.

Core Courses, of which five have to be taken for any area of concentration:
- PSYC 101. Intro to Developmental Psychology
- PSYC 102. Intro to Sensation and Perception
- PSYC 103. Intro to Principles of Behavior
- PSYC 104. Intro to Social Psychology
- PSYC 105. Intro to Cognitive Psychology

2010-2011 UC SAN DIEGO GENERAL CATALOG • PSYCHOLOGY
Concentration in Behavior Analysis

Behavior analysis is based on the principles of Pavlovian and operant conditioning, and other aspects of contemporary associative learning theory. It also includes the application of reinforcement principles and other behavior modification techniques in applied settings (applied behavior analysis).

Courses

PSYC 109. Lab/Applied Behavior Analysis
PSYC 120. Learning and Motivation
PSYC 121. Lab/Operant Psychology
*to be taken concurrently with PSYC 120
PSYC 132. Hormones and Behavior
PSYC 134. Eating Disorders
PSYC 135. Evolutionary Principles/Animal Social Behavior
PSYC 140. Lab/Human Behavior
*to be taken concurrently with PSYC 120
PSYC 143. Control and Analysis of Human Behavior
PSYC 154. Behavior Modification
PSYC 168. Psychological Disorders of Childhood
PSYC 171. Neurobiology Learning and Memory
PSYC 184. Choice and Self Control
PSYC 188. Impulse Control Disorders
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Neuroscience and Behavior

This area studies how the nervous system mediates behavioral effects in the realms of motivation, perception, learning and memory, and attention. It also includes human neurophysiology and aphasia.

Courses

PSYC 107. Lab/Substance Abuse Research
PSYC 114. Lab/psychophysiological Perspectives on the Social Mind
PSYC 125. Clinical Neuropsychology and Assessment
PSYC 129. Logic of Perception
PSYC 132. Hormones and Behavior
PSYC 133. Circadian Rhythms—Biological Clocks
PSYC 134. Eating Disorders
PSYC 135. Evolutionary Principles/Animal Social Behavior
PSYC 150. Cognitive Neuroscience of Vision
PSYC 159. Physiological Basis of Perception
PSYC 169. Brain Damage and Mental Function
PSYC 170. Introduction to Cognitive Neuropsychology
PSYC 171. Neurobiology Learning and Memory
PSYC 179. Drugs, Addiction, and Mental Disorders
PSYC 181. Drugs and Behavior
PSYC 188. Impulse Control Disorders
PSYC 189. Brain, Behavior, and Evolution
PSYC 190. Parenting
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Clinical Psychology

This area studies psychological and physiological causes of and treatments for mental illness in children and adults.

Courses

PSYC 107. Lab/Substance Abuse Research
PSYC 109. Lab/Applied Behavior Analysis
PSYC 124. Intro to Clinical Psychology
PSYC 125. Clinical Neuropsychology and Assessment
PSYC 132. Hormones and Behavior
PSYC 133. Circadian Rhythms—Biological Clocks
PSYC 134. Eating Disorders
PSYC 151. Test and Measurement
PSYC 154. Behavior Modification
PSYC 155. Social Psychology and Medicine
PSYC 163. Abnormal Psychology
PSYC 168. Psychological Disorders in Children
PSYC 172. Human Sexuality
PSYC 184. Choice and Self-Control
PSYC 188. Impulse Control Disorders
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Cognitive Psychology and Cognitive Neuropsychology

1. The cognitive area studies reasoning, thinking, language, judgment, and decision-making in adults and children (including attention, memory, and visual and auditory information processing).

2. The cognitive neuropsychology area studies cognitive processes and their implementation in the brain. Cognitive neuroscientists use methods drawn from brain damage, neuropsychology, cognitive psychology, functional neuroimaging, and computer modeling.

Courses

PSYC 108. Introduction to Cognitive Neuroscience
PSYC 114. Lab/psychophysiological Perspectives on the Social Mind
PSYC 115. Lab/Cognitive Psychology
PSYC 118. Lab 118A-B/Language Processing
PSYC 119. Lab/psycholinguistics
PSYC 128. Psychology of Reading
PSYC 129. Logic of Perception
PSYC 137. Social Cognition
PSYC 141. Evolution and Human Nature
PSYC 142. Psychology of Consciousness
PSYC 144. Memory and Amnesia
PSYC 145. Psychology of Language
PSYC 146. Language and Conceptual Development
PSYC 148. Psychology of Judgment and Decision
PSYC 150. Cognitive Neuroscience of Vision
PSYC 152. Concepts of Intelligence
PSYC 156. Cognitive Development in Infancy
PSYC 161. Introduction to Engineering Psychology
PSYC 170. Introduction to Cognitive Neuropsychology
PSYC 171. Neurobiology Learning and Memory
PSYC 187. Development of Social Cognition
PSYC 191. Psychology of Sleep
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Developmental Psychology

This area studies all aspects of human development with emphasis on social and personality development, perceptual development, and language acquisition. It also includes the study of developmental psychopathology.

Courses

PSYC 109. Lab/Applied Behavior Analysis
PSYC 114. Lab/psychophysiological Perspectives on the Social Mind
PSYC 133. Circadian Rhythms—Biological Clocks
PSYC 135. Evolutionary Principles/Animal Social Behavior
PSYC 136. Cognitive Development
PSYC 141. Evolution and Human Nature
PSYC 145. Psychology of Language
PSYC 152. Concepts of Intelligence
PSYC 156. Cognitive Development in Infancy
PSYC 158. Interpersonal Relationships
PSYC 168. Psychological Disorder of Childhood
PSYC 172. Human Sexuality
PSYC 180. Adolescence
PSYC 185. Applied Developmental Psychology
PSYC 187. The Development of Social Cognition
PSYC 190. Parenting
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

(For additional qualifying courses, see the department’s Student Affairs Office, 1533 Mandler Hall.)

Concentration in Sensation and Perception

This area studies how our sense organs and brain make it possible for us to construct a consciously experienced representation of the environment. Experiments using stimuli and computer control are used to test models of sensory or perceptual processes. Processes of particular interest include color vision, motion perception, and auditory illusions and paradox.

Courses

PSYC 125. Clinical Neuropsychology and Assessment
PSYC 128. Psychology of Reading
PSYC 129. Logic of Perception
PSYC 138. Sound and Music Perception
PSYC 150. Cognitive Neuroscience of Vision
PSYC 159. Physiological Basis of Perception
PSYC 169. Brain Damage and Mental Functions
PSYC 182. Allusions and the Brain
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

**Concentration in Social Psychology**

This area studies human behavior in social situations, with specialization in such topics as emotion, aggression, social cognition, and aesthetics. It also encompasses applied social psychology, including psychology and the law and behavioral medicine.

**Courses**

PSYC 114. Lab/Psychophysiological Perspectives on the Social Mind
PSYC 127. Applied Social Psychology
PSYC 130. Delay of Gratification
PSYC 135. Evolutionary Principles/Animal Social Behavior
PSYC 137. Social Cognition
PSYC 139. Social Psychology of Sports
PSYC 141. Evolution and Human Nature
PSYC 149. Social Psychology of Theater
PSYC 152. Concepts of Intelligence
PSYC 153. Psychology of Emotion
PSYC 155. Social Psychology and Medicine
PSYC 157. Happiness
PSYC 158. Interpersonal Relationships
PSYC 160. Groups
PSYC 162. Psychology and the Law
PSYC 172. Human Sexuality
PSYC 175. Psychology and the Arts
PSYC 178. Industrial Organization Psychology
PSYC 186. Psychology and Social Policy
PSYC 187. Development of Social Cognition
PSYC 190. Parenting
PSYC 199. Independent Study courses in this field must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

**HONORS PROGRAM**

Students are encouraged to participate in the department's honors program. It is strongly recommended for all students interested in graduate school. A minimum overall GPA of 3.5 (3.3 for transfer students, based on transfer GPA) is a prerequisite. Admission is granted by application in the fall quarter of the junior year (Deadline: October 31).

This program is composed of the following courses:

1. **Junior Year**
   - Winter:
     - Junior Honors Research Seminar (PSYC 110)
     - Advanced Statistics and Research Methods (PSYC 111A)
   - Spring:
     - Advanced Statistics and Research Methods (PSYC 111B)

2. **Senior Year**: A year-long independent research project (PSYC 194-A-B-C) under the sponsorship of a faculty advisor. This research culminates in an honors thesis.

3. At least one laboratory course (Psychology 107, 109, 114, 115, 118A, 118B, 119, 120/121, 120/140, 127) or, upon petitioning, two Psychology 199 Independent Study courses culminating in a research paper accepted by the advisor (199s, however, do not count as upper-division credit toward the major).

   Successful completion of the Honors Program requires a grade of A- in the Psychology 194 series and a minimum GPA of 3.5 in the upper-division courses taken for the major.

**MINOR PROGRAM**

The minor in psychology consists of seven four-unit courses and a minimum GPA of 3.5 in the upper-division courses taken for the major.

**EDUCATION ABROAD**

Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP) while still making progress toward the major. Students considering this option should discuss their plans with the Psychology Student Affairs Office before going abroad, and courses taken abroad must be approved by the department. Students may only receive credit for up to two core courses (PSYC 101-106) from their courses taken abroad. Information on EAP/OAP is detailed in the Education Abroad Program of the UC San Diego General Catalog. Interested students should contact the Program Abroad Office in the International Center.

**TRANSFER CREDIT**

In general, all introductory courses in experimental psychology are accepted for lower-division credit toward a psychology minor. Lower-division courses covering special topics in psychology (e.g., personal adjustment, human sexuality) will be accepted only if: 1) the student had a general introductory course as a prerequisite, and 2) the student had satisfied this prerequisite before taking the special topics course. Upper-division psychology courses will be evaluated for transfer credit on a course by course basis.

**THE GRADUATE PROGRAM**

The Department of Psychology provides broad training in experimental psychology. Increased specialization and the general burgeoning of knowledge make it impossible to provide training in depth in every aspect of experimental psychology, but most aspects are represented in departmental research.

**PREPARATION**

Apart from the general university requirements, the department generally expects adequate undergraduate preparation in psychology. A major in the subject, or at least a strong minor, is normally a prerequisite, but applicants with good backgrounds in such fields as biology and mathematics are also acceptable.

**LANGUAGE REQUIREMENTS**

There is no foreign language requirement.

**GRADUATE CURRICULUM**

Students must fulfill all course requirements (stated below) while registered as graduate students in psychology at UC San Diego. There may occasionally be exceptions granted to this rule. Requests for exception should be in the form of petitions from students and their advisors to the Committee on Graduate Affairs. It is in the best interest of the student if these petitions are forthcoming at the time of admission to the graduate program. In this way, the committee, the students, and their advisors will all be aware of the course requirements before any of them are taken.

**PROGRAM OF STUDY**

Courses are divided into six areas: behavior analysis (including basic and applied), neuroscience and behavior (including neuropsychology and neurophysiology), cognitive (including attention, language, and perception), developmental (including language acquisition), sensation and perception (including vision and audition), and social (including health and law). The Graduate Affairs Committee provides an approved list of courses from these areas. In the first year of study, each student must fulfill the following four requirements:

1. Each student must fulfill a quantitative methods requirement, either by taking two quantitative methods courses approved by the Graduate Affairs Committee (currently 201A and 201B), or by showing a satisfactory knowledge of these courses through an examination.
2. In addition to the quantitative methods requirement, each student is expected to take four proseminars and four approved courses from the list prepared by the Graduate Affairs Committee. All course work must be completed by the end of the third year.
3. Each first-year graduate student is required to submit a research paper on the research project (Psychology 270ABC). The paper should be comparable in style, length, and quality to papers published in the normal, refereed journals of the student’s research area. (The publication manual of the American Psychological Association, fourth edition, 1995, gives an acceptable format.) The research paper will be read and evaluated by the student’s research advisor and by at least two other readers appointed by the graduate advisor. The research paper is presented orally at a research meeting held at the end of the spring quarter. Attendance at this meeting is a requirement for the department’s graduate students and faculty. Typically, each student is allowed ten minutes to present the paper, with a five-minute question period following the presentation.

4. A teaching requirement must be met. (See below.)

All students are evaluated by the entire faculty at the end of the academic year. The normal...
minimum standards for allowing a student to continue beyond the first year are

a. Satisfactory completion of the first-year research project (including oral presentation)
b. At least a B average in the courses which fulfill the area requirements
c. Having a faculty advisor in the Department of Psychology

Any student whose needs cannot be reasonably met with courses conforming to these guidelines may petition the Graduate Affairs Committee. The petition should contain a specific list of courses and a statement of justification and must be approved by the student’s advisor.

ADVANCING TO CANDIDACY

In order to advance to Ph.D. candidacy a student must
1. Complete all first-year requirements
2. Complete an additional four elective courses from the list prepared by the Graduate Affairs Committee
3. Complete the qualifying examination for the Ph.D.

The qualifying examination is divided into two sections to be taken separately by all students. Part I of the qualifying exam consists of a paper written by the student that is modeled after those published in Psychological Bulletin or Psychological Review. Ideally, the paper would consist of a detailed review and theoretical synthesis of a coherent body of research. The paper should demonstrate independent and original thinking on the part of the student, and should either take a theoretical stance or recommend experiments designed to resolve theoretical ambiguities (i.e., the paper should not merely review published research).

Students form a qualifying committee in much the same way that they form a dissertation committee. The same rules apply, except that members from outside the department need not be included (although up to two may be). Once the committee is formed, the student should prepare a brief (e.g., three pages) proposal defining the area of research and the theoretical issues that will be addressed in the paper. A proposal meeting is then arranged (usually in spring quarter of the student’s second year), and committee members may at that time recommend changes in the scope of the paper and define their expectations.

The paper does not have a prescribed length, although low-end and high-end limits of thirty and fifty pages, respectively, seem reasonable. An oral defense of the paper is required (and should be completed by the end of the student’s third year). Part II of the qualifying examination is the defense of the dissertation proposal. This will normally follow Part I of the qualifying examination and will be an oral examination including outside examiners.

TEACHING

In order to acquire adequate teaching experience, all students are required to participate in the teaching activities of the department for at least four years (one quarter for the first year and two quarters the second through the fourth year).

RESIDENCY

Each student must complete the requirements for qualification for candidacy for the Ph.D. degree by the end of the third year of residence. Any student failing to qualify by this time will be placed on probation. A student who fails to qualify by the end of the spring quarter of the fourth year of residence will automatically be terminated from the department.

No students may allow more than eight calendar years to lapse between starting the graduate program and completing the requirements for the Ph.D. Degree students will automatically be terminated from the program at the end of the spring quarter of their eighth calendar year in the department.

RESEARCH

In each year of graduate study, students enroll in a research practicum (Psychology 270 in the first year; Psychology 296 or 299 in subsequent years). Students are assigned to current research projects in the department and receive the personal supervision of a member of the staff.

DEPARTMENTAL PH.D. TIME LIMIT POLICIES

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed eight years. Total registered time at UCSD cannot exceed eight years.

SPECIALIZATION IN ANTHROPOGENY

This is a transdisciplinary graduate specialization in anthropogeny with the aim of providing graduate students the opportunity to specialize in research and education on explaining the origins of the human phenomenon. The aim is to rectify the absence of existing training programs that provide such a broad and explicitly transdisciplinary approach—spanning the social and natural sciences—and focusing on one of the oldest questions known to humankind, namely, the origins of humans and humanity. This specialization is not a stand-alone program, but aims at providing graduate students who have just embarked on their graduate careers with the opportunity to interact and communicate with peers in radically different disciplines throughout the duration of their Ph.D. projects. Such communication across disciplines from the outset is key to fostering a capacity for interdisciplinary “language” skills and conceptual flexibility.

ADMISSION TO THE SPECIALIZATION

The psychology graduate program will advertise the specialization to those students in our programs who have an interest in human origins. Qualifying applicants will have the opportunity to enroll for the specialization.

SPECIALIZATION REQUIREMENTS

Students pursuing this specialization will be required to take a series of courses in addition to research rounds over four years of study. It is advised that students begin their course work in their second year.

- Course work: Introduction to Anthropogeny (BIOM 225) and Advanced Anthropogeny (BIOM 229) are each taken once, in the winter and spring of the students’ second year. Current Topics in Anthropogeny (BIOM 218) is to be taken every quarter for four years.
- Research Rounds: Monthly seminars during which all participating students talk about their respective research.

QUALIFYING EXAMINATION

Psychology students in the anthropogeny specialization must meet the departmental requirement for advancement to candidacy, including the qualifying paper and dissertation proposal. In addition, students must meet internal deadlines, mentoring provisions, and proposal standards of the anthropogeny specialization track.

DISSERTATION

Ph.D. students must complete a dissertation, which meets all requirements of the home program. In addition, it is expected that the Ph.D. dissertation is broadly related to human origins and will be interdisciplinary in nature.

TIME LIMITS

It is expected that students will retain the same time to degree as students not pursuing this specialization. Additional course load consists only of two regular courses (two quarters twenty lectures each). The third proposed course takes place only three times a year from Friday noon to Saturday evening.

MAJOR REQUIREMENTS FOR THE CONTIGUOUS B.S./M.A.

A contiguous program leading to a bachelor of science degree and a master of arts degree in psychology is offered to those undergraduate students who are enrolled in the bachelor of science major offered in the Department of Psychology at UC San Diego. Qualified students are able to obtain the M.A. degree within one year following receipt of the B.S. degree. Students interested in applying to this program must consult with the B.S./M.A. advisor in the Psychology Student Affairs Office fall quarter of their junior year.

The program is open only to UCSD undergraduates. The Department of Psychology does not have financial aid available for students enrolled in this program.

ELIGIBILITY AND ENROLLMENT

To be eligible, students must have completed the first two quarters of their junior year in residence at UCSD and must have an overall UCSD GPA of at least 3.0 and students’ major GPA should be at least 3.3. It is the responsibility of the prospective student to select a faculty member who would be willing to serve as the student’s advisor and in whose laboratory the student would complete at least twenty-four units of research over a two-year period. Twelve of the twenty-four units of research Psychology (194A-B-C or 196A-B-C) must be completed during the student’s senior undergraduate year and must be taken in addition to the requirements for the bachelor of science degree. The remaining twelve units of research will be taken in their year of graduate study as part of their M.A.
There are two applications:
1. In fall quarter of the junior year, students apply to the contiguous B.S./M.A. track if they fulfill the above requirements.
2. In the spring quarter of their senior year, students apply to the M.A. program.

REQUIREMENTS FOR THE M.A.

For an M.A. in psychology, students must pick a concentration in one of six areas: Behavioral, Cognitive, Developmental, Neuroscience and Behavior, Sensation and Perception, and Social. Students who have been approved (by both the Department of Psychology and UCSD Office of Graduate Studies) for the program must enroll in their graduate year in:
- PSYC 201A-B. Quantitative Methods
- PSYC 270A-B-C. Introduction to Laboratory Experimentation
- Four psychology seminars, two of which are in their area of concentration. In addition, three of the four seminars must be pro-seminars, which include
  - PSYC 217. Developmental Psychology
  - PSYC 218. Cognitive Psychology
  - PSYC 219. Behavioral Psychology
  - PSYC 220. Social Psychology
  - PSYC 221. Sensation and Perception
  - PSYC 222. Behavioral Psychology
  - One PSYC 500. Teaching Instruction

This amounts to forty units of graduate work. All course work is to be approved by the advisors (forms available from the Psychology Student Affairs Office). Students are expected to meet the graduate requirements for the M.A. in one year (three consecutive, contiguous, academic quarters, beginning in the fall after graduation). Any deviation from this plan, such as a break in enrollment for one or more quarters, will cause the student to be dropped from the program.

All forms required for the program must be submitted and approved by the Psychology Student Affairs Office, including the Application for Candidacy. Students must pay fees and be officially enrolled at UCSD during the quarter that the student begins their graduate studies for the program. See the Psychology Student Affairs Office for further details.

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

LOWER-DIVISION

EXPERIMENTAL REQUIREMENTS

Psychology at UCSD is a laboratory science. We are concerned with the scientific development of knowledge about human and animal behavior and thought. Accordingly, experience with experimental procedures plays an important role in the undergraduate and graduate training of students.

1. Psychology (4)
A comprehensive series of lectures covering the basic concepts of modern psychology in the areas of human information processing, sensation and perception, motivation, developmental processes, language acquisition, social psychology, and personality.

2. General Psychology: Biological Foundations (4)
A survey of physiological and psychological mechanisms underlying selected areas of human behavior. Emphasis is placed on the experimental basis of psychological knowledge and the development of language, memory, and attention.

3. General Psychology: Cognitive Foundations (4)
This course is an introduction to the basic concepts of cognitive psychology. The course surveys areas such as perception, attention, memory, language, and thought. The relation of cognitive psychology to cognitive science and to neuropsychology is also covered.

4. General Psychology: Behavioral Foundations (4)
This course will provide a basic introduction to behavioral psychology, covering topics such as classical conditioning, operant conditioning, animal learning, and motivation, and behavior modification.

5. General Psychology: Social Foundations (4)
This course will provide a basic introduction to social psychology, covering topics such as emotion, aesthetics, behavioral medicine, person perception, attitudes and attitude change, and behavior in social organizations.

6. General Psychology: Developmental Foundations (4)
This course is an introduction to cognitive and social changes that take place over the course of a lifetime. With emphasis also given to the neuropsychology of motivation, memory, and attention.

7. General Psychology: Social Foundations (4)
This course will provide a basic introduction to social psychology, covering topics such as emotion, aesthetics, behavioral medicine, person perception, attitudes and attitude change, and behavior in social organizations.

8. General Psychology: Developmental Foundations (4)
This course is an introduction to cognitive and social changes that take place over the course of a lifetime. With emphasis also given to the neuropsychology of motivation, memory, and attention.

9. Independent Study (2-4)
Independent study or research under direction of a member of the faculty. Prerequisites: lower-division standing, completion of at least thirty units of undergraduate study at UCSD with a minimum UCSD GPA of 3.0; completed and approved Special Studies form.

UPPER-DIVISION

101. Introduction to Developmental Psychology (4)
A lecture course on a variety of topics in the development of the child, including the development of perception, cognition, language, and sex differences. Prerequisites: upper-division standing; Psychology 60 or BIH 100 or COGS 14 or Econ. 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

102. Introduction to Sensation and Perception (4)
An introduction to problems and methods in the study of sensation and perception processes. Prerequisites: upper-division standing; Psychology 60 or BIH 100 or COGS 14 or Econ. 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

103. Introduction to Principles of Behavior (4)
An example of the principles of conditioning and their application to the control and modification of human behavior. Prerequisites: upper-division standing; Psychology 60 or BIH 100 or COGS 14 or Econ. 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

104. Introduction to Social Psychology (4)
An intensive introduction and survey of current knowledge in social psychology. Prerequisites: upper-division standing; Psychology 60 or BIH 100 or COGS 14 or Econ. 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

105. Introduction to Cognitive Psychology (4)
Introduction to experimental study of higher mental processes. Topics to be covered include pattern recognition, perception, cognition, language, memory, and problem solving. Prerequisites: upper-division standing; Psychology 60 or BIH 100 or COGS 14 or Econ. 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

106. Introduction to Physiological Psychology (4)
Intensive introduction to current knowledge of physiological factors in learning, motivation, perception, and memory. Prerequisites: upper-division standing; Psychology 60 or BIH 100 or COGS 14 or Econ. 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

107. Lab/Substance Abuse Research (4)
This course examines theory and research design and methods for substance abuse in adolescent adult populations. This course serves as preparation for individual research topics culminating in a paper.

108. Introduction to Cognitive Neuroscience (4)
This course covers background history, neuroanatomy, methods, and results from neuropsychological and neuropsychological studies of behavior. Topics include attention, motor control, executive function, memory, learning, emotion, and language. Prerequisites: upper-division standing; Psychology 60 or BIH 100 or COGS 14 or Econ. 120A or Math. 11 or Math. 181A or Math. 183 or Soc/L 60.

109. Lab/Applied Behavior Analysis (4)
This course will provide students with hands-on training in the application of behavioral research technology to a clinical population. Students will meet weekly for lecture, discussion, research article reviews, and specific technical training. In addition, students will work on a research project. Prerequisite: Psychology 199 in the Schreiberan autism laboratory recommended.

110. Juniors Honors Research Seminars (4)
Meetings consist of research seminars by a range of departmental faculty, exposing students to contemporary research problems in all branches of experimental psychology. Class discussions will follow faculty presentations. Evaluation is based on assigned papers. Prerequisites: admission by application with a minimum UCSD GPA of 3.3. Department stamp required. Application forms are available from the Student Services Office and due by the end of October of each fall quarter.

111A. Research Methods I (6)
Designed to provide training in the applications of advanced statistical methods in the context of initial instruction in experimental design. Emphasis will be placed on the development of statistical problem-solving skills, practical computer applications, and scientific report writing. Prerequisites: minimum grade of B in Psychology 60 or
111B. Research Methods II (6) Designed to extend the material of Psychology 111A. Focusing on the techniques developed previously. Participate in data collection, data organization, statistical analysis, and graphic displays, emphasis placed on developing scientific report writing, presentations, and critical thinking about experimental methods. Prerequisite: Psychology 111A or consent of instructor.

114. Laboratory in Psychophysiological Perspectives on the Social Mind (4) Lab course on the use of psychophysiological methods to investigate “the social mind,” or the cognitive and emotional processes involved in understanding and reacting to other people. Overview of major research topics and methods applying selected techniques in actual experiments. Students will engage in developing individual research questions to actively participate in designing and conducting the experiments. Prerequisite: upper-division standing.

115. Laboratory in Cognitive Psychology (4) Lecture and laboratory work in human information processing. Prerequisite: upper-division standing or consent of instructor.

118A. Real-Time Examination of Language Processing (4) This lab course examines the design and methods for the real-time examination of language processing in normal and disordered (aphasic, dyslexic, child language impaired, etc.) language populations. This course serves as preparation for individual research topics in Psychology 118B. Prerequisite: a course in language or cognition (see professor for exception).

118B. Real-Time Examination of Language Processing (4) This lab is a continuation of Psychology 118A. The introduction to laboratory methods is now applied to individual research projects culminating in a lab presentation and paper. Prerequisite: Psychology 118A or consent of instructor.

119. Psycholinguistics/Cognition Laboratory (4) Methods and practicum in experimental study of language, reading, and related cognitive processes (reasoning, problem solving) in young adult populations. Prerequisites: Psychology 118A-B or consent of instructor. Department stamp required.

120. Learning and Motivation (4) Survey of research and theory in learning and motivation. Includes instincts, reinforcement, stimulus control, choice, aversive control, and human application. Prerequisite: upper-division standing. Must be taken concurrently with Psychology 121 or Psychology 140.

121. Laboratory in Operant Psychology (4) Lecture and laboratory in operant psychology. Prerequisite: upper-division standing. May be taken concurrently with Psychology 120.

123. Cognitive Control and Frontal Lobe Function (4) Cognitive control refers to the optimization of behavior according to one’s goals. This class examines: anatomy; neuroscience methods; working memory, switching, and stopping; prefrontal pharmacology; ADHD and other neuropsychiatric disorders; addiction and emotion regulation; development, rehabilitation, and criminal responsibility. Note: Students may not enroll in Psychology 123 after receiving credit for Psychology 193 Cognitive Control and Frontal Lobe Function. Prerequisite: department stamp.

124. Introduction to Clinical Psychology (4) Introduction to major concepts and models used in psychological assessment and psychotherapeutic intervention. Several modalities of psychotherapy (individual, group, and family) will be reviewed along with research on their efficacy. Prerequisite: Psychology 163.

125. Clinical Neuropsychology and Assessment (4) A fundamental grounding in basic neuropsychological principles. Major topics include functional neuroanatomy and physiology of the human brain, neurobehavioral presentations of common neurologic and psychiatric conditions, and an introduction to diagnostic neuropsychological assessment and methods. Prerequisite: Psychology 60.

127. Methods in Applied Social Psychology (4) Emphasizes learning of experimental and quasi-experimental methodology applicable to social problems. Students carry out field research in areas such as the psychology of law (judicial decision-making), traffic-related behavior (risk taking), environmental psychology, and other areas of student interest. Prerequisites: Psychology 104 and 60.

128. Psychology of Reading (4) Basic information about the nature of reading will be covered. Topics include word recognition, eye movements, inner speech, sensorimotor memory for reading, learning, methods for teaching reading, reading disabilities, and dyslexia, speed reading. Prerequisites: Psychology 105 or Psychology 145 or consent of instructor.

129. Logic of Perception (4) Lectures will cover three topics: 1) tradition of experimental work on perception that dates back to H. Held, 2) discussion and criticisms of theories of perception, 3) recent physiological work on the visual pathways that may give us insights into neural mechanisms underlying perception. Prerequisite: upper-division standing.

130. Delay of Gratification (4) This course will review the research on delay of gratification. Students will make it in general so tough, what situations make it possible, who can do it, and what the implications of this ability are. Prerequisite: upper-division standing.

132. Hormones and Behavior (4) A survey of the effects of chemical signals (hormones, neurohormones and pheromones) on behavior as well as reciprocal effects of behavior on these chemical systems. Specific topics covered include aggression, sex and sexuality, feeding, learning, memory and mood. Animal studies will be emphasized. Prerequisite: Psychology 106 or consent of instructor.

133. Circadian Rhythms—Biological Clock (4) Examples and fundamental properties of the daily biological clock in humans, animals and microbes. Experimental approaches employed to understand how organisms keep time and how this applies to human health. Prerequisite: Psychology 106 or BILD 1 or consent of instructor. This course is cross-listed with BMIM 116.

134. Eating Disorders (4) This course covers psychological and psychobiology of eating disorders such as anorexia nervosa, bulimia nervosa, and binge eating disorder. Abnormal, as well as normal eating will be discussed from various perspectives including endocrinological, neurobiological, psychological, sociological, and evolutionary. Prerequisite: upper-division standing.

135. Animal Behavior (4) Mechanisms that regulate the behavior of animals, including neural, endocrine, genetic, and environmental mechanisms, with a strong emphasis on evolution (natural and sexual selection). Topics include communication, sociality, mating strategies, and parental behavior. Prerequisites: upper-division standing and consent of instructor.

136. Cognitive Development (4) This course examines the foundations and growth of the mind, discussing the development of perception, imagery, concept formation, memory, and thinking. Emphasis is placed on the representation of knowledge in infancy and early childhood. Credit may be received for both PSYC 136 and COGS 113.) Prerequisite: PSYC 101 or PSYC 105.

137. Social Cognition (4) Social cognition blends cognitive and social psychology to show how people make sense of the social world. Social perception, inference, memory, motivation, and affect, understanding of the self, stereotypes, and cultural cognition. Prerequisite: upper-division standing.

138. Sound and Music Perception (4) Topics include the physiology of the auditory system, perception and pitch, loudness and timbre, localization of sound in space, perception of melodic and temporal patterns, handedness correlates, and musical illusions and paradoxes. There will be a substantial number of sound demonstrations. Prerequisites: upper-division standing and consent of instructor.

139. Social Psychology of Sports (4) This course focuses on the applications of social psychological principles and understanding of sports. Topics include the role of motivation, level of aspiration, competition, cooperation, social comparison, and optimal arousal, spectators’ perspective, motivation and perceptions of success, streaks, etc. Prerequisite: upper-division standing and consent of instructor.

140. Lab/Human Behavior (4) Laboratory on the principles of human behavior, including choice behavior, self-control, and reasoning. Prerequisites: 120 (may be taken concurrently); upper-division standing and consent of instructor.

142. Psychology of Consciousness (4) This course will survey research on consciousness from an experimental psychology perspective. Special emphasis will be placed on cognitive, neuroimaging, and clinical/neuropsychiatric investigative techniques, and on the scientific assessment of the mind-body problem. Prerequisite: upper-division standing.

143. Control and Analysis of Human Behavior (4) An overview of the behavioral approach including basic principles, self-control, clinical applications, and the design of cultures. Prerequisite: upper-division psychology major.

144. Memory and Amnesia (4) This course will review basic research into the nature of memory. It begins with an examination of historical milestones in the study of memory and then considers research concerned with contemporary models of memory and amnesia. Prerequisite: upper-division standing.

145. Psychology of Language (4) Introduction to research on language comprehension and production. Focus on the role of language in human nature. Prerequisite: a course in language, cognition, or cognitive development. Prerequisite: upper-division standing.

146. Language and Conceptual Development (4) Introduction to research on language acquisition and how it relates to conceptual development. Focus on theoretical foundations (e.g., learning mechanisms, universal grammar, theories of concepts) and empirical case studies, including word meaning, syntax and semantics, and language and thought. Recommend course in language/linguistics, cognition, or cognitive development. Prerequisite: upper-division standing or consent of instructor.

147. Gender (4) This interactive undergraduate seminar will examine biological approaches to gender differences and sexuality. Do the biosciences further our understanding of these issues? How are biological claims embraced or rebutted by other disciplines? Students will read primary scientific literature and criticism. Prerequisite: upper-division standing.

148. Psychology of Judgment and Decision (4) Broadly defined, the field of judgment and decision making examines preferences and subjective probability, and how they are combined to arrive at decisions. The course will cover history and current topics.

149. Social Psychology of Theater (4) Exploration of the relationship between social psychology and drama, focusing on the use of psychological principles in plays (by playwrights) and their performance (by directors, actors, and choreographers). Prerequisite:
upper-division standing, major in psychology or theater, or consent of instructor.

150. Cognitive Neuroscience of Vision (4)
Cognitive neuroscience is an interdisciplinary field of research dedicated to understanding how the brain supports different cognitive abilities. This course will focus on the neural basis of visual experience, or how our brain allows us to see in the world around us. Prerequisite: Psychology 102 or Psychology 108.

151. Tests and Measurement (4)
This course provides an introduction to psychological testing presented in three components: 1) psychometric and statistical methods of test construction; 2) application of psychological tests in industry, clinical practice, and other applied settings; and 3) controversies in the application of psychological tests. Prerequisite: Psychology 60.

152. Conceptions of Intelligence (4)
This course will examine the concept of intelligence from several perspectives: its historical development, its measure in terms of IQ test, and its role in practical affairs. Also included will be its role in comparative psychology and attempts to analyze intelligence in change in more fundamental cognitive processes. Prerequisite: Psychology 60 or consent of instructor.

153. Psychology of Emotion (4)
Past and current findings and theories on emotion. Facial expressions of emotions, psychophysiology, evolutionary perspectives, and specific emotions: anger, fear, and jealousy. Prerequisite: upper-division standing or consent of instructor.

154. Behavior Modification (4)
Extension of learning principles to human behavior, methods of applied behavior analysis, and applications of behavioral principles to clinical disorders and to normal behavior in various settings. Prerequisite: upper-division standing.

155. Social Psychology and Medicine (4)
Explores areas of health, illness, treatment, and delivery of treatment, and social psychological perspectives in the medical area. Prerequisites: Psychology 60 or equivalent and 104.

156. Cognitive Development in Infancy (4)
Examines perception and cognition in the first year of life. Differences in cognitive development are linked to the development of perception and cognition. Prerequisite: upper-division standing or consent of instructor.

157. Happiness (4)
This course will address the psychology of happiness. The discussions and readings, consisting largely of original research articles and perspectives, will address questions as: what is happiness? How do we measure it, and how do we tell who has it? What is the psychology of happiness and what is its evolutionary significance? What Makes people happy—youth, fortune, marriage, chocolate? Is the pursuit of happiness rational? Prerequisite: upper-division standing.

158. Interpersonal Relationships (4)
A seminar-style course to examine theories and empirical work pertaining to interpersonal relationships; attraction, jealousy, attachments, love. Prerequisite: upper-division standing.

159. Physiological Basis of Perception (4)
A survey of sensory and perceptual phenomena and the physiological mechanisms underlying them. Prerequisite: Psychology 102 or consent of instructor.

160. Groups (4)
An examination of the processes of group formation and maintenance and their consequences for group members. Prerequisite: upper-division standing.

161. Introduction to Engineering Psychology (4)
Surveys human perceptual and cognitive limitations and abilities important for understanding "user-friendly" computers and devices, improving aviation and traffic safety, and other engineering challenges. Topics include human vision as it bears on display design (including virtual-reality), short-term memory limitations, learning and practice, effects of noise and stress, causes of human error and their minimization. Prerequisite: upper-division standing.

162. Psychology and the Law (4)
Research dealing with psychological factors in the legal system will be surveyed. Particular emphasis will be placed on applying psychological theory and methods to the criminal justice system and in understanding the behavior of its participants. Prerequisite: Psychology 60 and 104.

163. Abnormal Psychology (4)
Surveys origins, characteristics and causes of abnormal behavior and the biological and environmental causes of abnormality. Prerequisite: upper-division standing.

164. Criminology (4)
Focus is on the scientific study of law making and societal reaction to breaking of laws; major theories that account for criminal behavior; the relationship between drugs and crime; the effects penalties have on recidivism; and psychological effects of incarceration. Note: Students may not enroll in Psychology 164 after receiving credit for Psychology 193 Criminology. Prerequisite: department approval.

166. History of Psychology (4)
Survey of the major trends and personalities in the development of psychological thought. Emphasis given to such selected topics as mind-body problem, nativism vs. empiricism, and genesis of behaviorism. Open to psychology majors with senior standing only.

168. Psychological Disorders of Childhood (4)
Explores different forms of psychological deviance in children (psychosis, neurosis, mental retardation, language disorders and other behavior problems). Emphasis on symptomatology, assessment, etiological factors, and various treatment modalities. Prerequisite: upper-division standing.

169. Brain Damage and Mental Functions (4)
Studies neural mechanisms underlying perception, memory, language, and other mental capacities. What happens to these capacities when different parts of the brain are damaged? What can we learn about the normal brain by studying patients? Prerequisite: upper-division standing.

170. Introduction to Cognitive Neuropsychology (4)
What are the neural mechanisms underlying mental phenomena such as perception, attention, and memory? The two disciplines, neuropsychology and psychology, both have a long history but until recently there has been very little interaction between them. This course will take students to the interface between these two fields and we will discuss a wide range of topics that are of current interest. Prerequisite: upper-division standing.

171. Neuropsychology of Learning and Memory (4)
Studies the neurobiology of learning and memory, from cognitive to molecular neuroscience, including human, animal, and cellular; and molecular studies of memory. Topics include amnesia, mental retardation, exceptional intelligence, aging, and Alzheimer's disease. Prerequisites: Psychology 2 or 106 or 181, upper-division standing or consent of instructor.

172. The Psychology of Human Sexuality (4)
Important issues in human sexuality including sex and gender, sexual orientation, reproductive technology, and sexual dysfunction. Prerequisite: upper-division standing.

173. Psychology of Food and Behavior (4)
Reviews the psychology of food and behavior. Topics will include biological, psychological, and social influences: taste preferences and aversions and how they are learned; how culture influences food selection; and food-related behaviors across the lifespan. Prerequisite: upper-division standing or consent of instructor.

175. Psychology and the Arts (4)
An interdisciplinary course focusing on theoretical ideas and empirical research that relate contemporary psychology (social and cognitive, psychophysiology, motivation and emotion) to issues in various aesthetic and artistic domains, including visual arts, music, literature, criticism, and the performance arts. Prerequisites: upper-division standing, major in psychology, music, visual arts, communication, theatre and dance, or literature, or consent of instructor.

176. Creativity (4)
The focus is on enhancing creativity in individuals, small groups, and organizations. Topics include how changes to individuals (e.g., gaining expertise, accepting more risk) and their environment (e.g., more diverse colleagues, more time for exploring) increase creativity. Prerequisite: upper-division standing.

179. Drugs, Addiction, and Mental Disorders (4)
Considers the use, abuse, liability, and psychotherapeutic effects of drugs in humans. Lectures are supplemented by guest lecturers. Prerequisites: upper-division students in psychology, biology, economics, or consent of instructor.

180. Adolescence (4)
This course will adopt a multidisciplinary approach toward understanding the period of human adolescence. A strong focus on the neurobiological underpinnings of adolescent behavior will be combined with psychological, anthropological, and sociological considerations. Prerequisite: upper-division standing.

181. Drugs and Behavior (4)
Develops basic principles in psychopharmacology while exploring the behavioral effects of psychoactive drugs and mechanisms of action of drugs. Prerequisites: Psychology major or minor, or biology major or minor.

182. Illusions and the Brain (4)
This course explores the bases of illusions in terms of perceptual and cognitive principles, and the underlying brain mechanisms; extensive demonstrations are included. Prerequisite: upper-division standing.

184. Choice and Self-Control (4)
Experimental analysis of choice behavior, with an emphasis on the affective and cognitive processes that underlie self-control. Focus on conditions under which decision-making is optimal. Prerequisite: upper-division students in psychology, biology, economics, or consent of instructor.

185. Applied Developmental Psychology (4)
This seminar course deals with how developmental psychologists explore such questions as: How do we help children to acquire new knowledge, and what are the implications for children's well-being. Major issues to be discussed are: child witnesses, literacy, school violence, impact of media on child development, and developmental psychopathology. Prerequisites: upper-division standing and Psychology 101.

187. Development of Social Cognition (4)
This course will examine reasoning about people from a developmental perspective. Topics will include emotional understanding, achievement motivation, peer relations, social categories, and culture. Prerequisite: Psychology 101.

188. Impulse Control Disorders (4)
Problems of impulse control are important features of major psychiatric disorders but also of atypical impulse control disorders such as: pathological gambling, compulsive sex, eating, exercise, shopping. Focus: development, major common features, treatment, and neurobiological basis of impulse control disorders. Prerequisite: upper-division standing.

189. Brain, Behavior, and Evolution (4)
A survey of natural behaviors, including birdsong, prey capture, localization, electro-reception, and echo-location, and the neural systems that control them, emphasizing broad functional relationships between brain and behavior across species. Prerequisites: Psychology 103 and 106, or permission of instructor.
190. Parenting (4)
This course adopts an interdisciplinary approach to the complex construct of parenting. Parenting is explored with respect to history, culture, development, psychology, biology, etc. Controversial issues such as the influence of the media, family structure, and discipline strategies are analyzed. Prerequisite: upper-division standing.

191. Psychology of Sleep (4)
Topics include basic psychology, evolutionary models of the purpose of sleep, the role of sleep in learning/creativity, dreams, and sleep disorders. Prerequisite: upper-division standing.

193. Topics in Psychology (4)
Selected topics in the field of psychology. May be repeated for credit as topics vary. Prerequisites: upper-division standing and consent of instructor.

194A-B-C. Honors Thesis (4-4-4)
Students will take part in a weekly research seminar. In addition, they will plan and carry out a three-quarter research project under the guidance of a faculty member. The project will form the basis of the senior honors thesis. Prerequisites: acceptance to the Honors Program in the junior year (110A-B) (GPA 3.3), in addition one laboratory course (114–127) or two 199s which culminate in a research paper (by petition only) and Psychology 110, 111A-B and consent of instructor.

195. Instruction in Psychology (4)
Intensive course in statistical methods and the mathematical foundations of research. Topics include probability, hypothesis testing, and hypothesis generation and grading (P/NP grades only). This course counts only once towards the major. Prerequisites: junior or senior psychology major with GPA of 3.0 or an A in the course and consent of instructor.

196A-B-C. Research Seminar (4-4-4)
Weekly research seminar, three quarter research project under faculty guidance which culminates in a thesis. Prerequisites: one laboratory course, 3.3 GPA, and/or consent of instructor.

199. Independent Study (2 or 4)
Independent study or research under direction of a member of the faculty. Prerequisites: GPA 2.5 and ninety units completed. (P/NP grades only) Not counted for credit toward the major. See section on 199 information.

GRADUATE

201A-B-C. Quantitative Methods in Psychology (4-4-4)
An intensive course in statistical methods and the mathematical treatment of data, with special reference to research in psychology. Prerequisite: restricted to graduate students in psychology.

204. Neurobiology of Social Development (4)
The goal of this class is to acquaint students with research on the neurological underpinnings of social and social cognitive development. Students will be expected to become familiar with the existing research in the area, and to understand the neural structures that comprise the limbic system, and their developmental timecourse. Students will be expected to form hypotheses about the neural correlates of aspects of social development based upon an understanding of the development of structures involved in social behavior.

205. Emotion (4)
This seminar provides a selective overview of the scientific study of emotion. We will discuss various theoretical perspectives on emotion and will focus on specific topics such as emotion regulation, affect in social interactions, individual differences, and particular emotions (e.g., embarrassment, envy, and jealousy). Prerequisite: graduate standing.

206. Mathematical Modeling (4)
This course is designed to teach the basics of mathematical modeling. Topics include when, why, and how to use signal detection theory (an essential theory for anyone interested in attention, perception, memory, or decision making), how to analyze reaction time distributions (instead of simply measuring mean RT), how to engage in the fine art of model comparison, and how to avoid creating models that are more complex than the data they seek to explain.

209. Topics in Judgment and Decision Making (3)
This seminar examines issues in the psychology of judgment and decision making. Topics include the heuristics and biases approach, overconfidence, framing effects, intertemporal choice, and rationality.

210. Skill Acquisition and Development of Expertise (4)
The course examines the transition from novice to highly skilled performance and the transfer of that skill to novel problems and contexts. Emphasis will be on information processing accounts of learning and performance for relatively simple cognitive tasks.

211. The Development of Social Cognition (3)
This seminar will cover the development of concepts about people. Topics include emotional understanding, “theory of mind,” trait thinking, social categories, psychological essentialism, achievement motivation, and social and cultural influences on person perception. Prerequisite: graduate standing.

212. Current Topics in Visual Science (3)
Each year a different topic in visual science is selected for in-depth review and discussion based on current readings. Prerequisite: consent of instructor.

213. Professional Procedures and Survival in Psychology (3)
This course provides a forum for presentation and discussion of the basic issues associated with surviving in a professional (particularly, academic) psychology environment. It covers such issues as: 1) how to get a job; 2) how to keep a job; 3) general issues in professional survival. The course will include the presence of a number of the psychology faculty in topic specific areas (e.g., journal editors from our faculty; faculty sitting on grant review panels, etc.). The issue of ethics will be examined and discussed relative to each topic raised.

214. Applied Developmental Psychology (4)
This seminar deals with how developmental psychologists conduct scientific studies that have direct practical implications for children's well-being. Major issues to be discussed are: child witnesses, literacy, school violence, impact of media on child development, and developmental psychopathology.

217A. Proseminar in Developmental Psychology I (3)
The course examines cognitive development through the school-age period. It begins with an examination of early neurological, sensory, motor, and perceptual functions and then focuses on issues in linguistic and cognitive development.

217B. Proseminar in Developmental Psychology II (3)
The course examines social and personality development from infancy through early adolescence. The class will first discuss general developmental theory and methods and then topics such as attachment, temperament, self-concept, aggression, family relations, play, and peers.

218A-B. Cognitive Psychology (3-3)
A two-quarter survey of basic principles and concepts of cognitive psychology. This course is intended to serve as the basic introduction for first-year students. Basic areas include knowledge, memory, thought, perception and performance. The areas are taught by faculty members who work within the specialty. Prerequisite: graduate status in psychology or consent of instructor.

219. Proseminar in Learning and Motivation (3)
An overview of the experimental and applied analysis of behavior including topics such as the principles of operant and classical conditioning, stimulus control, choice, conditioned reinforcement, aversive control, biological and economic contexts, verbal behavior, and the modification of human behavior in a variety of applied settings.

220. Proseminar in Social Psychology (3)
An introduction to social psychology. Psychology and the law, health and psychosomatics, perception, perception and aggression are some of the topics to be covered.

221. Proseminar in Sensation and Perception (3)
Fundamentals of vision, audition, and other senses. Emphasis will be upon psychophysical approaches to the study of these sensory modalities, as well as some essential aspects of their neurophysiological bases.

222. Biological Psychology (3)
A survey of the functional neuroanatomical, neurodevelopmental, neurophysiological, and pharmacological correlates of psychological phenomena.

223. Advanced Topics in Vision (4)
An in-depth analysis of empirical and theoretical issues in a specialized area of vision or visual perception. Emphasis most likely will be on a topic of ongoing vision research at UCSD. Prerequisite: Psychology 212 or special consent of instructor.

229. Happiness (4)
This course will address the psychology of happiness. The discussions and readings, consisting largely of original research articles, will explore such questions as: What is happiness? How do we measure it, and how do we tell who has it? What is the biology of happiness and what is its evolutionary significance? What makes people happy—youth, fortune, marriage, chocolate? Is the pursuit of happiness pointless?

230. Comparative Social Cognition (4)
This seminar will address the following questions: What do nonhuman animals know about the identity and characteristics of conspecifics? How do they use this information to guide their actions? How do animals modify their behavior in relation to social context? What kinds of information are culturally transmitted? What are the brain mechanisms for social cognition in nonhumans, and how do they compare to ours? Prerequisite: graduate standing or consent of instructor.

231. Experimentation and Data Analysis Using Matlab (4)
Lecture and exercises will demonstrate the use of Matlab, its extensions in running psychological experiments and in analyzing experimental data. No prior programming knowledge assumed. Experimental topics include writing scripts to generate well-controlled visual or acoustic stimuli. Analytical topics include data plotting and statistics. Prerequisite: graduate standing or consent of instructor.

233A. Topics in Learning and Motivation (3)
Advanced topics in learning and motivation, with special emphasis on current research. Prerequisite: Psychology 210.

236. Substance Abuse (3)
Theory and research on the development, progression, and resolution of substance use and abuse will be reviewed and evaluated. Normal and abnormal patterns of substance involvement will be contrasted across the life span.

237. Human Rationality (4)
The traditional view of rationality is based upon abstract, content-independent rules for behavior. People sometimes violate these rules in a laboratory setting, but the violations are often systematic and appear to reflect adaptation to the environment outside the laboratory. Such findings raise questions about what it means to be rational. Readings will be empirically oriented and cover the areas of deductive reasoning, inductive reasoning, and choice.

240. The Primate Brain (4)
This course will explore the neural basis of perception, action and cognition in primate cortex. Drawing on recent findings in neuroscience, we will discuss the role of cortex in a range of topics including decision making, object perception and recognition, memory and communication. Prerequisite: graduate standing or consent of instructor.

242A-B-C. Research Topics in Developmental Psychology (4-4-4)
Advanced seminar concentrating on methods of research and current experimental literature. May be taken by undergraduate senior majors concurrently enrolled in Psychology 194. Prerequisite: consent of instructor. (S/U grades permitted.)
243. Sound and Music Perception (3)
This course will deal with anatomy and physiology of the ear, central auditory pathways, and neurological disorders of sound and music perception.

244. Special Topics in Psycholinguistics (4)
Discussion of the psychological reality of grammatical models, competence versus performance, learnability and innateness in theories of language acquisition, and questions of autonomy of “modularity” of grammatical versus semantic processing. In addition, graduate students are required to give oral presentations on articles. Prerequisites: Psychology 145, upper-division standing, or consent of instructor.

246. Emotion and Cognition (4)
This seminar focuses on the interplay between emotion and cognition. We will consider how emotion influences perception, reasoning, memory, and judgment, and how cognitive processes can have emotional consequences. We will also discuss physiological and neural underpinnings of an affective influence and debate more general issues such as emotion and rationality. Prerequisite: graduate standing or consent of instructor.

247. Neuroendocrinology of Social Variation (4)
Students will read and discuss primary literature on the general topic of how steroid and peptide hormones contribute to the production of social variation and diversity. This diversity includes seasonal variation, intersexual variation, and divergence between species in patterns of sociality and space use, pair-bonding and mating tactics, aggression, and use of communication signals.

249A-B-C. Advanced Topics in Applied Behavior Analysis (3-3-3)
Research and discussion on selected topics in applied behavior analysis.

250. Sleep, Learning and Thought (4)
The role of time and sleep in learning, memory, and thought will be covered. Topics include human procedural memory, declarative memory, inference, creativity, and problem solving. Prerequisite: graduate standing or consent of instructor.

251. Advanced Topics in Learning and Motivation (3)
Weekly meetings for graduate students actively engaged in research on conditioning. Prerequisite: consent of instructor.

252. Seminar on Cognitive Neuroscience (3)
This is a series of weekly seminars on current trends in neuropsychology. The seminars will deal with the concept of "localization" of function in different parts of the brain and the effects of damage to these parts on cognitive functions such as perception, memory and language. Active student participation will be encouraged in preparing these seminars.

253. Cognitive Psychology and Cognitive Neuroimaging (4)
This seminar in cognitive neuroscience focuses on modern approaches to cognitive psychology as revealed through cognitive neuroimaging. A major goal of the course is to evaluate what (if anything) neuroimaging evidence has added to classic cognitive models/evidence in major areas of cognition (working memory, categorization, executive processes, decision-making, emotion, and memory).

255A-B-C. Advanced Topics in Biological Psychology (3-3-3)
Research and discussion on selected topics in biological psychology.

256. Impulsivity (4)
This seminar will cover the following topics in relation to impulsivity: varieties of the construct; operationalization via behavioral tasks in nonhuman animals and humans; translation from genes through phenotypes; neuropsychiatric disorders; neuropsychopharmacology; behavioral treatments; and implications for jurisprudence. Prerequisite: graduate standing or consent of instructor.

258. Delay of Gratification (3)
This course will review the research on delay of gratification. We will cover what makes it in general so tough, what situations make it possible, who can do it, and what the implications of this ability are. We will draw from research in social, personality, and animal psychology as well as economics.

259. Social Psychology/Psycho-aesthetics (3)
This course will be an intensive examination of social psychology (legal decision-making, emotion, aggressive behavior) and the psychology of visual art and music (psycho-aesthetics).

261. Proseminar in History of Psychology (3)
This course will consider the intellectual context in the nineteenth century from which psychology developed as an independent discipline. Emphasis will be on early German psychology and evolutionary theory. The second part of the course will consider the histories of different areas of psychology (e.g., behavioral, cognitive).

262. Functional Construction of the Vertebrate Brain’s Social Behavior Network (4)
The vertebrate brain contains a network of strongly interconnected structures that play essential roles in the regulation of social behavior. In this seminar we will read and discuss primary literature that details the structure and functional behaviors of this network.

264A-B-C. Advanced Topics in Language Processes (4-4-4)
Research and discussion on selected topics in language processes.

266. Psychology of Reading (4)
This seminar will cover aspects of reading, emphasizing cognitive processes involved in skilled reading. However, learning to read and methods to teach reading will also be discussed. Other topics include: eye movements and reading, word recognition, inner speech, context effects, discourse processing, sentence parsing, and dyslexia.

267A-B-C. Advanced Topics in Behavior Medicine (3-3-3)
Research and discussion on selected topics in behavior medicine.

269A-B-C. Advanced Topics in Sound and Music Perception (3-3-3)
Research and discussion on selected topics in sound and music perception.

270A-B-C. Introduction to Laboratory Experimentation (1–4)
A basic laboratory course, designed to introduce first-year graduate students to experimental methods in psychology. The student will select a research topic, do a thorough literature review of the area, design and carry out new, original studies of problems in the selected area, and prepare a final formal report of the study at the end of the spring quarter. This course is required of all first-year graduate students in the department. Prerequisite: first-year psychology graduate students only.

271. Neurobiology of Learning and Memory (4)
This seminar will span the study of learning and memory from an interdisciplinary neuroscience perspective: the goal will be to gain a broad perspective on memory. The course will also touch on dysfunctions of learning and memory such as in amnesia, mental retardation, aging, and Alzheimer’s disease. The course will end with exciting developments in the field, including the possibility of genetic and pharmacological enhancement of memory and intelligence.

272. Selected Topics in Cognitive Psychology (3)
An in-depth analysis of selected empirical and theoretical topics in cognitive psychology. The course will focus on areas where notable progress appears to be taking place in contemporary research.

273. Selected Topics in Quantitative Methods in Psychology (4)
An in-depth analysis and discussion of selected advanced topics in quantitative methods in psychology.

280. Seminar in Communication and Information Processing (1)
(S/U grades only.)
THE JOINT DOCTORAL PROGRAM (JDP) IN EPIDEMIOLOGY

OFFICE: Stein Clinical Research Building, Room 349
Mail Code 0607
UCSD—http://epidemiology.ucsd.edu/
SDSU—http://publichealth.sdsu.edu/phdmain.php

The doctoral program in public health (epidemiology) was developed as a joint program in 1990 between the Department of Family and Preventive Medicine in the School of Medicine at the University of California, San Diego (UCSD), and the Graduate School of Public Health at San Diego State University (SDSU). Students in the program complete course work and conduct research at both institutions. Faculty from each campus serve on advisory and dissertation committees, providing students with extensive exposure to experts whose research interests represent the interdisciplinary nature of modern public health. Dr. Deborah Wingard (UCSD) and Dr. Richard Shaffer (SDSU) codirect the program.

Requirements for the joint doctoral degree include:
1. successful completion of required course work
2. passing written preliminary examinations in epidemiology and biostatistics
3. passing written and oral qualifying examinations
4. demonstrating proficiency in two computer-based statistical software packages
5. demonstrating proficiency in teaching
6. completion and successful formal defense of a dissertation

Typical areas of emphasis include infectious disease epidemiology, chronic disease epidemiology, cancer epidemiology, behavioral epidemiology, community-based trials, physical activity/exercise/nutrition and health, San Diego is ideally located in a large and ethnically diverse metropolitan center bordering Mexico and the Pacific Rim, enabling students to carry out population-based multicultural and multinational studies of health problems.

Time Limits

The goal of this policy is to encourage Ph.D. completion in a timely manner.

Pre-candidacy limit. Maximum registered time to advance to Ph.D. candidacy: 4 years

Support limit. Maximum registered time doctoral student is eligible for support: 6 years

Total time limit. Maximum registered time to complete all Ph.D. requirements: 7 years

Information regarding admission is found in the current edition of the Bulletin of the Graduate Division of San Diego State University. To receive an application for admission, contact SDSU/UCSD Joint Doctoral Program in Public Health, San Diego State University, 5500 Campanile Drive, San Diego 92182-4162, (619) 594-2743.

For more information, please contact UCSD Graduate Coordinator, 3855 Health Sciences Drive, Room 3063, La Jolla, CA 92093-0901, (858) 822-2382.

THE JOINT DOCTORAL PROGRAM (JDP) IN GLOBAL HEALTH

OFFICE: Ash Building, Room 109
Mail Code 0622

Since 2007, a Ph.D. in public health with a concentration in global health has been offered by multidisciplinary faculty in UCSD’s School of Medicine and the Graduate School of Public Health at San Diego State University. Global health relates to health issues and concerns that transcend national borders, class, race, ethnicity, and culture, stresses the commonality of health issues, and calls for collective, partnership-based action to resolve these issues. Accordingly, emphasis is on preparing graduates with the fundamental knowledge, understanding, and specific skills necessary to become public health researchers and professional leaders in global health settings. Proximity to the U.S./Mexico border and expertise of many current faculty support and encourage a focus on infectious diseases (e.g., HIV, TB, STDs) and health of migrant populations, although students are expected to develop other areas of specialization within the global health concentration. These may be content areas, such as chronic/infectious disease surveillance and prevention, environmental health, health policy, and substance abuse, or methodological areas such as quantitative, qualitative, and spatial research methodologies that are applied to address health problems of global health significance. Dr. Steffanie Stratthdee (UCSD) and Dr. Jenny Quintana (SDSU) direct the program.

Requirements for the joint doctoral degree include:
1. Successful completion of required course work
2. Passing written and oral qualifying examinations
3. Demonstrated proficiency in teaching
4. Demonstrated cultural competence appropriate to dissertation area
5. Completion and successful formal defense of a dissertation

THE JOINT DOCTORAL PROGRAM (JDP) IN HEALTH BEHAVIOR

OFFICE: Moores UCSD Cancer Center, Room 3063
Mail Code 0901
UCSD—http://famprevmed.ucsd.edu/educational.html
SDSU—http://publichealth.sdsu.edu

A Ph.D. in public health with a concentration in health behavior is offered by the joint faculties of the Department of Family and Preventive Medicine in the School of Medicine at UC San Diego and the Graduate School of Public Health at San Diego State University (SDSU). Students in the program complete course work and conduct research at both institutions. Faculty from each campus serve on advisory and dissertation committees, providing students with extensive exposure to experts whose research interests represent the interdisciplinary nature of modern public health. Dr. John P. Pierce (UCSD) and Dr. Joni Mayer (SDSU) codirect the program.

Emphasis is on producing graduates with a mastery of the central concepts and analytic processes of health behavior. Graduates of the program are expected to establish advanced skills in applied behavioral analysis for population application; to establish expertise in advanced qualitative and quantitative research methods; to establish advanced skills in the application of interventions and research methods to health behavior in disenfranchised populations; and to establish skills necessary to understand and change health policy. Graduates of the program are competitive for a variety of research, teaching, and community service positions in areas such as academic institutions, local and state health departments, federal and international agencies, and both private and public-sponsored research institutions.

Areas of specialization currently include physical activity, tobacco control, skin-cancer prevention, nutrition and obesity, and HIV/AIDS and tuberculosis prevention and control. An additional emphasis will be placed on methodologies, such as measurement and related research issues; and ecological approaches to understanding health behavior. San Diego is ideally located in a large and ethnically diverse metropolitan center bordering Mexico and the Pacific Rim, enabling students to carry out community-based multicultural and multinational studies of health problems.

Time Limits

The goal of this policy is to encourage Ph.D. completion in a timely manner.

Pre-candidacy limit. Maximum registered time to advance to Ph.D. candidacy: 4 years

Support limit. Maximum registered time doctoral student is eligible for support: 6 years

Total time limit. Maximum registered time to complete all Ph.D. requirements: 7 years

Information regarding admission is found in the current edition of the Bulletin of the Graduate Division of San Diego State University. To receive an application for admission, contact SDSU/UCSD Joint Doctoral Program in Public Health, San Diego State University, 5500 Campanile Drive, San Diego 92182-4162, (619) 594-2743.

For more information, please contact UCSD Graduate Coordinator, 3855 Health Sciences Drive, Room 3063, La Jolla, CA 92093-0901, (858) 822-2382.
Public Service Minor

Office: Office of the Provost
Thurgood Marshall College
Administration Building

AFFILIATED FACULTY AND STAFF
Amy Binder, Associate Professor, Sociology, Director of Public Service Minor
Tricia Taylor-Oliveira, Director, Academic Internship Program
Kerry Shannon, Public Service Internship Specialist

SPECIALIZATION CHAIRS
Aurora Zepeda, M.P.A., Education Studies—Education
Steven P. Erie, Ph.D., Political Science—Government
Lawrence A. Palinkas, Ph.D., Family and Preventive Medicine, School of Medicine—Health
Joel Robbins, Ph.D., Anthropology—Social Issues

The public service minor at UCSD encourages students to understand the history and practices of public service and to participate in the development of civic skills. Those skills and practices are essential cornerstones of participation in a democratic society regardless of one’s chosen profession.

The course work for the minor emphasizes the history and emergence of the non-profit sector as a national institution distinct from the private and public sectors. The practicum aspects of the minor coupled with the traditional academic work encourage students to see the connection between the deeds of charitable service and the historic worth of citizen participation in the common public franchise, regardless of professional interests or gain.

The minor in public service is open to all UCSD students in good standing. Students first complete TMC 15, Public Service in America, and must choose one area of specialization from education, government, social issues, or health. A list of specific courses appropriate for these specializations is available through the Marshall College Provost’s Office. Approval of the minor is based on completion of TMC 15 and two of the three upper-division specialization courses with a 2.0 GPA or better, and a cumulative GPA of 2.5 on ninety units. Students approved to complete the minor are placed into specific internships in public service through the Academic Internship Program.

The following twenty-eight units comprise the public service minor:

- TMC 15, Public Service in America
- Three upper-division specialization courses (education, government, social issues, or health)
- Three upper-division academic internships in public service
- Capstone seminar in public service

For more information regarding the requirements for the minor, see the Office of the Provost, or Academic Advising, Thurgood Marshall College.

PROGRAM DESCRIPTION

The program engages in the academic study of religious phenomena in many regions of the world and within many different religious cultures and traditions; and it studies literature, history, and society in relation to religion. Faculty and students associated with the program give primacy to humanistic and social scientific methods of study that have become established in the academic community during the nineteenth and twentieth centuries.

The location of the program in the Division of Arts and Humanities and its use of courses from a variety of departments and divisions imply that neither the study of religion nor its data are the privileged possession of a single discipline. The hallmark of the program is its interdisciplinary and interdepartmental structure. At UC San Diego, faculty from the Departments of Anthropology, History, Literature, Philosophy, Political Science, Sociology, and Visual Arts provide students with the opportunity to examine religious artifacts, texts, institutions, and communities within a particular cultural and historical context and in the context of comparable manifestations within the general history of religions.

A concentration in the Study of Religion aims at fostering a student’s understanding of religion as one of the primary expressions of the human condition and as an historically powerful force in the shaping of human cultures; and it aims to foster an understanding of multiple religious traditions. It seeks to develop a student’s appreciation of the difficulties and possibilities inherent in undertaking a critical, disciplined, cross-cultural study of religion.

Since the program endorses an interdisciplinary and comparative approach to the study of religion, lower-division preparation should be wide and varied. Lower-division courses in which religion figures prominently (e.g., Introduction to Religion, The Making of the Modern World, or the Revelle College Humanities Program), as well as courses which focus on textual and contextual analysis and employ the analytical tools and conceptual categories of the human sciences, would all be useful in preparing the student for a major in the Study of Religion. The program strongly encourages foreign language study.

The ability to read the languages of original sources and of modern scholarship is highly recommended, especially for students planning to attend graduate school in religion.

MAJOR

The major in the Study of Religion consists of twelve upper-division courses, achieving a balance between courses which focus on a single religious tradition or issue and those which explore various traditions and methodologies. These courses should include the following:

- Three required courses in the Study of Religion, (1) RELI 110A or B and (2) RELI 111 or 112 or 113 and (3) RELI 189, or one other seminar approved by the program director.
- Nine courses from the approved course list to be selected in consultation with the program director. Students should see the program coordinator for further details.

DOUBLE MAJOR

Students may choose to pursue the Study of Religion as their second major. In such cases, it may be possible for up to two courses to overlap with the other major. Students should consult the program coordinator for further information.

HONORS IN THE STUDY OF RELIGION

The program for the Study of Religion offers an Honors Program for students who demonstrate excellence in the major. The minimum eligibility requirements for the Honors Program are stated below. In most cases students are completing their last two quarters (winter and spring) when they enroll in the Honors Program.

Minimum Eligibility Requirements

- RELI 110A or 110B completed prior to honors project
- Junior or senior standing (completion of at least 90 units)
- GPA of 3.3 overall and a 3.5 in the major to enter or remain in the Honors Program
- Eight units of RELI 196H taken over two quarters (typically winter and spring)
- Research paper (at least twenty pages; most students write between thirty and fifty pages)

Students interested in the Honors Program should consult with the program coordinator for a detailed list of requirements and an application. Participation in the Honors Program is contingent upon the prior approval of the Honors Thesis research topic by the director. Honors proposals are due at the program office by the tenth week of the quarter (usually fall quarter of the senior year) prior to being enrolled. Final approval must take place before the first day of the quarter in which the student plans to enroll in RELI 196H.

The Honors student’s faculty director must certify by the end of the first term that the student is making timely progress toward the completion of his or her project.

The notations “distinction,” “high distinction,” and “highest distinction” will be determined on the following basis: major GPA, the grade for the research paper, and the grade for the public presentation.

MINOR

The minor in the Study of Religion consists of seven courses, of which five must be upper-division. These seven courses must include two required courses in the Study of Religion as delineated under the major:
1. RELI 110A or 110B, and
2. RELI 111 or 112 or 113.

Some students may apply two lower-division college requirements to the minor (e.g., Revelle students may apply HUM 1 and HUM 2, and ERC students may apply MW 2 and MW 3).

Student Advising

All students are assigned a faculty advisor and are encouraged to meet with their advisor at least once
a quarter to develop their course of study. Additional advising information may be obtained from the program coordinator, Literature Building, First Floor, Room 139.

Study Abroad

Students are encouraged to investigate the University of California Education Abroad Program (EAP) and other options for foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill major and minor requirements. More information about studying abroad can be obtained in the Education Abroad section of the catalog.

Career Opportunities and Preparation for Graduate Study

Among its many aims, the major in the Study of Religion is designed to develop fundamental skills in critical thinking, comparative analysis, research, and written expression. As such, the B.A. degree is appropriate for careers in education, government, business, and non-profit agencies. It is also an excellent preparation for graduate study in a variety of fields and disciplines.

Students interested in earning a California teaching credential from UCSD should contact the Teacher Education Program for further information. Students are encouraged to consult the program director for further information about career opportunities and graduate study. Information is also available on the program’s Web site.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

RELI 1. Introduction to Religion (4)
An introduction to key topics in the study of religion through a comparative reading of religious texts and/or artifacts. The intent is to develop basic strategies of interpretation for undertaking a critical, disciplined study of religion.

RELI 110A. The Modern Study of Religion: Religion in Modernity (4)
This class examines the history of the term “religion,” focusing upon the development of religion’s contemporary significance within the Reformation and Enlightenment, and questioning what it means to be “modern.” Topics change yearly. Special attention to contemporary culture and politics.

RELI 110B. The Modern Study of Religion: Social and Cultural Theories of Religion (4)
An introduction to basic strategies of interpretation in the study of religion, including issues of category formation, theory, and method. Special attention paid to prominent voices of the nineteenth and twentieth centuries, including Marx, Freud, Durkheim, Eliade, etc.

RELI 111. Texts and Contexts: The Holy Book in Judaism and Christianity (4)
This class examines the development of sacred scripture in Judaism and Christianity. Topics include the variety and use of texts in religious communities; the process of canonization; the formation and transformation of textual communities. Prerequisite: upper-division standing or department stamp.

RELI 112. Texts and Contexts: The Holy Book in Islam (4)
An overview of the history and thematic issues in the study of Quran. It will focus on historical events, issues, and various interpretive practices in the development of Quran as a sacred text. Prerequisite: upper-division standing or department stamp.

RELI 113. Texts and Contexts: Textual Communities in South Asia (4)
This class considers important texts belonging to one or more of the following South Asian Traditions: Hinduism, Buddhism, Jainism, or Sikhism. It introduces students to the ways in which religious identities are formed and contested within a pluralistic society.

RELI 130. Religion, Science, and Magic (4)
Religion, science, and magic provide scholars with a set of analytic categories for the comparative study of cultural forms and modes of thinking. What are the ideological underpinnings of these categories? This class addresses this question using comparative avenues involving literary sources. Prerequisite: upper-division standing or consent of instructor.

RELI 131. Topics in Religion and Sexuality (4)
How does religiosity as a significant cultural component help mold gender and sexuality identities? The class offers topical investigations into this question. Prerequisite: upper-division standing or consent of instructor.

RELI 132. Topics in Orthodoxy and Heterodoxy (4)
Religious dogmas often develop in dialogue with alternative viewpoints that ultimately are rejected by heterodoxy by the dominant group. This class presents case studies in the interpretation of such ideological and sociological pairings using scriptural, literary, and analytic sources. Prerequisite: upper-division standing or consent of instructor.

RELI 134. Topics in American Religion (4)
Topical studies in the history of religion in American society, ranging from the Puritans to the New Age. Prerequisite: upper-division standing or consent of instructor.

RELI 140. Death and Religion (4)
This interdisciplinary course uses literary sources to explore the relationship between death and religion on a historical and global scale; the relationship between political religious rituals and symbolism of rebirth; examination of carnival, death pollution, and symbolism of gender. Prerequisite: upper-division standing or consent of instructor.

RELI 141. Public Sphere and Religion (4)
This interdisciplinary course will explore the historical and theoretical relationship between religious rituals and symbolism of rebirth; examination of carnival, death pollution, and symbolism of gender. Prerequisite: upper-division standing or consent of instructor.

RELI 142. Secularization and Religion (4)
Surveys the relationship between religion and modernity, in particular the problematic of the secularization theory; covers cases such as Catholic liberation theology and Islamic fundamentalism, with particular focus on the "deprivation of modern religion." Prerequisite: upper-division standing or consent of instructor.

RELI 143. Topics in Performing Religion (4)
This course explores religion as a system of bodily practices, rather than one of tenets or beliefs. How do day-to-day activities as well as significant rituals express and inform people’s religious lives? Why is doctrine an insufficient basis for understanding religion? May be taken up to three times as topics vary. Prerequisite: upper-division standing or consent of instructor.

RELI 188. Special Topics in Religion (4)
Students in this lecture will investigate important problems in the study of religion or the history of particular religions. May be repeated for credit up to three times when topics vary. Prerequisite: upper-division standing.

RELI 189. Seminar in Religion (4)
This seminar requires the intensive analysis of critical problems in the study of religion or the history of particular religions. May be repeated for credit up to three times when topics vary. Prerequisite: upper-division standing: RELI 110A or 110B or consent of instructor.

RELI 196H. Honors Thesis Research (4)
Honors thesis research for students accepted into the Honors Program. Research is conducted under the supervision of a program faculty member. Prerequisite: program approval into the Honors Program.

RELI 197. Directed Advanced Readings (4)
A faculty member will direct a student in advanced readings on a topic not generally included in the Program for the Study of Religion’s curriculum. Students must make arrangements with the program and individual faculty. May be repeated for credit up to three times for credit. Prerequisites: upper-division standing: RELI 110A or 110B; overall GPA of 2.5.

RELI 199. Independent Research Study for Undergraduates (2–4)
Independent research in religion under the supervision of a faculty member affiliated with the Program for the Study of Religion. This course may be repeated three times with program approval. (P/NP grades only.) Prerequisites: upper-division standing, with 2.5 GPA (overall); program stamp.

APPROVED ELECTIVE COURSES

The following lower- and upper-division courses are offered on a regular basis, although not every course is available every year. Please contact the program coordinator for approved courses in any given quarter or visit the program’s Web site, http://reliigion.ucsd.edu. Students may petition other courses, including independent study and Education Abroad Program courses when appropriate.

LOWER-DIVISION

ANTH 1. Introduction to Culture
HUM 1. The Foundations of Western Civilization: Israel and Greece
HUM 2. Rome, Christianity, and the Middle Ages
MMW 2. The Great Classical Traditions
MMW 3. The Medieval Heritage
PHIL 14. Introduction to Philosophy: Metaphysics
PHIL 31. History of Philosophy: Ancient Philosophy
RELI 1. Introduction to Religion
SOCI 1A, 8. The Study of Society

UPPER-DIVISION

METHODOLOGICAL

ANSC 120. Anthropology of Religion
ANSC 167. Rituals and Celebrations
RELI 110A. The Modern Study of Religion: Religion in Modernity
RELI 110B. The Modern Study of Religion: Social and Cultural Theories of Religion
RELI 143. Topics in Performing Religion
RELI 189. Seminar in Religion
SOCI 100. Classical Sociological Theory
SOCI 156. Sociology of Religion

GENERAL COMPARATIVE

ANSC 104. Anthropology of Fantasy
ANSC 134. Global Islam
ANSC 160. Nature, Culture, and Environmentalism
LTWL 100. Mythology
RELI 130. Religion, Science, and Magic
RELI 131. Topics in Religion and Sexuality
RELI 132. Topics in Orthodoxy and Heterodoxy

HUMANITIES/WRITING PROGRAM

OFFICE: Galbraith Hall 180, Revelle College
See Humanities.

REVELLE HONORS PROGRAM

OFFICE: Office of the Provost, Revelle College
Particularly well-prepared students are invited to join a freshman honors program, which includes weekly participation in small faculty seminars (Revelle 20). Acceptance into the Honors Program at admission is automatic for Regents and National Merit Scholars as well as those students entering with a high school GPA of 3.6 or higher and verbal and math SAT scores of 700 or higher. Admission to the program winter quarter is offered to those who achieve a 3.7 GPA in at least twelve graded units taken at UC San Diego during the fall quarter. A variety of other perquisites are also awarded. Outstanding students are individually advised to participate in small honors classes in chemistry, mathematics, physics, and social science.

Outstanding seniors are selected for participation in honors seminars, Revelle 100 and 110. At least five outstanding graduating seniors are honored at graduation each year with a monetary honorarium.

An honors banquet is given for the top 200 students (from all class levels) in Revelle each spring.

REVELLE SEMINARS

OFFICE: Office of the Provost, Revelle College
Revelle Seminars 90 (1.0 unit credit) are sponsored by Revelle College to promote student/faculty interaction in a small group setting.

Revelle 90. Undergraduate Seminar (1)
A seminar intended for exposing undergraduate students, especially freshmen and sophomores, to exciting research programs conducted by the faculty. Prerequisite: none. Pass/Not Pass grades only. (F,W,S)

Revelle 91. Art, Book, and Life (1)
This interdisciplinary seminar will look at some selective relationships between visual arts and literature generally building chronologically and culminating with slide-illustrated visits to the world’s great museums. Short student presentations. Prerequisite: Humanities or consent of instructor.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

Revelle 20. Revelle Honors Seminar (0)
Weekly seminars with a faculty member (chosen each year by the provost to match the interests of participating students). This seminar will acquaint students with the scholarship and research being conducted by faculty and instill in students a sense of participation in the scholarly life at UCSD. Prerequisite: by invitation only. Pass/Not Pass grades only. (F,W,S)

Revelle 100. Senior Honors Seminar:
Science and Civilization (4)
Beginning with the distinction between science and technology, the course will trace their evolution from earliest times, culminating in an examination of their impact on modern society and of the social concerns about their future course. Prerequisites: senior standing, 3.5 overall GPA, science major, consent of instructor, Revelle students only. Pass/Not Pass grades only.
Russian and Soviet Studies

FACULTY
Steven Cassedy, Ph.D., Professor in Literature
Frantisek Deak, Ph.D., Professor Emeritus in Theatre and Dance
Robert Edelman, Ph.D., Professor in History
Amelia Glaser, Ph.D., Assistant Professor in Literature
Philip Roeder, Ph.D., Professor in Political Science
Rebecca Wells, Lecturer in Literature

OFFICE:
History Undergraduate Advising
Humanities and Social Sciences Building, Fifth Floor
Muir College

Russian and Soviet Studies is an interdisciplinary program that provides a broad range of courses in the history, language, literature, and social and political life of Russia (before, during, and after the Soviet period). It is designed for students who do not wish to restrict their Russian studies to literature.

THE MINOR
The minor consists of seven courses, at least four of which must be upper-division. In addition, there must be at least one course each from two of the three following areas: literature, history, and social science. No more than three of the seven courses may be language courses. Knowledge of the language is not a requirement for the minor, but it is strongly recommended.

THE MAJOR
The major requires a study of Russian language. It consists of LTRU 1A-B-C (First-Year Russian), LTRU 2A-B-C (Second-Year Russian), or their equivalent, and a minimum of twelve upper-division courses. All students are required to take LTRU 104A-B-C (Advanced Practicum in Russian), HIEU 134 (History of Russia, Ninth Century to 1855), HIEU 156 (History of Russia, 1855 to the Present), and LTRU 110A-B-C (Survey of Russian Literature in Translation). In addition, students will take four electives, of which at least two must be from the social sciences (sociology or political science).

Students in the major are encouraged to participate in the Education Abroad Program (EAP) in Russia and to investigate other options for foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill UC San Diego degree and major requirements. Please visit the Web site at http://history.ucsd.edu/programs/caesar-programs/russiansoviet-stud/ for further details.

COURSES
For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

LITERATURE
LTRU 1A-B-C. First-year Russian (4-4-4)
LTRU 2A-B-C. Second-year Russian (4-4-4)
LTRU 104A-B-C. Advanced Practicum in Russian (4-4-4)
LTRU 110A-B-C. Survey of Russian and Soviet Literature in Translation (4-4-4)
110A. 1800–1860
110B. 1860–1917
110C. 1917–Present
LTRU 123. Single Author in Russian Literature in Translation (4)
LTRU 150. Russian Culture (4)
LTRU 198. Directed Group Study (4)
LTRU 199. Special Studies (2 or 4)

HISTORY
HIEU 134. The Formation of the Russian Empire, 800–1855 (4)
HIEU 157. Religion and the Law in Modern European History (4)
HIEU 178. Soviet History (4)

SOCIOLOGY
Course offerings vary by quarter.

POLITICAL SCIENCE
POLI 130AA. The Soviet Successor States (4)
POLI 130B. The Soviet State and Society (4)
POLI 130AC. Seminar: Post-Soviet Politics (4)
Science Studies

Program Director, Robert S. Westman

PROFESSORS
William Bechtel, Ph.D., Philosophy
Craig Callender, Ph.D., Philosophy
Lisa Cartwright, Ph.D., Communication
Nancy Cartwright, Ph.D., Philosophy
Paul M. Churchland, Ph.D., Philosophy
Gerald D. Doppelt, Ph.D., Philosophy
Chandra Mukerji, Ph.D., Communication
Naomi Oreskes, Ph.D., History
Andrew Scull, Ph.D., Sociology
Eric Watkins, Ph.D., Philosophy
Robert S. Westman, Ph.D., History

PROFESSOR EMERITUS
Martin J.S. Rudwick, Ph.D., History

ASSOCIATE PROFESSORS
Tal Golan, Ph.D., History
Martha Lampland, Ph.D., Sociology
David Serlin, Ph.D., Communication
Charles Thorpe, Ph.D., Sociology

ASSISTANT PROFESSORS
Morana Alac, Ph.D., Communication
Kelly Gates, Ph.D., Communication
Cathy Gee, Ph.D., History
Christian Wuthrich, Ph.D., Philosophy

AFFILIATED FACULTY/RESEARCHERS
Karen Baker, M.D., Scripps Institution of Oceanography
Roddey Reid, Ph.D., Literature
Linda Strauss, Ph.D., Sixth College

OFFICE: 5045 Humanities and Social Sciences Building, Muir College
http://sciencestudies.ucsd.edu/

The Science Studies Program at UC San Diego is an interdisciplinary Ph.D. program committed to working toward a deeper understanding of scientific knowledge and technological change, past and present. The program offers students an opportunity to integrate the perspectives developed in communication studies and the history, sociology, and philosophy of science, while receiving a thorough training at a professional level in one of the component disciplines. Students enrolled in the program choose one of the four disciplines for their major field of specialist studies and are required to complete minor field requirements in the others. Students are also required to take the Introduction to Science Studies, Advanced Approaches to Science Studies, and two interdisciplinary, topical “core” seminars, and to attend the program colloquium. Science studies students are encouraged to select dissertation topics that offer scope for a cross-disciplinary approach. The Ph.D. will be awarded in Communication (Science Studies), History (Science Studies), Sociology (Science Studies), or Philosophy (Science Studies). In special circumstances, students may be permitted to work for the M.A. degree.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

GRADUATE

COGR 225A, HIGR 238, PHIL 209A, SOCG 255A. Introduction to Science Studies (4)
Study and discussion of classic work in history of science, sociology of science, and philosophy of science, and of work that attempts to develop a unified science studies approach. Required for all students in the Science Studies Program. Prerequisite: enrollment in Science Studies Program.

COGR 225B, HIGR 239, PHIL 209B, SOCG 255B. Seminar in Science Studies (4)
Study and discussion of selected topics in the science studies field. Required for all students in the Science Studies Program. The topic varies from year to year, and students may, therefore, repeat the course for credit. Prerequisite: enrollment in Science Studies Program.

COGR 225C, HIGR 240, PHIL 209C, SOCG 255C. Colloquium in Science Studies (4)
A forum for the presentation and discussion of research in progress in science studies, by graduate students, faculty, and visitors. Required for all students in the Science Studies Program. Prerequisite: enrollment in the Science Studies Program.

COGR 225D, HIGR 241, PHIL 209D, SOCG 255D. Advanced Approaches to Science Studies (4)
Contemporary themes and problems in Science Studies. Focus on recent literature in the history, philosophy and sociology of science, technology, and medicine. Required of all students in the Science Studies Program. Prerequisites: completion of COGR 225A, HIGR 238, PHIL 209A, or SOCG 255A; enrollment in Science Studies Program; or instructor’s permission.

HIGR 235. Science, Empire, and Exploration (4)
Examines links between scientific work, particularly expeditions and exploration, and political programs of empire in the seventeenth to twentieth centuries. Topics: collecting expeditions as expressions of empire; role of colonial administrative networks in facilitating field-based investigations; relations between European and non-European knowledge systems. Prerequisite: graduate standing or consent of instructor.

HIGR 236A-B. Seminar in History of Science (4-4)
A two-quarter research seminar, comprising intensive study of a specific topic in the history of science. The first quarter will be devoted to readings and discussions; the second chiefly to the writing of individual research papers. The topic varies from year to year, and students may repeat the course for credit. (IP grade to be awarded the first quarter; final grade will be given at the end of the second quarter.) Prerequisite: graduate standing.

HIGR 242. Topics in the History of Earth and Life Sciences (4)
Intensive study of specific problems in the history of the life sciences and earth sciences, ranging in period from the Renaissance to the twenty-first century. May be repeated for credit as topics will vary annually. Prerequisite: graduate standing.

HIGR 243. Historical Scholarship in Technology (4)
An introduction to the historiography of technology. This reading seminar provides an overview of scholarly approaches to the history of technology by critically examining classic and contemporary works in the field. Prerequisite: graduate standing or consent of instructor.

HIGR 244. Introduction to Sound Studies (4)
Study and discussion of classic and recent scholarship on sound production and cultures of listening. Emphasizes historical literature but also includes works in literary studies, art history, music, and other fields.

HISC 160. Historical Approaches to the Study of Science (4)
This colloquium course will introduce students to the rich variety of ways in which the scientific enterprise is currently being studied historically. Major recent publications on specific topics in the history of science selected to illustrate this diversity will be discussed and analyzed; the topics will range in period from the seventeenth century to the late twentieth, and will deal with all major branches of natural science. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students may be expected to submit a more substantial piece of work. Prerequisites: consent of instructor; department stamp required.

HISC 163/263. History, Science, and Politics of Climate Change (4)
The complex historical development of human understanding of global climate change, including key scientific work, and the cultural dimensions of proof and persuasion. Special emphasis on the differential political acceptance of the scientific evidence in the U.S. and the world. Graduate students are required to submit an additional paper. Prerequisite: upper-division or graduate standing; department stamp required.

HISC 164/264. Topics in the History of the Physical Sciences (4)
Intensive study of specific problems in the physical (including chemical and mathematical) sciences, ranging in period from the Renaissance to the twentieth century. Topics vary from year to year, and students may therefore repeat the course for credit. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students may be expected to submit a more substantial piece of work. Prerequisites: consent of instructor; department stamp required.

HISC 165. Topics in Twentieth-Century Science and Culture (4)
This is a seminar open to advanced undergraduate and graduate students that explores topics at the interface of science, technology, and culture, from the late nineteenth century to the present. Topics change yearly; may be repeated for credit with instructor’s consent. Requirements vary for undergraduates, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. Prerequisites: upper-division standing or consent of instructor; department stamp required.

HISC 166/266. The Galileo Affair (4)
Galileo’s condemnation by the Catholic Church in 1633 is a well-known but misunderstood episode. Was Galileo punished for holding dangerous scientific views? Personal arrogance? Disobedience? Religious transgressions? Readings in original sources, recent historical interpretations. Graduate students will be expected to submit a more substantial piece of work. Prerequisites: upper-division standing or consent of instructor.

HISC 167/267. Gender and Science (4)
Why have women been traditionally excluded from science? How has this affected scientific knowledge? How have scientists constructed gendered representations not only of women, but also of science and nature? We will address these questions from perspectives including history, philosophy, and psychoanalytic theory. Prerequisite: upper-division standing or consent of instructor.

HISC 168/268. The Extraterrestrial Life Question (4)
The changing fortunes of the belief in the existence of life beyond the Earth (pluralism) from 1750–present as it evolved from a marginal speculation to a central scientific question with wide-ranging consequences for traditional religious belief systems. Prerequisite: upper-division standing or graduate standing or consent of instructor. Graduate students will be expected to submit a more substantial piece of work.

2010-2011 UC SAN DIEGO GENERAL CATALOG • SCIENCE STUDIES 1
HISC 170/270. Topics in the History of Science and Technology (4)
This seminar explores topics at the interface of science, technology, and society, ranging from the seventeenth century to the twentieth. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit an additional paper. Prerequisite: upper-division standing or consent of instructor; department stamp required.

The history of the built environment in the United States, from skyscrapers to suburbs, canals and railroads to factories and department stores. The technological history of structures and infrastructures, and the social and cultural values that have been "built into" our material environment. Graduate students are required to submit an additional paper. Prerequisite: upper-division standing or consent of instructor; department stamp required.

Phil. 204A. Core Course in Philosophy of Science (4)
An introduction to one or more central problems in the philosophy of science, or in the philosophy of one of the particular sciences, such as the nature of confirmation and explanation, the nature of scientific knowledge, reductionism, the unity of science, or realism and antirealism. May be taken for credit three times with changed content.

Phil. 245. Philosophy of Science (4)
This seminar will cover current books and theoretical issues in the philosophy of science. May be taken for credit seven times with changed content.

Phil. 247. Philosophy of Biology (4)
Historical and contemporary perspectives on foundational issues about biology. May include questions about the nature of biological explanation, the relation of biology to chemistry and physics, the status of attributions of function, and the relation of biology to the social sciences. May be taken for credit six times with changed content.

Phil. 250A. Philosophy of the Cognitive Sciences (4)
Contemporary debates about the study of the mind-brain as studied in one or more of the empirical cognitive sciences. May include questions about the different strategies of explanation invoked, the conceptions of representation employed, the connections between theoretical models developed. May be taken for credit six times with changed content.

Phil. 280. Philosophy of Science Topics and Methods (1-2)
This course meets weekly to discuss recent books or articles in philosophy of science. The reading is designed both for students doing active research in the field and for those seeking to gain some familiarity with it. Can be taken nine times for credit with changed content. Prerequisite: graduate standing or consent of instructor.

Soc/G 234. Intellectual Foundation of the Study of Science, Technology, and Medicine (4)
This course focuses on some classic methodological and theoretical resources upon which the sociology of science, technology, and medicine all draw. It gives special attention to relationships between knowledge and social order, and between knowledge and practice, that are common to science, technology, and medicine. Prerequisite: graduate standing.

Soc/G 247. Madness and Society (4)
An examination of the changing Western responses from the age of Bedlam to the age of Prozac. Topics include: the rise and decline of the total institution; the emergence of psychiatry; changing cultural meanings of madness; and the therapeutics of mental disorder. Prerequisite: graduate standing.

Soc/G 249. Technology and the Human (4)
This course explores the ethical and political implications of technological interventions into human life. Approaches from science studies, the sociology of the body, and philosophy. Topics include transformations in domains of life such as work, health, childhood, and death. Prerequisite: graduate standing.

Soc/G 283. The Making of Modern Medicine (4)
An examination of the intellectual, social, cultural, and political dimensions of the Transformation of Western medicine from 1750 to 1900, with a primary focus on Anglo-American developments. Prerequisite: graduate standing.

Soc/G 284. Contemporary Biomedicine (4)
Develops central themes in medical sociology in order to understand twentieth- and twenty-first-century medical practice and research. Topics include authority and expertise; health inequalities; managed care; health activism; biomedical knowledge production; and the construction of medical objects and subjects. Prerequisite: graduate standing.

Soc/G 288. Knowledge Capitalism (4)
This seminar examines the place of scientific knowledge and information and communication technology in the transformation of capitalist economy and society. The class explores new interactions between science studies and the social theory of advanced capitalism. Prerequisite: graduate standing.
Science, Technology, and Public Affairs

OFFICE: Galbraith Hall, Room 180, Revelle College

The program offers an opportunity to study the important social policy issues that lie at the intersection of science, technology, and decision making and to develop awareness of the social and political factors that condition technology on the social order. The program will be attractive to students anticipating careers in law, administrative sciences, science, engineering, business, and international affairs. The program will serve as a meeting place for those interested in approaching policy questions from the perspective of the physical and biological sciences and for those in the social sciences having an interest in the scientific and technological component of present social, political, and environment problems.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

LOWER-DIVISION

35. Society and the Sea (4)
Introduction to the oceans and their relationship to mankind. Selected topics include ocean-related science, engineering, research, economics, and international relations (emphasizing countries of the Pacific Rim); living and nonliving resources; coastal zone management; military and social aspects; and the sea in weather and climate. Prerequisite: none. (F)

UPPER-DIVISION

181. Essentials of Global Health (4)
Illustrates and explores ecologic settings and frameworks for study and understanding of global health and international health policy. Students acquire understanding of diverse determinants and trends of disease in various settings and inter-relationships between socio-cultural-economic development and health. Prerequisite: upper-division standing. (W)

199. Special Project (2 or 4)
Directed study on topics in science, technology, and public affairs; especially for Warren College students. (P/NP grades only.) Prerequisite: senior standing.

RELATED COURSES

Courses in other departments (change somewhat from year to year):

Economics 130
MAE 110B, 118A, 118B, 118C
Political Science 138D, 154, 160AA, 160AB
PROFESSORS
Duncan C. Agnew, Ph.D., Geophysics
Laurence Armi, Ph.D., Oceanography
Farooq Azam, Ph.D., Marine Biology
Jeffrey L. Bada, Ph.D., Marine Chemistry

THE UNDERGRADUATE PROGRAM

The Scripps Institution of Oceanography Department offers over forty-five undergraduate courses covering a wide breadth of earth and marine sciences on several different levels. There are several introductory classes for non-majors, and upper-division courses intended for a wide range of students in natural science majors. For students interested in careers in earth sciences, the Scripps Institution of Oceanography offers a B.S. degree and a contiguous B.S./M.S. degree in earth sciences. In addition, students may follow a chemistry/earth sciences major, a physics major with a specialization in earth sciences, or an environmental systems/earth sciences major (see the “Chemistry,” “Physics,” or “Environmental Systems” sections of the catalog for details). The program also offers an academic minor in earth sciences.

For students interested in broadening their understanding of and opportunity in marine science and oceanography, the program offers an academic minor in marine science. The marine science minor is designed to complement the strong disciplinary training of UC San Diego basic natural science and engineering majors (i.e., chemistry, physics, biological sciences, earth sciences, engineering, mathematics, etc.) by providing a broad interdisciplinary perspective with an applied environmental focus.

EARTH SCIENCES MAJOR

Earth sciences encompass broad scientific study of the origin and evolution of the earth system and its life forms. The earth sciences major embraces a wide range of topics, including the physical and chemical evolution of the planet, the evolution of life, the causes of earthquakes and volcanic eruptions, earth-surface processes, the origin and behavior of oceans and atmosphere, and the impact of humans on the environment. Earth science investigations are increasingly quantitative and experimental, and thus most upper-division courses require a strong foundation in chemistry, physics, and mathematics.

The earth sciences curriculum takes advantage of the unique opportunities offered by Scripps Institution of Oceanography. Classes beyond introductory level are usually small, permitting personalized instruction. Field trips are an important part of the instructional program. Earth sciences students are encouraged to consult with their instructors about incorporating appropriate courses and research opportunities at the Scripps Institution of Oceanography into their undergraduate curriculum.

A degree in earth sciences is an appropriate start for a broad range of career and graduate school opportunities in various areas, including research, government, state and federal survey jobs, environmental management, the petroleum and mining industries, consulting, ocean sciences, industrial institutions, elementary or secondary education, environmental policy, or environmental law. Program advisors and faculty can provide additional information on career and graduate school opportunities.

There are three specializations, each with slightly different course requirements, in the earth sciences major: The Earth Sciences/Geology major, Earth Sciences/Geochemistry major, and Earth Sciences/Geophysics major.

It is strongly recommended that all earth science majors meet regularly with the earth sciences academic advising staff and a faculty advisor to discuss and update curriculum choices. The earth sciences academic staff are located in the Scripps office of Undergraduate Programs in Galbraith Hall, Room 188.

Lower-division requirements are designed to provide the foundations in mathematics, physics, chemistry, and biology that are essential in modern quantitative earth science disciplines. In addition, there are four upper-division courses introducing basic concepts, SIO 100, SIO 102, SIO 103, and SIO 104. SIO 100 and SIO 102 should be taken during the sophomore year to provide the appropriate background for other upper-division courses.

A grade-point average of 2.0 or higher in the upper-division major program is required for graduation. Students must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. In exceptional cases, students with a grade-point average in the major of 2.5 or greater may petition to have one grade of D accepted. All courses (lower- and upper-division) required for the major must be taken for a letter grade.

Special Studies Courses

Special studies in the earth sciences are offered as the courses SIO 198 and SIO 199. These courses are subject to consent of the instructor and approval by the earth sciences faculty advisor. They are open to students who have accrued at least ninety quarter-units and have a GPA of at least 3.0. Two quarters of earth sciences special studies may be counted toward any earth sciences major.

EARTH SCIENCES/GEOLoGY

The earth sciences/geology major is designed to allow students maximum flexibility in tailoring the curriculum to their interests, within the constraints of obtaining the necessary background in physical, biological, and earth sciences. Compared to the earth sciences/geochemistry and earth sciences/geophysics tracks, it requires more earth science and fewer non-earth science courses.

Lower-Division Requirements

Math. 20A-B-C (may allow Math. 10A-B-C by petition) and Math. 20D
Phys. 2A-B-C (may allow Phys. 1A-B-C by petition)
Chem. 6A-B-C
BILD 3
SIO 50

Upper-Division Requirements

Earth Sciences Upper-Division Core Requirements

SIO 100. Introduction to Field Methods
SIO 102. Introduction to Geochemistry
SIO 103. Introduction to Geophysics
SIO 104/255. Paleobiology and History of Life
Upper-Division Earth Science Requirements
SIO 105. Sedimentology and Stratigraphy
SIO 120. Mineralogy
SIO 152. Petrology and Petrography
SIO 160. Introduction to Tectonics
SIO 162. Structural Geology
SIO 182A. Environmental and Exploration Geophysics A
SIO 182B. Environmental and Exploration Geophysics B

Upper-Division Restricted Electives, at least four courses from
Chem. 173. Atmospheric Chemistry
SIO 101. California Coastal Oceanography
SIO 110. Introduction to GIS and GPS for Scientists
SIO 111/Phys. 111. Introduction to Waves and Tides
SIO 112. Urban Landscapes
SIO 115. Ice and the Climate System
SIO 117. The Physical Basis of Global Warming
SIO 135/236. Satellite Remote Sensing
SIO 138. The Coral Reef Environment
SIO 141/Chem. 174. Chemical Principles of Marine Systems
SIO 144/252A. Introduction to Isotope Geochemistry
SIO 148/248. Evolution of Earth’s Biosphere
SIO 154/254. Macroevolution
SIO 155/251. Petrology and Geochemistry of the Solid Earth
SIO 170. Introduction to Volcanology
SIO 186. Interactions Between Humans and the Environmental Problems, including biochemical and anthropogenic effects.

Lower-Division Requirements
Math. 20A-B-C-D
Phys. 2A-B-C (2D recommended)
Chem. 6A-B-C and Chem. 6BL
BILD 3
SIO 50

Upper-Division Requirements
Earth Sciences Upper-Division Core Requirements
SIO 100. Introduction to Field Methods
SIO 102. Introduction to Geochemistry
SIO 103. Introduction to Geophysics
SIO 104/255. Paleobiology and History of Life

Upper-Division Earth Science Requirements
SIO 120. Mineralogy
SIO 144/252A. Introduction to Isotope Geochemistry
SIO 152. Petrology and Petrography

Upper-Division Chemistry Requirements
Chem. 120A. Inorganic Chemistry
Chem. 131. Physical Chemistry or Chem. 127
Chem. 140A. Organic Chemistry

Chemistry Restricted Electives, at least two courses from
Chem. 149A. Environmental Chemistry
Chem. 149B. Environmental Chemistry
Chem. 173. Atmospheric Chemistry

Upper-Division Restricted Electives, at least three courses from
SIO 101. California Coastal Oceanography
SIO 105. Sedimentology and Stratigraphy
SIO 110. Introduction to GIS and GPS for Scientists
SIO 111/Phys. 111. Introduction to Waves and Tides
SIO 112. Urban Landscapes
SIO 115. Ice and the Climate System
SIO 135/236. Satellite Remote Sensing
SIO 138. The Coral Reef Environment
SIO 141/Chem. 174. Chemical Principles of Marine Systems
SIO 148/248. Evolution of Earth’s Biosphere
SIO 154/254. Macroevolution
SIO 155/251. Petrology and Geochemistry of the Solid Earth
SIO 160. Introduction to Tectonics
SIO 162. Structural Geology
SIO 170. Introduction to Volcanology
SIO 182A. Environmental and Exploration Geophysics A

EARTH SCIENCES/GEOPHYSICS MAJOR

This specialization focuses on the Earth as a chemical system and on its evolution. Emphasis is placed on the fundamental observations that allow geoscientists to understand better the past history of the planet, the energetics of its evolution, and the major “cycles” (e.g., water, carbon) that characterize and control planetary-scale changes on a broad range of time scales. The major is appropriate for students interested in modern geochemistry, in “global change” studies, and in global and local environmental problems, including biochemical and anthropogenic effects.

Lower-Division Requirements
Math. 20A-B-C-D-E-F
Phys. 4A-B-C-D or Phys. 2A-B-C (4D recommended)
Chem. 6A-B-C
BILD 3
SIO 50

Upper-Division Requirements
Earth Sciences Upper-Division Core Requirements
SIO 100. Introduction to Field Methods
SIO 102. Introduction to Geochemistry
SIO 103. Introduction to Geophysics
SIO 104/255. Paleobiology and History of Life
Upper-Division Earth Sciences Requirements

SIO 160. Introduction to Tectonics
SIO 182A. Environmental and Exploration Geophysics A
SIO 182B. Environmental and Exploration Geophysics B

Upper-Division Physics Requirements

Phys. 100A-B. Electromagnetism
Phys. 110A-B. Mechanics

Physics Restricted Electives, at least one course from

Phys. 105A. Mathematical and Computational Physics
Phys. 105B. Mathematical and Computational Physics
Phys. 121. Experimental Techniques
Phys. 140A-B. Statistical and Thermal Physics
MAE 131A. Solid Mechanics I
MAE 180A. Spacecraft Guidance I

Upper-Division Restricted Electives, at least two courses from

SIO 101. California Coastal Oceanography
SIO 105. Sedimentology and Stratigraphy
SIO 110. Introduction to GIS and GPS for Scientists
SIO 111/Phys. 111. Introduction to Waves and Tides
SIO 112. Urban Landscapes
SIO 115. Ice and the Climate System
SIO 117. The Physical Basis of Global Warming
SIO 120. Introduction to Mineralogy
SIO 135/236. Satellite Remote Sensing
SIO 138. The Coral Reef Environment
SIO 141/Chem. 174. Chemical Principles of Marine Systems
SIO 144/252A. Introduction to Isotope Chemistry
SIO 148/248. Evolution of Earth’s Biosphere
SIO 152. Petrology and Petrography
SIO 154/254. Macroevolution
SIO 155. Petrology and Geochemistry of the Solid Earth
SIO 160. Introduction to Tectonics
SIO 162. Structural Geology
SIO 170. Introduction to Volcanology
SIO 186. Interactions Between Humans and the Earth
SIO 195. Methods of Teaching Earth Sciences
SIO 197. Earth Science Internship
SIO 199. Independent Study
SIO 223. Geophysical Data Analysis
SIO 226. Introduction to Marine Geophysics
SIO 227A. Introduction to Seismology

An example schedule is outlined below.

**FALL** | **WINTER** | **SPRING**
--- | --- | ---
Freshman Year | Chem. 6A | Chem. 6B | Chem. 6C
 | Math. 20A | Math. 20B | Math. 20C
SIO 50 | Phys. 4A | Phys. 4B |  
Sophomore Year | Math. 20D | Math. 20E | Math. 20F
 | Math. 4C | Phys. 4D | BILD 3
SIO 100 | SIO 102 |  
Junior Year | Phys. 100A | Phys. 100B | Phys. 100C
 | Phys. 110A | SIO 104 | SIO 110B
 | SIO 103 | SIO 182A | SIO 182B
Senior Year | SIO 130 or 160 | Phys. Elect. | SIO Elect.
 |  |  |  

**HONORS PROGRAM**

The Honors Program in Earth Sciences is offered for a limited number of students who have demonstrated excellence in the earth sciences major. Students are eligible for admission to the program when they have:

- Completed ninety units of courses including twelve units of earth sciences courses.
- Achieved a GPA of 3.3 overall and 3.5 in earth sciences courses.
- Submitted to the Earth Sciences Steering Committee, and had approved, an honors thesis research proposal.
- Successful completion of the Honors Program requires Maintenance of a GPA of 3.3 overall and 3.5 in earth sciences courses.
- Completion, with a B grade or higher, of a minimum of eight units of SIO 196 related to the honors thesis research, distributed over at least two quarters. These units must be in addition to the ordinary major requirements. However, students who subsequently fail to complete the Honors Program may apply up to four of these 196 units to their major.
- Acceptance of a written honors thesis report by a committee of not fewer than three faculty members.
- Satisfactory presentation of an oral report on the thesis research, preferably at a public undergraduate research conference on campus, or at an earth sciences conference. Alternatively, the oral report may be given at a seminar involving honors students and at least three faculty members.
- Students who successfully complete the Honors Program will graduate with "high distinction." Students who are interested in the Honors Program should contact the program advisor in Galbraith Hall, Room 188, Revelle College.

(See Scripps Institution of Oceanography graduate program for information on the "Contiguous Bachelor’s/Master’s Earth Sciences Degree Program."

**EARTH SCIENCES MINOR**

A minor in earth sciences consists of twenty-eight units of earth sciences courses, at least twenty of which must be upper-division, focused on geology, geochemistry, or geophysics. Courses required by a student’s major may not be applied toward a minor and neither can SIO 198 nor SIO 199. Courses for the minor may be taken on a Pass/Not Pass basis if the student’s college permits. Students interested in the earth sciences minor should meet with the earth sciences academic advising staff to discuss their curriculum choices.

**MARINE SCIENCE MINOR**

The Scripps Institution of Oceanography offers an undergraduate minor program in marine science. The minor curriculum is designed to complement the strong disciplinary training of UCSD basic science majors by providing a broad interdisciplinary perspective with an environmental focus. Ocean-related science is relevant to many contemporary environmental issues and problems and central to understanding earth-system evolution, dynamics, climate, and sustainability. The minor consists of courses and research opportunities offered primarily through faculty and researchers at Scripps. The mix of these components can be tailored to reflect students’ career interests through an “all courses” track or a “research” track. The “all courses” track offers a very flexible curriculum that serves students with a broad range of educational and career interests including environmental management and regulation, teaching, environmental law, economics and policy and a wide variety of graduate programs. The “research” track is designed for students interested in an undergraduate research experience at Scripps and serves as excellent preparation for graduate research studies.

The minor consists of twenty-eight units of course work, at least twenty of which must be upper-division. Courses required by a student’s major may not be applied toward the minor. Up to two courses for the minor may be taken on a Pass/Not Pass basis (upper- or lower-division). Students must earn at least a letter grade of C- in the remaining five or more courses used for the minor. The marine science minor places a strong emphasis on a rigorous natural science foundation; thus, several of the upper-division courses related to the minor have significant prerequisites. Students planning the minor should check catalog course descriptions carefully and should meet with advising staff in the Scripps Institution of Oceanography Office of Undergraduate Programs, Galbraith Hall, Room 188.

**Lower-Division Requirements**

SIO 30. The Oceans
Any one of the following lower-division courses may be applied to the minor requirements
STPA 35. Society and the Sea
SIO 10. The Earth
SIO 12. History of the Earth and Evolution
SIO 20. The Atmosphere
SIO 35. Water
SIO 40. Life and Climate on Earth
SIO 50. Introduction to Earth and Environmental Sciences

Additionally, any math, chemistry, physics, or biology course that is a prerequisite for an upper-division elective for the marine science minor (ex., Math. 20 series; Chem. 6A, 6B, 6C; Phys. 2 series; BILD 1, 2, 3) may be applied, by petition, as a lower-division requirement for the minor ’s major.
Upper-Division Requirements

Option 1 — All Courses Track
At least five courses from the list (below) of upper-division electives

Option 2 — Research Track
At least five courses from the list (below) of upper-division electives, at least three of which must be courses satisfying Option #1 and at least two of which must be Independent Study (SIO 199); eight units total. The Independent Study must be designed in mutual agreement and arrangement with an SIO faculty member. Students interested in the marine science minor “Research Track” must meet with a Scripps Undergraduate Program advisor for information and policies.

Upper-Division Electives
SIO 101. California Coastal Oceanography
SIO 102. Introduction to Geochemistry
SIO 103. Introduction to Geophysics
SIO 104/255. Paleobiology and History of Life
SIO 105. Sedimentology and Stratigraphy
SIO 110. Introduction to GIS and GPS for Scientists
SIO 111/Phys. 111. Introduction to Ocean Waves and Tides
SIO 115. Ice and the Climate System
SIO 117. The Physical Basis of Global Warming
SIO 138. The Coral Reef Environment
BIMM 126. Marine Microbiology
BIMM 127/SIO 288. Marine Microbiology Lab
BIBC 130/SIO 281. Marine Biochemistry
BIEB 134. Introduction to Biological Oceanography
SIO 135/236. Satellite Remote Sensing
SIO 141/Chem. 174. Chemical Principles of Marine Systems
SIO 148/248. Evolution of Earth’s Biosphere
SIO 154/254. Macroevolution
SIO 160. Introduction to Tectonics
SIO 180/292. Communicating Science to Informal Audiences
SIO 198. Directed Group Study
SIO 199. Independent Study
ECE 156/MAE 149/SIO 238. Sensor Networks
SIO 201. Geologic Record of Climate Change
SIO 210. Physical Oceanography
SIO 260. Marine Chemistry
SIO 265. Chemical Ecology of Marine Organisms
Other SIO courses may be submitted by petition.

STUDY ABROAD

Study abroad through the Education Abroad Program (http://programsabroad.ucsd.edu/) or Opportunities Abroad Program can enhance a student’s major, particularly as an opportunity for diverse field experiences. However, careful planning is important to meet all major requirements. Please contact the Scripps Office of Undergraduate Programs as early as possible if you are an earth sciences major and planning to study abroad.

CAREERS IN EDUCATION

Students interested in a teaching career should be aware that the earth sciences major, because of its broad course requirements in the sciences, fulfills many of the subject requirements for obtaining a California Teaching Credential through UCSD’s Educational Studies Program. The projected high demand over the next decade for well-trained teachers, particularly in the sciences, makes this an attractive option for many students. Students who wish to take advantage of this opportunity may wish to complete a minor in science education. Please contact the Education Studies office directly for further details.

THE GRADUATE PROGRAM

GRADUATE EDUCATION OFFICE:
Old Scripps Building 22, Scripps Institution of Oceanography
http://scrippseducation.ucsd.edu/

The Department of Scripps Institution of Oceanography offers instruction leading to Ph.D. degrees in oceanography, marine biology, and earth sciences. Although students are not admitted specifically for an M.S. degree, it is possible to obtain an M.S. on the way to completing the Ph.D. degree. The Department of Scripps Institution of Oceanography is organized into three academic programs: Climate-Ocean-Atmosphere Program (COAP), Geosciences of the Earth, Oceans, and Planets (GEO), and Ocean Biosciences Program (OBP).

Each of these programs is responsible for all graduate educational activities in its area, including teaching, advising, and examining. The academic programs are umbrellas for curricular groups as follows.

Climate-Ocean-Atmosphere Program (COAP)

Applied Ocean Science (AOS)
Climate Sciences (CS)
Physical Oceanography (PO)

Geosciences of the Earth, Oceans, and Planets (GEO)

Geophysics (GP)
Geosciences (GS)
Marine Chemistry and Geochemistry (MCG)

Ocean Biosciences Program (OBP)

Biological Oceanography (BO)
Marine Biology (MB)

Climate-Ocean-Atmosphere Program (COAP)

Applied Ocean Science is a multidisciplinary program focused on the application of advanced technology to ocean exploration and observation. AOS students perform research in marine acoustics, optics, electromagnetics, geophysics, ecology, sediment transport, coastal processes, physical oceanography, and air-sea interaction. The emphasis is on the resolution of key scientific issues through novel technological development. The science focus of the Scripps AOS program is complemented by parallel Applied Ocean Science programs in the Mechanical and Aerospace Engineering (MAE) and Electrical and Computer Engineering (ECE) departments. Students have access to professors, courses, and research facilities across all three departments.

Climate Sciences concerns the study of the climate system of the earth with emphasis on the physical, dynamical, and chemical interactions of the atmosphere, ocean, land, ice, and the terrestrial and marine biospheres. The program encompasses changes on seasonal to interannual time scales and those induced by human activities, as well as paleoclimatic changes on time scales from centuries to millions of years. Examples of current research activities include: interannual climate variability; physics and dynamics of El Niño; studies of present and future changes in the chemical composition of the atmosphere in relation to global warming and ozone depletion; effects of cloud and cloud feedbacks in the climate system; paleoclimate reconstructions from ice cores, banded corals, tree-rings, and deep-sea sediments; the origin of ice ages; air-sea interactions; climate theory; terrestrial and marine ecosystem response to global change.

Physical Oceanography is the field of study that deals with mechanisms of energy transfer through the sea and across its boundaries, and with the physical interactions of the sea with its surroundings, especially including the influence of the seas on the climate of the atmosphere. Research activities within this curricular group are both observational and theoretical and include: study of the general circulation of the oceans, including the relations of ocean currents to driving forces and constraints of the ocean basins; fluctuations of currents, and the transport of properties; the mechanisms of transport of energy, momentum, and physical substances within the sea and across its boundaries; properties of wind waves, internal waves, tsunami, and planetary waves; the thermodynamic description of the sea as a system not in equilibrium; optical and acoustic properties of the sea; and the influence of surf on near-shore currents and the transport of sediments.

Geosciences of the Earth, Oceans and Planets (GEO)

Geophysics emphasizes the application of general principles of mathematics and experimental physics to fundamental problems of the oceans, the oceanic and continental lithosphere, the cryosphere, and the crust and deep interior of the Earth. Research interests of the group include: observational and theoretical studies of electric and magnetic fields in the oceans and on the land; paleomagnetism; theoretical seismology with special emphasis on the structure of the Earth from free-oscillation and body wave studies; broadband observational seismology, including ocean bottom and multichannel seismology; earthquake source mechanisms; the measurements of slow crustal deformations using satellite and observatory methods on continents and in the oceans; marine geomicrobes and tectonophysics; gravity measurements; geophysical inverse theory; observations of the ice sheets; magnetohydrodynamics of the core of the Earth; geophysical instrumentation for oceanic and
Geosciences emphasizes the application of general principles of geology, geochemistry, and geophysics to problems in the marine and terrestrial environments of the Earth. Graduate students routinely participate in expeditions at sea and on land and many doctoral theses evolve from these experiences.

Research areas in the geological sciences include: the origin and evolution of the ocean-atmosphere system and global climate; geology, geochemistry, and geophysics of oceanic crustal rocks and near-shore environments; tectonic and structural evolution of the oceans, plate margins, and back-arc basins; the role of fluids in the crust; chemistry of rare gases in active volcanoes; the use of natural nuclear processes for understanding physical and chemical processes in the Earth; paleomagnetic applications in geology and geophysics.

Marine Chemistry and Geochemistry concerns chemical and biochemical processes operating in a broad range of study areas: the oceans, the solid earth, the atmosphere, marine organisms, polar ice sheets, lakes, meteorites, and the solar system.

Areas of advanced study and research include the physical and inorganic chemistry of seawater; ocean circulation and mixing based on chemical and isotopic tracers; marine organic and natural products chemistry; marine bioinorganic chemistry; geochemical interactions of sediments with seawater and interstitial waters; geochemicals of volcanic and geothermal phenomena; chemical exchanges between the ocean and the atmosphere; geochemical cycles of carbon, oxygen, sulfur, nitrogen, and other elements; isotopic geochemistry of the solid earth and meteorites; atmospheric trace gas chemistry; paleoatmospheric composition recorded in polar ice cores, corals and sediments; and chemistry of lakes and other freshwater systems.

Studies are typically interdisciplinary and involve integration of chemical concepts with information about the physical, biological, or geological processes that influence natural systems. Students in the marine chemistry and geochemistry curricular group are encouraged to explore these links.

Ocean Biosciences Program (OBP)

Biological Oceanography is concerned with the interactions of populations of marine organisms with one another and with their physical and chemical environment. Because these interactions are frequently complex, and because the concepts and techniques used are drawn from many fields, biological oceanography is, of necessity, interdisciplinary. Therefore, studies in physical oceanography, marine chemistry, marine geology, and several biological areas are pertinent.

Research is conducted on space/time scales ranging from short-term interactions between individual organisms (mm., sec.) to interdecadal variation in widely dispersed populations. The techniques used in these investigations are diverse, and can include field observation and manipulations, experimentation in the laboratory, and mathematical modeling.

Research topics include primary and secondary productivity and nutrient regeneration, fishery biology and management, community ecology of benthic and pelagic organisms, population dynamics, habitat changes and disruptions, systematics and biogeography, population genetics and evolution, and behavior as it affects distribution. Development and testing of new tools (molecular, optical, acoustical), design of sampling programs, and statistical/mathematical analyses of data also are significant activities.

Marine Biology is the study of marine organisms. It is concerned with evolutionary, organismic, genetic, genomic, physiological, and biochemical processes in these organisms, and the relationship between them and their biotic and physical environment. Marine biology encompasses several major areas of modern biology, and is interpreted by understanding the physical and chemical dynamics of the oceans. Faculty research focuses on microbiology, photobiology, invertebrate biology, vertebrate biology, high pressure biology, deep-sea biology, developmental biology, genetics, comparative biochemistry, ecotoxicology, physiology, behavior, ecology, biogeography, taxonomy, and evolution.

Processes ranging from coral larval recruitment to the role of bacteria in marine food web dynamics are under study in over twenty independent research laboratories.

REQUIREMENTS FOR ADMISSION

Candidates for admission should have a bachelor’s or master’s degree in one of the physical, biological, or earth sciences; degrees in mathematics or engineering science are also accepted. A scholastic average of 8 or better in upper-division courses, or prior graduate study, is required. The student’s preparation should include mathematics through differential and integral calculus, physics, one year with laboratory (the course should stress the fundamentals of mechanics, electricity, magnetism, optics, and thermodynamics, and should use calculus in its exposition) chemistry, one year with laboratory, and an additional year of physics, chemistry, or mathematics.

All applicants are required to submit scores from the general test of the Graduate Record Examinations (GRE) given by the Educational Testing Service of Princeton, New Jersey. Applicants to the Ocean Biosciences Program, additionally, should take one GRE subject test of their own choice.

All international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English must take the TOEFL and submit their test scores to the UC San Diego Office of Graduate Admissions.

Specific additional requirements for admission to the programs are as follows:

Climate-Ocean-Atmosphere Program (COAP)

Applied Ocean Science—Students are admitted with a strong background in physical science, engineering science, or mathematics. Three years of physics or applicable engineering and three years of mathematics at college level are expected.
including advice about courses of study that may reach beyond a single curricular group. By the end of the first year, students usually select a particular area of focus and choose an advisor. As students advance beyond the first year, they begin to function effectively as research assistants or, in some cases, as teaching assistants. During their third to fifth year they are working toward writing their dissertations.

Programs of study for the first year vary between the three programs.

Climate-Ocean-Atmosphere Program

Students admitted to COAP choose a curricular group by the end of the fall quarter. This choice is aided by the student’s guidance committee, which includes a Curriculum Advisor from one of the COAP curricular groups. The guidance committee will help to arrange an individually tailored set of first-year courses for the student, and to ensure that the student has taken all necessary courses to prepare for the departmental exam. During the year, students may be supported in a variety of ways, but by the end of the spring quarter students must choose a research advisor. After the first year the guidance committee is dissolved, and the research advisor and dissertation committee provide guidance.

Applied Ocean Science—The AOS academic program is designed to provide both a broad background and a core technical base to support the diverse interests and activities of the students. Early participation in an ongoing research project is encouraged. However, specialization and focus on a specific thesis topic is not required until the second or third year of the program. Required courses include SIO 214A Introduction to Fluid Mechanics, and the two-quarter Wave Physics sequence SIO 202A–B. Two of the four AOS introductory courses (SIO 210, 240, 260, 280), must be completed during the first year, with the remaining two required prior to passing the doctoral qualifying exam at the end of the third year. In addition, the applied math sequence SIO 203 A–B or MAE 294 A–B is taken in either the first or second year of study. The AOS Seminar (SIO 208) serves as a communications bridge across the program; enrollment in this seminar is required during the student’s entire period of study. Beyond these core classes, the majority of each student’s academic program is tailored to individual interests. The AOS departmental examination, held at the end of the first year, is based on the core technical courses SIO 214A, SIO 202A–B, and two of the four introductory courses (chosen by the student). The exam has both oral and written components.

Climate Sciences—The emphasis of this curricular group is on education through interdisciplinary research. All students are responsible for the fundamental material in the following “core” courses: SIO 210, 217A-B-C, 260. Students are also expected to supplement their backgrounds with five to seven additional courses, including, for most Climate Sciences students, at least one additional quarter of fluid dynamics. These additional course(s) will be chosen in consultation with the students’ advisors. It is recommended that students participate actively in at least two quarters of seminar courses designed to complement and stimulate individual research. Though the group stresses interactions across disciplines, students will specialize in a particular subdiscipline or track that will be chosen by the student following discussions with a three-person faculty advisory committee soon after arrival. Examples of core tracks include: (1) atmospheric/ocean/climate dynamics and physics; (2) atmospheric chemistry (emphasizing climatic interactions); and (3) paleoclimate studies. Additional course requirements for these tracks will be tailored to the needs of the individual student.

Physical Oceanography—The physical oceanography curriculum combines a comprehensive program of course work with individually tailored specialization to meet student needs. Presently defined “tracks” in the curriculum are: (i) Observational Physical Oceanography, (ii) Theoretical Physical Oceanography, and (iii) the Atmospheric/Ocean Climate System. All tracks are similar in the entry-year fall quarter, diverging as students become more familiar with the field and in their interests. A Faculty Curriculum Advisory Committee meets with students to tailor tracks to individual needs, or to create new tracks as appropriate. Students in all subdisciplines of physical oceanography are required to take SIO 210A-B, 214A, 212A. In any track, students are required to take sixteen four-unit graduate courses, of which twelve are covered during the first year. As part of the overall requirement, tracks include a breadth component of two or more four-unit courses in other scientific disciplines. These might come from the SIO core courses in other oceanographic disciplines (SIO 240, 260, 280) or from related graduate-level courses taught at UCSD.

Any exception to the policy above requires written approval by the department chair in consultation with the curriculum advisor.

Physical oceanography students are required to take the departmental examination after completing one year of graduate work at UCSD. The examination covers the material in the four required courses and in eight additional first-year graduate courses offered by the student in consultation with the curriculum advisor.

The Department of Scripps Institution of Oceanography offers regular seminars in several areas of current interest. After the departmental exam, students in residence are strongly encouraged to enroll for credit in at least one seminar each quarter.

Geosciences of the Earth, Oceans, and Planets

Students admitted to GEO are assigned an advisor, who is a member of the three-person guidance committee. Based on the student’s interests and the major affiliation of the advisor, students are assigned to a curricular group on admission. Although students may change curricular groups in the course of the year, they must choose which departmental exam they will take. Departmental exams have similar structures among the curricular groups within GEO (a written exam at the end of spring quarter and an oral exam before the beginning of fall quarter). The material covered is quite different so students must begin preparing for the particular exam from the start. Student support for the first year comes from a variety of sources including departmental fellowships and research grants. Students are encouraged to begin a research project from the beginning and typically do not hold teaching assistant positions during their first year. Students may change advisors during their first year, and they must find an advisor by the end of the first year. Geophysics—There is no single course of study appropriate to the geophysics curriculum; instead, the individual interests of the student will permit, in consultation with the first-year guidance committee, a choice of course work in seismology, geomagnetism, etc. The content of certain core courses usually taken during the first year (SIO 223A,B, SIO 225, SIO 227A, SIO 229, SIO 234) forms the basis for the written departmental examination. Students are also encouraged to participate in the Special Topics seminars (SIO 239).

Geosciences—The geosciences curriculum consists of a series of core courses and a series of research focus courses. All students whether pursuing an earth sciences or an oceanography degree are responsible for material in the core courses: Marine Geology (SIO 240), Marine Chemistry (SIO 260), and Physical Oceanography (SIO 210) during their first year of study. The research courses are selected from three themes: geochemistry, paleoclimate and Earth history, and geology and geophysics. A total of four research courses are required during the first year of study, with at least one from each theme. Additional courses offered by other curricular programs (e.g., geophysics, marine chemistry, and geochemistry) can be selected and scheduled depending on the student’s background and interests any time during the student’s career at SIO. Each student is also encouraged to participate in the Special Topics seminars (SIO 249) every quarter during the first two years of graduate study. Students wishing to graduate with an oceanography degree are also responsible for the material in SIO 280 (Biological Oceanography).

Marine Chemistry and Geochemistry—In their first year at SIO, students in this curricular group are required to take SIO 210, 260, and either SIO 280 or SIO 240, as well as three additional elective courses. In their second year, students are required to take a further three elective courses. Although the exact choice of such courses will depend on the student’s research interests, these required electives must be four-unit courses that are offered at the graduate level, and that have been approved by the curricular group as suitable electives. A list of approved courses is on file at the Department of Scripps Institution of Oceanography. If a student desires to take (as a required elective) a course that is not already on this list, he or she should consult with one of the curricular group advisors to get approval.

Ocean Biosciences Program

Students admitted to OBP are assigned an advisor, who is a member of the three-person guidance committee. Students are assigned to a curricular group based on their interests. Although students may change curricular groups near the beginning of the year, they must commit to a curricular group early on because this determines which departmental exam they will take. The BO departmental exam is an oral exam based on first year course work while the MB exam is a written report and an oral presentation based on first year research, both are
be administered no later than the end of the third year. The nature of the qualifying examination varies between curricular groups. In biological oceanography, marine biology, geosciences, physical oceanography, applied ocean science, and climate sciences the student will be expected to describe his or her proposed thesis research and satisfy the committee, in an oral examination, as to mastery of this and related topics. In marine chemistry and geochemistry the student, in an oral examination, is required to present and defend a single research proposition in his or her specialized area. The student also is required to provide a written summary of the research proposition, with references, prior to the examination. In geophysics, the student presents an original research problem, in the form of a written proposition, to the doctoral committee. The student's oral presentation and defense of this proposition completes the examination.

DISsertATION

A requirement for the Ph.D. degree is the submission of a dissertation and a final examination in which the thesis is publicly defended. Students are encouraged to publish appropriate parts of their theses in the scientific literature. Individual chapters may be published as research articles prior to completion of the dissertation.

DEPARTMENTAL PH.D. TIME LIMIT POLICIES

Students must complete a qualifying examination by the end of three years, and must be advanced to candidacy for the Ph.D. Degree by the end of four years. Total university support may not exceed seven years and total registered time at UCSD may not exceed eight years.

SPECIAL FINANCIAL ASSISTANCE AND FELLOWSHIPS

In addition to teaching assistantships, and graduate student researcher positions, fellowships, traineeships, and other awards available on a campus-wide competitive basis, the department has available a certain number of fellowships and graduate student researcher positions supported from research grants and contracts, or from industrial contributions.

CONCURRENT PH.D./M.B.A. PROGRAM

The Department of Scripps Institution of Oceanography offers a concurrent degree program allowing interested Ph.D. students to complete an M.B.A. at the Rady School of Management. Students who are admitted to Scripps may, with the consent of their academic advisor, apply to Rady, through the usual admissions process, to begin the M.B.A. program no earlier than after the completion of their departmental exam, and no later than the fall quarter following their advancement to candidacy, in line with specific plans developed with their Scripps faculty advisors. An extensive independent study, jointly supervised by Scripps and Rady faculty, enables the student to develop linkages between Scripps and Rady studies. Interested students are encouraged to consult early with Rady M.B.A. admissions and their Scripps academic advisors.

CONTIGUOUS BACHELOR’S/MASTER’S EARTH SCIENCES DEGREE PROGRAM

The program leading to a bachelor of science and a master of science degree in earth sciences is offered to undergraduate students who are enrolled in the earth sciences major, and to qualified students who are completing a specialization or minor in earth sciences. It is open only to UCSD undergraduates, and entails participation in research in an area of the earth sciences to be determined jointly by the student and a committee of earth sciences faculty members from the Scripps Institution of Oceanography Department. Applications will only be accepted during the final quarter of the applicant’s junior year, or the first or second quarter of the senior year. A minimum undergraduate GPA of 3.0 overall and 3.3 in upper-division earth sciences courses is required for admission. Applications must include a written statement of purpose, a summary of the research proposal, and a letter of support from the potential M.S. thesis advisor. Students must complete requirements for the B.S. degree before they are enrolled in the M.S. program, and are expected to meet the requirements for the M.S. degree within three consecutive academic quarters after obtaining the B.S. Students may be dropped from the program if breaks in enrollment occur. The Scripps Institution of Oceanography Department does not have financial aid available for students enrolled in the contiguous B.S./M.S. program. Please contact the undergraduate education program office in Galbraith Hall, room 188, for information.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

LOWER-DIVISION

1. The Planets (4)
Space exploration has revealed an astonishing diversity among the planets and moons in our solar system. The planets and their histories will be compared to gain insight and a new perspective on planet Earth. Prerequisite: none. (W)

10. The Earth (4)
An introduction to structure of the Earth and the processes that form and modify it. Emphasizes material which is useful for understanding geological events as reported in the news and for making intelligent decisions regarding the future of our environment. Prerequisite: none. (W)

12. History of the Earth and Evolution (4)
Evolution of the Earth from its origin in the early solar system to formation of continents and ocean basins, and how the planet became habitable. It examines the geologic record of evolution, extinction, plate tectonics, and climate changes through time. Prerequisite: none. (S)

15. Natural Disasters (4)
Introduction to environmental perils and their impact on everyday life. Geological and meteorological processes, including earthquakes, volcanic activity, large storms, global climate change, mass extinctions throughout Earth’s history, and human activity that causes and prevents natural disasters. Prerequisite: none. (F)
16. Geology of the National Parks (4)
An introduction to fundamental concepts of geology and environmental science through the lens of the national park system. Topics covered include the geologic time scale; plate tectonics; igneous, metamorphic, and sedimentary processes; geomorphology; climate change; and environmental degradation. Prerequisite: none. (S)

20. The Atmosphere (4)
Descriptive introduction to meteorology and climate studies. Topics include global and wind and precipitation patterns, weather forecasting, present climate and past climate changes (including droughts, El Niño events), "greenhouse" gas effects, ozone destruction, the "little ice age," acid rain. Prerequisite: none. (W)

25. Climate Change and Society (4)
Climate change is one of the most complex and critical issues affecting societies today. This course will present the scientific evidence for climate change and its impacts and consider governmental policy responses and possible adaptation strategies. Prerequisite: none. (W)

30. The Oceans (4)
Presents modern ideas and descriptions of the physical, chemical, biological, and geological aspects of oceanography, and considers the interactions between these aspects. Intended for students interested in the oceans, but who do not necessarily intend to become professional scientists. Prerequisite: none. (F)

35. Water (4)
This course will examine the properties of water that make it unique and vital to living things. Origin of water on Earth and neighboring planets will be explored. Socially relevant issues concerning water use and contamination will be covered. Prerequisite: none. (S)

40. Life and Climate on Earth (4)
Explores life on Earth and its relationship to the environment—past, present, and future. Topics include origins of life, earth history, elemental cycles, global climate variability and human impacts on our environment. Prerequisite: none. (F)

50. Introduction to Earth and Environmental Sciences (6)
This course is an introduction to how our planet works, focusing on the formation and evolution of the solid earth, and the processes affecting both its surface and interior. Laboratories and substantial field component complement and extend the lecture material. Prerequisite and/or material fee may apply. Prerequisite: none. (F)

87. Freshman Seminar (1)
The freshman seminar program is designed to provide the new students with the opportunity to explore and intellectual topic with a faculty member in a small setting. Topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. Prerequisite: none. (F,WS)

90. Undergraduate Seminar (1)
Provides an introduction to earth sciences. Faculty members from departments in natural sciences, geosciences, and marine sciences will offer perspectives in these areas. Formerly ERTH 90. (Students may earn up to three units of credit of SIO 90 and/or ERTH 90.) Prerequisite: none.

96. Frontiers in the Earth Sciences (2)
An introduction to current research in the earth sciences. Background in science not required, but may be useful for some topics. Areas covered vary from year to year. Prerequisite: none.

99. Independent Study (2 or 4)
Independent reading or research on a problem by special arrangement with a faculty member. Prerequisite: lower-division standing, completion of thirty units of UCSD undergraduate study, a minimum UCSD G.P.A. of 3.0, and a completed and approved Special Studies form, UCSD Application for Enrollment Special Studies Courses 97, 98, 99.

UPPER-DIVISION

100. Introduction to Field Methods (4)
Mapping and interpretation of geologic units. Field work is done locally and under the direction of the laboratory instructor. There will be one mandatory weekend field trip to Anza Borrego State Park. Program and/or material fee may apply. Prerequisite: SIO 50 or consent of instructor. (F)

101. California Coastal Oceanography (4)
This course emphasizes oceanographic connections between physical and climate forcing and marine ecosys- tem responses using examples from and activities in the California coastal environment. The approach is inquiry- based, combining classroom and experiential learning to build critical and quantitative thinking and research insights and abilities. Prerequisite: Chem. 6A or consent of instructor. (F)

102. Introduction to Geochemistry (4)
An introduction to the chemical composition and evolution of the Earth and solar system. Applications of chemical methods to elucidate the origin and geologic history of the Earth and the planets, evolution of oceans and atmosphere, and human environmental impacts. Prerequisites: SIO 50, Chem. 6A-B-C, or consent of instructor. (W)

103. Introduction to Geophysics (4)
An introduction to the structure and composition of the solid earth. Topics include seismology, the gravity and magnetic fields, high-pressure geophysics, and concepts in geodynamics. Emphasis on chemical geophysics, i.e., on the structure and evolution of the planet. Prerequisites: Math. 20A-B-C-D and Phys. 2A-B-C, SIO 50, or consent of instructor. SIO 160 recommended. (F)

104/255. Paleobiology and History of Life (6)
An introduction to the major biological transitions in Earth history from the origins of metabolism and cells to the evolution of complex societies. The nature and limitation of the fossil record, patterns of adaptation and diversity, and the tempo and mode of biological evolution. Laboratories and substantial field component complement and extend the lecture material. Program and/or course fee may apply. Prerequisite: Undergraduate: BILD 3 or consent of instructor. Graduate: graduate-level standing or consent of instructor. Graduate students, additionally, will give oral presentation or research paper. (W)

105. Sedimentology and Stratigraphy (4)
This course will examine sedimentary environments from mountain tops to the deep sea across a variety of time scales. The focus is to develop the skills to interpret strati- tigraphy and read the history of the Earth that it records. Laboratories and substantial field component complement and extend lecture material. Program and/or course material fee may apply. Prerequisite: SIO 50 or consent of instructor. (S)

110. Introduction to GIS and GPS for Scientists (4)
A hands-on introduction to science applications of geographic information systems and global positioning system. Students acquire data through GPS field surveys, design and construct GIS using ESRI's ArcGIS software, analyze spatial data, and present the results in a Web-based environment. Prerequisite: upper-division standing or consent of instructor. (W)

111/Phys. 111. Introduction to Ocean Waves and Tides (4)
This course will cover broad physical models of ocean current and wave formation. Topics include: linear waves, non-linear waves, dispersion relations, effect of wind conditions, wave energy, and wave power. Prerequisites: Math. 20A and Phys. 20A-C or consent of instructor. (W)

112. Urban Landscapes (4)
Introduction to scientific examples, such as conservation of mass and energy and pattern formation, that govern the development of urban centers as complex systems. Contrasts between natural and urban landscapes will be highlighted, with examples including water routing and disease transmission. Prerequisite: upper-division standing or consent of instructor. (S)

115. Ice and the Climate System (4)
This course examines the Earth’s cryosphere, including glaciers, ice sheets, ice caps, sea ice, lake ice, river ice, snow, and permafrost. We cover the important role of the cryosphere in the climate systems and its response to climate change. Prerequisites: Math 20A-D and Physics 2A-C or consent of instructor. (F)

117. The Physical Basis of Global Warming (4)
Introduction to the processes behind global warming, including the physics of the greenhouse effect, controls on greenhouse gases, atmospheric and oceanic circulation, climate feedbacks, relationships to natural climate variability, and global environmental and societal issues related to global warming. Prerequisites: Math. 20D and Phys. 2C or consent of instructor. (S)

120. Introduction to Mineralogy (4)
Application of mineralogical and x-ray crystallographic techniques in earth sciences. Topics include symmetry, crys- tals structure, chemical, and physical properties of minerals with special emphasis on the common rock-forming mineral. Laboratory component includes polarizing microscope and x-ray powder diffraction methods. Prerequisites: SIO 50, or consent of instructor. (W)

135/236. Satellite Remote Sensing (4)
Satellite remote sensing provides global observations of Earth to monitor environmental changes in land, oceans, and ice. Overview, physical principles of remote sensing including: orbits, electromagnetic radiation, diffraction, electro-optical, and microwave systems. Weekly labs explore remote sensing data sets. Graduate students will also be required to write a term paper and do an oral presentation. Prerequisites: Undergraduate: Phys. 2A-B or Physics 4A-B-C or consent of instructor. Graduate: graduate-level standing or consent of instructor. (S)

138. The Coral Reef Environment (4)
Assessment of the physical, chemical, and biological interactions that define the coral reef system; essential geography and evolutionary history of reefs; natural and human perturbations to the coral reef ecosystem; aspects of reef management and sustainability. Prerequisite: BILD 3, Math. 10A, Chem. 6B, or consent of instructor.

Introduction to the chemistry and distribution of the elements in seawater, emphasizing basic chemical principles such as electron structure, chemical bonding, and group and periodic properties and showing how these affect basic aqueous chemistry in marine systems. Prerequisite: Chem. 6C with a grade of C– or better or consent of instructor. (S)

144/252A. Introduction to Isotope Geochemistry (4)
Radioactive and stable isotope studies in geology and geochemistry, including geochronology, isotopes as tracers of magmatic processes, cosmic-ray produced isotopes as tracers in the crust and weathering cycle, isotopic evolution of the crust and mantle. Prerequisites: Undergraduate: SIO 50, SIO 102, and 120 or consent of instructor. Graduate: graduate-level standing or consent of instructor. Graduate level requires student presentation. (W) (Not offered 2010–11.)

148/248. Evolution of Earth’s Biosphere (6)
Paleoecological development of marine and terrestrial environ- ments during Earth’s evolution. Ecological and chemical evolution of the oceans, atmosphere, biogeochemical cycles, and environments during Earth’s evolution. Prerequisites: SIO 104 or consent of instructor. Graduate: graduate-level standing or consent of instructor. Graduate level requires student presentation. (W) (Not offered 2010–11.)

152. Petrology and Petrography (4)
Mineralogic, chemical, textural and structural properties of igneous, metamorphic, and sedimentary rocks: their origin and relations to evolution of the Earth’s crust and mantle. Laboratory emphasizes hand specimens and microscopic
studies of rocks in thin sections. Prerequisites: SIO 50, SIO 102, and SIO 120 or consent of instructor. (S)

154/254. Macroevolution (4)
Tempo and mode of evolution with emphasis on the marine fossil record. Large-scale patterns and trends in diversity, speciation, and extinction. Innovation, disparity, and adaptive radiation. Evolutionary turnover and the role of the environment. Graduate students will also be required to write a term paper and do oral presentation. Prerequisites: Undergraduate: SIO 104 or BIEB 150 or consent of instructor. Graduate: graduate-level standing or consent of instructor. (S)

155/251. Petrology and Geochemistry of the Solid Earth (4)
A geochronologic and petrogenetic overview of the Earth and planets. Topics include formation and differentiation of the Earth into core, mantle, crust, and atmosphere/hydrosphere, generation of magma, and isotope and trace element geochemistry of igneous and metamorphic rocks. Prerequisites: Undergraduate: SIO 152 or consent of instructor. Graduate: graduate-level standing or consent of instructor. Graduate students, additionally, must submit a term paper in one aspect of work discussed during the quarter to be presented orally in class. (W) (Not offered 2010–11).

160. Introduction to Tectonics (4)
The theory of plate tectonics attempts to explain how forces within the Earth give rise to continents, ocean basins, mountain ranges, earthquake belts, and most volcanoes. In this course we will learn how plate tectonics works. Prerequisite: SIO 50 or consent of instructor. (S)

162. Structural Geology (4)
Principles of stratigraphy and structural geology applicable to field geologic studies. Discussion and laboratory exercises. Two to three field trips required. Program and/or material fee may apply. Prerequisites: SIO 50 and SIO 100, or consent of instructor. (W)

170. Introduction to Volcanology (6)
This course surveys fundamental aspects of physical and chemical volcanology with a major field study component on an active volcano on Hawaii (two weeks early September). Subjects are introduced in lectures and reinforced and expanded in field exercises. Students return to campus to attend regular lectures and to prepare final field report during fall quarter. Additional fees may be required. Prerequisites: SIO 50, SIO 100, and Chem. 6A, or consent of instructor. Department stamp required. (F)

180/292. Communicating Science to Informal Audiences (4)
Students develop fundamental science communication and instructional skills through the understanding and application of learning theory, interpretive techniques, and pedagogical practices, which occur in the context of communicating ocean science concepts to a diverse audience at Birch Aquarium at Scripps. Graduate science students will develop fundamental communication and instructional skills through the understanding and application of learning theory, interpretive techniques, and pedagogical practices, including the development of a teaching plan to support a consumer research proposal. Prerequisites: (graduate) graduate-level standing or consent of instructor; (undergraduate) Chem. 6A or SIO 50 or BILD 1 or consent of instructor. (F)

182A. Environmental and Exploration Geophysics A (4)
First of two-part sequence on theory and application of practical geophysics. Lectures are supplemented by the collection of gravity, magnetic, and seismic data and production of field reports. Includes introduction to MATLAB for analysis and interpretation of data. SIO 103 recommended. Prerequisites: Math. 20D and Phys. 2C, or consent of instructor. (W)

182B. Environmental and Exploration Geophysics B (4)
Second of two-part sequence on theory and application of practical geophysics. Lectures are supplemented by the collection of electrical and ground penetrating radar data. Continued use of MATLAB for analysis and interpretation of geophysical data. Prerequisite: SIO 182A or consent of instructor. (S)

186. Interactions Between Humans and the Natural Environment (4)
As human population and resource usage have increased, the character of human interactions with nonhuman natural systems on Earth’s surface has changed dramatically. This course will survey tools for characterizing this change, its nature, and projections into the future. Prerequisites: upper-division standing or consent of instructor. (W)

190. Special Topics in Earth Sciences (4)
A seminar course designed to treat emerging or topical subjects in the earth sciences. Includes reading from the literature and student participation in discussion. Topics vary from year to year. Enrollment by permission of instructor. (Students may enroll in SIO 190 and/or ERTH 190 no more than two times for credit.) Prerequisite: upper-division standing, a minimum UCSD GPA of 3.0 or consent of instructor.

192. Senior Seminar in Scripps Institution of Oceanography (1)
The Senior Seminar Program is designed to allow SIO senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in SIO (at the upper division level). Topics will vary from quarter to quarter. Senior Seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors.

Course attached to a six- to eight-unit internship taken by students participating in the UCDC Program. Involves weekly seminar meetings with faculty and teaching assistant and a substantial research paper. Prerequisites: departmental approval. Participation in the UCDC Program during quarter enrolled in seminar.

195. Methods of Teaching Earth Sciences (4)
Introduction to teaching earth sciences class section in a lower-division class, hold office hours, assist with examinations. This course counts only once toward the major.
Prerequisites: junior or senior earth sciences major with GPA of 3.0 or an A in the course, overall GPA of 3.0 or higher, ninety units or more, and consent of instructor, plus department stamp.

196. Honors Thesis Research (4)
Independent research on a problem in earth sciences by special arrangement with a faculty member (letter grade only). Students may take ERTH 196 and/or SIO 196 two times for credit. Prerequisites: completed ninety units of ERTH and/or courses included. Achieved a GPA of 3.3 overall and 3.5 in SIO/ERTH courses. Submitted to ERTH Steering committee, and had approved an honors thesis research proposal. Department stamp.

197. Earth Science Internship (2 or 4)
The earth science internship program is designed to complement the program’s academic curriculum with practical field experience. Prerequisites: completion of ninety units with a GPA of 2.5, and a completed and approved Special Studies Form, UCSD Application for Enrollment Special Studies Courses 197, 198, 199, and department stamp.

198. Directed Group Study (2–4)
This course covers a variety of directed group studies in areas not covered by formal SIO courses. (P/NP grades only.)

199. Independent Study for Undergraduates (4)
Independent reading or research on a problem. By special arrangement with a faculty member. (P/NP grades only.)

BS/S COURSE

228. Research Seminar (2)
A three-quarter required sequence for B.S./M.S. earth sciences students to prepare students for thesis writing. Prerequisites: current earth sciences B.S./M.S. student. Department stamp required.

GRADUATE

200A. Computational Ocean Acoustics and Signal Processing I (4)
Overview of ocean acoustics. Acoustics Wave Equation with some analytic solution techniques. Ray Methods. Introduction to Spectral and Normal Modes methods. Introduction to beamforming including matched field processing. Computer programs will be constructed on all subjects covered. Prerequisite: graduate standing and consent of instructor. Kuperman (F)

200B. Computational Ocean Acoustics and Signal Processing II (4)
Continuation of SIO 200A. Range dependent propagation models including adiabatic and coupled mode models and parabolic equations. More advanced topics in matched field processing. Prerequisites: graduate standing and SIO 200A or consent of instructor. Kuperman (W)

200C. Computational Ocean Acoustics and Signal Processing III (4)
Continuation of SIO 200B. Modeling interference such as ambient noise. Time domain methods. Matched field tomography, non-linear optimization methods, and geo-physical inversion. Prerequisites: graduate standing and SIO 200B or consent of instructor. Kuperman (S)

201. Geological Record of Climate Change (4)
Introduction to geological archives; the tools for paleoclimate reconstruction and a sampling of important issues from the geological record, including the development of “greenhouse” and “icehouse” worlds, the origin and evolution of glacial cycles, and the origin of “millennial scale” climate variability. Prerequisites: chemistry and physics required for graduate admission to SIO, SIO 101 or equivalent, or consent of instructor. Charles (S)

202A. Fundamentals of Wave Physics (4–4)
This two-quarter sequence is designed to introduce a broad background of students to basic principles of wave physics, including generation, propagation, dispersion, refraction, diffraction, reflection, waveguides, etc. A variety of wave motions of environmental relevance, including acoustic, ocean surface and internal (SIO 202A), optical and seismic (SIO 202B) are used to illustrate these principles. In-class experiments, data collection, and analysis exercises are incorporated. Prerequisites: calculus and partial differential equations. Buckingham, Kuperman, Stramski, Melville, Hildenbrand, Dorman (W)

202A. Introduction to Applied Mathematics I (4)

202B. Introduction to Applied Mathematics II (4)
(Cross-listed with MAE 294B.) Asymptotic methods: method of steepest descent (if not covered in I) WKB, method of multiple scales, boundary layer theory. Elements of complex analysis. Prerequisite: MAE 294A or SIO 203A or consent of instructor.

203C. Introduction to Applied Mathematics III (4)
(Cross-listed with MAE 294C.) Partial differential equations: characteristics, similarity solutions, Green’s functions, images, wave equation, diffusion equation, Laplace’s equation. Applications to continuum mechanics, potential fields, and transport phenomena such as diffusion, linear and nonlinear waves, Burger’s equation and shocks. Other topics according to the interests of the instructor. Prerequisite: MAE 294B or SIO 203B or consent of instructor.

204. Advanced Acoustics (4)
Theory of radiation, transmission, and scattering of sound with special application to ocean acoustics. Students who have taken SIO 204B for credit may not get credit for SIO 204. Prerequisite: graduate standing or consent of instructor. Buckingham (W)
206. Land Surface Hydrology (4) Advanced introduction to natural processes that govern water occurrence and transport over the land surface. Principles of global hydrologic cycle and land-surface water balance, runoff and fluvial geomorphology, infiltration and subsurface flow processes, and human influences on the water cycle. Prerequisites: graduate standing or consent of instructor. Staff (S)

207A. Fundamentals of Digital Signal Processing (4) Discussion of discrete-time signals and systems, Discrete-Time Fourier Transform (DFT) and window functions, Fast Fourier Transform (FFT), design of Finite Impulse Response (FIR) and Infinite Impulse Response (IIR) digital filters and their implementations, finite word length effects, applications to data acquisition and analysis. Prerequisite: graduate standing or consent of instructor. Hodgkiss (F)

207B. Digital Signal Processing I (4) Discrete random signals; conventional (FFT-based) spectral estimation. Coherence and transfer function estimation; model-based spectral estimation; linear prediction and AR modeling. Levinson-Durbin algorithm and lattice filters, minimum variance spectrum estimation. Cross-listed with ECE 251A. (Recommended prerequisites: ECE 153 in addition to either ECE 161 or 161A and SIO 207A or equivalent background.) SIO 207A is intended for graduate students who have not had an undergraduate course in DSP. Prerequisite: graduate standing. Hodgkiss, Rao (W)

207C. Digital Signal Processing II (4) Adaptive filter theory, estimation errors for recursive least squares and gradient algorithms, convergence and tracking analysis of LMS, RLS, and Kalman filtering algorithms, comparative performance of Wiener and adaptive filters, transversal and lattice filter implementations, performance analysis for equalization, noise canceling, and linear prediction applications. Cross-listed with ECE 251B. (Recommended prerequisite: ECE 251A or ECE 251AN.) Prerequisites: graduate standing, for ECE 251A (for ECE 251B; SIO 207B for SIO 207C). Hodgkiss (S)

207D. Array Processing (4) The coherent processing of data collected from sensors distributed in space for signal enhancement and noise rejection purposes. Overview of directional techniques - Convolutional and adaptive beamforming. Matched field processing. Sparse array design and processing techniques. Applications to acoustics, geophysics, and electromagnetics. Cross-listed with ECE 251D. (Recommended prerequisite: ECE 251A or ECE 251AN.) Prerequisites: graduate standing; ECE 251C (for ECE 251D); SIO 207C (for SIO 207D). Hodgkiss (F)

208. Seminar in Applied Ocean Sciences (1) Topics in applied ocean sciences. One-hour seminar. (S/U grades only). Staff (F,W,S)

209. Special Topics (1–4) Within the next few years, lectures on various special subjects will be offered by members of the staff. The emphasis will be on topics that reveal the interdependence of the biological, chemical, geological, and physical processes operating in the oceans. (S/U grades permitted.) Staff (F,W,S)

210. Physical Oceanography (4) Physical description of the sea; physical properties of seawater, methods and measurements, boundary processes, regional oceanography. Prerequisite: graduate standing or consent of instructor. Hendershot, Talley (F)

211A–B. Ocean Waves (4–4) Propagation and dynamics of waves in the ocean including the effects of stratification, rotation, topography, wind, and nonlinearity. Prerequisite: graduate standing or consent of instructor. Hendershot, Guza, Winant (W,S)

212A. Geophysical Fluid Dynamics I (4) The equations of motion for rotating stratified flow and their application to the atmospheric and oceanic dynamics; Ekman layer dynamics, potential vorticity dynamics, the quasi-geostrophic approximation, theories of the wind-driven oceanic circulation, theories of the atmospheric Hadley circulation, geostrophic adjustment, and baroclinic instability. Prerequisite: graduate standing or consent of instructor. Cessi, MacKinnon, Young (W,S)

212B. Geophysical Fluid Dynamics II (5) The equations of motion for rotating stratified flow and their application to the atmospheric and oceanic dynamics; Ekman layer dynamics, potential vorticity dynamics, the quasigeostrophic approximation, theories of the wind-driven oceanic circulation, theories of the atmospheric Hadley circulation, geostrophic adjustment, and baroclinic instability. Prerequisites: graduate standing or consent of instructor. Cessi, MacKinnon, Young (W,S)

213. Turbulence and Mixing (4) Mixing mechanisms, their identification, description, and modeling. Introduction to turbulence, semi-empirical theories, theoretical structures, and effects of stratification and rotation on turbulent structure, entrainment and mixing. Cross-listed with MAE 216. (S/U grades permitted.) Armi (S)

214A. Introduction to Fluid Mechanics (4) A survey of classical problems in fluid mechanics and approximate techniques of analysis. Topics include conservation equations, straight laminar flows, low and high Reynolds number laminar flow, stability of laminar flows, turbulent flow. Prerequisite: graduate standing or consent of instructor. Hendershot, Winant (F)

214B. Environmental Fluid Dynamics (4) Single-layer flows with a free surface, two-layer flows including exchange flows in harbors, estuaries, seas, and buildings. Continuously stratified flows with meteorological and oceanographic applications. Topographic effects, plumes, jets, and thermals. Planetary boundary layers. Prerequisite: graduate standing or consent of instructor. Armi (S)

215A. Applied Mathematics for Oceanographers I (4) Intended for first-year graduate students who seek a quantitative way to describe how the ocean works: vector analysis, complex quantities, Fourier and Laplace transforms, ordinary differential equations, non-homogeneous ordinary differential equations, initial and boundary value problems, Heat and Laplace equations. Prerequisite: graduate standing or consent of instructor. Hendershot, Ierley, Winant (F)

215B. Applied Mathematics for Oceanographers II (4) An introduction to the mathematical description of waves, beginning with a description of the linear oscillator, and followed by normal modes, the flexible string, membranes, water waves, ray theory, method of characteristics, and basic linear algebra. Prerequisites: graduate standing and SIO 215A or consent of instructor. Hendershot, Ierley, Winant (W)

215C. Applied Mathematics for Oceanographers III (4) An introduction to complex analysis, regular and singular expansions, Poincare's method, two-scale method, the WKBJ approximation and boundary layer theory. Prerequisites: graduate standing and SIO 215B or consent of instructor. Hendershot, Ierley, Winant (S)

216. Introduction to the Physics of Complex Systems (4) Emergent complex behavior in nonlinear, dissipative, open dynamical systems will be investigated by studying fundamental properties and their manifestation in examples drawn from the physical and biological sciences. Topics include fractals, chaos, self-organization, artificial life, and neural networks. Prerequisites: graduate standing or consent of instructor. Hendershot, Ierley, Winant (S)

217A. Atmospheric and Climate Sciences I (4) Thermodynamics and statics of dry and moist air, atmospheric composition, Earth radiation budget, vertical structure of the atmosphere, global energy balance, thermodynamic feedbacks in the climate system. Prerequisite: graduate standing or consent of instructor. (S/U grades permitted.) Werner (W)

217B. Atmospheric and Climate Sciences II (4) Structure of midlatitude synoptic systems; equations of motion, scale analysis, elementary applications and wave solutions; baroclinic instability theory; atmospheric general circulation; tropical dynamics; relationships between atmospheric dynamics, CO2 clouds, precipitation, and other weather and climate phenomena. Prerequisites: graduate standing and SIO 217A or equivalent background, or consent of instructor. J. Norris (W)

217C. Atmospheric and Climate Sciences III (4) Physical and dynamical processes that determine climate and climate change; role of aerosols; water vapor; CO2 and other greenhouse gases; cloud-radiative interactions; atmospheric general circulation; role of convection; tropical climate including El Niño. Prerequisites: graduate standing and SIO 217A and SIO 217B or equivalent background, or consent of instructor. Ramanathan (S)

217D. Atmospheric and Climate Sciences IV (4) Atmospheric chemistry that impacts climate change, including photochemical reactions, ozone chemistry, and aerosol evolution in the troposphere and stratosphere. Atmospheric applications of heterogeneous chemistry, and microphysical processes will include the ozone hole, urban smog, and aerosol-cloud interactions. Prerequisites: undergraduate physical chemistry, and mathematics (including differential equations). Russell (S)

218. Special Topics in Physical Oceanography (1–4) Example topics are case histories and methods in physical oceanography, theories of the ocean circulation, numerical methods in large-scale ocean and atmospheric models, and natural electromagnetic phenomena in the earth and the oceans. (S/U grades permitted). Staff (F,W,S)

220. Observations of Large-Scale Ocean Circulation (4) General circulation of the oceans; tropical, subtropical, and high-latitude current systems of the Atlantic, Indian, and Pacific Oceans and marginal seas; ocean heat flux and thermohaline circulation; observational basis of large-scale dynamics. Prerequisite: graduate standing or consent of instructor. (S/U grades permitted.) Roemmich (S)

221A. Analysis of Physical Oceanographic Data I (A) (4) Fundamental elements of analysis of geophysical and oceanographic time series, including sampling problems, least squares techniques, spectral analysis, interpretation of series, design of experiments. Prerequisite: consent of instructor. Pinkel (F)

221B. Analysis of Physical Oceanographic Data II (B) (4) Techniques for analysis of physical oceanographic data involving many simultaneous processes including probability densities, sampling errors, spectral analysis, empirical orthogonal functions, correlation, linear estimation, objective mapping. Prerequisite: graduate standing or consent of instructor. (S/U grades permitted.) Rudnick, Gille (F)

221C. Data Analysis Laboratory (4) This course is to give students practical experience with analysis techniques. Students complete three projects. Topics include empirical orthogonal functions, objective mapping, complex demodulation, inference of geostrophic flow, estimation of CTD salinity spiking, isolation of wind-driven currents, wavelets. Prerequisite: graduate standing or consent of instructor. (S/U grades only.) Rudnick, Gille (F)

222. Underwater Bioacoustics (4) Introductory course to familiarize a broad spectrum of participants to underwater sound and its relationship to underwater animals. Basic physics of sound propagation, use of sound to study underwater animals and, the sounds made by the animals themselves for echolocation and communication will be covered. Prerequisite: consent of instructor. (S/U grades permitted). J. Hildebrand, Jaffe (W)

223A. Geophysical Data Analysis I (4) Probability and statistics and their application to make inferences from geophysical data point processes, distributions, maximum likelihood estimation, hypothesis testing and confidence intervals, least squares, density estimation, interpolation and smoothing. Prerequisite: graduate standing or consent of instructor. Agnew, C. Constable (W)

223B. Geophysical Data Analysis II (4) Analysis of geophysical measurements, especially time series. Fourier theory digital filter design, and spectral analysis. Prerequisites: graduate standing and SIO 223A or consent of instructor. Agnew, C. Constable (S)

2010-2011 UC SAN DIEGO GENERAL CATALOG • SCRIPPS INSTITUTION OF OCEANOGRAPHY 11
224. Internal Constitution of the Earth (4)

An examination of current knowledge about the composition and state of the earth's interior revealed by geo-physical observations. Seismic velocity and mass distribution; equations of state; phase changes; energy balance and climate; potential energy. Development and refinement of models of composition from extraterrestrial samples and exposed rocks; spherical and aspherical variations of properties. Prerequisites: differential equations, calculus and physics, or consent of instructor. Masters (S)

225. Physics of Earth Materials (4)

Mathematics and physics of continuous media, focusing on geophysical problems. Topics include deformation, stress, and elasticity; attenuation, viscoelasticity, fracture mechanics, and porous media. Prerequisite: graduate standing or consent of instructor. Agnew, Fialko (W)

226. Introduction to Marine Geophysics (4)

Methods of exploration geophysics with emphasis on those useful at sea. Magnetic and gravitational potential field methods, multi-beam echo sounding reflection and refraction seismology will be covered. Recent papers from the literature will also be read and discussed. Prerequisites: differential equations, at least one geology course. (S/U grades permitted.) Dorman, Hildebrand (S)

227A. Introduction to Seismology (4)

Introduction to seismometers and seismograms; stress and strain; potentials and the wave equation; geometrical ray theory and travel times in layered media; representa- tion of seismic sources; WKB and synthetic seismograms; seismograms and seismology systems. Prerequisite: consent of instructor. (S/U grades permitted.) Shearer (F)

227B. Advanced Seismology I (4)

Introduction to low-frequency digital data; continuum mechanics and the equations of motion; free oscillation solutions; construction of Earth models; excitation of free-oscillations and source mechanism retrieval; array process- ing of long-period data; modelling aspherical structure; surface waves. Prerequisite: consent of instructor. (S/U grades permitted.) Staff (W)

227C. Advanced Seismology II (4)

High-frequency wave propagation; methods for computing synthetic seismograms including WKB, reflection, and finite differences; body-wave spectra; attenuation of body waves; source physics; reflection and refraction seismology; seismic tomography. Prerequisite: consent of instructor. (S/U grades permitted.) Staff (S)

229. Gravity and Geomagnetism (4)

Introduction to theory with applications to gravity and geomagnetism. Topics include the geoid, spherical harmonics, Laplace's equation, the Dirichlet problem on a sphere, and Fourier methods. Gravity anomalies and geomagnetic field modeling and sources are discussed; also classical seismologic observations. Prerequisite: graduate standing or consent of instructor. (S/U grades permitted.) C. Constable, Parker (S)

230. Introduction to Inverse Theory (4)

Solution of linear and nonlinear inverse problems in geo-physics by optimization techniques such as norm minimi- zation and linear programming. Construction of models by regularization; inference by bounding functionals. Illustrations from gravity, geomagnetism, and seismology. Prerequisite: graduate standing or consent of instructor. (S/U grades permitted.) Staff (W)

231. Introduction to EM Methods in Geophysics (4)

Introduction to electromagnetic methods for both global geophysics and applied/exploration methods. Covers his- tory of EM investigation in rocks, binary mixing laws, self potential, induced polarization, DC resistivity, magnetoellurics, geomagnetic depth sounding, elemen- tary inverse methods, global conductivity structure, and marine EM methods. Prerequisite: graduate standing or consent of instructor. (S/U grades permitted.) S. Constable (F)

233. Introduction to Computing at SIO (4)

Introduction to the SIO computing environment and com- mon software tools in geophysics and other disciplines. Topics include UNIX, MATLAB, Postscript, GMT, LaTeX, HTML, and a scientific programming language such as C or Fortran90. Prerequisite: graduate standing or consent of instructor. (S/U grades permitted.) Agnew, Shearer (F)

234. Geodynamics (4)

A general course on the dynamics and kinematics of the solid earth based on the text of Turcotte and Schubert. Topics include: physical geology, geodynamics, heat transport, plate tectonics, viscosity, flow viscosity, crustal dynamics, and other related topics. Prerequisite: graduate standing or consent of instructor. (S/U grades permitted.) Sandwell (W)

236. Satellite Remote Sensing (4)

Satellite remote sensing provides global observations of Earth to monitor environmental changes in land, oceans, and ice. A variety of remote sensing applications will be covered including: orbit, electromagnetic radiation, diffraction, electro-optical, and microwave systems. Weekly labs ex- plore remote sensing data sets. Graduate students will also be required to write a term paper and do an oral pre- sentation. Conjoined with SIO 135. Prerequisite: graduate standing or consent of instructor. Sandwell (S)

237A. Introduction to Ocean Optics (4)

Overview of ocean optics. Concepts in radiometry. Inherent and apparent optical properties. Radiative transfer equa- tion. Light absorption and scattering by seawater constitu- ents. Optics of the ocean surface. Light fields with and without the ocean. Optics of marine particles. Measurement methods and instrumentation. Prerequisites: basic physics and differential calculus, or consent of instructor. Stramski (F)

237B. Ocean Color Remote Sensing (4)

Overview of ocean color satellite missions. Concepts in radiometry. Inherent and apparent optical properties. Radiative transfer equation. Solar radiation and elements of atmospheric optics. Propagation of light across the sea sur- face and within the ocean. Light absorption and scattering by substances. Data analysis and remote-sensing reflectance. Ocean color algorithms and applications. Prerequisites: basic physics and differential calculus, or consent of instructor. (S/U grades permitted.) Stramski (F)

237C. Optical-Biological Interactions in the Ocean (2)

A discussion class with emphasis on the interaction of light with marine plankton. Topics will include light absorption, fluorescence, and scattering by phytoplankton and effects of growth conditions on phytoplankton optical properties. Classic and contemporary papers dealing with these topics will be discussed. Prerequisite: basic physics and biology, or consent of instructor. (S/U grades only.) Stramski (F)

238. Sensor Networks (4)

Characteristics of chemical, biological, seismic, and other physical sensors; signal processing techniques supporting distributed detection of salient events; wireless communi- cation and networking protocols supporting formation of robust sensor fabrics; current experience with low power, low cost sensor deployments. Conjoined with MAE 149 and ECE 156. Prerequisite: upper-division standing and approval of instructor, or graduate student in science or engineering. (S/U grades permitted.) Hodgskis (S)

239. Special Topics in Geophysics (1–4)

Special course offerings by staff and visiting scientists. Example topics are seismic source theory, geophysical problems, geodynamics, and seismology. Prerequisites: consent of instructor. (S/U grades only.) Staff (F,W,S)

240. Marine Geology (4)

Introduction to the geomorphology, sedimentation, stratigraphy, vulcanism, structural geology, tectonics, and geological history of the oceans. Prerequisites: the physics and chemistry required for admission to the gradu- ate curriculum in SIO, and ES 101 or equivalent, or consent of instructor. Canes, Charles, Hilton (F)

242. Marine Biotechnology (4)

The class will contain lectures discussing current topics and new technologies in the marine sciences (biology, chemistry). Faculty that are part of the marine biotechnol- ogy training grant will lecture on their own research and techniques that are being used. The students will select and present a paper that is an application of topics discussed.

The areas of genomics, proteomics, expression analysts, mutagenesis, microbial diversity, etc., will be presented. Bartlett (F)

243. Marine Paleoecology (4)

Paleoecology of marine plankton, nekton, and benthos. Patterns and changes in marine communities and eco- systems over geological time in relation to changes in the physical, chemical, and geological environment and biotic interactions. The preservation filter and inference of ecological processes from fossils and biogeochemical proxies. Biotic interchanges, incumbency, escalation and trends, mass extinctions, and recovery. Lectures, seminar discussions, laboratory, and field trips. Prerequisites: bach- elor's degree in science or consent of instructor; open to undergraduates with completion of SIO 104 and either BIB 130 or BIB 140, or equivalent. Jackson, Staff (S)

244. Shape and Structure of the Ocean Floor (4)

Description and explanation of the structural geomor- phology of oceanic crust, and of the tectonic and volcanic processes responsible for it. Description and interpretation of deep-sea sedimentary landforms (e.g., deep-sea fans, drifts, bedforms) and of the bottom currents that shape them. Offered in alternate years. Prerequisite: any previous graduate/undergraduate earth science or geology course. Lonsdale (W)

245. Sedimentary Geochemistry for Chemical Paleocenoegraphy (2)

Chemical paleoecography will be the focus, emphasis, on seawater and/or sediment chemical and isotopic records; discussions will concentrate on some of the following isotopic systems: Li, B, C, D, N, S, Sr, Nd, and on select chemical tracers such as Cd and Ir; on the marine phases that most reliably record seawater chemical and isotopic compositions; and on diagenetic processes, how to identify and deal with them. Prerequisite: SIO 260 and consent of instructor. (Offered in alternate years.) (S/U grades permitted.) Kastner (S)

246. Global Tectonics and Basin Formation (4)

Plate tectonics of the crust and upper mantle, examining a variety of environments from ridge crests to continental margins, including plate interiors, with an emphasis on basin formation in these tectonic settings. Prerequisite: graduate standing. Canes, Driscoll (W)

247. Rock Magnetism and Paleomagnetism (4)

Rock magnetism and acquisition of magnetic remanence in geological materials as well as laboratory procedures and data analysis (isolating remanence components and statistical approaches). The paleomagnetic literature will be used to illustrate applications in geological and geophysical problems. Prerequisites: one year each of college-level physics and geology; mathematics through calculus. (S/U grades permitted.) Tauxe (S)

248. Evolution of Earth’s Biosphere (4)

Paleoecological development of marine and terrestrial environments during Earth’s evolution. Ecological and chemical evolution of the oceans, atmosphere, biogeo- chemical cycles, and environments with particular em- phasis on the long-term history and climate of the Earth’s surface. Substantial field component (three weekend field trips in San Diego County) supplement and extend the lecture material. Additionally, at graduate level oral presentation or research paper required. Conjoined with SIO 148. Prerequisite: graduate-level standing or consent of instructor. Jackson, R. Norris (S)

249. Special Topics in Marine Geology (1–4)

Special course offerings by staff and visiting scientists. (S/U grades only.) Staff (F,W,S)

251. Petrology and Geochemistry of the Solid Earth (4)

A geochemical and petrogenetic overview of the Earth and planets. Topics include formation and differentiation of the Earth into core, mantle, crust, and atmosphere/ hydrosphere; generation of magma, and isotopic and trace element geochemistry of igneous and metamor- phic rocks. Graduate students, additionally, must submit a term paper in one aspect of work discussed during the quarter to be presented orally in class. Conjoined with SIO
252A. Introduction to Isotope Geochemistry (4)
Radioactive and stable isotope studies in geology and geochemistry, including geochronology, isotopes as tracers of magmatic processes, cosmic-ray produced isotopes as tracers in the crust and weathering cycle, isotopic evolution of the crust and mantle. Graduate level requires student presentation. Conjoined with SIO 144. Prerequisite: graduate-level standing or consent of instructor. Hinton, Keeling, Lal (W)

252B. Advanced Isotope Geochemistry I (4)
An advanced treatment of noble gas and stable isotope geochemistry. Offered in alternate years with SIO 252C. Prerequisites: SIO 252A/SIO 144. Hinton, Keeling, Lal (S)

252C. Advanced Isotope Geochemistry II (4)
An advanced treatment of radiogenic and cosmogenic isotope geochemistry. Offered in alternate years with SIO 252B. Prerequisites: SIO 252A/SIO 144. Lal (S)

253. Interactions of Oceanic Plates and the California Margin (4)
How the geology of Alta and Baja California has been shaped, especially in the past 30MYr, by changing patterns of oceanic plate motions that have subducted beneath the North American Margin, slid obliquely past it, and captured continental crust. Prerequisites: graduate standing, or consent of instructor and any other earth science class for undergraduates. Lonsdale, Castillo (S)

254. Macroevolution (4)
Tempo and mode of evolution with emphasis on the marine fossil record. Large-scale patterns and trends in diversity, speciation, and extinction. Innovation, disparity, and adaptive radiation. Evolutionary turnover and the role of the environment in macroevolution. Additionally, oral presentation or research paper required. Conjoined with SIO 154. Prerequisite: graduate-level standing or consent of instructor. Jackson, R. Norris (S)

255. Paleobiology and History of Life (6)
An introduction to the major biological transitions in Earth history from the origins of metabolism and cells to the evolution of complex societies. The nature and limitations of the fossil record, patterns of adaptation and diversity, and the tempo and mode of biological evolution. Laboratories and substantial field component complement and extend lecture material. Program and/or material fee may apply. Graduate students, additionally, will give oral presentation or research paper. Conjoined with SIO 104. Prerequisite: graduate-level standing or consent of instructor. Jackson, R. Norris (S)

255A. Topics in Paleobiology and History of Life (3)
Lecture topics on the major transitions in the evolutionary history of life including origin of metabolism, microbes, major eukaryotic radiation, ecosystems and societies. Prerequisite: graduate standing or consent of instructor. Jackson, R. Norris (S)

256A. Introduction to Field Geology (4)
Principles of stratigraphy and structural geology applicable to field geologic studies. Discussion and laboratory exercises. Prerequisites: consent of instructor. Brown (W)

256L. Structural Geology (4)
Principles of stratigraphy and structural geology applicable to field geologic studies. Discussion and laboratory exercises. Two to three field trips required. Graduate students will complete an in-depth literature-based focused study consisting of a written report and a forty-five-minute seminar on topics related to structural geology. Prerequisite: graduate-level standing or consent of instructor. (W)

257. Seminar in Petrology (4)
Discussion of current research in petrology and mineralogy. (S/U grades permitted.) Castillo (W)

259. Atmospheric Geochemistry (4)
Topics in this introductory course include: structure and composition of the atmosphere; chemistry and isotopes of natural and man-made carbon, nitrogen, and sulfur-bearing trace gases; ozone and hydroxyl radical; halogenated gases; air-sea exchange; aerosols; climatic effects. (S/U grades permitted.) Weiss (S)

260. Marine Chemistry (4)
Chemical description of the sea; the distribution of chemi- cal species in the world oceans, and their relationships to physical, biological, and geological processes. Aluwihare, Barbeau, R. Keeling (W)

261. Energetics and Kinetics in Marine Systems (4)
This course teaches the physical chemical principles that control chemistry in marine systems. After a basic introduction to thermodynamics and its application to an understanding of the marine environment, the emphasis will be on the study of a variety of kinetic processes. Prerequisite: graduate standing or consent of instructor. Dickson (S)

262. Seminar in Marine Natural Products (1)
Students will give seminars on current research topics in marine natural products chemistry. Prerequisite: graduate standing or consent of instructor. (S/U grades only.) Fenical, W. Gerwick, Moore (F,WS)

263. Aqueous Chemistry (4)
This course emphasizes the chemical principles that control basic aqueous chemistry in marine systems. The focus will be to show that the geochemistry of the various elements in sea water and biological systems can be understood as a consequence of basic general chemical concepts such as electron structure, chemical bonding, and group and periodic properties. Prerequisite: undergraduate chemistry equivalent to UCSD Chemistry 6 sequence. Dickson (F)

264. Special Topics in Marine Natural Products Chemistry (3)
This course provides the foundation for advanced study in the field of marine natural products chemistry. Topics vary from the history of natural products to the organic chemistry of terpenes, alkaloids, acetogenins, and other natural product classes. Varying by topic quarterly, this class is given each quarter and may be repeated. Prerequisite: one year general organic chemistry. (S/U grades only.) Fenical, W. Gerwick, Moore (F,WS)

265. Biogeochemistry (4)
Examines quantitatively the impact of the biota on the chemistry of the atmosphere and ocean. Emphasis given to isotopes as tracers of biogeochemical processes. Attention given to paleoclimatic and paleoatmospheric data from ice cores to reveal mechanisms. Prerequisite: graduate standing or consent of instructor. Severinghaus, R. Keeling (S)

266. Seminar in Geochemistry and Marine Chemistry (1)
Student seminar in topics related to geochemistry and the chemistry of the marine environment. (S/U grades only.) Dickson (S)

269. Special Topics in Marine Chemistry (1–4)
Special course offerings by staff and visiting scientists. (S/U grades permitted.) Staff, (F,WS)

270. Pelagic Ecology (4)
Analysis of the concepts and theories used to explain the biological events observed in the water column. Alternate years. Prerequisites: SIO 210, 280, or consent of instructor. Checkley, Ohman (S)

270A. Fisheries Oceanography (4)
Aspects of marine ecology relevant to the reproduction, survival, and distribution of commercially important marine species. Alternate years only. Prerequisite: graduate standing or consent of instructor. Checkley, Ohman (S)

271. Marine Zooplankton (5)
Lectures and laboratories treating the morphological, behavorial, and life history variations of the principal phyto- plankton invertebrates and heterotrophic protists. Constraints of life at low Reynolds numbers; principles of allometry; growth processes of heterotrophic organisms. Prerequisite: graduate standing or consent of instructor. (S/U grades permitted.) Ohman (S)

272. Biogeochemistry (3)
A lecture course concerning the origin, development, and perpetuation of distributional patterns with emphasis on benthic marine organisms. (W)

273. Professional Ethics in Science (2)
A seminar on the historical and contemporary ethics and ethos of scientific research, based on published documents. Offered in alternate years. Dayton (W)

275A. Benthic Ecology (4)
Evolution and maintenance of benthic communities from the terrestrial margins to the deep sea. Special emphasis will be placed on physical and biological scal- ing and processes determining patterns of distribution and abundance; interrelationships between community structure and population phenomena, including trophic relationships, reproductive and recruitment patterns, suc- cession, and life history biology. Offered in alternate years with SIO 275B. Prerequisite: consent of instructor; open to undergraduates. (S/U grades permitted.) Levin, Dayton (W)

275B. Natural History of Coastal Habitats (6)
Two three-hour lecture/laboratories per week, three week- long field trips to coastal habitats in the Southwest and northern Mexico. Several day field trips to local habitats. Offered in alternate years with SIO 275A. Prerequisite: consent of instructor. (S/U grades permitted.) Dayton, R. Norris (S)

276. Quantitative Theory of Populations and Communities (4)
An introduction to the quantitative tools and conceptual issues underlying the study of the dynamics and struc- ture of ecological systems. Prerequisite: calculus (three quarters) or consent of instructor. (S/U grades permitted.) Sugihara (F)

277. Deep-Sea Biology (4)
The ecology, zoogeography, taxonomy, and evolution of deep-sea organisms, with emphasis on the benthos. Course includes the one-day cruise to the hydrothermal environment to examine deep sea organisms (700–1200 meters) (two-hour steam from Point Loma). Offered alternate years. Prerequisite: graduate standing or consent of instructor. Levin (W)

278. Seminar in Ocean Biosciences (2)
Presentations of reports, review of literature, and discussion of current research in the marine biological and oceano- graphic sciences. (S/U grades permitted.) Staff, (F,WS)

279. Special Topics in Biological Oceanography (1–4)
(S/U grades permitted.) Staff, (F,WS)

280. Biological Oceanography (4)
The biology and ecology of marine plankton, nekton, and benthos. Emphasis will be on processes regulating spe- cies, community, and ecosystem patterns and changes, including productivity, trophic relationships and species interactions with the physical, chemical, and geological environment. One or more field trips. Prerequisite: bachelor’s degree in science or consent of instructor. Franks or Checkley, Levin (F)

281. Environmental Physiology and Biochemistry of Marine Organisms (4)
Biochemical mechanisms of adaptation of organisms to the marine environment. Special emphasis is on the effects of pressure, temperature, salinity, oxygen, and light on the physiology and biochemistry. Conjoined with BIBC 130. Prerequisite: BIBC 102 or consent of instructor. Felbeck (F)

282. Phytoplankton Diversity (4)
Molecular, biochemical, ecological, and evolutionary perspectives on the diversity of eukaryotic and prokary- otic phytoplankton. Prerequisite: consent of instructor. Palenik (W)

285. Physical-Biological Interactions (4)
Physical and biological processes affecting growth and patchiness of plankton. Concepts and equations from physical oceanography will be presented and explored in a biological context. Ideas will be treated both theoreti- cally and with examples from the literature. Prerequisites: introductory calculus and SIO 210, or consent of instructor. Franks (S)

286. Marine Science, Economics and Policy (4)
This course investigates global issues in marine conserva- tion and potential policy solutions. The approach is inter-disciplinary, fast-paced, and discussion oriented. Students will become acquainted with sufficient background in
marine biology, ecology, marine and conservation economics, international law, and policy as preparation for participation in discussion on real-world issues in marine conservation. Topics and instructors change each quarter. **Prerequisite:** graduate standing or consent of instructor. (S/U grades permitted) Staff (F,W)

287A. Marine Microbial Ecology (4)
Recent developments in the study of marine bacteria. Emphasis will be on biochemical and physiological adaptations of marine bacteria to the ocean environment. Bacterial metabolism, growth, and death will also be discussed in the context of trophic interactions and flows of material and energy in marine ecosystems. Molecular biology techniques used in the study of bacterial ecology will also be discussed. **Prerequisite:** consent of instructor. (S/U grades permitted.) Azam (W)

287B. Microbial Physiology (4)
Prokaryotic microbial physiology will be discussed primarily from a biochemical standpoint with emphasis on mechanism. Topics will vary from year to year but will include the following themes: Central Metabolism, Bioenergetics, Biosynthesis, Regulation, Differentiation. Prokaryotic Structure-Function Relationships. Conjoined with BIBM 130. **Prerequisites:** BIBC 100 or BIBC 102 or equivalent. Saier (S).

288. Marine Microbiology Laboratory (4)
Advanced techniques and theory in environmental microbiology. Students will perform experiments concerning (a) enrichment of diverse microbes (b) microbial enumeration and identification (c) metabolic and physiochemical adaptations, and (d) biotechnology, along with an independent project. **Prerequisite:** consent of instructors. Brahamsha, Palenik (S)

290. Marine Biology (4)
An introduction to the field of marine biology, especially to the diversity of marine organisms at all taxonomic levels and their adaptations to the marine environment. **Prerequisite:** graduate standing. N. Holland, Palenik (W)

291. Biology Graduate Research Presentations (1)
Graduate students in the biological sciences present their research in a seminar or poster format. Class participants and instructors provide written feedback on the presentations. Required of third-year and beyond marine biology curricular group students during spring quarter. Open to all SIO graduate students. (S/U grades only.) Latz (S)

292. Communicating Science to Informal Audiences (4)
Students develop fundamental science communication and instructional skills through the understanding and application of learning theory, interpretative techniques, and pedagogical practices, which occurs in the context of communicating ocean science concepts to a diverse audience at Birch Aquarium at Scripps. Graduate science students will develop fundamental communication, and instructional skills through the understanding and application of learning theory, interpretive techniques, and pedagogical practices, including the development of an education/outreach plan to support a competitive research proposal. Conjoined with SIO 180. **Prerequisite:** graduate standing or consent of instructor. (F)

294. Biology of Fishes (5)
The comparative evolution, morphology, physiology, and ecology of fishes. Special emphasis on local and deep-sea and pelagic forms in laboratory. **Prerequisite:** graduate standing or consent of instructor. Hastings (S)

295S. Introduction to Marine Biodiversity and Conservation—Seminar (8)
Lectures on ecological, economic, social, and legal issues related to marine biodiversity and case studies on socio-economic and legal issues. Students are expected to attend field trips at sea and to various sites around San Diego County as part of the course. Students who have taken SIO 295 may not receive credit for SIO 295S. **Corequisite:** SIO 295LS. **Prerequisites:** MAS students only; consent of instructor. Jackson (Su)
The Senior Seminar Program was launched in fall 2006 as an additional venue to enhance the undergraduate student experience at UC San Diego. By design, the small informal class setting promotes intellectual discussions with faculty, and fosters an ideal learning environment for polishing critical thinking and analytical skills.

Some twenty unique seminars are offered each quarter by faculty representing most UCSD academic departments. Senior seminars are designated by the course number 192 (e.g., POLI 192), are graded Pass/Not Pass, and carry one unit of credit. A department stamp is required prior to enrollment and is obtained by simply contacting the department or program offering the seminar. Prerequisites vary by seminar. Students are highly encouraged to incorporate senior seminars into their upper-division studies at UCSD.

Please visit the Senior Seminar Program Web site at http://ugseminars.ucsd.edu for a description of seminars currently offered. This site also contains useful information such as enrollment procedures and additional program details. Questions about a specific senior seminar should be directed to the department offering the seminar.
CULTURE, ART, AND TECHNOLOGY

See “Culture, Art, and Technology” core sequence.

SIXTH COLLEGE HONORS PROGRAM

OFFICE: Academic Advising
Pepper Canyon Hall, 2nd floor
Sixth College Honors Program nurtures academically high achieving students intellectually and socially, increases their awareness about opportunities of academic, social, and cultural engagement, and motivates them to become community leaders in Sixth College, at UC San Diego, and in communities outside the university.

• Through seminars, research, and social and cultural events, students are introduced to the academic, cultural, artistic, and social richness of the campus, provide information about resources, support students in finding extracurricular activities, and create opportunities to make connections to people, peers, faculty, staff, and campus community leaders.

• Through special advising by Sixth College provost and Sixth College associated faculty, honors students will receive mentoring and guidance.

FRESHMAN HONORS SEQUENCE

Students who have distinguished themselves academically in their high schools are invited to participate in the Freshman Honors Program. The qualifications are outstanding high school grade-point averages (3.8) and College Board Scholastic Aptitude Test scores (SAT math: 700 and above, and SAT reading and writing: 700 and above). In the fall quarter, freshmen are invited to enroll in SXTH 20—Freshmen Honors Seminar, which is noted on the UCSD transcript for zero units. Students who were not originally invited and who completed at least twelve graded units with a 3.7 cumulative GPA, will be invited to join the honors program. Students need to maintain a 3.5 cumulative GPA in order to remain in the honors program.

The weekly Freshman Honors seminars include cultural and social events such as lectures, hikes, dinners, plays, music events, and visits to museums are also an important component of the program.

SOPHOMORE HONORS SEQUENCE

Sixth College students who distinguish themselves academically during their freshman year and maintain a minimum cumulative GPA of 3.5 have two additional academic enrichment opportunities available to them:

• Second-year honors can participate in the Sixth College Honors Apprentice Research Program by enrolling in SXTH 96 (2 units P/NP)—Honors Project. Second-year projects may extend for one to three quarters and may lead to the creation of a Practicum project. Students are encouraged to present their projects at the UCSD Undergraduate Research Conferences held each spring and summer.

• A second option is participation in SXTH 60 (1 unit)—Sophomore Honors Seminar, a series that deals with Technology and Society and the Arts issues.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

SXTH 20. Freshmen Honors Seminar (0)
Weekly seminars with faculty members from a variety of disciplines (chosen by the provost to match the interests of participating students). This seminar provides students with opportunities to learn more about research and scholarly activities being conducted by faculty and instill in students a sense of participation in the scholarly life at UCSD. Prerequisite: by invitation only. Pass/Not Pass grade only.

SXTH 60. Sophomores Honors Seminar (1)
This sophomore weekly seminar is the continuation of the Freshman Honors Seminar. This series will deal specifically with Culture, Art, and Technology issues/topics. Prerequisite: by invitation only. Pass/Not Pass grade only.

SXTH 96. Honors Project (2)
Individual project on a topic related to Culture, Art, and Technology done under the direction of a faculty member. College stamp required. Pass/Not Pass grade only.

SOCIOLGY AT UC SAN DIEGO

Sociology studies societies and human groups: their composition, organization, culture, and development. It combines scientific and humanistic methods to investigate a subject that is both relevant and broad—ranging from social interaction in everyday life to social changes taking place on a global scale. The Department of Sociology at UC San Diego offers an innovative program that covers the breadth of the discipline while giving students opportunities to specialize in areas of their choice, to conduct independent research, and to participate in an Honors Program. The department also encourages majors to study abroad and to take courses in other humanities and social science departments in order to expand their perspective on sociological topics.

Students at UCSD can explore a full range of sociological inquiry through courses in such established fields as Third World development, law, culture, social movements, religion, race and ethnic relations, gender roles, medicine, and mental illness. In addition, students have the opportunity to participate in courses found in few other sociology departments, such as the politics of language, ethnographic film, the Holocaust, comparative sex stratification, mass media, and revolutions. The faculty also teach an exceptional array of courses focusing on specific societies or world regions, including Africa, Japan, China, Latin America, eastern Europe, the former Soviet Union, and the United States.

Thus sociology is a valuable major for students who want to enter law, medicine, architecture, business, or politics. It also provides a solid liberal arts education for students who plan careers in such fields as criminal justice, public health, urban planning, social welfare, counseling, public administration, international relations, or market research. For students who wish to pursue graduate study in the social sciences for careers in teaching or scholarly research, an undergraduate degree from the Department of Sociology will provide a thorough grounding in recent theoretical and methodological advances in the discipline. A sociology major offers excellent preparation for teaching in the elementary schools. If you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program for information about the prerequisite and professional preparation requirements. It is recommended that you contact TEP as early as possible in your academic career. Whatever the career choice, the study of sociology can help the student cultivate a critical awareness of social life.

Students interested in majoring or minoring in sociology should stop by the Department of Sociology office, SSB 401, for program information and handouts. These clarify specific procedures and guidelines, and provide recommendations for areas of specialization within the major, as well as for graduate studies and careers in sociology.

THE UNDERGRADUATE PROGRAM

THE MAJOR

Students may choose to major in general sociology or in one of several concentrations, described below. Some basic requirements for the B.A. are common to all of these majors. All students must complete four lower-division and twelve upper-division courses in sociology.

A 2.0 GPA is required in the major, and students must earn at least a C– in each course used for the major. No courses taken to apply toward the major may be taken on a Pass/Not Pass basis except Sociology 199. Only one such special studies course (including internships) may be applied toward the major. Special studies courses must be applied for and approved by the department before the beginning of the quarter in which the student wishes to enroll, and can only be taken on a Pass/Not Pass basis. See the staff undergraduate coordinator for the necessary application forms and deadlines.

Lower-Division

The four lower-division requirements for a major in sociology are:

1. Sociology 1, 2 and 60. (We strongly recommend you take Sociology 1 and 2 in sequence.)
2. One course from the following: Sociology 10, 20, 30, 40 or 50

It is advisable that students complete these required lower-division courses (which should be taken during the freshman or sophomore year) before continuing with their upper-division work. Sociology 60 is a prerequisite for all upper-division methods courses.

Upper-Division

Twelve upper-division courses are needed for the major. Sociology 100 is required (students are strongly advised to complete this course by the end of their junior year), as well as one of the following methods courses:

1. Sociology 103M
2. Sociology 104
3. Sociology 105
4. Sociology 106
5. Sociology 106M
6. Sociology 108
7. Sociology 109
8. Sociology 110

Sociology 60 is a prerequisite for these methods courses. Students are encouraged to complete their theory and methods courses early in their program, since theoretical perspectives and skills in methods will enhance their subsequent course work. Ten additional upper-division classes are required for the major. The specific choices will depend on the student’s major concentration.

REQUIREMENTS FOR MAJOR IN GENERAL SOCIOLOGY

Students who seek a B.A. in General Sociology may complete any ten additional upper-division Sociology classes.

Requirements for Major Concentrations

Students may graduate with a B.A. in one of seven concentrations by choosing at least five upper-division classes from the course offerings in that concentration, as part of the ten upper-division courses for the major. Only one major concentration is allowed.

Concentration in International Studies

Students may graduate with a B.A. in Sociology/International Studies by completing at least five of the following courses as part of the ten
upper-division courses required for the major. This concentration would be especially appropriate for those interested in international business, foreign service, or international law.
SOCI 111E. Human Rights: Principles and Problems
SOCI 111F. Human Rights: Practices and Cases
SOCI 130. Population and Society
SOCI 145. Violence and Society
SOCI 148. Political Sociology
SOCI 151. Comparative Race and Ethnic Relations
SOCI 152. Urban Sociology
SOCI 157. Religion in Contemporary Society
SOCI 158. Islam in the Modern World
SOCI 162R. Religion and Popular Culture in East Asia
SOCI 169. Citizenship, Community, and Culture
SOCI 176. War and Society
SOCI 177. International Terrorism
SOCI 178. The Holocaust
SOCI 179. Social Change
SOCI 180. Social Movements and Social Protest
SOCI 181. Modern Western Society
SOCI 182. Ethnicity and Indigenous Peoples in Latin America
SOCI 183. Minorities and Nations
SOCI 185. Globalization and Social Development
SOCI 187. African Societies through Film
SOCI 188D. Latin America: Society and Politics
SOCI 188E. Community and Social Change in Africa
SOCI 188F. Modern Jewish Societies and Israeli Society
SOCI 188G. Chinese Society
SOCI 188J. Change in Modern South Africa
SOCI 189. Special Topics in Comparative-Historical Sociology

Note: Sociology SOCI 189 must be preapproved by undergraduate advisor.

It is recommended that students concentrating in this area take Sociology 20 as part of their lower-division requirements.

Concentration in American Studies

Students may graduate with a B.A. in Sociology/ American Studies by completing at least five of the following courses as part of the ten upper-division courses required for the major. This concentration is especially appropriate for those interested in careers in American politics, education, and social work.
SOCI 115. Social Problems
SOCI 117. Language, Culture, and Education
SOCI 125. Sociology of Immigration
SOCI 127. Immigration, Race, and Ethnicity
SOCI 126. Social Organization of Education
SOCI 129. The Family
SOCI 148. Political Sociology
SOCI 151. Comparative Race and Ethnic Relations
SOCI 152. Urban Sociology
SOCI 157. Religion in Contemporary Society
SOCI 163. Migration and the Law
SOCI 180. Social Movements and Protest
SOCI 188K. American Society

It is recommended that students concentrating in this area take Sociology 10 as part of their lower-division requirements.

Concentration in Science and Medicine

Students may graduate with a B.A. in Sociology/ Science and Medicine by completing at least five of the following courses as part of the ten upper-division courses required for the major. This concentration is especially appropriate for those interested in careers in the health professions or technology-related fields.
SOCI 113. Sociology of the AIDS Epidemic
SOCI 134E. The Making of Modern Medicine
SOCI 135. Medical Sociology
SOCI 136E. Sociology of Mental Illness: An Historical Approach
SOCI 136F. Sociology of Mental Illness in Contemporary Society
SOCI 138. Genetics and Society
SOCI 149. Sociology of the Environment
SOCI 167. Science and War
SOCI 168E. Sociology of Science
SOCI 168T. Sociology of Technology

It is recommended that students concentrating in this area take either Sociology 30 or 40 as part of their lower-division requirements.

Concentration in Culture and Communication

Students may graduate with a B.A. in Sociology/ Culture and Communication by completing at least five of the following courses as part of the ten upper-division courses required for the major. This concentration is especially appropriate for those interested in careers related to education, the media, or marketing.
SOCI 116. Gender and Language in Society
SOCI 117. Language, Culture, and Education
SOCI 118. Sociology of Gender
SOCI 120T. Special Topics in Communication and Culture
SOCI 131. Sociology of Youth
SOCI 137. Sociology of Food
SOCI 156. Sociology of Religion
SOCI 157. Religion in Contemporary Society
SOCI 160. Sociology of Culture
SOCI 162. Popular Culture
SOCI 162R. Religion and Popular Culture in East Asia
SOCI 165A. American News Media
SOCI 166. Sociology of Knowledge
SOCI 172. Films and Society
SOCI 174. Sociology of Literature
SOCI 184. Gender and Film

Note: Sociology SOCI 120T must be preapproved by undergraduate advisor.

It is recommended that students concentrating in this area take Sociology 50 as part of their lower-division requirements.

Concentration in Economy and Society

Students may graduate with a B.A. in Sociology/ Economy and Society by completing at least five of the following courses as part of the ten upper-division courses required for the major. This concentration is especially appropriate for those interested in careers related to contemporary business.
SOCI 121. Economy and Society
SOCI 125. Sociology of Immigration
SOCI 137. Sociology of Food
SOCI 132. Gender and Work
SOCI 139. Social Inequality: Class, Race, and Gender
SOCI 140F. Law and the Workplace
SOCI 141. Crime and Society
SOCI 142. Social Deviance
SOCI 146. Law Enforcement in America
SOCI 147. Organizations, Society, and Social Justice
SOCI 159. Special Topics in Social Organizations and Institutions
SOCI 160E. Law and Culture
SOCI 163. Migration and the Law
SOCI 173. Elite Crime

Note: Sociology SOCI 159 must be preapproved by undergraduate advisor.

It is recommended that students concentrating in this area take Sociology 50 as part of their lower-division requirements.

Concentration in Social Inequality

Students may graduate with a B.A. in Sociology/ Social Inequality by completing at least five of the following courses as part of the ten upper-division courses required for the major. This concentration is especially appropriate for those interested in social services and education.
SOCI 114. Culture and Ethnicity
SOCI 116. Gender and Language in Society
SOCI 117. Language, Culture, and Education
SOCI 118. Sociology of Gender
SOCI 119. Sociology of Sexuality and Sexual Identities
SOCI 126. Social Organization of Education
SOCI 127. Immigration, Race, and Ethnicity
SOCI 129. The Family
SOCI 132. Gender and Work
SOCI 139. Sociology Inequality: Class, Race, and Gender
SOCI 148. Political Sociology
SOCI 151. Comparative Race and Ethnic Relations
SOCI 151M. Chicanos in American Society
SOCI 153. Urban Sociology
SOCI 154. Religious Institutions in America
SOCI 155. The City of San Diego
SOCI 157. Religion in Contemporary Society
SOCI 163. Migration and the Law
SOCI 180. Social Movements and Protest
SOCI 183. Sociology of Gender

It is recommended that students concentrating in this area take either Sociology 10 or 20 as part of their lower-division requirements.
Education Abroad Program

Students are encouraged to participate in the UC Education Abroad Program (EAP) or UCSD’s Opportunities Abroad Program (OAP) while still making progress toward completing their major. Students considering this option should discuss their plans with the undergraduate advisor prior to going abroad, and courses taken abroad must be approved by the department. It may be possible to use some related courses outside of the discipline of sociology toward the major. For more information on EAP, see the section of this catalog on the Education Abroad Program. Interested students should contact the Programs Abroad Office in the International Center. To petition particular courses taken abroad, see the undergraduate advisor in the Department of Sociology.

RECOMMENDATIONS FOR TRANSFER STUDENTS

Students transferring from a community college or other university may petition for sociology credit for courses taken at their previous institution. For students transferring from the California Community College System, articulation agreements for many courses have been developed that facilitate the petition process.

Transferring Lower-Division Credit

The four lower-division requirements for a major in sociology are:

- Sociology 1, 2, and 60: Articulations exist at most community colleges
- Sociology 10, 20, 30, 40, or 50: If your community college does not offer an already articulated course, please see the undergraduate coordinator for information about petitioning potential lower-division sociology transfer credit.

It is important to note that eight of the twelve upper-division courses in the undergraduate program must be taken in the Department of Sociology at UCSD, unless students obtain special acceptance of additional courses from the chair and the faculty undergraduate advisor.

THE MINOR

The minor consists of seven sociology courses: two lower-division and five upper-division. Unless colleges specify specific courses to be taken, the student may choose any two lower-division sociology courses (Soc. 1, 2, 10, 20, 30, 40, or 60) and any five upper-division courses (Soc. 100 to 190). Courses for the minor must be taken for a letter grade only. Special study courses or internships may not be applied toward the minor.

THE HONORS PROGRAM

The Department of Sociology offers an honors program to those students who have demonstrated excellence in the sociology major. Successful completion of the honors program enables the student to graduate “With Highest Distinction,” “With High Distinction,” or “With Distinction,” depending upon performance in the program.

Eligibility

Students may apply to the honors program if they meet the following requirements:

1. junior standing (ninety units completed)
2. GPA of 3.5 or better in the major
3. recommendation of a faculty sponsor familiar with student’s work
4. must have completed at least four upper-division sociology courses
5. overall GPA of 3.2 or better
6. must have completed SOCI 100 and one upper-division methods course prior to the fall quarter when the honors course begins; alternatively, the consent of the honors program director or the undergraduate advisor must be obtained

Interested students may pick up an application from the staff undergraduate coordinator in the Department of Sociology. Completed applications must be in the department office no later than week five of the spring quarter prior to the start of the honors program in the fall.

Students traveling abroad during their junior year should note that the deadline for applications still applies to them and should make arrangements accordingly.

Enrollment in the honors program is limited. Final decisions on acceptance into the program will be made by the presiding faculty member.

Course Requirement

The student must take Sociology 196A, Advanced Studies in Sociology, and Sociology 196B, Supervised Thesis Research, which will count as two of the twelve upper-division courses required for the major. Each student will choose a faculty advisor to help supervise the thesis research and writing with the honors program director.

Students whose GPA in the major falls below 3.5 or who do not earn at least an A– in the honors seminars will not graduate with distinction, but they may count the two honors courses among the twelve upper-division courses required for the major. Students must maintain a 3.5 GPA in the major and a 3.2 overall GPA until final graduation, in order to receive honors in the sociology honors program. To graduate “With Highest Distinction” the student must earn an A+; to graduate “With High Distinction” the student must earn an A; and to graduate “With Distinction” the grade must be an A–.

THE GRADUATE PROGRAM

The graduate program in sociology at the University of California, San Diego is organized on the basis of programs of specialization in comparative and historical sociology, the sociology of culture, social inequalities, and science, technology, and medicine. It is designed to prepare students for two main goals: to contribute to the increase of knowledge about societies and thereby advance the discipline of sociology; and to teach sociology at the graduate and undergraduate levels. The majority of graduates from the program find teaching and research positions in colleges and universities, although some also work in non-academic research and social policy positions. The department offers a course of study leading to the doctor of philosophy degree. While the Master of Arts degree is awarded as a step toward the completion of the Ph.D., applicants seeking only an M.A. degree are not accepted.

Departmental Research and Teaching Members of the department are engaged in a wide variety of research and teaching activities that fall into four broad areas of concentration that correspond to our programs of specialization. Much of the research carried out by departmental students and faculty is distinguished by unique intersections of these areas.

Comparative and Historical Sociology

Many members of our faculty have research interests in the historical and/or comparative analysis of social institutions, structures, and processes, and social change in general. Using methods of comparative historical research and concepts drawn from social theory, individual faculty are engaged in research on, among other things: (1) political sociology, including revolution, social and political movements, and the evolution of the modern state, (2) economic transformation in contemporary societies (industrial countries, “emerging markets,” and agrarian societies), including the labor process, stratification and the organization of work, and the development of market economies, (3) collective identities and social relations, including nationalism, class, gender, race, and ethnicity, and (4) social control and institutionalization. The department is among the most internationally oriented departments of sociology in the world, with specialists in most regions of the world, including Eastern and Western Europe, the former Soviet Union, Japan, China, southern Africa, Latin America, the Middle East, as well as the United States.

Sociology of Culture

A great number of the faculty have research and teaching interests in the sociology of culture broadly conceived. Sociology of culture involves topics such as: (1) the interpretation of the symbol systems that constitute meaningful resources for social action, (2) the analysis of the processes through which patterns of meaning are socially reproduced, and (3) the study of the interaction between culture change and social change. Many faculty have an interest in the comparative study of cultural traditions around the world. Others are interested in the relationship of culture to social movements and collective identities. And some see the sociology of culture not simply as a subdiscipline but as a general theoretical perspective on social experience. More specific substantive interests include sociology of knowledge and intellectuals, political culture, the culture of work, education and socialization, comparative moral cultures, the cultural dimensions of ethnicity, gender, sexuality, and popular culture.

Sociology of Social Inequalities

A large number of departmental faculty have expertise in the study of social inequalities, including those based on distinctions of gender, race, ethnicity, class, language, citizenship, and sexuality. Unique to our program are (1) focus on the processes by which social distinctions and identities
are themselves constructed, represented, and maintained over time, (2) comprehensive training in both qualitative and quantitative approaches to studying inequality, (3) emphasis on international and historical inequality research, and (4) expertise in social movements as products of and challenges to inequality. Many members of the department study inequalities in workplaces, schools, markets, states, families, politics, law, and medicine.

**Sociology of Science, Technology, and Medicine**

A substantial fraction of the faculty has research and teaching interests focused on the interrelationships between science, technology, and medicine and modern society. Drawing on a range of sociological and historical methodologies, individual faculty are engaged in research on science and social movements, scientists and the state, biomedicine, the social history of madness and psychiatry, the historical sociology of scientific knowledge and practice, and sociological approaches to the Scientific Revolution. (For information on the interdisciplinary Science Studies Program, see below “Interdisciplinary Programs of Study”)

**ADMISSION**

Admission to the graduate program in sociology is open to students with excellent undergraduate records in any field. Some previous work in sociology or the social and behavioral sciences is advisable, but not required. New students are admitted in the fall quarter of each academic year. A bachelor’s degree from an accredited college or university is a prerequisite for admission to the graduate program. Prospective applicants should submit the official online application for admission and awards (same form), one set of official transcripts from each institution attended after high school, official scores from the Graduate Record Examination, application fee, at least three letters of recommendation, and one or more samples of the applicant’s own writing, such as a term paper. Additionally, foreign applicants must submit official scores from the Test of English as a Foreign Language (TOEFL) and the Test of Written English (TWE). Applicants are encouraged to contact and communicate with the department to talk with faculty and graduate students. The application deadline is January 4, of each year.

**PROGRAM OF STUDY**

The graduate programs in the University of California system work under the “normative time” standard. Normative time refers to the time period in which students, under normal circumstances, are expected to complete their requirements for the Ph.D. degree. Each department establishes a normative time for its doctoral program, and for the Department of Sociology, as for most graduate programs in the university, it is six years.

**Course Requirements**

Students are required to enroll as full-time graduate students, to carry a minimum enrollment of twelve units of graduate-level courses each quarter, and to maintain a grade-point average of 3.0 or better.

**Theory and Methods Requirements**

Students take almost all the courses on theory and methods in their first year in the program. They are required to take two courses in classical sociological theory (Sociology 201A/B) and one in contemporary theory (Sociology 202), two in quantitative methods (Sociology 205 and 206), and two in qualitative methods (from among Sociology 203, Field Methods; Sociology 204, Text and Discourse Analysis; or Sociology 207, Comparative-Historical Methods). In addition, students enroll in a two-credit introduction to the faculty and their research (Sociology 208). Note: Sociology 208 is in addition to other requirements.

The remaining theory and methods requirements are Sociology 252 and 253, a two-quarter practicum sequence, which will be taken in the fall quarters of the second and third year. In these courses, students will complete a piece of research they have started in a previous seminar, write a paper, and revise it for submission to a journal. The emphasis in the first quarter will be on the completion of the research for this project, and the second quarter will focus on the writing of the results and revision of drafts.

**Core Seminars**

These are survey courses in major substantive fields. Students must take three out of the following eight, which the department offers regularly: Sociology 264, Economic Sociology; Sociology 226, Political Sociology; Sociology 216, Sociology of Culture; Sociology 234, Intellectual Foundations of the Study of Science, Technology, and Medicine; Sociology 212, Social Stratification; Sociology 267, Sociology of Gender; Sociology 244, Sociology of Race and Ethnicity; and Sociology 222, Social Movements. These are major areas of sociology and fields in which several of the members of our faculty specialize. Moreover, several of these seminars serve as introductions to the programs of specialization on which the program is based (see below).

**Remaining Courses**

Beyond these requirements, students must take four seminars, at least two of which must be in the program of specialization selected by the student. In total, sixteen graduate courses, plus the introduction to the faculty, are required for advancing to candidacy.

**The Programs of Specialization**

The department currently offers specialized Ph.D. programs in comparative and historical sociology, sociology of culture, sociology of social inequalities, and the sociology of science, technology, and medicine. Affiliation to the clusters is voluntary and non-exclusive, and the department encourages multiple participation and joint activities among the groups. Students could qualify in more than one concentration, if they wish, and they will not be required to specialize in any one of them (although we are confident that most will find it advantageous to do so). The curriculum for each specialization is relatively light, in order to provide students with a solid common background in theory and methods, and allow for as much interface as possible between the programs. The requirements are: appropriate qualitative methods courses, one of the core seminars (see above) in areas relevant for the concentration, two specialized seminars, pertinent specialties for the field examination, and the dissertation.

The qualitative methods requirement varies according to the program of specialization. Students who concentrate in comparative and historical sociology must take Sociology 207, Comparative-Historical Methods. For sociology of culture, Sociology 203, Field Methods, is required. Students specializing in social inequalities should take at least one of the following courses: Sociology 203, Field Methods; Sociology 204, Text and Discourse Analysis; or Sociology 207, Comparative-Historical Methods. Finally, students specializing in sociology of science, technology, and medicine must choose two of the following three courses in qualitative methods: Sociology 203, Field Methods; Sociology 204, Text and Discourse Analysis; and Sociology 207, Comparative-Historical Methods. The required core seminars are survey courses in major substantive fields. Students must take three out of the following eight, which the department offers regularly: Sociology 264, Economic Sociology; Sociology 226, Political Sociology; Sociology 216, Sociology of Culture; Sociology 234, Intellectual Foundations of the Study of Science, Technology, and Medicine; Sociology 212, Social Stratification; Sociology 267, Sociology of Gender; Sociology 244, Sociology of Race and Ethnicity; and Sociology 222, Social Movements. These are major areas of sociology and fields in which several of the members of our faculty specialize. Moreover, several of these seminars serve as introduction to the programs of specialization on which the program is based. The core seminars required for each program of specialization are the following: Sociology 264, Economic Sociology or Sociology 226, Political Sociology, for comparative and historical sociology Sociology 216, Sociology of Culture, for sociology of culture Sociology 212, Social Stratification or Sociology 244, Sociology of Race and Ethnicity or Sociology 267, Sociology of Gender, for social inequalities Sociology 234, Intellectual Foundations of the Study of Science, Technology, and Medicine, for sociology of science, technology, and medicine

**PROGRAM OVERVIEW**

**First-Year Evaluation**

All students are evaluated by the department faculty toward the end of the academic year. At the end of the student’s first year in the program, student performance is also evaluated by the Graduate Program Committee, including the director of Graduate Studies, the faculty teaching the core sequences, and by their faculty advisor. Students whose performance is satisfactory are allowed to continue the regular course of study; others may be asked to repeat some courses or to do additional course work; others may be asked to withdraw from the program. Evaluations are communicated to students in writing.
Second-Year Evaluation and the M.A. Degree

The master's degree is earned as one of the requirements of the Ph.D. and is based on the quality of the student's course work described below. At the end of the second year, students are evaluated by the Graduate Program Committee for the master's degree. At that time, the committee ascertains the student's suitability for doctoral work.

The fifteen core courses required to receive the M.A. degree are:

Sociology 201A. Classical Sociological Theory I
Sociology 201B. Classical Sociological Theory II
Sociology 202. Contemporary Sociological Theory
Sociology 205. Quantitative Methods I
Sociology 206. Quantitative Methods II
Sociology 252. Research Practicum I

Two courses chosen from:

Sociology 203. Field Methods
Sociology 204. Text and Discourse Analysis
Sociology 207. Comparative-Historical Methods

Three seminars from:

Sociology 212. Social Stratification
Sociology 216. Sociology of Culture
Sociology 222. Social Movements
Sociology 226. Political Sociology
Sociology 234. Intellectual Foundation of the Study of Science, Technology, and Medicine
Sociology 244. Sociology of Race and Ethnicity
Sociology 264. Economic Sociology
Sociology 267. Sociology of Gender

Three elective sociology graduate seminars.

One may be outside the department and may be taken S/U.

At the beginning of the spring quarter of their second year in the program or at the beginning of the quarter in which they wish to be considered, students must submit to the committee for evaluation three papers they have written for seminars taught by different faculty. Reviewers assess the quality of the overall record and determine whether it indicates a potential for conducting doctoral research.

The final decision regarding the M.A. degree is based on the student's GPA, the three papers, and yearly faculty evaluations. The committee makes one of the following three recommendations: pass, M.A. only, and non-pass. Pass means that students may proceed toward the Ph.D. Those given M.A. only evaluations are granted the degree but may not continue toward the Ph.D. Students who received non-pass evaluations are asked to withdraw without a graduate degree.

Students admitted for a Ph.D. with a master's degree in sociology may not be candidates for a second master's degree.

The Field Examination

In the quarter in which students expect to finish the theory and methods requirements, the three core seminars, and the six elective seminars, students become eligible to take the field examination. This examination must be completed by the end of the student's third year in the program. The object of the field examination is to demonstrate mastery of two established, broad, and distinct fields of sociological inquiry, selected from a list of fields provided by the department. The examination is carried out by a faculty committee composed of no fewer than four departmental faculty, one of whom serves as chair. The choice of fields and the composition of the committee must be approved by the Graduate Program Committee before the student starts preparing for the exam. Faculty from departments other than sociology may be added (or, if necessary, substituted) by petition to the Graduate Program Committee.

The demonstration of mastery has both written and oral components. The written part consists of two papers, one in each field, and a course syllabus for a course they would teach in one of the two fields in which they take their orals. In these papers, students are expected to demonstrate a grasp of key issues and debates, and of the broad, conceptual history of the field. These reviews are based on a bibliography drawn up by the student in consultation with relevant committee members and other faculty in each field. Students are expected to know the central arguments of all the books and papers in the bibliographies, regardless of the extent to which these books and articles have been used in the papers. Field papers must be a minimum of thirty and a maximum of fifty pages each, exclusive of notes and should include at least twenty to thirty books or article equivalents. The two bibliographies may not significantly overlap, either in literature surveyed or in specific titles. The papers, the bibliographies, and the syllabus must be submitted to the committee at least two weeks before orals, or the orals cannot go forward.

The oral part lasts two hours and covers both fields. It is given by the examining committee, sitting as a whole, and is based on the bibliographies, papers, and course syllabus submitted by the student. The exam does not focus on the papers, but on the students' knowledge of the fields. Following the oral examination, the committee evaluates the student on the basis of both the written and the oral components of the examination. Possible grades are high pass, pass, conditional pass, and no pass. High pass recognizes exceptional performance. Conditional pass indicates that the committee has passed the student pending the completion of additional work. Students receiving a grade of no pass will have an opportunity to retake the examination, should they so desire, no later than the end of the subsequent quarter. Students electing not to retake the examination or receiving a grade of no pass a second time will be asked to withdraw from the graduate program.

Students will have to constitute their field exam committee two months before the proposed date of the exam. Once the committee is constituted it can be changed only if a faculty member becomes unavailable. Students will have to submit one copy per member of a substantial draft of their field papers one month in advance to the graduate coordinator, who then distributes them to the committee members. Faculty, in turn, will commit to read and comment on the papers in two weeks time.

All papers (as opposed to the drafts) and the syllabus must be submitted to the committee two weeks before the fields.

The Dissertation Prospectus and Hearing

The central intellectual activity leading to the award of the Ph.D. degree is the doctoral dissertation: an original contribution to knowledge, based on substantial, original research on a topic of intellectual significance within the field of sociology.

Following successful completion of the field examination, the student establishes a doctoral committee to supervise dissertation research. This is a five-person committee, including three faculty from within the department and two from other departments within the university. The committee should include the faculty members whose fields of expertise make them most appropriate for supervising the students' research. The student approaches the faculty member he or she would like to include, but the committee must be approved by the director of Graduate Studies and the department chair before the student starts working on the prospectus. The composition of the committee may or may not overlap with the committee that carried out the field examination. If the student elects to have a six member committee, the sixth member has all the same obligations as the other committee members.

By the end of the spring quarter of the fourth year in the department, the student must have a dissertation prospectus approved by his or her doctoral committee. The dissertation prospectus is a document that presents the research topic of the dissertation, places it in the context of the relevant literature, discusses its significance, specifies and justifies the methods the student intends to use, establishes the feasibility of the research, and indicates the anticipated steps leading to completion.

Following submission of the dissertation prospectus, the student must defend it at a hearing before the doctoral committee. The purpose of the hearing is to certify that the prospectus is significant and feasible, that the research design is appropriate, and that the student is prepared to carry it out successfully. Based on the written prospectus and the hearing, the committee may choose to approve the prospectus or to ask for revisions and resubmission. The prospectus hearing serves, in effect, as a qualifying examination, and approval of the dissertation prospectus is the final step to advancement to candidacy for the Ph.D. Degree.

Students will have to constitute their dissertation committee three months before the proposed date of the exam. Once the committee is constituted it can be changed only if a faculty member becomes unavailable. Students will have to submit one copy per member of a substantial draft of their prospectus one month in advance to the graduate coordinator, who then distributes them to the committee members. Faculty, in turn, will commit to read and comment on the papers in two weeks time.

The Doctoral Dissertation

Upon approval of the dissertation prospectus, the student proceeds with dissertation research. Students are expected to consult with committee members as the research progresses and to keep the committee chair advised of progress made.

Once the dissertation is substantially completed and committee members have had the opportunity to review drafts of the written work, the committee
meets at least one month before the defense takes place, with or without the student present, to consider the progress made and to identify concerns, changes to be made, or further work to be done. Once the committee members are substanti- tially satisfied with the written work, the student, in consultation with the committee, schedules the oral defense of the dissertation. By university regulation, this defense is open to the public.

The final version of the dissertation must be ap- proved by each member of the doctoral committee. All members of the committee must be present at the defense. Exceptions may be made only under very restrictive conditions. Further, the student must consult with the Office of Graduate Studies to be told of appropriate requirements for the thesis to be filed. Having obtained this approval and successfully defended the dissertation in oral examination, the student is eligible to receive the Ph.D. Degree. The final version of the dissertation is then filed with the university librarian via the Office of Graduate Studies. Acceptance of the dissertation by the university librarian is the final step in completing all requirements for the Ph.D.

Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years (PCTL—Preliminary Candidacy Limit). Normative time is six years. Total university financial support (SUTL—Support Time Limit) cannot exceed seven years. Total registered (TRTL—Total Registered Time Limit) time at UCSD cannot exceed eight years.

INTERDISCIPLINARY PROGRAMS OF STUDY

Sociology of Science, Technology, and Medicine and the Science Studies Program

Students interested in the interrelationships between science, technology, and medicine (STM) and the larger social order can opt for one of two specialized programs of study. The first of these is undertaken wholly within the department (see above). The second approach is to seek admission to the Science Studies Program, a joint doctoral program that brings together graduate students from the Departments of Sociology, History, Philosophy, and Communication. Students in the Program pursue a cross-disciplinary curriculum leading to dissertation research in the sociology of science, technology, or medicine, broadly conceived. Sociology faculty affiliated with this Program have research interests across the broad spectrum of science studies, from the philosophy and history of science to the organization of scientific discovery and the culture of specific work.

Students may seek admission to the Science Studies Program at the same time they apply for admission to the Department of Sociology, or may, in certain circumstances, request to be accepted into the Program at some point after entering the University of California, San Diego. The requirements of the Science Studies Program are similar to those of the standard graduate program. However, there are some distinct curricular requirements in the first two years of the Program, as well as some distinct emphases in the qualifying examination. The core of the Program is a two-quarter team-taught seminar sequence taken in the first year, the first quarter being an interdisciplinary introduction to science studies and the second quarter (or core seminar) being devoted to special topics in science studies which vary from year to year.

For details on the Science Studies Program, including information about requirements, write to the University of California, San Diego, Coordinator, Science Studies Program, 9500 Gilman Drive #0104, La Jolla, CA 92039-0104; or telephone the program coordinator at (858) 534-0491. Visit their Web site: http://sciencestudies.ucsd.edu.

Interdisciplinary Program in Sociology and Cognitive Science

This program allows students to earn a Ph.D. in sociology and cognitive science. Students must complete all the regular sociology requirements. In addition, they take six cognitive science seminars and select a dissertation committee composed of three Sociology and three Cognitive Science Program faculty. Admission to this program requires a separate application and is contingent on acceptance into the Department of Sociology. For more information, contact the coordinators in the Department of Sociology, (858) 534-4626, or the Cognitive Science Department, (858) 534-7141. Please view our Web site for application and department handbook information: http://sociology.ucsd.edu.

Courses

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

LOWER-DIVISION

SOCI 1. The Study of Society (4)

An introduction to the organizing themes and ideas, empirical concerns, and analytical approaches of the discipline of sociology. The course focuses on both classical and contemporary views of modern society, on the nature of community, and on inequality; with special attention to class, race, and gender. Materials include both theoretical statements and case studies. Will not receive credit for SOCI 1 and SOCL 1A.

SOCI 2. The Study of Society (4)

A continuation of Sociolgy/1. 1A. The focus here is on socialization processes, culture, social reproduction and social control, and collective action. As in 1A, materials include both theoretical statements and case studies. While 1B may be taken as an independent course, it is recommended that students take 1A and 1B in sequence, as the latter builds on the former. Will not receive credit for SOCI 2 and SOCL 1B.

SOCI 10. American Society: Social Structure and Culture in the U.S. (4)

An introduction to American society in historical, compara- tive, and contemporary perspectives. Topics will include American cultural traditions; industrialization; class struc- ture; the welfare state; ethnic, racial, and gender relations; the changing position of religion; social movements; and political trends. Will not receive credit for SOCI 10 and SOCL 10.

SOCI 20. Social Change in the Modern World (4)

A survey of the major economic, political, and social forces that have shaped the contemporary world. The course will provide an introduction to theories of social change, as well as prepare the student for upper-division work in comparative-historical sociology. Will not receive credit for SOCI 20 and SOCL 20.

SOCI 30. Science, Technology, and Society (4)

A series of case studies of the relations between society and modern science, technology, and medicine. Global warming, reproductive medicine, AIDS, and other topical cases prompt students to view science-society interactions as problematic and complex. Will not receive credit for SOCI 30 and SOCL 30.

SOCI 40. Sociology of Health Care Issues (4)

Designed as a broad introduction to medicine as a social institution and its relationship to other institutions as well as its relation to society. It will make use of both micro and macro sociological work in this area and introduce students to sociological perspectives of contemporary health care issues. Will not receive credit for SOCI 40 and SOCL 40.

SOCI 50. Introduction to Law and Society (4)

Interrelationships between law and society, in the U.S. and other parts of the world. We examine law’s norms, customs, culture, and institutions, and explain the prolifera- tion of lawyers in the U.S. and the expansion of legal “rights” worldwide. Will not receive credit for SOCI 50 and SOCL 50.

SOCI 60. The Practice of Social Research (4)

This course introduces students to the fundamental principles of the design of social research. It examines the key varieties of evidence, sampling methods, logic of comparison, and causal reasoning researchers use in their study of social issues. Will not receive credit for SOCI 60 and SOCL 60.

SOCI 87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminar topics will vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

SOCI 98. Directed Group Study (4)

Small group study and research under the direction of an interested faculty member in an area not covered in regular sociology courses. (P/NP grades only.) Prerequisites: lower-division standing; completion of thirty units of UCSD undergraduate study; minimum UCSD GPA of 3.0; completion and approval of Special Studies form. Consent of instructor and department approval required.

SOCI 99. Independent Study (4)

Individual study and research under the direction of an in- terested faculty member. P/NP grades only. Prerequisites: lower-division standing; completion of thirty units of UCSD undergraduate study; minimum UCSD GPA of 3.0; completion and approval of Special Studies form. Consent of instructor and department approval required.

UPPER-DIVISION

SOCI 100. Classical Sociological Theory (4)

Major figures and schools in sociology from the early nineteenth century onwards, including Marx, Tocqueville, Durkheim, and Weber. The objective of the course is to provide students with a background in classical social theory, and to show its relevance to contemporary sociol- ogy. Prerequisite: upper-division standing. Will not receive credit for SOCI 100 and SOCA 100.

SOCI 103M. Computer Applications to Data Management in Sociology (4)

Develop skills in computer management and analysis of sociological data. Practical experience with data produced by sociological research. Students will develop competency in the analysis of sociological data, by extensive acquaint- ance with computer software used for data analysis and management (e.g., SPSS). Prerequisite: SOCI 60. Will not receive credit for SOCI 103M and SOCA 103M.

SOCI 104. Field Research/Methods of Participant Observation (4)

Relationship between sociological theory and field re- search. Strong emphasis on theory and methods of partici- pant observation: consideration of problems in entering field settings, recording observations, description/analysis
of field data, ethical problems in field work. Required paper

Prerequisite: upper-division standing. Will not receive credit for SOCI 107 and SOCA 108.

SOCI 106. Comparative and Historical Methods (4)

A broad-based consideration of the use of historical materials in sociological analysis, especially as this facilitates empirically oriented studies across different societies and through time, and their application in student research projects. Prerequisite: SOCI 60. Will not receive credit for SOCI 106 and SOCA 106.

SOCI 106M. Holocaust Diaries (4)

Methods for interpreting diaries, letters, and testaments written by victims and perpetrators of the Holocaust. Students use these sources for original research about life in hiding, ghettos, and death camps. Includes techniques for making comparisons and for generalizing from evidence. Prerequisites: SOCI 60 and SOCI 178 or the consent of instructor. Will not receive credit for SOCI 106M and SOCA 106M.

SOCI 107. Epidemiological Methods: Statistical Study of Disease (4)

Epidemiology is the statistical study of disease, and epide 
mologic knowledge is a powerful tool for understanding the causes of certain diseases, e.g., AIDS, scurvy, cholera, and lung cancer. These fundamental epidemiologic methods will be taught. Prerequisite: SOCI 60. Will not receive credit for SOCI 107 and SOCA 107.

SOCI 108. Survey Research Design (4)

Translation of research goals into a research design, including probability sampling, questionnaire construction, data collection (including interviewing techniques), data processing, coding, and preliminary tabulation of data. Statistical methods of analysis will be limited primarily to percentage tables. Prerequisite: SOCI 108 and SOCA 108.

SOCI 109. Analysis of Sociological Data (4)

Students test their own sociological research hypotheses using data from recent American and International social surveys and state-of-the-art computer software. Application of classical scientific methods, interpretation of statistical results, and clear presentation of research findings. Prerequisite: SOCI 60. Will not receive credit for SOCI 109 and SOCA 109.

SOCI 110. Qualitative Research in Educational Settings (4)

Basic understanding of participant observation, interview ing, and other ethnographic research techniques through field experiences in school and community settings sponsored by CREATE. Students will learn to take field notes, write-up interviews, and compose interpretive essays based on their field experiences. Prerequisite: SOCI 60 Will not receive credit for SOCI 110 and SOCA 110A.

SOCI 111E. Human Rights: Principles and Problems (4)

An inquiry into the concept of human rights, the history of human rights in the twentieth century, and problems in both the concept and its implementation in modern societies. Prerequisite: upper-division standing. Will not receive credit for SOCI 111E and SOCB 111A.

SOCI 111F. Human Rights: Practices and Cases (4)

An investigation into human rights practices in contemporary society, focusing on abuses and understanding both their causes and responses to them. We will look at several key cases, probably including the Islamic world and East Asia. Prerequisite: upper-division standing. Will not receive credit for SOCI 111F and SOCB 111B.

SOCI 112. Social Psychology (4)

This course will deal with human behavior and personali 
dity development as affected by social group life. Major theories will be presented. The interaction dynamics of such substantive areas as socialization, normative and deviant behavior, learning and achievement, the social construction of the self, and the social identities will be considered. Prerequisite: upper-division standing. Will not receive credit for SOCI 112 and SOCB 112.

SOCI 113. Sociology of the AIDS Epidemic (4)

This course considers the social, cultural, political, and economic aspects of HIV/AIDS. Topics include the social context of transmission; the experiences of women living with HIV; AIDS activism; representations of AIDS; and the impact of race and class differences. Prerequisite: upper-division standing. Will not receive credit for SOCI 113 and SOCB 113.

SOCI 114. Culture and Ethnicity (4)

Examines culture and inter-ethnic relations, the links be 
tween culture and ethnic variations in socio-economic achievement, and the intersection of culture and ethnic 
ity with politics in the impact of immigration and the impact of immigration on host economies; refugees; assimilation; and return migration. Prerequisite: upper-division standing. Will not receive credit for SOCI 125 and SOCB 125.

SOCI 126. Social Organization of Education (4)

(Same as EDS 126.) The social organization of education in the U.S. and other societies; the functions of education for individuals and society; the structure of schools; educational decision making; educational testing; socialization and education; formal and informal education; cultural transmission. Prerequisite: upper-division standing. Will not receive credit for SOCI 126 and SOCB 126.

SOCI 127. Immigration, Race, and Ethnicity (4)

Examination of the role that race and ethnicity play in immigrant group integration. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; public opinion; comparisons between contemporary and historical waves of immigration. Prerequisite: upper-division standing. Will not receive credit for SOCI 127 and SOCB 127.

SOCI 129. The Family (4)

An examination of historical and social influences on family life. Analyzes contemporary families in the United States, the influence of gender, class, and race, and current issues such as divorce, domestic violence, and the feminization of poverty. Prerequisite: upper-division standing. Will not receive credit for SOCI 129 and SOCB 129.

SOCI 130. Population and Society (4)

This course offers insight into why and how populations grow (and decline), and where and under what conditions changes in population size and/or structure change have positive and negative consequences for societies and environment. Prerequisite: upper-division standing. Will not receive credit for SOCI 130 and SOCB 130.

SOCI 131. Sociology of Youth (4)

Chronological age and social status; analysis of social processes bearing upon the socialization of children and adolescents. The emergence of "youth cultures," generational succession as a cultural problem. Prerequisite: upper-division standing. Will not receive credit for SOCI 131 and SOCB 131.

SOCI 132. Gender and Work (4)

Examination and analysis of empirical research and theo retical perspectives on gender and work. Special attention to occupational segregation. Other topics include: the integration between work and family, work and poverty; gender and work in the Third World. Prerequisite: upper-division standing. Will not receive credit for SOCI 132 and SOCB 132.
SOCI 133. Immigration in Comparative Perspective (4)
Societies across the world are confronting new immigration. In this course, we will focus on Europe, Asia, and North America, and examine issues of nationalism, cultural diversity and integration, economic impacts, and government policy. Prerequisite: upper-division standing. Will not receive credit for SOCI 133 and SOCB 133.

SOCI 134E. The Making of Modern Medicine (4)
A study of the social, intellectual, and institutional aspects of the nineteenth-century transformation of clinical medicine, examining both the changing content of medical knowledge and the moral and economic impact on the medical profession. Prerequisite: upper-division standing. Will not receive credit for SOCI 134E and SOCC 134A.

SOCI 135. Medical Sociology (4)
An inquiry into the roles and structure in mediating the health and illness experiences of individuals and groups. Topics include the social construction of illness, the relationships between patients and health professionals, and the organization of medical work. Prerequisite: upper-division standing. Will not receive credit for SOCI 135 and SOCC 135.

SOCI 136E. Sociology of Mental Illness: An Historical Approach (4)
An examination of the social, cultural, and political factors involved in the identification and treatment of mental illness. This course will emphasize historical material, focusing on the eighteenth, nineteenth, and early twentieth centuries. Developments in England as well as the United States will be examined from an historical perspective. Prerequisite: upper-division standing. Will not receive credit for SOCI 136E and SOCC 136A.

SOCI 136F. Sociology of Mental Illness in Contemporary Society (4)
This course will focus on recent developments in the mental illness arena and the contemporary sociological literature on mental illness. Developments in England as well as the United States will be examined. Prerequisite: upper-division standing. Will not receive credit for SOCI 136F and SOCC 136B.

SOCI 137. Sociology of Food (4)
Topics include food as a marker of social inequalities (e.g., gender, class, ethnicity)—the changing character of food production and distribution; food as an object of political conflict; and the symbolic meanings and rituals of food preparation and consumption. Prerequisite: upper-division standing. Will not receive credit for SOCI 137 and SOCB 137.

SOCI 138. Genetics and Society (4)
The class will first examine the direct social effects of the "genetic revolution": eugenics, genetic discrimination, and stratification. Second, the implications of thinking of society in terms of genetics, specifically—sociobiology, social evolution, and evolutionary psychology and biology. Prerequisite: upper-division standing. Will not receive credit for SOCI 138 and SOCC 138.

SOCI 139. Social Inequality: Class, Race, and Gender (4)
Massive inequality in wealth, power, and prestige is ever-present in industrial societies. In this course, causes and consequences of class, gender, race, and ethnic inequality ("stratification") will be considered through examination of classical and modern social science theory and research. Prerequisite: upper-division standing. Will not receive credit for SOCI 139 and SOCC 139.

SOCI 140. Sociology of Law (4)
This course analyzes the structuring of law in society, the social sources of legal change, social conditions affecting the administration of justice, and the role of social science in jurisprudence. Prerequisite: upper-division standing. Will not receive credit for SOCI 140 and SOCC 140.

SOCI 140F. Law and the Workplace (4)
This course examines how the U.S. legal system has responded to the dynamic of inequality and demands for employee rights. Particular attention is given to racial, gender, religious, and disability discrimination, as well as the law's role in regulating unions, the global economy, and sweatshop labor. Prerequisite: upper-division standing. Will not receive credit for SOCI 140F and SOCC 140F.

SOCI 141. Crime and Society (4)
A study of the social origins of criminal law, the administration of justice, causes, and patterns of criminal behavior, and the prevention and control of crime, including individual rehabilitation and institutional change, and the politics of legal policy and correctional reform. Prerequisite: upper-division standing. Will not receive credit for SOCI 141 and SOCC 141.

SOCI 142. Social Deviance (4)
This course studies the major forms of behavior seen as rule violations by large segments of our society and analyzes the major theories trying to explain them, as well as processes of rule making, social control, deviance, stigmatization and status degradation, and rule change. Prerequisite: upper-division standing. Will not receive credit for SOCI 142 and SOCC 142.

SOCI 143. Suicide (4)
Traditional and modern theories of suicide will be reviewed and tested. The study of suicide will be treated as one method for investigating the influence of society on the individual. Prerequisite: upper-division standing. Will not receive credit for SOCI 143 and SOCC 143.

SOCI 144. Forms of Social Control (4)
The organization, development, and mission of social control agencies in the nineteenth and twentieth centuries, with emphasis on modern law enforcement (police, psychiatrists, correctional work, etc.) theories of control movements. Prerequisite: upper-division standing. Will not receive credit for SOCI 144 and SOCC 144.

SOCI 145. Violence and Society (4)
Focusing on American history, this course explores violence in the light of three major themes: struggles over citizenship and nationhood; the drawing and maintenance of racial, ethnic, and gender boundaries; and the persistence of notions of “masculinity” and its relation to violence. Prerequisite: upper-division standing. Will not receive credit for SOCI 145 and SOCC 145.

SOCI 146. Law Enforcement in America (4)
Provides a sociological understanding of policing in practice in the United States. Examines the social, political, and historical forces behind the development and shaping of policing in America—including the functions of police, the “-working personality” of police officers, as well as police misconduct and its control. Prerequisite: upper-division standing. Will not receive credit for SOCI 146 and SOCC 146.

SOCI 147. Organizations, Society, and Social Justice (4)
Organizations are dynamic forces in society. This course examines how organizations address human health and social justice issues in national and international settings, focusing on the changing dynamics of organizations and macro-level political, economic, and cultural factors. Prerequisite: upper-division standing. Will not receive credit for SOCI 147 and SOCC 147.

SOCI 148. Political Sociology (4)
Course focuses on the interaction between state and society. It discusses central concepts of political sociology (social cleavages, mobilization, the state, legitimacy), institutional characteristics, causes, and consequences of contemporary political regimes (liberal democracies, authoritarianism, communism), and processes of political change. Prerequisite: upper-division standing. Will not receive credit for SOCI 148 and SOCC 148.

SOCI 148E. Inequality and Jobs (4)
Some people do much better than others in the world of work. Causes and consequences of this inequality will be examined: How do characteristics of individuals (e.g., class, gender, race, education, talent) and characteristics of jobs affect market outcomes? Prerequisite: upper-division standing. Will not receive credit for SOCI 148E and SOCC 148E.

SOCI 149. Sociology of the Environment (4)
The “environment” as a socially and technically shaped milieu in which competing values and interests play out. Relation of humanity to nature; conflicts between preservation and development; environmental pollution and contested illnesses. Will not receive credit for SOCI 149 and SOCC 149.

SOCI 150. Madness and the Movies (4)
Hollywood has had an ongoing obsession with mental illness. This course will examine a number of important or iconic films on this subject. By examining them against a historical and cultural backdrop, we shall develop a critical perspective on these cultural artifacts. Prerequisite: upper-division standing. Will not receive credit for SOCI 150 and SOCC 150.

SOCI 151. Comparative Race and Ethnic Relations (4)
An historical and comparative analysis of race and ethnic relations in various national settings, with emphasis on the United States. The course will center on the origins of ethnic stratification systems, their maintenance, the adaptation of minority communities, and the role of reform and revolutionary movements and government policies in promoting civil rights and social change. Prerequisite: upper-division standing. Will not receive credit for SOCI 151 and SOCC 151.

SOCI 151M. Chicanos in American Society (4)
Survey of contemporary sociological issues affecting Mexican-origin people in the United States. Lectures and reading will be oriented toward understanding the range of experiences within the Mexican-origin population. Focus will also be placed on evaluating theories and evidence used to understand this population. Prerequisite: upper-division standing. Will not receive credit for SOCI 152 and SOCC 152.

SOCI 153. Urban Sociology (4)
Same as USP 105.) Introduces students to the major approaches in the sociological study of cities and to what a sociological analysis can add to our understanding of urban processes. Prerequisite: upper-division standing or consent of instructor. Will not receive credit for SOCI 153 and SOCC 153.

SOCI 154. Religious Institutions in America (4)
Examination of sociological theories for why people have religious beliefs. Also examines types of religious organizations, secularization, fundamentalism, religion and immigration, religion and politics, and religiously inspired violence and terrorism. Will focus on the American context. Prerequisite: upper-division standing. Will not receive credit for SOCI 154 and SOCC 154.

SOCI 155. The City of San Diego (4)
A research-oriented course studying a specific city. Students will describe and analyze a local community of San Diego. Additional work on one citywide institution. Guest lecturers from San Diego organizations and government. Readings largely from city reports and news media. Prerequisite: upper-division standing. Will not receive credit for SOCI 155 and SOCC 155.

SOCI 156. Sociology of Religion (4)
Diverse sociological explanations of religious ideas and religious behavior. The social consequences of different kinds of religious beliefs and religious organizations. The influence of religion upon concepts of history, the natural world, human nature, and the social order. The significance of such notions as “sacred peoples” and “sacred places.” The religious-like character of certain political movements and political parties. Prerequisite: upper-division standing. Will not receive credit for SOCI 156 and SOCC 156.

SOCI 157. Religion in Contemporary Society (4)
Sacred texts, religious experiences, and ritual settings are explored from the perspective of sociological analysis. The types and dynamic of religious sects and institutions are examined. African and contemporary U.S. religious data provide resources for lecture and comparative analysis.
SOCI 158. Islam in the Modern World (4)
The role of Islam in the society, culture, and politics of the Muslim people during the nineteenth and twentieth centuries; attempts by Muslim thinkers to accommodate or reject rival ideologies (such as nationalism and socialism); and a critical review of the relationship between Islam and the West. Prerequisite: upper-division standing. Will not receive credit for SOCI 158 and SOCC 158.

SOCI 159. Special Topics in Social Organizations and Institutions (4)
Readings and discussion of particular substantive issues and research in the sociology of organizations and institutions, including such areas as population, economy, education, family, medicine, law, politics, and religion. Topics will vary from year to year. Prerequisite: upper-division standing.

SOCI 160. Sociology of Culture (4)
This course will examine the concept of culture, its "disintegration" in the twentieth century, and the repercussions on the integration of the individual. We will look at this process from a variety of perspectives, each focusing on one cultural fragment (e.g., knowledge, literature, religion) and all suggesting various means to reunify culture and consequences of the individual. Prerequisite: upper-division standing. Will not receive credit for SOCI 160 and SOCB 160.

SOCI 160E. Law and Culture (4)
This course examines major formulations of the relationship between law and culture in the sociological literature. Topics include formal law versus embedded law, law and morality, law and the self, legal consciousness, the rule of law, and the construction of legality. Prerequisite: upper-division standing. Will not receive credit for SOCI 160E and SOCB 160.

SOCI 161. Sociology of the Life Course (4)
This course explores concepts, theory and empirical research related to demographic, socio-psychological, and institutional aspects of the different stages of human development. It considers social influences on opportunities and constraints by gender, class, race/ethnicity, and historical period. Prerequisite: upper-division standing. Will not receive credit for SOCI 161 and SOCB 161.

SOCI 162. Popular Culture (4)
An overview of the historical development of popular culture from the early modern period to the present. Also a review of major theories explaining how popular culture reflects and/or affects patterns of social behavior. Prerequisite: upper-division standing. Will not receive credit for SOCI 162 and SOCB 162.

SOCI 162R. Religion and Popular Culture in East Asia (4)
(Same as HEA 119.) Historical, social, and cultural relationships between religion and popular culture. Secularization of culture through images, worldviews, and concepts of right and wrong, which may either derive from or pose challenges to the major East Asian religions. Prerequisite: upper-division standing. Will not receive credit for SOCI 162R and SOCB 162R.

SOCI 163. Migration and the Law (4)
Provides a global sociological perspective on the development and consequences of laws regulating migration within and across nation-state borders. The ability of the nation-state to control migration using law and its policy instruments. The effects of different legal statuses on political and socio-economic outcomes. Prerequisite: upper-division standing. Will not receive credit for SOCI 163 and SOCC 163.

SOCI 165A. American News Media (4)
History, politics, social organization, and ideology of the American News Media. SOCI 165A surveys the development of the news media as an institution, from earliest newspapers to modern mass news media. Prerequisite: upper-division standing. Will not receive credit for SOCI 165A and SOCC 165A.

SOCI 166. Sociology of Knowledge (4)
This course provides a general introduction to the development of the sociology of knowledge, and will explore questions concerning social determination of consciousness as well as theoretical ways to articulate a critique of ideology. Prerequisite: upper-division standing. Will not receive credit for SOCI 166 and SOCC 166.

SOCI 167. Science and War (4)
This class examines how science has been mobilized in the development of nuclear weapons and other weapons of mass destruction. The class applies sociological concepts to the analysis of modern technological violence. Prerequisite: upper-division standing. Will not receive credit for SOCI 167 and SOCC 167.

SOCI 168E. Sociology of Science (4)
A survey of theoretical and empirical studies concerning the workings of the scientific community and its relations with the wider society. Special attention will be given to the institutionalization of the scientific role and to the social construction of scientific knowledge. Prerequisite: upper-division standing. Will not receive credit for SOCI 168E and SOCC 168E.

SOCI 168T. Sociology of Technology (4)
An introduction to classic and recent sociological perspectives on technology, giving special attention to the relations between gender, science, and technology and work, organization, and technology and politics. Prerequisite: upper-division standing. Will not receive credit for SOCI 168T and SOCC 168T.

SOCI 169. Citizenship, Community, and Culture (4)
Will survey the liberal, communitarian, social-democratic, nationalist, feminist, post-nationalist, and multicultural viewpoints, and will examine the role of the citizen in the modern world. Prerequisite: upper-division standing. Will not receive credit for SOCI 169 and SOCC 169.

SOCI 172. Films and Society (4)
An analysis of films and how they portray various aspects of American society and culture. Prerequisite: upper-division standing. Will not receive credit for SOCI 172 and SOCC 172.

SOCI 173. Elite Crime (4)
Explores theoretical and conceptual dimensions in the analysis of the systematic violation of the laws and ethics of business and politics in the United States. Covers a range of illegal and unethical practices, the social and political advantages of such violators, as well as the historical bias in both theory and research that has contributed to our lack of understanding of such issues in sociology and criminology. Prerequisite: upper-division standing. Will not receive credit for SOCI 173 and SOCC 173.

SOCI 174. Sociology of Literature (4)
Literature will be discussed in the context of the ideas of national and regional culture, "historical situation," and "social order." Other issues to be studied are literary men and women as spokespersons and as rebels, literary movements and social conditions, and literary works as social documents. Prerequisite: upper-division standing.

SOCI 175. Nationality and Citizenship (4)
Surveys the development of nationality and citizenship law in historical and comparative perspective with an emphasis on the United States, Latin America, and Europe. Examines competing sociological accounts for national variation and convergence; consequences of the law; and local, transnational, and extraterritorial forms of citizenship. Prerequisite: upper-division standing. Will not receive credit for SOCI 175 and SOCC 175.

SOCI 176. War and Society (4)
This course considers classical and contemporary theories that address the social organization of war-making and the effects of war on society since the Middle Ages, emphasizing more recent history. Topics include state formation, citizenship, gender, social stratification, and social protest. Prerequisite: upper-division standing. Will not receive credit for SOCI 176 and SOCC 176.

SOCI 177. International Terrorism (4)
(Same as POLI 1420.) This course covers the definitions, history, and internationalization of terrorism; the interrelation of religion, politics and terror; and the representation of terrorism in the media. A number of organizations and their activities in Europe and the Middle East are examined. Prerequisite: upper-division standing. Will not receive credit for SOCI 177 and SOCD 177.

SOCI 178. The Holocaust (4)
The study of the unique and universal aspects of the Holocaust. Special attention will be paid to the nature of genocide and racism. Other issues studied are literate aspects that make genocide possible, the relationship among the perpetrators, the victims and the bystanders, and the teaching, memory, and denial of the Holocaust. Prerequisite: upper-division standing. Will not receive credit for SOCI 178 and SOCD 178.

SOCI 179. Social Change (4)
Course focuses on the development of capitalism as a worldwide process, with emphasis on its social and political consequences. Topics include: capitalist societies, the rise of capitalism in the West, and the social and political responses to its expansion elsewhere. Prerequisite: upper-division standing. Will not receive credit for SOCI 179 and SOCD 179.

SOCI 180. Social Movements and Social Protest (4)
An examination of the nature of protests and violence, particularly as they occur in the context of larger social movements. The course will further examine those generic factors and general movements that have to do with their genesis, characteristic forms of development, relationship to established political configurations, and gradual fading away. Prerequisite: upper-division standing. Will not receive credit for SOCI 180 and SOCC 180.

SOCI 181. Modern Western Society (4)
This course examines the nature and dynamics of modern Western society in the context of the historical process by which this type of society has emerged over the last several centuries. The aim of the course is to help students think about what kind of society they live in, what makes it the way it is, and how it shapes their lives. Prerequisite: upper-division standing. Will not receive credit for SOCI 181 and SOCD 181.

SOCI 182. Ethnicity and Indigenous Peoples in Latin America (4)
Ethnicity and the reassertion of Indian identity in contemporary Latin America. Issues related to these trends are examined in comparative perspective, with attention to changes in global conditions and in the socioeconomic, political, and cultural contexts of Latin American modernization. Prerequisite: upper-division standing. Will not receive credit for SOCI 182 and SOCD 182.

SOCI 183. Minorities and Nations (4)
We will study minority rights and aspirations as well as the logic and dynamic of nationalist movements in selected cases. We will conclude by examining the chances and challenges of a post-nationalist world. Prerequisite: upper-division standing. Will not receive credit for SOCI 183 and SOCD 183.

SOCI 184. Gender and Film (4)
This class will examine issues of masculinity and femininity through analysis of films. Emphasis is on contemporary American society and will include varying issues such as race, class, and sexualities; worlds of work; romance, marriage, and family. Prerequisite: upper-division standing. Will not receive credit for SOCI 184 and SOCC 184.

SOCI 185. Globalization and Social Development (4)
Social development is more than mere economic growth. It entails improvements in the overall quality of human life, particularly in terms of access to health, education, employment, and income for the poorer sectors of the population. Course examines the impact of globalization on the prospects for attaining these goals in developing countries. Prerequisite: upper-division standing. Will not receive credit for SOCI 185 and SOCD 185.

SOCI 187. African Societies through Film (4)
Exploration of contemporary African urbanization and social change via film, including 1) transitional African communities, 2) social change in Africa, 3) Western vs. African filmmakers' cultural codes, ideological and ethnographic representations, aesthetics, social relations, and market demand for African films are analyzed. Prerequisite:
upper-division standing. Will not receive credit for SOCI 187 and SOCD 187.

SOCI 187T. The Sixties (4)
A sociological examination of the era of the 1960s in America, its social and political movements, its cultural expressions, and debates over its significance, including those reflected in video documentaries. Comparisons will also be based on violent and nonviolent settings in other countries. Prerequisite: upper-division standing. Will not receive credit for SOCI 187T and SOCD 187S.

SOCI 188D. Latin America: Society and Politics (4)
Course focuses on the different types of social structures and political systems in Latin America. Topics include positions in the world economy, varieties of class structure and ethnic identities, political regimes, mobilization and legitimacy, class alignments, reform and revolution. Prerequisite: upper-division standing. Will not receive credit for SOCI 188D and SOCD 188D.

SOCI 188E. Community and Social Change in Africa (4)
The process of social change in African communities, with emphasis on changing ways of seeing the world and the effects of religion and political philosophies of social change. The methods and data used in various village and community studies in Africa will be critically examined. Prerequisite: upper-division standing. Will not receive credit for SOCI 188E and SOCD 188A.

SOCI 188F. Modern Jewish Societies and Israeli Society (4)
Contrary effects of modernization on Jewish society in Western and Eastern Europe and the plethora of Jewish responses: assimilation, fundamentalism, emigration, socialism, diaspora nationalism, and Zionism. Special attention will be paid to issues of discontinuity between Jewish societies and Israeli society. Simultaneously, we will scrutinize the influence of the Palestinian-Israeli conflict on Israeli society, and identity. Prerequisite: upper-division standing. Will not receive credit for SOCI 188F and SOCD 188F.

SOCI 188G. Chinese Society (4)
The social structure of the People's Republic of China since 1949, including a consideration of social organization at various levels: the economy, the policy, the community, and kinship institutions. Prerequisite: upper-division standing. Will not receive credit for SOCI 188G and SOCD 188B.

SOCI 188J. Change in Modern South Africa (4)
Using sociological and historical perspectives, this course examines the origins and demise of apartheid and assesses the progress that has been made since 1994, when apartheid was officially ended. Contrasts of racism in South Africa and the United States. Prerequisite: upper-division standing. Will not receive credit for SOCI 188J and SOCD 188J.

SOCI 188K. American Society (4)
Comparative and historical perspectives on U.S. society. The course highlights "American exceptionalism": did America follow a special historical path, different from comparable nations in its social relations, politics, and culture? Specific topics include class relations, race, religion, and social policy. Prerequisite: upper-division standing. Will not receive credit for SOCI 188K and SOCD 188K.

SOCI 189. Special Topics in Comparative-Historical Sociology (4)
Readings and discussion in selected areas of comparative and historical macro-sociology. Topics may include the analysis of a particular research problem, the study of a specific society or of cross-national institutions, and the review of different theoretical perspectives. Contents will vary from year to year. Prerequisite: upper-division standing.

SOCI 192. Senior Seminar in Sociology (1)
The Senior Seminar Program is designed to allow seniors undergraduate students to meet with faculty members in a small group setting to explore an intellectual topic in sociology (at the upper-division level). Topics will vary from quarter to quarter. Senior Seminars may be taken for credit up to four times. Students may conduct a research project and/or serve as a resource for the department. Enrollment is limited to twenty students, with preference given to seniors. (P/NP grades only.)
abstract. Prerequisites: graduate standing/Soc/L 1A, 1B or consent of instructor.

Soc/G 232. Advanced Issues in the Sociology of Knowledge (4) The social construction of 'knowledge' and the social institutions in which these processes take place are examined. Topics include relationships between knowledge and social institutions, conceptions of knowledge in society, knowledge and social interactions, and contrasting folk and specialized theories. Prerequisites: graduate standing in sociology.

Soc/G 234. Intellectual Foundation of the Study of Science, Technology, and Medicine (4) This course focuses on some classic methodological and theoretical issues in the sociology of science, technology, and medicine all draw. It gives special attention to relationships between knowledge and social order, and between knowledge and practice, that are common to science, technology, and medicine. Prerequisites: graduate standing in sociology.

Soc/G 238. Survey of the Sociology of Scientific Knowledge (4) An introduction to some enduring topics in the sociology of scientific knowledge and to some resources for addressing them. Attention is drawn to problems of accounting for scientific change and stability, and to recurring debates over the proper method for sociological accounts of science. Prerequisite: graduate standing.

Soc/G 243. Sociology of Social Control (4) An examination of the sociological literature on social control, looking at theoretical developments over time, and examining the contemporary literature dealing with social control in historical and comparative perspective. Prerequisite: graduate standing.

Soc/G 244. Sociology of Race and Ethnicity (4) Analysis of enduring topics in the study of race and ethnicity, including stratification, discrimination conflict, immigration, assimilation, and politics. Other topics include racial and ethnic identity and the social construction of race and ethnic categories. A special focus is on the role of 'culture' and 'structure' for explaining race/ethnic differentiation. Prerequisites: graduate standing in sociology.

Soc/G 246. The Welfare State (4) Surveys major theories of the development and functioning of the welfare state, addressing the roles of economic development, political institutions, stratification, and culture. The course focuses on the development of the U.S. social provision in comparison with other advanced industrial societies.

Soc/G 247. Madness and Society (4) An examination of changing Western responses to the age of Bedlam to the age of Prozac. Topics include: the rise of and decline of the total institution; the emergence of psychiatry; changing cultural meanings of madness; and the therapeutics of mental disorder. Prerequisites: graduate standing in sociology.

Soc/G 249. Technology and the Human (4) This course explores the ethical and political implications of technological interventions into human life. Approaches from science studies, the sociology of the body, and philosophy. Topics include transformations in domains of life such as work, health, childhood, and death.

Soc/G 252. Research Practicum I (4) In this seminar students work on a research project, which might have originated in a paper written for another course. The goal is to produce the first draft of a paper that will be submitted to an academic journal. Prerequisite: graduate standing in sociology.

Soc/G 253. Research Practicum II (4) In this seminar students revise an existing research paper (usually the one they wrote for Sociology 252) for submission to an academic journal. Emphasis is placed on conceptual development, writing style and structure, and drawing links to the existing theoretical and empirical literature. Prerequisite: graduate standing in sociology.

Soc/G 255A. Introduction to Science Studies (4) (Same as Phil. 209A, HIGR 238, and COGR 225A.) Study and discussion of classic work in history of science, sociology of science, and philosophy of science, and of work that attempts to develop a unified science studies approach. Required for all students in the Science Studies Program. Prerequisite: enrollment in Science Studies Program.

Soc/G 255B. Seminar in Science Studies (4) (Same as Phil. 209B, HIGR 239, and COGR 225B.) Study and discussion of selected topics in the science studies field. Required for all students in the Science Studies Program. Prerequisite: enrollment in Science Studies Program.

Soc/G 255C. Colloquium in Science Studies (4) (Same as Phil. 209C, HIGR 240, and COGR 225C.) A forum for the presentation and discussion of research in progress in science studies, by graduate students, faculty, and visitors. Required of all students in the Science Studies Program. Prerequisite: enrollment in Science Studies Program.

Soc/G 255D. Advanced Approaches to Science Studies (4) (Same as COGR 225D, Phil. 241, Phil. 209D.) Focus on recent literature in the history, philosophy, and sociology of science, technology, and medicine. Required of all students in the Science Studies Program. Prerequisites: Soc/G 255A is a prerequisite for Soc/G 255D; enrollment in Science Studies Program or instructor's permission.

Soc/G 258. Institutional Change in the Contemporary World; Latin American Societies in a Comparative Perspective (4) This course explores institutional change in contemporary Latin America, and compares this area with other transitional societies. Issues include social consequences of economic liberalization, changing forms of inequality, dynamics of civil society, conceptions of citizenship, quality, and future of democracy. Prerequisite: graduate standing.

Soc/G 260. Sociology of Religion (4) This seminar will examine major theories and debates in the sociology of religion. Possible topics include secularization, religion and immigration, and religion and politics. Prerequisite: graduate standing in sociology.

Soc/G 263. Graduate Seminar in the Sociology of Art (4) This seminar explores the production and interpretation of art forms in cross-cultural context. Processes of symbolic and economic exchange in art worlds will be examined from sociological and semiotic perspectives. Contemporary and popular art forms will be analyzed as types of cultural reproduction. Graduate students will be required to submit a project abstract and final research paper of twenty-seven pages. Prerequisite: graduate standing in sociology.

Soc/G 264. Economic Sociology (4) This course provides an overview of the classical and current debates in economic sociology literature. It presents theories of the rise of industrial economics and addresses how economic activities are constituted and influenced by institutions, culture, and social structure. Prerequisite: graduate standing in sociology.

Soc/G 267. Sociology of Gender (4) Course examines social construction of gender focusing on recent contributions to the field, including micro- and macro-level topics, i.e., social psychological issues in the development of gender, gender stratification in the labor force, gender and social protest, feminist methodologies. Prerequisite: graduate standing in sociology.

Soc/G 268. Sociology of Masculinities (4) This course introduces students to recent developments in the field of masculinities within analysis to theoretical conceptualizations as well as empirical analyses of social organization of masculinity. Topics include the development of masculinity in boys, historical and cultural influences on masculinity, differences of race, class, sexuality, the male body, and the meaning of work and family in men's lives.

Soc/G 269. The Citizenship Debates (4) Will examine the controversies surrounding the construction of the modern citizen and the good society of the liberal outlook, and their alternatives in the communitarian, social-democratic, nationalist, feminist, and multicultural perspectives. Prerequisite: graduate standing in sociology.

Soc/G 270. The Sociology of Education (4) A consideration of the major theories of schooling and society, including functionalist, conflict, critical and interactional; selected topics in the sociology of education will be addressed in a given quarter, including the debate over inequality, social selection, cultural reproduction and the transition of knowledge, the cognitive and educational consequences of education. Major research methods will be discussed and critiqued. Prerequisite: graduate standing in sociology.

Soc/G 278. Immigration, Assimilation, and Identity (4) This course focuses on theoretical and empirical approaches to the study of immigration, assimilation, and identity. The course will focus primarily on the post-1965 immigrants, but consideration will also be given to earlier waves of immigration. Prerequisites: graduate standing in sociology.

Soc/G 282. Immigration and Citizen (4) Alternative theories of the relations of immigrants and host societies, and an examination on the debates on, and dynamic of, immigration expansion and restriction. Comparison of the bearing of liberal, communitarian, and ethnic citizenship discourses on the inclusion and exclusion of immigrants and their descendants. Prerequisite: graduate standing in sociology.

Soc/G 284. Contemporary Biomedicine (4) Develops central themes in medical sociology in order to understand twentieth- and twenty-first-century medical practice and research. Topics include authority and expertise; health inequalities; managed care; health activism; biomedical knowledge production; and the construction of medical objects and subjects. Prerequisite: graduate standing.

Soc/G 288. Knowledge Capitalism (4) This seminar examines the place of scientific knowledge and information and communication technology in the transformation of capitalist economy and society. The class explores new interactions between science studies and social theory of advanced capitalism. Prerequisite: graduate standing in sociology.

Soc/G 290. Graduate Seminar (4) A research seminar in special topics of interest to available staff, provides majors and minors in sociology with research experience in close cooperation with faculty. (S/U grades permitted.) Prerequisite: graduate standing in sociology.

Soc/G 299. Independent Study (1–8) Tutorial individual guides study and/or independent research in an area not covered by present course offerings. (S/U grades only.) Prerequisite: graduate standing in sociology; departmental approval.

Soc/G 299. Thesis Research (1–12) Open to graduate students engaged in thesis research. (S/U grades only.) Prerequisite: graduate standing in sociology.

Soc/G 500. Apprentice Teaching (2–4) Supervised teaching in lower-division contact classes, supplemented by seminar on methods in teaching sociology. (S/U grades only.) Prerequisite: graduate standing in sociology.

2010-2011 UC SAN DIEGO GENERAL CATALOG • SOCIOLOGY 11
THEATRE AND DANCE

PROFESSORS
Steven Adler, M.F.A., Provost, Warren College, Stage Management and Directing
Andrei Both, M.F.A., Scenic Design
Alan Burnett, GCE (U.K.), Lighting Design
Frantisek Deak, Ph.D., Emeritus, Criticism and Theory
Judith A. Dolan, Ph.D., Costume Design, Associate Dean, Division of Arts and Humanities
Kyle Donnelly, M.F.A., Arthur and Molli Wagner Chair in Acting, Acting and Directing
Deborah M. Dryden, M.F.A., Emerita, Costume/SET Design
Allyson Green, M.F.A., Chair, Dance
Allan Havis, M.F.A., Playwriting, Provost, Marshall College
Jorge A. Huerta, Ph.D., Emeritus, Dramatic Literature
Naomi Iizuka, M.F.A., Playwriting
James Ingalls, B.F.A., Lighting Design (Adjunct)
Walt Jones, M.F.A., Emeritus, Directing/Acting/Sound Design
Marianne McDonald, Ph.D., Dramatic Literature
Adele Edling Shank, M.A., Emerita, Playwriting
Theodore Shank, Ph.D., Emeritus, Directing
Janet Smarr, Ph.D., Dramatic Literature and Italian Studies
Yolande Snaith, B.A., Dance
Gabor Tompa, Ph.D., Directing
Arthur Wagner, Ph.D., Emeritus, Acting
Les Waters, B.A., Emeritus, Directing
James R. Winker, M.F.A., Academic Senate, Distinguished Teaching Award, Acting

ASSOCIATE PROFESSORS
James Carmody, Ph.D., Dramatic Literature
Mary Corrigan, M.A., Emerita, Voice
Tony Curiel, M.A., Emeritus, Chicano Literature, Acting
Nadine George-Graves, Ph.D., Dramatic Literature and Dance History
Lisa Porter, M.F.A., Stage Management
Victoria Petrovich, M.F.A., Design
John Rouse, Ph.D., Dramatic Literature
Kim Rubinstein, B.S., Head of Undergraduate Acting
Jonathan Saville, Ph.D., Emeritus, Literature/Criticism
Shahrokh Yadegaari, Ph.D., Sound Design/Composition/Audio Technology

ASSISTANT PROFESSORS
Robert Castro, M.F.A., Acting, Directing, Chicano Literature
Liam Clancy, M.F.A., Dance
Emily Roxworthy, Ph.D., Dramatic Literature

SENIOR LECTURERS WITH SECURITY OF EMPLOYMENT
Eva W. Barnes, M.F.A., Speech and Acting
Margaret Marshall, M.F.A., Emerita, Ballet, Dance History, Choreography
Ursula Meyer, M.F.A., Voice and Acting

Charlie Oates, M.F.A., Movement and Acting
Patricia A. Rincón, M.F.A., Modern and Jazz Dance

LECTURER WITH POTENTIAL SECURITY OF EMPLOYMENT
Eric Geiger, M.A., Dance

LECTURERS
Kristin Arcidiacono, M.A., Dance
Tony Caligagan, Dance
Sandra Foster-King, M.F.A., Dance
Mark Guirguis, M.F.A., Design
Jean Isaac, B.A., Emerita, Dance
Alicia E. Rincón, M.F.A., Dance
Todd Salovey, M.F.A., Acting and Directing
Toni Sammartano, B.A., Dance
Judith A. Sharp, B.S., Dance
Linda Vickerman, D.M.A., Singing
Terry Wilson, M.F.A., Dance

OFFICE: 202 Galbraith Hall, Revelle College (858) 534-3791 http://theatre.ucsd.edu

THE UNDERGRADUATE PROGRAM

The curriculum of the Department of Theatre and Dance is based on the belief that a good undergraduate education in theatre or dance should provide the student with a solid background in dramatic literature and the aesthetics and history of theatrical performance as well as exposure to the different artistic components of theatrical art—performance, playwriting, design, and choreography.

In addition to providing an integrated program for students desiring a theatre or dance major, the curriculum provides a sequence of courses to fulfill the fine arts and/or humanities requirements for Muir College; courses fulfilling Warren College’s program of concentration requirements; courses to fulfill Revelle, Thurgood Marshall, and Eleanor Roosevelt Colleges’ fine arts requirements; public speaking courses to fulfill requirements in the Schools of Engineering and Pharmacy; and elective courses for the general student desiring experience in theatre or dance.

Any student who has been accepted to the University of California, San Diego is eligible to declare theatre or dance as a major, double major, or minor. Auditions are not required. Continuing UCSD students who are changing their major to theatre or dance must file a Change of Major form with the UCSD Registrar’s Office.

DEPARTMENT OF THEATRE AND DANCE ADVISING

The department’s undergraduate faculty advisors, can provide guidance and answers to students’ questions concerning specific course content, transfer course work, honors research projects, academic success, production, auditioning procedures, postgraduate opportunities, and departmental policy changes.

The undergraduate coordinator can answer students’ questions regarding major requirements, procedural matters, class enrollment, and the petition process, and give referrals to faculty and other campus resources for specific information.

Undergraduate student representatives are another important resource for theatre and dance majors. The student reps organize quarterly meetings at which students and faculty discuss departmental issues and concerns.

The department regularly communicates with the majors and minors, as well as other students involved in classes and productions, through the campus e-mail and Listserv systems. Students are strongly urged to check their campus e-mail accounts for timely messages or to make arrangements with Academic Computing Services to have campus e-mail forwarded to any other e-mail account they may use. Additionally, a handbook containing useful information is available in the department office, Room 202, Galbraith Hall.

PROGRAMS ABROAD

The department encourages students to enrich their undergraduate experience by studying abroad. Students majoring in theatre and/or dance are encouraged to participate in the Education Abroad Program (EAP) and to investigate other options of foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill UCSD degree and major requirements. Please visit the Programs Abroad Web site at http://pao.ucsd.edu/pao for further details. Financial aid is applicable and special study abroad scholarships are readily available.

The Department of Theatre and Dance will accept a maximum of three courses per semester abroad, and students are encouraged to take courses abroad that will fulfill major elective requirements. Please meet with the undergraduate coordinator prior to the EAP/OAP application deadline.

THE THEATRE MAJOR

The theatre major provides a student with a solid artistic and academic background. The required lower-division courses equip the student with the skills and knowledge necessary for more advanced work in each of the areas of study. The major is structured to respond to the needs of students who seek a broad-based liberal arts education in theatre as well as those who plan to pursue their studies at the graduate level with the aim of acquiring either an M.F.A. or a Ph.D. degree. Students should meet with the department’s undergraduate coordinator during the quarter in which they declare a theatre major in order to plan an appropriate individual course of study.

The major requirements are those published in the catalog in effect for the first quarter that a first-year student attends UCSD; transfer students will be held to the catalog requirements two years previous to their first quarter at UCSD. Any student in good standing may declare a theatre major by completing a Change of Major form and delivering it to the Registrar’s Office. A department stamp is not required.

THE DANCE MAJOR

The dance major offers students an opportunity to specialize their training in the creative, aesthetic, and conceptual discipline of expressive movement as a contemporary art form, within the context of a broad undergraduate education. The primary focus
of the dance major will be the study of contemporary and ballet techniques, dance history, theory, and choreographic methods, emphasizing innovation and interdisciplinary collaboration, and pushing forward the boundaries of dance as a contemporary art form. It will provide the rigor of an academic program that fosters the balanced development of the dancer’s creative artistic potential, physical skills, and intellectual growth. The aim is to provide students with a broad range of artistic and conceptual tools for achieving goals in a variety of career areas and for pursuing advanced study in dance and dance related fields. Growth of individual artistic potential is encouraged through the integration of creative, physical and intellectual process, which provide a foundation for the creative and critical thinking needed for success in all career paths.

The major requirements are those published in the catalog in effect for the first quarter that a first-year student attends UCSD; transfer students will be held to the catalog requirements two years previous to their first quarter at UCSD. Any student in good standing may declare a theatre major by completing a Change of Major form and delivering it to the Registrar’s Office. A department stamp is not required.

THE THEATRE-DANCE DOUBLE MAJOR

The double major in Theatre and Dance provides students with a solid academic base and an artistic base in both theatre and dance disciplines. Furthermore, requirements for this double major will create stronger and more experienced directors (for their exposure to choreography), choreographers (for their exposure to directing), actors (for their exposure to directing), and dancers (for having confronted text and character).

Students should meet with the department’s undergraduate coordinator as soon as practical (but no later than the quarter in which they declare the major) in order to plan an appropriate individual course of study.

Double majors should complete the Petition for Double Major form obtained from their college and submit it to the department for review and approval.

THEATRE MINOR

The theatre minor consists of seven theatre courses, one of which is the Practicum. It is recommended that students declare the theatre minor as soon as possible as priority enrollment in the Practicums is given to majors and minors.

DANCE MINOR

The dance minor consists of seven courses, one of which is the Practicum. The dance minor will provide a balanced educational experience for the student who has a strong interest in dance but who wishes to major in another area of study. It is recommended that students declare the dance minor as soon as possible as priority enrollment in the Practicums is given to majors and minors.

SATISFYING YOUR MAJOR REQUIREMENTS

Fifty percent of all course work required for the theatre or dance major (including both upper- and lower-division courses) must be taken at UCSD, regardless of approved transfer work and petitions.

Theatre practicum (TDPR) classes completed elsewhere do not satisfy the theatre and dance department’s requirements unless they have been formally petitioned and approved. Only one practicum class from another institution may be petitioned. All courses required for the major or minor must be taken for a letter grade. A theatre and dance department course for which a student earns a grade lower than C– will not satisfy any of the department’s graduation requirements. Four units of Instructional Assistance (TDGE 195, P/NP credit) may be used as an upper-division elective for the theatre major, double major, or minor. Courses taken outside the Department of Theatre and Dance will not satisfy core or elective major requirements.

MAJOR REQUIREMENTS

Theatre majors are required to complete ten lower-division courses. Dance majors are required to complete three lower-division courses. All lower-division courses should be satisfied before starting upper-division course work in the respective areas.

Theatre and Dance majors and minors should complete a Practicum course—either TDPR 1, TDPR 2, TDPR 3, or TDPR 5—with three quarters of declaring their major or minor. Theatre majors should plan to complete their second Practicum requirement as soon as possible thereafter, as space in these classes is limited. The second Practicum course must be in an area different from the initial Practicum course.

Theatre History 10, 21, 22, and 23 are prerequisites for most upper-division theatre history and theory courses. Introduction to Acting (TDAC 1), Theatre Design (TDDE 1), and Theatre Playwriting (TDPW 1) are all prerequisites for any upper-division course work in their respective areas. Students should take these classes as soon as possible after declaring their major. Prerequisites ensure that students are properly prepared for the work required.

Theatre Major

Please refer to the major requirements section for an overview of the theatre major.

Lower-Division Requirements

1. Two courses selected from
TDPR 1. Practicum—Scenery
TDPR 2. Practicum—Costume
TDPR 3. Practicum—Lighting
TDPR 5. Practicum—Sound

2. Each of the following:
TDHT 10. Introduction to Play Analysis
TDHT 21. Performance Dynamics: Spaces, Performers, and Audiences
TDHT 22. One Actor, Two, or More: How Theatre Peoples the World
TDHT 23. Social Contexts of Performance

3. TDGE 1. Introduction to Theatre

4. Each of the area threshold classes:
   a. TDAC 1. Introduction to Acting
   b. TDDE 1. Introduction to Design
   c. TDWP 1. Introduction to Playwriting

   Note: The threshold classes listed above must be completed before taking upper-division courses in their respective areas.

Upper-Division Requirements

5. One upper-division four-unit acting course
6. One upper-division four-unit design course
7. One upper-division four-unit directing course
8. One upper-division four-unit playwriting course
9. One upper-division four-unit stage management course
10. Three upper-division four-unit theatre history courses
11. Four upper-division four-unit theatre electives

Note: THGE 197 and 199 may not be used as upper-division electives by theatre majors unless approved by petition.

Dance Major

Lower-Division Requirements

1. One course from
TDPR 1. Practicum—Scenery
TDPR 2. Practicum—Costume
TDPR 3. Practicum—Lighting
TDPR 5. Practicum—Sound

2. TDTR 10. Introduction to Dancing
3. TDCH 40. Principles of Choreography

Upper-Division Requirements

4. TDTR 101. Dance Movement Analysis
5. Two choreography courses chosen from the following:
   TDCH 140. Improvisation/Composition
   TDCH 142. Choreographic Workshop
   TDCH 145. Music for Dance Composition

6. One design course chosen from the following:
   TDDE 113. Costume Design for Dance
   TDDE 121. Lighting Design for Dance

7. Four dance history and theory courses chosen from the following:
   TDHD 171. Dance History I (Ancient to 1900)
   TDHD 172. Dance History II (1900 to 1960)
   TDHD 173. Dance History III (1960 to present)
   TDHD 174. Dance Aesthetics and Criticism
   TDHD 175. Cultural Perspectives on World Dance

8. Forty-eight units of movement courses in ballet and contemporary dance chosen from the following (each of the courses listed below may be repeated up to six times):
   TDMV 110. Intermediate Ballet
   TDMV 111. Advanced Ballet
   TDMV 112. Advanced Ballet for Contemporary Dance
   TDMV 120. Intermediate Contemporary Dance
   TDMV 122. Advanced Contemporary Dance

9. Eight units of electives chosen from the following:
   TDAC 109. Singing for the Actor
   TDAC 111. Freeing the Voice
   TDAC 115. Movement for Actors
   TDCH 143. Choreography and Dramatic Text
   TDMV 133. Advanced Jazz
   TDMV 142. Latin Dance of the World
   TDMV 143. West African Dance
Theatre and Dance Double Major

Lower-Division Requirements
1. One course from
   TDPR 1. Practicum—Scenery
   TDPR 2. Practicum—Costumes
   TDPR 3. Practicum—Lighting
   TDPR 5. Practicum—Sound
2. One course from the following list:
   TDHT 21. Performance Dynamics: Spaces, Performers, and Audiences
   TDHT 22. One Actor, Two, or More: How Theatre Peoples the World
   TDHT 23. Social Contexts of Performance
   TDAC 1. Introduction to Acting
   TDDE 1. Introduction to Design
   TDPW 1. Introduction to Playwriting

Upper-Division Requirements
3. Any five four-unit, upper-division theatre courses chosen from the following subjects: TDAC, TDDE, TDGR, TDGE, TDHT, TDPR, TDPW.

THE DANCE MINOR

Minor forms are available at the advising office of the student's college. Minor courses may not be taken on a Pass/Not Pass basis.

The minor requirements are those published in the catalog in effect for the first quarter that a first-year student attends UCSD; transfer students will be held to the catalog requirements two years previous to their first quarter at UCSD.

Dance Minor Requirements
Lower-Division Requirements
1. One course from
   TDPR 1. Practicum—Scenery
   TDPR 2. Practicum—Costumes
   TDPR 3. Practicum—Lighting
   TDPR 5. Practicum—Sound

2. One course from the following list:
   TDHT 21. Performance Dynamics: Spaces, Performers, and Audiences
   TDHT 22. One Actor, Two, or More: How Theatre Peoples the World
   TDHT 23. Social Contexts of Performance
   TDAC 1. Introduction to Acting
   TDDE 1. Introduction to Design
   TDPW 1. Introduction to Playwriting

Upper-Division Requirements
3. Any five four-unit, upper-division theatre courses chosen from the following subjects: TDAC, TDDE, TDGR, TDGE, TDHT, TDPR, TDPW.

THEATRE MINOR

Minor forms are available at the advising office of the student's college. Minor courses may not be taken on a Pass/Not Pass basis.

The minor requirements are those published in the catalog in effect for the first quarter that a first-year student attends UCSD; transfer students will be held to the catalog requirements two years previous to their first quarter at UCSD.

Note: TDGE 197 and 199 may not be used as upper-division electives by theatre and dance majors unless approved by petition.

THE TECHNICAL MINOR

Minor forms are available at the advising office of the student's college. Minor courses may not be taken on a Pass/Not Pass basis.

The minor requirements are those published in the catalog in effect for the first quarter that a first-year student attends UCSD; transfer students will be held to the catalog requirements two years previous to their first quarter at UCSD.

Honors Program

The department offers a special program of advanced study for outstanding undergraduates majoring in theatre or dance. Successful completion of the Honors Program enables the student to graduate with Highest Distinction (A+), With High Distinction (A), or With Distinction (A–), depending upon performance in the program.

Eligibility

1. Junior standing (ninety units or more completed)
2. 3.7 GPA or better in the major
3. 3.5 GPA or better overall, which student must maintain until final graduation
4. Completion of at least four upper-division theatre courses
5. Recommendation of a faculty sponsor who is familiar with the student's work

Guidelines

Application to the Honors Program may be made upon completion of ninety units or no later than the fifth week of the quarter preceding the final two quarters before graduation. The Undergraduate Committee will consider the application and, if approved, the student and the principal advisor will have the responsibility of proposing an Honors Thesis Committee to the Undergraduate Committee for final approval.

Students are required to take THGE 196A, Honors Studies in Theatre, and 196B, Honors Thesis in Theatre, in addition to the thirteen upper-division required courses for the major. THGE 196A-B are to be taken consecutively and may not be taken concurrently.

Placement and Proficiency for Dance Majors

The technical command and the expansion of a vocabulary of movement are essential to the dancer’s creative expression. The faculty advise new students in dance to participate in beginning dance in all areas for a minimum of one year, as well as enrolling in TDTR 10, Introduction to Dance. These courses are designed to give the student the basic information needed to move on to the intermediate level. Students should remain in this level for a minimum of one year unless the instructor encourages them to move up to the advanced level.

Students are required to audition and be approved by the faculty to be enrolled in advanced dance courses. If you come to UCSD with a background in dance and would like to take an advanced class, you need to audition in the class of your choice on the first day of the class meeting so that the teacher can
accept you in the class or recommend another more appropriate class.

**Undergraduate Student Petitions**

Undergraduate student petitions are required whenever an exception to a rule is being requested. They are required for major or minor requirement substitutions, substitution of courses from other departments or institutions, late course adding or dropping, or requesting a retroactive incomplete grade. Students should submit petitions for course substitutions well in advance of taking the course. If they have difficulty with the form, students should have the Department of Theatre and Dance undergraduate coordinator assist them with the petition process to ensure that the petition is complete and well documented.

**Receiving Transfer Credit**

Students must petition the department to substitute courses taken in another department or institution for courses required by the Department of Theatre and Dance. The following procedures and guidelines will help students with the transfer petition process.

First, review the Department of Theatre and Dance residency requirement. It is generally a good idea to petition a course before taking it. The Department of Theatre and Dance undergraduate coordinator will review petitions for all transfer courses. Students may obtain a General Undergraduate Student Petition form on TritonLink. A detailed syllabus for the course to be evaluated must be attached to the completed petition form. Any petition relating to courses within the Department of Theatre and Dance should be dropped off at the main office during normal business hours.

Transfer credits must be accepted by the Admissions Office at the appropriate level and for the appropriate number of units for the substitution to be effective. Upper-division credit cannot be given for lower-division work. Course work done at a junior college can only transfer to UCSD as lower-division credit.

**Theatre and Dance Performance and Production Opportunities**

The Department of Theatre and Dance produces undergraduate productions throughout the academic year. These productions range in scale from student directed “black box” productions to full-scale faculty directed undergraduate productions on the main stage. Every effort is made to provide a faculty directed opportunity for undergraduates each quarter.

Each of these productions is staged with undergraduate actors and dancers. Historically, where there are design assignments to be made (sets, costumes, lights, sound), those assignments are given to qualified undergraduates. Upper-division credit is available for students involved in the design or staging of department productions. Students may not work on department productions unless they are formally enrolled in a related class. Information regarding design and advanced crew opportunities is typically available from the design faculty or may be posted on the bulletin board in the lobby of Galbraith Hall as opportunities arise.

**Cabaret**

Cabarets are independent productions that are produced in Galbraith Hall Studio Theatre 157. Students may submit proposals for cabarets one quarter in advance to the cabaret manager. The cabaret policy is subject to revision on a quarterly basis. Please check at the front desk for details and deadlines.

**Undergraduate Audition Policy**

Undergraduates are encouraged to audition for all shows produced in the department. Auditions are typically held in the quarter preceding the staging of a production. Audition announcements will be posted on the bulletin board in the lobby of Galbraith Hall. Undergraduates who have completed or are currently enrolled in TDA 1, Introduction to Acting are eligible to audition. Qualified undergraduates may audition for roles in graduate productions as they are available.

**UCSD Dance Repertory**

This repertory is open to dance students through auditions. The company will perform lecture-demonstrations, and performances, and teach master classes in the community or at other UC campuses.

**Annual Dance Concerts**

Two main stage and one studio theatre dance concert are presented each year. In fall quarter a small-scale faculty-directed laboratory or cabaret performance is presented in the Molli and Arthur Wagner Dance Building’s Studio Theatre. In winter quarter’s Dance Alive concert, students perform choreography created by the professional faculty and international guest artists in the Mandell Weiss Center for the Performing Arts, Forum Theatre, or the Potiker Theatre; and in spring quarter’s New Works student dance concert, students perform the faculty-directed experimental choreographic works for other students at the Potiker Theatre. In addition, smaller productions and student cabarets take place in our intimate Studio Theatre, located in the dance facility. Auditions are held at the beginning of the quarter for all productions. Students interested in performing in the winter concert must audition for a specific repertory class taught by the faculty or guest choreographer with whom they wish to work. Students who are then cast must enroll in both the appropriate Dance Repertory (TDPF 160, 161, 162) and Studies in Performance (TDPF 163). Students interested in performing in the spring concert must audition for a specific repertory class taught by the faculty or guest choreographer with whom they wish to work. Students who are then cast must enroll in both the appropriate Dance Repertory (TDPF 160, 161, 162) and Studies in Performance (TDPF 160, 161, 162). Students participating in either dance production are required to be concurrently attending a technique class. Students who wish to choreograph for the spring concert must have completed or be concurrently enrolled in a choreography class.

**Ushering**

A fantastic and simple way for students to become involved with the Department of Theatre and Dance is to be a volunteer usher. When a student volunteers, he or she will receive a complimentary ticket and a guaranteed seat to a predetermined performance in exchange for carrying out easy but important front-of-house tasks (such as tearing tickets, seating patrons, or handing out programs). Ushering is fun and easy—no experience is required and all majors are welcome.

To inquire about usher availability, contact the Theatre and Dance promotions manager at promotions@ucsd.edu and put the word “USHER” (in all caps) in the subject line. Someone will respond to your inquiry with more information in a timely manner.

**Comps**

Declared Theatre or Dance majors are eligible to receive one free complimentary ticket per departmental production. The complimentary tickets are on a first-come-first-served basis. Majors need to come into the department office and fill out a complimentary request form at least forty-eight hours prior to the performance. Majors will be notified through e-mail if the request cannot be filled. For the complete Complimentary Ticket Policy, please visit our Web site (http://theatre.ucsd.edu) or come into the office.

---

**THE GRADUATE PROGRAM**

**MASTER OF FINE ARTS IN THEATRE**

**JOINT DOCTORAL DEGREE PROGRAM**

**M.F.A. IN THEATRE**

The Department of Theatre and Dance at UC San Diego has set an ambitious goal for its M.F.A. program: the training of artists who will shape the future direction of the theatre. The professional theatre training program is ranked third in the nation (and first west of the Hudson River), according to U.S. News & World Report, 1997.

The curriculum for all students involves studio classes and seminars. These are integrated with a progressive sequence of work on productions and with a professional residency at the La Jolla Playhouse.

The M.F.A. program at UCSD is built around the master-apprentice system of training. All the faculty are active professionals who teach at UCSD because of a shared commitment to training young artists. Instruction takes place not just in the classroom, but in theatres around the country where faculty, with students as assistants, are involved in professional productions, including those at the La Jolla Playhouse.

Students graduating from the M.F.A. program at UCSD should be prepared to take positions in the professional theatre in the United States and abroad. Students are now working in New York, in resident theatres, in the film and television industry, and in European repertory theatres. M.F.A. candidates in acting, dance theatre, design, directing, playwriting, and stage management will complete at least ninety quarter-units of academic work during their tenure in the program.
PROGRAM DESCRIPTIONS

Acting

The body and mind of the actor are synthesized to serve as an instrument of expression. Actors must depend on their instrument to perform, and the program places great emphasis on the strengthening and tuning of that instrument. The innate talent of the student is nurtured, coaxed, and challenged with individual attention from an extraordinary team of professionals and specialists in actor training.

Classes

Each year, intensive studio work in movement, voice, speech, and singing accesses, expands, and frees the physical body. Acting process introduces a range of improvisational and rehearsal techniques that help the actor approach onstage events with imagination and a rich emotional life. In the first year, studio classes guide the actor through daily explorations that encourage, change, and enhance artistic expression. The second year is devoted to the study of classical texts as well as the specific vocal and physical skills required to perform them. In the final year, classes focus on the needs of individual actors as they prepare to enter the professional world.

Productions

Actors work on classical and contemporary texts as well as new plays with graduate students, faculty, and professional guest directors. Each year the department schedules from fifteen to twenty productions of varying size and scope. Graduate students are given casting priority for all but a few plays. Student-scheduled and produced cabaret/workshop productions occur year-round and provide additional acting opportunities.

Externship

All graduate students serve a residency with the La Jolla Playhouse and are cast in positions ranging from supporting to leading roles alongside professional actors and directors of national and international stature. For many actors this opportunity establishes valuable networking relationships and exposure for future employment.

Research and Other Opportunities

Modest funds are sometimes available for the pursuit of research, special technique workshops, and travel to auditions and festivals. In addition, in the third year, the entire acting class receives a showcase presentation in both Los Angeles and New York at which specially invited groups of film, television, and theatre professionals are in attendance.

Dance Theatre

With an emphasis on the collaborative process, the purpose of the Dance Program is to create an intensive laboratory for candidates to pursue processes that will hone their particular artistic voice in dance theatre. The curriculum is designed to allow graduate students to explore their own unique creative processes, to define their own particular aesthetic, and to discover and develop their own distinctive movement and performance language. Core courses consist of Choreography Seminars in the study and practice of aesthetic concepts, history, and methodology for choreographic creation of dance theatre; Dance Theatre Topics Seminars that provide in-depth discussion and research on a full spectrum of topics from collaborative processes to professional practice; costume, lighting, sound, and scenic design; and a rich offering of electives across media and between disciplines that allow each student to pursue individual areas of interest. Graduate students maintain a physical practice chosen from Graduate Studio offerings in contemporary practices, improvisation, ballet for contemporary dance, yoga, Pilates, and a range of Latin, African, and Asian dance forms.

Productions

Dance Theatre students will have the opportunity to create work throughout their time at UCSD in studio, workshop, cabaret, and site-specific productions. Second-year students will present a short work in the existing production in the spring quarter. Thesis projects of a significant dance theatre work will be fully executed by the extensive production talents of the M.F.A. design program in the winter quarter of the third year.

Externship

Students are encouraged to work or research in the field when time permits, and they are assisted with professional opportunities, typically in the spring or summer of the second year. Dance Theatre candidates may have an opportunity to gain production experiences in a variety of theatres and venues in San Diego, New York, Seattle, Los Angeles, and London, at the La Jolla Playhouse, or through a comparable professional residency experience.

Dance Theatre

The M.F.A. program in Dance Theatre provides an intensive laboratory for candidates to pursue processes that will hone their particular artistic voice in dance theatre. The curriculum is designed to allow graduate students to explore their own unique creative processes, to define their own particular aesthetic, and to discover and develop their own distinctive movement and performance language. Core courses consist of Choreography Seminars in the study and practice of aesthetic concepts, history, and methodology for choreographic creation of dance theatre; Dance Theatre Topics Seminars that provide in-depth discussion and research on a full spectrum of topics from collaborative processes to professional practice; costume, lighting, sound, and scenic design; and a rich offering of electives across media and between disciplines that allow each student to pursue individual areas of interest. Graduate students maintain a physical practice chosen from Graduate Studio offerings in contemporary practices, improvisation, ballet for contemporary dance, yoga, Pilates, and a range of Latin, African, and Asian dance forms.

Productions

There are a generous number of (fully executed) production opportunities, and generally all productions are designed by students. Designers collaborate with student, faculty, and internationally prominent guest directors. Students are fully supported by the same professional workshop staff as the La Jolla Playhouse and are not expected to build or run their own productions.

Research and Other Opportunities

With an emphasis on the collaborative process, the purpose of the Directing Program is to develop directors with a solid foundation in the components of production and the interpretation of text. Individuals are encouraged to make challenging choices, to break down barriers, and to create exciting, meaningful theatre. Graduates of the program are prepared to select and get to the heart of a text, to communicate effectively with and inspire production designers, and to elicit expressive performances from the actors with whom they work.

Classes

The core curriculum of the Directing Process Program offers students opportunities to hone their skills in text analysis and scene work in all three years. The first-year student also completes a sequence in the acting process, develops a visual vocabulary in theatrical design and visual arts courses, and explores the nature of the collaborative process.

Productions

Directing students will direct from two to four department scheduled and supervised productions in the Mandell Weiss Center for the Performing Arts during their time at UCSD. In addition, studio, workshop, and cabaret productions of the director's choice are strongly encouraged. The production season also offers opportunities to assist guest and faculty directors.
Externship

In the students' second year, the La Jolla Playhouse provides a residency during which students typically serve as assistant directors.

Additional Opportunities

It is common for the directing faculty to take M.F.A. directors with them to work as assistant directors at theatres around the United States and the world.

Playwriting

Playwrights are more than mere writers. They are artists who unleash their imagination in incredibly dramatic ways. The successful playwright writes with intellectual power and emotional honesty, with a distinct and essential voice that speaks with vulnerability and sentence to the heart and soul of the audience. The dedicated, individual attention and formidable production opportunities of the program offer talented writers the ability to stretch, expand, and witness the unfolding of their work onstage in the bodies of very gifted actors.

Classes

In Playwriting Seminar—the core course—writers in all three years read and discuss their ongoing work, focusing on style, character, and structure. They also observe their work being read by M.F.A. actors at times throughout the year. Writing for Television, Screenwriting, and Dramatization/Adaptation are offered in rotation within a three-year cycle. In addition, students take a variety of topics in theatre and dramatic literature along with individual practicum classes. Playwrights can take advantage of rich offerings in literature, music, visual arts, and language study, as well as in dramatic texts, theory, and design.

Production

First-year students receive a one-act showcase production each year, while second- and third-year students receive a fully designed production. These are produced in the New Plays Festival each spring, which is attended by literary managers, agents, and artistic directors from across the country. Typically, these productions are directed, designed, and acted by students in the M.F.A. program. Production of plays in any year of study is dependent on the readiness of the work for staging.

Externship

Each student is assisted with a carefully chosen assignment, typically in the summer of the second year. Our playwrights may have an opportunity to gain exceptional literary and production experiences in a variety of theatres and venues in New York, Seattle, Los Angeles, London, Germany, and Romania.

Stage Management

The stage manager is a pivotal member of the collaborative process and creates the environment that supports the work of the other members of the artistic team. The stage manager is the prime communicator and liaison who synthesizes the disparate elements of production into a cohesive whole and is responsible for the implementation of diverse artistic choices throughout the production process.

The Stage Management Program at UCSD integrates a comprehensive knowledge of all critical components of this complex field in order to prepare students for work in leading professional theatres. The program develops individualized, creative artists with personal approaches to their work. UCSD creates a supportive and stimulating environment that allows each student to develop the confidence and flexibility necessary to meet the challenges of production in a wide variety of professional venues.

Classes

All first-year students take a core curriculum in stage management process that explores the role of the stage manager in professional theatre today and offers a comprehensive investigation of the work from pre-production to closing a show. Students in all three years attend the stage management seminar, which serves as a weekly forum for sharing insights and solving problems on current production assignments, meeting with a variety of guest artists, and examining the bigger picture of stage management and theatre in America today. Additional course work is offered in various aspects of theatre administration and management, professional practice, directing, design, and collaborative process.

Productions

Great emphasis is placed on the student's ability to apply the theories learned in class to the production process. Students typically serve as both assistant stage manager and stage manager on a number of studio and main stage productions in a variety of theatrical spaces. In addition to established scripts directed by M.F.A. students, faculty, and nationally prominent guest directors, students also work on new plays by graduate or guest playwrights, as well as faculty and student choreographed dance concerts.

Research Opportunities

Students are encouraged to work or research in the field when time permits. Past projects have included stage managing at the National Playwrights Conference at the O'Neill Center in Connecticut, interning at Warner Brothers Feature Animation, working as production assistant for the Broadway production of Play On, stage managing Andrei Serban's production of Our Country's Good at the Romanian National Theatre, and researching stage combat and weaponry at the Royal Shakespeare Company.

Externship

Each student is guaranteed at least one production opportunity at the La Jolla Playhouse, or a comparable professional residency experience.

PH.D. IN THEATRE AND DRAMA

The UCSD Department of Theatre and Dance and the Department of Drama at UC Irvine began to recruit students for the new Joint Doctoral Program in Theatre and Drama in fall 1999 for admission in fall 2000. Within the context of the program's twin focus on theory and history, an innovative structure permits each student to pursue a custom designed curriculum that draws from a rich variety of seminars in faculty research areas that include Greek classical theatre; Shakespeare and his contemporaries; Italian, French, and German theatre; U.S.-Latino, African-American, and Asian-American theatre; and critical, historical, and performance theories.

Interested students are encouraged to request detailed information about the program and application materials, which will be available from either department each September.

Preparation

Students with a B.A. (minimum GPA: 3.5), M.A., or M.F.A. degrees in drama and theatre are eligible for admission to the doctoral program. Students with training in literature (or another area in the humanities) will also be considered, provided they can demonstrate a background in drama or theatre. Experience in one of the creative activities of theatre (acting, directing, playwriting, design, dramaturgy) will enhance chances of admission.

All applicants are required to take the Graduate Record Examination and to submit samples of their critical writing.

While not required for admission, a working knowledge of a second language is highly desirable (see "Language Requirement").

Course of Study

Students are required to take a minimum of 144 units, which is equivalent to four years of full-time study (full-time students must enroll for a minimum of twelve units each quarter). Forty of these units will be taken in required seminars; the balance will be made up of elective seminars, independent study, and research projects (including preparing the three qualifying papers), and dissertation research. Students must take a minimum of one seminar per year in the Department of Drama at UC Irvine. The program of study makes it possible for students to take a significant number of elective courses and independent studies both with faculty in drama and theatre and in other departments.

Required Seminars

1. A minimum of twelve units of TDGR 290 (Dramatic Literature and Theatre History to 1900).
2. A minimum of twelve units of TDGR 291 (Dramatic Literature and Theatre History 1900 to the Present).
3. A minimum of sixteen units of TDGR 292 (Cultural and Critical Theory).

These required seminars must be completed before the end of the student's third year. In addition to the ten required seminars, students must pass comprehensive examinations at the end of the first and second years (see "Comprehensive Examinations" below).

Comprehensive Examinations

In the first year, students prepare for the written comprehensive examination, which is based on a reading list of approximately 150 titles ranging from the ancient Greeks to the present. Students take the written comprehensive at the beginning of the fall quarter of the second year. (Comprehensive examinations are scheduled at the beginning of fall
quarter in order to allow the students the summer to prepare.) Students who fail the written comprehensive may retake it no later than the first week of winter quarter of the second year. Students who fail the written comprehensive for a second time are dismissed from the program.

In the second year, students prepare for oral comprehensive examination. The reading list for this examination is designed to permit the student to acquire a knowledge of his or her dissertation subject area, broadly conceived. The reading list is compiled by the student and his or her dissertation advisor, in consultation with other members of the faculty, as appropriate; the reading list must be established by the end of winter quarter of the second year. Students take the oral comprehensive at the beginning of the fall quarter of the third year. Students who fail the oral comprehensive for a second time are dismissed from the program.

Advancement to Candidacy: Three Qualifying Papers
Students normally select a dissertation advisor during the second year and must do so before the end of spring quarter of that year. In consultation with the dissertation advisor and other faculty members, students develop topics for three qualifying papers, which are written during the third year. The three qualifying papers—one long (approximately fifty pages) and two short (approximately thirty pages each)—must be completed by the end of the third year; when completed, the qualifying papers provide the basis for the oral qualifying examination. Students write the long paper under the direction of the dissertation advisor; it is understood that the long paper is preparatory to the dissertation. The short papers deal with other related topics, subject to the approval of the student’s advisors; the two short papers are understood as engaging in exploring the larger contexts of the dissertation. Students normally pass the qualifying examination and advance to candidacy at the end of the third year; students must advance to candidacy no later than the end of fall quarter of the fourth year. Once admitted to candidacy, students write the dissertation that, upon completion, is defended in a final oral examination. Students may select a dissertation advisor from either UCSD’s Department of Theatre and Dance or UC Irvine’s Department of Drama. All UCSD doctoral dissertation committees must include at least one faculty member from UC Irvine.

Language Requirement
Students are required to complete an advanced research project using primary and secondary material in a second language (“materials” should be understood as including live and/or recorded performance; interviews with artists, critics, and scholars; and other non-documentary sources, as well as more conventional textual sources). This requirement may be satisfied by writing a seminar paper or a qualifying paper (see “Advancement to Candidacy”) that makes extensive use of materials in a second language. The second language requirement must be satisfied before the end of the third year. This requirement will not be waived for students who are bi- or multilingual; all students are required to do research level work in more than one language.

It is assumed that students will have acquired a second language before entering the doctoral program, although second-language proficiency is not a requirement for admission. While students may study one or more second languages while at UC Irvine or UCSD, language classes may not be counted toward program requirements.

Teaching
Students are required to teach a minimum of four quarters. No more than eight units of apprentice teaching (TDGR 500) may be counted toward the required 144 units.

Departmental Ph.D. Time Limit Policies
Students must advance to candidacy by the end of the fall quarter of their fourth year. Departmental normative time for completion of the degree is five years; total registered time in the Ph.D. program at UCSD or UC Irvine cannot exceed seven years. While students with an M.A. or M.F.A. degree may be admitted to the Ph.D. program, they will be required to take all required doctoral seminars.

Financial Support
Students entering the Ph.D. program may be supported (by either employment or fellowships) for four years. Support depends on the funds available and on the student’s rate of progress toward the degree.

Courses
For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

Note: For changes in major requirements and in course offering implemented after publication, inquire at the office of the Department of Theatre and Dance.

TDAC – THEATRE ACTING

TDAC 1. Introduction to Acting (4)
A beginning course in the fundamentals of acting: establishing a working vocabulary and acquiring the basic skills of the acting process. Through exercises, compositions, and improvisations, the student actor explores the imagination as the actor’s primary resource, and the basic approach to text through action. Prerequisite: none.

TDAC 101. Acting I (4)
This course focuses on beginning scene study with an emphasis on exploring action/objective and the given circumstances of a selected text. Prerequisite: THAC or TDAC 1 or consent of instructor.

TDAC 102. Acting II (4)
Further study in the application of the given circumstances to a text and the development of characterization. Prerequisite: THAC or TDAC 1 or consent of instructor.

TDAC 103A. Acting Intensive I (4)
An intensive foundation class for students interested in professional actor training. Using Viewpoints, students will learn the physical, vocal, and emotional aspects of their actor instrument toward developing character and relationships by using scenes from contemporary and modern plays. Prerequisites: THAC 101 or TDAC 101, department stamp, and consent of instructor.

TDAC 103B. Acting Intensive II (4)
A continuation of TDAC 103A. Working from Meisner technique, students will learn to deepen and detail their objectives, spontaneous response, and deep listening skills. For those who wish to pursue a performance career at UCSD, these courses will fulfill a performance background. Prerequisites: THAC or TDAC 102, and department stamp.

TDAC 104. Classical Text (4)
Studies in the heightened realities of poetic drama. Verse analysis, research, methods and how to approach a classical dialogue. Prerequisites: THAC or TDAC 102, and department stamp.

TDAC 105. Rehearsing Shakespeare (4)
Advanced exploration of Shakespeare’s language through examining and performing scenes from the plays. Admission by audition/interview. Prerequisites: THAC 102 or TDAC 102, department stamp, interview/audition, consent of instructor.

TDAC 106. Chekhov Acting (4)
Intensive workshop for actors and directors designed to examine and perform scenes from the plays of Anton Chekhov. Admission by audition/interview. Prerequisites: THAC 101 or TDAC 101, THAC 102 or TDAC 102, interview/audition, and consent of instructor.

TDAC 107. Improvisation for the Theatre (4)
Improvisation for the Theatre explores improvisation techniques as an alternative and unique approach to acting. Students should have a performance background. Prerequisite: THAC or TDAC 1.

TDAC 108. Advanced Topics (4)
Advanced topics in acting, such as avant garde drama, commedia, or Beckett, for students who possess basic acting techniques. Prerequisites: THAC or TDAC 102, admission by audition, and department stamp.

TDAC 109. Singing for Actors (4)
This course introduces basic vocal skills of breathing, placement, diction, musicianship, harmony, interpretation, and presentation needed by actors for roles requiring singing. Through a combination of group and individual coaching in class, students will prepare a program of short solo and ensemble pieces for a finals-week presentation. Prerequisites: THAC or TDAC 1 and audition; department stamp.

TDAC 111. Freeing the Voice (4)
Intensive workshop for actors and directors designed to “free the voice,” with special emphasis on characteristics and vocal flexibility in a wide range of dramatic texts. This proven method combines experimental and didactic learning with selected exercises, texts, tapes, films, and total time commitment. Prerequisite: concurrent enrollment in THAC or TDAC 101.

TDAC 112. Major Seminar in Acting (4)
An in-depth study seminar focused on special issues in acting as they relate to contemporary theatre. Of particular interest to students who plan to pursue a career in this area of theatre. Prerequisites: department stamp; theatre majors only; upper-division only.

TDAC 115. Movement for Actors (4)
An exploration of the wide array of physical skills necessary for the actor. Using techniques derived from mime, clowning, sports, acrobatics, and improvisation, students
will investigate their individual physical potential as well as their sense of creativity and imagination. **Prerequisite:** THAC or TDAC 101.

**TDAC 120. Ensemble (4)**

An intensive theatre practicum designed to generate theatre created by an ensemble with particular emphasis upon the analysis of text. Students will explore and analyze the script. **Prerequisite:** Consent of instructor. Admission by audition only. A maximum of four units may be used for major credit. **Prerequisite:** consent of the instructor; department stamp.

**TDAC 123. Advanced Studies in Performance (4)**

Participation in a fully staged season production that is directed by a faculty member or guest for the Department of Theatre and Dance. Admission by audition only. A maximum of four units may be used for major credit. **Prerequisite:** consent of the instructor; department stamp.

**TDAC 126. Acting-Directing Process (4)**

A studio class that investigates the relationship between the actor and the director. Working alongside directors, students learn how to animate the writer’s and director's vision onstage through status exercises and scene work while expanding their skills in the acting process. **Prerequisites:** THAC or TDAC 1 and THAC or TDAC 101, or consent of instructor.

**TDCH–DANCE CHOREOGRAPHY**

**TDCH 40. Principles of Choreography (4)**

Presents the fundamentals of the concepts, elements, aesthetic principles, and process of choreographic creation through practical studies, discussions, and examination of choreographies. **Prerequisite:** TDTR 10.

**TDCH 140. Improvisation/Composition (4)**

The study of compositional and improvisational methods concerning the aesthetic awareness of movement, and organization of elements in time, space, and energy. Both structured and unstructured tasks facilitate development of movement vocabulary, imagination, timing, spontaneity, contact skills, and compositional choices. **Prerequisite:** TDTR 10.

**TDCH 142. Choreographic Workshop (4)**

Advanced problem solving through practical and conceptual studies. Choreographic projects enable students to create choreographic projects for solo, duet, and small group situations. Emphasis will be on dance as a complement to verbal communication and a medium for nonverbal communication. **Prerequisites:** TDTR 10, TDCH 40.

**TDCH 143. Choreography and Dynamic Text (4)**

Choreographic problems in movement style and purpose will be explored through analysis of both historical and contemporary choreographies and dynamic text. Emphasis will be on dance as a complement to verbal communication and a medium for nonverbal communication. **Prerequisites:** TDTR 10, TDCH 40.

**TDCH 145. Music for Dance Composition (4)**

Presents the fundamentals of the concepts, elements, aesthetics, and process of music. Emphasizes choreographer/composer/musician collaborations. Rhythmic analysis will include the physical application of relating movement and sound. **Prerequisites:** TDTR 10, TDCH 40.

**TDCH 146. Advanced Improvisation: Partnering (4)**

Advanced problem solving through practical and conceptual studies pertaining to improvisation and partnering. **Prerequisites:** TDTR 10, TDCH 40, or consent of instructor.

**TDCH 164A. Senior Honors Focus Choreographic (4)**

Selected seniors create a significant choreographic work or media project under faculty mentorship for presentation in the studio theatre, spring dance production, or site-specific alternative location. All courses in the choreography series must be completed or concurrent with the seniors honos focus. **Prerequisites:** TDCH 140, TDCH 142, TDCH 145, consent of instructor, and department stamp. **Prerequisites:** THDE or TDDE 1 recommended. May be repeated for credit. A maximum of four units may be used for major credit. **Prerequisite:** consent of instructor; department stamp.

**TDCH 164B. Senior Honors Focus Choreographic (4)**

Continuation of TDCH 164A. Selected seniors present a significant choreographic work or media project under faculty mentorship in the studio theatre, spring dance production, or site-specific alternative location. All courses in the choreography series must be completed or concurrent with the seniors honos focus. **Prerequisites:** TDCH 140, TDCH 142, TDCH 145, consent of instructor, and department stamp. **Prerequisite:** THDE or TDDE 1 recommended. May be repeated for credit. A maximum of four units may be used for major credit. **Prerequisites:** THDE or TDDE 1 or consent of instructor. May be taken three times for credit.

**TDCH 165. Special Topics in Theatre Design (4)**

A course designed to expose the theatre design students to a variety of specialized topics that will vary from quarter to quarter. **Prerequisites:** TDCH 40 or TDDE 1 or consent of instructor. May be taken three times for credit.

**TDCH 167. Undergraduate Mainstage Production: Design (4)**

A course that will guide a student in a design assignment on the undergraduate mainstage production. Specialized topics dependent on the design requirements of the production. **Prerequisites:** THDE or TDDE 1 and THDE or TDDE 101 or THDE or TDDE 121, or THDE or TDDE 131, or consent of instructor. May be taken three times for credit.

**TDCH 168. Theatre Process—Scene Design (4)**

This course focuses on advancing students in their artistic and technical skills in scenic design. A large-scale project will be identified with special attention given to text analysis and technical specification of the sound design process. **Prerequisites:** THDE or TDDE 1 or THPR or TDPR 3 or THPR 140 or THDE or TDDE 1, any upper-division un -

**TDCH 169. Major Project in Design/ Theatre Production (4)**

For the advanced design/production student. Concentration on a particularly challenging design or theatre production assignment, including such areas as assistant designer (scenery, lighting, or costumes), technical director, master cutter, or master electrician. May be repeated one time for credit. A maximum of eight units of major project study, regardless of area (design, directing, or stage management) may be used to meet major requirements. **Prerequisite:** admission by consent of instructor only. See department for application form. May be taken two times for credit.

**TDDR–THEATRE DIRECTING/STAGE MANAGEMENT**

**TDDR 101. Stage Management (4)**

A production-oriented course that continues to introduce students to the fundamentals of design assisting. Laboratory format allows the student to work with faculty, graduate, or advanced undergraduate theatre designers, directors, designers, dance directors, and stage managers. **Prerequisites:** THCH or TDCH 140, or consent of instructor. May be repeated for credit. A maximum of eight units of major project study, regardless of area (design, directing, or stage management) may be used to meet major requirements. **Prerequisite:** THDE or TDDE 1 recommended. May be taken three times for credit.

**TDDR 103. Assistant Designer (2–6)**

A production-oriented course that continues to introduce students to the fundamentals of design assisting. Laboratory format allows the student to work with faculty, graduate, or advanced undergraduate theatre designers, directors, designers, dance directors, and stage managers. **Prerequisites:** THCH or TDCH 140, or consent of instructor. May be repeated for credit. A maximum of eight units of major project study, regardless of area (design, directing, or stage management) may be used to meet major requirements. **Prerequisites:** THCH or TDCH 140, or consent of instructor. May be taken three times for credit.

**TDDR 104. Theatre Process—Lighting Design (4)**

One of three classes in theatre process. The course aims to develop basic skills in lighting design through practical projects, lab work and lecture. Emphasizes relationships between design and production. **Prerequisite:** TDCH 145, or consent of instructor.

**TDDR 105. Lighting Design (4)**

Creative projects and topics in lighting design. Work to include studies and design research, concepts, collaboration, professional procedures and systems, paperwork, and organization. Varies scales of theoretical and practical projects in the light lab and classroom will be addressed by the student for presentation and critique. Final project will be a lighting design suitable for a design portfolio. **Prerequisites:** THCH or TDCH 140, or consent of instructor. May be repeated for credit. A maximum of eight units of major project study, regardless of area (design, directing, or stage management) may be used to meet major requirements. **Prerequisite:** THDE or TDDE 1 recommended. May be taken three times for credit.

**TDDR 107. Text Analysis for Actors and Directors (4)**

This is an introductory class in the process of understanding the play script. The class will focus on analyzing the story and the underlying dramatic structure in terms of dramatic action, objectives, action, and character. **Prerequisite:** upper-division standing or consent of instructor.

**TDDR 109. Directing–Acting Process (4)**

A studio class that investigates the fundamental skills a director needs to work with actors. Working with actors, students learn how to animate the text onstage through status exercises and scene work as they develop their skill in...
text work, staging, and dramatic storytelling. Prerequisite: THDR or TDTR 108 or THDS or TDTH 10.

TDTR 190. Major Project in Directing (4)
For the advanced student in directing. Intensive concentration on the full realization of a dramatic text from research and analysis through rehearsal and into performance. A maximum of eight units of major project study, regardless of area (design, directing, or stage management) may be used to fulfill major requirements. See department for application. Prerequisites: THDR or TDTR 108, THDR or TDTR 111, consent of instructor, and department stamp. May be taken two times for credit.

TDTR 191. Major Project in Stage Management (4)
For the advanced student in stage management. Intensive concentration problems of a dramatic text, from research and analysis through rehearsal and final performance. A maximum of eight units of major project study regardless of area (design, directing, stage management, or playwriting) may be used to fulfill major requirements. See department for application. Prerequisites: THPR or TDPR 4, THPR or TDPR 104, THDR or TDTR 101, consent of instructor, and department stamp. May be taken two times for credit.

TDGE–THEATRE GENERAL

TDGE 1. Introduction to Theatre (4)
An introduction to fundamental concepts in drama and performance. Students will attend performances and learn about how the theatre functions as an art and as an industry in today’s world. Prerequisite: none.

TDGE 2. Solo Performance (4)
Analysis, history, and literature of solo performance in the United States; screening of pivotal one-person shows; workshops to design and mount students’ own solo theatre pieces; focus on delivery of American experiences through performance. Prerequisite: none.

TDGE 10. Theatre and Film (4)
Theatre and Film analyzes the essential differences between theatrical and cinematic approaches to drama. Through selected play/film combinations, the course looks at how the director uses actors and the visual languages of the stage and screen to guide and stimulate the audience’s responses. Prerequisite: none.

TDGE 11. Great Performances on Film (4)
Course examines major accomplishments in screen acting from the work of actors in films or film genres. Prerequisite: none. May be taken three times for credit.

TDGE 25. Public Speaking (4)
This course is designed to establish a clear understanding of the fundamentals of effective oral communication. The methodologies explore the integration of relaxation, concentration, organization, and clear voice and diction as applied to various public speaking modes. Prerequisite: none.

TDGE 87. Freshman Seminar in Theatre and Dance (1)
Seminar on a topic in theatre or dance on a level appropriate for first-year students, conducted in an informal, small group setting limited to ten to twenty students. Topics will vary. Prerequisites: none or THDA 10, upper-division standing.

TDGE 90. Undergraduate Seminar (1)
Discussion of various theatre topics.

TDGE 108. Production (4)
The collaborative process from the rehearsal process through public performance. All participants will enroll for the same number of units with the director of theatre. Prerequisite: consent of instructor.

TDGE 122. The Films of Woody Allen (4)
Students explore a variety of issues: screenwriting, directing, cinematography, and editing; the intersection of comedy and tragedy in Allen’s works; recurring themes; and critical responses. Students view thirteen films and write two three-page essays and one ten-page research paper. Prerequisite: upper-division standing.

TDGE 123. Mary Poppins Meets Bladerunner (4)
A lecture class that examines significant historical and contemporary art direction/genres that effectively supports film narration in a unique manner. Highlights and video clips accompany each feature film presentation. (TDGE 1 recommended). Prerequisite: upper-division standing.

TDGE 124. Cult Films: Weirdly Dramatic (4)
A select survey of eight to ten exceptional offbeat, frequently low-budget films from the last sixty years that have attained cult status. The mix includes Tod Browning’s Freaks (1932) to John Water’s Pink Flamingos (1973). Aspects of bad taste, cinematic irony, and theatrical invention will be highlighted. Prerequisite: upper-division standing.

TDGE 125. Topics in Theatre and Film (4)
Great films and the performance of the actors in them are analyzed in their historical, cinematic, or theatrical contexts. This course examines the actor’s contribution to classic cinema and the social and aesthetic forces at work in film. Prerequisites: upper-division standing or consent of instructor.

TDGE 126. Storytelling and Design in Animation (4)
This course will use a broad range of animation styles and genres to examine larger issues in art practice, focusing closely on the relationship between form and content, and how a filmmaker’s narrative voice works. Prerequisite: upper-division standing or consent of instructor.

TDGE 127. The Films of Spike Lee (4)
Students view eight to ten films of this important filmmaker to examine style; genre; screenwriting; directing; cinematography; recurring themes; the place of this work in (African) American history; race and movie industry politics; and critical responses. Prerequisite: upper-division standing or consent of instructor.

TDGE 130. Let There Be Light! (4)
An adventure-theory class investigating the power of light and color in art, architecture, theatre, film, and television, and how human and social behavior is altered and shaped by light in the environment. Prerequisite: upper-division standing or consent of instructor.

TDGE 192. Senior Seminar in Theatre and Dance (1)
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in theatre and dance (at the upper-division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. Prerequisites: senior standing; department stamp and/or consent of instructor.

TDGE 195. Instructional Assistance (2 or 4)
Assist with instruction in undergraduate theatre courses. Full description of duties will appear on the "Application for Instructional Assistance." Prerequisites: upper-division standing; 3.0 GPA; department stamp. May be repeated for a total of 8 units.

TDGE 196A. Honors Study in Theatre (4)
Theatre honors students undertake research for a scholarly thesis or a creative project in playwriting or in directing under the guidance of a faculty mentor. Creative projects will culminate in a written thesis that is either a full-length play or a dramaturgical discussion of the directing project. Prerequisites: upper-division course work in the area of thesis, department stamp, 3.5 GPA in major, approval of faculty member.

TDGE 196B. Honors Study in Theatre (4)
Theatre honors students complete the thesis, play, or dramaturgical analysis of a directing project under the close supervision of a faculty mentor. Prerequisites: upper-division course work in the area of thesis, TDGE 196A, 3.5 GPA in major, approval of faculty member.

TDGE 197. Field Studies (1–12)
Designed for advanced students, this course significantly extends their knowledge of the theatre through intensive participation in the creative work of a major professional theatre, television, or film company under the guidance of artists resident in those theatres or companies. Students will submit regular written evaluations each week of their ongoing field study. Prerequisites: consent of instructor, upper-division standing, and department stamp. May be taken two times for credit.

TDGE 198. Directed Group Studies (0–2–4)
Group studies, readings, projects, and discussions in theatre history, problems of production, and performance, and similarly appropriate subjects. Prerequisites: upper-division standing, 2.5 GPA, consent of instructor, and department stamp. May be repeated for a total of 12 units.

TDGE 199. Special Projects (0–2–4)
Qualified students will pursue a special project in theatre history, problems of production, and performance, and similarly appropriate topics. Prerequisites: upper-division standing, 2.5 GPA, consent of instructor, and department stamp.

TDHD–DANCE HISTORY

TDHD 171. Dance History I (Ancient to 1900) (4)
The study of the history of dance from antiquity to the early twentieth century. An analysis and understanding of the social, political, and cultural forces on the development of early dance theories and practices. Prerequisite: TDTH 10. Not equivalent to THDA 151, Dance History–Ballet.

TDHD 172. Dance History II (1900 to 1960) (4)
The study of the history of dance from the early twentieth century to the 1960s. An analysis and understanding of the social, political, and cultural forces on the development of dance theories and practices. Prerequisite: TDTH 10. Not equivalent to THDA 152, Dance History–Modern.

TDHD 173. Dance History III (1960 to Present) (4)
The study of the history of dance from the 1960s to the present. An analysis and understanding of social, political, and cultural forces on the development of current dance theories and practices. Prerequisite: TDTH 10. Not equivalent to THDA 153, Dance History–Jazz Dance and Related Ethnic Studies.

TDHD 174. Dance Aesthetics and Criticism (4)
An historical overview of the aesthetic concepts that form the foundation for the creation, performance, and critical analysis of dance. Critical and aesthetic theory in related arts will be discussed and contrasted. Prerequisite: TDTH 10 or consent of instructor.

TDHD 175. Cultural Perspectives on World Dance (4)
The study of world dance forms from a comparative perspective. An analysis and understanding of ethnic dance traditions and their connections to religion, ritual, folklore, custom, festive celebration, popular culture, and political movements. Prerequisite: TDTH 10 or consent of instructor.

TDHD 176. Dance History—Special Topics (4)
An in-depth exposure to an important topic in dance history, theory, aesthetics, and criticism. Topics vary from quarter to quarter. Prerequisites: TDTH 10, upper-division standing.

TDHD 169A. Senior Honors Focus Scholarly (4)
Selected seniors will complete a scholarly research project on a dance topic of their choice under faculty mentorship that will be reviewed by the faculty and archived. All courses in the history series must be completed or concurrent with the senior honors focus. Individual honors contract for selected senior dance majors. Honors content noted on transcript. Requirements: 3.5 overall GPA, 3.7 major GPA, 90 units completed, and 2 quarter commitment. Prerequisite: TDHD 171, TDHD 172, TDHD 173, TDHD 174, TDHD 175, consent of instructor, and department stamp.

TDHD 169B. Senior Honors Focus Scholarly (4)
Continuation of TDHD 169A. Selected seniors will present a scholarly research project on a dance topic of their choice under faculty mentorship that will be reviewed by the faculty and archived. All courses in the history series must be completed or concurrent with the senior honors focus. Individual honors contract for selected senior dance majors. Requirements: 3.5 overall GPA, 3.7 major GPA, 90 units completed, and 2 quarter commitment. Prerequisites:
TDHT–THEATRE HISTORY

TDHT 10. Introduction to Play Analysis (4)
An introduction to the fundamental techniques of analyzing a dramatic text. Focus is on the student's ability to describe textual elements and their relationships to each other as well as on strategies for writing critically about drama. Prerequisites: none.

TDHT 21. Ancient and Medieval Theatre (4)
Ancient and medieval theatre. Explores the roots of contemporary theatre in world performance traditions of ancient cultures, with a focus on humans' gravitation toward ritual and play. Examples come from Egypt, Greece, Rome, Mesoamerica, Japan, China, India, Indonesia, Persia, and England. Prerequisite: none.

TDHT 22. Theatre 1500–1900 (4)
Explores varieties of drama in professional theatre from 1500 to 1900 in Europe, Japan, and China, and their interconnections both formal and historical. Prerequisite: none.

TDHT 23. Twentieth-Century Theatre (4)
Twentieth-century theatre: a survey of drama from 1890 to 1990, with attention also paid to the development of avant-garde performance forms. Plays discussed reflect developments in Europe and the U.S., but also transnational, postcolonial perspectives. Prerequisite: none.

TDHT 101. Topics in Dramatic Literature and Theatre History (4)
An in-depth exposure to an important individual writer or subject in dramatic literature and/or theatre history. Topics vary from quarter to quarter. Recent courses have included Shakespeare, Modern French Drama, and the History of Russian Theatre. Prerequisite: THHS or TDHT 10 or consent of instructor. May be taken three times for credit.

TDHT 101XL Topics in Dramatic Literature and Theatre History: Foreign Language Discussion Section (1)
Foreign-language discussion of materials in the English-language course with corresponding number. This section is taught by the course professor, has no final exam, and does not affect the grade in the parent course. Prerequisite: concurrent enrollment in TDHT 101.

TDHT 102. Masters of Theatre (4)
Focus on the artists of seminal importance in the theatre. Consideration will be given to theory and practice of the artist; the function of the theatrical realization that can be reconstructed by integrated research. Examples of recent courses include Molière, Fugard, and Strindberg. Prerequisite: THHS or TDHT 10 or consent of instructor. May be taken three times for credit.

TDHT 103. Asian American Theatre (4)
This course examines pivotal dramatic works in the history of professional Asian American theatre in the U.S. (1960s to the present). Issues include interculturalism, the crossover between minority theatres and mainstream venues, and the performance of identity. Prerequisite: THHS or TDHT 10 or consent of instructor.

TDHT 104. Italian Comedy (4)
Continuities and changes in Italian comedy from the Romans through the Renaissance and commedia dell'arte to modern comedy. Prerequisite: THHS or TDHT 10 or consent of instructor.

TDHT 105. French Comedy (4)
Masterpieces of French farce and comedy from the seventeenth century to the twentieth century studied their theatrical and cultural contexts. Readings include plays by Molière, Marivaux, Beaumarchais, and Feydeau. Prerequisite: THHS or TDHT 10 or consent of instructor.

TDHT 106. Brecht and Beyond (4)
Examination of the German playwright and director, Bertolt Brecht and of recent representative plays and performances from world theatre that reveal a creative assimilation of Brecht's influence on artists including Peter Weiss, Heiner Muller, Augusto Boal, and Tony Kushner. Prerequisite: THHS or TDHT 10 and TDHT 21 or consent of instructor.

TDHT 106XL. Brecht and Beyond: Foreign Language Discussion Section (1)
Foreign language discussion of materials in the English-language course with corresponding number. This section is taught by the course professor, has no final exam, and does not affect the grade in the parent course. Prerequisite: concurrent enrollment in TDHT 106.

TDHT 107. American Theatre (4)
In this course we will examine representative plays and playwrights who write about the American experience from a variety of historical periods and diverse cultural communities. Playwrights will include O'Neill, Glaspell, Miller, Williams, Hellman, Wasserstein, Wang, and Parks. Prerequisite: THHS or TDHT 10 or consent of instructor.

TDHT 108. Luis Valdez (4)
In this course examines the works of Luis Valdez, playwright, director, screenwriter, film director, and founder of the Teatro Campesino. Readings include plays and essays by Valdez and critical books and articles about this important American theatre artist. Prerequisite: THHS or TDHT 10 or consent of instructor.

TDHT 109. African American Theatre (4)
This course provides a survey of the contributions to the theatre arts made by African Americans. Analytic criteria will include the historical context in which the piece was crafted—thematic and stylistic issues; aesthetic theories and reception. Prerequisite: THHS or TDHT 10 or TDHT 10 consent of instructor.

TDHT 110. Chicano Dramatic Literature (4)
Focusing on the contemporary evolution of Chicano dramatic literature, this course will analyze playwrights and theatre groups that express the Chicanos experience in the United States, examining relevant "actors," plays, and documentaries for their contributions to the developing Chicano theatre movement. (Cross-listed with Ethnic Studies 132.) Prerequisite: THHS or TDHT 11 or 12 or 13 or consent of instructor.

TDHT 111. Hispanic-American Dramatic Literature (4)
Course examines the plays of leading Cuban-American, Puerto-Rican, and Chicano playwrights in an effort to understand the experience of these Hispanic-American groups in the United States. (Cross-listed with Ethnic Studies 133.) Prerequisite: THHS or TDHT 11 or 12 or 13 or consent of instructor.

TDHT 112. Gay and Lesbian Themes in U.S. Latino Theatre (4)
This course examines plays by Latina and Latino playwrights that include characters who are gay, lesbian, bisexual, or transgendered. Readings include the plays as well as articles and essays about the plays, playwrights, and queer theory. Prerequisites: THHS or TDHT 10 and 11 or consent of instructor.

TDHT 113. Avant-Garde Theatre (4)
Innovations in theatre production and performance since the late nineteenth century. Artists and movements studied include Jarry, Appia, Constructivism, Expressionism, Dada, cabaret, performance art, and dance theatre. Complements TDHT 13's focus on modern theatre. Prerequisite: THHS or TDHT 10 or consent of instructor.

TDHT 114. American Musical Theatre (4)
The class will explore this vital and unique theatre form in its historical context as an American vernacular form. Builds a beginning technical jazz vocabulary with a focus on rhythmic exercises, isolations, turns, and locomotor combinations. Prerequisite: none. May be taken six times for credit.

TDHT 115. History and Theory of Directing (4)
A practical course in directing; students will develop skills in dramatic interpretation and working on the dramatic text. Prerequisites: THHS or TDHT 10 and THAC 101 or TDAC 101 or consent of instructor. May be taken three times for credit.

TDHT 116. Old Myths in New Films (4)
The course will address the work of different writers each quarter, showing how their films derive from classic myths, legends, and traditions of a specific ethnic group. Authors discussed may include Kurosawa (Japanese), Herzog (German), Nei Jordan (Irish), and other moderns. Prerequisite: upper-division standing or consent of instructor. May be taken three times for credit.

TDHT 118. Dramaturgy in Practice (4)
Provides opportunities for students to undertake dramaturgical assignments for productions or as projects. Class meetings will create a mentoring atmosphere focused on the concrete, day-to-day tasks of dramaturgy. Prerequisite: Theatre major, THHS or TDHT 11, 12, 13, and TDHT 118; at least two UD History courses; consent of instructor.

TDMV–DANCE MOVEMENT

TDMV 1. Beginning Ballet (2)
An introduction to classical ballet principles, technique, and terminology. Develops the body for strength, flexibility, and artistic interpretation. Emphasis on developing a foundation in classical movement for continuation of ballet training. Historical origin of ballet will be discussed. Prerequisite: none. May be taken six times for credit.

TDMV 2. Beginning Contemporary Dance (2)
Introduction to contemporary dance as an expressive medium, building technical skills at the beginning level. Pattern variations analyzed in time, space, design, and kinetic sense. Movement exploration includes improvisation and composition. Prerequisite: none. May be taken six times for credit.

TDMV 3. Beginning Jazz (2)
Introduction to the technique of jazz dance, while placing the art form in its historical context as an American vernacular form. Builds a beginning technical jazz vocabulary with a focus on rhythmic exercises, isolations, turns, and locomotor combinations. Prerequisite: none. May be taken six times for credit.

TDMV 11. Theatrical Tap (2)
The study of theatrical tap dance. Various styles of tap—such as classical, rhythm, and musical theatre—will be introduced. Emphasis on rhythm, coordination, timing, and theatrical style. Includes basic through intermediate tap movement. Prerequisite: none.

TDMV 110. Intermediate Ballet (4)
Continued studio work in ballet technique at the intermediate level and terminology. Emphasis on increasing strength, flexibility, and balance, and the interpretation of classical ballet phrases. Includes a foundation in classical movement and artistic philosophy of classical ballet. Prerequisite: six units of THDA or TDMV 1 or consent of instructor. May be taken six times for credit.

TDMV 111. Advanced Ballet (4)
Further emphasis on advanced ballet technique, performance, terminology, and an introduction to point work. Introduces historical ballet choreographic variations. Individual and group composition will be examined and aesthetic criticism applied. Prerequisite: twelve units of THDA 101A-B-C or TDMV 110 or consent of instructor. May be taken six times for credit.

TDMV 112. Advanced Ballet for Contemporary Dance (4)
Designed for students with advanced training in contemporary modern dance and intermediate to advanced training in ballet. Emphasis is on increasing composition and performance skills in ballet through contemporary modern dance aesthetic. Prerequisite: twelve units of THDA 101A-B-C or TDMV 111 or consent of instructor. May be taken six times for credit.

TDMV 120. Intermediate Contemporary Dance (4)
The development of contemporary dance as an expressive medium, with emphasis on technical skills at the intermediate level. Includes the principles, elements, and historical context of contemporary modern postmodern dance. Prerequisite: six units of THDA 2 or TDMV 2 or consent of instructor. May be taken six times for credit.
TDPF–DANCE PERFORMANCE

TDPF 122. Advanced Contemporary Dance (4)
The development of contemporary dance as an expressive medium, with emphasis on advanced technical skills, expressive style, and performance elements. Choreography and aesthetic concepts will be explored. Incorporates applied theoretical principles of human movement. Prerequisite: T2 units of THDA 110A-B-C or TDHA 111A-B-C, or TDMV 112, or TDMV 120 or consent of instructor. May be taken six times for credit.

TDPF 130. Intermediate Jazz (2)
Designed to provide training in the technique of jazz dance, while placing the art form in its historical context as an American vernacular form. Builds an intermediate technical jazz level with a focus on style, musicality, dynamics, and performance. Prerequisite: six units of THDA 3 or TDMV 3 or consent of instructor. May be taken six times for credit.

TDPF 133. Advanced Jazz Dance (4)
Further development in the technique of jazz dance, while placing the art form in its historical context as an American vernacular form. Builds an advanced technical jazz level with a focus on style, musicality, dynamics, and performance. Prerequisite: six units of THDA 120A-B-C or TDHA 121A-B-C or TDMV 130 or consent of instructor. May be taken six times for credit.

TDPF 138. Hip-Hop (2)
An introduction to the basic technique of hip-hop, studied to enhance an understanding of the historical cultural content of the American form hip-hop and street dances in current choreography. Prerequisite: THDA 3 or TDTR 10 or consent of instructor. May be taken twice for credit.

TDPF 139. Pilates Dance Conditioning (2)
A conditioning program based on the teachings of Joseph Pilates, designed to correct muscular imbalances, and body alignment by incorporating strength, flexibility, and relaxation techniques. Prerequisite: THDA 1 or THDA 2 or TDMV 3 or TDTR 1 or TDTR 2 or consent of instructor. May be taken six times for credit.

TDPF 140. Beginning Dances of the World (2)
Courses designed for the in-depth study of the dances and historical context of a particular culture or ethnic form: Afro-Cuban, Spanish, Balinese, Japanese, Latin, etc. Specific topic will vary from quarter to quarter. Prerequisite: upper-division standing.

TDPF 141. Advanced Dances of the World (4)
Courses designed for the advanced continuing study of the dances and historical context of a particular culture or ethnic form: Afro-Cuban, Spanish, Balinese, Japanese, Latin, etc. Specific topic will vary from quarter to quarter. Prerequisite: THDA 132 or TDMV 136 or TDMV 142 or TDMV 143 or TDMV 144, or consent of instructor.

TDPF 142. Latin Dance of the World (4)
To develop an appreciation and understanding of the various Latin dance forms. Emphasis on learning basic social dance movement vocabulary, history of Latin cultures, and use of each dance as a means of social and economic expression.

TDPF 143. West African Dance (4)
An introductory course that explores the history of West African cultures and diasporas through student research, oral presentation, dance class, and performance. Contemporary African dances influenced by drum masters and performing artists from around the world are also covered. Prerequisite: upper-division standing.

TDPF 144. Asian Dance (4)
To develop an appreciation and understanding of the dances from various Asian cultures. Emphasis on learning the basic forms and movement vocabularies, their historical context, and the use of each dance as a means of cultural and artistic expression. Prerequisite: upper-division standing.

TDPF–DANCE PERFORMANCE

TDPF 160. Studies in Performance—Fall Production (2–4)
The in-depth study of a major dance production in a fall dance cabaret led by faculty. Admission by audition only.

Prerequisites: audition; department stamp; concurrent enrollment in TDMV 110, 111, 112, 120, 122, 130, or 133.
TDPF 161. Studies in Performance—Winter Production (2–4)
The in-depth study for a fully staged dance production in various venues, including a fall dance cabaret led by faculty, a winter faculty concert with guest choreographers, and a spring student choreographed concert directed by faculty. Admission by audition only. Prerequisites: audition, department stamp, concurrent enrollment in TDMV 163, TDMV 110 or TDMV 111 or TDMV 120 or TDMV 122 or TD TR 130 or TDMV 133. May be taken four times for credit.

TDPF 162. Studies in Performance—Spring Production (2–4)
The in-depth study for a fully staged dance production in various venues, including a fall dance cabaret led by faculty, a winter faculty concert with guest choreographers, and a spring student choreographed concert directed by faculty. Admission by audition only. Prerequisites: audition, department stamp, concurrent enrollment in TDMV 163, TDMV 110 or TDMV 111 or TDMV 120 or TDMV 122 or TDMV 130 or TDMV 133. May be taken four times for credit.

TDPF 163. Dance Repertory (1–4)
The study and aesthetic examination of major choreographic works by dance faculty or distinguished guest artists. Students will experience the creative process, staging, production, and performance of a complete dance work in conjunction with a conceptual study of its form and function. Admission by audition only. Prerequisites: concurrent enrollment in TDPF 160 or TDPF 161 or TDPF 162. May be taken four times for credit.

TDPF 164. Performance Laboratory (2–4)
A faculty directed dance theatre project culminating in a public performance. Both purely choreographic approaches to creating work and collaboration with visual design, musical composition, texts, film, and video will be explored, as well as participation in production elements. Prerequisites: audition and department stamp.

TDPF 165. Practicum—Scenery (2–4)
A production performance-oriented course that introduces fundamentals of scenery construction and its theatrical operation. Laboratory format allows students to work through the scenery production process culminating in a crew assignment for a fully mounted theatrical production. Prerequisite: department stamp required.

TDPF 166. Practicum—Costume (2–4)
A production performance-oriented course that introduces fundamentals of costume construction and its integration into theatre operations. Laboratory format allows students to work through the costume production process culminating in a crew assignment for a fully mounted theatrical production. Prerequisite: department stamp required.

TDPF 167. Practicum—Lighting (2–4)
A production performance-oriented course that introduces fundamentals of stage lighting and sound and its technical operation. Laboratory format allows a student to work through the lighting and sound production process culminating in a crew assignment for a fully mounted theatrical production. Prerequisite: department stamp.
TDGR 200. Dynamics (1)
A daily program of physical, vocal, and speech exercises designed to prepare the student to move in a focused way into specific class areas with minimum amount of warm-up time. The exercises work on development of flexibility, strength, and coordination throughout the body. Strong emphasis is placed on physical and mental centering within a structured and disciplined approach to preparation. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 201. Stage Combat (2)
A study of the dramatic elements of stage violence, and practical work in developing the physical skills necessary to fully realize violent moments on the stage. At the core of the study is the process from text to convincing theatrical action. Physical work revolves around basic principles of energy, focus, and center inherent in unarmed and weapons combat. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 202. Joint Stock (3)
The process of collaborative creation from idea to performance. Prerequisite: admission to the M.F.A. program or consent of instructor.

TDGR 203. Seminar and Supervision for ArtsBridge Scholars (1)
A workshop to address the specific pedagogical requirements and techniques to be employed by students as ArtsBridge (outreach) Scholars and Mentors of ArtsBridge Scholars. Instructor will mentor the students on-site as well as in seminars. Prerequisites: graduate standing and consent of instructor.

TDGR 204A. Text Analysis (4)
Topics to be covered will include (1) concept of poetic language; lexical and syntactic analysis of dialogue; (2) the semantic context of dialogue; (3) thematic structure, from motive to theme; (4) the concept of dramatic character or hero; (5) dramatic narrative; (6) the material of drama; the relationship of myth and ritual to drama; (7) analysis versus interpretation; (8) practical applications. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 204B. Contemporary Theories of Theatre (4)
An investigation of contemporary theories of theatre with an emphasis on structural and poststructural perspectives on text and textuality. The seminar will focus on adapting contemporary techniques of close reading to the interpretive and creative process in the theatre. Prerequisites: TDGR 204A, admission to M.F.A. Theatre program or consent of instructor.

TDGR 204C. Collective Creation (4)
The culmination of the TDGR 204 sequence, in which students in all disciplines create and perform publicly presented original theatre pieces. Prerequisites: TDGR 204B, admission to M.F.A. Theatre program or consent of instructor.

TDGR 205. Improvisation for the Theatre (3)
A course designed to introduce improvisational techniques to professional acting students. A variety of approaches to the art of improvisation will be presented and practiced, both serious and comic. Small and large group improvisations will be offered. Prerequisite: admission to the M.F.A. program or consent of instructor.

TDGR 206. Faculty Directed Production (4)
Faculty directed production, from the rehearsal process through public performance. All participants will enroll in the same section, the number of units depending upon degree of involvement. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 207. Production (4)
The collaborative process from the rehearsal process through public performance. All participants will enroll in the same section, the same number of units. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 209. Commedia and Comic Techniques (3)
A course designed to provide actors with tools, both physical and verbal, to play comedy. Included will be commedia dell’arte techniques, the work of masks, circus techniques, mime, and scene work from comic scripts. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 210A. Process I—Part I (4)
The actors focus on the nature of the acting process, using various exercises to stimulate imagination and to inspire instinctual choices. Later work includes improvisational and imaginative experiences to explore character and text. The class culminates in intensive scene work chosen for the particular actor to model the improvisational approach with scripted material. The class is a combination of both actors and directors so that a common language is developed. Prerequisite: admission to the M.F.A. program or consent of instructor.

TDGR 210B. Process I—Part II (4)
Intensive studio examination of realistic texts using improvisational and imaginative techniques to realistically texts commonly from American theatre. Second course in a three course sequence. Prerequisites: TDGR 210A and admission to the M.F.A. program or consent of instructor.

TDGR 210C. Process I—Part III (4)
The intensive study of the dramatic and fictional work of Anton Chekhov and an actor’s approach to that work. This course includes many of the techniques begun in earlier classes and applies them to this material. Also included is a study of Chekhov’s short stories and plays, and involves adapting and staging these works. Third course of a three course sequence. Prerequisites: TDGR 210B and admission to the M.F.A. program or consent of instructor.

TDGR 211A. Speech for the Actor (2–4)
Introduction of the principles of phonetics and articulation. Constant study and drill to prepare the actor for standard speech and flexibility. Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 211B. Speech for the Actor (2–4)
Continued introduction of the principle of phonetics and articulation. Constant study and drill to prepare the actor for standard speech and flexibility. Second course in a three-course series. Prerequisites: TDGR 211A and admission to the M.F.A. program or consent of instructor.

TDGR 211C. Speech for the Actor (2–4)
Continued introduction of the principle of phonetics and articulation. Constant study and drill to prepare the actor for standard speech and flexibility. Third course in a three-course series. Prerequisites: TDGR 211B and admission to the M.F.A. program or consent of instructor.

TDGR 212. Acting Practicum (2)
One-on-one laboratory workshop that examines practical applications of accents, speech and voice work, dialect, movement and combat work specific and ancillary to the productions in which the students have been cast. Prerequisite: admission to the M.F.A. Theatre program.

TDGR 213. Dance Theatre Topics Seminar (2)
A topics seminar in current dance theatre history, issues and research, with varying content by faculty. Prerequisite: admission to the M.F.A. program or consent of instructor.

TDGR 213A-B-C. Movement for Theatre I (2-2-2)
An intensive studio course in the art of movement as a basis for theatre performance. Theory and practice of energy, flow, weight, spatial focus, time consumption, and the shape factor. (S/U grades only.) Prerequisites: THGR or TDGR 213A for B, THGR or TDGR 213B for C; admission to the M.F.A. Theatre program.

TDGR 214. Dance Theatre Topics: Collaborative Processes (2)
This seminar examines the nature of collaborative creative processes and artistic relationships between choreographers and other primary artists in the creation of interdisciplinary dance theatre, from the initial concepts, themes, and inspiration through the research, rehearsal and final presentation. Prerequisite: admission to the M.F.A. program or consent of instructor.

TDGR 214A. Voice for Theatre I—Part I (3)
Voice exercises designed to “free the voice” with emphasis on diaphragmatic breathing, articulation exercises, and singing exercises. Course designed to broaden pitch, range, projection, and to expand the full range of potential characterizations. Prerequisites: admission to the M.F.A. program or consent of instructor.
TDGR 214B. Voice for Theatre II—Part I (3)
Voice exercises designed to “free the voice” with emphasis on diaphragmatic breathing, articulation exercises, and singing exercises. Course designed to broaden pitch, range, projection, and to expand the full range of potential characterizations. Second course in a three-course sequence.
Prerequisites: TDGR 214A and admission to the M.F.A. program or consent of instructor.

TDGR 214C. Voice for Theatre I—Part III (3)
Voice exercises designed to “free the voice” with emphasis on diaphragmatic breathing, articulation exercises, and singing exercises. Course designed to broaden pitch, range, projection, and to expand the full range of potential characterizations. Third course in a three course series.
Prerequisites: TDGR 214B and admission to the M.F.A. Theatre program or consent of instructor.

TDGR 215. Dance Theatre Seminar (2)
This seminar focuses on the aesthetic concepts that form the foundation for the creation, performance, research, and critical analysis of dance theatre. Students will discuss critical theory in related arts and develop individualized projects that advance their creative and intellectual goals.
Prerequisite: admission to the M.F.A. Theatre program or consent of the instructor.

TDGR 216. Principles of Curriculum Theory (2)
This comprehensive seminar provides an assessment of the field of curriculum theory as preparation for teaching general dance education courses. Conceptual thinking, problem solving, current publications, methods of inquiry, assessment, and a range of practical teaching issues will be discussed. Enrollment is open to the M.F.A. Theatre program or consent of instructor.

TDGR 217. New Media and Technology (2)
This seminar explores the interaction of new media and technologies for collaboration, research, and creation in performance. Students will pursue diverse and innovative research in technology as a medium for new forms of expression in dance theatre. Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 218. Dance Theatre: Professional Practice (2)
This seminar focuses on the skills and tools needed for the professional practice of self-production in performance. Areas introduced include grant writing, press kits, media relations, marketing, Web sites, documentation, budgets, artistic management, and nonprofit organization administration.
Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 219. Directing Process Studio (4)
Preparation, presentation, and discussion of representative scenes from various periods of dramatic literature.
Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 220. Advanced Contemporary Dance (2)
Designed for graduates with advanced training in contemporary modern dance and intermediate to advanced training in ballet. Emphasis is on increasing composition and performance skills in ballet through contemporary modern dance aesthetics.
Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 220A. Process II: Classical Text (1-4)
An intensive studio examination of problems and potentials associated with the theatrical realization of the classical text.
Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 220B. Process II: Classical Text (1-4)
An intensive studio examination of problems and potentials associated with the theatrical realization of the classical text. This course is a continuation of TDGR 220A.
Prerequisite: TDGR 220A and admission to the M.F.A. Theatre program or consent of instructor.

TDGR 220C. Process II: Classical Text III (4)
An intensive studio examination of problems and potentials associated with the theatrical realization of the classical text. This course is a continuation of TDGR 220B.
Prerequisites: TDGR 220B and admission to the M.F.A. Theatre program or consent of instructor.

TDGR 221. Graduate Studio: Contemporary Movement Practices (2)
Designed for development of a movement practice in various modalities including contemporary dance, yoga, Pilates, and Alexander. Emphasis on advanced technical skills, expressive style, and actor formation of the voice. Aesthetic concepts will be explored. Incorporates applied physiological principles of human movement.
Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 221A—B. Speech for the Actor II (3-3)
Advanced work in phonetics and articulation. Intensive study of the expressive voice and the actor’s ability to solve problems related to vocal projection, and performance skills in ballet through contemporary training in ballet.
Prerequisites: graduate standing. THGR or TDGR 221A
Prerequisite for THGR or TDGR 221B: admission to the M.F.A. Theatre program.

TDGR 222. Topics in World Dance (2)
Course designed for study of specific world dances. Historical and contemporary context of each performance of music and dance will be explored. Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 222A—B. C. Theatre Production II (1-4)
Ranging from staged reading of new plays, documentary drama, or synthetically created dramatic text to totally integrated production of full-length plays (faculty or student directed), and incorporating the creative contribution of directors, actors, playwrights, and critics, this intensive course is designed to serve both an M.A. and graduate students.
Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 223. Improvisation Ensemble (2)
A course for dance theatre practitioners to exchange ideas, work with scores, text, and other material in a supportive and focused environment. Students will participate as group leaders allowing participants to explore new areas of their artistic practice.
Prerequisite: admission to the M.F.A. program or consent of instructor.

TDGR 223A—B. Movement for Theatre II (3-3)
An advanced course in the art of movement for the theatre, building on the knowledge gained in Theatre 213. (S/U grades only.)
Prerequisites: THGR or TDGR 223A for B;
Prerequisite for THGR or TDGR 223A for B: admission to the M.F.A. Theatre program.

TDGR 224A—B. Voice for Theatre II (3-3)
Advanced voice training designed to help the actor fuse voice, emotion, and body into a fully realized reflection of the text. (S/U grades only.)
Prerequisites: THGR or TDGR 224A for B; admission to the M.F.A. Theatre program.

TDGR 225A—B. Singing for the Actor II (1-1)
Continuing vocal technique for the musical theatre. More complicated musical material investigated and prepared.
Prerequisite: admission to the M.F.A. Theatre program.

TDGR 227. Directing Seminar (1–6)
A seminar focusing on the current directing projects of all graduate directing students. Depending upon individual student needs, the work may include play selection, historical or sociological research, and discussion of emerging directorial concepts and rehearsal process, and post-production evaluation.
Prerequisite: admission to the M.F.A. Theatre program.

TDGR 228. Graduate Workshop (1–4)
A workshop in which students from music and theatre departments study examples of various forms of music theatre and collaboratively develop creative projects that are presented at the end of the two-quarter sequence.
Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 230. Acting Process III: Actors’ Studio (4)
An advanced studio for graduate actors and directors, this work will explore a single text from the modern theatre under the direction of a master teacher-artist. Concentration will be on multiple possible modes of encountering a text, varied interpretation and performance realization, and the development of a theatre ensemble.
Prerequisite: admission to the M.F.A. Theatre program.

TDGR 231A. Professional Preparation for the Actor (4)
A twice-weekly seminar focusing on the actor’s confrontation with the industry, including in-depth preparation for auditions, cold readings, and meetings/meetings/interviews with producers, casting directors, agents, and managers. Actors will also begin to create material that could be crafted into solo performances.
Prerequisite: admission to M.F.A. Theatre program or consent of instructor.

TDGR 233. Acting for the Camera (1)
This course is designed to aid the actor in the transition from stage to film work. Examination of film production and its physical characteristics and the acting style needed for work in film and television. Students will rehearse and perform in simulated studio setting.
Prerequisite: admission to the M.F.A. Theatre program.

TDGR 235. Singing for the Actor III (1)
Continuing vocal technique for the musical theatre. More complicated musical material investigated and prepared.
Prerequisite: admission to the M.F.A. Theatre program.

TDGR 239. Skills (4)
A unifying approach to acting skills (voice, movement, and speech) designed to result in providing the graduating actor with a daily regimen appropriate for professional work.
Prerequisite: admission to the M.F.A. Theatre program.

TDGR 240. Directing Seminar I (1-6)
A seminar focusing on the current directing projects of all graduate directing students. Depending upon individual student needs, the work may include play selection, historical or sociological research, and discussion of emerging directorial concepts and rehearsal process, and post-production evaluation.
Prerequisite: admission to the M.F.A. Theatre program.

TDGR 242. Director Designer Collaboration Seminar (4)
A seminar focusing on the creative application of design solutions to problems presented by specific texts, and how they function in directorial and design production concepts.
Prerequisite: admission to M.F.A. Theatre program or consent of instructor.

TDGR 243. Director/Playwright/Choreographer Lab (4)
Collaborative process between directing and playwriting students providing a focused exploration of a broad range of directing and writing methodologies. Students work in teams to develop and create pieces based on the methodology of guest directors.
Prerequisite: admission to M.F.A. Theatre program or consent of instructor.

TDGR 244. New Plays Workshop (2)
A course where playwrights and actors work together to develop new plays—in-progress.
Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 245. Directing Practicum (4)
Students enrolled in this course will work on productions in the function of a director. This will include staging, creative interpretation, blocking, etc.
Prerequisite: admission to the M.F.A. Theatre program.

TDGR 249A. Music Theatre Workshop (4)
A workshop in which students from music and theatre departments study examples of various forms of music theatre and collaboratively develop creative projects that are presented at the end of the two-quarter sequence.
Prerequisite: admission to the M.F.A. Theatre program or consent of instructor.

TDGR 249B. Music Theatre Workshop (4)
Continuation of workshop in which students from music and theatre departments study examples of various forms of music theatre and collaboratively develop creative
projects that are presented at the end of the two-quarter sequence. **Prerequisite:** admission to M.F.A. Theatre program or consent of instructor.

**TDGR 250. Playwriting Seminar (4)**
A seminar focusing on the current playwriting project of all graduate playwriting students. Work for each quarter is individually determined according to student needs, but may include exploration of an inceptive idea, development of a scenario or other structural work, and writing dialogue. Students present work to be discussed in class. May include group or individual playwriting exercises. **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 251. Playwriting Practicum (2)**
Creative writing project developing original scripts from outline to the final play. Plays may vary depending on the quarter, but will include writing of a realistic one-act, a nonrealistic one-act, a one-act documentary or dramatization of fiction, a full-length play. **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 252. Dramaturgy Seminar (4)**
The seminar will deal with all dramatic issues pertinent to departmental productions: production research, textual analysis, translation, adaptation, rehearsal process, and critique. Concurrently with the dramaturgy issues of the given year, the seminar will discuss possible choices of plays for future production seasons. **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 254. Television Writing (4)**
A one-quarter course covering the hour-long format (five weeks) and situation comedies (five weeks). Includes study and discussion of television script format and structure. Students will create the concept and structure for specific scripts in each genre. **Prerequisite:** admission to M.F.A. Theatre program or consent of instructor.

**TDGR 256. Contemporary Plays (1-4)**
A guided reading course focusing exclusively on very recent plays in an attempt to become aware of what is being written now. Course may be repeated for credit. **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 257A–B. Screenwriting (4-4)**
Students will develop the concept for an original piece for television or film and will write the screenplay. Student work will be presented in seminar at each phase of the development. **Prerequisites:** admission to the M.F.A. Theatre program and THGR or TDGR 250.

**TDGR 258A–B. Dramatization and Adaptation (4-4)**
Seminar will deal with dramatization and adaptation of literary texts for the purpose of theatrical production. The class will study some significant examples of such practice from the past, and subsequently, students will develop their own projects of dramatization, adaptation, or modernization of texts. **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 260. New-Play Festival (4)**
The collaborative process of new-play development through readings, rehearsals, and public performance. M.F.A. actors, directors, playwrights, and stage managers enroll in each quarter and collaborate in creating the annual festival of full-length and one-act plays. **Prerequisite:** admission to M.F.A. Theatre program or consent of instructor.

**TDGR 262. Crossing Boundaries: Design Implications (4)**
Conceiving interactive designs. A project/performance-based course, concentrating on the conception of designs adaptable to improvisatory contexts, in which technological strategies such as real-time processing and control and rendering of images are encouraged and discussed. **Prerequisite:** admission to M.F.A. Theatre program or consent of instructor.

**TDGR 267. Automated Lighting (4–6)**
Introduces the design student to the technology, control, and creative use of automated lighting in the entertainment lighting field. The class involves substantial independent research. Students create both theoretical and realized design projects. **Prerequisite:** admission to M.F.A. Theatre program or consent of instructor.

**TDGR 268. Storyboarding (4)**
Course will cover multiple applications of storyboarding as a tool of communication and expression; comic books, theatre, opera, film, TV, and commercial applications will be explored. Individual and team assignments will be given to develop the basic vocabulary and techniques. **Prerequisite:** admission to M.F.A. Theatre program or consent of instructor.

**TDGR 269A. Photoshop II (4)**
Course will introduce the basic functions and applications of Photoshop as they may be applied to theatrical design. Emphasis on using Photoshop as an artistic tool. **Prerequisite:** admission to M.F.A. Theatre program or consent of instructor.

**TDGR 269B. Photoshop III (4)**
Advanced Photoshop techniques will be explored and applied to the creation of multimedia projects. **Prerequisite:** admission to M.F.A. Theatre program or consent of instructor.

**TDGR 270A. Design Studio I (4)**
This course will focus on beginning-level problems in theatre design, including text analysis, research, conceptualization, and visual expression. Students will work on individual projects in lighting, costume, and scenic design. The course will include group critiques of completed designs and works in progress. 270A, Scenic Design (fall); 270B, Costume Design (winter); 270C, Lighting Design (spring). **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 270B. Design Studio II: Costume Design (4)**
This course will focus on beginning-level problems in theatre design, including text analysis, research, conceptualization, and visual expression. Students will work on individual projects in lighting, costume, and scenic design. The course will include group critiques of completed designs and works in progress. 270A, Scenic Design (fall); 270B, Costume Design (winter); 270C, Lighting Design (spring). **Prerequisites:** THGR 270A, graduate standing, consent of instructor.

**TDGR 270C. Design Studio I: Lighting Design (4)**
This course will focus on beginning-level problems in theatre design, including text analysis, research, conceptualization, and visual and auditory expression. Students will work on individual projects in sound, lighting, costume, and scenic design. The course will include group critiques of completed designs and works in progress. 270A, Scenic Design (fall); 270B, Costume Design (winter); 270C, Lighting Design (spring). **Prerequisites:** THGR 270A or TDGR 270A, THGR 270B or TDGR 270B, graduate standing, consent of instructor.

**TDGR 270D. Design Studio I: Sound Design (4)**
This course will focus on beginning-level problems in theatre design, including text analysis, research, conceptualization, and visual and auditory expression. Students will work on individual projects in sound, lighting, costume, and scenic design. The course will include group critiques of completed designs and works in progress. 270A, Scenic Design (fall); 270B, Costume Design (winter); 270C, Lighting Design (spring). **Prerequisites:** THGR 270A, THGR 270B, graduate standing, consent of instructor.

**TDGR 271. Design Seminar (2)**
A seminar focusing on all aspects of the design profession, including current projects of graduate design students. The work may also include portfolio presentations, research papers, and guest lectures. **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 272. Master Class in Design (1–4)**
Special topics in design taught in an intensive workshop format by professionals in the respective fields of study. Topics could include, but are not limited to, sound design techniques, new developments in set design, AutoCAD. **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 273. Fashioning the Body (4)**
A survey/history of artistic and cultural stylistic change as embodied in clothing from early Western civilization to the contemporary period. **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 274. Advanced Scenic Design (4)**
This course explores advanced problems in scenic design through development and critical review of creative class projects and production works-in-progress. **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 275. Advanced Lighting Design (4)**
Creative projects and topics in lighting design to develop the student’s techniques and professional practices. Work to include studies in design research, concepts, psychological considerations, professional procedures and systems, paperwork, and organization. Various scales of production projects will be addressed by the student for presentation and critique, and may be discussed and researched into the designer's calendar. **Prerequisites:** second- or third-year design students only; admission to the M.F.A. Theatre program.

**TDGR 276. Advanced Costume Design (4)**
Projects in costume design, emphasizing script analysis, research, conceptualization, and visual expression. Studio work includes costume rendering in various media for specific plays. **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 278. Special Topics in Theatre Design (1–6)**
A course designed to expose the theatre design student to a variety of specialized topics, including millinery, pattern drafting and draping, scenic painting, model making, figure drawing, drafting, fitting, rendering. Topics will vary from quarter to quarter. **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 279. Design Practicum (4)**
This course covers the artistic, aesthetic, and practical aspects of the designer's work as they develop and execute the design toward a fully realized production. **Prerequisite:** admission to the M.F.A. Theatre program.

**TDGR 280A. Stage Management 1 (4)**
The first course in the three-quarter introductory stage management series, this course further explores the stage manager's role, focusing on the technical rehearsal period through the opening of a production. **Prerequisites:** TDGR 280A; admission to M.F.A. Theatre program or consent of instructor.

**TDGR 280B. Stage Management 2 (4)**
The second course of the three-quarter introductory stage management series, this course further explores the stage manager's role, focusing on the technical rehearsal period through the opening of a production. **Prerequisites:** TDGR 280A; admission to M.F.A. Theatre program or consent of instructor.

**TDGR 280C. Stage Management 3 (4)**
The final course in the three-part introductory stage management series focuses on the stage manager's role once a production has opened. The course will also address topics such as new plays, tours, dance, multimedia productions, and music. **Prerequisites:** TDGR 280A and TDGR 280B; admission to M.F.A. Theatre program or consent of instructor.

**TDGR 282. Advanced Sound Design (4)**
Creative projects to develop student's techniques and professional practices. Studies include research, concepts, collaboration, professional procedures, systems and organization. Various scales of projects will be addressed for presentation and critique; may be theoretical or productions in the Department calendar. **Prerequisite:** admission to the M.F.A. program or consent of instructor.

**TDGR 286. Special Topics in Stage Management (1–6)**
A course for M.F.A. students in stage management. Topics will focus on various aspects of theatre administration, and advanced stage management, including nonprofit theatre, commercial theatre, advanced production venues, musicals/dance, production management, theatre development, business problems, and theatre marketing. **Prerequisite:** admission to the M.F.A. Theatre program.
TDGR 288. Stage Management Seminar (4)
A weekly seminar in which all graduate stage managers participate. Includes discussions of problems encountered on current productions, paperwork, methodology, and production approaches. **Prerequisite:** admission to the M.F.A. Theatre program.

TDGR 289. Introduction to Doctoral Studies (4)
Seminar acquaints doctoral students of all levels with research methods, theoretical models, publishing protocol, professional preparation, and pedagogical approaches particular to theatre and performance studies. Course assignments are tailored to students’ scholarly interests and progress toward degree. **Prerequisite:** admission to Ph.D. program in theatre or consent of instructor.

TDGR 290. Dramatic Literature and Theatre History Prior to 1900 (4)
Selected material from following topics: Classical Drama, Asian Drama, Medieval and Early Modern Drama, Shakespeare, European Drama 1600–1900. May be taken eight times as content varies. **Prerequisite:** admission to Ph.D. program in Theatre.

TDGR 291. Dramatic Literature and Theatre History 1900 to the Present (4)
Selected material from following topics: European Theatre 1900–Present, American Theatre 1900–Present, Contemporary Theatre and Performance. May be taken eight times as content varies. **Prerequisite:** admission to Ph.D. program in Theatre.

TDGR 292. Cultural and Critical Theory (4)
Selected material from following topics: Performance Theory, Dramatic Theory, Critical Theory, Cultural Studies. May be taken eight times as content varies. **Prerequisite:** admission to Ph.D. program in Theatre.

TDGR 293. Directed Studies (4–12)
Individual or small group directed study.

TDGR 294. Dissertation Research (4–12)
Research and preparation of doctoral dissertation.

TDGR 295. Acting Practicum (2)
This course covers the artistic, aesthetic, and practical aspects of the actors’ work as they develop and execute the character/role toward a fully realized production. **Prerequisite:** admission to the M.F.A. Theatre program.

TDGR 296. Stage Management Practicum (4)
Taken each term by all graduate stage management students. The class focuses on the development of knowledge and skills necessary for the contemporary stage manager. Seminar format is augmented by lab work that may include departmental productions. **Prerequisite:** admission to the M.F.A. Theatre program.

TDGR 297. Thesis Research (2–12)
Thesis research for M.F.A. degree. (S/U grades only.) **Prerequisite:** admission to the M.F.A. Theatre program.

TDGR 298. Special Projects (0–4)
Advanced seminar and research projects in theatre. (S/U grades only) **Prerequisite:** admission to the M.F.A. Theatre program.

TDGR 299. Thesis Project (2–12)
Specific projects in theatre individually determined to meet the developing needs, interests, and abilities of M.F.A. candidates. (S/U grades only) **Prerequisite:** admission to the M.F.A. Theatre program.

TDGR 500. Introduction to Apprentice Teaching (4)
This course, designed to meet the needs of the graduate students who serve as teaching assistants, includes analysis of texts and materials, discussion of teaching techniques, conducting discussion sections, formulation of topics and questions for papers, and examinations and grading. 2 units = 25% TAship. 4 units = 50% TAship. **Prerequisites:** graduate standing and consent of the instructor.

TDGR 501. Teaching—Non-Departmental (4)
Consideration of pedagogical applications in the teaching of literacy, historical and philosophical text at the undergraduate level. Pedagogical aids for the teaching of composition and supervised teaching in sections of undergraduate courses such as the Revelle Humanities sequence and in the CAT programs of Sixth College. **Prerequisite:** admission to the M.F.A. Theatre program.
THE MAJOR PROGRAM

Students interested in Third World studies may focus on a theme, problem, or geohistorical area. A Third World studies program of study must be interdisciplinary. Students must choose course offerings from at least three disciplines (anthropology, economics, history, literature, political science, sociology, etc.).

A Third World studies major requires a minimum of twelve upper-division courses plus three lower-division courses from the Third World studies sequence (TWS 21, 22, 23, 24, 25, or 26). Students at Eleanor Roosevelt College may substitute up to two courses, Making of the Modern World 4 and 5, for two of the three-course lower-division sequence, but must take at least one course in the TWS 21–26 sequence. Selection of a specific concentration, discipline, or department should be determined in consultation with a Third World studies faculty member or program advisor.

Students majoring and minoring in Third World studies are encouraged to experience their areas first-hand by studying abroad in any number of ways. Most convenient, depending on the area, is the University of California’s Education Abroad Program, whereby students can gain UC credit for study at foreign universities. This is especially convenient for students who cannot find sufficient courses at UC San Diego pertaining to such regions as the Caribbean and the Indian subcontinent. Moreover, Latin America, Asia, and Africa course work is available in these regions through the Education Abroad Program and various programs available through other U.S. universities.

DOUBLE MAJOR

Students interested in Third World studies as a double major must have at least ten upper-division courses that are unique to each departmental major. The courses required for Third World studies may cover one or more disciplines. Courses may focus on a theme or problem or on a geo-historical area. The remaining two courses may overlap with the other major requirements. Approval from both departments is required for overlaps. Students should consult a Third World studies faculty member or program advisor for approval of a major program.

MINOR

A student may minor in Third World studies by selecting two courses from the lower-division Third World studies sequence (TWS 21, 22, 23, 24, 25, or 26) and five upper-division courses in disciplines dealing with the Third World.

Third World studies faculty members offer courses in the Departments of Anthropology, Communication, Literature, Political Science, Sociology, History, and in the Third World Studies Program. Appropriate courses in other departments may also be considered. Students should consult departmental and program listings for Third World area offerings.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

See listings also under the Departments of Anthropology, Communication, History, Literature, Political Science, and Sociology for other Third World area offerings.

LOWER-DIVISION

21-22-23-24-25-26. Third World Literatures (4-4-4-4-4-4)

An introduction to the cultures of various Third World countries through close reading of selected literary texts. TWS 21 focuses on African literature, TWS 22 deals with Latin American literature, TWS 23 examines Chinese literature, TWS 24 examines Caribbean literature, TWS 25 focuses on Middle Eastern literature, and TWS 26 treats literature of the Indian Subcontinent. Topics will vary each quarter. (F, W, S)

UPPER-DIVISION

132. Literature and Third World Societies (4)

This course will investigate novelistic and dramatic treatments of European society in the era of nineteenth-century imperialism, Third World societies under the impact of colonialism, and the position of national minorities inside the United States to the present day. Attention will center on the interplay between the aesthetic merits and social-historical-philosophical content of the works read.

135. Bilingualism: Research and Field Studies (4)

A study of sociolinguistic findings on bilingualism throughout the world and an evaluation of bilingual education theories. The students will also engage in surveys of local communities to assess bilingualism and educational needs of bilingual communities. Prerequisite: upper-division standing.

190. Undergraduate Seminars (4)

Seminars will be organized on the basis of topics with readings, discussions, and papers. Specific subjects to be covered will change each quarter depending on particular interest of instructors or students. May be repeated for credit.

197. Field Work (4)

In an attempt to explore and study some unique processes and aspects of community life, students will engage in research in field settings. Topics to be researched may vary, but in each case the course will provide skills for carrying out these studies.

198. Directed Group Studies (2 or 4)

Directed group study on a topic or in a field not included in the regular department curriculum, by special arrangement with a faculty member. Prerequisite: upper-division standing.

199. Independent Study (2 or 4)

Tutorial, individual guided reading and research projects (to be arranged between student and instructor) in an area not normally covered in courses currently being offered in the department. (P/NP grades only.) Prerequisites: upper-division standing and consent of instructor. (F, W, S)

Thurgood Marshall College

OFFICE: Provost, Thurgood Marshall College Administration Building

HONORS PROGRAM

The Thurgood Marshall College Honors Program is designed to address one of the greatest responsibilities and challenges of public higher education: the education of students of exceptionally high academic achievement. The program provides the organization and the environment within which students are encouraged to pursue individual excellence.

Honors activities and events are designed to introduce Thurgood Marshall students to the excitement of pioneering research and innovative scholarship in all disciplines at UC San Diego and to create opportunities for discussion on public issues with locally and nationally known figures. This happens primarily through the honors seminar, offered every quarter, and open to all class levels of honors students.

To qualify for the honors program, incoming transfer and freshmen students must check the Marshall College Honors eligibility criteria on the Marshall Web site: http://marshall.ucsd.edu. Continuing UCSD students are eligible upon successful completion of at least twelve graded units with a 3.8 or better cumulative GPA. All honors students must maintain a 3.50 or better cumulative GPA.

Thurgood Marshall College annually recognizes superior achievement. The Provost Award is presented at commencement to a graduating senior who is recognized for outstanding academic achievement and breadth of scholarship. In addition, students may be eligible for universitywide and departmental honors, Provost Honors, Thurgood Marshall College Honors, Phi Beta Kappa membership, and participation in small honors classes in science.

PUBLIC SERVICE MINOR

Thurgood Marshall College sponsors the Public Service Minor at UCSD, which encourages students to understand the history and practices of public service and to participate in the development of civic skills. This minor is open to all UCSD students in good standing. Please see “Public Service Minor” in the departmental listings or visit the Web site at http://publicsvcminor.ucsd.edu.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

10. Thurgood Marshall College Methods of Inquiry (2)
In this course, students learn analytical thinking strategies routinely used by professional scholars, historians, and social planners. Each student applies methodologies from the materials presented in lectures, films, and readings relevant to the current course work. Prerequisite: department stamp. (P/NP only.)

15. Introduction to Public Service in America (4)
This course is designed to study, discuss, and analyze the history and current role of public service in the United States. Students will be introduced to the different roles held by the three sectors of the American economic structure (government, business, and nonprofit/public service) with opportunity to provide a critical analysis of those roles within American society.

20. Thurgood Marshall College Honors Seminar (1)
Weekly seminar conducted by UCSD faculty and distinguished guest lecturers on topics related to the core curriculum: diversity, justice, and imagination. (P/NP only.)

90. Undergraduate Seminar (1)
These seminars are designed to expose undergraduate students, especially freshmen and sophomores, to exciting research conducted by UCSD faculty. Prerequisite: none. (P/NP only.)

198. Thurgood Marshall College Directed Group Studies (4)
Directed group studies of a creative project. Designated for TMC students to work as a group on a project supervised by faculty; not included in regular curriculum, where group emphasis would be more beneficial and constructive than individual special studies. Prerequisites: upper-division standing (ninety units) including lower-division writing requirement (DOC 2 and DOC 3), minimum overall GPA of 2.5 and consent of instructor.

199. Marshall College Special Project (1–4)
Individual, independent research, or creative work intended to satisfy Marshall College graduation requirement. Designated for Marshall College students, topics are supervised by Marshall faculty in association with the honors seminar and honors projects. A written application describing the project is required. See Office of the Provost. Prerequisites: upper-division students with 2.5 GPA and 90 units and approval of the provost or faculty designee. Honors standing required for honors projects. (P/NP only)
Since 1997, the UC San Diego Washington Center has provided students an opportunity to intern in the nation's capital while continuing their academic coursework. The program is open to all students who have completed ninety units toward graduation with a 2.5 grade-point average. Students earn fourteen units of academic credit, continue to be registered full-time, and fulfill university residency requirements.

Students maintain financial aid eligibility; the amount can be adjusted to reflect the additional costs of the program. In addition, eligible students are considered for the University of California President's Washington Scholarship Program. Students live in the University of California Washington Center, located in the heart of Washington, D.C.

Internship—Students work twenty-four hours per week as interns in federal agencies, interest groups, trade associations, the national news media, museums, research institutions, or in other organizations related to policy, politics, science, and culture and geared to the interests and objectives of individual students. Political Science 197I: six or eight units of academic credit.

Research Seminar—Drawing on the internship experience, each student participates in a seminar and undertakes an independent research project. Political Science 194 (or depending on the student’s major, one of the cross-listed equivalents): four units of academic credit.

Elective Course—Each student also enrolls in one upper-division seminar course at the Washington Center. These courses are taught by the different campuses' resident faculty and change each quarter. Typically they include a mix of political science, international relations, other social sciences, history, and the arts and humanities. In addition to regular instruction, these seminars may take advantage of the Washington locale and often include guest speakers and fieldwork activities.
Urban Studies and Planning

FACULTY
Mirle Rabinowitz Buswell, Ph.D., USP Lecturer
Steven P. Erie, Ph.D., Professor, Political Science, Director of USP
Nancy Kwak, Ph.D., Assistant Professor, History
April Linton, Ph.D., Assistant Professor, Sociology
Isaac Martin, Ph.D., Associate Professor, Sociology
Gabriel Mendes, Ph.D., Assistant Professor, Ethnic Studies
Natalia Molina, Ph.D., Associate Professor, Ethnic Studies
Keith Pezzoli, Ph.D., Lecturer, USP Supervisor of Field Studies
Michelle White, Ph.D., Professor, Economics

AFFILIATED FACULTY
David Abel, J.D., USP Lecturer
Marisa Abrajano, Ph.D., Assistant Professor, Political Science
Amy Bridges, Ph.D., Professor, Political Science
Erik Bruvold, USP Lecturer
Edwin Teddy Cruz, Associate Professor, Visual Arts
Gary Fields, Ph.D., Associate Professor, Communication
Greg Freeman, USP Lecturer
Kathleen Garcia, USP Lecturer
Carlos Graizbord, M Architecture, USP Lecturer
Zoltan Hajnal, Ph.D., Associate Professor, Political Science
Lawrence Herzog, Ph.D., Visiting Professor
James Ingram, Ph.D., Political Science Lecturer
David Janssen, Ph.D., USP Lecturer
Grace Kim, Ethnic Studies Lecturer
Thad Kousser, Ph.D., Associate Professor, Political Science
Leslie Lewis, USP Lecturer
Jack McGrory, USP Lecturer
Susan Peerson, USP Lecturer
Denise de Alcantara Pereira, Ph.D., USP Lecturer
Wayne Raffesberger, USP Lecturer
Oscar Romo, USP Lecturer
Abraham Shragge, Ph.D., USP Lecturer
Kenneth E. Sulzer, USP Lecturer
Julie Wartell, USP Lecturer
K. Wayne Yang, Ph.D., Assistant Professor, Ethnic Studies

THE URBAN STUDIES AND PLANNING PROGRAM

The great majority of U.S. citizens, and a growing proportion of people throughout the world, live in cities. Cities provide the environment in which people work, learn, play, and make decisions together. Local governments make critical interventions in the quality of life. At the same time, the cities of the world are increasingly linked in a global economic system, making diverse contributions to the international division of labor.

Urban studies and planning (USP) is an interdisciplinary program providing students with a variety of perspectives for understanding the development, growth, and cultural landscape of cities and the communities within them. Course work introduces students to the ways different disciplines understand cities and the societies of which they are a part. Upper-division requirements educate students about the parameters within which urban choices are made.

One of the outstanding features of the Urban Studies and Planning Program is the upper-division research requirement. During a two-quarter sequence designed to be taken in the fall and winter of the senior year, all USP majors are guided through a research internship and writing process. The upper-division field studies sequence allows students to work on specific policy projects in the San Diego region. Eligible students may choose to enroll in USP 190 in the spring to write an honors thesis. The honors option is an opportunity to do advanced research and writing that builds on work already completed in the senior sequence.

Urban studies and planning is an undergraduate community of students with diverse interests and goals. After graduation some majors pursue graduate work in social science disciplines. Others pursue graduate study in public policy, law, planning, or architecture. Urban studies has always also attracted students interested in medicine and public-health issues, who continue to study in these areas at schools of medicine or public health. Urban studies and planning provides students with a solid liberal arts background for graduate study or for professional work in a number of fields. Many students find employment opportunities through their internship placement. More generally, graduates of urban studies and planning will have the analytic skills to think clearly and act creatively about the problems and prospects of the urban environment.

THE URBAN STUDIES AND PLANNING MAJOR

A bachelor of arts degree in urban studies and planning will be given to students who satisfactorily complete the general-education requirements of Muir, Revelle, Marshall, Warren, Roosevelt, or Sixth College in addition to the urban studies and planning courses described below. The undergraduate program in urban studies and planning requires a three-quarter lower-division sequence in urban studies (USP 1-2-3), Political Science 30, and twelve courses in upper-division urban studies and planning.

In accordance with campus academic regulations, courses used to satisfy the major cannot be applied toward a minor, although some overlap is allowed for double majors. All lower-division and upper-division requirements must be taken for a letter grade. A 2.0 grade point average is required in the major, and students must earn at least C– in each course used for the major. Transfer students should consult the USP major affairs advisor to determine whether courses taken elsewhere satisfy USP major requirements. No more than one special studies course, USP 198 or USP 199, will be accepted to count toward the major.

LOWER-DIVISION REQUIREMENTS
Students majoring in urban studies and planning must complete the introductory sequence: USP 1, History of U.S. Urban Communities (4) USP 2, Urban World System (4) USP 3, The City and Social Theory (4) and Political Science 30, Political Inquiry (4) (Psychology 60, Introduction to Statistics or Sociology 60, The Practice of Social Research may be substituted for Political Science 30.)

UPPER-DIVISION REQUIREMENTS
The upper-division requirements in urban studies and planning are
1. three foundation courses
2. one research methods course to be taken junior year
3. two senior sequence courses
4. six upper-division elective courses

Foundation Courses
Foundation courses provide the conceptual tools for the major. Students are to choose three of
USP 102. Urban Economics (Economics 135) (4)
USP 103. U.S. Cities in the Twentieth Century (HIUS 148) (4)
(USP 165/Hius 147, History of the American Suburb may be substituted for USP 103.)
USP 104. Ethnic Diversity and the City (Ethnic Studies 105) (4)
USP 105. Urban Sociology (Sociology 153) (4)
USP 107. Urban Politics (Political Science 102E) (4)
USP 124. Land Use Planning (4)
(USP 173, History of Urban Planning and Design may be substituted for USP 124.)

Research Methods Courses
Students are to choose one course of
USP 125. The Design of Social Research (4)
USP 129. Research Methods: Studying Racial and Ethnic Communities (Ethnic Studies 190) (4)
USP 130. Field Work in Racial and Ethnic Communities (Ethnic Studies 107) (4)
USP 191. GIS for Urban Community Planning (4)
USP 193. San Diego Community Research (4)

Senior Sequence Requirement
In their senior year, all students must complete the senior sequence: USP 186 in the fall, and USP 187 in the winter. These courses must be taken in order. The sequence develops each student’s ability to (1) critically review literature research; (2) formulate interesting research questions of their own; (3) design an original research project and investigative strategy; (4) conduct research; and (5) analyze, interpret, and write up findings. The final requirement of USP 186 is a research proposal. By the end of USP 187, each student must complete a Senior Research Project.

Because the senior sequence includes an internship, no other internship or field placement will be counted toward the major.
**Upper-Division Elective Courses**

Students are encouraged to pick an area of concentration, and choose upper-division electives listed under that cluster. Students may also define their own area of concentration and design an appropriate curriculum drawn from courses offered by USP and other related departments. USP 199, Independent Study taken for Pass/Not Pass counts for one USP upper-division elective course.

**Urban/Regional Policy and Planning**

USP 100. Introduction to Urban Planning

USP 101/Political Science 160AA. Introduction to Policy Analysis

USP 102/Economics 135. Urban Economics

USP 107/Political Science 102E. Urban Politics

USP 109/Political Science 103A. California Government and Politics

USP 110/Political Science 102J. Advanced Topics in Urban Politics

USP 111/Political Science 102JJ. Field Research in Urban Politics

USP 113/Political Science 103B. Politics and Policymaking in Los Angeles

USP 115/Political Science 103C. Politics and Policymaking in San Diego

USP 116. California Local Government: Finance and Administration

USP 120. Urban Planning, Infrastructure, and Real Estate

USP 122. Redevelopment Planning, Policymaking, and Law

USP 124. Land Use Planning

USP 133/Sociology 152. Social Inequality and Public Policy

USP 137. Housing and Community Development Policy and Practice

USP 170. Sustainable Planning

USP 171. Sustainable Development

USP 173. History of Urban Planning and Design

USP 174. Regional Governance and Planning Reconsidered

USP 180. Transportation Planning

USP 181. Public Transportation

USP 187. USP 190. Senior Honors Seminar (4)

Prerequisites for enrolling in USP 190 are a minimum 3.5 GPA in the major, senior standing, USP 186 and USP 187, and consent of instructor. Majors who plan to enroll in USP 190 must declare their intent fall quarter in USP 186.
THE MINOR PROGRAM

The urban studies and planning minor consists of seven courses in urban studies and planning, selected with the prior approval of the USP student affairs advisor. Students who wish to minor in urban studies may do so by taking any two courses from among the lower-division sequence and the upper-division foundation courses, and five upper-division courses from among those that serve the USP major. All courses must be taken for a letter grade not lower than a C-. Prerequisite: upper-division standing or consent of instructor.

EDUCATION ABROAD PROGRAM

Students are encouraged to participate in UC Education Abroad Program (EAP) or Opportunities Abroad Program (OAP) while still making progress toward completing their USP major. For more information on EAP, see the Education Abroad Program or visit http://programsabroad.ucsd.edu. Students considering this option are advised to discuss their plans with the USP student affairs advisor before going abroad.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

LOWER-DIVISION

1. History of US Urban Communities (4)
   This course charts the development of urban communities across the United States both temporally and geographically. It examines the patterns of cleavage, conflict, and consensus that have shaped urban life. Social, cultural, and economic forces will be analyzed for the roles they have played in shaping the diverse communities of America's cities.

2. Urban World System (4)
   Examines cities and the environment in a global context. Emphasizes how the world's economy and the earth's ecology are increasingly interdependent. Focuses on biophysical and socio-economic concerns rooted in the contemporary division of labor among cities, Third World industrialization, and the post-industrial transformation of U.S. cities.

3. The City and Social Theory (4)
   An introduction to the sociological study of cities, focusing on urban society in the United States. Students in the course will examine theoretical approaches to the study of urban life; social stratification in the city; urban social and cultural systems; ethnic communities, suburbia, family life in the city, religion, art, and leisure.

87. Freshman Seminar I (1)
   This Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

UPPER-DIVISION

100. Introduction to Urban Planning (4)
   This course is designed to provide an introduction to the fundamentals of urban planning. It surveys important topics in urban planning, including economic development, urban design, transportation, environmental planning, housing, and the history of urban planning.

101. Introduction to Policy Analysis (4)
   This course will explore the process by which the preferences of individuals are converted into public policy. Also included will be an examination of the complexity of policy problems, methods for designing better policies, and a review of tools used by analysts and policy makers. Prerequisite: upper-division standing or consent of instructor.

102. Urban Economics (4)
   (Same as Economics 135.) Economic analysis of why and where cities develop, problems they cause, and public policies to deal with these problems. Determination of urban land use, reasons for suburbanization. Transportation and congestion in cities, zoning, poverty and housing, urban local government. Prerequisites: Economics 1A-B or 1-2 and Mathematics 10A or 20A.

103. American Cities in the Twentieth Century (4)
   (Same as HIUS 148.) This course surveys changes in U.S. cities since about 1900. Case studies of individual cities illustrate the social, political, and environmental consequences of rapid urban expansion, as well as the ways in which "urban problems" have been understood historically. Prerequisite: upper-division standing or consent of instructor.

104. Ethnic Diversity and the City (4)
   (Same as Ethnic Studies 105.) This course will examine the city as a crucible of ethnic identity exploring both the racial and ethnic dimensions of urban life in the U.S. from the Civil War to the present. Prerequisite: upper-division standing.

105. Urban Sociology (4)
   (Same as Sociology 153.) Introduces students to the major approaches in the sociological study of cities and to what a sociological analysis can add to our understanding of urban processes. Prerequisite: upper-division standing or consent of instructor.

107. Urban Politics (4)
   (Same as Political Science 102E.) This survey course focuses upon the following six topics: the evolution of urban politics since the mid-nineteenth century; the urban fiscal crisis; federal/urban relationships; the "new" politics; urban power structure and leadership; and selected contemporary policy issues such as downtown redevelopment, poverty, and race.

109. California Government and Politics (4)
   (Same as Political Science 103A.) This survey course explores five topics: 1) the state's political history; 2) campaign finance, the mass media, and elections; 4) the California role in national politics. Prerequisite: upper-division standing.

110. Advanced Topics in Urban Politics (4)
   (Same as Political Science 102J.) Building upon the introductory urban politics course, this advanced topics course explores issues such as community power, minority empowerment, and the politics of growth. A research paper is required. Students wishing to fulfill the paper require-ment with field research should enroll in the subsequent Political Science 102JJ course offered Summer Session II. Prerequisites: upper-division standing, consent of instructor.

111. Field Research in Urban Politics (4)
   (Same as Political Science 102JJ.) To be taken with the approval of the Political Science 102J instructor, this course allows students to do original field research on topics in urban politics. This course is offered in Summer Session II subsequent to a spring 102J course. May not be used to fulfill any major or minor requirements in political science or urban studies and planning. Prerequisites: USP 110/Political Science 102J and consent of instructor.

113. Politics and Policymaking in Los Angeles (4)
   (Same as Political Science 103B.) This course examines politics and policymaking in the five-county Los Angeles region. It explores the historical development of the city,
suburbs, and region; politics, power, and governance; and major policy challenges facing the city and metropolitan area. Prerequisite: upper-division standing.

115. Politics and Policymaking in San Diego (4) (Same as Political Science 103C.) This course examines how major policy decisions are made in San Diego. In analyses of the region’s power structure (including the roles of non-governmental organizations and the media), governance systems and reform efforts, and the politics of major infrastructure projects. Prerequisite: upper-division standing or consent of instructor.

116. California Local Government: Finance and Administration (4) This course surveys public finance and administration. It focuses on California’s and America’s major metropolitan centers. Prerequisite: upper-division standing or consent of instructor.

120. Urban Planning, Infrastructure, and Real Estate (4) This course will explore the interrelationships of urban planning, public infrastructure, and real estate development. These three issues are critical to an examination of the region: the growth of California’s and America’s major metropolitan centers. Prerequisite: upper-division standing or consent of instructor.

122. Redevelopment Planning, Policymaking, and Law (4) This course examines key elements of land use, planning, and law as related to urban redevelopment. It focuses on San Diego case studies, including the Petco Park/ East Village redevelopment project and the Navel Training Center (NTC) Redevelopment Area (Liberty Station). Prerequisite: upper-division standing or consent of instructor.

124. Land Use Planning (4) Introduction to land use planning in the United States: zoning and subdivision, regulation, growth management, farmland preservation, environmental protection, and comprehensive planning. Prerequisite: upper-division standing or consent of instructor.

125. The Design of Social Research (4) Research methods are tools for improving knowledge. Beginning with a research question, students will learn to select appropriate methods for sampling, collecting, and analyzing data to improve their research activities and research results. Prerequisite: upper-division standing or consent of instructor.

129. Research Methods: Studying Racial and Ethnic Communities (4) (Same as ETHN 190.) The course offers students the basic research methods and skills to study ethnic and racial communities. The topics to be explored include human and physical geography, transportation, employment, economic structure, cultural values, housing, health, education, and intergroup relations. Prerequisite: upper-division standing or consent of instructor.

130. Field Work in Racial and Ethnic Communities (4) (Same as ETHN 107.) This is a research course examining social, economic, and political issues in ethnic and racial communities through field work. Topics are examined through a variety of research methods which may include interviews, archival research, library, and historical research. Prerequisite: upper-division standing.

132. African Americans, Religion, and the City (4) (Same as Ethnic Studies 188.) This course details the history of African-American migration to urban areas after World War I and World War II and explores the role of religion in their lives as well as the impact that their religious experiences had upon the cities in which they lived. Prerequisite: upper-division standing.

133. Social Inequality and Public Policy (4) (Same as SOC 152.) Primary focus on understanding and analyzing poverty and public policy. Analysis of how current debates and public policy initiatives mesh with alternative social scientific explanations of poverty. Prerequisite: upper-division standing.

135. Asian and Latina Immigrant Workers in the Global Economy (4) (Same as ETHN 129.) This course will explore the social, political, and economic implications of global economic restructuring, immigration policies, and welfare reform on Asian and Latina immigrant women in the United States. We will critically examine these larger social forces from the perspectives of Latina and Asian immigrant women workers, incorporating theories of race, class, and gender to provide a careful reading of the experiences of immigrant women on the global assembly line. Prerequisite: upper-division standing.

137. Housing and Community Development Policy and Practice (4) History, theory, and practice of U.S. housing and community development. Public, private, and nonprofit sectors shape urban housing and policy decisions at the federal, state, local and neighborhood levels. Prerequisite: upper-division standing.

143. The U.S. Health Care System (4) This course will provide an overview of the organization of health care within the context of the community with emphasis on the political, social, and cultural influences. It is concerned with the socio-cultural, economic, and demographic trends of health and health-related programs in the United States to include sponsorship, financing, training and utilization of health personnel. Prerequisite: upper-division standing or consent of instructor. (Offered winter quarter.)

144. Environmental and Preventive Health Issues (4) This course will analyze needs of populations, highlight current public health problems such as chronic and communicable diseases, environmental hazards of diseases, psychiatric problems and additional diseases, new social mores affecting health maintenance, consumer health awareness and health practices, special needs of economically and socially disadvantaged populations. The focus is on selected areas of public and environmental health, namely: epidemiology, preventive services in family health, communicable and chronic disease control, and occupational health. Prerequisite: upper-division standing or consent of instructor. (Offered fall quarter.)

145. Aging—Social and Health Policy Issues (4) This course will provide a brief introduction to the nature and problems of aging, with emphasis on socioeconomic and health status; determinants of priorities of social and health policies will be examined through analysis of the structure and organization of selected programs for the elderly. Field visits will constitute part of the course. Prerequisite: upper-division standing.

147. Case Studies in Health Care Programs/ Poor and Underserved Population (4) The purpose of this course is to identify the special health needs of low income underserved populations and to review their status of care, factors influencing the incidence of disease and health problems, and political and legislative measures related to access and the provision of care. Selected current programs and policies that address the health-care needs of selected underserved populations, such as working poor, inner city populations, recent immigrants, and persons with severe disabling mental illness will be studied. Offered in alternate years. Prerequisite: upper-division standing or consent of instructor. (Offered spring quarter.)

165. History of the American Suburb (4) (Same as HUS 147.) This lecture course explores the development of suburbs in America, from the early nineteenth century to the contemporary era. Topics include suburban formation, class, ethnic and racial dimensions, government influence, and social and cultural responses to suburbs. The class will explore competing theories of suburbanization as it surveys the major literature. Prerequisite: upper-division standing.

166. History of San Diego (4) Course surveys the social, political, economic, cultural and environmental history of the San Diego region from pre-colonial times to the present, with an emphasis on the urban development that has occurred since 1900. Prerequisite: upper-division standing.

167. History of New York City (4) (Same as HUS 123.) New York City breathes history. Whether it is in the music, the literature, or the architecture, the city informs our most basic conceptions of American identity. This course examines the evolution of Gotham from its colonial era to today. Prerequisite: upper-division standing or consent of instructor.

170. Sustainable Planning (4) This course will explore the different factors and processes that shape a sustainable city. Contemporary green planning techniques and values will be evaluated. The course will also discuss planning, design, and implementation of sustainable facilities that will reduce sprawl. Prerequisite: upper-division standing or consent of instructor.

171. Sustainable Development (4) Sustainable development is a concept invoked by an increasingly wide range of scholars, activists, and organizations dedicated to promoting environmentally sound approaches to economic development. This course critically examines the diverse, often contradictory, interests in sustainability. It provides a transdisciplinary overview of emergent theories and practices. Prerequisite: upper-division standing.

173. History of Urban Planning and Design (4) The analysis of the evolution of city designs over time; study of the forces that influence the form and content of a city: why cities change; comparison of urban planning and architecture in Europe and the United States. Prerequisite: upper-division standing.

174. Regional Governance and Planning Reconsidered (4) Regional planning and local governance in California, focusing upon San Diego. Current system, the state/local relationship, and the incentives and disincentives for restructuring regional and local governance and planning. Prerequisite: upper-division standing.

177. Urban Design Practicum (4) This course is designed to introduce the student to the theory and practice of urban design, the form of the built environment, and how it is created. There is an emphasis on the development within a larger urban context. Prerequisite: upper-division standing or consent of instructor.

178. Urban Design for Redevelopment (4) This course addresses inner-city and suburban redevelopment focusing on urban design, and ethnic issues using advanced physical planning and urban design methods. Also included will be the environmental-impact assessments of redevelopment projects. Prerequisite: upper-division standing.

179. Urban Design, Theory, and Practice (4) Roles of the urban designer; preparing schematic proposals and performance statements, identifying opportunities for and constraints on designers. Each student will prepare a practical exercise in urban design using various urban design methods. Prerequisite: upper-division standing.

180. Transportation Planning (4) Introduction to the history and current state of urban transportation planning, including the relationship between transportation and urban form; role of automobile, mass transit, and alternative modes; methods for transportation systems analysis; decision-making, regulatory, and financing mechanisms; and public attitudes. Prerequisite: upper-division standing.

181. Public Transportation (4) Livable cities rely on balanced transportation systems that can mitigate the negative impacts of a car-oriented environment and society. This course will explore the role of public transit in creating a balanced transportation system. A variety of public transportation systems will be analyzed. Prerequisite: upper-division standing or consent of instructor.
186. Senior Sequence Research Proposal (6)
Introduces students to the theory and practice of social research including the challenges of writing a scholarly proposal. Students are required to complete 100 hours of an internship experience while critically examining the relations between social science and society. Prerequisites: upper-division standing, USP major.

187. Senior Sequence Research Project (6)
An intensive research, internship, and writing experience that culminates in an original senior research project. Students learn about the theoretical, ethical, and technical challenges of scholarly research and publication. Prerequisite: USP 186.

190. Senior Honors Seminar (4)
Each student enrolled will be required to write an honors essay, a substantial research paper on a current urban policy issue, under the supervision of a member of the faculty. Most often the essay will be based on their previous fieldwork courses and internship. This essay and other written exercises, as well as class participation, will be the basis of the final grade for the course. The seminar will rotate from year to year among the faculty in urban studies and planning. Prerequisites: USP 186, USP 187, major GPA 3.5, and permission of instructor.

191. GIS for Urban and Community Planning (4)
Introduction to Geographic Information Systems and using GIS to make decisions: acquiring data and organizing data in useful formats, demographic mapping, geocoding. Selected exercises examine crime data, political campaigns, banking and environmental planning, patterns of bank lending and finance. Prerequisites: upper-division standing, USP major.

193. San Diego Community Research (4)
Using the San Diego region as a case study, students will be introduced to the process of collecting, evaluating, and presenting urban and regional data using a variety of methods, including aggregate data analysis, historical research, and ethnography. Prerequisite: upper-division standing.

(Same as Cognitive Science 194, Communication 194, Earth Science 194, History 193, Political Science 194, Sociology E/194.) Course attached to six-unit internship taken by students participating in the UCDC program. Involves weekly seminar meetings with faculty and teaching assistant and a substantial research paper. Prerequisites: department approval and participating in UCDC program.

195. Teaching Apprentice–Undergraduate (2–4)
Introduction to teaching activities associated with course. Responsibilities include preparing reading materials assigned by the instructor, attending course lectures, meeting at least one hour per week with the instructor, assisting instructor in grading, and preparing a summary report to the instructor. Prerequisites: consent of instructor and an A in the course in which the student plans to assist.

198. Directed Group Study (2–4)
Directed group study on a topic or in a field not included in the regular departmental curriculum by special arrangement with a faculty member. Prerequisites: upper-division standing and consent of instructor.

199. Independent Study (2–4)
Reading and research programs and field-study projects to be arranged between student and instructor, depending on the student's needs and the instructor's advice in terms of these needs. Prerequisites: upper-division standing and consent of instructor.

Brett Stalbaum, M.F.A.

LECTURER WITH POTENTIAL FOR SECURITY OF EMPLOYMENT
Michael Triglio, M.F.A.
OFFICE: 216 Mandeville Center for the Arts
http://visarts.ucsd.edu

The Department of Visual Arts offers courses in painting, drawing, sculpture, performance, computing in the arts, film, video, photography, and art history/criticism (including that of film and video). A bachelor's degree from this department provides students with a solid liberal arts background and is preparatory training for careers as artists, art historians, filmmakers, video artists, photographers, digital media artists, and art critics. It also provides students the initial skills required for teaching and work in museums, television, and the commercial film, photography, and internet industries.

By its composition, the Department of Visual Arts is biased in the direction of actively producing artists and critics whose presence at the center of the contemporary art world necessitates reconsideration and reevaluation of artistic productions, their information structure, and significance. Consequently, a flexible introductory program of historically based courses has been devised mainly to provide the student an opportunity to concentrate on areas involving significantly different aesthetic and communication structures. A series of studio courses, in which painting and sculpture are included, is presented to bring the student into direct contact with the real contingencies compelling redistribution of aesthetic attitudes and reinterpretation of genres. Because of the exploratory nature of our program, the department is prepared to emphasize new media that would traditionally be considered to have scant relation to the visual arts. Thus, courses in theatrical events, linguistic structures, etc., are provided. In this context, theoretical courses with a media orientation, as in film, video, photography, or computing, are also offered.

The Department of Visual Arts is located in the Mandeville Center for the Arts. In addition, the master of fine arts program office, as well as faculty and graduate students' studios/research spaces are located in the Visual Arts Facility sited in Sixth College. Ph.D. student offices are located in the Literature Building.

Additional facilities and equipment are available to undergraduates in both the Mandeville Center and at the campuswide Media Center, providing the opportunity to study painting, drawing, photography, computing in the arts, 16mm film, performance, sculpture, and video. Facilities at the Media Center include portable video recording equipment, video and audio editing suites, non-linear editing, and production studios. Additional film equipment available includes an animation stand, optical printer, two sound-mixing studios, and numerous film editing suites. Courses in computing in the arts take place in the Silicon Graphics/Mac/NT lab located at the Visual Arts Facility, the INTEL-shared lab in the Applied Physics and Mathematics building, and a dedicated ICAM lab in building 201 University Center.

The University Art Gallery displays a continually changing series of exhibitions, and the Mandeville Annex Gallery, located on the lower level, is directed by visual arts undergraduate students. A gallery and performance space, located in the Visual Arts Facility, are directed by graduate students.

THE UNDERGRADUATE PROGRAM

COLLEGE REQUIREMENTS

The Department of Visual Arts teaches courses applicable toward the Muir, Sixth, and Warren general-education requirements; the Marshall humanities requirement, the Eleanor Roosevelt and Revelle fine arts requirements. Optional minors may be taken within any college.

MINOR IN VISUAL ARTS

The Department of Visual Arts offers minors in seven areas of study: studio painting/drawing/sculpture, photography, computing, art history, history and criticism of film and video, digital video and film production, and ICAM. A minor consists of seven specific courses, of which at least five must be upper-division. Because the requirements differ for each minor, prospective visual arts minors should consult with the departmental advisor for a complete list of appropriate classes acceptable for the minor.

Students are advised to begin their program in the second year; otherwise, they cannot be guaranteed enough time to complete the classes required for a minor.

Art History (VA26)

Required Courses
20. Introduction to Art History
   Choose one from
   21A. Introduction to Art of the Americas or Africa and Oceania
   21B. Introduction to Asian Art
   Choose one course from three of the five Distribution Areas A–E.
   Please refer to the Art History major for the course options in each area:
   • European Pre-Modern: Ancient and Medieval
   • European early Modern: Renaissance and Baroque
   • Modern and Contemporary
   • Arts of the Americas
   • Arts of Asia
   Choose two additional Art History courses from any area A–E.

Studio Minor (VA28)

Required Courses
22. Formations of Modern Art
111. Structure of Art
   Choose one course from
   1. Introduction to Art-Making: Two-Dimensional Practices
   2. Introduction to Art-Making: Motion- and Time-Based Art
   3. Introduction to Art-Making: Three-Dimensional Practices
   Choose four courses from:
   104A. Performing the Self
   104BN. Verbal Performance
   104CN. Personal Narrative
   105A. Drawing: Representing the Subject
   105B. Drawing: Practices and Genre
   105C. Drawing: Portfolio Projects
   105D. Aesthetics in Chinese Calligraphy
   105E. Chinese Calligraphy Installation
   106A. Painting: Image Making
   106B. Painting: Practices and Genre
   106C. Painting: Portfolio Projects
   107A. Sculpture: Making the Object
   107B. Sculpture: Practices and Genre
   107CN. Sculpture: Portfolio Projects

2010-2011 UC SAN DIEGO GENERAL CATALOG • VISUAL ARTS 1
ICAM: Interdisciplinary Computing and the Arts (VA29)

Required Courses
ICAM 40/VIS 40. Introduction to Computing in the Arts
ICAM 110. Computer Arts: Current Practice
ICAM 150/VIS 159. History of Art and Technology
Choose one from
1. Introduction to Art-Making: Two-Dimensional Practices
2. Introduction to Art-Making: Motion and Time-Based Art
3. Introduction to Art-Making: Three-Dimensional Practices
MUS 4. Introduction to Western Music
Choose one from
ICAM 101/VIS 140. Digital Imaging: Image and Interactivity
ICAM 103/MUS 170. Musical Acoustics
Choose two from
ICAM 102/VIS 145A. Time and Process Based Digital Media I
145B. Time and Process Based Digital Media II
ICAM 120. Virtual Environments
ICAM 130/VIS 149. Seminar in Contemporary Computer Topics
MUS 171. Computer Music I
MUS 172. Computer Music II
MUS 176. Music Technology Seminar
132. Installation Production and Studio
141A. Computer Programming for the Arts I
141B. Computer Programming for the Arts II
147A. Electronic Technologies for Art I
147B. Electronic Technologies for Art II

Computing (MO53)

Required Courses
22. Formations of Modern Art
VIS 40/ICAM 40. Introduction to Computing in the Arts
111. Structure of Art
VIS 159/ICAM 150. History of Art and Technology
Choose three upper-division Computing courses:
ICAM 101/VIS 140. Digital Imaging: Image and Interactivity
ICAM 102/VIS 145A. Time and Process Based Digital Media I
145B. Time and Process Based Digital Media II
147A. Electronic Technologies for Art I
147B. Electronic Technologies for Art II

Photography (MO54)

Required courses
22. Formations of Modern Art
60. Introduction to Digital Photography
111. Structure of Art
158. Histories of Photography
VIS 159/ICAM 150. History of Art and Technology
164. Photographic Strategies
165. Camera Techniques

History and Criticism of Film and Video (MO72)

Required courses
70N. Introduction to Media
84. History of Film
111. Structure of Art
Choose four upper-division courses in the history and/or criticism of film and video. (Courses numbered 150–157 except 156N)
*Five unique upper-division courses in media history/criticism are required if you are also completing a Visual Arts major or minor.

Digital Video and Film Production (MO71)

Required courses
70N. Introduction to Media
84. History of Film
111. Structure of Art
174. Media Sketchbook
Choose one upper-division course in digital video and film production listed below:
171. Digital Cinema: Theory and Production
175. Editing: Theory and Production
176. 16 mm Filmmaking
177. Scripting Strategies
178. Sound: Theory and Production
Choose two upper-division courses in the history and/or criticism of film and video listed below:
150. History of Silent Cinema
151. History of Experimental Film
152. Film in Social Context
153. The Genre Series
154. Hard Look at the Movies
155. The Director Series
157. Video History and Criticism
1945. Fantasy in Film
*Five unique upper-division courses in media are required if any of these courses overlap with your major or minor.
**Students may not major in Visual Arts Media (VA27) and minor in Digital Video and Film Production.

EDUCATION ABROAD PROGRAM

Students are often able to participate in the UC Education Abroad Program (EAP) and UC San Diego’s Opportunities Abroad Program (OAP) while still making progress toward completing their major. Financial aid is applicable to study abroad and special study abroad scholarships are readily available. Students considering this option should discuss their plans with an Education Abroad advisor before going abroad, and courses taken abroad must be approved by the departmental faculty advisor. More information on EAP/OAP is detailed in the Education Abroad Program of the UC San Diego General Catalog or on their Web site http://programsabroad.ucsd.edu/pao/. Interested students should contact the Programs Abroad Office in the International Center.

RESIDENCY REQUIREMENTS

A minimum of two-thirds of the course work completed for the major must be taken at UCSD. Students who transfer to UCSD in their second or third year may petition to substitute courses taken at other colleges and universities for major requirements.

Visual Arts 111, Structure of Art, must be taken at UCSD by all students, including transfer students, in the art history, media, and studio majors.

HONORS PROGRAMS

The department offers honors programs in art history, in media, and in studio for outstanding students.

The art history honors program will provide outstanding students with pre-professional experience. It consists of an issue-oriented seminar followed by a directed group study and will result in an exhibition with catalogue, a scholarly conference with a mock publication and/or series of research papers. Students who meet the criteria may, with permission of the art history faculty advisor or the art history honors seminar instructor, enroll in the art history honors program during the last quarter of their junior year or as a senior. This program is open to juniors and seniors who meet eligibility requirements: minimum major GPA of 3.5 (3.3 overall), completion of all lower-division art history requirements, completion of all upper-division art history distribution requirements, and completion of Art Historical Methods (VIS 112) and at least one additional art history seminar. The level of distinction will be determined by the faculty committee on the basis of work in the honors seminar and on the research project.

The media honors program will help students develop high-quality professional portfolios. The honors thesis project is a sequence of individual studies that runs the length of an academic year to provide sufficient time for ideas to develop and critically aware work to be produced. Students may agree to work with different faculty advisors each term or may engage a single advisor for the year. To be eligible for the honors thesis sequence, students must have at least a 3.5 GPA in the major and have approval of all the advisors with whom they will work. Qualified students may begin their sequence the last quarter of their junior year or during their senior year. At the end of the third quarter, all involved media faculty will meet to critique the overall quality of the final thesis work to determine level of distinction.

Through exhibition, verbal and written presentations and course work, the studio honors program is intended to give the student as strong a technical, critical, and theoretical base as possible. The program is open to juniors and seniors with a minimum 3.5 GPA in the major (3.0 overall), who have completed all lower-division studio requirements and all upper-division groups I, II, III, and IV (subgroup A) requirements.

Students interested in participating in an honors program should consult with the departmental advisor.

DOUBLE MAJOR WITHIN THE DEPARTMENT

There are three double majors within the Department of Visual Arts: Art History/Theory/Criticism paired with either studio, media, or ICAM. Students interested in a double major within the department must have at least ten upper-division...
courses that are unique to each departmental major and the remaining courses may overlap with other major requirements. Students should consult with the departmental advisor for additional information.

MAJOR REQUIREMENTS

Twenty courses are required in studio, media, and ICAM and eighteen courses in art history for the attainment of the bachelor of arts degree. A minimum of twelve of these courses must be upper-division, however, some majors may require more upper-division courses.

All courses taken to satisfy major requirements must be taken for a letter grade, and only grades of C- or better will be accepted in the visual arts major.

STUDIO MAJOR

The studio major is aimed at producing a theoretically based, highly productive group of artists. Lower-division courses are structured to expose students to a variety of ideas in and about the visual arts. Introductory skills are taught, but their development will occur at the upper-division level in conjunction with the student's increasing awareness of the range of theoretical possibilities in the field. The curriculum includes courses in drawing, painting, sculpture, performance, photography, video, 16mm film, many offerings in art history/criticism, as well as new courses in digital imaging and electronics.

Group I: Lower-Division

Foundation Level

Five courses required.
1. Introduction to Art Making: Two-Dimensional Practices
2. Introduction to Art Making: Motion and Time Based Art
3. Introduction to Art Making: Three-Dimensional Practices
4. Formations of Modern Art
5. Introduction to Art History
6. Introduction to the Arts of the Americas or Africa and Oceania
7. History of Film

Group II: Upper-Division

Entry Level

Five courses required.
8. Structure of Art
9. Choose four from
10. Introduction to Computing in the Arts
11. Introduction to Digital Photography
12. Introduction to Media
13. Performing the Self
14. Drawing: Representing the Subject
15. Painting: Image Making
16. Sculpture: Making the Object

Note: Required for Visual Arts studio, media, and art history majors.

Group III: Upper-Division

Intermediate Level

Two courses required.

104BN. Verbal Performance
105B. Drawing: Practices and Genre
105D. The Aesthetics of Chinese Calligraphy
106B. Painting: Practices and Genre
107B. Sculpture: Practices and Genre
140/ICAM 101. Digital Imaging: Image and Interactivity
147A. Electronic Technologies for the Art I

Group IV: Upper-Division

Advanced Level

Five courses required.

Group A

Choose two from

104CN. Personal Narrative
105C. Drawing: Portfolio Projects
105E. Chinese Calligraphy as Installation
106C. Painting: Portfolio Projects
107CN. Sculpture: Portfolio Projects
147B. Electronic Technologies for the Art II

Group B

Group A must be completed before Group B can be taken.

Choose three from

108. Advanced Projects in Art
110A. Contemporary Issues and Practices
110B. New Genres/New and Old Technologies
110C. Proposals, Plans, Presentations
110D. Visual Narrative/Tableau
110E. Art in Public Places/Site Specific Art
110F. Installation: Cross-Disciplinary Projects
110G. The Natural and Altered Environment
110H. Image and Text Art
110I. Performing for the Camera
110J. Ritual Performance
110K. Installation Performance
130. Special Projects in Visual Arts
132. Installation Production and Studio

Group V: Upper-Division

Non-Studio

Three courses required.

Upper-division art history, film history, and theory/criticism courses such as
113CN. History of Criticism III: Contemporary (1950–Present)
117B. Theories of Representation
117I. Western and Non-Western Rituals and Ceremonies
124CN. Nineteenth-Century Art
125A. Twentieth-Century Art
125BN. Contemporary Art
152. Film in Social Context

*VIS 40, 60, or 70N can be taken to fulfill Group II entry level studio requirements, but will not count toward the fifteen upper-division courses needed to fulfill the major requirements.

Group I—Required Courses

Two courses.

Honors Program in Studio

110M. Studio Honors I
110N. Studio Honors II

The Studio Honors I and the attached Studio Honors II count as one course towards the fulfillment of a Group IV requirement.

ART HISTORY/THEORY/CRITICISM MAJOR

The major in art history, theory, and criticism is designed both for students who desire a broadly based education in the humanities and for those who plan to pursue a career in an art-related profession. In both cases, the foundation for study is proficiency in the languages of artistic expression. Through the study of art history, students learn to treat works of art as manifestations of human belief, thought, and experience in Western and non-Western societies from prehistory to the present day. Courses in criticism review the theoretical approaches that are used to understand artistic achievement. By combining art historical and critical study, the program promotes in the student an awareness of the cultural traditions that have shaped his or her intellectual outlook and provides a framework for informed judgment on the crucial issues of meaning and expression in contemporary society.

Majors are encouraged to take relevant courses in allied disciplines such as history, communication, anthropology, and literature, and in such area programs as classics and Italian studies. In addition, students who plan to apply to graduate schools are strongly advised to develop proficiency in one or more foreign languages, as is dictated by their area of specialization.

FOUNDATION LEVEL—Lower-Division

Five courses required.

20. Introduction to Art History
22. Formations of Modern Art
23. Information Technologies in Art History

Choose one from

21A. Introduction to the Art of the Americas or Africa and Oceania
21B. Introduction to Asian Art

13. Information Technologies in Art History

Note: VIS 23 should be completed by the end of the sophomore year or taken the first time it is offered after a junior declares an art history major or transfers into the program. VIS 23 is a prerequisite for VIS 112.

ADVANCED LEVEL—Upper-Division

Thirteen courses required.

1154. Hard Look at the Movies
1157. Video History and Criticism
1158. Histories of Photography
1159/ICAM 150. History of Art and Technology
1194S. Fantasy in Film

*seminar
These two courses are required for all art history and criticism majors:

111. Structure of Art

112. Art Historical Methods

Note: Majors must complete VIS 112 by the end of their junior year and are strongly advised to do so earlier.

*Required of Visual Arts art history, media, and studio majors.

GROUP II—Distributional Requirement

Six courses. Choose one course from each of the following areas:

A. European Pre-Modern: Ancient and Medieval

120A. Greek Art
120B. Roman Art
120C. Late Antique Art
120D. Prehistoric Art
121AN. The Idea of Medieval Art
121B. Castles, Cathedrals, and Cities
121D. The Illuminated Manuscript in the Middle Ages
128A. Topics in Pre-Modern Art History
129A. * Seminar in Pre-Modern Art History

B. European Early Modern: Renaissance and Baroque

122AN. Renaissance Art
122CN. Defining High Renaissance Art
122D. Michelangelo
122GS. The City in Italy
122F. Leonardo's La Gioconda
123AN. Between Spirit and Flesh: Northern Art of the Early Renaissance
123BN. * Jan van Eyck
124AN. Baroque Art
128B. Topics in Early Modern Art History
129B. * Seminar in Early Modern Art History

C. Modern and Contemporary

124BN. Art and the Enlightenment
124CN. Nineteenth Century Art
125A. Twentieth Century Art
125BN. * Contemporary Art
125DN. * Marcel Duchamp
125F. Latin American Film
128C. Topics in Modern Art History
129C. * Seminar in Modern Art History
158. Histories of Photography
159/ICAM 150. History of Art and Technology

D. Arts of the Americas

126AN. Pre-Columbian Art of Ancient Mexico and Central America
126BN. The Art and Civilization of the Ancient Maya
126C. * Problems in Mesoamerican Art History
126D. * Problems in Ancient Maya Iconography and Inscriptions
126HN. Pacific Coast American Indian Art
126I. Southwest American Indian Art
126J. African and Afro-American Art
126K. Oceanic Art
126L. Latin American Art, 1890–1950
126Q. Latin American Art, 1950–Present
126R. Latin American Photography
128D. Topics in Art History of the Americas
129D. * Seminar in Art History of the Americas

E. Arts of Asia

127B. Arts of China
127C. Arts of Modern China
127D. * Early Chinese Painting
127E. * Later Chinese Painting
127F. * Japanese Buddhist Art
127G. * Twentieth-Century Chinese Art
127H. Twentieth-Century Art in China and Japan
127P. Arts of Japan
127Q. * Japanese Paintings and Prints
128E. Topics in Art History of Asia
129E. * Seminar in Art History of Asia

F. Theory

113BN. * History of Criticism II: Early Twentieth Century (1900–1950)
113CN. * History of Criticism III: Contemporary (1950–Present)
117A. * Narrative Structures
117B. * Theories of Representation
117E. * Problems in Ethnoaesthetics
117F. Theorizing the Americas
117G. Critical Visual Theory and Practice since 1980
117H. Constructing Gender in Fifth-Century BC Athens and Eighteenth-Century France
117L. * Western and Non-Western Rituals and Ceremonies
128F. Topics in Art Theory and Criticism
129F. * Seminar in Art Theory and Criticism

*seminar

Students must take at least three upper-division seminars in addition to VIS 112. These three additional seminars may come from any area and be taken in fulfillment of the distribution requirements or as open electives.

In accordance with standard university policy, the department requires that students take two-thirds of the upper-division courses in their major at UCSD. The distribution requirement must be fulfilled with courses taken at UCSD. Courses taken abroad or at other U.S. institutions do not count towards, and will not be substituted for, the six-course distribution requirement.

GROUP III—Electives

Five courses.

Students are required to take five upper-division courses in addition to VIS 111, VIS 112, and those used to fulfill the distribution requirements. At least three of these must be courses in art history or theory. For the remaining two, choose from the following:

- any upper-division art history course(s) in history or theory
- any upper-division course(s) in media history and criticism (e.g., VIS 150, 151, 152, 153, 154, 155, 156N, 157);
  - up to two upper-division courses in studio or media production; or
  - with permission of art history faculty advisor, one upper-division course in a related department or program such as anthropology, history, literature, or critical gender studies.

- two two-unit curatorial practices workshop courses (VIS 128P) count as one course towards the fulfillment of an elective.

Honors Program in Art History

129G. * Art History Honors Seminar
129H. * Art History Honors Directed Group Study

*seminar

The completion of both the Art History Honors Seminar and the Art History Honors Directed Group Study counts as one course towards the fulfillment of the Group III requirement.

Students who meet the criteria may, with permission of the art history faculty advisor or the Art History Honors Seminar instructor, enroll in the Art History Honors Program during the last quarter of their junior year or as a senior. This program is open to juniors and seniors who meet eligibility requirements. Please consult with the departmental advisor for these requirements.

MEDIA MAJOR

With a visual arts foundation, the program is designed for students who want to become creative videomakers, filmmakers, photographers, and computer artists, encouraging the hybridity of media. The curriculum combines hands-on experience of making with practical and theoretical criticism, provides historical, social, and aesthetic backgrounds for the understanding of modern media, and emphasizes creativity, versatility, and intelligence over technical specializations. It should allow students to go on to more specialized graduate programs in the media arts, to seek careers in film, television, computing, or photography, or to develop as independent artists. All media majors should see the Visual Arts Undergraduate advisor upon entrance into UCSD.

FOUNDATION LEVEL—Lower-Division

Six courses required.

Group A

1 or 2 or 3. Introduction to Art Making
22. Formations of Modern Art
84. History of Film

Group B

40/ICAM 40. Introduction to Computing in the Arts
670. Introduction to Digital Photography
70N. Introduction to Media

All six courses listed under Groups A and B above are required. VIS 70N is prerequisite for use of the Media Center facilities; no further production courses may be taken until VIS 70N is completed.

INTERMEDIATE LEVEL—Upper-Division

Nine courses required: six from Group A and three from Group B.

Group A

Two courses required. Required courses for all emphases:

111. Structure of Art
174. Media Sketchbook
Choose One Emphasis
Four courses required.

Computing Emphasis
Three courses plus one from photography or video and digital cinema.
140/ICAM 101. Digital Imaging: Image and Interactivity
145A/ICAM 102. Time- and Process-Based Digital Media I
147A. Electronic Technologies for Art I

Photography Emphasis
Two courses plus two from computing or video and digital cinema.
164. Photographic Strategies
165. Camera Techniques

Video and Digital Cinema Emphasis
Three courses plus one from computing or photography.
171. Digital Cinema—Theory and Production
175. Editing—Theory and Production
176. 16mm Filmmaking
177. Scripting Strategies
178. Sound—Theory and Production

GROUP B—History, Criticism, and Theory
Three courses required.
113BN. History of Criticism II: Early Twentieth Century (1900–1950)
113CN. History of Criticism III: Contemporary (1950–Present)
117B. Theories of Representation
150. History of Silent Cinema
151. History of Experimental Film
152. Film in Social Context
153. The Genre Series
154. Hard Look at the Movies
155. The Director Series
156N. Special Problems in Film History and Theory
157. Video History and Criticism
158. Histories of Photography
159/ICAM 150. History of Art and Technology

Note: Any courses in the art history distributional requirement may be taken to fulfill the Group B requirement.
VIS 158 is required for all students with a photography emphasis.
VIS 159/ICAM150 is required for all students with a computing emphasis.

ADVANCED LEVEL—Upper Division
Five courses required.
180A. Documentary Evidence and the Construction of Authenticity in Current Media Practices
180B. Fiction and Allegory in Current Media Practices
183A. Strategies of Self
183B. Strategies of Alterity

Three of the above are required for the photography and video and digital cinema emphases and two are required for the computing emphasis. The A and B portion of VIS 180 and VIS 183 courses cannot be taken concurrently.

Electives
Three courses required.

Computing Emphasis
Three courses required.
145B. Time- and Process-Based Digital Media II
147B. Electronic Technologies for Art II
149/ICAM 130. Seminar in Contemporary Computer Topics

Photography Electives
Two courses required.
166. Advanced Camera Techniques
167. Social Engagement in Photography
168. Color Techniques in Photography

Video and Digital Cinema Electives
Two of the courses below required.
181. Sound and Lighting
182. Advanced Editing
184. Advanced Scripting

• to give students necessary technical, theoretical, and historical backgrounds so they can contribute to the development of new aesthetics for computer media
• to prepare students to mediate between the worlds of computer science and technology, the arts, and the culture at large by being equally proficient with computing and cultural concepts
• to give students sufficient understanding of the trajectories of development in computing so they can anticipate and work with the emerging trends, rather than being locked in particular software currently available on the market

Lower-Division
Eight courses required.

Arts
Four courses required.
MUS 4. Introduction to Western Music
VIS 1. Introduction to Art-Making: Two-dimensional Practices
VIS 22F. Formations of Modern Art
VIS 77N. Introduction to Media

Computer Science
One course required.
CSE 11. Introduction to Computer Science: JAVA

Note: CSE 11 is an accelerated course in the JAVA programming language. CSE 8A/BL and 8B, which cover the same material in a non-accelerated format, may be substituted.

Mathematics
Two courses required.
Math. 20A. Calculus for Science and Engineering
Math. 20B. Calculus for Science and Engineering

Note: MATH 20A and 20B are accelerated calculus courses for Science and Engineering. MATH 10A, 10B, and 10C, which cover similar material in a non-accelerated format, may be substituted.

Computing and the Arts
One course required.
ICAM 40/VIS 40. Introduction to Computing in the Arts

Upper-Division
Twelve courses required.

Survey
One course required.
ICAM 110. Computing in the Arts: Current Practice

Foundation
Three courses required.
ICAM 101/VIS 140. Digital Imaging: Image and Interactivity
ICAM 102/VIS 145A. Time- and Process-Based Digital Media I
ICAM 103/MUS 170. Musical Acoustics

Advanced
Four courses required.
Choose three from
ICAM 120. Virtual Environments
ICAM 130/VIS 149. Seminar in Contemporary Computer Topics
VIS 109. Advanced Projects in Media
VIS 151. Special Projects in Media
VIS 132. Installation Production and Studio
VIS 141A. Computer Programming for the Arts I
VIS 147A. Electronic Technologies for Art I
VIS 174. Media Sketchbook
MUS 171. Computer Music I
MUS 173. Audio Production: Mixing and Editing
MUS 174A-B-C. Recording/MIDI Studio Techniques
MUS 175. Musical Psychoacoustics
MUS 176. Music Technology Seminar

Choose one from
VIS 141B. Computer Programming for the Arts II
VIS 145B. Time- and Process-Based Digital Media II
VIS 147B. Electronic Technologies for Art II
MUS 172. Computer Music II

Theory and History
Two courses required.
ICAM 150/VIS 159. History of Art and Technology and one of
VIS 150. History of Silent Cinema
VIS 151. History of the Experimental Film
VIS 152. Film in Social Context
VIS 153. The Genre Series
VIS 154. Hard Look at the Movies
VIS 155. The Director Series
VIS 156N. Special Problems in Film History and Theory
VIS 157. Video History and Criticism
VIS 158. Histories of Photography
VIS 194. Fantasy in Film
MUS 111. Topics/World Music Traditions
MUS 114. Music of the Twentieth Century

Senior Project
Two courses required.
ICAM 160A. Senior Project in Computer Arts I
ICAM 160B. Senior Project in Computer Arts II

Note: Enrollment in production courses is limited to two per quarter. Production courses are numbered VIS 109, 131, 132, 140/ICAM 101, 141A-B, 145A/ICAM 102, 145B, 147A-B, 174. ICAM 120, 160A-B.

MASTER OF FINE ARTS PROGRAM

The program is designed to provide intensive professional training for the student who proposes to pursue a career within the field of art—including art making, criticism, and theory. The scope of the UC San Diego program includes painting, sculpture, performance, installation art, public art, photography, film, video, and digital media. The program is unique in that the course of study provides for and encourages student mobility within this range of traditional and media-based components. It also offers opportunities for collaborative work.

The educational path of students is focused around their particular interests in art. The department seeks to provide an integrated and comprehensive introduction to the possibilities of contemporary art production, the intellectual structures that underlie them, and the "world view" which they entail. Art-making activities are considered serious intellectual endeavors, and all students in the program find themselves confronted by the need to develop their intellectual and critical abilities in working out their artistic positions. A body of theory-oriented courses is required. Therefore, we have no craft-oriented programs or facilities; nor do we have any courses in art education or art therapy. The courses offered are intended to develop in the student a coherent and informed understanding of the past and recent developments in art and art theory. The program also provides for establishing a confident grasp of contemporary technological possibilities, including those involved in film, video, photography, and the electronic media.

The program includes formal education in lecture and seminar courses as well as study groups, studio meetings, independent studies, and quarterly departmental critiques. Course work is intended to place art making in critical and intellectual context but doesn't underestimate the central importance of the student's own work. In fact, this aspect of the student's activity is expected to be self-motivated and forms the core around which the program of study operates and makes sense.

No two students will necessarily follow the same path through the degree program, and the constitution of individual programs will depend upon the analysis of their individual needs and interests, worked out by students in collaboration with their individual faculty advisors.

Admission Requirements

Grade-Point Average—An overall GPA of 3.00 and a 3.50 in a student's undergraduate major is required.
Art History—Students are expected to have had at least four semester courses or six quarter courses in art history and/or film history/criticism at the undergraduate level. Those who have a broader art history background will have a better chance of being awarded teaching assistantships. Students without this requirement can be admitted, but they may be expected to make up the six courses in excess of the seventy-two units required for the degree. If there are questions concerning this requirement, check with the department student affairs advisor.
Statement—Students are required to submit an essay of one-to-three pages on the direction of their work and its relationship to contemporary art. This essay should be critical in nature, refer explicitly to the student's own work, and may refer to other artists, recent events in art history, and issues in domains other than art that have bearing on the student's process, thought, and work.
Work—Students are asked to submit documentation of their best work and upload images and files into our online portfolio Web site. Access to the website is given once a UCSD online application has been filed through the Office of Graduate Studies. A printed catalog, this would include a critical essay of approximately 1,500 words.

Please note that no application will be processed until all required information has been received. Students should submit applications with the application fee to the graduate admissions office using the UCSD online application on or before Thursday, January 18, 2011. Official transcripts should be sent directly to the department and postmarked no later than January 18, 2011. The statement of purpose and letters of recommendation must be sent electronically through the online application.

REQUIREMENTS FOR THE DEGREE

The M.F.A. is considered a terminal degree in studio work, and is a two- to three-year program. The following requirements must be completed in order to receive the M.F.A.:

First Year Review—This review takes place in the third quarter in residence. Students make a formal presentation of their work to a faculty committee; this includes a position paper and an oral examination. This presentation is considered a departmental examination, and if at its conclusion the student's work is judged to be inadequate, the student may be dismissed regardless of GPA, or may be reviewed again in the fourth quarter.

Seventy-two units of course work, including a four-unit apprentice teaching course, are required. Students may select sixteen of these units (four courses) from upper-division undergraduate course offerings. (See listings in this catalog.) There are six required Visual Arts core seminars:

• Contemporary Critical Issues (VIS 201)
• Art Practice Seminar (VIS 202)
• Working Critique Seminar (VIS 203)
• Introduction to Graduate Studies in Art Practice (VIS 205)
• one course in either Art Practice/Theory group or the Art History/Theory/Criticism group
• one additional seminar in Art Practice/Theory group (VIS 210-219)

Specific information on other course distribution requirements can be obtained from the department. One additional graduate course is required and must be taken in another department.

Students who remain registered in the third (optional) year must average one graduate course per quarter.

THE M.F.A. FINAL PRESENTATION

Presentation of Work—During the last quarter in residence, each student is required to present to the public a coherent exhibition or screening of his or her work.

Oral Examination—A committee of three Department of Visual Arts faculty members and one faculty member from another department will administer an oral examination to each student covering the student's work and its relationship to the field of art.

Thesis—Students are required to submit some form of written work for the M.F.A. degree. Four options are available:
1. Catalog—The student would design and have printed an actual catalog. This would include a critical essay of approximately 1,500 words.
2. Critical paper—The student would write a critical paper of 3,000 words analyzing his or her process and the relationship of his or her work to recent art history, with references to contemporary styles and specific artists.
3. Analytical essay on some phase of art—Students who have focused on both art production and art
the histories and theoretical assumptions of the engaging art objects and practices and what are disseminated? What are the alternative modes of and contexts (social, intellectual, institutional, and societies, and with reference to categories such as artistic identities constructed across distinct epochspast, in the urbanized West and in other cultures, in doctoral student in art and media history, whatever seminars address the core questions about artworks Categories/Constructs under the heading recent developments in the field in the seminars time, place, and media specific seminars listed under New Visions Theories/...

4. Critical thesis—Students whose emphasis is essentially critical and who do not present an M.F.A. exhibition would write a forty- to fifty-page thesis—the topic to be decided by the student and his or her advisor.

**ADMISSION**

Applicants may apply to the Ph.D. program only. The policy of UCSD is to admit in the fall quarter only. Applications for admission must be postmarked January and selections will be made by April 1. For concentrations under which the M.A. is granted, see below. Prior to matriculation, students must have obtained a bachelor’s or master’s degree in art history, art practice, or another field approved by the departmental committee on graduate studies, such as (but not limited to) history, literature, anthropology, or philosophy.

Applicants must submit their academic transcripts, scores on the Graduate Record Examination, three letters of recommendation, a statement of purpose (no more than 750 words), and a sample of written work (e.g., senior honors thesis, M.A. thesis, or other research or critical paper, preferably in art or media history). An overall GPA of 3.00 and a 3.50 in a student’s undergraduate major are required. The Test of English as a Foreign Language (TOEFL) is required for international applicants. Applicants must have a good reading knowledge of at least one foreign language at the time they enter the program.

Please note that no application will be processed until all required information has been received. Students should submit applications with the application fee to the graduate admissions office on or before Tuesday, January 11, 2011. The Statement of Purpose and letters of recommendation must be submitted online along with the application. Official transcripts should be sent directly to the department and postmarked no later than Tuesday, January 11, 2011. Students are asked to upload their writing samples and images (for art practice concentration) into our online portfolio Web site. Access to the Web site is given once a UCSD online application has been filed through the Office of Graduate Studies.

**AREAS OF CONCENTRATION**

During the first year of study, each student must declare an area of major concentration in consultation with his or her individual faculty advisor and with the approval of the Ph.D. graduate advisor. The major concentration may be selected from the following: ancient art; medieval art; Renaissance art; early modern art; modern art (nineteenth and twentieth centuries); contemporary art; media studies (film, video, photography, digital media); Meso-American art; and art practice. A student may also choose, in consultation with his or her advisor and the Ph.D. graduate advisor, a field of emphasis that cuts across the areas within the department (e.g., art or media theory and criticism) or, with appropriate approvals, one that involves another department (e.g., early modern art history and history). Once the field of emphasis is established, it will be the responsibility of the student and his or her advisor to devise a program of courses, independent study and outside reading, over and above the required program, that will ensure that the student will attain command of the major field of emphasis.

**FOREIGN LANGUAGE REQUIREMENTS**

Students will be required to demonstrate reading knowledge of at least two of the foreign languages required for advanced study in art history, theory, and criticism. One should be the language most directly relevant to the student’s area of specialization. The student and his or her individual advisor will jointly determine the examination languages. Foreign language requirements will normally be satisfied by passing examinations requiring sight translation of texts in art history, theory, and criticism. Students are required to pass their entering language examination in order to be advanced to their second year in the program. The first-year language examination will be offered during the fall quarter of the entering year. The second required language examination will be offered during the fall quarter.
quarter of the second year in the program. Students must pass both language examinations by the end of their second year to continue in the program.

EXAMINATIONS

No later than the first quarter of the third year, the student, in consultation with his or her individual advisor, will form a qualifying examination committee that will consist of four members drawn from the visual arts department faculty and one tenured faculty member outside the department. The composition of the qualifying examination committee and the dissertation defense for students in the Art Practice degree program is: four department faculty (two art history, theory, and criticism faculty, and at least one tenured studio faculty) and one tenured faculty member outside the department. This committee will conduct the qualifying examination required by university policy and oversee completion of the dissertation. The membership of the committee must be approved by the Ph.D. graduate advisor and ultimately the dean of Graduate Studies. The qualifying examination will consist of a three-hour written examination, followed within the next two days by a two-hour oral examination, in the student's major field. A student must have completed all required course work and passed all language examinations before taking the qualifying examination, which will be held no later than the end of the third year. Upon successful completion of the qualifying examination, the student will be advanced to candidacy. A student who fails either the written or the oral examination may petition the committee and Ph.D. graduate advisor to repeat the examination. Any student who fails a second time will not be advanced to candidacy. In some cases, the committee and graduate program director may judge such student eligible to receive a terminal M.A. (see below).

DISSERTATION

Following successful completion of the qualifying examinations, the student will complete a doctoral dissertation in his or her field of emphasis. Upon selection of the dissertation topic, a colloquium will be held at which the student will present a prospectus that outlines the topic and program of research for discussion by the graduate group and for approval by his or her committee. After the committee has reviewed the finished dissertation, the student will defend his or her thesis orally. Students in the Art Practice concentration will submit a written dissertation project, the nature of which will be determined by language in contemporary performance art. Students interested in an M.A. only are not admitted to our program.

M.A. DEGREE

All students will apply for and be admitted to the Ph.D. Program. An M.A. degree may be awarded to continuing Ph.D. students upon successful completion of the following: (1) at least twelve two-unit courses, including VIS 204, Re-Thinking Art History, and two seminars from the group VIS 210–219; (2) a three-hour written examination in a designated field of emphasis (see "Examinations" above); (3) one language examination; and (4) an M.A. thesis. The M.A. is not automatically awarded; students must apply in advance to the Ph.D. graduate advisor and in accordance with university procedures, no later than the first two weeks of the quarter in which they expect to receive the degree.

Students interested in an M.A. only are not admitted to our program.

COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

Note: The following list of courses represents all visual arts offerings; not all courses offered each year.

LOWER-DIVISION

1. Introduction to Art-Making: Two-Dimensional Practices (4)
An introduction to the concepts and techniques of art making with specific reference to the artists and issues of the twentieth century. Lectures and studio classes will examine the nature of images in relation to various themes. Drawing, painting, found objects, and texts will be employed. Prerequisite: none. This course is offered only one time each year.

2. Introduction to Art-Making: Motion and Time Based Art (4)
An introduction to the process of art making utilizing the transaction between people, objects, and situations. Emphasis is placed on developing fundamental control of the processes and materials through lectures, field, and lab experience. Basic discussion of image making included. Prerequisite: none. Materials fee required.

70N. Introduction to Media (6)
Operating as both a lecture and production course, this introductory class provides a technical foundation and theoretical context for all subsequent production-oriented film and video studies. In the laboratory, the student will learn the basic skills necessary to initiate video production. Completion of Visual Arts 70N is necessary to obtain a media card. Prerequisite: none. Materials fee required.

84. History of Film (4)
A survey of the history and the art of the cinema. The course will stress the origins of cinema and the contributions of the earliest filmmakers, including those of Europe, Russia, and the United States. Prerequisite: none. Materials fee required. This course is offered only one time each year.

87. Freshman Seminar (1)
The Freshman Seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students with preference given to entering freshmen. Prerequisite: none.

UPPER-DIVISION

104A. Performing the Self (4)
Using autobiography, dream, confession, fantasy, or other means to invent one’s self in a new way, or to evoke the variety of selves in our imagination, the course experiments with and explores the rich possibilities available to the contemporary artist in his or her own persona. Prerequisites: two from VIS 1, 2, 3 and 111.

104BN. Verbal Performance (4)
The course is designed to introduce the student to the part played by language in contemporary performance art.
Monologues, musically derived sound poetry, vocalizations, verbally inscribed installations, and the uses of language and voice in film and video are some of the areas explored. 

**Prerequisite:** VIS 104A.

104CN. Personal Narrative (4)
The course will explore personal experiential materials to more fully understand the relationship of voice, style, language, with personal, identity, self-awareness, and desire. Instructor and student will discuss student work as well as published personal narrative. 

**Prerequisite:** VIS 104BN.

105A. Drawing: Representing the Subject (4)
A studio course in beginning drawing covering basic drawing and composition. These concepts will be introduced by the use of models, landscapes, and conceptual projects. 

**Prerequisites:** two from VIS 1, 2, 3 and 111.

105B. Drawing: Practices and Genre (4)
A continuation of VIS 105A. A studio course in which the student will investigate a wider variety of technical and conceptual issues involved in contemporary art practice related to drawing. 

**Prerequisite:** VIS 105A.

105C. Drawing: Portfolio Projects (4)
A studio course in drawing, emphasizing individual creative problems. Class projects, discussions, and critiques will focus on issues related to intention, subject matter, and context. 

**Prerequisite:** VIS 105B.

105D. The Aesthetics of Chinese Calligraphy (4)
This course examines Chinese calligraphy as an art form. This conceptually based introductory course combines fundamentals with creative explorations. Students are exposed to traditional and contemporary forms of Chinese calligraphy while encouraged to experiment with basic aesthetic grammars. 

**Prerequisite:** VIS 105A.

105E. Chinese Calligraphy as Installation (4)
This course concerns East-West aesthetic interactions. What are the possibilities when calligraphy, an ancient form of Chinese art, is combined with installation, a contemporary artistic Western practice? Emphasis is placed on such issues as cultural hybridity, globalization, multiculturality, and commercialization. 

**Prerequisite:** VIS 105D.

106A. Painting: Image Making (4)
A studio course focusing on problems inherent in painting—transferring information and ideas onto a two-dimensional surface, color, composition, as well as manual and technical procedures. These concepts will be explored through the use of models, still life, and landscapes. 

**Prerequisites:** two from VIS 1, 2, 3 and 111.

106B. Painting: Practices and Genre (4)
A continuation of VIS 106A. A studio course in which the student will investigate a wider variety of technical and conceptual issues involved in contemporary art practice related to painting. 

**Prerequisite:** VIS 106A.

106C. Painting: Portfolio Projects (4)
A studio course in painting emphasizing individual creative problems. Class projects, discussions, and critiques will focus on issues related to intention, subject matter, and context. 

**Prerequisite:** VIS 106B.

107A. Sculpture: Making the Object (4)
A studio course focusing on the problems involved in transferring ideas and information into three-dimensions. Course will explore materials and construction as dictated by the intended object. Specific problems to be investigated will be determined by the individual professor. 

**Prerequisites:** two from VIS 1, 2, 3 and 111.

107B. Sculpture: Practices and Genre (4)
A studio course in which the student will investigate a wider variety of technical and conceptual issues as well as materials involved in contemporary art practice related to sculpture. 

**Prerequisite:** VIS 107A.

107CN. Sculpture: Portfolio Projects (4)
A studio course in sculpture emphasizing individual creative problems. Class projects, discussions, and critiques will focus on issues related to intention, subject matter, and context. 

**Prerequisite:** VIS 107B.

108. Advanced Projects in Art (4)
A studio course for serious art students at the advanced level. Stress will be placed on individual creative problems. Specific orientation of this course will vary with the instructor. Topics may include film, video, photography, performance, printmaking. May be repeated twice for credit. 

**Prerequisite:** consent of instructor, department stamp required.

109. Advanced Projects in Media (4)
Individual or group projects over one or two quarters. Specific project organized by the student(s) will be realized during this course with instructor acting as a close advisor. 

**Prerequisites:** consent of instructor prior to enrollment. 

**Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

108. New Genre/New Media Old Technologies (4)
Advances the idea of different materials, methods, and practices raised at the intermediate level in drawing, painting, and sculpture, and explores and utilizes new and traditional media in studio production of work. emphasis on multiple media, combining traditional and electronic media, as well as different genres, in an attempt to prepare new directions for the student’s ideas. 

**Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

109. Proposals, Plans, Presentations (4)
Exposes the use of the maquette, or sketch, in the process of developing, proposing and planning visual works in various media for public projects, site specific works, group exhibitions and personal presentations. The student will work on synthesizing ideas and representing them in alternate forms that deal with conception, fabrication and presentation. 

**Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110. Art in Public Space/Site-Specific Art (4)
Course takes painting, sculpture, and related media out of the studio/gallery and into the public sphere by examining the contemporary history of public artworks, both traditional and nontraditional site-specific work, focusing on production, critical discussion, and writing. 

**Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN, or 147B, or consent of instructor.

110E. Art in Public Space/ Site-Specific Art (4)
Course takes painting, sculpture, and related media out of the studio/gallery and into the public sphere by examining the contemporary history of public artworks, both traditional and nontraditional site-specific work, focusing on production, critical discussion, and writing. 

**Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN, or 147B, or consent of instructor.

110F. Installation: Cross-Disciplinary Projects (4)
Attempts to expand the idea contained in a singular work, or object, into the space of the gallery, forms such as comic, or light, drawing or story boards, and the use of photo, video, and computing. 

**Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN, or 147B, or consent of instructor.

110G. The Natural and Altered Environment (4)
Explores the natural and altered environment as a basis for subject as well as place of work pertaining to the environment. 

**Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110H. Image and Text Art (4)
Devoted to the study and practice of the multiple ways in which writing and other forms of visible language have been incorporated into contemporary and traditional artworks, including artists' books, collaging and poster art, visual and concrete poetry, typographical experiments, and calligraphies. 

**Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110I. Performing for the Camera (4)
The dematerialization of the performer into a media based image—video, film, slides, still photographs, using the camera as a spy, a co-conspirator, a friend or a foe—employing time lags, spatial derangement, image deconstruction, along with narrative, text, history, to invent time based pieces that break new ground while being firmly rooted in an understanding of the rich body of work done in this area over the last three decades. 

**Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

110J. Ritual Performance (4)
The course will explore forms of art making that use dance and music, traditional and non-traditional, as a way to deal with the contemporary history of public artworks with traditional and nontraditional site-specific work, focusing on the studio/gallery and into the public sphere by examining the contemporary history of public artworks, both traditional and nontraditional site-specific work, focusing on production, critical discussion, and writing. 

**Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

111. The Art of the Essay (4)
The art historian as performer working with materials, objects, props, technology, to create multi-layered, experimental, interesting three-dimensional art spaces in which the artist's body, voice, actions, or memory, moves through, enlivens, or haunts the physical space. 

**Prerequisites:** two from VIS 104CN, 105C, 106C, 107CN and 147B.

111M. Studio Honors I (4)
An advanced studio course intended for the productive, motivated, and self-disciplined student with a clear and unified body of work. The intent is to help refine and expand the student’s work and ideas towards an exhibition and verbal written position. 

**Prerequisite:** consent of the instructor, department stamp required. 

111N. Studio Honors II (4)
The second advanced studio course in the Honors Program in Studio, the successful completion of which will lead towards an honors degree in the studio major. The course builds on the critical and technical issues raised in Studio Honors I. 

**Prerequisite:** VIS 111M.

111. The Structure of Art (4)
This course will address the structure of significance in art. We will consider the modes of signification in a wide range of representational and nonrepresentational artworks from architecture through drawing, painting, sculpture, photography, video, and film to performance. Examples will be selected from various places and epochs. This course is required for transfer students. This course is offered during winter quarter only.

112. Art Historical Methods (4)
A critical review of the principal strategies of investigation in the history and present art historical practice, a scrutiny of their contexts and underlying assumptions, and a look at alternative possibilities. The various traditions for formal and iconographic analysis as well as the categories of historical description will be studied. Required for all art history and criticism majors. 

**Prerequisites:** VIS 23 and one upper-division art history course; two recommended.

113AN. History of Criticism I: Early Modern (4)
Introducing Classical, Medieval, and Renaissance theories of the image, we concentrate on developments in the eighteenth and nineteenth centuries: Neo-Classicism, Romanticism, Realism, and Symbolism. 

**Prerequisites:** one from VIS 20, VIS 21A, VIS 21B, VIS 22 or upper-division standing.

113BN. History of Criticism II: Early Twentieth Century (1900–1950) (4)
The principal theories of art and criticism from Symbolism until 1945: formalism and modernism, abstraction, Surrealism, Marxism, and social art histories, phenomenology, existentialism. 

**Prerequisite:** none; VIS 112 or two upper-division courses in art history strongly recommended.

113CN. History of Criticism III: Contemporary (1950–Present) (4)
Recent approaches to the image in art history and visual culture: structuralism, semiotics, psychoanalysis,
post-structuralism, post-modernism, feminism, post-colonialism, cultural studies. Prerequisite: none; VIS 112 or two upper-division courses in art history strongly recommended.

117A. Narrative Structures (4)
A discussion of major Western theories of representation with a critique of their applicability to art. Material is drawn from a variety of historical periods from Antiquity to Modern. Emphasis is given to theories special significance for art history, but some attention is given to representation theories in other contexts. Readings may include selections from such modern theorists as Peirce, Panofsky, Gombrich, Benveniste, Barfield, Barthes, Goodman, Foucault, Broyson, Summers, and Mitchell and from classic texts by Plato, Aristotle, John of Damascus, Alberti, and Leonardo.
Prerequisite: none; one or more upper-division courses in art history strongly recommended. Note: Majors must have taken VIS 23.

117B. Theories of Representation (4)
This seminar will address and critique various approaches to studying the art of non-Western societies with respect to their own aesthetic and cultural systems. Students are encouraged to explore comparative philosophies of art and art history from the perspectives of Western aesthetic scholarship.
Prerequisite: none; VIS 21A or 21B or 112 or two upper-division courses in art history strongly recommended.

117C. Late Antique Art (4)
During the later centuries of the Roman Empire, the ancient world underwent a profound crisis. Beset by barbarian invasions, torn by internal conflict and drastic social change, inflamed with religious passion which was to lead to a transformation of the individual, the world, and the divine, this momentous age saw the conversion of the Roman world to Christianity, the transfer of power from Rome to Constantinople, and the creation of a new society and culture. Out of this ferment, during the centuries from Constantine to Justinian, there emerged a new art forms that represent the new vision of an otherworldly reality: a vaulted architecture of apocalyptic space, a new art of mosaics that dissolved surfaces in light, and a figurative language both abstractly symbolic and urgently expressive. The great creative epoch transformed the heritage of classical Greco-Roman art and laid the foundations of the art of the Christian West and Moslem East for the next thousand years.
Prerequisite: none; VIS 20 or 120B recommended.

120A. Greek Art (4)
This course offers new approaches to understanding Michelangelo's greatest creations. By considering how each work relates to the setting for which it was intended, by regarding critical literature and artistic borrowings as evidence about the works, and by studying the thought of the spiritual reformers who counseled Michelangelo, new interpretations emerge which show the artist to be a deeply religious man who invested his works with both public and private meanings.
Prerequisite: upper-division standing; or one of the following courses: VIS 20, 21, 22, or 23, or any upper-division course in art history and criticism in European history.

122CN. Defining High Renaissance Art (4)
Since the sixteenth century, the names of Leonardo da Vinci, Raphael, and Bramante have conjured up images of the highest artistic achievement. This course shows the intellectual concerns common to the artist and scientific productions of Leonardo help illuminate the distinctive character of the art of two of his greatest contemporaries.
Prerequisite: none; VIS 20, 122AN, or 122BN recommended.

123AN. Between Spirit and Flesh: Northern Art of the Early Renaissance (4)
The art of the Early Renaissance in Northern Europe is marked by what appears to be striking conflict: on the one hand, a new love of nature and of the pleasures of court society; and on the other, an intensified spirituality and focus on personal devotion. This course explores these provocative cross-currents in works by master painters like Jan van Eyck and Hieronymus Bosch as well as lesser known mass-produced objects of everyday use.
Prerequisite: none; VIS 20, 121AN, and/or 122AN recommended.

123BN. Jan van Eyck (4)
Intensive study of the career of Jan van Eyck, whose magical paintings have always fascinated us with their microscopically detailed naturalism and subtly disguised spiritual meanings. Masterpieces such as the Arnolfini Wedding are emphasized.
Prerequisite: none; VIS 112 or two upper-division courses in art history recommended.

124AN. Baroque Art (4)
This course discusses the achievement of such major artists as Caravaggio, Giorgia, Bernini, Borromini, Rubens, Rembrandt, Velasquez, and Vermeer within a culture marked by increasing intellectual specialization, the entrenchment of modern national boundaries, the co-existence of rival religious organizations, the formations of artistic academies, and the rise of an art market serving the flourishing middle class.
Prerequisite: none; VIS 20 recommended.

124BN. Art and the Enlightenment (4)
Eighteenth century artists and critics were convinced that art could be a force to improve society. This course places Roccoco and Neo-Classical artists such as Watteau, Fragonard, Tiepolo, Hogarth, Reynolds, Vigee Lebrun, Blake, and David, within the context of art academies, colonialism, the Grand Tour, Enlightenment conceptualizations of history and nature, and the American and French Revolutions.
Prerequisite: none; VIS 20 or 22 recommended.

124CN. Nineteenth-Century Art (4)
A critical survey discussion of the crises of the Enlightenment, Romanticism, Realism and Naturalism, Academic Art and History Painting, representations of the New World, the Pre-Raphaelites, Impressionism, International Symbolism, Post-Impressionism, and the beginnings of Modernism.
Prerequisite: none; VIS 20 or 22 recommended.
125A. Twentieth-Century Art (4)
A critical survey outlining the major avant-gardes after 1900: Fauvism, Cubism, Metaphysical Painting, Futurism, Dada, Surrealism, Neo-Plasticism, Purism, the Soviet avant-garde, Socialist Realism, and American art before Abstract Expressionism. Prerequisite: none; VIS 20 or 22 recommended.

125BN. Contemporary Art (4)
Art after Abstract Expressionism: Happenings, Post-painterly Abstraction, Minimalism, Performance, Earth Art, Conceptual Art, Neo-Expressionism, Post-Conceptualism and development in the 1990s, including non-Western contexts. We also explore the relation of these tendencies to Postmodernism, Feminism, and ideas of postcoloniality. Prerequisite: none; VIS 20 or 22 recommended.

125DN. Marcel Duchamp (4)
A critical examination of the work of one of the most radical twentieth century artists. In Duchamp's four dimensional perspective, the ideas of art-object, artist, and art itself are deconstructed. The Large Glass and Etant Donnees... are the twin foci of an oeuvre without boundaries in which many twentieth-century avant-garde devices such as chance techniques, conceptual art, and the fashioning of fictive identities, are invented. Prerequisite: none.

125F. Latin American Film (4)
An overview of film and filmmaking in Latin America and its reception in a national context and beyond. Prerequisite: upper-division standing.

126AN. Pre-Columbian Art of Ancient Mexico and Central America (4)
An introduction to the cities and monuments of the ancient civilizations which flourished in Mexico and Central America before the Spanish Conquest. This course will cover the major cultures of Mesoamerica, including the Olmec, Aztec, and neighboring groups. Prerequisite: none; VIS 21 recommended.

126BN. The Art and Civilization of the Ancient Maya (4)
This course offers a history of Maya society from its formative stages to the eve of the Spanish Conquest through an investigation of its art and archeology. Special attention is given to its unique calendar and writing systems. Prerequisite: none; VIS 21 recommended.

126C. Problems in Mesoamerican Art History (4)
Topics of this seminar will address special problems or areas of research related to the major civilizations of ancient Mexico and Central America. Course offerings will vary to focus upon particular themes, subjects, or interpretive problems. Prerequisite: upper-division standing. VIS 21A recommended. Student may not receive credit for VIS 126B and VIS 126C.

126D. Problems in Ancient Maya Iconography and Inscriptions (4)
This seminar focuses upon the art, architecture, and inscriptions of the ancient Maya. Topics will vary within a range of problems that concern hieroglyphic writing, architecture, and visual symbols the Maya elite used to mediate their social, political, and spiritual words. Prerequisite: upper-division standing. VIS 21A recommended.

126HN. Pacific Coast American Indian Art (4)
Explores the art and expressive culture of American Indians of far western United States, including California and Pacific Northwest. Social and cultural contexts of artistic traditions and their beliefs in the ways in which their practices are transmitted, ceremonialism, beliefs, and creative visions of their makers. Prerequisite: upper-division standing. VIS 21A recommended. Student may not receive credit for VIS 126CN and VIS 126HN.

126I. African and Afro-American Art (4)
The dynamic, expressive arts of selected West African societies and their subsequent survival and transformation in the New World will be studied. Emphasis will be placed on Afro-American modes of art and ceremony in the United States, Haiti, and Brazil. Prerequisite: upper-division standing. VIS 21A recommended. Student may not receive credit for VIS 126DN and VIS 126J.

126K. Oceanic Art (4)
An examination of the relation of art to ritual life, mythology, and social organization in the native Polynesian and Melanesian cultures of Hawaii, New Guinea, the Solomon Islands, and Australia. Prerequisite: upper-division standing. VIS 21A recommended. Student may not receive credit for VIS 126E and VIS 126K.

126L. Latin American Art: Modern to Postmodern, 1890–1950 (4)
A survey of major figures and movements in Latin American art that have dominated for century and a half and into the mid-twentieth century. Prerequisite: upper-division standing.

126M. Modern Latin American Art to the Present (4)
A survey of major figures and movements in Latin American art from the mid-twentieth century to the present. Prerequisite: upper-division standing.

126P. Latin American Art: Modern to Postmodern, 1890–1950 (4)
A survey of major figures and movements in Latin American art that have dominated for century and a half and into the mid-twentieth century. Prerequisite: upper-division standing.

126R. Latin American Photography (4)
An overview of the history of photography, concentrating on developments in Latin America. Prerequisite: upper-division standing.

127B. Arts of China (4)
Course will survey major trends in the arts of China from a thematic point of view, explore factors behind the making of works of art, including political and religious meanings, and examine contexts for art in contemporary cultural and philosophical phenomena. Prerequisite: upper-division standing. VIS 21B recommended.

127C. Arts of Modern China (4)
Course will explore Chinese art of the twentieth century. By examining artworks in different media, we will investigate the most compelling of the multiple realities that Chinese artists have constructed for themselves. Prerequisite: upper-division standing. VIS 21B recommended.

127D. Early Chinese Painting (4)
Explore representations of figures and landscapes from the dawn of Chinese painting through the Yuan dynasty, with stress on developments in style and subject matter, and relationships to contemporary issues in philosophy, religion, government, and culture. Prerequisite: upper-division standing. VIS 21B recommended.

127E. Later Chinese Painting (4)
Explores major schools and artists of the Ming and Qing periods, including issues surrounding court patronage of professional painters, revitalization of art through reviving ancient styles, commercialization's challenges to scholar-artist art, and the influences of the West. Prerequisite: upper-division standing. VIS 21B recommended.

127F. Japanese Buddhist Art (4)
Explore the development of Buddhist art and architecture in Japan. Focus on the role of art in Buddhist practice and philosophy and the function of syncretic elements in Japanese Buddhist art. Prerequisite: upper-division standing. VIS 21B recommended.

127G. Japanese Painting and Prints (4)
Explore the development of Buddhist art and architecture in Japan. Focus on the role of art in Buddhist practice and philosophy and the function of syncretic elements in Japanese Buddhist art. Prerequisite: upper-division standing. VIS 21B recommended.

127H. Japanese Art and Architecture (4)
Explore the development of Buddhist art and architecture in Japan. Focus on the role of art in Buddhist practice and philosophy and the function of syncretic elements in Japanese Buddhist art. Prerequisite: upper-division standing. VIS 21B recommended.

127I. Japanese Painting and Prints (4)
Explore the development of Buddhist art and architecture in Japan. Focus on the role of art in Buddhist practice and philosophy and the function of syncretic elements in Japanese Buddhist art. Prerequisite: upper-division standing. VIS 21B recommended.

127J. Japanese Art and Architecture (4)
Explore the development of Buddhist art and architecture in Japan. Focus on the role of art in Buddhist practice and philosophy and the function of syncretic elements in Japanese Buddhist art. Prerequisite: upper-division standing. VIS 21B recommended.

127L. Arts of Japan (4)
Course is a survey of the visual arts of Japan, considering how the arts developed in the context of Japan's history and discussing how art and architecture were used for philosophical, religious, and material ends. Prerequisite: upper-division standing. VIS 21B recommended.

127Q. Japanese Painting and Prints (4)
Explore major trends in Japanese pictorial art from the seventh century to the nineteenth century, with focus on function, style and subject matter, and with particular emphasis on the relationship between Japanese art and that of continental Asia. Prerequisite: upper-division standing. VIS 21B recommended.

128A. Topics in Pre-Modern Art History (4)
A lecture course on a topic of special interest to visiting and permanent faculty. Topics vary from term to term and with instructor and may not be repeated. These courses fulfill upper-division distribution requirements. As the courses under this heading will be offered less frequently than those of the regular curriculum, students are urged to check for availability and descriptions of these supplementary courses in the annual catalogue listings. Like the courses listed under VIS 129 below, the letters following the course number indicate the area in which the courses fall. Students may take courses with the same number but of different content, with consent of instructor and/or program advisor. May be taken three times for credit. Prerequisite: none; courses in art history recommended.

128B. Topics in Early Modern Art History (4)
A lecture course on a topic of special interest in Renaissance or Baroque art. May be taken three times for credit. Prerequisite: upper-division standing; courses in art history (VIS 113AN–129F) are recommended.

128C. Topics in Modern Art History (4)
A lecture course on a topic of special interest on Modern or Contemporary art. May be taken three times for credit. Prerequisite: upper-division standing; courses in art history (VIS 113AN–129F) are recommended.

128D. Topics in Art History of the Americas (4)
A lecture course on the topic of special interest in the Anasazi cultures of America, the Pacific Islands, and Central America. Prerequisite: upper-division standing. Courses in art history (VIS 113AN–129F) are recommended.

128E. Topics in Art History of Asia (4)
A lecture course on the topic of special interest in India, China, and Japan. Prerequisites: upper-division standing. Courses in art history (VIS 113AN–129F) are recommended.

128F. Topics in Art Theory and Criticism (4)
A lecture course on a topic of special interest in art theory, art criticism, or the history of literature on art. May be taken three times for credit. Prerequisites: upper-division standing. Courses in art history (VIS 113AN–129F) are recommended.

128P. Curatorial Practices Workshop (2)
Students will be exposed to the professional context of institutional art research, preparation, exhibition and publication. The content of the course will evolve around the curatorial experience of the particular faculty member. May be repeated once for credit. Two- to six-unit curatorial practices workshops courses count as one course towards the fulfillment of a Group B requirement in the major. Prerequisites: VIS 112 or upper-division courses in art history (VIS 113AN–129F).

129A–F. Seminar in Art Criticism and Theory (4)
These seminar courses provide the opportunity for in-depth study of a particular work, artist, subject, period, or issue. Courses offered under this heading may reflect the current research interests of the instructor or treat a controversial theme in the field of art history and criticism. Active student research and classroom participation are expected. Enrollment is limited and preference will be given to majors. The letters following 129 in the course
number designate the particular area of art history or theory concerned. Students may take courses with the same number but of different content more than once for credit, with consent of the instructor and/or the program advisor. May be taken three times for credit. Prerequisite: VIS 112 or two upper-division courses in art history.

129A. Seminar in Pre-Modern Art History (4)
A seminar on an advanced topic of special interest in art criticism and/or art history. Students may take courses with the same number but of different content more than once for credit. Prerequisite: VIS 112 or two upper-division courses in art history (VIS 113AN–1129).

129B. Seminar in Early Modern Art History (4)
A seminar on an advanced topic of special interest in Renaissance or Baroque art. Prerequisites: VIS 112 or two upper-division courses in art history (VIS 113AN–1129).

129C. Seminar in Modern Art History (4)
A seminar on an advanced topic of special interest in the history and theory of art since 1945. May be repeated once for credit. Prerequisites: VIS 112 or two upper-division courses in art history (VIS 113AN–1129).

129D. Seminar in Art History of the Americas (4)
A seminar on an advanced topic of special interest in the Ancient Americas to Africa and the Pacific Islands. Prerequisites: VIS 112 or two upper-division courses in art history (VIS 113AN–1129).

129E. Seminar in Art History of Asia (4)
A seminar on an advanced topic of special interest in India, China, and Japan. Prerequisites: VIS 112 or two upper-division courses in art history (VIS 113AN–1129).

129F. Seminar in Art Theory and Criticism (4)
A seminar on an advanced topic of special interest in art theory, art criticism, or the history of literature on art. Prerequisites: VIS 112 or two upper-division courses in art history (VIS 113AN–1129).

129G. Art History Honors Seminar (4)
This research seminar, centered on a series of critical, theoretical, and/or historical issues that cut across subdisciplinary specializations, provides outstanding advanced students with the opportunity to undertake graduate-level research. The first part of a two-part sequence, this seminar is designed for the Art History Honors Group. Prerequisite: VIS 129H. Prerequisite: consent of instructor or art history faculty advisor, department stamp required. Note: The Art History Honors Seminar and the attached Art History Honors Directed Group Study counts as one course towards the fulfillment of the Group III requirement.

129H. Art History Honors Directed Group Study (4)
The second part of the honors program sequence, this course provides a forum for students engaged in research and writing to develop their ideas with the help of a faculty advisor and in conjunction with similarly engaged students. Prerequisites: consent of instructor or art history faculty advisor, department stamp required.

130. Special Projects in Visual Arts (4)
Special topic course may be offered. Prerequisites: consent of instructor or art history faculty advisor, department stamp required. Note: Special topic courses in Visual Arts may be offered. Consent of instructor or department stamp required.

131. Special Projects in Media (4)
Special topic course may be offered. Prerequisites: consent of instructor or art history faculty advisor, department stamp required. Note: Special topic courses in Media may be offered. Consent of instructor or department stamp required.

132. Installation Production and Studio (4)
Through discussions and readings, the class will examine the issues and aesthetics of installation art-making. Using media familiar to them, students will produce several projects. May be taken twice for credit. Studio and visual arts/media majors only. Prerequisites: from (VIS 104CN, 105C, 106C, 107CN, or 147B) or one from (VIS 180A, 180B, 183A, and 183B) or consent of instructor. Open to studio, media majors only.

140. Digital Imaging: Image and Interactivity (4)
(Cross-listed with ICAM 101.) Introduction to digital image involving images, texts, and interactive display and operates both within computer-mediated space (i.e., Web site) and in physical space (i.e., artist book). Interactive narrative and computational forms. Materials fee required. Prerequisite: VIS 40 or ICAM 40. Open to media, ICAM, and studio majors; computing and ICAM minors only. Two production course limitation.

141A. Computer Programming for the Arts I (4)
Introduces external APIs currently of interest in the arts (example: OpenGL2, J2ME, Servlets/JSP, Java3D) extending a common programming language (C++, Ctech, Java). Students gain API fluency through planning and coding software or software mediated art projects. CSE 11 or equivalent recommended. Materials fee required. Prerequisites: VIS 40 or ICAM 40 and (VIS 140 or ICAM 101). Open to ICAM majors and minors only. Two production course limitation.

141B. Computer Programming for the Arts II (4)
Students extend their programming capabilities to include the creation of reusable software libraries, packages, database APIs, tools, utilities, and applications intended to be publishable and useful to other practicing artists, or as preparatory work for the student’s senior thesis sequence. Materials fee required. Prerequisite: VIS 141A. Open to ICAM majors and minors only. Two production-course limitation.

145A. Time- and Process-Based Digital Media I (4)
(Cross-listed with ICAM 102.) Introduces time- and process-based digital media. Students will implement time- and process-based media will be studied and projects produced. Topics may include software art, software and hardware interfacing, interaction, and installation in an art context. CSE 5A or equivalent programming experience recommended. Materials fee required. Prerequisites: VIS 40 or ICAM 40 and (VIS 140 or ICAM 101). Open to media and ICAM majors and ICAM minors only. Two production-course limitation.

145B. Time- and Process-Based Digital Media II (4)
Students will implement time- and process-based projects under direction of faculty. Projects such as software and hardware interfacing, computer mediated performance, software art, installation, interactive environments, data visualization and sonification will be produced as advanced study and portfolio project. Materials fee required. Prerequisite: VIS 145A or ICAM 102. Open to media and ICAM majors; ICAM minors only. Two production course limitation.

147A. Electronic Technologies for Art I (4)
Develops artwork and installations that utilize digital electronics. Techniques in digital electronic construction and computer interfacing. Producing interactive control of light, sound, image, and electromechanics. Construction of devices which use the microprocessor to control devices, including the use of microcontroller and the interaction of physical elements and machines. Materials fee required. Prerequisite: VIS 1. Open to media, studio, and ICAM majors; ICAM minors only. Two production course limitation.

147B. Electronic Technologies for Art II (4)
Continuation of the electronics curriculum. Design of programmable microcontroller systems for creating artworks that are able to respond to complex sets of input conditions, perform algorithmic and procedural processing, and generate real-time output. Purchase of components kit required. Prerequisite: VIS 147A. Open to media, studio, and ICAM majors; computing and ICAM minors only. Two production course limitation.

149. Seminar in Contemporary Computer Topics (4)
(Cross-listed with ICAM 130.) Topics relevant to computer-based art and music-making, such as computer methods for making art/music, design of interactive systems, spatialization of visual/musical elements, critical studies. Topics will vary. May be repeated twice. Materials fee required. Prerequisites: VIS 140 or ICAM 101, VIS 145A or ICAM 102, and MUS 170 or ICAM 103 recommended. Open to studio, Studio and visual arts/media majors only; ICAM majors only. Two production course limitation.

150. History of Silent Cinema (4)
An investigation of silent films from early cinema to the development of a classical style in the twenties, exploring issues of spectatorship, analyzing differences between American and European cinema, and highlighting the interaction between film and other arts. Works by such film artists as Man Ray, Salvador Dali, Maya Deren, Stan Brakhage, and Michael Snow will be examined in depth. Materials fee required. Prerequisite: VIS 84 or consent of instructor.

151. History of the Experimental Film (4)
An inquiry into a specialized alternative history of film, consisting of experimental works made outside the conventions of the movie industry and which in their style and nature are closer to modernist painting, poetry, etc., than to the mainstream theatrical cinema. Works by such film artists as Man Ray, Salvador Dali, Maya Deren, Stan Brakhage, and Michael Snow will be examined in depth. Materials fee required. Prerequisite: VIS 84 or consent of instructor.

152. Film in Social Context (4)
This collection of courses gathers, under one cover, films that are strongly marked by period, geography, and the culture within which they received their dominating local quality. These courses pay particular attention to the stamp of place—climate, dress, habitation, language, music, politics—as well as the films moves that helped color such works as environmental. The series takes in the following subjects: Third World films, the Munich films (the new wave of Germans who made their first features in Munich following 1967), films of the American thirties and their relationship to current thought, American Westerns, Ethnographic Film, Brazil’s Cinema Novo, etc. Specific topics to be covered will vary with the instructor. May be repeated twice for credit. Materials fee required. Prerequisite: VIS 84 or consent of instructor.

153. The Genre Series (4)
A group of related courses exploring the conventions within such generic and mythic forms as the cowboy, shamus, chorus girls, and vampire films. May be repeated twice for credit. Materials fee required. Prerequisite: none; VIS 84 recommended.

154. Hard Look at the Movies (4)
Examines a choice of films, selected along different lines of analysis, coherent within the particular premise of the course. Films are selected from different periods and genres among Hollywood, European, and Third World films. May be repeated once for credit. Materials fee required. Prerequisite: VIS 84 or consent of instructor.

155. The Director Series (4)
A course that describes the director's experiences, looks, and structure of director-dominated films. A different director will be studied each quarter. The student will be required to attend the lecture in the course and to meet with the instructor at least once each week. May be repeated three times for credit. Materials fee required. Prerequisite: VIS 84 or consent of instructor.

156N. Special Problems in Film History and Theory (4)
Seminar on an advanced topic in the history and theory of film. Credit will vary from quarter to quarter. Prerequisite: VIS 84 or consent of instructor. Note: Materials fee required.

157. Video History and Criticism (4)
A lecture course that examines video as an art form, its relationship to the development from television and video art forms, and surveys current work in the medium. Materials fee required. Prerequisites: VIS 22, 84, and 111.

158. Histories of Photography (4)
Photography is so ubiquitous a part of our culture that it seems to defy any simple historical definition. Accordingly, this course presents a doubled account of the medium; it explores both the historical and cultural specificity of a singular photographic practice as well as the multitude of photographs that inhabit our world. Will examine a number of the most important photographic themes from the past 200 years. Prerequisite: none.

159. History of Art and Technology (4)
(Cross-listed with ICAM 150.) Aims to provide historical context for computer art by examining the interaction between the arts, media technologies, and sciences in different historical periods. Topics vary (e.g., Renaissance perspective, futurism and technology, and computer art of
the 1950s and 1960s. Prerequisite: none. Material fee required.

164. Photographic Strategies (4)
Introduction to the aesthetic problems in photography. Both historical and contemporary art practices will be examined. Students will create photo pieces to engage these conceptual issues. Material fee required. Prerequisites: VIS 60 and consent of instructor. Open to media majors and photography minors only. Two production-course limitation.

165. Camera Techniques (4)
An intermediate course designed to teach students to develop fiber-based black and white printing skills, to introduce the fundamentals of digital photography, and to address the issues of text in relation to image in art practices. Material fee required. Prerequisites: VIS 60 and consent of instructor. Open to media majors and photography minors only. Two production-course limitation.

166. Advanced Camera Techniques (4)
Advanced-level course working with refined techniques in traditional and digital photographic art practices. The student will also be instructed in the development of a portfolio for use in post-graduation career development. Material fee required (photo lab). Prerequisites: VIS 164, 165, and consent of instructor. Open to media majors only. Two production-course limitation.

167. Social Engagement in Photography (4)
This course will examine the use of photography to examine social issues. Working in both the documentary and fictional modes, students will produce projects on social concerns to present for critical feedback in class. Prerequisites: VIS 158, VIS 164, VIS 165.

168. Color Techniques in Photography (4)
Instruction in color photography and printing. Lectures on theory and demonstration in shooting and printing color negatives. Material fee required. Prerequisites: VIS 60, 164, 165. Open to media majors only. Note: Portfolio required for admission. Two production-course limitation.

171. Digital Cinema—Theory and Production (4)
A digital image is not a film image, and this reality and its technological and conceptual implications are what this course will attempt to map out, exploring its possibilities and the massive overload of media aesthetics it implies. Prerequisites: (VIS 40/ICAM 40), VIS 60, VIS 70N and VIS 174, plus one from VIS 1, VIS 2, VIS 3, VIS 22 or VIS 84. Open to media majors only. Two production-course limitation.

174. Media Sketchbook (4)
Video and film used both as production technology and as device to explore the fundamental character of film-making and time-based computer arts practices. Students perform all aspects of production with attention to developing ideas and building analytical/critical skills. Prerequisite: VIS 70N. Open to media and ICAM majors only. Two production-course limitation.

175. Editing—Theory and Production (4)
The evolving aims and grammars of editing practice in film and digital media will be examined. These histories will create a context for exploring contemporary editing strategies. The productions will be centered on digital editing practice. Prerequisites: (VIS 40/ICAM 40), VIS 60, VIS 70N, and VIS 174 plus one from VIS 1, VIS 2, VIS 3, VIS 22, or VIS 84. Open to media majors only. Two production-course limitation.

176. 16mm Filmmaking (4)
A technical foundation and creative theoretical context for film production will be explored. Students will produce a short film with post-synchronized sounds and final mixed-track. Prerequisites: (VIS 40/ICAM 40), 60, 70N and 174, plus one from VIS 1, VIS 2, VIS 3, VIS 22 or VIS 84. Open to media majors only. Two production-course limitation.

177. Scripting Strategies (4)
Script writing, reading, and analysis of traditional and experimental narrative film. The emphasis will be on the structural character of the scripting process and its language. Students will write several short scripts along with analytical papers. Prerequisites: VIS 70N and VIS 174. Open to media majors only. Two production-course limitation.

178. Sound—Theory and Production (4)
Sound design plays an increasing role in media production and has opened up new structural possibilities for narrative strategies. A critical and historical review of sound design and a production methodology component. Critical papers and soundtracks for projects will be required. Prerequisites: VIS 70N and VIS 174. Open to media majors only. Two production-course limitation.

180A. Documentary Evidence and the Construction of Authenticity in Current Media Practices (4)
Exploration of concepts in representational artworks by critically examining “found” vs. “made” recorded material. Advanced film/video, photography, computing work. Issues of narrative and structure; attention to formal aspects of media work emphasized. Cannot be taken same quarter as VIS 180B. Prerequisites: VIS 174 and one from VIS 140/ICAM 101, 145A, ICAM 102, 145B, 164, 165, 172, 175, 176, 177; VIS 177 strongly recommended. Open to media majors only. Two production-course limitation.

180B. Fiction and Allegory in Current Media Practices (4)
Exploration of choices in invention, emphasizing “made” over “found.” Advanced film/video, photography, and computing. Issues of narrative and structure, and formal aspects of media work emphasized. Cannot be taken same quarter as VIS 180A. Prerequisites: VIS 174 and one from VIS 140/ICAM 101, 145A/ICAM 102, 145B, 164, 165, 172, 175, 176; VIS 177 strongly recommended. Open to media majors only. Two production-course limitation.

181. Sound and Lighting (4)
Advanced course to gain sophisticated control of lighting and sound recording techniques with understanding of theoretical implications and interrelation between production values and subject matter. Interactions between sound and image in various works in film, video, or installation. Prerequisite: VIS 174, and three of the following courses depending on emphasis: VIS 164, 165, 172, 175, 176, 177. Open to media majors only. Two production-course limitation.

182. Advanced Editing (4)
Film/video editing and problems of editing from theoretical and practical points-of-view. Films and tapes analyzed on a frame-by-frame, shot-by-shot basis. Edit stock material and generate own materials for editing final project. Aesthetic and technical similarities/differences of film/video. Prerequisites: VIS 175 and two courses from the 180 and 183 series. Open to majors only. Two production-course limitation.

183A. Strategies of Self (4)
Looks at the way that self-identity is reflected and produced through various media practices. Focus is on the rhetorical strategies of biography and autobiography in media, and students compare and contrast these strategies with those drawn from related cultural forms. Cannot be taken same quarter as VIS 183B. Prerequisites: VIS 174 and one from VIS 140/ICAM 101, VIS 145A/ICAM 102, VIS 147A, VIS 164, VIS 165, VIS 175, VIS 176, VIS 177 strongly recommended. Open to media majors only. Two production-course limitation.

183B. Strategies of Alterity (4)
Looks at difference as it is reflected and constructed in various media practices. Course will examine a wide range of forms and genres such as ethnography, science fiction, crime narratives, documentary film, political drama, and animated shorts. Cannot be taken same quarter as VIS 183A. Prerequisites: VIS 174 and one from VIS 140/ICAM 101, VIS 145A/ICAM 102, VIS 147A, VIS 164, VIS 165, VIS 175, VIS 176, VIS 177 strongly recommended. Open to media majors only. Two production-course limitation.

184. Advanced Scripting (4)
Film/video production will be framed through the script writing process, focusing on the problems of longer duration, density, and adaptation from other media. Students will both read and analyze both historical and contemporary scripts and produce a thirty- to sixty-minute script. Prerequisites: VIS 177 and two courses from VIS 180A, VIS 180B, VIS 183A, VIS 183B. Open to media majors only. Two production-course limitation.

194S. Fantasy in Film (4)
This course will explore the path of the deliberately “un-real” in movies. Fantasy in film will be considered both in terms of its psychological manifestations and also in terms of imaginary worlds created in such willfully anti-realistic genres as science-fiction, horror, and musical films. Material fee required. Prerequisite: Upper-division standing. Offered in summer session only.

197. Media Honors Thesis (4)
This advanced-level sequence coordinates three consecutive independent research courses to culminate in a completed thesis project in the third quarter of study. After the project’s public presentation, the faculty involved in the project will determine whether the student will graduate with departmental honors. Prerequisite: consent of instructor. Note: Requires a written proposal, 3.5 GPA in the major, prior consent from all involved, and approvals by the department chair and provost.

198. Directed Group Study (2–4)
Directed group study on a topic or in a group field not included in regular department curriculum, by special arrangement with a faculty member. Prerequisite: consent of instructor. Note: Open only to upper-division students. Requires instructor’s, department chair’s, and provost’s approval. Pass/Not Pass grades only.

199. Special Studies in the Visual Arts (4)
Independent reading, research, or creative work under direction of a faculty member. Prerequisite: consent of instructor. Note: Open only to upper-division students. Requires instructor’s, department chair’s, and provost’s approval. Pass/Not Pass grades only.

ICAM 103. Musical Acoustics (4)
(Cross-listed with MUS 170.) An introduction to the acoustics of music with particular emphasis on contemporary digital techniques for understanding and manipulating sound. Prerequisites: MUS 1A, 2A, or 4.

ICAM 110. Computing in the Arts: Current Practice (4)
Designed around the presentations by visiting artists, critics, and scientists involved with contemporary issues related to computer arts. Lectures by the instructor and contextual readings provide background material for the visitor presentations. Prerequisite: none. Note: Material fee required.

ICAM 120. Virtual Environments (4)
Students create virtual reality artworks. Projects may be done individually or in groups. Exploration of theoretical issues involved will underlie acquisition of techniques utilized in the construction of virtual realities. Material fee required. Prerequisites: VIS 145A or ICAM 102; CSE 11 recommended. Open to ICAM majors and minors only. Two production-course limitation.

ICAM 160A. Senior Project in Computer Arts I (4)
Students pursue projects of their own design over two quarters with support from faculty in a seminar environment. Project proposals are developed, informed by project development guidelines from real-world examples. Collaborations are possible. Portfolio required for admission. Prerequisite: VIS 141B or VIS 145B or VIS 147B or MUS 172. Open to ICAM majors only. Department stamp required.

ICAM 160B. Senior Project in Computer Arts II (4)
Continuation of ICAM 160A. Completion and presentation of independent projects along with documentation. Prerequisites: ICAM 160A. Open to ICAM majors only. Department stamp required.

ICAM 198. Directed Group Study (2–4)
Directed group study on a topic or in a group field not included in regular department curriculum by special arrangement with a faculty member. May be repeated twice for credit. Prerequisites: consent of instructor. Note: Open only to upper-division students. Requires instructor approval. Pass/Not Pass grades only.

ICAM 199. Special Studies (2/4)
Independent reading, research or creative work under direction of faculty member. Prerequisites: department stamp and upper-division standing and consent of instructor required.

2010-2011 UC SAN DIEGO GENERAL CATALOG • VISUAL ARTS 13
217. Communities and Subcultures (4)
A critical examination of the practices of self-defined communities (e.g., Bauhaus, Shaker, Surrealists), which have attempted to change the social and spiritual quality of life by aesthetic means and of communities and subcultures defined by other means.

218N. Imaging Selves and Others (4)
Explores various strategies exhibited in a wide range of contemporary art practices engaging in the representation of personality, spirituality, and the physical self.

219. Special Topics in Art Practice/Theory (4)
Examines a topic of special interest to permanent and visiting faculty that is not addressed in the regular curriculum. As in other Art Practice/Theory seminars, students will both produce work and read and write critically about the topics. Topics will vary.

HISTORY/THEORY/CRITICISM

Categories/Constructs

230. “Art” as Category (4)
Explores the complex and changing criteria by which certain categories of objects and practices are designated as “art” in cultural and visual contexts.

231N. Confronting the Object (4)
Investigates the nature and status of art objects and practices and the forms of engagement with them through topics such as the practice and metaphors of description; phenomenological analysis; film analysis; and ekphrasis and visual analysis.

232. Artistic Identities (4)
Explores the historical, theoretical, and cross-cultural concepts of the artist/author and his/her varied and shifting identities as inscribed in works of art, recorded in biographical and critical literature, and enacted through social roles.

234N. Frames of View (4)
Critical and historical analysis of the institutions, social networks, and communicative media through which art is presented to its audiences. May also address theories of vision and visuality, spectatorship, public space, originality and reproduction, and public space.

235N. Frames of Analysis (4)
Historical critique and philosophical analysis of the central terminology and constructs of art history, theory, and criticism. May address such key terms as style, genre, and periodization or a topic such as theories of representation and narrative. Prerequisite: graduate standing or consent of instructor.

Theories/New Visions

240. Histories of Theory and Criticism: Platon to Post-Modernism (4)
Historical and critical investigations of art theory and criticism, antiquity to the present. May be taught as an historical overview or focus on a particular topic, e.g., Critical Currents Since World War II, Renaissance Foundations, From Culture to Popular Culture.

241. Topics in Contemporary Critical Theory (4)
Focused studies, changing from year to year, in contemporary theoretical positions and perspectives (e.g., New Social Theory, Post-Colonialism, Gender Theory) and one or more leading theorists (e.g., Deleuze, C. S. Peirce, Steinberg).

242. Theories of Media and New Media (4)
Critical study of the ways in which media (film, video, photography) and new media have been theorized. May be taught from an historical or comparative perspective or focus on a single theorist or theorist.

243. Aesthetic Theory (4)
Study of the philosophical concepts of the function of art and visual culture and the criteria for its evaluation in diverse epochs and cultures. May be taught as an historical overview or comparative study or focus on a single topic or theorist.

244. Studies in the Relationship of Theory and Practice (4)
Investigations of one or more artist-theorists or movements, contemporary or historical, that put in issue the interface between theory and practice. May also focus on a topic such as perspective, color, or narrative, or genre such as film or new media.

Times/Terrains

250N. Seminar in Ancient Art (4)
The arts of Greece, Rome, and allied cultures in the ancient world. Topics will vary, e.g., Roman Portraiture: Self and Social Mask; The Invention of Perspective and Revolution in Two-Dimensional Representation; The “Modern” Art of Antiquity (late third to early fourth century A.D.). May be taken three times for credit. Prerequisite: graduate standing or consent of instructor.

251. Seminar in Medieval Art (4)
European art from late antiquity through the fourteenth century and the historical processes by which “medieval” art has been constructed as a category. Topics may include Devotional Vision and the Sacred Image; Medieval Comic Genres; Neo-Medievalism, Fifteenth Century to Today. May be taken three times for credit. Prerequisite: graduate standing or consent of instructor.

252. Seminar in Renaissance Art (4)
Concentrates on the art of the Renaissance in Italy and the North through a changing series of topics, e.g., Vision and Composition in Perspective; The Sistine Chapel; Envisioning Jan Van Eyck; Renaissance Print-Making; Leonardo da Vinci; La Gioconda. May be taken three times for credit. Prerequisite: graduate standing or consent of instructor.

253. Seminar in Early Modern Art (4)
European and American art, 1580s to 1850. Topics might include Deconstructing the Enlightenment: Images of Disorder; Escaping History: Genre Painting, Rococo to Impressionism; Politics and Love in the Art of Jacques-Louis David; Art and Urbanism in Baroque Rome. May be taken three times for credit. Prerequisite: graduate standing or consent of instructor.

254. Seminar in Modern Art (4)
European and American art, ca. 1850 to 1960. Questions in Impressionism and Post-Impressionism; The Cubist Revolution: Marcel Duchamp and the Anti-Formalist Tradition; American Modernism; Reckoning with Abstract Art; Issues of Dada and Surrealism; Soviet Avant-Gardes. May be taken three times for credit. Prerequisite: graduate standing or consent of instructor.

255. Seminar in Contemporary Art (4)
Theoretical and critical discussions of recent U.S. and international art, 1960s to the present. Art/theory transcendence; Mixed Media Practices; Conceptual Art; Art After Appropriation; Global Art at the Millennium; New Genres of Public Art; Mike Kelly and the Conceptual Vernacular: Art and Activism. May be taken three times for credit. Prerequisite: graduate standing or consent of instructor.

257. Seminar in Meso-American Art (4)
Topics relating to the art and civilizations of Precolumbian Mexico and Central America, either specifically art historical (such as iconographic, formal, and stylistic analysis) or encompassing a spectrum of interdisciplinary and cultural/historical problems. May be taken three times for credit. Prerequisite: graduate standing or consent of instructor.

258. Seminar in Chinese Art (4)
Advanced studies in the secular and religious art traditions of China. From year to year, the seminar may focus on early China (Neolithic to the end of the T’ang dynasty), in later dynasties (Sung, Yuan, Ming) or on art of the People’s Republic. May be taken three times for credit. Prerequisite: graduate standing or consent of instructor.

259. Seminar in Latin American Art (4)
Historical and theoretical problems in the art of Mexico, Central, and South America art from the colonial period to today, as well as from the Hispanic traditions of the American Southwest. May be taken three times for credit. Prerequisite: graduate standing or consent of instructor.
260. Seminar in North American Indian Art (4)
Topics for this seminar concern Native American art history from ancient to contemporary times. Seminars may focus on archaeological and art historical approaches, philosophy and aesthetics, archaeoastronomy, and cultural contexts. Issues of globalization and transculturation may be examined as well.

269. Contextual Studies: Special Topics (4)
Studies in the art of cultures and time periods not covered in the currently published curriculum (e.g., African Art, Japanese Art, Byzantine Art, Islamic Art) or of issues and genres crossing epochal, cultural, and media boundaries.

OTHER

280. Workshop in Critical Writing (4)
Practice in writing about art (both one's own and others) accompanied by analysis of selected contemporary critical writings.

281. Curatorial Practice (4)
Methodological investigation of and training in the practices of art museums, galleries, film and digital environments, public arts organizations, and the like. Instruction by museum and gallery curators and opportunities for participation in ongoing programs at local art institutions.

282. Special Projects in Art Practice (4)
Advanced workshop in specialized areas of art practice (e.g., Sound and Lighting, Editing).

295. Individual Studies for Graduate Students (1–12)
Individual research with the student’s individual faculty advisor in preparation for their comprehensive exhibitions for the M.F.A. degree or qualifying exam for the Ph.D. These units are intended to be with the chair of the student’s review committee. For the M.F.A. degree, these units can only be taken after completing the First Year Review. (Required, M.F.A., Ph.D.)

298. Directed Group Study (1–12)
Directed group study on specific topics not covered at present in the normal curriculum. Used as an experimental testing of courses that may be given regular course numbers if proved successful. Special arrangement with faculty member. Prerequisite: consent of department.

299. Graduate Research (1–4)
Graduate-level research under the direct guidance of a faculty member. Prerequisite: consent of instructor.

500. Apprentice Teaching (1–4)
Apprentice teaching in undergraduate courses given by the Department of Visual Arts. Graduate students are required to teach a minimum of one quarter (four units) within the department to fulfill degree requirements.

501. Apprentice Teaching in Culture, Art, and Technology (CAT) (4)
Consideration and development of pedagogical methods appropriate to undergraduate teaching in the interdisciplinary Sixth College Core Sequence, Culture, Art and Technology. Supervised by the Core Program faculty, director and associate directors for the Writing and Thematic Programs. Prerequisites: graduate student and consent of instructor.
THE WRITING CENTER

Within four quarters following successful completion of the UC Entry Level Writing Requirement, all students entering as freshman must complete a two-course sequence at UC San Diego in Warren Writing (10A and 10B). The purpose of the sequence is to teach and thereby enable students, through intensive practice, to read critically and write appropriately in a variety of academic contexts. Classes are seminar-size and center on discussion of student work.

In both 10A and 10B, student writing is duplicated and discussed by the class in a workshop setting. Instructors hold conferences with students individually during the quarter and provide written and oral commentaries on student work. The minimum writing requirement is 8,000 words per quarter.

ETHICS AND SOCIETY

All Warren students entering as freshmen must take two core courses in Ethics and Society. The courses are cross-listed as Political Science 27 and 28 and Philosophy 27 and 28 (see departmental listings). A student may enroll in these courses through either department. The courses are to be taken immediately following completion of Warren Writing 10A-B (or Scholars Seminar 11A-B). Poli./Phil. 27 must be taken before Poli./Phil. 28.

THE WRITING CENTER

OFFICE: EBU 3B, Computer Science and Engineering Building, Room 1109

The Writing Center, staffed by trained undergraduate mentors, provides academic support for all Warren College student writers. The center offers individual peer mentoring sessions on a one-time or ongoing basis. The center director also provides group workshops addressing specific writing tasks, such as application essays and timed essay exams. Writing mentors enroll in Warren 189 to receive training and supervision.

WARREN COLLEGE HONORS PROGRAM

OFFICE: EBU 3B, Computer Science and Engineering Building, Room 1102

The Warren College Honors Program offers students educational, cultural, and social experiences designed to broaden their intellectual interests. The activities vary each quarter and are planned to foster student interaction and promote a sense of community.

Entering freshmen with a high school GPA of 3.8 or above and SAT I scores of 700 reading/700 math/700 writing, or the ACT equivalent, are eligible to participate in the Honors Program. To remain in the program, students must maintain a cumulative GPA of 3.7 on all graded units completed at UC San Diego.

Students who do not qualify for the Honors Program at the time of admission and all transfer students may join as soon as a cumulative GPA of 3.7 is attained on twelve or more graded units completed at UC San Diego. In all subsequent quarters, students must maintain a cumulative GPA of 3.7 on all graded units completed at UC San Diego to remain in the program. Students in the Warren College Honors Program are not required to apply to the program or produce research projects in order to continue in the program.

Any Warren Honors student who writes a research paper for a departmental honors course may submit his or her paper to the Warren College Provost’s Office for consideration for the Michael Addison Award. The award is presented annually at commencement to the Warren Honors student who is judged to have written the most distinguished research paper. The submission must be accompanied by a letter of support from the faculty departmental honors advisor.

For more information, please contact the program coordinator at (858) 534-1709 or warren.honors@ucsd.edu.

WARREN SCHOLARS SEMINAR

The Warren Scholars Seminar offers an interdisciplinary curriculum that is designed to help students broaden their intellectual interests and prepare them for rigorous academic inquiry. Students enroll in both seminars, Warren 11A-B, which fulfill the college writing requirement. The seminars are taught by a Warren College lecturer and feature distinguished guest speakers from a variety of disciplines.

Entering first-year Honors Program students are admitted to the Warren Scholars Seminar by application and invitation.

Students in the Honors Program may serve as undergraduate assistants in Warren 11A-B (Warren 195, Apprentice Teaching). Undergraduate assistants participate in planning class meetings, introducing guest speakers, facilitating small-group discussions, and supporting students in the paper-writing process.

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

10A. The Writing Course A (4)

A workshop course in reading and writing required of all Warren College students. The course emphasizes argumentation and critical writing based on sources. (Letter grade only.) Prerequisites: satisfaction of the university entry level writing requirement and must be a Warren College student.

10B. The Writing Course B (4)

A workshop course in reading and writing required of all Warren College students who have completed 10A. The course continues the emphasis on argumentation and critical writing based on sources. (Letter grade only.) Prerequisites: completion of WCWP 10A and must be a Warren College student.

11A. Warren Scholars Seminar A (4)

The Warren College Scholars Seminar A allows students to develop and refine their expressive and analytical skills. The seminar offers an interdisciplinary approach to topics on the relation of individuals and society, and the function of evidence and observation in the formation of theories. The course emphasizes argumentation and critical thinking. (Letter grade only.) Prerequisites: limited to freshman Warren College Honors Program students upon approval of a submitted writing sample.

11B. Warren Scholars Seminar B (4)

The Warren Scholars Seminar B allows students to develop and refine their expressive and analytical skills by exploring a topic that offers viewpoints from a wide range of disciplines. The seminar emphasizes argumentation and critical writing. The topic will vary each year. (Letter grade only.) Prerequisite: Warren 11A or by consent of instructor.

189. Academic Mentoring and the Writing Process (2)

Students will gain a fundamental understanding of all stages of the writing process and will develop the necessary skills to serve as productive mentors for their peers. Prerequisites: students must have completed WCWP 10A and 10B (or WARR 11A and 11B) and Phil./Poli. 27 with B grade or higher, have upper-division standing, and a minimum GPA of 3.0. Enrollment is restricted to Warren students only. Submission of a writing portfolio and departmental authorization is required to enroll.

195. Apprentice Teaching (1)

Undergraduate instructional assistance. Responsible both in area of learning and instruction. Student must prepare reading materials assigned by the professors and lead student discussions in Warren 11A or 11B. (P/NP grade only.) Prerequisite: student must be in the Warren College Honors Program.
Appendix

Nondiscrimination and Affirmative Action Policy Statement for the University of California

It is the policy of the university not to engage in discrimination against or harassment of any person employed by or seeking employment with the University of California on the basis of race, color, national origin, religion, sex, gender identity, pregnancy (includes pregnancy, childbirth, and medical conditions related to pregnancy or childbirth), physical or mental disability, medical condition (cancer-related or genetic characteristics), ancestry, marital status, age, sexual orientation, citizenship, or service in the uniformed services (as defined by the Uniformed Services Employment and Reemployment Rights Act of 1994). This policy applies to admissions, access, and all employment practices, including recruitment, selection, promotion, transfer, merit increase, salary, training and development, demotion, and separation. This policy is intended to be consistent with the provisions of applicable state and federal laws and university policies.

University policy also prohibits retaliation against any employee or person seeking employment for bringing a complaint of discrimination or harassment pursuant to this policy. This policy also prohibits its retaliation against a person who assists someone with a complaint of discrimination or harassment, or participates in any manner in an investigation or resolution of a complaint of discrimination or harassment. Retaliation includes threats, intimidation, reprisals, and/or adverse actions related to employment.

In addition, it is the policy of the university to undertake affirmative action, consistent with its obligations as a federal contractor, for minorities and women, for persons with disabilities, and for covered veterans (disabled veterans, recently separated veterans; Vietnam-era veterans; veterans who served on active duty in the U.S. military, ground, naval, or air service during a war in a campaign or expeditions for which a campaign badge has been authorized; or armed forces service medal veterans) The university commits itself to apply every good faith effort to achieve prompt and full utilization of minorities and women in all segments of its workforce where deficiencies exist. These efforts conform to all current legal and regulatory requirements, and are consistent with university standards of quality and excellence.

Inquiries regarding the University of California, San Diego’s (UCSD) equal employment opportunity policies and student-related nondiscrimination policies may be directed to:

UC San Diego Policies and Procedures Applying to Student Activities

Students enrolling at UC San Diego are required to observe campus regulations, including but not limited to the Standards of Conduct and the Policies and Procedures Applying to Student Activities, which are available to students at http://ugr8.ucsd.edu/judicial/ as well as the following locations:

• Student Legal Services
• Center for Student Involvement
• College Dean Offices
• Office of Graduate Studies
• Office of the Student Affairs Dean, School of Medicine
• Student Policies and Judicial Affairs
• SIO, Graduate Student Department

Notification of Rights under FERPA for Postsecondary Institutions

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. They are:

1. The right to refuse permission for any or all of the categories of personally identifiable information to be designated as directory information with respect to themselves.

2. The right to inspect and review the student’s education records within forty-five days of the day UC San Diego receives the student’s written request.

Students should submit written requests that identify the record(s) that the student wishes to inspect. The UCSD official to whom the request was submitted will notify the student of the time and place where the records may be inspected.

3. The right to request amendments of the student’s education records that the student believes are inaccurate or misleading.

The request may be submitted in writing to the UCSD official responsible for the record, clearly identifying the part of the record they want changed, and specifying why it is inaccurate or misleading. If the UCSD official decides not to amend the record as requested by the student, that official will notify the student of the decision and advise the student of the procedures to appeal the denial.

4. The right to consent to disclosures of personally identifiable information contained in the student’s education records, except to the extent that FERPA authorizes disclosure without consent.

Exceptions: One exception that permits disclosure without consent is disclosures to UCSD or UC officials with legitimate educational interests. A UCSD or UC official is a person employed by UCSD.
or UC in an administrative, supervisory, academic, research, or support staff position; a person or company with whom UCSD or UC has contracted (such as attorney, auditor, or collection agent); or a student serving on an official committee, such as a disciplinary or grievance committee. A UCSD or UC official has a legitimate educational interest if the information requested is relevant and necessary for the official to perform a task or determination that is an employment responsibility or to perform a task that is related specifically to the official’s participation in the student’s education or to perform a task that is related specifically to the discipline or the student, and provides a service or benefit to the student or the student’s family.

UCSD may also disclose personally identifiable information from an education record to appropriate parties, including parents of an eligible student, in connection with an emergency if knowledge of the information is necessary to protect the health or safety of the student or other individuals.

5. The right to file a complaint with the U.S. Department of Education concerning alleged failures by UCSD to comply with the requirements of FERPA. The name and address of the office that administers FERPA is

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Ave. SW
Washington, DC 20202-4605

Questions about these rights or any other aspect of student records management by UCSD officials may be referred to the director of Student Policies and Judicial Affairs, Student Center, Building B, or by telephone at (858) 534-6225 or e-mail at judicialaffairs@ucsd.edu. The text of FERPA may be found in the government documents section of the UCSD Geisel Library. Copies of the UCSD student records policy, PPM 160-2, may be accessed electronically at http://adminrecords.ucsd.edu/ppm/docs/160-2.html.

Directory or Public Information

The following has been designated by UCSD as “directory information”: a student’s name, address (local and/or permanent), e-mail address, telephone numbers, date and place of birth; major fields of study; dates of attendance; grade level; enrollment status (e.g., paid or unpaid enrollment, undergraduate, full time, or part time); number of course units in which enrolled; degrees and honors received; the most recent previous educational institution attended; participation in officially recognized activities, including intercollegiate athletics; and the name, weight, and height of participants on intercollegiate UCSD athletic teams.

UCSD SEXUAL HARASSMENT PREVENTION AND POLICY

UC San Diego is committed to creating and maintaining a community where all persons who participate in UC San Diego programs and activities can work and learn together in an atmosphere free of all forms of harassment, exploitation, or intimidation. Every member of the UC San Diego community should be aware that UC San Diego is strongly opposed to sexual harassment and that such behavior is prohibited both by law and UC San Diego policy. Retaliation against a person who brings a complaint of sexual harassment is also strictly prohibited and may result in separate disciplinary action. UC San Diego will respond promptly and effectively to reports of sexual harassment and will take appropriate action to prevent, correct, and, if necessary, discipline behavior that violates this policy.

LAWS AND UNIVERSITY POLICIES PROHIBITING SEXUAL HARASSMENT

The University of California Policy on Sexual Harassment applies to UC San Diego, including the medical centers and all auxiliary university locations. The California Fair Employment and Housing Act and Title VII of the Federal Civil Rights Act of 1964, as amended, prohibit sexual harassment in employment. Title IX of the Education Amendments of 1972 prohibits sexual harassment in educational institutions that are recipients of federal funds.

DEFINING SEXUAL HARASSMENT

Sexual harassment is defined as unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature when submission to or rejection of this conduct explicitly or implicitly affects a person’s employment or education; unreasonably interferes with a person’s work or educational performance; or creates an intimidating, hostile, or offensive working or learning environment. UC San Diego will respond to reports of any such conduct.

In determining whether the reported conduct constitutes sexual harassment, consideration shall be given to the record of the conduct as a whole and to the totality of the circumstances, including the context in which the conduct occurred.

Sexual harassment does not typically include verbal expression or written material that is relevant and appropriately related to course subject matter or curriculum. This policy is intended to protect members of the UC San Diego community from discrimination, not to regulate protected speech.

Sexual harassment may occur between persons of differing power or between peers. In addition, sexual harassment may involve a female harassing a male, or a male or female harassing a person of the same gender. Harassment that is not sexual in nature but is based on gender, gender identity, sex stereotyping, or sexual orientation also is prohibited if it is sufficiently severe to deny or limit a person’s ability to participate in or benefit from UC San Diego educational programs, employment, or services. In determining whether a hostile environment due to sexual harassment exists, UC San Diego may take into account acts of discrimination based on gender, gender identity, sex stereotyping, or sexual orientation.

CONSENSUAL RELATIONSHIPS

UC San Diego’s consensual relationship policy addresses potential ethical and legal issues that arise when individuals develop romantic or sexual relationships. In addition, the UC Regents have approved a systemwide faculty-student relationship policy that prohibits a faculty member from becoming romantically or sexually involved with students for whom the faculty member has or should expect to have supervisory responsibility.

PREVENTION AND EDUCATION

To implement UC San Diego’s policy regarding sexual harassment, the Office of Sexual Harassment Prevention and Policy (OSHPP) provides assistance in investigating and resolving complaints and provides education to the entire UC San Diego community. Emphasis is on prevention and early resolution. Copies of UC San Diego’s policy and procedures may be obtained at OSHPP at 201 University Center or http://oshpp.ucsd.edu. Sexual harassment prevention materials, including the university policy, are available in Spanish. Students are encouraged to review the interactive online education program, Preventing Sexual Harassment, available on the OSHPP Web page.

Under California state law, large employers are required to provide their supervisors with two hours of sexual harassment prevention training every two years. At the University of California, for the purpose of sexual harassment prevention training, supervisors include all faculty.

COMPLAINT RESOLUTION

UC San Diego has established guidelines for resolving sexual harassment complaints. There are several early resolution options, depending on the circumstances, including educational programs for targeted campus units or for particular individuals and mediation between the parties. Where early resolution is unsuccessful or inappropriate, a formal complaint may be filed and a formal investigation undertaken. There is no prescribed sequence, so choosing one option first does not prevent a complainant from choosing a different option for resolution later on.

Because complaints are most effectively resolved at the earliest possible stage, UC San Diego encourages early reporting of concerns or complaints regarding sexual harassment. If you believe you have been sexually harassed, you are encouraged to discuss your options and to learn about UC San Diego procedures by contacting OSHPP at (858) 534-8298. You may obtain advice without filing a complaint. Unreasonable delay in reporting sexual harassment or failure to utilize UC San Diego’s complaint resolution procedures may affect your legal rights.

A number of governmental agencies also accept complaints of sexual harassment, including the California Department of Fair Employment and Housing; the U.S. Equal Employment Opportunity Commission; and the Office for Civil Rights, U.S. Department of Education. The time deadlines for filing such complaints vary between 180 and 365 days.
RETAILIATION

Threats, other forms of intimidation, and retaliation against a faculty member, student, or staff employee for bringing a complaint of sexual harassment or for assisting another in bringing a complaint are prohibited. Retaliation is itself a violation of UC San Diego policy and applicable law, and is a serious offense. Complaints of retaliation may be brought through the sexual harassment complaint procedures. Acts of retaliation may result in discipline.

STUDENT SEX OFFENSE POLICY

UC San Diego does not tolerate sex offenses in any form, including sexual assault, sexual misconduct, harassment, exploitation, or intimidation. Reports of sex offenses may be made to the Sexual Assault & Violence Prevention Resource Center, the UC San Diego Police Department, the Office of Sexual Harassment Prevention and Policy, Counseling and Psychological Services, Student Health Service, and other campus resources outlined in the UC San Diego Sex Offense Policy. Investigations of reports of sex offenses are conducted by the Office of Sexual Harassment Prevention and Policy. A student who has been accused of a sex offense may seek assistance from Student Legal Services, Counseling and Psychological Services, the Office of Student Advocacy, and other campus resources outlined in the policy.

Sex offenses can be addressed both through university administrative procedures and through the criminal justice system. Any criminal proceeding is entirely separate from administrative proceedings of the university.

The UC San Diego Sex Offense Policy is available online at http://oshpp.ucsd.edu.

TITLE IX COMPLIANCE COORDINATOR/SEXUAL HARASSMENT OFFICER

Persons who wish to bring a complaint alleging a violation of Title IX of the Education Amendments of 1972 may contact the Title IX Coordinator as follows:

Lori Chamberlain, Title IX Compliance Coordinator/Sexual Harassment Officer
University of California, San Diego
9500 Gilman Dr. # 0024
La Jolla, CA 92093-0024

Ronald W. Stovitz
Vice President of the Alumni Associations of the University of California
Yolanda Nunn Gorman

APPOINTED REGENTS

The term of office of appointed regents is twelve years, and terms expire on March 1 of the year indicated.

Jesse Bernal (2010)*
Richard C. Blum (2014)
William de la Peña (2018)
Russell Gould, Chair (2017)
Eddie Island (2017)
Odessa Johnson (2012)
George Kieffer (2021)
Monica Lozano (2013)
Hadi Makarechian (2020)
George M. Marcus (2012)
Norman J. Pattiz (2014)
Bonnie Reiss (2020)
Frederick Ruiz (2016)
Leslie Tang Shilling (2013)
Bruce D. Varmer (2018)
Paul Wachtler (2016)
Charlene Zettel (2021)
Jesse Cheng, Student Regent Designate
Rex Hime, Alumni Regent Designate
Derek DeFreece, Alumni Regent Designate
Dan Simmons, Faculty Representative
Henry Powell, Faculty Representative
Juliann Martinez, Staff Advisor
Edward L. Abeysa, Staff Advisor

*Student Regent appointed to one year term July 1 to June 30

PRINCIPAL OFFICERS OF THE REGENTS

President of the Regents
Arnold Schwarzenegger

Chair of the Regents
Russell Gould
Vice Chair of the Regents
Sherry L. Lansing
Acting Treasurer
Marie Berggren
Ethics, Compliance and Audit
Sheryl Vacca
General Counsel
Charles F. Robinson
Secretary and Chief of Staff to the Regents
1111 Franklin Street, 12th Floor
Oakland, CA 94607
Diane M. Griffiths

UC SYSTEMWIDE ADMINISTRATION

President of the University
Mark G. Yudof
Executive Vice President
Bruce B. Darling
Executive Vice President—Business Operations
Nathan Brostrom
Interim Provost and Executive Vice President—Academic Affairs
Lawrence Pitts
Executive Vice President—Chief Financial Officer
Peter J. Taylor
Senior Vice President—Health Sciences and Services
John D. Stobo
Senior Vice President—External Relations
Daniel M. Dooley
General Counsel and Vice President for Legal Affairs
Charles F. Robinson
Senior Vice President—Chief Compliance and Audit Officer
Sheryl Vacca
Special Advisor to the President
Christopher F. Edley
Chief Investment Officer and Vice President for Investments and Acting Treasurer of the Regents
Marie N. Berggren
Director, Institutional Research
Kathleen Dettman
Executive Director—Issues Management, Policy Analysis and Coordination
Jenny Kao
Interim Chief of Staff and Associate Vice President—Policy and Analysis
Marsha Kelman
Interim Deputy Chief of Staff
Deanna Dudley

CHANCELLORS OF THE UC CAMPUSES

Berkeley
Robert J. Birgeneau
ACADEMIC AND ADMINISTRATIVE OFFICERS
UNIVERSITY OF CALIFORNIA, SAN DIEGO

CHANCELLOR
Marye Anne Fox

SENIOR VICE CHANCELLOR
Paul W. Drake, Academic Affairs

VICE CHANCELLORS
David A. Brenner, M.D., Health Sciences and Dean, School of Medicine
Arthur B. Ellis, Research
Anthony D. J. Haymet, Marine Sciences, Director, Scripps Institution of Oceanography and Dean, Graduate School of Marine Sciences
Gary C. Matthews, Resource Management and Planning
Steven W. Relyea, External and Business Affairs
Penny Rue, Student Affairs

ASSOCIATE CHANCELLORS
Sandra Daley
Clare Kristofco

ASSISTANT CHANCELLOR
Glynda Davis, Diversity

CHAIR, ACADEMIC SENATE
William S. Hodgkiss, 2009–10
Frank L. Powell, 2010–11

ACADEMIC DEANS
Arts and Humanities
Seth Lerner, Dean

Biological Sciences
Steve Kay, Dean

Extended Studies and Public Programs
Mary Lindenstein Walshok, Dean

Graduate School of International Relations and Pacific Studies
Peter Cowhey, Dean

Rady School of Management
Robert S. Sullivan, Dean

Graduate Studies
Kim E. Barrett, Dean

Jacobs School of Engineering
Frieder Seible, Dean

Physical Sciences
Mark Thiemens, Dean
Skaggs School of Pharmacy and Pharmaceutical Sciences
Palmer Taylor, Dean
Social Sciences
Jeffrey Elman, Dean

CHIEF OFFICERS

Chief of Staff—Chancellor’s Office
Clare Kristofco
Campus Counsel
Dan Park
University Librarian
Brian E. C. Schottlaender
Chief Diversity Officer
Sandra Daley

COLLEGE PROVOSTS

Revelle College
Don Wayne
John Muir College
Susan Smith
Thurgood Marshall College
Allan Havis
Earl Warren College
Steven Adler
Eleanor Roosevelt College
Alan Houston
Sixth College
Naomi Oreskes

ASSOCIATE VICE CHANCELLORS

Cathy Constable, Marine Sciences
Jeanne Ferrante, Faculty Equity
Boone Hellmann, Facilities Design and Construction
Juli Larsen, University Development
Barbara Sawrey, Undergraduate Education
Ed Spriggs, Student Affairs Resource Administration
Jeffrey Steindorf, Campus Planning
Suresh Subramani, Academic Planning and Resources
George Tynan, Research
Mary Lindenstein Walshok, Public Programs

ASSISTANT VICE CHANCELLORS

Armin Afashi, Alumni Affairs
Doug Bennett, Marine Sciences
Mae Brown, Admissions and Enrollment Services
Stephanie Burke, Audit and Management Advisory
Karen Calfas, Student Wellness
Linda Collins, Contract and Grant Administration
Marianne Generales, Research
Brian Gregory, Strategic Campus Resource Initiatives

——, Academic Affairs
Nancy Kossan, Real Estate
Don Larson, Controller, Business and Financial Services
Tom Leet, Human Resources
Sylvia Lepe-Askari, Campus Budget
Deborah J. McGraw, Academic Affairs Resource Administration
Jane Moores, Technology Transfer and Intellectual Property
Kristina Larsen, Academic Personnel
Gary Ratcliff, Student Life
Marlene Shaver, UCSD Foundation and Advancement Services
Shawn Sheffield, Health Sciences Resource Strategy and Planning
Russ Thackston, Auxiliary and Plant Services
Loren C. Thompson, Student Educational Advancement

DEAN OF INTERNATIONAL EDUCATION

Lynn C. Anderson

DEANS OF STUDENT AFFAIRS

Eleanor Roosevelt College
Patricia Scott
John Muir College
Patricia Mahaffey
Revelle College
Reene Barnett-Terry
Sixth College
James Stascavage
Thurgood Marshall College
Mentha Hynes-Wilson
Earl Warren College
Paul DeWine

DEANS OF ACADEMIC ADVISING

Eleanor Roosevelt College
Sarah Spear-Barrett
John Muir College
Kay Reynolds
Revelle College
Mirasol Espanola
Sixth College
Brigitte Benoist
Thurgood Marshall College
Anne Porter
Earl Warren College
Jacob Lacy

ORGANIZED RESEARCH UNITS, NON-ORU CENTERS, AND PROJECTS

Organized Research Units

MULTICAMPUS

Institute on Global Conflict and Cooperation
Susan Shirk, Director
Institute of Geophysics and Planetary Physics
Catherine Constable, Director
White Mountain Research Station
Frank Powell, Director

GENERAL CAMPUS

BioCircuits Institute
Jeff Hasty, Director
California Institute for Telecommunications and Information Technology (Calit2), San Diego Division
Ramesh Rao, Director
Center for Astrophysics and Space Sciences
George Fuller, Director
Center for Chronobiology
Stuart Brody and Susan Golden, Codirectors
Center for Comparative Immigration Studies
John Skrentny, Director
Center for Energy Research
Farrokh Najmabadi, Director
Center for Human Development
Terry Jernigan, Director
Center for Iberian and Latin American Studies
Christine Hunefeldt, Director
Center for Molecular Agriculture
Maarten Chrispeels, Director
Center for Research in Computing and the Arts
Sheldon Brown, Director
Center for Research in Language
Marta Kutas, Director
Institute of International, Comparative, and Area Studies
Gershon Shafir, Director
Institute for Neural Computation
Terrence Sejnowski and Gert Cauwenberghs, Codirectors
Institute for Pure and Applied Physical Sciences
M. Brian Maple, Director
Kavli Institute for Brain and Mind
Nicholas Spitzer and Jeffrey Elman, Codirectors
San Diego Supercomputer Center  
Francine Berman, Director

SCHOOL OF MEDICINE

AIDS Research Institute  
Douglas Richman, Director

Center for Academic Research Training in Anthropology  
Fred Gage, Margaret Schoeninger, and Ajit Varki, Co-directors

Center for Research in Biological Systems  
Mark Ellisman, Director

Clinical and Translational Research Institute  
Gary Firestein, Director

Glycobiology Research and Training Center  
Ajit Varki and Jeffrey Esko, Co-directors

Rebecca and John Moores UCSD Cancer Center  
Dennis Carson, Director

Stein Institute for Research on Aging  
Dilip Jeste, Director

SCRIPPS INSTITUTION OF OCEANOGRAPHY

Climate, Atmospheric Science, and Physical Oceanography (CASPO) Research Division  
Art Miller, Director

Center for Marine Biotechnology and Biomedicine  
William Fenical, Director

Geosciences Research Division  
Steve Cande, Director

Integrative Oceanography Division  
Elizabeth Venrick and Robert Guza, Co-directors

Marine Biology Research Division  
Ronald Burton, Director

Marine Physical Laboratory  
William Kuperman, Director

Non-ORU Centers

SCHOOL OF MEDICINE

Alzheimer's Disease Research Center  
Douglas Galasko, Director

Academic Geriatric Resource Center  
Ruth Covell, Director

Biostatistics and Bioinformatics  
Gustavo Jimenez, Director

California NeuroAIDS Tissue Network  
Igor Grant, Director

Center for Pain and Palliative Medicine  
Mark Wallace, Director

Center for Community Health, Division of Community Pediatrics  
— —

Center for AIDS Research  
Douglas Richman, Director

Center for Neural Circuits and Behavior  
Anirvan Ghosh, Director

General Clinical Research Center  
Michael Ziegler, Director

HIV Neurobehavioral Research Center  
Igor Grant, Director

Ludwig Institute for Cancer Research, San Diego Branch  
Webster Cavenee, Director

BIOGEM-Biomedical Genomics Micoarray  
Gary Hardiman, Director

SCRIPPS INSTITUTION OF OCEANOGRAPHY

Center for Clouds Chemistry and Climate  
V. Ramanathan, Director

Center for Marine Biodiversity and Conservation  
Jeremy Jackson, Director

Center for Marine Genomics  
Terry Gaasterland, Director

Joint Institute for Marine Observations  
W. Kendall Melville, Director

Center for Observations, Modeling and Prediction at Scripps  
Bruce Cornuelle, Director

BIOLOGICAL SCIENCES

SD-CAB (San Diego Center for Algae Biotechnology)  
Steve Mayfield, Director

ENGINEERING

Bernard and Sophia Gordon Engineering Leadership Center  
Ingolf Krueger, Director

CASB (Center for Algorithmic and Systems Biology)  
Pavel Pevzner, Director

CWC (The Center for Wireless Communications)  
Bhaskar Rao, Director

Charles Lee Powell Structural Research Laboratories  
Gil Hegemier, Director

Cymer Center for Control Systems and Dynamics  
Miroslav Krstic, Director

Information Theory and Applications Center

SOCIAL SCIENCES

Center for Research on Educational Equity, Assessment, and Teaching Excellence  
Hugh Mehan, Director

Laboratory of Comparative Human Cognition  
Michael Cole, Director

Center for Environmental Economics  
Ted Groves, Director

Center for Research on Gender in the Professions  
Mary Blair-Loy, Director

Projects

African and African American Studies Project  
Bennetta Jules-Rosette, Director

Project for Explaining the Origin of Humans  
Ajit Varki, Director

Project for the Responsible Conduct of Research Education  
Michael Kalichman, Director

Project in Econometric Analysis  
Graham Elliott, Coordinator

Project in Geometry and Physics  
James Bunch, Coordinator

Project on International Affairs  
Barbara Walter, Director

Public Policy Research Project  
Mathew McCubbins, Director

UCSD MEDICAL CENTER

Tom E. Jackiewicz, Chief Executive Officer, UC San Diego Medical Center

Thomas McAfee, Dean for Clinical Affairs, Health Sciences

Vacant, Chief Operating Officer, Medical Group

Edward Babakanian, Chief Information Officer

Lawrence S. Friedman, Medical Director, Ambulatory and Primary Care

Robert W. Hogan, Associate Director, Director of Finance, UCSD Medical Center

James D. Kaufman, Purchasing Manager

Dennis E. Goodrich, Director, Facilities and Safety Management, UCSD Medical Center

Timothy D. Jackiewicz, Chief Financial Officer, UC San Diego Medical Center

Dennis E. Goodrich, Director, Facilities and Safety Management, UCSD Medical Center
Walter F. Heiligenberg Professorship in Neuroethology
Stefan Leutgeb
Ingrid and Joseph W. Hibben Chair in Space Science and Education
—
Rebeca Hickel Chair in Elizabethan Literature
—
Chair in High Performance Computing
—
Larry L. Hillblom Foundation Endowed Chair in Geriatrics
Laura Dugan
Hwei-Chih and Julia Hsiu Chair in Chinese Studies
Joseph W. Esherick
Institute of the Americas Chair for Inter-American Affairs
Paul W. Drake
John Dove Isaacs Chair in Natural Philosophy
Stephen Mayfield
Kazuo Iwama Chair in Materials Science
Sungho Jin
Joan and Irwin Jacobs Endowed Chair in Bioengineering and Systems Biology
Shankar Subramaniam
Irwin Mark and Joan Klein Jacobs Chair of Information and Computer Science
Ronald Graham
Jeri-Ann and Gary E. Jacobs Endowed Chair in Social Sciences
David Lake
Helen A. Jarrett Chair in Alzheimer’s Disease Research
David Salmon
Chair of Judaic Studies
David Goodblatt
Nancy Kaehr Chair in Pediatric Research
Sanjay Nigam
Jerome Katzin Chair in Corporate Governance
David Schkade
Katzin Chair of Jewish Civilization
—
Norma Kershaw Chair in the Archaeology of Ancient Israel and Neighboring Lands
Thomas Levy
Tamara and Kevin Kinsella Chair in Neurobiology
—
Lawrence B. and Sallye K. Krause Chair in Korean Studies
Stephan Haggard
Stephen W. Kuffler Chair in Biology
Anirvan Ghosh
Ho Miu Lam Chair in China and Pacific Relations
Susan Shirk
Richard K. Lansche, M.D. and Tatiana A. Lansche Endowed Chair in Ophthalmology
Stuart Brown
George W. and Carol A. Lattimer Campus Professorship
David Meyer
Estelle and Edgar Levi Memorial Chair in Aging
Dilip Jeste
Benard L. Maas Chair in Inherited Metabolic Disease
Bruce Barshop
Mary Gilman Marston Chair in Psychiatry
Lewis Judd
Quinn Martin Chair in Drama
Visiting Professors
Bernd T. Matthias Chair in Physics
M. Brian Maple
Joseph E. Mayer Chair of Theoretical Chemistry
Andrew McCammon
McQuown Chair in Natural Science at SIO
George Sugihara
Endowed Chair in Modern Chinese History
Paul Pickowicz
Hajime Mori Chair in Japanese Language and Literature
—
Kenneth M. Moser Endowed Chair
Patricia Finn
Jerome Namais Chair
—
Professorship in Neuroregeneration
—
Nicholas Family Endowed Chair in Modern Greek History
Thomas Gallant
Elizabeth Hamman and Morgan Dene Oliver Chair in Marine Biodiversity and Conservation Science
—
Nancy Olmsted Chair in Pediatric Pulmonology
Paul Quinton
M. J. Orloff Family Endowed Chair in Surgery
Mark Talamini
The Marcie and Michael Oxman Professorship in Infectious Diseases
Joshua Fierer
Pacific Economic Cooperation Chair in International Economic Relations
Takeo Hoshi
George E. Palade Endowed Chair
Peter Novick
Stanford S. and Beverly P. Penner Endowed Chair in Engineering or Applied Science
Juan C. Lasheras
Edith and William Perlman Chair in Clinical Cardiology
Kirk L. Peterson
Distinguished Chair in Physical Chemistry
—
John G. Pickard Chair in Cardiac Surgery
—
Charles Lee Powell Endowed Chair in Mathematics I
—
Charles Lee Powell Endowed Chair in Mathematics II
—
Charles Lee Powell Chair in Wireless Communication
Bang-Sup Song
Presidential Chair in Energy and Combustion Research
Forman Williams
Presidential Chair in Philosophy
Patricia Churchland
Qualcomm Endowed Chair in Communications and Technology Policy
Peter Cowhey
Qualcomm Endowed Chair in Embedded Microsystems
Rajesh Gupta
Qualcomm Endowed Chair in Information Theory and its Application
Alon Orlitsky
Qualcomm Endowed Chair in Mobile Computing
Yuanyuan Zhou
Qualcomm Endowed Chair in Telecommunications and Information Technologies
Ramesh Rao
Gerry & Jeannie Ranglas Chair in Ancient Greek History
—
Helen Ranney Endowed Chair in Medicine
Kenneth Kaushansky
Anne Ratner Chair in Pediatric Ophthalmology
David Granet
Eric and Johanna Reissner Chair in the Department of Structural Engineering
Frieder Seible
Roger Revelle Chair in Environmental Science
—
Stephen O. Rice Chair in Magnetic Recording Research
Jack K. Wolf
Florence Riford Chair for Alzheimer’s Disease Research I
William Mobley
Florence Riford Chair for Research in Neurodegenerative Disease and Dementia
—
Florence Seeley Riford Chair for Acquired Immune Deficiency Syndrome Research
Douglas Richman
William E. and Mary B. Ritter Memorial Chair
Jeremy Jackson
Rohr Chair in Pacific International Relations
Miles Kahler
Paul D. Saltman Chair in Science Education
Robert Schmidt
San Diego County Heart Association Chair in Cardiovascular Research
—
Science Applications International Corporation Chair in Engineering
Amin Vahdat
Shiley Endowed Chair in Alzheimer’s Disease Research in Honor of Dr. Leon Thal
Roberto Malinow
Harold Simon Chair in International Health and Cross-Cultural Medicine
Steffanie Strathean
Skyworks Endowed Chair in High Performance Communications Devices and Circuits
Peter Asbeck
Sokwanlok Chair in Chinese International Affairs
Barry Naughton
Martin Stein Endowed Chair in Developmental and Behavioral Pediatrics
Sheila Gahagan
Herbert Stern Chair in Biology
William McGinnis
Structural Systems Research Chair
—
Tasch Endowed Chair in Parkinson’s Disease Research
—
Evelyn and Edwin Tasch Chair in Cancer Research
Thomas Kipps
Ronald R. Taylor Chair in Information Technology in Computer Science
Pavel Pevzner
Torrey Mesa Research Institute Chair in Plant Science
Julian Schroeder
Sandra and Monroe Trout Chair in Pharmacology
Palmer Taylor
Monroe E. Trout Chair in Surgery
Raul Coimbra
Harold Clayton Urey Chair in Chemistry
Clifford Kubiak
Endowed Chair in Urology
—
Vatz Family Chair in Philosophy
Paul M. Churchland
Alkiviadis Vassiliadis Endowed Chair in Byzantine Greek History
—
Arthur and Molli Wagner Chair in Acting
Kyle Donnelly
Sam M. Walton Chair for Cancer Research
John Pierce
Stefan E. Warschawski Endowed Chair in Mathematics
Kiran Kadiyala
Judith and Jack White Chair in Cardiology
Anthony DeMaria
Sheryl & Harvey White Chair in Management Leadership
Vish Krishnan
Muriel Jeanette Whitehill Chair in Bio-Medical Ethics
Theodore Friedmann
Winkler Endowed Chair for Type I Diabetes Research
—
Herman Wouk Chair of Modern Jewish Studies
Deborah Hertz
Daniel Yankelovich Endowed Chair on Social Thought
—
Samuel S. C. Yen Chair in Reproductive Medicine
—
Walter J. Zable Chair in Engineering
Frieder Seible

2010-2011 UC SAN DIEGO GENERAL CATALOG • APPENDIX
9
On-campus student enrollment (Fall 2009)

On-campus student enrollment (Fall 2009)
Undergraduate 23,143
Revelle 3,757
John Muir 4,171
Thurgood Marshall 3,962
Earl Warren 4,162
Eleanor Roosevelt 3,687
Sixth 3,404
Graduate 4,231
School of Medicine and School of Pharmacy and Pharmaceutical Sciences 1,736
Total 29,110
Grade-point averages
Freshman 2.90
Sophomore 3.00
Junior 3.02
Senior 3.07
Number of undergraduates in most populous departments
Biology 5,768
Economics 2,486
Psychology 1,474
Political Science 1,261
Mechanical and Aerospace Engineering (MAE) 1,161
Chemistry 1,039
Communication 897
International Studies 876
Bioengineering 827
Computer Science and Engineering (CSE) 789
Miscellaneous
UCSD Extension enrollment 23,248
Summer Session enrollment 20,073
On campus teaching faculty members 2,200
Bound books in library collection 3,118,440

Based upon the previous year’s experience, 94 percent of all new freshmen enrolled at UCSD in the fall quarter are also enrolled in the subsequent fall quarter. Eighty-five percent of all students who begin their undergraduate studies as freshmen at UCSD complete their degree requirements here within six years. Questions or requests for more detailed information should be directed to the Office of Student Research and Information/Student Affairs.

Members of Honorary Societies/Faculty Prizes and Awards
A.B. Wood Medal Prize
Acoustical Society of America
Albert Lasker Award for Basic Medical Research
American Academy of Arts and Sciences
American Association of Physicians
American Chemical Society
American Council of Learned Societies Fellowship
American Geophysical Union
American Philosophical Association
American Philosophical Society
American Physical Society
American Society of Mechanical Engineers
Andrew Mellon Foundation Fellowship
Arthur C. Cope Scholar Award
Association for the Advancement of Artificial Intelligence Fellow
Balzan Prize
California Scientist of the Year
Council on Foreign Relations
Crafoord Prize
Dreyfus New Faculty Award
Econometric Society Fellow
Emmy Award
Fields Medal
Ford Foundation Fellowship
Fulbright Scholarship
Goldschmidt Medal
Guggenheim Fellowship
Harvey Prize
Howard Hughes Medical Investigator Award
Howard Hughes Medical Investigator Professors Award
Humboldt Fellowship
IEEE Fellow
IEEE/NPSS Early Achievement Award
Institute of Medicine
Jacob Javits Neuroscience Investigator Award
James B. Macelwane Medal
John Adam Fleming Medal
Keck Foundation: Distinguished Young Scholars Program
Klingenstein Fellowship
Kyoto Prize
Landis Award
LSE Seed Fund
MacArthur Fellowship
Maurice Ewing Medal
McDonnell-Pew Fellow
McKnight Scholar Award
MERIT Award (NIMH)
National Academy of Education Fellow in the Life Sciences
National Academy of Education
National Academy of Engineering
National Academy of Sciences
National Book Critic Circle Award
National Endowment for Humanities
National Endowment for the Arts
National Humanities Medal
National Kidney Foundation Young Investigator Award
National Medal of Science
National Science Foundation Creativity Award
New Innovator Award, National Institutes of Health
NIH Clinical Investigator Award
Nobel Peace Prize
Nobel Prize
NSF Early Career Development Program
Overton Prize
Packard Fellowship
Presidential Early Career Award for Scientists and Engineering (PECASE)
Pulitzer Prize
Residency at the Getty Center for Arts and Humanities
Residency at the National Humanities Center
Rockefeller Fellowship
Royal Society
Shaw Prize
Searle Scholar
Sloan Research Fellowship
Spencer Foundation Fellowship
Theodore Bullock Neuroscience Award
Truman Capote Award for Literary Criticism
Tyler Prize
Vannevar Bush Award
Walter H. Bucher Medal
William Bowie Medal
Wolf Prize
World Computer Smithsonian Award
Young Investigator Award, Biomedical Engineering Society
Young Investigator Award, Child Neurology Society
Young Investigator Award, International Society for Matrix Biology

*As of spring 2010
